1 Getting started

1.1 About this guide

This document describes the commands available in the MD-CLI that can be used to manage the router.

For a list of unsupported features by platform and chassis, see the *SR OS R24.x.Rx Software Release Notes*, part number 3HE 20152 000*x* TQZZA.

Command outputs shown in this guide are examples only; actual output may differ depending on supported functionality and user configuration.

Note:
This guide generically covers Release 24.*x*.R*x* content and may contain some content that will be released in later maintenance loads. In addition, some SR OS features are platform-specific and may not be available or visible on all platforms. See the *SR OS R24.x.Rx Software Release Notes*, part number 3HE 20152 000*x* TQZZA, for information about the supported features and applicable platforms in each load of the Release 24.*x*.R*x* software.

To access the configuration statements within the MD-CLI, the MD-CLI engine must be enabled and the configuration mode must be **mixed** or **model-driven**. For information about using the MD-CLI, see the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide.*

1.2 Platforms and terminology

Note:
Unless explicitly noted otherwise, this guide uses the terminology defined in the following table to collectively designate the specified platforms.

Table 1: Platforms and terminology

Platform	Collective platform designation
7450 ESS-7	All
7450 ESS-12	
7750 SR-1	
7750 SR-1-24D	
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platform	Collective platform designation
7750 SR-1x-92S	
7750 SR-7	
7750 SR-12	
7750 SR-12e	
7750 SR-a4	
7750 SR-a8	
7750 SR-1e	
7750 SR-2e	
7750 SR-3e	
7750 SR-1s	
7750 SR-1se	
7750 SR-2s	
7750 SR-2se	
7750 SR-7s	
7750 SR-14s	
7950 XRS-20	
7950 XRS-20e	
7950 XRS-40	
VSR	
VSR-NRC	
7450 ESS-7	7450 ESS
7450 ESS-12	
7750 SR-1	7750 SR
7750 SR-1-24D	
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	
7750 SR-1x-92S	
7750 SR-7

7950 XRS-40	
VSR	VSR
VSR-NRC	

1.3 Conventions

This section describes the general conventions used in this guide.

1.3.1 Precautionary and information messages

The following information symbols are used in the documentation.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

DANGER: Danger warns that the described activity or situation may result in serious personal injury or death. An electric shock hazard could exist. Before you begin work on this equipment, be aware of hazards involving electrical circuitry, be familiar with networking environments, and implement accident prevention procedures.

WARNING: Warning indicates that the described activity or situation may, or will, cause equipment damage, serious performance problems, or loss of data.

Caution: Caution indicates that the described activity or situation may reduce your component or system performance.

Note: Note provides additional operational information.

Tip: Tip provides suggestions for use or best practices.

1.3.2 Options or substeps in procedures and sequential workflows

Options in a procedure or a sequential workflow are indicated by a bulleted list. In the following example, at step 1, the user must perform the described action. At step 2, the user must perform one of the listed options to complete the step.

Example: Options in a procedure

1. User must perform this step.
2. This step offers three options. User must perform one option to complete this step.
   - This is one option.
   - This is another option.
   - This is yet another option.

Substeps in a procedure or a sequential workflow are indicated by letters. In the following example, at step 1, the user must perform the described action. At step 2, the user must perform two substeps (a. and b.) to complete the step.

Example: Substeps in a procedure

1. User must perform this step.
2. User must perform all substeps to complete this action.
   a. This is one substep.
   b. This is another substep.

1.4 MD-CLI command reference

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

1.4.1 MD-CLI tree hierarchy

Table 2: Command syntax symbols

Symbol	Description
|	A vertical bar represents an "or" condition, indicating that only one of the parameters in the brackets or parentheses can be selected.
( )	Parentheses indicate that one of the parameters must be selected.
[ ]	Brackets indicate optional parameters.
Bold	Commands in **bold** indicate commands and keywords.
Italic	Commands in *italics* indicate that you must enter text for the parameter.

In the following examples, **location** and **graceful-shutdown** are command names. For the **location** command, *keyword* must be one of the keywords **cf1**, **cf2**, or **cf3**. For the **graceful-shutdown** command, *boolean* must be one of the keywords **true** or **false**, although explicitly using the keyword **true** is optional.

```
location keyword
keyword - (cf1 | cf2 | cf3)

graceful-shutdown boolean
boolean - ([true] | false)
```

The configuration branch of the MD-CLI shows the commands and parameters (also known as elements) that are available, shown in a hierarchical structure as in the following figure.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Figure 1: MD-CLI configuration tree example

```
configure
  – cflowd
    – active-flow-timeout number
    – admin-state keyword
    – analyze-gre-payload boolean
    – analyze-l2tp-traffic boolean
    – analyze-v4overv6-traffic boolean
    – apply-groups reference
    – apply-groups-exclude reference
    – cache-size number
    – collector (ipv4-address-no-zone | ipv6-address-no-zone) port number
      – admin-state keyword
      – aggregation
        – as-matrix boolean
        – destination-prefix boolean
        – protocol-port boolean
        – raw boolean
        – source-destination-prefix boolean
        – source-prefix boolean
      – apply-groups reference
      – apply-groups-exclude reference
      – autonomous-system-type keyword
      – description string
      – export-filter
        – family
          – ipv4 boolean
          – ipv6 boolean
          – l2-ip boolean
          – mcast-ipv4 boolean
          – mcast-ipv6 boolean
          – mpls boolean
        – interface-list
          – router reference interface-name reference
          – service
```

sw4113

The **configure** context is the root level of the configuration branch within the configuration mode in the MD-CLI. Each chapter of this guide describes a configuration branch in the MD-CLI configuration tree.

Commands are linked to their command descriptions in the configuration tree with some exceptions (for example, to reduce repeated content), including the **apply-groups**, **apply-groups-exclude**, and **groups** commands. These commands are used to direct the use of configuration templates called configuration groups in the configure region at all configuration levels. The **apply-groups** command applies a configuration group at a configuration level and the **apply-groups-exclude** command excludes a configuration group at a configuration level. See "Using configuration groups" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide* for more information.

Some commands require one or more keys to be entered with the command. For example, the **collector** command has two keys which must be entered: the IP address and the port number. The key name for the IP address (**ip-address**) is optional, however, the key name **port** must be entered before the port number.

```
- collector (ipv4-address-no-zone | ipv6-address-no-zone) port number
```

The command description indicates the required syntax for each command. See MD-CLI command descriptions for more information.

collector [ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*

Italicized names after a command or parameter name indicate the parameter type. The parameter types include (but are not limited to):

- Boolean (true and false values)
- keyword (enumerated values)
- string

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- number
- IPv4 address
- IPv6 address
- MAC address

The **summary-only** parameter, for example, requires a Boolean value. The **autonomous-system** parameter requires a number. For more information about the input values, click the command or parameter name from the MD-CLI tree to be linked to the command description.

```
- summary-only boolean
- autonomous-system number
```

A parameter type may also be a combination of different base types. These parameters are displayed in the MD-CLI tree with the individual parameter types enclosed in round brackets (()), separated by a vertical bar (|). For example, the **indirect** parameter can be configured with either an IPv4 address or IPv6 address:

```
- indirect (ipv4-address-no-zone | ipv6-address-no-zone)
```

Allowed values in strings are printable, 7-bit ASCII characters. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotation marks. Double quotation marks within a string are not supported.

1.4.1.1 Context path

In the CLI tree section, a contextual path at the top of a page refers to the full context of the first command on the page, as shown in the following figure.

Figure 2: Command tree navigation

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

1.4.2 MD-CLI command descriptions

The command syntax is shown in the command description, where the command is displayed in bold, followed by any key names and a type. From the MD-CLI tree, the **configure log accounting-policy** command shows that the key for the command is a number:

```
    - log
        - accounting-policy number
```

The command description for **accounting-policy** shows that the key for the command is a policy identifier:

accounting-policy [**policy-id**] *number*

The square brackets ([ ]) indicate that the **policy-id** key name is optional. From the **policy-id** command description, the range of the identifier is a number from 1 to 99. Therefore, when using the **accounting-policy** command, the following inputs are acceptable:

```
accounting-policy policy-id 15
accounting-policy 25
accounting-policy 1
accounting-policy policy-id 99
```

The following table describes the fields that may be displayed for a command. Not all fields are applicable for all commands.

Table 3: Command descriptions fields

Field	Description
Element Name	Name of the element (command or parameter) and its syntax
Synopsis	Summary description of the element
Context	Full path to the command (with links to parent commands)
Tree	Link to the command in the CLI tree. For key elements, the link is to the parent element.
Description	Detailed description of the element, as needed
String Length	For string elements, the range of the number of characters allowed
Range/Max. Range	For number elements, the range of allowed values. A maximum range may be overridden by a platform-specific range.
Units	Base unit type of the element
Options	Enumerated values allowed for the element. Not all options are available on all platforms.
MD-CLI Default	MD-CLI default value for the element

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Default	YANG default value when there is no MD-CLI default. Platform-specific defaults are not displayed.
Reference	Reference to an element instance in the configuration or state datastore
Min./Max. Instances	For lists and leaf-lists, the minimum or maximum number of instances for this element
Notes	Information about special attributes of the element, including whether the element is: • a key for an element • mandatory • ordered by the user (instead of by the system) • part of a choice of elements
Introduced	Release in which the element was introduced
Deprecated	Release in which the element was deprecated
Platforms	Hardware platforms on which the element is available. See Platforms and terminology for more information about the platforms. **Note:** Some SR OS features are platform-specific and therefore may not be available or visible on all platforms. See the *SR OS R24.x.Rx Software Release Notes*, part number 3HE 20152 000*x* TQZZA, for information about platform support.

A description of the element is also available from the online help for the element. For information about using the online help in the MD-CLI, see the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide*.

Note:
All options for enumerated types and numerical ranges are listed in the MD-CLI command descriptions, however, not all options or ranges are valid on all platforms.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

2 Operational commands

This section lists the commands available at the operation level of the MD-CLI.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

2.1 admin commands

The **admin** commands are used to perform administrative functions, such as displaying configuration that is not subject to AAA, manually saving the configuration, clearing user sessions, and rebooting the system.

```
admin
   –  application-assurance
      –  group reference
         –  url-list reference
            –  upgrade
      –  upgrade
   –  clear
      –  security
         –  lockout
            –  all
            –  user string
         –  password-history
            –  all
            –  user string
   –  disconnect
      –  address (ipv4-address-no-zone | ipv6-address-no-zone)
      –  op-table-bypass boolean
      –  session-id number
      –  session-type keyword
      –  username string
   –  ipsec
      –  show
         –  key
            –  gateway string
            –  ip-tunnel string
            –  ipsec-tunnel string
            –  peer-tunnel-ip-address (ipv4-address-no-zone | ipv6-address-no-zone)
            –  peer-tunnel-port number
            –  type keyword
   –  nat
      –  save-deterministic-script
   –  reboot
      –  [card] keyword
      –  hold
      –  now
   –  redundancy
      –  force-switchover
         –  ignore-status
         –  now
      –  synchronize
         –  boot-environment
         –  certificate
         –  configuration
   –  satellite
      –  ethernet-satellite reference
         –  reboot
            –  now
            –  upgrade
         –  synchronize
         –  tech-support
            –  [url] string
   –  save
      –  bof
      –  configure
      –  debug
      –  li
```

© 2024 Nokia.

2.1.1 admin command descriptions

admin

Synopsis	Enter the administrative context for system operations
Context	admin
Tree	admin
Introduced	16.0.R1
Platforms	All

application-assurance

Synopsis	Enter the **application-assurance** context
Context	admin application-assurance
Tree	application-assurance
Description	Commands in this context configure Application Assurance (AA) upgrade and AA group upgrade operations.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group [aa-group-id] *reference*

Synopsis	Enter the **group** list instance
Context	admin application-assurance group *reference*
Tree	group
Description	Commands in this context configure the attributes of the group-specific upgrade.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-group-id**] *reference*

Synopsis	AA group ID
Context	admin application-assurance group *reference*
Tree	group
Reference	**state application-assurance group** *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

url-list [url-list-name] *reference*

Synopsis	Enter the **url-list** list instance
Context	admin application-assurance group *reference* url-list *reference*
Tree	url-list
Description	Commands in this context configure the URL list upgrade parameters.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**url-list-name**] *reference*

Synopsis	AA URL list name
Context	admin application-assurance group *reference* url-list *reference*
Tree	url-list
Reference	**state application-assurance group** *number* **url-list** *string*
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

upgrade

Synopsis	Upgrade the referenced URL list
Context	admin application-assurance group *reference* url-list *reference* upgrade
Tree	upgrade
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

upgrade

Synopsis	Upgrade to a new isa-aa.tim file
Context	admin application-assurance upgrade

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	upgrade
Description	This command loads a new isa-aa.tim file as part of a router-independent signature upgrade. An AA ISA reboot is required for the upgrade to take effect.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

clear

Synopsis	Enter the **clear** context
Context	admin clear
Tree	clear
Introduced	19.10.R1
Platforms	All

security

Synopsis	Enter the **security** context
Context	admin clear security
Tree	security
Introduced	19.10.R1
Platforms	All

lockout

Synopsis	Reset the lockout timer
Context	admin clear security lockout
Tree	lockout
Introduced	19.10.R1
Platforms	All

all

Synopsis	Clear lockout of all users
Context	admin clear security lockout all
Tree	all

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **all** or **user**.
Introduced	19.10.R1
Platforms	All

user *string*

Synopsis	User to be cleared of lockout
Context	admin clear security lockout user *string*
Tree	user
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: **all** or **user**.
Introduced	19.10.R1
Platforms	All

password-history

Synopsis	Clear the password history
Context	admin clear security password-history
Tree	password-history
Introduced	19.10.R1
Platforms	All

all

Synopsis	Clear password history of all users
Context	admin clear security password-history all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or **user**.
Introduced	19.10.R1
Platforms	All

user *string*

Synopsis	User to be cleared of password history information
Context	admin clear security password-history user *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	user
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: **all** or **user**.
Introduced	19.10.R1
Platforms	All

disconnect

Synopsis	Disconnect a user session
Context	admin disconnect
Tree	disconnect
Introduced	16.0.R1
Platforms	All

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the session to disconnect
Context	admin disconnect address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Introduced	19.10.R1
Platforms	All

op-table-bypass *boolean*

Synopsis	Avoid operation ID allocation
Context	admin disconnect op-table-bypass *boolean*
Tree	op-table-bypass
Description	When configured to **true**, the system bypasses the YANG-based operations infrastructure and avoids the allocation of an operation ID. This is useful if the global operations table is full and a delete operation or **admin disconnect** is required.
Introduced	21.5.R1
Platforms	All

session-id *number*

Synopsis	ID of the session to disconnect

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	admin disconnect session-id *number*
Tree	session-id
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

session-type *keyword*

Synopsis	Type of session to disconnect
Context	admin disconnect session-type *keyword*
Tree	session-type
Options	console, bluetooth, telnet, ssh, ftp, netconf, grpc, cron-ehs
Introduced	19.10.R1
Platforms	All

username *string*

Synopsis	Username to disconnect
Context	admin disconnect username *string*
Tree	username
String Length	1 to 32
Introduced	19.10.R1
Platforms	All

ipsec

Synopsis	Perform IPsec operations
Context	admin ipsec
Tree	ipsec
Introduced	23.10.R1
Platforms	All

show

Synopsis	Display IPsec information

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	admin ipsec show
Tree	show
Introduced	23.10.R1
Platforms	All

key

Synopsis	Display IPsec key history
Context	admin ipsec show key
Tree	key
Introduced	23.10.R1
Platforms	All

gateway *string*

Synopsis	IPsec gateway name
Context	admin ipsec show key gateway *string*
Tree	gateway
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: (**gateway**, **peer-tunnel-ip-address**, and **peer-tunnel-port**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-tunnel *string*

Synopsis	IPsec transport mode IP tunnel name
Context	admin ipsec show key ip-tunnel *string*
Tree	ip-tunnel
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: (**gateway**, **peer-tunnel-ip-address**, and **peer-tunnel-port**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	23.10.R1
Platforms	All

Tree	type
Options	ike, child
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	All

nat

Synopsis	Enter the **nat** context
Context	admin nat
Tree	nat
Introduced	21.2.R1
Platforms	All

save-deterministic-script

Synopsis	Save script that computes deterministic NAT map entries
Context	admin nat save-deterministic-script
Tree	save-deterministic-script
Introduced	21.2.R1
Platforms	All

reboot

Synopsis	Reboot CPM or force an upgrade of system boot ROMs
Context	admin reboot
Tree	reboot
Introduced	16.0.R1
Platforms	All

[**card**] *keyword*

Synopsis	Card to reboot
Context	admin reboot [card] *keyword*
Tree	[card]

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	active, standby, upgrade
Introduced	16.0.R1
Platforms	All

hold

Synopsis	Hold a rebooted standby CPM from coming back online
Context	admin reboot hold
Tree	hold
Introduced	19.10.R1
Platforms	7750 SR-7s, 7750 SR-14s, VSR

now

Synopsis	Reboot immediately without prompts or confirmation
Context	admin reboot now
Tree	now
Introduced	16.0.R1
Platforms	All

redundancy

Synopsis	Enter the **redundancy** context
Context	admin redundancy
Tree	redundancy
Introduced	16.0.R1
Platforms	All

force-switchover

Synopsis	Force a switchover to the standby CPM
Context	admin redundancy force-switchover
Tree	force-switchover
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.

ignore-status

Synopsis	Switch to the standby CPM regardless of its status
Context	admin redundancy force-switchover ignore-status
Tree	ignore-status
Introduced	19.10.R1
Platforms	7950 XRS

now

Synopsis	Force the switchover to the standby CPM immediately
Context	admin redundancy force-switchover now
Tree	now
Introduced	16.0.R1
Platforms	All

synchronize

Synopsis	Synchronize the standby CPM
Context	admin redundancy synchronize
Tree	synchronize
Introduced	20.10.R1
Platforms	All

boot-environment

Synopsis	Synchronize all files required for the boot process
Context	admin redundancy synchronize boot-environment
Tree	boot-environment
Notes	The following elements are part of a mandatory choice: **boot-environment**, **certificate**, or **configuration**.
Introduced	20.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

certificate

Synopsis	Synchronize imported certificate, key, and CRL files
Context	admin redundancy synchronize certificate
Tree	certificate
Notes	The following elements are part of a mandatory choice: **boot-environment**, **certificate**, or **configuration**.
Introduced	23.3.R1
Platforms	All

configuration

Synopsis	Synchronize the configuration files
Context	admin redundancy synchronize configuration
Tree	configuration
Description	When specified, the system synchronizes the primary, secondary, and tertiary configuration files.
Notes	The following elements are part of a mandatory choice: **boot-environment**, **certificate**, or **configuration**.
Introduced	20.10.R1
Platforms	All

satellite

Synopsis	Perform administrative operations for satellites
Context	admin satellite
Tree	satellite
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ethernet-satellite [satellite-id] *reference*

Synopsis	Enter the **ethernet-satellite** list instance
Context	admin satellite ethernet-satellite *reference*
Tree	ethernet-satellite
Introduced	22.2.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**satellite-id**] *reference*

Synopsis	Satellite ID
Context	admin satellite ethernet-satellite *reference*
Tree	ethernet-satellite
Reference	**state satellite ethernet-satellite** *number*
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reboot

Synopsis	Initiate an administrative reboot of the chassis
Context	admin satellite ethernet-satellite *reference* reboot
Tree	reboot
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

now

Synopsis	Reboot immediately without prompts or confirmation
Context	admin satellite ethernet-satellite *reference* reboot now
Tree	now
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

upgrade

Synopsis	Initiate a firmware image update during the reboot
Context	admin satellite ethernet-satellite *reference* reboot upgrade
Tree	upgrade
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

synchronize

Synopsis	Synchronize the chassis to the boot image
Context	admin satellite ethernet-satellite *reference* synchronize
Tree	synchronize
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tech-support

Synopsis	Save satellite technical support information
Context	admin satellite ethernet-satellite *reference* tech-support
Tree	tech-support
Description	This command creates a system core dump. If no file URL is specified and the **ts-location** command is configured in the **configure system security tech-support** context, the technical support file is automatically generated by the system with the file name based on the system name and the date and time, and is saved to the directory indicated by the **ts-location** configuration. The format of the auto-generated file name is ts-XXXXX.YYYYMMDD.HHMMUTC.dat, where: • XXXXX is the system name with special characters expanded to avoid problems with file systems (for example, a period (.) is expanded to %2E) • YYYYMMDD is the date with leading zeros on the year, month, and day • HHMM is the hours and minutes in UTC time (24 hour format, always 4 characters, with leading zeros on the hours and minutes) **Note**: This command is not supported over non-interactive interfaces (for example, NETCONF). **Note**: This command should only be used with authorized direction from the Nokia Technical Assistance Center (TAC).
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**url**] *string*

Synopsis	URL to save technical support information
Context	admin satellite ethernet-satellite *reference* tech-support [url] *string*
Tree	[url]
String Length	1 to 180

configure

Synopsis	Show the configure region configuration
Context	admin show configuration configure
Tree	configure
Notes	The following elements are part of a choice: **bof**, **configure**, **debug**, or **li**.
Introduced	20.7.R1
Platforms	All

converted

Synopsis	Include converted third-party model configuration
Context	admin show configuration converted
Tree	converted
Description	This option specifies the inclusion of converted configuration values from third-party models in the output and is only available when **configure system management-interface yang-modules openconfig-modules** is set to **true**. This option should only be used in the **configure** region when third-party models are used. The output with this option is the same as **admin show configuration** when used in other configuration regions.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

debug

Synopsis	Show the debug region configuration
Context	admin show configuration debug
Tree	debug
Notes	The following elements are part of a choice: **bof**, **configure**, **debug**, or **li**.
Introduced	21.5.R1
Platforms	All

depth *number*

Description	Commands in this context specify options for Certificate Management Protocol v2 (CMPv2) operations.
Introduced	23.3.R1
Platforms	All

cert-request

Synopsis	Request an additional certificate
Context	admin system security pki cmpv2 cert-request
Tree	cert-request
Description	When specified, the system requests an additional certificate after the initial certificate has been obtained from the CA. The request is authenticated by a signature signed by the current key, along with the current certificate. The hash algorithm used for the signature depends on the key type:

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- DSA key - SHA1
- RSA key: MD5 | SHA1 | SHA224 | SHA256 | SHA384 | SHA512 (default is SHA1)
- ECDSA key: SHA1 | SHA224 | SHA256 | SHA384 | SHA512 (default is SHA256)

CA may not return a certificate immediately, for example, if the request process requires manual intervention. The **poll** command can be used to poll the status of the request.

Introduced	23.3.R1
Platforms	All

ca-profile *reference*

Synopsis	PKI CA profile name
Context	admin system security pki cmpv2 cert-request ca-profile *reference*

Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	All

initial-registration

Synopsis	Request initial certificate using the CMPv2 protocol
Context	admin system security pki cmpv2 initial-registration
Tree	initial-registration
Description	When specified, the system requests the initial certificate from the CA using the CMPv2 initial registration procedure.

The **ca-profile** parameter specifies a CA profile which includes CMP server information.

The **key-to-certify** parameter is an imported key file to be certified by the CA.

The request is authenticated via one of the following methods:

- A password and a reference number that pre-distributed by CA via out-of-band means. The specified password and reference number are not necessarily in the key-list configured in the corresponding CA-Profile. If key-list is not configured in the corresponding CA profile, the system uses the existing password to authenticate the CMPv2 packets from server if it is in password protection. If key-list is configured in the corresponding CA profile and the server does not send SenderKID, the system

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

uses the lexicographical first key in the key-list to authenticate the CMPv2 packets from the server in case it is in password protection mode.

- A signature signed by the protection-key or key-to-certify, optionally with with the corresponding certificate. If the **protection-key** command is not specified, the system uses the **key-to-certify** configuration for message protection. The hash algorithm used for the signature depends on the key type. See the **cert-request** command for details. Optionally, the system may send a certificate or a chain of certificates in the extraCertsfield. The certificate is specified by the **certificate** parameter and must include the public key of the key used for message protection. Sending a chain is enabled by specifying the **send-chain** and **with-ca** command options.

The **subject-dn** command specifies the subject of the requesting certificate.

The **save-as** command specifies the full path name for saving the result certificate.

The CA may not return the certificate immediately, for example, if the request process requires manual intervention. In such cases, the **poll** command can be used to poll the status of the request.

poll

Synopsis	Poll the CMPv2 server for pending request status
Context	admin system security pki cmpv2 poll
Tree	poll
Description	When specified, the system polls the status of the pending CMPv2 request toward the specified CA. If the response is ready, the system resumes the CMPv2 protocol exchange with the server. SR OS allows only one pending CMP request per CA; therefore, no new request is allowed when a pending request is present.
Introduced	23.3.R1

enroll

Synopsis	Enroll a new certificate with CA with the EST protocol
Context	admin system security pki est enroll
Tree	enroll
Description	When specified, the system enrolls a new certificate with Certificate Authority (CA) by the EST protocol specified with the **est-profile** command with a imported private key specified by the **key** command. The **est-profile** commad specifies the authentication between the system and EST server. The **hash-alg**, **subject-dn**, **domain-name**, and **ip-address** commands are used to generate the Certificate Signing Request (CSR) in the EST request message. The **domain-name** and **ip-address** commands are used as subject alternative names. If **validate-certificate-chain** is specified, the system validates the chain of result certificate before importing it. The certificate chain is the chain of all certificates from the

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

result certificate to the issuing CA. The result certificate is the new certificate returned by the EST server.

The result certificate is imported and saved with the filename specified by the **output-file** command. If the **force** command is specified, the system overwrites the existing file with same name as the output file.

Introduced	23.3.R1
Platforms	All

Context	compare *string* [to] *string* [cli-path] *string*
Tree	[cli-path]
Introduced	20.10.R1
Platforms	All

flat

Synopsis	Show the context from the pwc on each line
Context	compare *string* [to] *string* flat
Tree	flat
Description	This option shows the hierarchy on each line starting from the present working context.
Notes	The following elements are part of a choice: **flat** or **netconf-rpc**.
Introduced	16.0.R1
Platforms	All

full-context

Synopsis	Show the full context on each line
Context	compare *string* [to] *string* full-context
Tree	full-context
Introduced	16.0.R1
Platforms	All

lines *number*

Synopsis	Number of lines of context to display before and after
Context	compare *string* [to] *string* lines *number*
Tree	lines
Description	This command specifies the number of lines of context to display before and after changed elements. The context is evaluated separately at each container. If the parameter value is larger than the available context, the maximum available context up to the container boundary is displayed.
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

netconf-rpc

Synopsis	Display changes in NETCONF <edit-config> RPC format
Context	compare *string* [to] *string* netconf-rpc
Tree	netconf-rpc
Description	This option specifies the display of changes in NETCONF <edit-config> RPC format. This option is only supported with the **summary** option.
Notes	The following elements are part of a choice: **flat** or **netconf-rpc**.
Introduced	21.5.R1
Platforms	All

summary

Synopsis	Suppress specific differences and display a summary
Context	compare *string* [to] *string* summary
Tree	summary
Description	This command allows the suppression of specific differences and displays a summarized comparison. The summarized differences in elements under the highest level container that was deleted is displayed with { ... }. A tilde (~) character is displayed to indicate the new value of an element that has changed.
Introduced	16.0.R1
Platforms	All

copy

command-completion

Synopsis	Enter the **command-completion** context
Context	environment command-completion
Tree	command-completion
Introduced	16.0.R1
Platforms	All

enter *boolean*

Synopsis	Complete the command when the Enter key is pressed
Context	environment command-completion enter *boolean*
Tree	enter
Default	true
Introduced	16.0.R1
Platforms	All

space *boolean*

Synopsis	Complete the command when the Space key is pressed
Context	environment command-completion space *boolean*
Tree	space
Default	true
Introduced	16.0.R1
Platforms	All

tab *boolean*

Synopsis	Complete the command when the Tab key is pressed
Context	environment command-completion tab *boolean*
Tree	tab
Default	true
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

console

Synopsis	Enter the **console** context
Context	environment console
Tree	console
Introduced	16.0.R1
Platforms	All

length *number*

Synopsis	Number of lines displayed on the console
Context	environment console length *number*
Tree	length
Range	24 to 512
Default	24
Introduced	16.0.R1
Platforms	All

width *number*

Synopsis	Number of columns displayed on the console
Context	environment console width *number*
Tree	width
Range	80 to 512
Default	80
Introduced	16.0.R1
Platforms	All

info-output

Synopsis	Enter the **info-output** context
Context	environment info-output
Tree	info-output
Introduced	22.2.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

always-display

Synopsis	Enter the **always-display** context
Context	environment info-output always-display
Tree	always-display
Description	Commands in this context specify elements that are always displayed, regardless of whether they are set to their default value.
Introduced	22.2.R1
Platforms	All

admin-state *boolean*

Synopsis	Always display admin-state elements
Context	environment info-output always-display admin-state *boolean*
Tree	admin-state
Description	When configured to **true**, the values of the **admin-state** elements in **info** output (without the **detail** option) are always displayed, even if they are the default values.
Default	false
Introduced	22.2.R1
Platforms	All

message-severity-level

Synopsis	Enter the **message-severity-level** context
Context	environment message-severity-level
Tree	message-severity-level
Introduced	16.0.R1
Platforms	All

cli *keyword*

Synopsis	Message severity threshold for CLI messages
Context	environment message-severity-level cli *keyword*
Tree	cli
Options	warning, info

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	info
Introduced	16.0.R1
Platforms	All

more *boolean*

Synopsis	Activate the pager when output is longer than a screen
Context	environment more *boolean*
Tree	more
Default	true
Introduced	16.0.R1
Platforms	All

progress-indicator

Synopsis	Enter the **progress-indicator** context
Context	environment progress-indicator
Tree	progress-indicator
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the progress indicator
Context	environment progress-indicator admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

delay *number*

Synopsis	Delay before the progress indicator is displayed
Context	environment progress-indicator delay *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	delay
Range	0 to 10000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

type *keyword*

Synopsis	Progress indicator output style
Context	environment progress-indicator type *keyword*
Tree	type
Options	dots
Default	dots
Introduced	16.0.R1
Platforms	All

prompt

Synopsis	Enter the **prompt** context
Context	environment prompt
Tree	prompt
Introduced	16.0.R1
Platforms	All

context *boolean*

Synopsis	Show the current command context in the prompt
Context	environment prompt context *boolean*
Tree	context
Default	true
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

newline *boolean*

Synopsis	Add a new line before every prompt line
Context	environment prompt newline *boolean*
Tree	newline
Default	true
Introduced	16.0.R1
Platforms	All

timestamp *boolean*

Synopsis	Show the timestamp before the first prompt line
Context	environment prompt timestamp *boolean*
Tree	timestamp
Default	false
Introduced	16.0.R1
Platforms	All

uncommitted-changes-indicator *boolean*

Synopsis	Show an asterisk (*) when uncommitted changes exist
Context	environment prompt uncommitted-changes-indicator *boolean*
Tree	uncommitted-changes-indicator
Default	true
Introduced	16.0.R1
Platforms	All

python

Synopsis	Enter the **python** context
Context	environment python
Tree	python
Introduced	21.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

memory-reservation *number*

Synopsis	Memory reserved per Python interpreter
Context	environment python memory-reservation *number*
Tree	memory-reservation
Range	1 to 500
Units	megabytes
Introduced	21.10.R1
Platforms	All

minimum-available-memory *number*

Synopsis	Minimum memory requirement to run a Python interpreter
Context	environment python minimum-available-memory *number*
Tree	minimum-available-memory
Range	5 to 50
Units	percent
Introduced	21.10.R1
Platforms	All

timeout *number*

Synopsis	Maximum run time before a Python application is stopped
Context	environment python timeout *number*
Tree	timeout
Range	30 to 86400
Units	seconds
Default	3600
Introduced	21.10.R1
Platforms	All

time-display *keyword*

Synopsis	Time zone to display time
Context	environment time-display *keyword*
Tree	time-display

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the time zone for a timestamp displayed in outputs, such as event logs and **show** commands for the current CLI session. In event logs, the selected time is used to control the timestamps in the CLI output of **show log log-id** and in YANG state in the /state/log/log-id branch (for logs such as session, cli, memory, SNMP, and NETCONF). Also see the **configure log log-id time-format** command.
Options	local, utc
Default	local
Introduced	16.0.R1
Platforms	All

time-format *keyword*

Synopsis	Format to display the date and time
Context	environment time-format *keyword*
Tree	time-format
Description	This command specifies the format of the time display in the prompt, configuration, state, and certain **show** command output in the current CLI session.
Options	iso-8601, rfc-1123, rfc-3339
Default	rfc-3339
Introduced	20.5.R1
Platforms	All

Use subject to Terms available at: www.nokia.com/terms.

2.4 file commands

See “File management” in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Basic System Configuration Guide* for more information.

```
file
   –  change-directory
      –  [url] (sat-url | cflash-url | string-not-all-spaces | ftp-url)
   –  checksum
      –  [type] keyword
      –  [url] (sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url)
   –  copy
      –  client-tls-profile string
      –  [destination-url] (sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-
url-loose | scp-url)
      –  direct-http
      –  force
      –  proxy string
      –  recursive
      –  router-instance string
      –  [source-url] (sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-
loose)
   –  disable
      –  active
      –  cflash-id string
      –  standby
   –  edit
      –  [url] (sat-url | cflash-url | string-not-all-spaces)
   –  enable
      –  active
      –  cflash-id string
      –  standby
   –  format
      –  [cflash-id] string
   –  list
      –  reverse
      –  [sort-order] keyword
      –  [url] (sat-url | cflash-url | string-not-all-spaces | ftp-url)
   –  make-directory
      –  [url] (sat-url | cflash-url | string-not-all-spaces | ftp-url)
   –  move
      –  client-tls-profile string
      –  [destination-url] (sat-url | cflash-url | string-not-all-spaces | ftp-url | http-url-
loose)
      –  direct-http
      –  force
      –  proxy string
      –  [source-url] (sat-url | cflash-url | string-not-all-spaces | ftp-url | http-url-loose)
   –  permission
      –  [attribute] keyword
      –  [url] (sat-url | cflash-url | string-not-all-spaces)
   –  remove
      –  client-tls-profile string
      –  direct-http
      –  force
      –  proxy string
      –  [url] (sat-url | cflash-url | string-not-all-spaces | ftp-url | http-url-loose)
   –  remove-directory
      –  force
      –  recursive
      –  [url] (sat-url | cflash-url | string-not-all-spaces | ftp-url)
```

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

file repair

```
   –  repair
      –  [cflash-id] string
   –  show
      –  client-tls-profile string
      –  direct-http
      –  proxy string
      –  [url] (sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-loose)
   –  unzip
      –  create-destination
      –  [destination-url] (sat-url | cflash-url | string-not-all-spaces)
      –  force
      –  list
      –  [source-url] (sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-
loose)
   –  version
      –  [url] (sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url)
```

2.4.1 file command descriptions

file

Synopsis	Perform file operations
Context	file
Tree	file
Description	Commands in this context execute file management operations.
Introduced	20.10.R1
Platforms	All

change-directory

Synopsis	Change the working directory
Context	file change-directory
Tree	change-directory
Introduced	20.10.R1
Platforms	All

[**url**] *(sat-url | cflash-url | string-not-all-spaces | ftp-url)*

Synopsis	New working directory URL
Context	file change-directory [url] *(sat-url | cflash-url | string-not-all-spaces | ftp-url)*
Tree	[url]
String Length	1 to 200
Default	.
Introduced	20.10.R1
Platforms	All

checksum

Synopsis	Compute and display checksums
Context	file checksum
Tree	checksum

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command computes and displays an image file or a checksum for a file.
Introduced	20.10.R1
Platforms	All

[**type**] *keyword*

Synopsis	Checksum option type
Context	file checksum [type] *keyword*
Tree	[type]
Options	image, md5, sha256
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

[**url**] *(sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url)*

Synopsis	File URL
Context	file checksum [url] *(sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url)*
Tree	[url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

copy

Synopsis	Copy files
Context	file copy
Tree	copy
Introduced	20.10.R1
Platforms	All

client-tls-profile *string*

Synopsis	Connect over HTTP with a client TLS profile

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	file copy client-tls-profile *string*
Tree	client-tls-profile
String Length	1 to 32
Introduced	20.10.R1
Platforms	All

[**destination-url**] *(sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-loose | scp-url)*

Synopsis	Destination URL or '.' for the working directory
Context	file copy [destination-url] *(sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-loose | scp-url)*
Tree	[destination-url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

direct-http

Synopsis	Allow direct HTTP connection, do not follow redirects
Context	file copy direct-http
Tree	direct-http
Introduced	20.10.R1
Platforms	All

force

Synopsis	Force copy without prompting before overwriting
Context	file copy force
Tree	force
Introduced	20.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

proxy *string*

Synopsis	Connect over HTTP with a proxy
Context	file copy proxy *string*
Tree	proxy
String Length	1 to 255
Introduced	20.10.R1
Platforms	All

recursive

Synopsis	Copy sub-directories encountered at the source URL
Context	file copy recursive
Tree	recursive
Description	This command recursively copies files and directories. If files or directories already exist, the operator is prompted to overwrite them. When the **force** command is enabled, a positive response to the overwrite prompts is assumed, and the operator is not prompted for confirmation. The existing files or directories are overwritten.
Introduced	21.10.R1
Platforms	All

router-instance *string*

Synopsis	Router name or VPRN service name
Context	file copy router-instance *string*
Tree	router-instance
Introduced	23.10.R1
Platforms	All

[**source-url**] *(sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-loose)*

Synopsis	Source URL
Context	file copy [source-url] *(sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-loose)*
Tree	[source-url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

disable

Synopsis	Disable compact flash devices
Context	file disable
Tree	disable
Introduced	20.10.R1
Platforms	All

active

Synopsis	Disable all devices on the active CPM
Context	file disable active
Tree	active
Notes	The following elements are part of a choice: **active**, **cflash-id**, or **standby**.
Introduced	20.10.R1
Platforms	All

cflash-id *string*

Synopsis	Disable the compact flash device
Context	file disable cflash-id *string*
Tree	cflash-id
String Length	4 to 6
Notes	The following elements are part of a choice: **active**, **cflash-id**, or **standby**.
Introduced	20.10.R1
Platforms	All

standby

Synopsis	Disable all devices on the standby CPM
Context	file disable standby
Tree	standby
Notes	The following elements are part of a choice: **active**, **cflash-id**, or **standby**.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.10.R1
Platforms	All

edit

Synopsis	Edit files with the text editor
Context	file edit
Tree	edit
Description	This command allows users to edit files with the text editor. See "Text editor" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Basic System Configuration Guide* for more information.
Introduced	22.10.R1
Platforms	All

[**url**] *(sat-url | cflash-url | string-not-all-spaces)*

Synopsis	File URL
Context	file edit [url] *(sat-url | cflash-url | string-not-all-spaces)*
Tree	[url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

enable

Synopsis	Enable compact flash devices
Context	file enable
Tree	enable
Introduced	20.10.R1
Platforms	All

active

Synopsis	Enable all devices on the active CPM

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	file enable active
Tree	active
Notes	The following elements are part of a choice: **active**, **cflash-id**, or **standby**.
Introduced	20.10.R1
Platforms	All

cflash-id *string*

Synopsis	Enable the compact flash device
Context	file enable cflash-id *string*
Tree	cflash-id
String Length	4 to 6
Notes	The following elements are part of a choice: **active**, **cflash-id**, or **standby**.
Introduced	20.10.R1
Platforms	All

standby

Synopsis	Enable all devices on the standby CPM
Context	file enable standby
Tree	standby
Notes	The following elements are part of a choice: **active**, **cflash-id**, or **standby**.
Introduced	20.10.R1
Platforms	All

format

Synopsis	Format a compact flash device
Context	file format
Tree	format
Introduced	20.10.R1
Platforms	All

© 2024 Nokia.

[**cflash-id**] *string*

Synopsis	Compact flash ID
Context	file format [cflash-id] *string*
Tree	[cflash-id]
String Length	4 to 6
Introduced	20.10.R1
Platforms	All

list

Synopsis	List directory contents
Context	file list
Tree	list
Introduced	20.10.R1
Platforms	All

reverse

Synopsis	List files in reverse sort order
Context	file list reverse
Tree	reverse
Introduced	20.10.R1
Platforms	All

[**sort-order**] *keyword*

Synopsis	Sort order for the directory
Context	file list [sort-order] *keyword*
Tree	[sort-order]
Options	date, name, size
Introduced	20.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**url**] *(sat-url | cflash-url | string-not-all-spaces | ftp-url)*

Synopsis	Location of the directory to be listed
Context	file list [url] *(sat-url | cflash-url | string-not-all-spaces | ftp-url)*
Tree	[url]
String Length	1 to 200
Default	.
Introduced	20.10.R1
Platforms	All

make-directory

Synopsis	Make a directory
Context	file make-directory
Tree	make-directory
Introduced	20.10.R1
Platforms	All

[**url**] *(sat-url | cflash-url | string-not-all-spaces | ftp-url)*

Synopsis	Directory location
Context	file make-directory [url] *(sat-url | cflash-url | string-not-all-spaces | ftp-url)*
Tree	[url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

move

Synopsis	Move or rename files or directories
Context	file move
Tree	move
Introduced	20.10.R1
Platforms	All

© 2024 Nokia.

force

Synopsis	Force removal without prompting
Context	file remove-directory force
Tree	force
Introduced	20.10.R1
Platforms	All

recursive

Synopsis	Remove directory and contents recursively
Context	file remove-directory recursive
Tree	recursive
Introduced	20.10.R1
Platforms	All

[**url**] *(sat-url | cflash-url | string-not-all-spaces | ftp-url)*

Synopsis	Directory URL
Context	file remove-directory [url] *(sat-url | cflash-url | string-not-all-spaces | ftp-url)*
Tree	[url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

repair

Synopsis	Repair a compact flash file system
Context	file repair
Tree	repair
Introduced	20.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**cflash-id**] *string*

Synopsis	Compact flash ID
Context	file repair [cflash-id] *string*
Tree	[cflash-id]
String Length	4 to 6
Introduced	20.10.R1
Platforms	All

show

Synopsis	Display the contents of a file
Context	file show
Tree	show
Introduced	20.10.R1
Platforms	All

client-tls-profile *string*

Synopsis	Connect over HTTP with a client TLS profile
Context	file show client-tls-profile *string*
Tree	client-tls-profile
String Length	1 to 32
Introduced	20.10.R1
Platforms	All

direct-http

Synopsis	Allow direct HTTP connection, do not follow redirects
Context	file show direct-http
Tree	direct-http
Introduced	20.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

proxy *string*

Synopsis	Connect over HTTP with a proxy
Context	file show proxy *string*
Tree	proxy
String Length	1 to 255
Introduced	20.10.R1
Platforms	All

[**url**] *(sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-loose)*

Synopsis	File URL
Context	file show [url] *(sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-loose)*
Tree	[url]
String Length	1 to 200
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

unzip

Synopsis	Unzip files
Context	file unzip
Tree	unzip
Introduced	20.10.R1
Platforms	All

create-destination

Synopsis	Create destination directory if it does not exist
Context	file unzip create-destination
Tree	create-destination
Introduced	20.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**destination-url**] *(sat-url | cflash-url | string-not-all-spaces)*

Synopsis	Destination URL or '.' for the working directory
Context	file unzip [destination-url] *(sat-url | cflash-url | string-not-all-spaces)*
Tree	[destination-url]
String Length	1 to 200
Introduced	20.10.R1
Platforms	All

force

Synopsis	Force the unzip operation without prompting
Context	file unzip force
Tree	force
Description	When configured, files and directories that already exist in the destination URL are overwritten without prompting. The system does not automatically create directories explicitly specified by the destination URL. To allow the system to create new directories, use the **create-destination** command. When unconfigured, the system prompts the user before overwriting a file or directory.
Notes	The following elements are part of a choice: **force** or **list**.
Introduced	20.10.R1
Platforms	All

list

Synopsis	List the file contents without the unzip operation
Context	file unzip list
Tree	list
Notes	The following elements are part of a choice: **force** or **list**.
Introduced	20.10.R1
Platforms	All

[**source-url**] *(sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url | http-url-loose)*

Synopsis	Source URL

Tree	priority
Range	0 to 7
Default	7
Introduced	20.2.R1
Platforms	All

two-way-slm-test

Synopsis	Initiate a two-way SLM test in SAA
Context	oam eth-cfm two-way-slm-test
Tree	two-way-slm-test

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.2.R1
Platforms	All

[**destination**] *(mac-unicast-address-no-zero* | *number)*

Synopsis	Destination MAC address or remote MEP ID of the peer
Context	oam eth-cfm two-way-slm-test [destination] *(mac-unicast-address-no-zero* | *number)*
Tree	[destination]
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

interval *(number* | *decimal-number)*

Synopsis	Time between probes within the test run
Context	oam eth-cfm two-way-slm-test interval *(number* | *decimal-number)*
Tree	interval
Range	1 to 10
Units	seconds
Default	5
Introduced	20.2.R1
Platforms	All

ma-admin-name *reference*

Synopsis	Association name
Context	oam eth-cfm two-way-slm-test ma-admin-name *reference*
Tree	ma-admin-name
Reference	**state eth-cfm domain** *string* **association** *string*
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

md-admin-name *reference*

Synopsis	Domain name
Context	oam eth-cfm two-way-slm-test md-admin-name *reference*
Tree	md-admin-name
Reference	**state eth-cfm domain** *string*
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

mep-id *number*

Synopsis	Local Maintenance Association Endpoint (MEP) ID
Context	oam eth-cfm two-way-slm-test mep-id *number*
Tree	mep-id
Range	1 to 8191
Notes	This element is mandatory.
Introduced	20.2.R1
Platforms	All

priority *number*

Synopsis	Frame priority that can be manipulated by QoS policies
Context	oam eth-cfm two-way-slm-test priority *number*
Tree	priority
Range	0 to 7
Default	7
Introduced	20.2.R1
Platforms	All

send-count *number*

Synopsis	Number of two-way SLM test messages to send
Context	oam eth-cfm two-way-slm-test send-count *number*
Tree	send-count

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 1000
Default	1
Introduced	20.2.R1
Platforms	All

size *number*

Synopsis	Data portion size of the data TLV, octet string allowed
Context	oam eth-cfm two-way-slm-test size *number*
Tree	size
Description	This command specifies the size of the data portion of the data TLV allowing for an optional octet string to be included.
Range	0 to 1500
Units	bytes
Default	0
Introduced	20.2.R1
Platforms	All

timeout *number*

Synopsis	Wait time for a reply to a sent message request
Context	oam eth-cfm two-way-slm-test timeout *number*
Tree	timeout
Description	This command specifies the time the router waits for a message reply after sending a message request. Upon expiration of the timeout, the router assumes that the message response is not received. Any response received after the timeout is silently discarded.
Range	1 to 10
Units	seconds
Default	5
Introduced	20.2.R1
Platforms	All

lsp-ping

Synopsis	Perform a Label Switched Path (LSP) ping test

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	oam lsp-ping
Tree	lsp-ping
Introduced	23.3.R1
Platforms	All

bgp-label

Synopsis	Perform a BGP-label LSP trace test
Context	oam lsp-ping bgp-label
Tree	bgp-label
Description	This command option performs a Border Gateway Protocol (BGP-label) LSP trace test using Target FEC Stack code point "BGP labeled IPv4 prefix".
Introduced	23.3.R1
Platforms	All

fc *keyword*

Synopsis	QoS forwarding class for the sent echo request packet
Context	oam lsp-ping bgp-label fc *keyword*
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Default	be
Introduced	23.3.R1
Platforms	All

interface *reference*

Synopsis	Egress router interface to use with path destination
Context	oam lsp-ping bgp-label interface *reference*
Tree	interface
Reference	**state router** *string* **interface** *string*
Notes	The following elements are part of a choice: **interface** or **next-hop**.
Introduced	23.3.R1

source-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source IP address
Context	oam lsp-ping sr-ospf3 source-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	source-ip-address
Introduced	23.3.R1
Platforms	All

timeout *number*

Synopsis	Time to wait for a reply after sending an echo request
Context	oam lsp-ping sr-ospf3 timeout *number*
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	23.3.R1
Platforms	All

ttl *number*

Synopsis	TTL value for the MPLS label of the echo request
Context	oam lsp-ping sr-ospf3 ttl *number*
Tree	ttl
Range	1 to 255
Default	255
Introduced	23.3.R1
Platforms	All

sr-policy

Synopsis	Perform an SR policy LSP ping test
Context	oam lsp-ping sr-policy
Tree	sr-policy
Introduced	23.3.R1
Platforms	All

service-activation-testhead

Synopsis	Start or stop Service Activation Testhead service test
Context	oam service-activation-testhead
Tree	service-activation-testhead
Introduced	23.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

service-test [service-test-name] *reference*

Synopsis	Service test name
Context	oam service-activation-testhead service-test *reference*
Tree	service-test
Introduced	23.10.R1
Platforms	All

[**service-test-name**] *reference*

Synopsis	Name of the service test to be started or stopped
Context	oam service-activation-testhead service-test *reference*
Tree	service-test
Reference	**state test-oam service-activation-testhead service-test** *string*
Notes	This element is part of a list key.
Introduced	23.10.R1
Platforms	All

start

Synopsis	Start OAM SATH service test
Context	oam service-activation-testhead service-test *reference* start
Tree	start
Description	This command starts an OAM Service Activtation Testhead (SATH) service test. Only one instance of a service test is allowed for the specified *service-test-name*. If the user attempts to start another instance of a service test for the same *service-test-name* while the current instance is still running, an error is generated.
Introduced	23.10.R1
Platforms	All

stop

Synopsis	Stop OAM SATH service test
Context	oam service-activation-testhead service-test *reference* stop

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	stop
Description	This command stops an OAM Service Activtation Testhead (SATH) service test. If the user attempts to stop a service test that is already complete, an error is generated.
Introduced	23.10.R1
Platforms	All

password

Synopsis	Change the local user password
Context	password
Tree	password
Introduced	20.10.R1
Platforms	All

ping

Synopsis	Ping an IP address or DNS name
Context	ping
Tree	ping
Introduced	19.10.R1
Platforms	All

bypass-routing

Synopsis	Bypass routing table when sending ping request to host
Context	ping bypass-routing
Tree	bypass-routing
Description	When configured, the system bypasses the routing table when sending the ping request to a host on a directly-attached network. If the host is not on a directly-attached network, an error is returned.
Notes	The following elements are part of a choice: **bypass-routing**, **interface**, **next-hop-address**, or **subscriber**.
Introduced	19.10.R1
Platforms	All

Use subject to Terms available at: www.nokia.com/terms.

candidate-path

Synopsis	Ping candidate path of the SRv6 policy
Context	ping candidate-path
Tree	candidate-path
Description	When configured, this command allows the user to specify a candidate path of the SRv6 policy to ping. The candidate path does not need to be the currently active candidate path.
Introduced	23.10.R1
Platforms	All

color *number*

Synopsis	Color identifier of the Segment Routing IPv6 policy
Context	ping color *number*
Tree	color
Max. Range	0 to 4294967295
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	23.7.R1
Platforms	All

count *number*

Synopsis	Number of ping requests to send to the remote host
Context	ping count *number*
Tree	count
Range	1 to 100000
Units	packets
Default	5
Introduced	19.10.R1
Platforms	All

[**destination**] *(ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces)*

Synopsis	Destination IP address or DNS name

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	ping [destination] *(ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces)*
Tree	[destination]
String Length	1 to 128
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	19.10.R1
Platforms	All

distinguisher *number*

Synopsis	SRv6 policy candidate path distinguisher
Context	ping distinguisher *number*
Tree	distinguisher
Description	This command specifies the distinguisher of the SRv6 policy candidate path to send the ping probe on. This command must be configured if the **protocol-owner** command is configured to **bgp**.
Range	1 to 4294967295
Introduced	23.10.R1
Platforms	All

do-not-fragment

Synopsis	Do not fragment the request frame
Context	ping do-not-fragment
Tree	do-not-fragment
Description	This command sets the do-not-fragment bit in the IPv4 header. This prevents packet fragmentation along the path when there is an MTU mismatch.
Introduced	19.10.R1
Platforms	All

endpoint *string*

Synopsis	Endpoint identifier of the Segment Routing IPv6 policy to be pinged
Context	ping endpoint *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	endpoint
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	23.7.R1
Platforms	All

fc *keyword*

Synopsis	Forwarding class option for the transmitted packet
Context	ping fc *keyword*
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Default	nc
Introduced	19.10.R1
Platforms	All

interface *(reference | reference | reference | reference | reference)*

Synopsis	Sending interface name
Context	ping interface *(reference | reference | reference | reference | reference)*

distinguisher *number*

Synopsis	SRv6 policy candidate path distinguisher
Context	traceroute distinguisher *number*
Tree	distinguisher
Description	This command specifies the distinguisher of the SRv6 policy candidate path to send the traceroute probe on. This command must be configured if the **protocol-owner** command is configured to **bgp**.
Range	1 to 4294967295
Introduced	23.10.R1
Platforms	All

endpoint *string*

Synopsis	Endpoint of the SRv6 policy to trace

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	traceroute endpoint *string*
Tree	endpoint
Description	This command configures an IPv6 endpoint address for an SRv6 policy as the target of the traceroute.
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	23.3.R1
Platforms	All

min-ttl *number*

Synopsis	First hop traceroute probes using the TTL value
Context	traceroute min-ttl *number*
Tree	min-ttl
Description	This command specifies the first hop traceroute probes, using the **ttl** value.
Range	1 to 255
Default	1
Introduced	21.10.R1
Platforms	All

numeric

Synopsis	Display IP addresses instead of DNS names
Context	traceroute numeric
Tree	numeric
Introduced	19.10.R1
Platforms	All

preference *number*

Synopsis	SRv6 policy candidate path preference
Context	traceroute preference *number*
Tree	preference
Description	This command specifies the preference of the SRv6 policy candidate path to send the traceroute probe on.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. Range	0 to 4294967295
Default	100
Introduced	23.10.R1
Platforms	All

probe-count *number*

Synopsis	Number of probes to send per hop
Context	traceroute probe-count *number*
Tree	probe-count
Range	1 to 10
Default	3
Introduced	20.10.R1
Platforms	All

protocol *keyword*

Synopsis	Packet type to send
Context	traceroute protocol *keyword*
Tree	protocol
Description	This command sets the transport protocol, UDP or TCP, for the traceroute packet. A targeted VPRN service silently discards TCP traceroutes and only responds to UDP traceroutes.
Options	udp, tcp
Default	udp
Introduced	21.10.R1
Platforms	All

protocol-owner *keyword*

Synopsis	Protocol owner
Context	traceroute protocol-owner *keyword*
Tree	protocol-owner
Description	This command specifies the protocol owner of the SRv6 policy candidate path to traceroute. The **bgp** option specifies a BGP SRv6 policy.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The **static** option specifies a locally configured static SRv6 policy.

Options	bgp, static
Introduced	23.10.R1
Platforms	All

router-instance *string*

Synopsis	Router name or VPRN service name
Context	traceroute router-instance *string*
Tree	router-instance
Default	Base
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	19.10.R1
Platforms	All

segment-list *number*

Synopsis	SR IPv6 segment list to trace
Context	traceroute segment-list *number*
Tree	segment-list
Description	This command configures the traceroute probe to target a specific segment list of an SRv6 policy. When the segment list is not specified, the traceroute probe is sent on the lowest available segment list.
Range	1 to 32
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	23.3.R1
Platforms	All

size *number*

Synopsis	Number of pad bytes in each transmitted packet
Context	traceroute size *number*
Tree	size
Range	0 to 9786

© 2024 Nokia.

Units	bytes
Default	0
Introduced	21.10.R1
Platforms	All

source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source address of the probe packets
Context	traceroute source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	source-address
Description	This command specifies the source address of the probe packets. If the IP address is not one of the interfaces of the device, the system returns an error.
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	19.10.R1
Platforms	All

srv6-policy

Synopsis	Trace an SRv6 policy
Context	traceroute srv6-policy
Tree	srv6-policy
Description	This command launches a traceroute of a Segment Routing IPv6 (SRv6) policy.
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	23.3.R1
Platforms	All

tos *number*

Synopsis	Type of Service (ToS) bits in the IP header
Context	traceroute tos *number*
Tree	tos
Range	0 to 255
Default	0

2.7 perform commands

The **perform** commands are YANG-modeled versions of the **tools perform** commands and are available in MD-CLI and NETCONF interfaces. The **perform** commands execute actions in the router, such as:

- force a LAG subgroup to become active
- set an IS-IS overload condition
- terminate a Python script

```
perform
   –  filter
      –  ip-filter reference
         –  entry reference
            –  activate-primary-action
      –  ipv6-filter reference
         –  entry reference
            –  activate-primary-action
      –  mac-filter reference
         –  entry reference
            –  activate-primary-action
      –  redirect-policy reference
         –  activate-best-dest
   –  lag
      –  clear-force
         –  lag
            –  [lag-name] reference
            –  sub-group number
         –  multi-chassis
            –  all
            –  peer
               –  [ip-address] reference
      –  force-active
         –  lag
            –  [lag-name] reference
            –  sub-group number
         –  multi-chassis
            –  all
            –  peer
               –  [ip-address] reference
      –  force-standby
         –  lag
            –  [lag-name] reference
            –  sub-group number
         –  multi-chassis
            –  all
            –  peer
               –  [ip-address] reference
      –  load-balance
         –  class number
         –  [lag-name] reference
   –  python
      –  python-policy
         –  cache
            –  policy
               –  hex-key string
               –  [name] reference
               –  set-lifetime number
               –  string-key string
      –  python-script
         –  protect
```

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

perform python python-script protect hmac-sha256-key

```
            -  hmac-sha256-key string
            -  input-file string
            -  output-file string
         -  reload
            -  script
               -  [name] reference
   -  router string
      -  isis reference
         -  ldp-sync-exit
         -  overload
            -  max-metric boolean
            -  [seconds] number
         -  run-manual-spf
   -  system
      -  script-control
         -  script-policy
            -  stop
               -  all
               -  owner reference
               -  policy-name reference
      -  security
         -  secure-boot
            -  show
               -  uefi-variables
                  -  card reference
```

set-lifetime *number*

Synopsis	Lifetime to set for a Python cache entry
Context	perform python python-policy cache policy set-lifetime *number*
Tree	set-lifetime
Range	1 to 604800
Units	seconds
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	All

string-key *string*

Synopsis	Policy key in ASCII format
Context	perform python python-policy cache policy string-key *string*
Tree	string-key
String Length	1 to 512
Notes	The following elements are part of a mandatory choice: **hex-key** or **string-key**.
Introduced	23.10.R1
Platforms	All

python-script

Synopsis	Enter the **python-script** context
Context	perform python python-script
Tree	python-script
Introduced	23.10.R1
Platforms	All

protect

Synopsis	Convert a Python file into a protected SRPY format
Context	perform python python-script protect
Tree	protect
Description	When invoked, the system converts a normal (unprotected) Python script file into a protected SRPY format using a specified key.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

For more information about the SRPY format and protected scripts, see "Python script protection" in the *7450 ESS, 7750 SR, and VSR Triple Play Service Delivery Architecture Guide*.

Introduced	23.10.R1
Platforms	All

hmac-sha256-key *string*

Synopsis	Key used to compute the hash
Context	perform python python-script protect hmac-sha256-key *string*
Tree	hmac-sha256-key
String Length	1 to 128
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	All

input-file *string*

Synopsis	URL of the input unprotected script file
Context	perform python python-script protect input-file *string*
Tree	input-file
String Length	1 to 180
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	All

output-file *string*

Synopsis	URL of the output protected script file
Context	perform python python-script protect output-file *string*
Tree	output-file
String Length	1 to 180
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	All

reload

Synopsis	Enter the **reload** context
Context	perform python python-script reload
Tree	reload
Description	Commands in this context reload and recompile the primary, secondary, and tertiary scripts in the specified Python scripts, in that order. The system uses the first script that comes up. Executing these commands may update the last modified time for the system configuration.
Introduced	23.10.R1
Platforms	All

script

Synopsis	Reload and recompile the specified script
Context	perform python python-script reload script
Tree	script
Introduced	23.10.R1
Platforms	All

[**name**] *reference*

Synopsis	Name of the python script to reload
Context	perform python python-script reload script [name] *reference*
Tree	[name]
Reference	**state python python-script** *string*
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	All

router [router-instance] *string*

Synopsis	Enter the **router** list instance
Context	perform router *string*
Tree	router

2.8 reset commands

The **reset** commands are YANG-modeled versions of the **clear** commands and are available in MD-CLI and NETCONF interfaces. The **reset** commands are primarily used to:

- set statistics in a specific area back to a value of zero
- reset specific hardware assemblies, for example, cards
- delete temporary operational state data, for example, contents of a log in memory

```
reset
   –  application-assurance
      –  group reference
         –  cflowd

2.8.1 reset command descriptions

reset

Synopsis	Clear statistics or reset operational state
Context	reset
Tree	reset
Description	Commands in this context are used to clear specific statistics, reset specific hardware assemblies (for example, cards), and delete temporary operational state data (for example, contents of a log in memory).
Introduced	23.3.R1
Platforms	All

application-assurance

Synopsis	Enter the **application-assurance** context
Context	reset application-assurance
Tree	application-assurance
Description	Commands in this context reset Application Assurance (AA) data.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group [aa-group-id] *reference*

Synopsis	Enter the **group** list instance
Context	reset application-assurance group *reference*
Tree	group
Description	Commands in this context reset AA group data.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-group-id**] *reference*

Synopsis	AA group ID
Context	reset application-assurance group *reference*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	group
Reference	**state application-assurance group** *number*
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cflowd

Synopsis	Reset AA group cflowd
Context	reset application-assurance group *reference* cflowd
Tree	cflowd
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

partition [aa-partition-id] *reference*

Synopsis	Enter the **partition** list instance
Context	reset application-assurance group *reference* partition *reference*
Tree	partition
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-partition-id**] *reference*

Synopsis	AA partition ID
Context	reset application-assurance group *reference* partition *reference*
Tree	partition
Reference	**state application-assurance group** *number* **partition** *number*
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log

Synopsis	Reset the AA event log for the group partition

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	reset application-assurance group *reference* partition *reference* event-log
Tree	event-log
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *reference*

Synopsis	Event log name
Context	reset application-assurance group *reference* partition *reference* event-log name *reference*
Tree	name
Reference	**state application-assurance group** *number* **partition** *number* **event-log** *string*
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp

Synopsis	Reset the AA GTP for the group partition
Context	reset application-assurance group *reference* partition *reference* gtp
Tree	gtp
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

statistics

Synopsis	Reset AA group statistics
Context	reset application-assurance group *reference* statistics
Tree	statistics
Description	This command resets statistics displayed using the **show application-assurance group status** command. **Note**: This command resets all the application assurance statistics counters to zero on the CPM; however, in some instances these counters may still display non-zero values if there are active flows on the ISA.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

force

Synopsis	Force the reset action
Context	reset application-assurance group *reference* statistics force
Tree	force
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

status

Synopsis	Reset status and statistics
Context	reset application-assurance group *reference* status
Tree	status
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy [name] *reference*

Synopsis	Enter the **radius-accounting-policy** list instance
Context	reset application-assurance radius-accounting-policy *reference*
Tree	radius-accounting-policy
Description	Commands in this context reset application assurance RADIUS accounting statistics for the specified policy.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *reference*

Synopsis	AA RADIUS accounting policy
Context	reset application-assurance radius-accounting-policy *reference*
Tree	radius-accounting-policy
Reference	**state application-assurance radius-accounting-policy** *string*
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

statistics

Synopsis	Reset AA RADIUS accounting policy statistics
Context	reset application-assurance radius-accounting-policy *reference* statistics
Tree	statistics
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server *reference*

Synopsis	AA RADIUS accounting policy server index
Context	reset application-assurance radius-accounting-policy *reference* statistics server *reference*
Tree	server
Reference	**state application-assurance radius-accounting-policy** *string* **radius-accounting-server server** *number*
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

card [slot-number] *reference*

Synopsis	Enter the **card** list instance
Context	reset card *reference*
Tree	card
Description	Commands in this context perform reset operations on a specific card.
Introduced	24.3.R1
Platforms	All

[**slot-number**] *reference*

Synopsis	Slot number
Context	reset card *reference*
Tree	card
Reference	**state card** *number*
Notes	This element is part of a list key.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	24.3.R1
Platforms	All

fp [fp-number] *reference*

Synopsis	Enter the **fp** list instance
Context	reset card *reference* fp *reference*
Tree	fp
Description	Commands in this context display information for the specified forwarding plane (FP).
Introduced	24.3.R1
Platforms	All

[**fp-number**] *reference*

Synopsis	FP number
Context	reset card *reference* fp *reference*
Tree	fp
Reference	**state card** *number* **fp** *number*
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	All

distributed-cpu-protection

Synopsis	Enter the **distributed-cpu-protection** context
Context	reset card *reference* fp *reference* distributed-cpu-protection
Tree	distributed-cpu-protection
Description	Commands in this context reset the distributed CPU protection information.
Introduced	24.3.R1
Platforms	All

information

Synopsis	Reset distributed CPU protection information
Context	reset card *reference* fp *reference* distributed-cpu-protection information

Tree	information
Introduced	24.3.R1
Platforms	All

forward-engine-drop-reason

Synopsis	Enter the **forward-engine-drop-reason** context
Context	reset card *reference* fp *reference* forward-engine-drop-reason
Tree	forward-engine-drop-reason
Introduced	24.3.R1
Platforms	All

statistics

Synopsis	Reset forwarding engine drop reason statistics
Context	reset card *reference* fp *reference* forward-engine-drop-reason statistics
Tree	statistics
Introduced	24.3.R1
Platforms	All

ingress

Synopsis	Enter the **ingress** context
Context	reset card *reference* fp *reference* ingress
Tree	ingress
Description	Commands in this context reset the ingress information.
Introduced	24.3.R1
Platforms	All

per-egress-fp-statistics

Synopsis	Reset per egress FP statistics
Context	reset card *reference* fp *reference* ingress per-egress-fp-statistics
Tree	per-egress-fp-statistics
Introduced	24.3.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

queue-group

Synopsis	Enter the **queue-group** context
Context	reset card *reference* fp *reference* ingress queue-group
Tree	queue-group
Introduced	24.3.R1
Platforms	All

statistics

Synopsis	Reset the queue group statistics
Context	reset card *reference* fp *reference* ingress queue-group statistics
Tree	statistics
Introduced	24.3.R1
Platforms	All

instance *number*

Synopsis	Queue group instance ID
Context	reset card *reference* fp *reference* ingress queue-group statistics instance *number*
Tree	instance
Max. Range	0 to 65535
Notes	This element is mandatory.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mode *keyword*

Synopsis	Queue group statistics mode
Context	reset card *reference* fp *reference* ingress queue-group statistics mode *keyword*
Tree	mode
Options	access, network
Notes	This element is mandatory.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	24.3.R1
Platforms	All

queue-group-name *string*

Synopsis	Queue group name
Context	reset card *reference* fp *reference* ingress queue-group statistics queue-group-name *string*
Tree	queue-group-name
Notes	This element is mandatory.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

reinitialize

Synopsis	Reset the specified card
Context	reset card *reference* reinitialize
Tree	reinitialize
Introduced	24.3.R1
Platforms	All

hard-reset-unsupported-mdas

Synopsis	Perform a hard reset on MDAs incapable of soft reset
Context	reset card *reference* reinitialize hard-reset-unsupported-mdas
Tree	hard-reset-unsupported-mdas
Description	This command allows a soft reset operation when some of the MDAs cannot perform a soft reset. A soft reset is performed on MDAs that support a soft reset, and a hard reset is performed on MDAs that do not support soft resets.
Introduced	24.3.R1
Platforms	All

soft

Synopsis	Perform a soft reset on the card
Context	reset card *reference* reinitialize soft

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**host-name**] *string*

Synopsis	Hostname
Context	reset router *string* dhcp-server dhcpv4 *string* sticky-leases host-name [host-name] *string*
Tree	[host-name]
String Length	1 to 32
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-name-prefix

Synopsis	Delete sticky leases associated with hostnames containing the prefix
Context	reset router *string* dhcp-server dhcpv4 *string* sticky-leases host-name-prefix
Tree	host-name-prefix
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**host-name-prefix**] *string*

Synopsis	Hostname prefix
Context	reset router *string* dhcp-server dhcpv4 *string* sticky-leases host-name-prefix [host-name-prefix] *string*
Tree	[host-name-prefix]
String Length	1 to 32
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subnet-extended-statistics

Synopsis	Enter the **subnet-extended-statistics** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	reset router *string* dhcp-server dhcpv4 *string* subnet-extended-statistics
Tree	subnet-extended-statistics
Description	Commands in this context reset the per subnet extended statistics peak values.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pool

Synopsis	Reset extended statistics peak values for all subnets in the pool
Context	reset router *string* dhcp-server dhcpv4 *string* subnet-extended-statistics pool
Tree	pool
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**pool**] *string*

Synopsis	Pool name
Context	reset router *string* dhcp-server dhcpv4 *string* subnet-extended-statistics pool [pool] *string*
Tree	[pool]
String Length	1 to 32
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix

Synopsis	Reset extended statistics peak values for the specified prefix
Context	reset router *string* dhcp-server dhcpv4 *string* subnet-extended-statistics prefix
Tree	prefix
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**prefix**] *string*

Synopsis	IPv4 prefix

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	reset router *string* dhcp-server dhcpv4 *string* subnet-extended-statistics prefix [prefix] *string*
Tree	[prefix]
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcpv6 [server-name] *string*

Synopsis	Enter the **dhcpv6** list instance
Context	reset router *string* dhcp-server dhcpv6 *string*
Tree	dhcpv6
Description	Commands in this context reset DHCPv6 server entities.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**server-name**] *string*

Synopsis	Server name
Context	reset router *string* dhcp-server dhcpv6 *string*
Tree	dhcpv6
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover-pool-statistics

Synopsis	Enter the **failover-pool-statistics** context
Context	reset router *string* dhcp-server dhcpv6 *string* failover-pool-statistics
Tree	failover-pool-statistics
Description	Commands in this context reset the per pool failover statistics.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

all

Synopsis	Reset failover statistics for all pools
Context	reset router *string* dhcp-server dhcpv6 *string* failover-pool-statistics all
Tree	all
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pool

Synopsis	Reset failover statistics for the specified pool
Context	reset router *string* dhcp-server dhcpv6 *string* failover-pool-statistics pool
Tree	pool
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**pool**] *string*

Synopsis	Pool name
Context	reset router *string* dhcp-server dhcpv6 *string* failover-pool-statistics pool [pool] *string*
Tree	[pool]
String Length	1 to 32
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

leases

Synopsis	Enter the **leases** context
Context	reset router *string* dhcp-server dhcpv6 *string* leases
Tree	leases
Description	Commands in this context delete leases in the specified DHCPv6 server.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**imsi**] *string*

Synopsis	International Mobile Subscriber Identity
Context	reset subscriber-management sessions gtp imsi [imsi] *string*
Tree	[imsi]
String Length	0 to 15
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-tracking

Synopsis	Enter the **host-tracking** context
Context	reset subscriber-management sessions host-tracking
Tree	host-tracking
Description	Commands in this context delete host-tracking table entries.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber

Synopsis	Enter the **subscriber** context
Context	reset subscriber-management sessions host-tracking subscriber
Tree	subscriber
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Delete host tracking table entry for all subscribers
Context	reset subscriber-management sessions host-tracking subscriber all
Tree	all

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

id

Synopsis	Delete host tracking table entry for the subscriber
Context	reset subscriber-management sessions host-tracking subscriber id
Tree	id
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *reference*

Synopsis	Subscriber ID
Context	reset subscriber-management sessions host-tracking subscriber id [name] *reference*
Tree	[name]
Reference	**state subscriber-mgmt subscriber** *string*
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp

Synopsis	Enter the **pfcp** context
Context	reset subscriber-management sessions pfcp
Tree	pfcp
Description	Commands in this context delete Packet Forwarding Control Protocol (PFCP) sessions matching the specified criteria.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nat-member

Synopsis	Delete PFCP session matching the NAT group member ID
Context	reset subscriber-management sessions pfcp nat-member

Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

statistics

Synopsis	Enter the **statistics** context
Context	reset subscriber-management statistics
Tree	statistics
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accumulated

Synopsis	Enter the **accumulated** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	reset subscriber-management statistics accumulated
Tree	accumulated
Description	Commands in this context reset accumulated statistics for a subscriber.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

active-subscribers

Synopsis	Enter the **active-subscribers** context
Context	reset subscriber-management statistics accumulated active-subscribers
Tree	active-subscribers
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

no-accu-stats-policy

Synopsis	Reset accumulated statistics for active subscribers
Context	reset subscriber-management statistics accumulated active-subscribers no-accu-stats-policy
Tree	no-accu-stats-policy
Description	This command resets the accumulated statistics that are no longer associated with an accumulated statistics policy. These statistics apply to active subscribers that are referencing a subscriber profile where the accumulated statistics policy is removed.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile

Synopsis	Reset active subscribers statistics without a policy
Context	reset subscriber-management statistics accumulated active-subscribers sub-profile
Tree	sub-profile
Description	This command resets the accumulated statistics that are no longer associated with an accumulated statistics policy. These statistics apply to active subscribers that are referencing the specified subscriber profile where the accumulated statistics policy is removed.
Introduced	23.10.R1

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp

Synopsis	Enter the **gtp** context
Context	reset subscriber-management statistics gtp
Tree	gtp
Description	Commands in this context reset GTP statistics.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Reset GTP messaging statistics
Context	reset subscriber-management statistics gtp all
Tree	all
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-and-session

Synopsis	Enter the **host-and-session** context
Context	reset subscriber-management statistics host-and-session
Tree	host-and-session
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peakvalues

Synopsis	Enter the **peakvalues** context
Context	reset subscriber-management statistics host-and-session peakvalues
Tree	peakvalues
Description	Commands in this context reset the peak values of subscriber management host and session statistics

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Note: Peak values statistics can be reset at each level independently. For example, clearing the most recent peak value for an IOM does not impact the MDA peak value.

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

card

Synopsis	Enter the **card** context
Context	reset subscriber-management statistics host-and-session peakvalues card
Tree	card
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Reset the peak value statistics for all cards
Context	reset subscriber-management statistics host-and-session peakvalues card all
Tree	all
Description	This command resets the subscriber management statistics peak values for all cards.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recursive

Synopsis	Reset the statistics recursively
Context	reset subscriber-management statistics host-and-session peakvalues card all recursive
Tree	recursive
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

slot

Synopsis	Reset peak values statistics for the specified card
Context	reset subscriber-management statistics host-and-session peakvalues card slot
Tree	slot

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command resets the subscriber management statistics peak values for the specified card.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Reset all peak value statistics for the service
Context	reset subscriber-management statistics host-and-session peakvalues service name *string* all
Tree	all
Description	This command resets all subscriber management statistics peak values for the specified service.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recursive

Synopsis	Reset the statistics recursively
Context	reset subscriber-management statistics host-and-session peakvalues service name *string* all recursive
Tree	recursive
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

Synopsis	Enter the **group-interface** context
Context	reset subscriber-management statistics host-and-session peakvalues service name *string* group-interface
Tree	group-interface
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Reset peak value statistics for all group interfaces
Context	reset subscriber-management statistics host-and-session peakvalues service name *string* group-interface all
Tree	all

ptp

Synopsis	Enter the **ptp** context
Context	reset system ptp
Tree	ptp
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

clock-recovery

Synopsis	Reset PTP clock recovery algorithm
Context	reset system ptp clock-recovery
Tree	clock-recovery
Description	This command resets the algorithms involved in PTP frequency and time recovery to initial conditions. This clears out any previous history and can be used to ensure a consistent starting state for a test or can be used to clear any unexpected behavior in the algorithm.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reboot-required

Synopsis	Clear the reboot required state
Context	reset system reboot-required
Tree	reboot-required

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command clears the reboot required information. Use this command after a configuration triggers the reboot required state, but the configuration is removed.
Introduced	24.3.R1
Platforms	All

satellite

Synopsis	Enter the **satellite** context
Context	reset system satellite
Tree	satellite
Description	Commands in this context reset satellite information.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ethernet-satellite [satellite-id] *reference*

Synopsis	Enter the **ethernet-satellite** list instance
Context	reset system satellite ethernet-satellite *reference*
Tree	ethernet-satellite
Description	Commands in this context reset Ethernet satellite information.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**satellite-id**] *reference*

Synopsis	Satellite ID
Context	reset system satellite ethernet-satellite *reference*
Tree	ethernet-satellite
Reference	**state satellite ethernet-satellite** *number*
Notes	This element is part of a list key.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

synchronous-interface-timing

Synopsis	Reset a failed reference on the Ethernet satellite
Context	reset system satellite ethernet-satellite *reference* synchronous-interface-timing
Tree	synchronous-interface-timing
Description	This command resets (re-enables) a previously failed reference on the Ethernet satellite.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**reference**] *keyword*

Synopsis	Synchronous timing reference
Context	reset system satellite ethernet-satellite *reference* synchronous-interface-timing [reference] *keyword*
Tree	[reference]
Options	ref1, ref2
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

script-control

Synopsis	Enter the **script-control** context
Context	reset system script-control
Tree	script-control
Introduced	23.7.R1
Platforms	All

script-policy

Synopsis	Enter the **script-policy** context
Context	reset system script-control script-policy
Tree	script-policy
Introduced	23.7.R1
Platforms	All

completed

Synopsis	Enter the **completed** context
Context	reset system script-control script-policy completed
Tree	completed
Description	Commands in this context delete completed script run history entries.
Introduced	23.7.R1
Platforms	All

all

Synopsis	Delete script run entries for all script policies
Context	reset system script-control script-policy completed all
Tree	all
Introduced	23.7.R1
Platforms	All

policy

Synopsis	Delete script run entries for specific policies
Context	reset system script-control script-policy completed policy
Tree	policy
Introduced	23.7.R1
Platforms	All

owner *reference*

Synopsis	Script-policy owner for run history deletion
Context	reset system script-control script-policy completed policy owner *reference*
Tree	owner
Description	This command specifies the script policy owner for run history deletion. The system only deletes run history entries for script policies with this owner and the specified policy name.
Default	TiMOS CLI
Reference	**state system script-control script-policy** *string* **owner** *string*

Use subject to Terms available at: www.nokia.com/terms.

Introduced	23.7.R1
Platforms	All

[**policy-name**] *reference*

Synopsis	Script-policy name for run history deletion
Context	reset system script-control script-policy completed policy [policy-name] *reference*
Tree	[policy-name]
Reference	**state system script-control script-policy** *string* **owner** *string*
Notes	This element is mandatory.
Introduced	23.7.R1
Platforms	All

security

Synopsis	Enter the **security** context
Context	reset system security
Tree	security
Introduced	23.3.R1
Platforms	All

cpm-filter

Synopsis	Enter the **cpm-filter** context
Context	reset system security cpm-filter
Tree	cpm-filter
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cpm-queue

Synopsis	Reset CPM queue information
Context	reset system security cpm-filter cpm-queue
Tree	cpm-queue
Introduced	23.3.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

queue-id *reference*

Synopsis	Queue ID for the CPM queue
Context	reset system security cpm-filter cpm-queue queue-id *reference*
Tree	queue-id
Reference	**state system security cpm-queue queue** *number*
Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip-filter

Synopsis	Reset IP filter information
Context	reset system security cpm-filter ip-filter
Tree	ip-filter
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

entry *reference*

Synopsis	Entry ID for IP filter
Context	reset system security cpm-filter ip-filter entry *reference*
Tree	entry
Reference	**state system security cpm-filter ip-filter entry** *number*
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6-filter

Synopsis	Reset IPv6 filter information
Context	reset system security cpm-filter ipv6-filter
Tree	ipv6-filter
Introduced	23.3.R1

© 2024 Nokia.

3.1 aaa commands

```
configure
   - aaa
      - apply-groups reference
      - apply-groups-exclude reference
      - diameter
         - node string
            - apply-groups reference
            - apply-groups-exclude reference
            - connection
               - ipv4
                  - allow-connections boolean
                  - local-address string
               - ipv6
                  - allow-connections boolean
                  - local-address string
               - timer number
            - description string
            - origin-realm string
            - peer index number
               - address (ipv4-address-no-zone | ipv6-address-no-zone)
               - admin-state keyword
               - apply-groups reference
               - apply-groups-exclude reference
               - connection-timer number
               - default-peer boolean
               - destination-host string
               - preference number
               - route index number
                  - application keyword
                  - apply-groups reference
                  - apply-groups-exclude reference
                  - preference number
                  - realm string
               - watchdog-timer number
            - python-policy reference
            - router-instance string
      - radius
         - acct-on-off-group string
            - apply-groups reference
            - apply-groups-exclude reference
            - description string
         - coa-port number
         - isa-policy string
            - accounting
               - include-attributes
                  - acct-delay-time boolean
                  - acct-triggered-reason boolean
                  - called-station-id boolean
                  - calling-station-id boolean
                  - circuit-id boolean
                  - class boolean
                  - credit-control-quota boolean
                  - dhcp-options boolean
                  - dhcp-vendor-class-id boolean
                  - frame-counters boolean
                  - framed-ip-address boolean
                  - framed-ip-netmask boolean
                  - framed-ipv6-prefix boolean
                  - hardware-timestamp boolean
```

3.1.1 aaa command descriptions

aaa

Synopsis	Enter the **aaa** context
Context	**configure** aaa
Tree	aaa
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

diameter

Synopsis	Enter the **diameter** context
Context	**configure** aaa diameter
Tree	diameter
Description	Commands in this context configure Diameter Base parameters.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

node [origin-host] *string*

Synopsis	Enter the **node** list instance
Context	**configure** aaa diameter node *string*
Tree	node
Max. Instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**origin-host**] *string*

Synopsis	Origin-Host AVP
Context	**configure** aaa diameter node *string*
Tree	node
String Length	1 to 80

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connection

Synopsis	Enter the **connection** context
Context	**configure** aaa diameter node *string* connection
Tree	connection
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** aaa diameter node *string* connection ipv4
Tree	ipv4
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-connections *boolean*

Synopsis	Listen on local address for incoming peer connections
Context	**configure** aaa diameter node *string* connection ipv4 allow-connections *boolean*
Tree	allow-connections
Description	When configured to **true**, this command is used in multi-chassis redundancy where the local Diameter node accepts connection from the inter-chassis peer. The peer requesting the connection must have the same Diameter name as the local peer and its source address must match the IP address of the locally configured destination peer. The IPv4 address on which the node listens for incoming connection is the configured source address of the local peer. This source IPv4 address can reference any local interface, including loopbacks. When configured to **false**, incoming requests for connections are refused.
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

local-address *string*

Synopsis	IPv4 source address for the TCP peer connection
Context	**configure** aaa diameter node *string* connection ipv4 local-address *string*
Tree	local-address
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** aaa diameter node *string* connection ipv6
Tree	ipv6
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-connections *boolean*

Synopsis	Listen on local address for incoming peer connections
Context	**configure** aaa diameter node *string* connection ipv6 allow-connections *boolean*
Tree	allow-connections
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address *string*

Synopsis	IPv6 source address for the TCP peer connection
Context	**configure** aaa diameter node *string* connection ipv6 local-address *string*
Tree	local-address
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

timer *number*

Synopsis	Wait time before attempting reconnection to peer
Context	**configure** aaa diameter node *string* connection timer *number*
Tree	timer
Description	This command configures the time the system waits before attempting to reconnect to a peer after the connection is lost.
Range	1 to 1000
Units	seconds
Default	30
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** aaa diameter node *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin-realm *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Origin-realm name
Context	**configure** aaa diameter node *string* origin-realm *string*
Tree	origin-realm
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

peer index *number*

Synopsis	Enter the **peer** list instance
Context	**configure** aaa diameter node *string* peer index *number*
Tree	peer
Max. Instances	5
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

index *number*

Synopsis	Index of a peer within the node
Context	**configure** aaa diameter node *string* peer index *number*
Tree	peer
Range	1 to 5
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Diameter peer address
Context	**configure** aaa diameter node *string* peer index *number* address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the Diameter peer
Context	**configure** aaa diameter node *string* peer index *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connection-timer *number*

Synopsis	Wait time before attempting reconnection to peer
Context	**configure** aaa diameter node *string* peer index *number* connection-timer *number*
Tree	connection-timer
Range	1 to 1000
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-peer *boolean*

Synopsis	Use the peer as default route for realm-based routing
Context	**configure** aaa diameter node *string* peer index *number* default-peer *boolean*
Tree	default-peer
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-host *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination-Host AVP string for Diameter messages
Context	**configure** aaa diameter node *string* peer index *number* destination-host *string*
Tree	destination-host
String Length	1 to 80
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

preference *number*

Synopsis	Diameter routing preference for a peer
Context	**configure** aaa diameter node *string* peer index *number* preference *number*
Tree	preference
Range	1 to 100
Default	50
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

route index *number*

Synopsis	Enter the **route** list instance
Context	**configure** aaa diameter node *string* peer index *number* route index *number*
Tree	route
Max. Instances	15
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

index *number*

Synopsis	Static Diameter route ID
Context	**configure** aaa diameter node *string* peer index *number* route index *number*
Tree	route
Description	This command configures the ID of the static route used to reach remote realms that are not directly connected to the origin realm. The route can also be used to override the route preference (peer preference) of the directly-connected realms.
Range	1 to 15
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

application *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Diameter application to which the route applies
Context	**configure** aaa diameter node *string* peer index *number* route index *number* application *keyword*
Tree	application
Description	This command specifies the Diameter application in the destination realm reachable via the static route.
Options	nasreq, gy, gx
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis	Static route preference; lower value is preferred
Context	**configure** aaa diameter node *string* peer index *number* route index *number* preference *number*
Tree	preference
Description	This command configures the preference of the static route. The preference is compared with the preference values of all other static and dynamic routes. The dynamic route is a realm route learned directly from the peer via the Capabilities Exchange process during the peer negotiation phase. The preference value of the dynamic route is configured directly under the peer configuration. A lower preference value is preferred for route selection.
Range	1 to 100
Default	50
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

realm *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	Destination realm reachable via the static route
Context	**configure** aaa diameter node *string* peer index *number* route index *number* realm *string*
Tree	realm
String Length	1 to 80
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

watchdog-timer *number*

Synopsis	Time between consecutive watchdog messages
Context	**configure** aaa diameter node *string* peer index *number* watchdog-timer *number*
Tree	watchdog-timer
Range	1 to 1000
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy for received or sent Diameter messages
Context	**configure** aaa diameter node *string* python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *string*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router in which this node connects to its peers
Context	**configure** aaa diameter node *string* router-instance *string*
Tree	router-instance
Default	Base
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

radius

Synopsis	Enter the **radius** context
Context	**configure** aaa radius
Tree	radius
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-on-off-group [name] *string*

Synopsis	Enter the **acct-on-off-group** list instance
Context	**configure** aaa radius acct-on-off-group *string*
Tree	acct-on-off-group
Max. Instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Group name for accounting on/off
Context	**configure** aaa radius acct-on-off-group *string*
Tree	acct-on-off-group
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** aaa radius acct-on-off-group *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R4

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

coa-port *number*

Synopsis	RADIUS listening port for CoA and Disconnect messages
Context	**configure** aaa radius coa-port *number*
Tree	coa-port
Range	1647 | 1700 | 1812 | 3799
Default	3799
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

isa-policy [name] *string*

Synopsis	Enter the **isa-policy** list instance
Context	**configure** aaa radius isa-policy *string*
Tree	isa-policy
Max. Instances	8
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	ISA RADIUS policy name referenced by a NAT application
Context	**configure** aaa radius isa-policy *string*
Tree	isa-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting

Synopsis	Enter the **accounting** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius isa-policy *string* accounting
Tree	accounting
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-attributes

Synopsis	Enter the **include-attributes** context
Context	**configure** aaa radius isa-policy *string* accounting include-attributes
Tree	include-attributes
Description	Commands in this context specify the attributes to include in the RADIUS accounting messages.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

acct-delay-time *boolean*

Synopsis	Include the accounting delay time attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes acct-delay-time *boolean*
Tree	acct-delay-time
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

acct-triggered-reason *boolean*

Synopsis	Include the accounting triggered reason attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes acct-triggered-reason *boolean*
Tree	acct-triggered-reason
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes calling-station-id *boolean*
Tree	calling-station-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Include the Agent-Circuit-Id attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes circuit-id *boolean*
Tree	circuit-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

class *boolean*

Synopsis	Include the Class attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes class *boolean*
Tree	class
Default	false
Introduced	16.0.R4

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

credit-control-quota *boolean*

Synopsis	Add unconsumed volume quota to Credit-Control-Quota
Context	**configure** aaa radius isa-policy *string* accounting include-attributes credit-control-quota *boolean*
Tree	credit-control-quota
Default	false
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-options *boolean*

Synopsis	Include the Alc-ToServer-Dhcp-Options attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes dhcp-options *boolean*
Tree	dhcp-options
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-vendor-class-id *boolean*

Synopsis	Include the Alc-Dhcp-Vendor-Class-Id attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes dhcp-vendor-class-id *boolean*
Tree	dhcp-vendor-class-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

frame-counters *boolean*

Synopsis	Include Acct-Input-Packets and Acct-Output-Packets
Context	**configure** aaa radius isa-policy *string* accounting include-attributes frame-counters *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	frame-counters
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ip-address *boolean*

Synopsis	Include the Framed-IP-Address attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes framed-ip-address *boolean*
Tree	framed-ip-address
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ip-netmask *boolean*

Synopsis	Include the Framed-IP-Netmask attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes framed-ip-netmask *boolean*
Tree	framed-ip-netmask
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ipv6-prefix *boolean*

Synopsis	Include the Framed-IPv6-Prefix attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes framed-ipv6-prefix *boolean*
Tree	framed-ipv6-prefix
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

hardware-timestamp *boolean*

Synopsis	Include the Event-Timestamp attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes hardware-timestamp *boolean*
Tree	hardware-timestamp
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *boolean*

Synopsis	Include the Alc-Ipv6-Address attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes ipv6-address *boolean*
Tree	ipv6-address
Description	When configured to **true**, the IA_NA address of the UE is included in the accounting message if an active IA_NA lease exists. When configured to **false**, the address is not included.
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *boolean*

Synopsis	Include the Alc-Client-Hardware-Addr attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes mac-address *boolean*
Tree	mac-address
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

millisecond-event-timestamp *boolean*

Synopsis	Include the Alc-Millisecond-Event-Timestamp attribute

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius isa-policy *string* accounting include-attributes millisecond-event-timestamp *boolean*
Tree	millisecond-event-timestamp
Description	When configured to **true**, the router includes the Alc-Millisecond-Event-Timestamp attribute in the accounting message. This attribute includes the time the accounting event was logged in milliseconds since Jan 1, 1970 00:00:00 UTC. When configured to **false**, the router does not include this attribute.
Default	false
Introduced	20.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

multi-session-id *boolean*

Synopsis	Include the Acct-Multi-Session-Id attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes multi-session-id *boolean*
Tree	multi-session-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-address *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes nas-ip-address *boolean*
Tree	nas-ip-address

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ipv6-address *boolean*

Synopsis	Include the NAS-IPv6-Address attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes nas-ipv6-address *boolean*
Tree	nas-ipv6-address
Description	When configured to **true**, the router includes the NAS-IPv6-Address attribute in RADIUS accounting messages using the address specified in the **configure aaa radius isa-policy nas-ip-address-origin** command. The NAS-IPv6-Address attribute is included in both IPv4 and IPv6 RADIUS connections. When configured to **false**, the router does not include the NAS-IPv6-Address attribute in RADIUS accounting messages.
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port *boolean*

Synopsis	Include the NAS-Port attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes nas-port *boolean*
Tree	nas-port
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes nas-port-id *boolean*
Tree	nas-port-id
Default	false
Introduced	16.0.R4

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-type *boolean*

Synopsis	Include the NAS-Port-Type attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes nas-port-type *boolean*
Tree	nas-port-type
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-inside-service-id *boolean*

Synopsis	Include NAT inside service ID in Alc-Serv-Id attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes nat-inside-service-id *boolean*
Tree	nat-inside-service-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-outside-ip-address *boolean*

Synopsis	Include the Alc-Nat-Outside-Ip-Addr attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes nat-outside-ip-address *boolean*
Tree	nat-outside-ip-address
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-outside-service-id *boolean*

Synopsis	Include NAT outside service ID in Alc-Serv-Id attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes nat-outside-service-id *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	nat-outside-service-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-port-forward-logging *boolean*

Synopsis	Enable logging of port forwards via RADIUS
Context	**configure** aaa radius isa-policy *string* accounting include-attributes nat-port-forward-logging *boolean*
Tree	nat-port-forward-logging
Description	When configured to **true**, the router enables static or PCP port-forward logging via RADIUS. Port-forward logging is supported only in conjunction with the logging of port blocks. When configured to **false**, the router disables static or PCP port-forward logging.
Default	false
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-port-range-block *boolean*

Synopsis	Include the Alc-Nat-Port-Range attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes nat-port-range-block *boolean*
Tree	nat-port-range-block
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-subscriber-string *boolean*

Synopsis	Include the Alc-Subsc-ID-Str attribute
Context	**configure** aaa radius isa-policy *string* accounting include-attributes nat-subscriber-string *boolean*
Tree	nat-subscriber-string
Default	false
Introduced	16.0.R4

Context	**configure** aaa radius isa-policy *string* authentication include-attributes framed-ip-address *boolean*
Tree	framed-ip-address
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *boolean*

Synopsis	Include the Alc-IPv6-address attribute
Context	**configure** aaa radius isa-policy *string* authentication include-attributes ipv6-address *boolean*
Tree	ipv6-address
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *boolean*

Synopsis	Include the Alc-Client-Hardware-Addr attribute
Context	**configure** aaa radius isa-policy *string* authentication include-attributes mac-address *boolean*
Tree	mac-address
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** aaa radius isa-policy *string* authentication include-attributes nas-identifier *boolean*
Tree	nas-identifier

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-address *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	**configure** aaa radius isa-policy *string* authentication include-attributes nas-ip-address *boolean*
Tree	nas-ip-address
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ipv6-address *boolean*

Synopsis	Include the NAS-IPv6-Address attribute
Context	**configure** aaa radius isa-policy *string* authentication include-attributes nas-ipv6-address *boolean*
Tree	nas-ipv6-address
Description	When configured to **true**, the router includes the NAS-IPv6-Address attribute in RADIUS authentication messages using the address specified in the **configure aaa radius isa-policy nas-ip-address-origin** command. The NAS-IPv6-Address attribute is included in both IPv4 and IPv6 RADIUS connections. When configured to **false**, the router does not include the NAS-IPv6-Address attribute in RADIUS authentication messages.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port *boolean*

Synopsis	Include the NAS-Port attribute
Context	**configure** aaa radius isa-policy *string* authentication include-attributes nas-port *boolean*
Tree	nas-port
Default	false

servers

Synopsis	Enter the **servers** context
Context	**configure** aaa radius isa-policy *string* servers
Tree	servers
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

access-algorithm *keyword*

Synopsis	Algorithm that accesses the RADIUS servers
Context	**configure** aaa radius isa-policy *string* servers access-algorithm *keyword*
Tree	access-algorithm
Options	direct, round-robin, hash-based, direct-priority
Default	direct
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** aaa radius isa-policy *string* servers ipv6
Tree	ipv6
Description	Commands in this context configure how to communicate with IPv6 RADIUS servers.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu *number*

Synopsis	MTU used to fragment outgoing IPv6 RADIUS packets
Context	**configure** aaa radius isa-policy *string* servers ipv6 mtu *number*
Tree	mtu
Range	1280 to 9000
Default	9000
Introduced	22.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source-prefix *string*

Synopsis	Prefix containing individual source addresses per ISA
Context	**configure** aaa radius isa-policy *string* servers ipv6 source-prefix *string*
Tree	source-prefix
Description	This command configures an IPv6 prefix containing individual /128 addresses. These addresses are used as the source address for connections to IPv6 RADIUS servers. The prefix must be large enough to accommodate all BB-ISAs or ESA VMs in the system.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Routing instance
Context	**configure** aaa radius isa-policy *string* servers router-instance *string*
Tree	router-instance
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [index] *number*

Synopsis	Enter the **server** list instance
Context	**configure** aaa radius isa-policy *string* servers server *number*
Tree	server
Max. Instances	10
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**index**] *number*

Synopsis	RADIUS server ID
Context	**configure** aaa radius isa-policy *string* servers server *number*

Units	seconds
Default	5
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

total-tries *number*

Synopsis	Maximum number of tries toward the same RADIUS server
Context	**configure** aaa radius isa-policy *string* servers total-tries *number*
Tree	total-tries
Range	1 to 10
Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-name

Synopsis	Enter the **user-name** context
Context	**configure** aaa radius isa-policy *string* user-name
Tree	user-name
Description	Commands in this context define the format of the username field in the UE authentication request sent to the RADIUS server. For authentication of IPv6 triggers (ICMPv6, DHCPv6, IPv6 data-trigger) the username format will always fall back to MAC only.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

format *keyword*

Synopsis	Username format in RADIUS message
Context	**configure** aaa radius isa-policy *string* user-name format *keyword*
Tree	format
Options	mac, mac-ip, dhcp-vendor, circuit-id
Default	mac
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mac-format *keyword*

Synopsis	MAC address format when contacting RADIUS server
Context	**configure** aaa radius isa-policy *string* user-name mac-format *keyword*
Tree	mac-format
Options	alu, ieee
Default	alu
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2tp-accounting-policy [name] *string*

Synopsis	Enter the **l2tp-accounting-policy** list instance
Context	**configure** aaa radius l2tp-accounting-policy *string*
Tree	l2tp-accounting-policy
Max. Instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	L2TP RADIUS accounting policy name
Context	**configure** aaa radius l2tp-accounting-policy *string*
Tree	l2tp-accounting-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-type

Synopsis	Enter the **accounting-type** context
Context	**configure** aaa radius l2tp-accounting-policy *string* accounting-type
Tree	accounting-type

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session *boolean*

Synopsis	Enable per-session accounting
Context	**configure** aaa radius l2tp-accounting-policy *string* accounting-type session *boolean*
Tree	session
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel *boolean*

Synopsis	Enable per-tunnel accounting
Context	**configure** aaa radius l2tp-accounting-policy *string* accounting-type tunnel *boolean*
Tree	tunnel
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-tunnel-connection-fmt *string*

Synopsis	Accounting tunnel connection ASCII specification
Context	**configure** aaa radius l2tp-accounting-policy *string* acct-tunnel-connection-fmt *string*
Tree	acct-tunnel-connection-fmt
String Length	1 to 253
Default	%n
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** aaa radius l2tp-accounting-policy *string* include-radius-attribute
Tree	include-radius-attribute
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** aaa radius l2tp-accounting-policy *string* include-radius-attribute calling-station-id *boolean*
Tree	calling-station-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** aaa radius l2tp-accounting-policy *string* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port

Synopsis	Enable the **nas-port** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius l2tp-accounting-policy *string* include-radius-attribute nas-port
Tree	nas-port
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bit-spec *string*

Synopsis	RADIUS NAS-Port attribute
Context	**configure** aaa radius l2tp-accounting-policy *string* include-radius-attribute nas-port bit-spec *string*
Tree	bit-spec
String Length	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port-id

Synopsis	Enable the **nas-port-id** context
Context	**configure** aaa radius l2tp-accounting-policy *string* include-radius-attribute nas-port-id
Tree	nas-port-id
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-string *string*

Synopsis	Prefix string added to RADIUS NAS-Port attribute
Context	**configure** aaa radius l2tp-accounting-policy *string* include-radius-attribute nas-port-id prefix-string *string*
Tree	prefix-string
String Length	1 to 8
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

base-user-name *string*

Synopsis	Prefix of the username used as access requests
Context	**configure** aaa radius route-downloader *string* base-user-name *string*
Tree	base-user-name
Description	This command sets the prefix for the username that is used for access requests. The actual name used is a concatenation of this string, the “-” (dash) character and a monotonically increasing integer.
String Length	1 to 32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-metric *number*

Synopsis	Default metric that RTM imported routes acquire
Context	**configure** aaa radius route-downloader *string* default-metric *number*
Tree	default-metric
Range	0 to 254
Default	2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-tag *number*

Synopsis	Default tag of this route downloader
Context	**configure** aaa radius route-downloader *string* default-tag *number*
Tree	default-tag
Range	0 to 4294967295
Default	0
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** aaa radius route-downloader *string* description *string*

radius-server-policy *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	RADIUS server policy referenced
Context	**configure** aaa radius route-downloader *string* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *string*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retry-interval

Synopsis	Enter the **retry-interval** context
Context	**configure** aaa radius route-downloader *string* retry-interval
Tree	retry-interval
Description	Commands in this context configure parameters of the retry interval timer, which is an exponential backoff timer. The system retries sending an Access Request message after the previous message was unanswered (for example, a RADIUS failure or ICMP port unreachable error).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max *number*

Synopsis	Maximum duration of the retry interval
Context	**configure** aaa radius route-downloader *string* retry-interval max *number*
Tree	max
Range	1 to 1440
Units	minutes
Default	20
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

min *number*

Synopsis	Minimum duration of the retry interval
Context	**configure** aaa radius route-downloader *string* retry-interval min *number*
Tree	min
Description	This command specifies the minimum duration of the retry interval. This duration grows exponentially after each sequential failure.
Range	1 to 1440
Units	minutes
Default	10
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server-policy [name] *string*

Synopsis	Enter the **server-policy** list instance
Context	**configure** aaa radius server-policy *string*
Tree	server-policy
Max. Instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

3.2.1 anysec command descriptions

anysec

Synopsis	Enter the **anysec** context
Context	**configure** anysec
Tree	anysec
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

mka-over-ip

Synopsis	Enter the **mka-over-ip** context
Context	**configure** anysec mka-over-ip
Tree	mka-over-ip
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

mka-udp-port *number*

Synopsis	ANYSec MKA UDP port
Context	**configure** anysec mka-over-ip mka-udp-port *number*
Tree	mka-udp-port
Description	This command configures the UDP port that identifies the MKA packet on the system. Nokia recommends configuring this UDP port network wide. In addition, ensure the UDP port is not used by any other protocols in the network.
Range	1024 to 49151
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

reserved-label-block *reference*

Synopsis	ANYSec reserved label block

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** anysec reserved-label-block *reference*
Tree	reserved-label-block
Description	This command assigns the label block that is reserved for the ANYsec encryption SID. Without this reserved block, ANYsec cannot assign any encryption SIDs. The encryption SID uniquely identifies the encrypting node within a network and avoids double encryption scenarios. The encryption SID can be assigned per encryption group. However, all encryption groups can have the same encryption SID. To save label space, Nokia recommends limiting the number of encryption SIDs within a network.
Reference	**configure** router *string* mpls-labels reserved-label-block *string*
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

tunnel-encryption

Synopsis	Enter the **tunnel-encryption** context
Context	**configure** anysec tunnel-encryption
Tree	tunnel-encryption
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

encryption-group [group-name] *string*

Synopsis	Enter the **encryption-group** list instance
Context	**configure** anysec tunnel-encryption encryption-group *string*
Tree	encryption-group
Description	Commands in this context create an encryption group. An encryption group is a group of LSPs that use the same CA and preshared keys (PSK). For ease of PSK management, SR OS allows a group of LSPs to use the same CA with the same PSKs. The PSK is used to secure the SAK for distribution to other PEERs. Note: Although the LSPs are unidirectional, ANYsec is a bidirectional concept where a pair of LSPs between two peers are encrypted and decrypted. Each pair of LSPs uses its own SAK for maximum security, although they may share the same CA and PSK with all other LSPs in the encryption group to secure the SAK.
Max. Instances	1023

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

[**group-name**] *string*

Synopsis	ANYsec encryption group name
Context	**configure** anysec tunnel-encryption encryption-group *string*
Tree	encryption-group
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

admin-state *keyword*

Synopsis	Administrative state of the encryption group
Context	**configure** anysec tunnel-encryption encryption-group *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	23.3.R2
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

ca-name *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Connectivity association for the encryption group
Context	**configure** anysec tunnel-encryption encryption-group *string* ca-name *reference*
Tree	ca-name
Description	This command configures the CA used for this encryption group. A CA must be configured with the keyword **anysec** for use in the encryption group.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Reference	**configure** macsec connectivity-association *string*
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

encryption-label *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Label identifying packets sent from the node to peers
Context	**configure** anysec tunnel-encryption encryption-group *string* encryption-label *number*
Tree	encryption-label
Description	This command creates an encryption SD for the encryption group. The encryption SID uniquely identifies the encrypting node within a network to avoid double encryption scenarios. The encryption SID can be assigned per encryption group. However, all encryption groups can have the same encryption SID. To save label space, Nokia recommends limiting the number of encryption SIDs within a network. To configure the encryption SID, a **reserved-label-block** command must be configured under the **anysec** context. The encryption SID is programmed at the bottom of the stack with the S-it set.
Range	32 to 1048575
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

peer [peer-ip-address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Enter the **peer** list instance
Context	**configure** anysec tunnel-encryption encryption-group *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	peer
Max. Instances	1023
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**peer-ip-address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Peer IP address of the node SID
Context	**configure** anysec tunnel-encryption encryption-group *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	peer
Description	This command configures the IPv4 or IPv6 address of the node SID of the peer that is part of this encryption group. This configuration identifies the segment routing node SID of the peer and programs the egress label stack for matching on the FP5 for encrypting the LSP. When the label stack is downloaded, the encryption SID is also included at the bottom of the stack with the S-bit set.
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

admin-state *keyword*

Synopsis	Administrative state of the encryption group peer
Context	**configure** anysec tunnel-encryption encryption-group *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

peer-tunnel-attributes

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **peer-tunnel-attributes** context
Context	**configure** anysec tunnel-encryption encryption-group *string* peer-tunnel-attributes
Tree	peer-tunnel-attributes

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the peer-tunnel attributes. Tunnel attributes are used to match and identify the outgoing tunnels for encryptoin with ANYsec. A single tunnel attribute is used for multiple peers. Since an LSP is unidirectional, the outgoing tunnel can have different attributes from the incoming tunnel (for example, security termination policy).
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

flex-algo-id *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Flexible algorithm ID
Context	**configure** anysec tunnel-encryption encryption-group *string* peer-tunnel-attributes flex-algo-id *number*
Tree	flex-algo-id
Description	This command configures the flexible algorithm ID. This ID must match the local terminating ANYsec tunnel.
Range	128 to 255
Introduced	23.3.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

igp-instance-id *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IGP instance ID
Context	**configure** anysec tunnel-encryption encryption-group *string* peer-tunnel-attributes igp-instance-id *number*
Tree	igp-instance-id
Description	This command configures the IGP instance ID. This IGP instance ID must match the IGP instance that the incoming encrypted LSP was signaled on.
Range	0 to 31 | 64 to 95

3.3.1 application-assurance command descriptions

application-assurance

Synopsis	Enter the **application-assurance** context
Context	**configure** application-assurance
Tree	application-assurance
Description	Commands in this context configure the attributes of Application Assurance (AA) operations.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp [aarp-id] *number*

Synopsis	Enter the **aarp** list instance
Context	**configure** application-assurance aarp *number*
Tree	aarp
Description	Commands in this context define an Application Assurance Redundancy Protocol (AARP) instance. This instance is paired with the same AARP ID in a peer node, as part of the configuration to provide flow and packet asymmetry removal for traffic of a multi-homed SAP or spoke SDP.
Max. Instances	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aarp-id**] *number*

Synopsis	AARP ID
Context	**configure** application-assurance aarp *number*
Tree	aarp
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the AARP instance
Context	**configure** application-assurance aarp *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** application-assurance aarp *number* description *string*
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

master-selection-mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AARP master selection mode
Context	**configure** application-assurance aarp *number* master-selection-mode *keyword*
Tree	master-selection-mode
Description	This command configures the AARP mode of operation with the peer instance. The modes affect the AARP state machine behavior according to the specified behavior.
Options	minimize-switchovers, inter-chassis-efficiency, priority-based-balance
Default	minimize-switchovers
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

peer *(ipv4-address-no-zone | ipv6-address-no-zone)*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AARP peer IP address
Context	**configure** application-assurance aarp *number* peer *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	peer
Description	This command defines the IP address of the AARP peer router, which must be a routable system IP address. If no peer is configured when the AARP is administratively enabled, it is configured as a single node AARP instance.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer-endpoint

Synopsis	Enter the **peer-endpoint** context
Context	**configure** application-assurance aarp *number* peer-endpoint
Tree	peer-endpoint
Description	Commands in this context specify the attributes of the peer endpoint parent AA subscriber of the AARP peer.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap

Synopsis	Enable the **sap** context
Context	**configure** application-assurance aarp *number* peer-endpoint sap
Tree	sap
Notes	The following elements are part of a choice: **sap** or **spoke-sdp**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encap-type *keyword*

Synopsis	Encapsulation type for peer endpoint SAP

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance aarp *number* peer-endpoint sap encap-type *keyword*
Tree	encap-type
Options	null, dot1q, qinq
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap-id *string*

Synopsis	AARP peer endpoint SAP ID
Context	**configure** application-assurance aarp *number* peer-endpoint sap sap-id *string*
Tree	sap-id
String Length	1 to 45
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

spoke-sdp *string*

Synopsis	AARP peer endpoint spoke SDP
Context	**configure** application-assurance aarp *number* peer-endpoint spoke-sdp *string*
Tree	spoke-sdp
String Length	3 to 16
Notes	The following elements are part of a choice: **sap** or **spoke-sdp**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AARP priority
Context	**configure** application-assurance aarp *number* priority *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	priority
Description	This command defines the priority for the AARP instance. The priority value is used to determine the master and backup upon initialization or rebalance.
Range	0 to 255
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cflowd

Synopsis	Enter the **cflowd** context
Context	**configure** application-assurance cflowd
Tree	cflowd
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field [field-name] *string*

Synopsis	Enter the **field** list instance
Context	**configure** application-assurance cflowd field *string*
Tree	field
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**field-name**] *string*

Synopsis	Cflowd record field name
Context	**configure** application-assurance cflowd field *string*
Tree	field
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

comment *string*

Synopsis	User information comment
Context	**configure** application-assurance cflowd field *string* comment *string*
Tree	comment
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-attribute

Synopsis	Enter the **flow-attribute** context
Context	**configure** application-assurance flow-attribute
Tree	flow-attribute
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

attribute [attribute-name] *string*

Synopsis	Enter the **attribute** list instance
Context	**configure** application-assurance flow-attribute attribute *string*
Tree	attribute
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**attribute-name**] *string*

Synopsis	Attribute name
Context	**configure** application-assurance flow-attribute attribute *string*
Tree	attribute
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

comment *string*

Synopsis	User information comment
Context	**configure** application-assurance flow-attribute attribute *string* comment *string*
Tree	comment
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group [aa-group-id] *number*

Synopsis	Enter the **group** list instance
Context	**configure** application-assurance group *number*
Tree	group
Description	Commands in this context configure an Application Assurance group and partition parameters.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-group-id**] *number*

Synopsis	AA group ID
Context	**configure** application-assurance group *number*
Tree	group
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

certificate-profile [cert-prof-name] *string*

Synopsis	Enter the **certificate-profile** list instance
Context	**configure** application-assurance group *number* certificate-profile *string*
Tree	certificate-profile
Description	Commands in this context create a certificate profile to be used for certificate-based encryption in HTTP header enrichment.

vlan-id *number*

Synopsis	Cflowd direct export VLAN ID
Context	**configure** application-assurance group *number* cflowd direct-export vlan-id *number*
Tree	vlan-id
Range	1 to 4094
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-override

Synopsis	Enter the **export-override** context
Context	**configure** application-assurance group *number* cflowd export-override
Tree	export-override
Description	Commands in this context configure the AA subtype used in the cflowd record export. The cflowd statistics exported to the cflowd collector look identical to AA for the type of system defined by the mode. The following cflowd export fields are affected: • The cflowd export observation point (field 138) mode is derived from the export-override category that is selected.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- The cflowd export AA_Subscriber_Type (field 12) mode is modified as configured, using existing field types.
- The cflowd interface name is used as the sub-ID field, optionally modified to use the configured **mode** and **prefix** commands for global identifiers.

All AA cflowd record types are affected by export override. To change the export override or prefix, cflowd must first be disabled. When this command is set back to the default, the prefix is also set back to its default.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AA cflowd export override mode
Context	**configure** application-assurance group *number* cflowd export-override mode *keyword*
Tree	mode
Description	This command specifies the type of system emulated for the cflowd export.
Options	mobile, ifname-obfuscate
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AA group cflowd export override prefix
Context	**configure** application-assurance group *number* cflowd export-override prefix *string*
Tree	prefix
Description	This command specifies the prefix-string associated with the export override. The prefix string specifies up to an 8 character string. If the 8 character prefix is "ABCDEFG_" for a particular node, the cflowd export override would generate IPv4 interface names such as ABCDEFG_255.255.255.255 or IPv6 as ABCDEFG_2001:DB8:EF01:2345::/64. By default, the prefix is left blank.
String Length	1 to 8

field [field-name] *string*

Synopsis	Add a list entry for **field**
Context	**configure** application-assurance group *number* cflowd volume template dynamic-fields field *string*
Tree	field
Description	This command adds a list entry for the fields to be included in the exported cflowd template.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**field-name**] *string*

Synopsis	Cflowd template dynamic field name
Context	**configure** application-assurance group *number* cflowd volume template dynamic-fields field *string*
Tree	field
Description	This command specifies the name of the field to be included in the exported cflowd template.

- Common to all templates are the following values: flowStartSeconds | flowDuration Milliseconds |postIpPrecedence | aaProt | aaApp | aaAppGrp | hostName |hostName Extended| deviceId | deviceMfgId | deviceOsId |ipFamily | deviceOsVer1 | device OsVer2 | deviceOsVer3 |anlType | anlTopology | anlCongestionState | apn | charge Id |mnc | imsi | msisdn | sgw-sgsnAddr | pgw-ggsnAddr | bsid |ratType | regionId | cellId |timeZone | aaChargingGrp |flowAttr_video | flowAttr_abr_service | flowAttr_ audio |flowAttr_encrypted | flowAttr_download |flowAttr_upload |flowAttr_realtime_ communication | aaSubTetheringState | imei| ipTTL | imei roamingStatus | mcc | uli | chargingChar | plmnid| customerId
- When AA is deployed in FWA SR, the following value applies: ApnExtended
- For the rtp-voice template only, the following values apply: flowStartSeconds | flow DurationMilliseconds |postIpPrecedence | aaProt | aaApp | aaAppGrp |rtpBurstCount| rtpAvgBurstLengthMs | rtpGapCount | rtpAvgGapLengthMs |MAPDV | RBurst | RGap | SSRC
- For the rtp-video template only, the following values apply: flowStartSeconds | flow DurationMilliseconds |postIpPrecedence | aaProt | aaApp | aaAppGrp |rtpRefClock Rate | MOSAV | VSTQ | estimatedPSNR |GoPType | avgGoPLength | avgInterIFrame Gap | imageWidth| imageHeight | frameRate |slicesPerIFrame | SSRC |video Interlaced | IFrameReceived | IFrameImpaired |PFrameReceived | PFrameImpaired | BFrameReceived |BFrameImpaired | SIFrameReceived | SIFrameImpaired | SPFrameReceived | SPFrameImpaired |frameInterArrivalJitter| IFrameInterArrival Jitter | avgFrameArrivalDelay

Use subject to Terms available at: www.nokia.com/terms.

- For the rtp-audio template only, the following values apply: flowStartSeconds | flowDurationMilliseconds |postIpPrecedence | aaProt | aaApp | aaAppGrp | rtpBurstCount| rtpAvgBurstLengthPkts | rtpGapCount |rtpAvgGapLengthPkts | PPDVM | rtpNumAudioChannels |rtpRefClockRate |rtpPeakAudioBw | SSRC | hostName
- For volume and comprehensive templates, the following values apply: tcpSessionEstDelay | tcpRetransmittedBytes |tcpRetransmittedPackets

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field-selection *keyword*

Synopsis	Field selection method
Context	**configure** application-assurance group *number* cflowd volume template field-selection *keyword*
Tree	field-selection
Description	This command configures the method for selecting the fields to be included in the exported cflowd template.
Options	legacy, dynamic
Default	legacy
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-ip-cache [dns-ip-cache-name] *string*

Synopsis	Enter the **dns-ip-cache** list instance
Context	**configure** application-assurance group *number* dns-ip-cache *string*
Tree	dns-ip-cache
Description	Commands in this context configure a DNS IP cache that is used to snoop DNS requests generated by subscribers, to populate a cache of IP addresses that match a specified list of domain names. In the context of strengthening URL-content charging, Operators may also specify a list of trusted DNS servers to populate the DNS IP cache.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**dns-ip-cache-name**] *string*

Synopsis	DNS IP cache name within the AA group
Context	**configure** application-assurance group *number* dns-ip-cache *string*
Tree	dns-ip-cache
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AA DNS IP cache object
Context	**configure** application-assurance group *number* dns-ip-cache *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** application-assurance group *number* dns-ip-cache *string* description *string*
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-match

Synopsis	Enter the **dns-match** context
Context	**configure** application-assurance group *number* dns-ip-cache *string* dns-match
Tree	dns-match
Introduced	21.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

domain [domain-name] *string*

Synopsis	Enter the **domain** list instance
Context	**configure** application-assurance group *number* dns-ip-cache *string* dns-match domain *string*
Tree	domain
Description	Commands in this context configure a domain expression to populate the DNS IP cache.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**domain-name**] *string*

Synopsis	DNS IP cache domain name
Context	**configure** application-assurance group *number* dns-ip-cache *string* dns-match domain *string*
Tree	domain
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

expression *string*

Synopsis	AA DNS domain expression to match
Context	**configure** application-assurance group *number* dns-ip-cache *string* dns-match domain *string* expression *string*
Tree	expression
Description	This command specifies a domain name expression string used to define a pattern match. The domain expression uses the same syntax as the expressions used in **configure application-assurance group partition policy app-filter entry app-filters** configuration.
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

trusted-server-address [dns-server-address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Enter the **trusted-server-address** list instance
Context	**configure** application-assurance group *number* dns-ip-cache *string* dns-match trusted-server-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	trusted-server-address
Description	Commands in this context configure a trusted DNS server address. DNS responses from this DNS server are used to populate the DNS IP cache.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**dns-server-address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Trusted DNS server address
Context	**configure** application-assurance group *number* dns-ip-cache *string* dns-match trusted-server-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	trusted-server-address
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server-name *string*

Synopsis	DNS server name
Context	**configure** application-assurance group *number* dns-ip-cache *string* dns-match trusted-server-address *(ipv4-address-no-zone | ipv6-address-no-zone)* server-name *string*
Tree	server-name
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-cache

Synopsis	Enter the **ip-cache** context
Context	**configure** application-assurance group *number* dns-ip-cache *string* ip-cache

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ip-cache
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high-watermark *number*

Synopsis	High watermark value for the DNS IP cache
Context	**configure** application-assurance group *number* dns-ip-cache *string* ip-cache high-watermark *number*
Tree	high-watermark
Description	This command configures the high watermark value for the DNS IP cache. When the number of cached IP addresses exceeds the threshold, the system generates a trap.
Range	0 to 100
Default	90
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low-watermark *number*

Synopsis	Low watermark value for the DNS IP cache
Context	**configure** application-assurance group *number* dns-ip-cache *string* ip-cache low-watermark *number*
Tree	low-watermark
Description	This command configures the low watermark value for the DNS IP cache. When the number of cached IP addresses exceeds the high watermark threshold, the system generates a trap based on the high watermark. The trap clears after the number of cached IP addresses drops below the configured low watermark value.
Range	0 to 100
Default	80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

size *number*

Synopsis	Maximum number of IP addresses stored in the cache
Context	**configure** application-assurance group *number* dns-ip-cache *string* ip-cache size *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	size
Range	10 to 64000
Default	10
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

static-address [static-ip-address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Add a list entry for **static-address**
Context	**configure** application-assurance group *number* dns-ip-cache *string* ip-cache static-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	static-address
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**static-ip-address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Trusted IP address for the DNS IP cache
Context	**configure** application-assurance group *number* dns-ip-cache *string* ip-cache static-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	static-address
Description	This command configures an IP address to be used as a trusted IP address. For packets whose destination IP address matches that of the trusted IP address, a cache hit is assumed.
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-enrich [http-enrich-name] *string*

Synopsis	Enter the **http-enrich** list instance
Context	**configure** application-assurance group *number* http-enrich *string*
Tree	http-enrich
Description	Commands in this context configure the attributes of the HTTP enrichment policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**http-enrich-name**] *string*

Synopsis	HTTP header enrichment policy name
Context	**configure** application-assurance group *number* http-enrich *string*
Tree	http-enrich
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the HTTP enrichment policy
Context	**configure** application-assurance group *number* http-enrich *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** application-assurance group *number* http-enrich *string* description *string*
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field [field-name] *string*

Synopsis	Enter the **field** list instance
Context	**configure** application-assurance group *number* http-enrich *string* field *string*
Tree	field
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**field-name**] *string*

Synopsis Field name to insert into the HTTP header

Context **configure** application-assurance group *number* http-enrich *string* field *string*

Tree field

Description This command specifies the field type to insert into the HTTTP header. The command must be repeated for each field to be inserted. The same field cannot be inserted twice into the header under different header names.

Note: AA can insert two copies of the following fields in the same HTTP header (with a different header name):

imei-hyphenated, imei-hyphenated-2, imsi, imsi-2, static-string, static-string-2, user-location-raw, and user-location-raw2.

The following field types are supported in any deployment:

static-string - header name for the inserted string

static-string-2 - header name for the inserted string

subscriber-id - header name for the subscriber ID

subscriber-ip - header name for the subscriber IP address

The following field types are supported in Fixed Wireless Access (FWA) deployments only:

apn - complete APN string

apn-ni - APN Network Identifier (APN-NI) used by the UE

billing-type - UE charging type (charging characteristics)

dynamic-acr - dynamic Anonymous Customer Record (ACR)

static-acr - static ACR

imei-hyphenated - subscriber IMEI with format AABBBBBB-CCCCCC-EE

imei-hyphenated-2 - subscriber IMEI with format AABBBBBB-CCCCCC-EE

imei-sv - subscriber IMEI with format AABBBBBBCCCCCCEE

imsi - subscriber IMSI

imsi-2 - subscriber IMSI

msisdn - subscriber MSISDN

msisdn-ts - subscriber MSISDN appended with the UNIX timestamp

msisdn-without-cc - subscriber MSISDN without a country code

pgw-ggsn-address - PGW/GGSN address serving the UE

plmn-id - Public Land Mobile Network (PLMN) ID of the SGSN/MME

rat-type - Radio Access Technology (RAT) type

timestamp - timestamp inserted in UNIX time format; for example, 1531204313

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	user-location - UE LOCATION (ULI) user-location-3gpp - ULI encoded as defined in 3GPP 29.061 user-location-raw - ULI in raw format:<ULI-TYPE1>[+<ULI-TYPE2>]=<ULI HEX> Example: x-locinfo: TAI+ECGI=1300622c46130062014adf16 user-location-raw-2 - ULI in raw format:<ULI-TYPE1>[+<ULI-TYPE2>]=<ULI HEX> Example: x-locinfo: TAI+ECGI=1300622c46130062014adf16
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aes-initialization-vector *string*

Synopsis	Initialization vector for the AES CBC encryption
Context	**configure** application-assurance group *number* http-enrich *string* field *string* aes-initialization-vector *string*
Tree	aes-initialization-vector
Description	This command configures the initialization vector used for the AES CBC encryption. The vector consists of 34 characters, that is, 0x followed by exactly 32 hexadecimal characters.
String Length	34
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

anti-spoof *boolean*

Synopsis	Enable anti-spoofing
Context	**configure** application-assurance group *number* http-enrich *string* field *string* anti-spoof *boolean*
Tree	anti-spoof
Description	When configured to **true**, this command enables the HTTP header enrichment anti-spoofing functionality.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

calling-line-id *boolean*

Synopsis	Enable calling line identification
Context	**configure** application-assurance group *number* http-enrich *string* field *string* calling-line-id *boolean*
Tree	calling-line-id
Description	When configured to **true**, this command configures the HTTP header for “x-up-calling-line-id” anti-spoofing.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encode

Synopsis	Enter the **encode** context
Context	**configure** application-assurance group *number* http-enrich *string* field *string* encode
Tree	encode
Description	Commands in this context configure the encoding applied to the HTTP header enrichment field.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert-base64 *reference*

Synopsis	Certificate profile name
Context	**configure** application-assurance group *number* http-enrich *string* field *string* encode cert-base64 *reference*
Tree	cert-base64
Reference	**configure** application-assurance group *number* certificate-profile *string*
Notes	The following elements are part of a choice: **cert-base64**, **cert-profile**, or **key**.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert-profile *reference*

Synopsis	Certificate profile name used for encryption

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* http-enrich *string* field *string* encode cert-profile *reference*
Tree	cert-profile
Reference	**configure** application-assurance group *number* certificate-profile *string*
Notes	The following elements are part of a choice: **cert-base64**, **cert-profile**, or **key**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key

Synopsis	Enter the **key** context
Context	**configure** application-assurance group *number* http-enrich *string* field *string* encode key
Tree	key
Description	Commands in this context configure the encryption fields.
Notes	The following elements are part of a choice: **cert-base64**, **cert-profile**, or **key**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Encoding type
Context	**configure** application-assurance group *number* http-enrich *string* field *string* encode key type *keyword*
Tree	type
Description	This command configures the encoding/ encryption method.
Options	md5, rc4, rc4-md5-base64, aes128, aes256, aes128cbc, aes256cbc
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value *string*

Synopsis	Secret key for encrypting the field
Context	**configure** application-assurance group *number* http-enrich *string* field *string* encode key value *string*
Tree	value

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String Length	1 to 114
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

md5-salt *string*

Synopsis	MD5 salt string
Context	**configure** application-assurance group *number* http-enrich *string* field *string* md5-salt *string*
Tree	md5-salt
Description	This command configures an MD5 salt string. The configured string is appended to the parameter before performing MD5 hashing of the field.
String Length	1 to 16
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

error-code [error-code-value] *number*

Synopsis	Enter the **error-code** list instance
Context	**configure** application-assurance group *number* http-error-redirect *string* error-code *number*
Tree	error-code
Description	Commands in this context configure the HTTP error status codes to which a redirect action is applied. Only messages with sizes less than that configured for the **custom-message-size** command are eligible for redirect action.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**error-code-value**] *number*

Synopsis	HTTP error code value for an HTTP error redirect
Context	**configure** application-assurance group *number* http-error-redirect *string* error-code *number*
Tree	error-code
Range	400 to 999
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-message-size *number*

Synopsis	HTTP error redirect error code custom message size
Context	**configure** application-assurance group *number* http-error-redirect *string* error-code *number* custom-message-size *number*
Tree	custom-message-size
Description	This command specifies the maximum message size above which an HTTP error redirect is not performed.
Max. Range	0 to 4294967295
Units	octets
Default	1024
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-host *string*

Synopsis	HTTP host for the HTTP error redirect object
Context	**configure** application-assurance group *number* http-error-redirect *string* http-host *string*
Tree	http-host
Description	This command specifies the HTTP hostname of the landing server (Barefruit or Xerocole). It is used in the HTTP GET operation from the client (which is being redirected) to the redirect search landing server. The hostname must contain a valid IP address or HTTP hostname or URI for the HTTP GET from the client to the landing server.
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

participant-id *string*

Synopsis	Participant ID for the HTTP error redirect object
Context	**configure** application-assurance group *number* http-error-redirect *string* participant-id *string*
Tree	participant-id
Description	This command specifies a string assigned to the operator by Barefruit. It is used by Barefruit landing servers (applies to template # 1 only).
String Length	1 to 32
Introduced	21.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

template *number*

Synopsis	Template ID for the HTTP error redirect object
Context	**configure** application-assurance group *number* http-error-redirect *string* template *number*
Tree	template
Description	This command configures the template of parameters passed from the AA-ISA to the redirect server using JavaScript in the redirect packet. The template is specific to the redirect server used in the network. Currently, two partners are supported with AA-ISA redirect solution, Barefruit, and Xerocole.
Max. Range	0 to 4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-notification [http-notification-name] *string*

Synopsis	Enter the **http-notification** list instance
Context	**configure** application-assurance group *number* http-notification *string*
Tree	http-notification
Description	Commands in this context configure an HTTP notification object for the subscriber in-browser notification.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**http-notification-name**] *string*

Synopsis	HTTP notification policy name
Context	**configure** application-assurance group *number* http-notification *string*
Tree	http-notification
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the AA HTTP notification object
Context	**configure** application-assurance group *number* http-notification *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** application-assurance group *number* http-notification *string* description *string*
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *(number | keyword)*

Synopsis	Minimum HTTP response notification interval
Context	**configure** application-assurance group *number* http-notification *string* interval *(number | keyword)*
Tree	interval
Range	1 to 1440
Units	minutes
Options	one-time
Default	one-time
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

script-url *string*

Synopsis	Script URL inserted into the HTTP response

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* http-notification *string* script-url *string*
Tree	script-url
Description	This command configures the URL of the script used by the HTTP notification policy.
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

template *number*

Synopsis	Template ID for the AA HTTP notification object
Context	**configure** application-assurance group *number* http-notification *string* template *number*
Tree	template
Description	This command configures the template that defines the format and attributes included in the HTTP notification message.
Max. Range	0 to 4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect [http-redirect-name] *string*

Synopsis	Enter the **http-redirect** list instance
Context	**configure** application-assurance group *number* http-redirect *string*
Tree	http-redirect
Description	Commands in this context configure the parameters of the HTTP redirect policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**http-redirect-name**] *string*

Synopsis	HTTP redirect policy name
Context	**configure** application-assurance group *number* http-redirect *string*
Tree	http-redirect
Description	This command specifies the applied HTTP redirect name. If no redirect name is specified, HTTP redirect is not enabled.
String Length	1 to 32

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AA HTTP redirect object
Context	**configure** application-assurance group *number* http-redirect *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

captive-redirect

Synopsis	Enter the **captive-redirect** context
Context	**configure** application-assurance group *number* http-redirect *string* captive-redirect
Tree	captive-redirect
Description	Commands in this context configure the captive redirect capability for an HTTP redirect policy. HTTP redirect policies using captive redirect can be used in conjunction with a session-filter policy to terminate TCP flows in the ISA-AA card before reaching the Internet to redirect subscribers to the predefined redirect URL. Non-HTTP TCP flows are TCP reset. Captive redirect uses the provisioned VLAN ID to send the HTTP response to subscribers; therefore, this VLAN ID must be properly assigned in the same VPN as the subscriber. The operator can select the URL arguments to include in the redirect URL using either a specific template ID or by configuring the redirect URL using a supported macro substitution keyword.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-id *number*

Synopsis	Captive redirect VLAN ID
Context	**configure** application-assurance group *number* http-redirect *string* captive-redirect vlan-id *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	vlan-id
Description	This command configures the VLAN ID for a captive redirect. Captive redirect uses the provisioned VLAN ID to send the HTTP response to subscribers; therefore, this VLAN ID must be properly assigned in the same VPN as the subscriber.
Range	1 to 4094
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** application-assurance group *number* http-redirect *string* description *string*
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

redirect-https *boolean*

Synopsis	Enable HTTPS redirect
Context	**configure** application-assurance group *number* http-redirect *string* redirect-https *boolean*
Tree	redirect-https
Description	When set to **true**, the HTTP redirect policy redirects HTTPS sessions to the configured redirect URL.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

redirect-url *string*

Synopsis	HTTP redirect URL
Context	**configure** application-assurance group *number* http-redirect *string* redirect-url *string*
Tree	redirect-url
Description	This command configures the HTTP redirect URL which is the URL (page) that the user is redirected to when an HTTP redirect takes effect.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The operator can select the URL arguments to include in the redirect URL, using either a specific template ID or by configuring any of the following macro substitution keywords:

- $URL - The Request-URI in the HTTP GET Request received
- $SUB - The subscriber ID
- $IP - The IP address of the subscriber host
- $RTRID - The router ID
- $URLPRM - The HTTP URL parameter associated with the subscriber
- $MAC - The UE MAC address
- $SAP - The UE SAP
- $CID - The circuit ID or interface ID of the subscriber
- $RID - The remote ID of the subscriber
- $CATID - The URL filter web-service rating category identifier
- $CATNAME - The URL filter web-service rating category name

Only ESM and ESM-MAC sub types support $MAC, $SAP, $CID, and $RID macro substitution.

String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-client-reset *boolean*

Synopsis	Enable TCP client reset
Context	**configure** application-assurance group *number* http-redirect *string* tcp-client-reset *boolean*
Tree	tcp-client-reset
Description	When configured to **true**, this command enables an HTTP-redirect policy to initiate a TCP reset towards the client if the AA policy results in a redirect with packet drop but the HTTP redirect cannot be delivered. Scenarios for this include HTTP (TLS) sessions, blocking of non-HTTP TCP traffic, and blocking of existing flows after a policy re-evaluation of an existing subscriber.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

template *number*

Synopsis	Template ID for the HTTP redirect object

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* http-redirect *string* template *number*
Tree	template
Description	This command configures the template that defines which parameters are appended to the HTTP host redirect field in the redirect message. The HTTP redirect template provides HTTP 302 redirect containing only the URL specified in the redirect policy, with no other parameters.
Max. Range	0 to 4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-identification-assist

Synopsis	Enter the **ip-identification-assist** context
Context	**configure** application-assurance group *number* ip-identification-assist
Tree	ip-identification-assist
Description	Commands in this context configure the IP identification assist feature, which uses IP addresses to assist in traffic identification. This optional mechanism is enabled by default and consults an internally generated and stored database when app-filters fail to classify the traffic as one of the configured applications from the AppDB. Use the **configure application-assurance group ip-identification-assist admin-state** command to disable the administrative state of the IP identification assist feature.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of IP identification assist
Context	**configure** application-assurance group *number* ip-identification-assist admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

passive-dns

Synopsis	Enter the **passive-dns** context
Context	**configure** application-assurance group *number* ip-identification-assist passive-dns
Tree	passive-dns
Description	Commands in this context configure passive DNS monitoring for the IP identification assist feature.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

monitor *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use passive DNS monitoring to collect IP addresses
Context	**configure** application-assurance group *number* ip-identification-assist passive-dns monitor *boolean*
Tree	monitor
Description	When configured to **true**, the router collects IP addresses by passively monitoring DNS traffic. The router uses the collected IP addresses to build its internal database.
Default	true
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trusted-server [ip-address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Enter the **trusted-server** list instance
Context	**configure** application-assurance group *number* ip-identification-assist passive-dns trusted-server *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	trusted-server
Description	Commands in this context configure a DNS server that the IP identification assist feature is allowed to passively monitor.
Max. Instances	64
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**ip-address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the DNS server
Context	**configure** application-assurance group *number* ip-identification-assist passive-dns trusted-server *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	trusted-server
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comment *string*

Synopsis	Name or description to associate with the DNS server
Context	**configure** application-assurance group *number* ip-identification-assist passive-dns trusted-server *(ipv4-address-no-zone | ipv6-address-no-zone)* comment *string*
Tree	comment
String Length	0 to 32
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

positive-app-id

Synopsis	Enter the **positive-app-id** context
Context	**configure** application-assurance group *number* ip-identification-assist positive-app-id
Tree	positive-app-id
Description	Commands in this context implement the positive application identification mechanism, which monitors the correlations between IP addresses and applications identified with a high degree of confidence independently of any IP identification assist mechanism.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

enabled *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	Use the positive application identification mechanism
Context	**configure** application-assurance group *number* ip-identification-assist positive-app-id enabled *boolean*
Tree	enabled
Description	When configured to **true**, the router uses the positive application identification mechanism. This mechanism causes the router to add the IP addresses of the global applications learned through AA analysis into the IP identification assist cache. The router uses the harvested IP addresses to build its internal application-IP database. When configured to **false**, only DNS is used to harvest IP addresses.
Default	true
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

partition [aa-partition-id] *number*

Synopsis	Enter the **partition** list instance
Context	**configure** application-assurance group *number* partition *number*
Tree	partition
Description	Commands in this context configure the AA partition-related policies.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-partition-id**] *number*

Synopsis	Partition ID within the AA group
Context	**configure** application-assurance group *number* partition *number*
Tree	partition
Range	0 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-congestion-detection

Synopsis	Enter the **aa-sub-congestion-detection** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection
Tree	aa-sub-congestion-detection
Description	Commands in this context configure congestion detection parameters related to Non-location Based Dynamic Experience Management (NLB-DEM). **Note:** NLB-DEM cannot be enabled if Access-Network Location (ANL) DEM mode is enabled; the two are mutually exclusive.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of congestion detection
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rat-type [rat-type-name] *keyword*

Synopsis	Enter the **rat-type** list instance
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection rat-type *keyword*
Tree	rat-type
Description	Commands in this context configure the RAT types for which unique RTT thresholds are configured.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**rat-type-name**] *keyword*

Synopsis	Mobile radio access technology (RAT) type
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection rat-type *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	rat-type
Options	utran, geran, wlan, gan, hspa-evol, eutran, virtual, eutran-nb, ehrpd, hrpd, cdma-1x, umb, wifi, nr, lte-m
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold *(number | keyword)*

Synopsis	Round trip time congestion threshold for a RAT type
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection rat-type *keyword* rtt-threshold *(number | keyword)*
Tree	rtt-threshold
Description	This command configures the maximum acceptable round trip time (RTT) under no congestion. Any measured RTT above the threshold is considered an indication of possible congestion.
Range	1 to 500
Units	milliseconds
Options	not-applicable
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold *(number | keyword)*

Synopsis	Round trip time congestion threshold
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection rtt-threshold *(number | keyword)*
Tree	rtt-threshold
Description	This command configures the default round trip delay threshold used by the DEM gateway algorithm to determine subscriber congestion for NLB-DEM. This default value is used when the current RAT-Type is not known, or has no associated configured RTT threshold.
Range	1 to 500
Units	milliseconds
Options	not-applicable
Default	173

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold-tolerance *number*

Synopsis	RTT threshold tolerance for congestion detection
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection rtt-threshold-tolerance *number*
Tree	rtt-threshold-tolerance
Description	This command configures the round trip delay threshold tolerance used by the DEM gateway algorithm to determine subscriber-level congestion.
Range	0 to 100
Units	percent
Default	50
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-remote *boolean*

Synopsis	Reverse subscriber traffic direction
Context	**configure** application-assurance group *number* partition *number* aa-sub-remote *boolean*
Tree	aa-sub-remote
Description	When configured to **true**, the direction of the from-subscriber and to-subscriber traffic is reversed for this group partition.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

access-network-location

Synopsis	Enter the **access-network-location** context
Context	**configure** application-assurance group *number* partition *number* access-network-location
Tree	access-network-location
Description	Commands in this context configure parameters related to dynamic experience management, also known as Access Network Location (ANL).

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source [source-type] *keyword*

Synopsis	Enter the **source** list instance
Context	**configure** application-assurance group *number* partition *number* access-network-location source *keyword*
Tree	source
Description	Commands in this context configure location sources for dynamic experience management.
Max. Instances	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**source-type**] *keyword*

Synopsis	Access network location source
Context	**configure** application-assurance group *number* partition *number* access-network-location source *keyword*
Tree	source
Description	This command specifies the location or access technology. AA supports access points for WLGW access points or ULI-2gpp for mobile (for example, FWA).
Options	mobile-3g, access-point, uli-3gpp
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rat-type [rat-type-name] *keyword*

Synopsis	Enter the **rat-type** list instance
Context	**configure** application-assurance group *number* partition *number* access-network-location source *keyword* rat-type *keyword*
Tree	rat-type
Description	Commands in this context configure the RAT types for which unique RTT thresholds are configured.

aqp-initial-lookup *boolean*

Synopsis Enable AQP initial lookup

Context **configure** application-assurance group *number* partition *number* aqp-initial-lookup *boolean*

Tree aqp-initial-lookup

Description When configured to **true**, this command allows AA to perform application QoS policy (AQP) lookups on flows prior to complete application identification. As usual, AQP will be looked up again when identification is complete. Without this, AA executes AQPs that are part of the sub-default policy. The sub-default policy is formed by regular AQPs that contain ASOs, subID, or flow direction as matching conditions.

This behavior is required, for example, to apply GTP and SCTP filtering on the first packet of a new GTP/SCTP flow (AQP matching conditions).

When configured to **false**, AA only performs AQP lookups when identification is complete.

Default false

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cflowd

Synopsis Enter the **cflowd** context

Context **configure** application-assurance group *number* partition *number* cflowd

Tree cflowd

Description Commands in this context configure the AA partition-based cflowd fields.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-type [flow-export-type] *keyword*

gtp-tunnel-database

Synopsis	Enter the **gtp-tunnel-database** context
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *string* gtp-tunnel-database
Tree	gtp-tunnel-database
Description	Commands in this context configure GTP advanced firewall functions, such as validating GTP tunnels, sequence numbers, and source IP addresses).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-tunnel-endpoint-limit *number*

Synopsis	Default GTP tunnel endpoint limit
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *string* gtp-tunnel-database default-tunnel-endpoint-limit *number*
Tree	default-tunnel-endpoint-limit
Description	This command configures the maximum number of GTP endpoints requested in GTP-C messages by using, for example, the PDP Context Create message type. The **validate-gtp-tunnels** command must be enabled before using this command.
Range	1 to 4294967295
Default	4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

validate-gtp-tunnels *boolean*

Synopsis	Enable GTP tunnel validation
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *string* gtp-tunnel-database validate-gtp-tunnels *boolean*
Tree	validate-gtp-tunnels
Description	When configured to **true**, this command configures GTP tunnel validation. This allows for the validation of TEIDs and is a prerequisite for sequence checking and UE IP address validation. This command is only applicable when AA GTP FW is deployed on S8/S5/Gp/Gn interfaces. The **gtpc-inspection** command in the **configure application-assurance group partition gtp** context must be configured to true before using this command. When configured to **false**, the GTP tunnels cannot be validated.
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

validate-sequence-number *boolean*

Synopsis	Enable GTP sequence number checking
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *string* gtp-tunnel-database validate-sequence-number *boolean*
Tree	validate-sequence-number
Description	When configured to **true**, this command enables GTP sequence number checking. GTP packets that fail the sequence number check are discarded. The **validate-gtp-tunnels** command in the **configure application-assurance group partition gtp gtp-filter gtp-tunnel-database** context must be configured to **true** before using this command. When configured to **false**, the GTP packet sequence number cannot be checked.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

validate-source-ip-addr *boolean*

Synopsis	Validate source IP address in GTP frames
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *string* gtp-tunnel-database validate-source-ip-addr *boolean*
Tree	validate-source-ip-addr
Description	When configured to **true**, this command enables checking for spoofed or invalid UE IP addresses. Upstream GTP packets that contain invalid UE IP addresses are discarded. When a packet is dropped due to source-ip-address “invalid source IP add”, the statistics counter is updated. The **validate-gtp-tunnels** command in the **configure application-assurance group partition gtp gtp-filter gtp-tunnel-database** context must be configured to **true** before using this command. When configured to **false**, the spoofed or invalid UE IP addresses cannot be checked.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

imsi-apn-filter

Synopsis	Enter the **imsi-apn-filter** context
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *string* imsi-apn-filter
Tree	imsi-apn-filter
Description	Commands in this context configure IMSI and APN filtering. The **gtpc-inspection** command in the **configure application-assurance group partition gtp** context must be configured to true before using this command. This command is only applicable to the GTP packets that contain IMSI or APN information elements (IEs).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action *keyword*

Synopsis	IMSI APN filter default action
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *string* imsi-apn-filter default-action *keyword*

Options	deny, permit
Default	permit
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

apn *string*

Synopsis	APN as GTP filter match criterion
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *string* imsi-apn-filter entry *number* apn *string*
Tree	apn
Description	This command configures a matching condition for an APN configured as a GTP filter. If no APN is specified, the entry is not checked for the APN IE in GTP-C packets. The values for this command are: • string:The extracted APN must match string exactly. • ^string: The extracted APN must start with string. • string$: The extracted APN must end with string. • WILDCARD_APN: Special string that indicates that the extracted APN must be “*” (that is, a length octet with value one, followed by the ASCII code for the asterisk)

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- EMPTY_APN: Special string that indicates that the extracted APN must be empty (that is, “”)
- ANY_APN: Special string that indicates that the extracted APN IE must be present and can have any value in order for the filter entry to match

String Length 1 to 100

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi-mcc-mnc-prefix *string*

Synopsis IMSI (MCC-MNC) prefix as GTP filter match criterion

Context **configure** application-assurance group *number* partition *number* gtp gtp-filter *string* imsi-apn-filter entry *number* imsi-mcc-mnc-prefix *string*

Tree imsi-mcc-mnc-prefix

Description This command configures a matching condition for the IMSI (MCC-MNC) prefix. This string represents the IMSI prefix to be matched against the IMSI IE of the packet, or the special value ANY_IMSI to indicate that an IMSI IE must be present as a matching condition regardless of the IMSI IE value. If no MCC-MNC prefix is specified, the entry will match GTP packets that have an IMSI IE containing any value.

String Length 1 to 8

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

src-gsn

Synopsis Enter the **src-gsn** context

Context **configure** application-assurance group *number* partition *number* gtp gtp-filter *string* imsi-apn-filter entry *number* src-gsn

Tree src-gsn

Description Commands in this context configure a matching condition for the GSN IP address. The IP address value is checked only against the source IP address of the GTP packets that contain an APN IE or an IMSI IE.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-payload-length *number*

Synopsis	Maximum allowed GTP payload length
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *string* max-payload-length *number*
Tree	max-payload-length
Range	0 to 65535
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-type

Synopsis	Enter the **message-type** context
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *string* message-type
Tree	message-type
Description	Commands in this context configure the GTP message-type filtering. If no message type is specified within a filter, all GTP message types are allowed.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-type-gtp-v2

Synopsis	Enter the **message-type-gtp-v2** context
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *string* message-type-gtp-v2
Tree	message-type-gtp-v2
Description	Commands in this context configure the GTPv2 message-type filtering. If message-type GTPv2 is not specified within a filter, all GTP message types are allowed, except for the messages that are dropped by GTP-C inspection because they violate the expected GTP protocol for the deployment interface (for example, roaming deployment). The **gtpc-inspection** command in the **configure application-assurance group partition gtp** context must be configured to true before configuring GTPv2 message-type filtering.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action *keyword*

Synopsis	GTPv2 message type default action
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *string* message-type-gtp-v2 default-action *keyword*
Tree	default-action
Options	deny, permit
Default	permit
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtpc-inspection *boolean*

Synopsis	Enable inspection of GTP-C packets
Context	**configure** application-assurance group *number* partition *number* gtp gtpc-inspection *boolean*
Tree	gtpc-inspection
Description	When configured to **true**, this command enables the inspection of GTP-C packets. This is relevant only when AA GTP FW is deployed on S8/S5/Gp/Gn interfaces. This command must be enabled before configuring related features, such as APN filtering, GTP tunnel validation, message-type-v2 filtering, sequence number validation, and SRC IP validation. When configured to **false**, GTP-C packet inspection cannot be performed.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

log

Synopsis	Enter the **log** context
Context	**configure** application-assurance group *number* partition *number* gtp log
Tree	log
Description	Commands in this context configure the AA group partition GTP log.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	GTP log action
Context	**configure** application-assurance group *number* partition *number* gtp log action *keyword*
Tree	action
Description	This command specifies the action on which the GTP log is raised.
Options	deny, permit, all
Default	deny

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event log reference for logging GTP events
Context	**configure** application-assurance group *number* partition *number* gtp log event-log *reference*
Tree	event-log
Reference	**configure** application-assurance group *number* partition *number* event-log *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	GTP mode
Context	**configure** application-assurance group *number* partition *number* gtp mode *keyword*
Tree	mode
Options	filtering, untunneling
Default	filtering
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-match-all-requests *boolean*

Synopsis	Enable HTTP matching for all requests for an expression
Context	**configure** application-assurance group *number* partition *number* http-match-all-requests *boolean*
Tree	http-match-all-requests
Description	When configured to **true**, this command enables HTTP matching for all requests for an HTTP expression. When configured to **false**, this command restores the default and removes the matching request for this particular expression.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-x-online-host *boolean*

Synopsis	Enable X-Online-Host header field
Context	**configure** application-assurance group *number* partition *number* http-x-online-host *boolean*
Tree	http-x-online-host
Description	When configured to **true**, this command enables the X-Online-Host header field as a replacement for the HTTP Host header field.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-identification-contribute *boolean*

Synopsis	Contribute traffic info from this partition to group
Context	**configure** application-assurance group *number* partition *number* ip-identification-contribute *boolean*
Tree	ip-identification-contribute
Description	When configured to **true**, the router collects information from traffic in this partition and contributes it to the database that is built by the IP identification assist feature at the group level.
Default	true
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list [ip-prefix-list-name] *string*

Synopsis	Enter the **ip-prefix-list** list instance
Context	**configure** application-assurance group *number* partition *number* ip-prefix-list *string*
Tree	ip-prefix-list
Description	Commands in this context configure an IP prefix list.
Introduced	21.10.R1

© 2024 Nokia.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-setup-direction *keyword*

Synopsis	Traffic flow direction for the application filter entry
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* flow-setup-direction *keyword*
Tree	flow-setup-direction
Options	subscriber-to-network, network-to-subscriber, both
Default	both
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-match-all-requests *boolean*

Synopsis	Enable HTTP matching for all requests
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* http-match-all-requests *boolean*
Tree	http-match-all-requests
Description	When configured to **true**, this command enables HTTP matching for all requests for an HTTP expression. When configured to **false**, this command restores the default for this app-filter entry which matches the first request.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-port

Synopsis	Enter the **http-port** context
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* http-port
Tree	http-port
Introduced	21.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the **eq** context
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* http-port eq
Tree	eq
Description	Commands in this context configure the exact value as the match criterion.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis	Port list name
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* http-port eq port-list *reference*
Tree	port-list
Reference	**configure** application-assurance group *number* partition *number* port-list *string*
Notes	The following elements are part of a choice: **port-list** or **port-number**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

ip-identification-assist *boolean*

Synopsis	Enable IP identification assist for this entry
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* ip-identification-assist *boolean*
Tree	ip-identification-assist
Description	When configured to **true**, the router performs a network IP address lookup that overrides the assigned application if it finds the network IP address in its internal application-IP database. If an IP match is found, the application assigned from the app-filter is overridden with the application from the IP lookup. This also affects the app-group and charging group. If an IP match is not found, the application assigned from the app-filter is not overridden and remains (including the app-group and charging group). When configured to **false**, this command disables the router from performing a network IP address lookup and overriding the assigned application.
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-protocol

Synopsis	Enter the **ip-protocol** context
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* ip-protocol
Tree	ip-protocol
Description	Commands in this context configure the IP protocol to use in the application definition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *(number | keyword)*

Synopsis	Exact match criterion used for the IP protocol number
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* ip-protocol eq *(number | keyword)*
Tree	eq
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq *(number | keyword)*

Synopsis	Non-match criterion used for the IP protocol number
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* ip-protocol neq *(number | keyword)*
Tree	neq
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

network-address

Synopsis	Enter the **network-address** context
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* network-address
Tree	network-address
Description	Commands in this context configure the network address to use for the application filter entry. The network address is the address on the network side of AA, independent of whether the subscriber is acting as a client or server and is not normally used in AA app-filters. The network address will match the destination IP address in a from-sub flow or the source IP address in a to-sub flow.
Notes	The following elements are part of a choice: **network-address** or **server-address**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the **eq** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* network-address eq
Tree	eq
Description	Commands in this context specify an exact value as the match criterion for the network address.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* network-address eq ip-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	ip-prefix
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP prefix list
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* network-address eq ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** application-assurance group *number* partition *number* ip-prefix-list *string*
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis	Enter the **neq** context
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* network-address neq
Tree	neq

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context specify the non-match criterion used for the network address.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* network-address neq ip-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	ip-prefix
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP prefix list
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* network-address neq ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** application-assurance group *number* partition *number* ip-prefix-list *string*
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol

Synopsis	Enter the **protocol** context
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* protocol
Tree	protocol
Description	Commands in this context configure the protocol signature in the application definition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

eq *(string | named-item)*

Synopsis	Exact match criterion used for the AA protocol name
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* protocol eq *(string | named-item)*
Tree	eq
String Length	1 to 32
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq *(string | named-item)*

Synopsis	Non-match criterion used for the AA protocol name
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* protocol neq *(string | named-item)*
Tree	neq
String Length	1 to 32
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server-address

Synopsis	Enter the **server-address** context
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* server-address
Tree	server-address
Description	Commands in this context configure the server address to use for the application filter entry. The server address is the address on the server end of a client-server session.
Notes	The following elements are part of a choice: **network-address** or **server-address**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-id *number*

Synopsis	App group export ID used in RADIUS accounting export
Context	**configure** application-assurance group *number* partition *number* policy app-group *string* export-id *number*
Tree	export-id
Description	This command assigns an export ID value to a charging group, an application group, or an application that RADIUS accounting uses for accounting export identification. This export ID is encoded in the top two bytes of the RADIUS accounting VSA to identify which charging group the counter value represents. If no export ID is assigned, the counter cannot be added to the AA subscriber stats RADIUS export-type. After a charging group index is referenced, it cannot be deleted without removing the reference.
Range	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-profile [app-profile-name] *string*

Synopsis	Enter the **app-profile** list instance
Context	**configure** application-assurance group *number* partition *number* policy app-profile *string*
Tree	app-profile
Description	Commands in this context configure an application profile.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**app-profile-name**] *string*

Synopsis	Application profile name
Context	**configure** application-assurance group *number* partition *number* policy app-profile *string*

Tree	app-profile
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-distribute-traffic-by-ip *boolean*

Synopsis	Allow application assurance to divert traffic
Context	**configure** application-assurance group *number* partition *number* policy app-profile *string* aa-sub-distribute-traffic-by-ip *boolean*
Tree	aa-sub-distribute-traffic-by-ip
Description	When configured to **true**, the system diverts traffic on the parent SAPor spoke-SDP to multiple ISAs or ESAs based on the source IP address. This is useful when the bandwidth of a single SAP is larger than the capacity of a single ISA or ESA. This is only supported for the auto-created transit IP subscribers. The traffic is diverted when the hashing is enabled at the AA group level and in the parent SAP application profile.
Default	false
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

aa-sub-suppressible *boolean*

Synopsis	Enable AA suppression for subs with this app profile
Context	**configure** application-assurance group *number* partition *number* policy app-profile *string* aa-sub-suppressible *boolean*
Tree	aa-sub-suppressible
Description	When configured to **true**, this command configures the ability to suppress Application Assurance for subscribers with this application profile. This function is used in the context of an SRRP group interface. If an SRRP group interface is configured as **configure service ies subscriber-interface group-interface suppress-aa-sub** or **configure service vprn subscriber-interface group-interface suppress-aa-sub**, subscribers with an application profile configured as suppressible are not diverted to Application Assurance.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

capacity-cost *number*

Synopsis	Application profile capacity cost
Context	**configure** application-assurance group *number* partition *number* policy app-profile *string* capacity-cost *number*
Tree	capacity-cost
Description	This command configures an application profile capacity cost. Capacity cost based load balancing allows a cost to be assigned to diverted SAPs (with the application profile). This allows for load balancing SAPs between ISAs and acts as a threshold to notify the operator if capacity planning is exceeded.
Range	1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic [characteristic-name] *reference*

Synopsis	Enter the **characteristic** list instance
Context	**configure** application-assurance group *number* partition *number* policy app-profile *string* characteristic *reference*
Tree	characteristic
Description	Commands in this context assign one of the existing values of an existing application service option characteristic to the application profile.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action
Tree	action
Description	Commands in this context configure AQP actions to be performed on flows that match the match criteria of the AQP entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

abandon-tcp-optimization *boolean*

Synopsis	Abandon TCPO for this entry
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action abandon-tcp-optimization *boolean*
Tree	abandon-tcp-optimization
Description	When configured to **true**, this command disables TCPO for flows matching this AQP entry.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bandwidth-policer

Synopsis	Enter the **bandwidth-policer** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action bandwidth-policer
Tree	bandwidth-policer
Description	Commands in this context assign an existing bandwidth policer as an action on flows matching this AQP entry. The match criteria for the AQP entry must specify a unidirectional traffic direction before a policer action can be configured. If a policer is used in one direction in an AQP match entry, the same policer name cannot be used by another AQP entry that uses different traffic direction match criteria. When multiple policers apply to a single flow, the final action on a packet is the worst case of all policer outcomes (for example, if one of the policers marks packet out of profile, the final marking will reflect that).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

anl *reference*

Synopsis	Access network locator bandwidth policer
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action bandwidth-policer anl *reference*
Tree	anl
Description	This command creates an Application Assurance policy profile for a policer instance for each ANL that limits traffic bandwidth in the scope of that ANL. For ANL, only single-bucket bandwidth policers can be configured.
Reference	**configure** application-assurance group *number* policer anl-bandwidth-policer *string*
Notes	The following elements are part of a choice: **anl**, **dual-bucket**, **flow**, or **single-bucket**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dual-bucket *reference*

Synopsis	Dual bucket bandwidth limiting policer
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action bandwidth-policer dual-bucket *reference*
Tree	dual-bucket
Description	This command creates an Application Assurance policy profile for a dual bucket (PIR) bandwidth limiting policer.
Reference	**configure** application-assurance group *number* policer dual-bucket-bandwidth-policer *string*
Notes	The following elements are part of a choice: **anl**, **dual-bucket**, **flow**, or **single-bucket**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect

Synopsis	Enter the **http-redirect** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action http-redirect
Tree	http-redirect
Description	Commands in this context assign an existing HTTP redirect policy as an action on flows matching this AQP entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-type *keyword*

Synopsis	Flow type for HTTP redirect of flows matching the entry
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action http-redirect flow-type *keyword*
Tree	flow-type
Description	This command assigns an existing HTTP redirect policy as an action on flows matching this AQP entry. The redirect only takes effect if the matching flows are HTTP and the condition specified is met. The condition specified by dropped flows means the flow is dropped due to an AQP action, such as flow rate, count policers, or drop actions. The admitted flows condition allows the operator to redirect HTTP traffic to a web portal while allowing non-HTTP traffic matching the same AQP rule to be forwarded. No HTTP redirect takes place if the HTTP redirect action and a drop/flow-police action are part of the default AQP policy. In this case, any flow drop actions take place before identification of the application/application-group.
Options	dropped-flows, admitted-flows
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *reference*

Tree	name
Description	This command specifies the name of an existing HTTP policy redirect.
Reference	**configure** application-assurance group *number* http-redirect *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mirror-source

Synopsis	Enter the **mirror-source** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action mirror-source
Tree	mirror-source
Description	Commands in this context configure an application-based policy mirroring service that uses the AQP entry of this AA ISA as a mirror source. When configured, the AQP entry becomes a mirror source for IP packets seen by AA. The mirrored packet is an IP packet analyzed by AA and does not include encapsulations present on the incoming interfaces.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

all-inclusive *boolean*

Synopsis	Mirror flows matching the AQP subscriber default policy
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action mirror-source all-inclusive *boolean*
Tree	all-inclusive
Description	This command specifies that all packets during the identification phase that could match a given AQP rule are mirrored in addition to packets after an application identification completes that match the AQP rule. This ensures that all packets of a flow are mirrored at a cost of sending some unidentified packets, which after the application is identified no longer match this AQP entry.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mirror-service *reference*

Synopsis	Mirror source service ID for flows matching the entry

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action mirror-source mirror-service *reference*
Tree	mirror-service
Description	This command specifies the mirror source service ID to use for flows that match this policy.
Reference	**configure** mirror mirror-dest *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overload-drop

Synopsis	Enable the **overload-drop** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action overload-drop
Tree	overload-drop
Description	Commands in this context configure a drop action for cases where flow records are not created (overload). This command is only applicable to ISA2 hardware.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event log name
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action overload-drop event-log *reference*
Tree	event-log
Reference	**configure** application-assurance group *number* partition *number* event-log *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remark

Synopsis	Enter the **remark** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action remark
Tree	remark

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the remark action on flows matching this AQP entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dscp

Synopsis	Enter the **dscp** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action remark dscp
Tree	dscp
Description	Commands in this context configure the DSCP remark action or actions on flows matching this AQP entry. All packets for all flows matching this AQP entry are remarked to the configured DSCP name. DSCP remark can only be applied when the entry remarks forwarding class or forwarding class and priority. In-profile and out-of-profile of a packet for DSCP remark is assessed after all AQP policing and priority remarking actions have taken place.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

in-profile *keyword*

Synopsis	DSCP name to remark matching in-profile flows
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action remark dscp in-profile *keyword*
Tree	in-profile
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

out-profile *keyword*

Synopsis	DSCP name to remark matching out-of-profile flows

Reference	**configure** application-assurance group *number* partition *number* sctp-filter *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-filter *reference*

Synopsis	Session filter to use for flows matching the AQP entry
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action session-filter *reference*
Tree	session-filter
Reference	**configure** application-assurance group *number* partition *number* session-filter *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-mss-adjust *number*

Synopsis	TCP MSS adjustment traffic action and size
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action tcp-mss-adjust *number*
Tree	tcp-mss-adjust
Range	160 to 10240
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-validate *reference*

Synopsis	TCP validation policy action for entry matching flows
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action tcp-validate *reference*
Tree	tcp-validate
Description	This command assigns an existing TCP validation policy as an action on flows matching this AQP entry. TCP validation can only be called from AQP entries that: • have no matching conditions that relate to information extracted from the incoming IP packets; for example, no application or IP address.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- allow the following match conditions: none, aa-sub, characteristic, traffic-direction (both only), traffic-direction cannot be unidirectional (from or to sub). It can either be set to both or left unspecified.

Reference	**configure** application-assurance group *number* partition *number* tcp-validate *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tls-enrich *reference*

Synopsis	HTTP TLS enrichment action for the AQP entry
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action tls-enrich *reference*
Tree	tls-enrich
Reference	**configure** application-assurance group *number* http-enrich *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

url-filter

Synopsis	Enter the **url-filter** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action url-filter
Tree	url-filter
Description	Commands in this context configure a URL filter action for flows matching this entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic *reference*

Synopsis	URL filter characteristic used for matching AQP entries
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action url-filter characteristic *reference*
Tree	characteristic

match

Synopsis	Enter the **match** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match
Tree	match
Description	Commands in this context configure flow match rules for this AQP entry. A flow matches this AQP entry only if it matches all match rules defined (logical AND of all rules). If no match rule is specified, the entry will match all flows.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub

Synopsis	Enter the **aa-sub** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match aa-sub
Tree	aa-sub
Description	Commands in this context specify a Service Access Point (SAP) or an Enhanced Subscriber Management (ESM) subscriber as matching criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm

Synopsis	Enter the **esm** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match aa-sub esm
Tree	esm
Description	Commands in this context configure the ESM fields for the AA subscriber match entry.
Notes	The following elements are part of a choice: **esm**, **esm-mac**, **sap**, **spoke-sdp**, or **transit**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *string*

Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dscp eq *keyword*
Tree	eq
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq *keyword*

Synopsis	Non-match criterion used for the DSCP
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dscp neq *keyword*
Tree	neq
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	dst-ip
Description	Commands in this context configure a destination IP address to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the **eq** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip eq
Tree	eq
Description	Commands in this context specify the exact match value as the match criterion. A successful match occurs when the flow matches the specified address or prefix.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP address prefix used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip eq ip-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	ip-prefix
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP address prefix list used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip eq ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** application-assurance group *number* partition *number* ip-prefix-list *string*
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis	Enter the **neq** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip neq
Tree	neq
Description	Commands in this context specify the non-match value as the match criterion. A successful match occurs when the flow does not match the specified address or prefix.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP address prefix used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip neq ip-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	ip-prefix
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP address prefix list used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip neq ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** application-assurance group *number* partition *number* ip-prefix-list *string*
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port
Tree	dst-port
Description	Commands in this context configure a destination TCP/UDP port, a destination port list, or a destination range to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the **eq** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port eq
Tree	eq
Description	Commands in this context specify the exact match criterion. A successful match occurs when the flow matches the specified port.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis	IP port list used as match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port eq port-list *reference*
Tree	port-list
Reference	**configure** application-assurance group *number* partition *number* port-list *string*
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis	Server port number used as match criterion

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port eq port-number *number*
Tree	port-number
Range	0 | 1 to 65535
Default	0
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enter the **range** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port eq range
Tree	range
Description	Commands in this context specify the match value as the match criterion based on the starting or ending port number.
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	TCP/UDP ending port number
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port eq range end *number*
Tree	end
Range	0 | 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	TCP/UDP starting port number

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port eq range start *number*
Tree	start
Range	0 | 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis	Enter the **neq** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port neq
Tree	neq
Description	Commands in this context specify the non-match value as the match criterion. A successful match occurs when the flow does not match the specified port.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis	IP port list used as match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port neq port-list *reference*
Tree	port-list
Reference	**configure** application-assurance group *number* partition *number* port-list *string*
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis	Server port number used as match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port neq port-number *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	port-number
Range	0 | 1 to 65535
Default	0
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enter the **range** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port neq range
Tree	range
Description	Commands in this context specify the match value as the match criterion based on the starting or ending port number.
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	TCP/UDP ending port number
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port neq range end *number*
Tree	end
Range	0 | 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	TCP/UDP starting port number
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port neq range start *number*
Tree	start

© 2024 Nokia.

Range	0 | 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-attribute [flow-attribute-name] *string*

Synopsis	Enter the **flow-attribute** list instance
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match flow-attribute *string*
Tree	flow-attribute
Description	Commands in this context configure a flow attribute to use as match criteria. The supported options are: • abr_service • audio • download • encrypted • esni • real_time_communication • upload • video
Max. Instances	10
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**flow-attribute-name**] *string*

Synopsis	Flow attribute name used as match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match flow-attribute *string*
Tree	flow-attribute
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

confidence

Synopsis	Enter the **confidence** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match flow-attribute *string* confidence
Tree	confidence
Description	Commands in this context configure the confidence level of the flow attribute for use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *number*

Synopsis	Exact match criterion for the flow-attribute confidence
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match flow-attribute *string* confidence eq *number*
Tree	eq
Range	0 to 100
Notes	The following elements are part of a choice: **eq**, **gte**, or **lt**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gte *number*

Synopsis	Greater than or equal to for confidence match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match flow-attribute *string* confidence gte *number*
Tree	gte
Range	0 to 100
Notes	The following elements are part of a choice: **eq**, **gte**, or **lt**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lt *number*

Synopsis	Less than value for confidence match criterion

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match flow-attribute *string* confidence lt *number*
Tree	lt
Range	1 to 100
Notes	The following elements are part of a choice: **eq**, **gte**, or **lt**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-protocol

Synopsis	Enter the **ip-protocol** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match ip-protocol
Tree	ip-protocol
Description	Commands in this context configure the IP protocol to use in the application definition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *(number | keyword)*

Synopsis	Exact match criterion used for the IP protocol
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match ip-protocol eq *(number | keyword)*
Tree	eq
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq *(number | keyword)*

Synopsis	Non-match criterion used for the IP protocol
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match ip-protocol neq *(number | keyword)*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	neq
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

src-ip

Synopsis	Enter the **src-ip** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-ip
Tree	src-ip
Description	Commands in this context configure a source IP address to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the **eq** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-ip eq
Tree	eq
Description	Commands in this context specify the exact match value as the match criterion. A successful match occurs when the flow matches the specified address or prefix.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP address prefix used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-ip eq ip-prefix *(ipv4-prefix | ipv6-prefix)*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ip-prefix
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP address prefix list used for match criterion

Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-port neq range end *number*
Tree	end
Range	0 | 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	TCP/UDP starting port number
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-port neq range start *number*
Tree	start
Range	0 | 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

traffic-direction *keyword*

Synopsis	Traffic direction to which AQP match entry is applied
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match traffic-direction *keyword*
Tree	traffic-direction
Options	subscriber-to-network, network-to-subscriber, both
Default	both
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-service-options

Synopsis	Enter the **app-service-options** context
Context	**configure** application-assurance group *number* partition *number* policy app-service-options
Tree	app-service-options

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure application service option characteristics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic [characteristic-name] *string*

Synopsis	Enter the **characteristic** list instance
Context	**configure** application-assurance group *number* partition *number* policy app-service-options characteristic *string*
Tree	characteristic
Description	Commands in this context create the characteristic of the application service options.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**characteristic-name**] *string*

Synopsis	ASO characteristic name
Context	**configure** application-assurance group *number* partition *number* policy app-service-options characteristic *string*
Tree	characteristic
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-value *string*

Synopsis	ASO characteristic default value
Context	**configure** application-assurance group *number* partition *number* policy app-service-options characteristic *string* default-value *string*
Tree	default-value
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**entry-id**] *number*

Synopsis	Charging filter entry ID in the AA partition policy
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number*
Tree	entry

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command defines a charging filter entry ID. Charging filter entries are an ordered list; the lowest numerical entry that matches the flow, defines the charging filter for this flow.
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AA charging filter entry
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group *reference*

Synopsis	Charging group to associate to flows matching the entry
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* charging-group *reference*
Tree	charging-group
Description	This command associates a charging group to the flows that match the charging filter entry.
Reference	**configure** application-assurance group *number* partition *number* policy charging-group *string*
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* description *string*

Tree	description
String Length	1 to 80
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis	Enter the **match** context
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match
Tree	match
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-group

Synopsis	Enter the **app-group** context
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match app-group
Tree	app-group
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *reference*

Synopsis	Exact value as the match criterion
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match app-group eq *reference*
Tree	eq
Description	This command specifies that the value configured and the value in the flow must be equal for a match to occur.
Reference	**configure** application-assurance group *number* partition *number* policy app-group *string*
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

neq *reference*

Synopsis	Non-matching application to resolve to a charging group
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match app-group neq *reference*
Tree	neq
Description	This command specifies that the value configured and the value in the flow must differ for a match to occur.
Reference	**configure** application-assurance group *number* partition *number* policy app-group *string*
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application

Synopsis	Enter the **application** context
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match application
Tree	application
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *reference*

Synopsis	Exact value as the match criterion
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match application eq *reference*
Tree	eq
Description	This command specifies that the value configured and the value in the flow must be equal for a match to occur.
Reference	**configure** application-assurance group *number* partition *number* policy application *string*
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	22.10.R1

neq *reference*

Synopsis	Non-matching application to resolve to a charging group
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match application neq *reference*
Tree	neq
Description	This command specifies that the value configured and the value in the flow must differ for a match to occur.
Reference	**configure** application-assurance group *number* partition *number* policy application *string*
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-attribute [flow-attribute-name] *string*

Synopsis	Enter the **flow-attribute** list instance
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match flow-attribute *string*
Tree	flow-attribute
Max. Instances	10
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**flow-attribute-name**] *string*

Synopsis	Flow attribute name match criteria
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match flow-attribute *string*
Tree	flow-attribute
Description	This command adds a flow attribute to the match criteria used by this charging filter entry.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

confidence

Synopsis	Enter the **confidence** context
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match flow-attribute *string* confidence
Tree	confidence
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *number*

Synopsis	Exact value as the match criterion
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match flow-attribute *string* confidence eq *number*
Tree	eq
Description	This command specifies that a successful match occurs when the flow attribute confidence level is equal to the specified value.
Range	0 to 100
Notes	The following elements are part of a choice: **eq**, **gte**, or **lt**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gte *number*

Synopsis	Confidence value to resolve to a charging group
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match flow-attribute *string* confidence gte *number*
Tree	gte
Description	This command specifies that a successful match occurs when the flow attribute confidence level is greater than or equal to the specified value.
Range	0 to 100
Notes	The following elements are part of a choice: **eq**, **gte**, or **lt**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lt *number*

Synopsis	Less than value as the match criterion
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match flow-attribute *string* confidence lt *number*
Tree	lt
Description	This command specifies that a successful match occurs when the flow attribute confidence level is less than the specified value.
Range	1 to 100
Notes	The following elements are part of a choice: **eq**, **gte**, or **lt**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tethered-flow

Synopsis	Enable the **tethered-flow** context
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match tethered-flow
Tree	tethered-flow
Description	Commands in this context add the tethering status to the match criteria used by this charging filter entry.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group [charging-group-name] *string*

Synopsis	Enter the **charging-group** list instance
Context	**configure** application-assurance group *number* partition *number* policy charging-group *string*
Tree	charging-group
Description	Commands in this context create a charging group for an Application Assurance policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**charging-group-name**] *string*

Synopsis	Charging group name
Context	**configure** application-assurance group *number* partition *number* policy charging-group *string*
Tree	charging-group
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** application-assurance group *number* partition *number* policy charging-group *string* description *string*
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-id *number*

Synopsis	Charging group export ID used for RADIUS accounting
Context	**configure** application-assurance group *number* partition *number* policy charging-group *string* export-id *number*
Tree	export-id
Description	This command assigns an export ID value to a charging group, an app application group, or an application to be used for accounting export identification in RADIUS accounting. This ID is encoded in the top 2 bytes of the RADIUS accounting VSA to identify which charging group the counter value represents.
Range	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

notify-start-stop *keyword*

Synopsis	Start and stop notification for the charging group

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* policy charging-group *string* notify-start-stop *keyword*
Tree	notify-start-stop
Options	none, flow, charging-group
Default	none
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-protocol [custom-protocol-id] *string*

Synopsis	Enter the **custom-protocol** list instance
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *string*
Tree	custom-protocol
Description	Commands in this context configure custom protocols. Custom protocols allow the creation of TCP and UDP-based custom protocols that employ pattern-match at offset in the protocol signature definition. Operator-configurable custom protocols are evaluated ahead of any Nokia-provided protocol signature in order of custom protocol ID within the context the protocol is defined. The lower ID is matched first in case of flow matching multiple custom protocols. Custom protocols must be created before they can be used in an application definition but do not have to be enabled. To reference a custom protocol in an application definition, or any other CLI configuration one must use the protocol name that is a concatenation of “custom_” and, (for example, custom_01, custom_02 ... custom_10, and so on). This concatenation is also used when reporting custom protocol statistics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**custom-protocol-id**] *string*

Synopsis	Custom protocol ID for the AA policy custom protocol
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *string*
Tree	custom-protocol
Description	This command configures the index into the protocol list that defines a custom protocol for Application Assurance.
String Length	9

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the custom protocol
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *string* description *string*
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

expression [expr-index] *number*

Synopsis	Enter the **expression** list instance
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *string* expression *number*
Tree	expression
Description	Commands in this context configure an expression string value for pattern-based custom protocols match. A flow matches a custom protocol if the specified string is found at an offset of a TCP/UDP of the first payload packet.
Introduced	21.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**expr-index**] *number*

Synopsis	Expression substring index for custom protocol matching
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *string* expression *number*
Tree	expression
Range	1
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Flow direction for custom-protocol expression matching
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *string* expression *number* direction *keyword*
Tree	direction
Description	This command configures the protocol direction to match against for a custom protocol.
Options	client-to-server, server-to-client, any
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *string*

Synopsis	Exact match criterion for custom protocol expression
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *string* expression *number* eq *string*
Tree	eq
String Length	1 to 255
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

offset *number*

Synopsis	Offset in protocol flow to start custom-protocol match
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *string* expression *number* offset *number*
Tree	offset
Description	This command configures the offset into the protocol payload where the expr-string match criteria starts.
Range	0 to 127
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-protocol *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP protocol number for custom-protocol match criterion
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *string* ip-protocol *keyword*
Tree	ip-protocol
Description	This command configures the IP protocol number of the TCP and UDP-based custom protocols.
Options	tcp, udp
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-charging-group *reference*

Synopsis	Default charging group
Context	**configure** application-assurance group *number* partition *number* policy default-charging-group *reference*
Tree	default-charging-group

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command associates a charging group with any applications or application groups that do not have an explicitly assigned charging group for the Application Assurance policy.
Reference	**configure** application-assurance group *number* partition *number* policy charging-group *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-tethered-charging-group *reference*

Synopsis	Default charging group for tethered traffic
Context	**configure** application-assurance group *number* partition *number* policy default-tethered-charging-group *reference*
Tree	default-tethered-charging-group
Description	This command configures the default charging group to be assigned to all flows which are classified as tethered. For flows that have been identified as tethered, the AA will replace the charging group configured at the application level with the charging group configured for tethered traffic (that is, configured with **default-tethered-charging-group**).
Reference	**configure** application-assurance group *number* partition *number* policy charging-group *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy-override

Synopsis	Enter the **policy-override** context
Context	**configure** application-assurance group *number* partition *number* policy-override
Tree	policy-override
Description	Commands in this context configure policy override parameters.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub

Synopsis	Enter the **aa-sub** context
Context	**configure** application-assurance group *number* partition *number* policy-override aa-sub

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	aa-sub
Description	Commands in this context configure the AA policy override subscriber fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppid-range

Synopsis	Enter the **ppid-range** context
Context	**configure** application-assurance group *number* partition *number* sctp-filter *string* ppid-range
Tree	ppid-range
Description	Commands in this context specify the range of PPID values that are allowed by the AA SCTP filter firewall.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max *number*

Synopsis	Maximum PPID value
Context	**configure** application-assurance group *number* partition *number* sctp-filter *string* ppid-range max *number*
Tree	max

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the maximum SCTP Payload Protocol Identifier (PPID) to be permitted by the SCTP filter. The value must be greater or equal to the minimum PPID value.
Range	0 to 4294967295
Default	4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

min *number*

Synopsis	Minimum PPID value
Context	**configure** application-assurance group *number* partition *number* sctp-filter *string* ppid-range min *number*
Tree	min
Description	This command configures the minimum SCTP Payload Protocol Identifier (PPID) to be permitted by the SCTP filter. The value must be less than or equal to the maximum PPID value.
Range	0 to 4294967295
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-filter [session-filter-name] *string*

Synopsis	Enter the **session-filter** list instance
Context	**configure** application-assurance group *number* partition *number* session-filter *string*
Tree	session-filter
Description	Commands in this context create a session filter.
Max. Instances	1000
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**session-filter-name**] *string*

Synopsis	Session filter name

Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the **action** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* action
Tree	action
Description	Commands in this context configure the action for this entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

deny

Synopsis	Deny sessions matching the criteria
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* action deny
Tree	deny
Notes	The following elements are part of a choice: **deny**, **http-redirect**, **l3-l4-redirect**, **permit**, or **tcp-optimizer**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event log name used to log the action
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* action event-log *reference*
Tree	event-log
Reference	**configure** application-assurance group *number* partition *number* event-log *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect *reference*

Synopsis	HTTP redirect for matching sessions
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* action http-redirect *reference*
Tree	http-redirect
Reference	**configure** application-assurance group *number* http-redirect *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **deny**, **http-redirect**, **l3-l4-redirect**, **permit**, or **tcp-optimizer**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l3-l4-redirect

Synopsis	Enter the **l3-l4-redirect** context
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* action l3-l4-redirect
Tree	l3-l4-redirect
Description	Commands in this context specify sessions matching the criteria are redirected to a different destination using Layer 3 and Layer 4 redirect. If the redirect action is removed from a session filter, the existing redirected flows are not affected, redirect still occurs. However, no redirect will be applied to newly-established flows.
Notes	The following elements are part of a choice: **deny**, **http-redirect**, **l3-l4-redirect**, **permit**, or **tcp-optimizer**.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Destination IP address for traffic redirection
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* action l3-l4-redirect dst-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	dst-ip-address
Description	This command specifies a valid unicast server IPv4 or IPv6 address to forward the traffic to. The destination IP address (Layer 3) is modified as indicated. In the reverse direction (toward the subscriber), AA restores the original IP address as the source IP field.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-port *number*

Synopsis	Destination port for traffic redirection

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* action l3-l4-redirect dst-port *number*
Tree	dst-port
Description	This command specifies a valid TCP/UDP server destination port number. The destination port is modified as indicated. In the reverse direction (toward the subscriber), AA restores the original port number as the port field.
Range	0 | 1 to 65535
Default	0
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

permit

Synopsis	Permit sessions that match the criteria
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* action permit
Tree	permit
Notes	The following elements are part of a choice: **deny**, **http-redirect**, **l3-l4-redirect**, **permit**, or **tcp-optimizer**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-optimizer *reference*

Synopsis	TCP optimizer to handle sessions matching the criteria
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* action tcp-optimizer *reference*
Tree	tcp-optimizer
Reference	**configure** application-assurance group *number* tcp-optimizer *string*
Notes	The following elements are part of a choice: **deny**, **http-redirect**, **l3-l4-redirect**, **permit**, or **tcp-optimizer**.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* description *string*
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis	Enter the **match** context
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match
Tree	match
Description	Commands in this context configure session conditions for this entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match dst-ip
Tree	dst-ip
Description	Commands in this context configure the destination IP address to match.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-ip-cache *reference*

Synopsis	Destination IPs in specified DNS IP Cache
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match dst-ip dns-ip-cache *reference*
Tree	dns-ip-cache
Reference	**configure** application-assurance group *number* dns-ip-cache *string*
Notes	The following elements are part of a choice: **dns-ip-cache**, **ip-prefix**, or **ip-prefix-list**.
Introduced	21.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	Destination IP address prefix as match criterion
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match dst-ip ip-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	ip-prefix
Notes	The following elements are part of a choice: **dns-ip-cache**, **ip-prefix**, or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP address prefix list as match criterion
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match dst-ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** application-assurance group *number* partition *number* ip-prefix-list *string*
Notes	The following elements are part of a choice: **dns-ip-cache**, **ip-prefix**, or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match dst-port
Tree	dst-port
Description	Commands in this context specify a destination TCP/UDP port, a destination port list, or a destination range to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

eq *number*

Synopsis	Match criterion used for destination or source port
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match dst-port eq *number*
Tree	eq
Range	0 | 1 to 65535
Default	0
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gt *number*

Synopsis	Greater than match criterion for the port number
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match dst-port gt *number*
Tree	gt
Range	0 | 1 to 65535
Default	0
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lt *number*

Synopsis	Less than match criterion for the port
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match dst-port lt *number*
Tree	lt
Range	0 | 1 to 65535
Default	0
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

port-list *reference*

Synopsis	Destination or source port list
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match dst-port port-list *reference*
Tree	port-list
Reference	**configure** application-assurance group *number* partition *number* port-list *string*
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the **range** context
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match dst-port range
Tree	range
Description	Commands in this context specify a destination IP port, a destination port list, or a destination range to use as match criteria.
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of the port range as match criterion
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match dst-port range end *number*
Tree	end
Range	0 | 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	Lower bound of the port range as match criterion

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match dst-port range start *number*
Tree	start
Range	0 | 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-protocol *(number | keyword)*

Synopsis	IP protocol as a match criterion
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match ip-protocol *(number | keyword)*
Tree	ip-protocol
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

src-ip

Synopsis	Enter the **src-ip** context
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match src-ip
Tree	src-ip
Description	Commands in this context specify a source IP address to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	Source IP address prefix as match criterion
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match src-ip ip-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	ip-prefix

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	Source IP address prefix list as match criterion
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match src-ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** application-assurance group *number* partition *number* ip-prefix-list *string*
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

src-port

Synopsis	Enter the **src-port** context
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match src-port
Tree	src-port
Description	Commands in this context specify a source IP port, a source port list, or a source range to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *number*

Synopsis	Match criterion used for destination or source port
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match src-port eq *number*
Tree	eq
Range	0 | 1 to 65535
Default	0
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	21.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gt *number*

Synopsis	Greater than match criterion for the port number
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match src-port gt *number*
Tree	gt
Range	0 | 1 to 65535
Default	0
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lt *number*

Synopsis	Less than match criterion for the port
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match src-port lt *number*
Tree	lt
Range	0 | 1 to 65535
Default	0
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis	Destination or source port list
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match src-port port-list *reference*
Tree	port-list
Reference	**configure** application-assurance group *number* partition *number* port-list *string*
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	21.10.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the **range** context
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match src-port range
Tree	range
Description	Commands in this context specify a destination IP port, a destination port list, or a destination range to use as match criteria.
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of the port range as match criterion
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match src-port range end *number*
Tree	end
Range	0 | 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	Lower bound of the port range as match criterion
Context	**configure** application-assurance group *number* partition *number* session-filter *string* entry *number* match src-port range start *number*
Tree	start
Range	0 | 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

shallow-inspection *boolean*

Synopsis	Enable shallow inspection
Context	**configure** application-assurance group *number* partition *number* shallow-inspection *boolean*
Tree	shallow-inspection
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

statistics

Synopsis	Enter the **statistics** context
Context	**configure** application-assurance group *number* partition *number* statistics
Tree	statistics
Description	Commands in this context configure accounting and billing statistics for this AA group.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-admit-deny

Synopsis	Enter the **aa-admit-deny** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny
Tree	aa-admit-deny
Description	Commands in this context configure admit-deny statistics generation.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny collect-stats *boolean*
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-filter-stats *boolean*

Synopsis	Include GTP filter admit-deny statistics in records
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny gtp-filter-stats *boolean*
Tree	gtp-filter-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer-stats *boolean*

Synopsis	Include admit-deny policer statistics in records
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny policer-stats *boolean*
Tree	policer-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer-stats-resources *boolean*

Synopsis	Allocate resources for policer admit-deny statistics

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny policer-stats-resources *boolean*
Tree	policer-stats-resources
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sctp-filter-stats *boolean*

Synopsis	Include SCTP filter admit-deny statistics in accounting
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny sctp-filter-stats *boolean*
Tree	sctp-filter-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-filter-stats *boolean*

Synopsis	Include session filter admit-deny statistics in records
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny session-filter-stats *boolean*
Tree	session-filter-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-validate-stats *boolean*

Synopsis	Include TCP validate admit-deny statistics in records
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny tcp-validate-stats *boolean*
Tree	tcp-validate-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

aa-app-group

Synopsis	Enter the **aa-app-group** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-app-group
Tree	aa-app-group
Description	Commands in this context configure the AA application group statistics fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	**configure** application-assurance group *number* partition *number* statistics aa-app-group accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-app-group collect-stats *boolean*
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-application

Synopsis	Enter the **aa-application** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-application
Tree	aa-application
Description	Commands in this context configure the application statistics fields.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	**configure** application-assurance group *number* partition *number* statistics aa-application accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-application collect-stats *boolean*
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-partition

Synopsis	Enter the **aa-partition** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-partition
Tree	aa-partition
Description	Commands in this context configure the AA partition statistics fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* statistics aa-partition accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-partition collect-stats *boolean*
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tethering-stats *boolean*

Synopsis	Collect tethering statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-partition tethering-stats *boolean*
Tree	tethering-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

traffic-type-stats *boolean*

Synopsis	Collect traffic type statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-partition traffic-type-stats *boolean*
Tree	traffic-type-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

aa-protocol

Synopsis	Enter the **aa-protocol** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-protocol
Tree	aa-protocol
Description	Commands in this context configure the AA protocol statistics fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	**configure** application-assurance group *number* partition *number* statistics aa-protocol accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of protocol statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-protocol admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-protocol collect-stats *boolean*
Tree	collect-stats

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub

Synopsis	Enter the **aa-sub** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub
Tree	aa-sub
Description	Commands in this context configure accounting and statistics collection parameters for Application Assurance subscribers.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aggregate-stats-export-using *keyword*

Synopsis	Method of statistics export to be used
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub aggregate-stats-export-using *keyword*
Tree	aggregate-stats-export-using
Options	accounting-policy, radius-accounting-policy
Max. Instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

app-group [app-group-name] *reference*

Synopsis	Enter the **app-group** list instance
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub app-group *reference*
Tree	app-group
Description	Commands in this context configure accounting and statistics collection parameters for AA application groups for a specific AA group/partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**app-group-name**] *reference*

Synopsis	Application group name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub app-group *reference*
Tree	app-group
Reference	**configure** application-assurance group *number* partition *number* policy app-group *string*
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-using *keyword*

Synopsis	Method used to export statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub app-group *reference* export-using *keyword*
Tree	export-using
Options	accounting-policy, radius-accounting-policy
Max. Instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

application [application-name] *reference*

Synopsis	Enter the **application** list instance
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub application *reference*
Tree	application
Description	Commands in this context configure the AA subscriber accounting statistics for the export of AA applications for an AA group/partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**application-name**] *reference*

Synopsis	Application name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub application *reference*
Tree	application
Reference	**configure** application-assurance group *number* partition *number* policy application *string*
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-using *keyword*

Synopsis	Method used to export statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub application *reference* export-using *keyword*
Tree	export-using
Options	accounting-policy, radius-accounting-policy
Max. Instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group [charging-group-name] *reference*

Synopsis	Enter the **charging-group** list instance
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub charging-group *reference*
Tree	charging-group
Description	Commands in this context configure AA subscriber accounting statistics for the export of AA charging groups of an AA group/partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**charging-group-name**] *reference*

Synopsis	Charging group name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub charging-group *reference*
Tree	charging-group
Description	This command specifies the AA charging group to be included in the exported accounting records.
Reference	**configure** application-assurance group *number* partition *number* policy charging-group *string*
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-using *keyword*

Synopsis	Method used to export statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub charging-group *reference* export-using *keyword*
Tree	export-using
Options	accounting-policy, radius-accounting-policy
Max. Instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Use subject to Terms available at: www.nokia.com/terms.

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub collect-stats *boolean*
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

exclude-tcp-retrans *boolean*

Synopsis	Exclude TCP retransmission and error statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub exclude-tcp-retrans *boolean*
Tree	exclude-tcp-retrans
Description	When configured to **true**, TCP errors and retransmission packets are not counted for the purpose of content-based billing. **Note:** This command is only applicable to EPC.This setting has no impact on app/app-group aggregate AA stats.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-stats *boolean*

Synopsis	Collect maximum throughput statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub max-throughput-stats *boolean*
Tree	max-throughput-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol [protocol-name] *string*

Synopsis	Enter the **protocol** list instance
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub protocol *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	protocol
Description	Commands in this context configure AA subscriber accounting statistics for the export of aa-sub protocols of an AA group/partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**protocol-name**] *string*

Synopsis	AA protocol name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub protocol *string*
Tree	protocol
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-using *keyword*

Synopsis	Method used to export statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub protocol *string* export-using *keyword*
Tree	export-using
Options	accounting-policy, radius-accounting-policy
Max. Instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis	RADIUS accounting policy name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub radius-accounting-policy *reference*
Tree	radius-accounting-policy
Reference	**configure** application-assurance radius-accounting-policy *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

usage-monitoring *boolean*

Synopsis	Collect usage monitoring statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub usage-monitoring *boolean*
Tree	usage-monitoring
Description	When configured to **true**, this command allows the system to activate Gx usage monitoring at AA group/partition level, if enough usage monitoring resources exist for all existing subs. When configured to **false**, this command silently removes all monitoring instances (no PCRF notifications) for AA subscribers and all subsequent AA Gx usage monitoring messages are ignored.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-study [study-type] *keyword*

Synopsis	Enter the **aa-sub-study** list instance
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword*
Tree	aa-sub-study
Description	Commands in this context configure accounting and statistics collection parameters per AA special study subscribers.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**study-type**] *keyword*

Synopsis	Statistic type that the study is using
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword*
Tree	aa-sub-study
Options	protocol, application

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub

Synopsis	Enter the **aa-sub** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub
Tree	aa-sub
Description	Commands in this context add an existing subscriber identification to a group of special study subscribers. Identifying a group of special study subscribers allows statistics and accounting records for those subscribers to be collected for protocols and applications through Application Assurance. When adding a subscriber to the special study group, accounting records and statistics generation commence immediately. When removing a subscriber from the group, special study statistics and accounting records for that subscriber in the current interval are lost.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm [esm-sub-name] *string*

Synopsis	Add a list entry for **esm**
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub esm *string*
Tree	esm
Description	Commands in this context configure the ESM fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**esm-sub-name**] *string*

Synopsis	ESM subscriber name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub esm *string*
Tree	esm
String Length	1 to 32

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm-mac [esm-mac-sub-name] *string*

Synopsis	Add a list entry for **esm-mac**
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub esm-mac *string*
Tree	esm-mac
Description	Commands in this context configure the ESM MAC fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**esm-mac-sub-name**] *string*

Synopsis	ESM MAC subscriber name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub esm-mac *string*
Tree	esm-mac
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *string*

Synopsis	Add a list entry for **sap**
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub sap *string*
Tree	sap
Description	Commands in this context configure the Service Access Point (SAP) for the purpose of enabling special study statistics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**sap-id**] *string*

Synopsis	AA subscriber SAP ID
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub sap *string*
Tree	sap
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

spoke-sdp [sdp-bind-id] *string*

Synopsis	Add a list entry for **spoke-sdp**
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub spoke-sdp *string*
Tree	spoke-sdp
Description	Commands in this context specify the spoke SDP ID and VC ID for the purpose of including the subscriber into AA special study statistics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**sdp-bind-id**] *string*

Synopsis	Spoke SDP ID for an AA subscriber
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub spoke-sdp *string*
Tree	spoke-sdp
String Length	3 to 16
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transit [transit-sub-name] *string*

Synopsis	Add a list entry for **transit**

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub transit *string*
Tree	transit
Description	Commands in the context specify an existing transit subscriber to be included in AA sub special study statistics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**transit-sub-name**] *string*

Synopsis	Transit subscriber name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub transit *string*
Tree	transit
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* collect-stats *boolean*
Tree	collect-stats
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-validate [tcp-validate-name] *string*

Synopsis	Enter the **tcp-validate** list instance
Context	**configure** application-assurance group *number* partition *number* tcp-validate *string*
Tree	tcp-validate
Description	Commands in this context configure a TCP validation policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**tcp-validate-name**] *string*

Synopsis	TCP validation policy name
Context	**configure** application-assurance group *number* partition *number* tcp-validate *string*
Tree	tcp-validate
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** application-assurance group *number* partition *number* tcp-validate *string* description *string*
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

log

Synopsis	Enter the **log** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* tcp-validate *string* log
Tree	log
Description	Commands in this context enable event logging of traffic dropped by TCP validation.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

all *boolean*

Synopsis	Enable logging of all dropped TCP packets
Context	**configure** application-assurance group *number* partition *number* tcp-validate *string* log all *boolean*
Tree	all
Description	When configured to **true**, all dropped TCP packets are logged, including the following: • packets received after an RST and discarded • packets received before TCP session establishment (before SYN) and discarded An event log must also be configured to enable logging of all dropped packets. When configured to **false**, discards related to the described cases are not captured in any event log.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event log name
Context	**configure** application-assurance group *number* partition *number* tcp-validate *string* log event-log *reference*
Tree	event-log
Reference	**configure** application-assurance group *number* partition *number* event-log *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

strict *boolean*

Synopsis	Enable strict checking of TCP traffic

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* tcp-validate *string* strict *boolean*
Tree	strict
Description	When configured to **true**, the command specifies whether enforcement of TCP sequence and acknowledgment numbers are applied. If a packet does not meet the expected sequence or acknowledgment number, it is dropped. This command should only be enabled if the expected bit error rate or packet loss is low. For example, if acknowledgments are lost before being detected by AA, the server timeouts are triggered and retransmissions occur. If strict is enabled, these retransmissions resemble a reply attack and are dropped by AA. When configured to **false**, the command removes the TCP sequence and acknowledgment number enforcement.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tethering-detection

Synopsis	Enter the **tethering-detection** context
Context	**configure** application-assurance group *number* partition *number* tethering-detection
Tree	tethering-detection
Description	Commands in this context configure tethering detection for the group.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of tethering detection
Context	**configure** application-assurance group *number* partition *number* tethering-detection admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

single-device

Synopsis	Enter the **single-device** context
Context	**configure** application-assurance group *number* partition *number* tethering-detection single-device
Tree	single-device
Description	Commands in this context configure the single-device fields and expected TTL values for flow-level tethering detection.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

expected-ttl [ttl] *number*

Synopsis	Add a list entry for **expected-ttl**
Context	**configure** application-assurance group *number* partition *number* tethering-detection single-device expected-ttl *number*
Tree	expected-ttl
Description	Commands in this context configure the TTL values for single-device tethering detection.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**ttl**] *number*

Synopsis	Expected TTL traffic value from host devices
Context	**configure** application-assurance group *number* partition *number* tethering-detection single-device expected-ttl *number*
Tree	expected-ttl
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

invert-match *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	Mark flows with expected TTL values as tethered
Context	**configure** application-assurance group *number* partition *number* tethering-detection single-device invert-match *boolean*
Tree	invert-match
Description	When configured to **true**, AA classifies flows with expected TTL values as coming from a connected device (tethered). When configured to **false**, AA classifies flows with expected TTL values as coming from the host device (untethered).
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ttl-monitor

Synopsis	Enter the **ttl-monitor** context
Context	**configure** application-assurance group *number* partition *number* tethering-detection ttl-monitor
Tree	ttl-monitor
Description	Commands in this context configure the scope of analysis for TCP and UDP traffic for tethering detection.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-protocols *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Scope of analysis for TCP traffic
Context	**configure** application-assurance group *number* partition *number* tethering-detection ttl-monitor tcp-protocols *keyword*
Tree	tcp-protocols
Description	This command configures whether AA analyzes all TCP traffic or only traffic from standard applications that generate consistent TTL values. Configuring AA to analyze all TCP traffic is typically recommended.
Options	standard – Protocols with reliable TTL-tethering state association all – All protocols

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	standard
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp-protocols *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Scope of analysis for UDP traffic
Context	**configure** application-assurance group *number* partition *number* tethering-detection ttl-monitor udp-protocols *keyword*
Tree	udp-protocols
Description	This command configures whether AA analyzes all UDP traffic or only traffic from standard applications that generate consistent TTL values. Configuring AA to analyze only standard UDP traffic is recommended.
Options	standard – Protocols with reliable TTL-tethering state association all – All protocols
Default	standard
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

threshold-crossing-alert

Synopsis	Enter the **threshold-crossing-alert** context
Context	**configure** application-assurance group *number* partition *number* threshold-crossing-alert
Tree	threshold-crossing-alert
Description	Commands in this context configure the generation of threshold crossing alerts (TCAs).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

criteria [criteria-id] *keyword* direction *keyword*

Synopsis	Enter the **criteria** list instance
Context	**configure** application-assurance group *number* partition *number* threshold-crossing-alert criteria *keyword* direction *keyword*

sub-ident-policy *reference*

Synopsis	Subscriber identification policy
Context	**configure** application-assurance group *number* partition *number* transit-ip-policy *number* sub-ident-policy *reference*
Tree	sub-ident-policy
Description	This command defines the subscriber identification policy for the transit IP policy that will be associated with a SAP. The subscriber identification policy must be defined prior to associating the profile with a SAP in the **configure subscriber-mgmt sub-ident-policy** context. Subscribers are managed by the system through the use of subscriber identification strings. A subscriber identification string uniquely identifies a subscriber. For static hosts, the subscriber identification string is explicitly defined with each static subscriber host. For dynamic hosts, the subscriber identification string must be derived from the DHCP ACK message sent to the subscriber host. The default value for the string is the content of Option 82 CIRCUIT-ID and REMOTE-ID fields interpreted as an octet string. As an option, the DHCP ACK message may be processed by a subscriber identification policy which has the capability to parse the message into an alternative ASCII or octet string value. When multiple hosts on the same port are associated with the same subscriber identification string, they are considered to be host members of the same subscriber.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

A subscriber identification policy can also be used for identifying dynamic transit subscriber names.

Reference **configure** subscriber-mgmt sub-ident-policy *string*

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transit-auto-create

Synopsis Enter the **transit-auto-create** context

Context **configure** application-assurance group *number* partition *number* transit-ip-policy *number* transit-auto-create

Tree transit-auto-create

Description Commands in this context enable the seen-IP auto creation of transit subscribers using the transit IP policy name and subscriber IP address as the aa-sub name. The default app-profile configured against the transit IP policy is applied to these subscribers.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the automatic dynamic transits

inactivity-monitor *boolean*

Synopsis Monitor inactivity on auto-created transit subscribers

Context **configure** application-assurance group *number* partition *number* transit-ip-policy *number* transit-auto-create inactivity-monitor *boolean*

Tree inactivity-monitor

Description When configured to **true**, this command enables the auto-removal of inactive transit subscribers. Periodically, AA removes any inactive auto-created subscribers. An inactive subscriber is defined as having no active flows in the last period.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, this command disables the auto-removal of inactive transit subscribers.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transit-prefix-policy [prefix-policy-id] *number*

Synopsis	Enter the **transit-prefix-policy** list instance
Context	**configure** application-assurance group *number* partition *number* transit-prefix-policy *number*
Tree	transit-prefix-policy
Description	Commands in this context define a transit AA subscriber prefix policy. Transit AA subscribers are managed by the system through the use of this policy assigned to services, which determines how transit subscribers are created and removed for that service.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis Action for packets violating configured policer rate

Context **configure** application-assurance group *number* policer anl-bandwidth-policer *string* action *keyword*

Tree action

Description This command configures the action to be performed by single-bucket bandwidth policers for non-conformant traffic.

Dual bucket bandwidth policers cannot have their action configured and always mark traffic below CIR as in-profile, between CIR and PIR as out-of-profile, and drop traffic above PIR. Flow policers always discard non-conformant traffic.

When multiple application assurance policers are configured against a single flow (including policers at both subscriber and system), the flow/packet is dropped if one of

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	the policers requires the packet to be discarded. This occurs regardless of the action of the other policers.
Options	permit-deny, priority-mark, monitor
Default	permit-deny
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

adaptation-rule

Synopsis	Enter the **adaptation-rule** context
Context	**configure** application-assurance group *number* policer anl-bandwidth-policer *string* adaptation-rule
Tree	adaptation-rule
Description	Commands in this context configure the AA policer adaptation rule fields and define the method used by the system to derive the operational CIR and PIR values when the queue is provisioned. For the CIR and PIR values individually, the system attempts to find the best operational rate depending on the defined option. To change the CIR adaptation rule only, the current PIR rule must be part of the command executed.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pir *keyword*

Synopsis	Peak information rate value for the adaptation rule
Context	**configure** application-assurance group *number* policer anl-bandwidth-policer *string* adaptation-rule pir *keyword*
Tree	pir
Description	This command configures the adaptation rule to be used while computing the operational PIR value. The adaptation rule specifies the rules to compute the operational values while maintaining minimum offset.
Options	max, min, closest
Default	closest
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mbs *number*

Synopsis	ANL bandwidth policer maximum burst size
Context	**configure** application-assurance group *number* policer anl-bandwidth-policer *string* mbs *number*
Tree	mbs
Description	This command configures the maximum burst size (MBS) for the policer. Nokia recommends configuring MBS larger than twice the MTU for the traffic handled by the policer to allow for some burstiness of the traffic. MBS is configurable for single-bucket, dual-bucket bandwidth, and flow setup rate policers only.
Range	0 to 131071
Units	kilobytes
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-percentage *number*

Synopsis	Rate used by Access-Network-Location policers
Context	**configure** application-assurance group *number* policer anl-bandwidth-policer *string* rate-percentage *number*
Tree	rate-percentage
Description	This command configures the stage 1 congestion percentage used by Access-Network-Location (ANL) policers. Because ANL total bandwidth is dynamically measured and estimated by AA, this command allows the operator to configure the ratio of that measured bandwidth to be used by the ANL policer as the policer rate. No limiting is performed if not specified.
Range	0 to 200
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

congestion-override-stage-2

Synopsis	Enter the **congestion-override-stage-2** context
Context	**configure** application-assurance group *number* policer dual-bucket-bandwidth-policer *string* congestion-override-stage-2
Tree	congestion-override-stage-2
Description	This command enables the context to configure per-subscriber stage 2 congestion bandwidth policer override rates.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cbs *number*

Synopsis	Committed burst size in a congested stage 2 state
Context	**configure** application-assurance group *number* policer dual-bucket-bandwidth-policer *string* congestion-override-stage-2 cbs *number*
Tree	cbs
Description	This command configures the committed burst size for a policer. The configured CBS should be larger than twice the maximum MTU for the traffic handled by the policer to allow for some burstiness of the traffic. CBS is configurable for dual-bucket bandwidth policers only.
Range	0 to 131071
Units	kilobytes
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cir *(number | keyword)*

Synopsis	Committed information rate value for policer override
Context	**configure** application-assurance group *number* policer dual-bucket-bandwidth-policer *string* congestion-override-stage-2 cir *(number | keyword)*
Tree	cir
Description	This command configures the CIR for the dual-bucket bandwidth policer congestion override. Nokia recommends that the CIR is configured larger than twice the maximum MTU for the traffic handled by the policer to allow for some burstiness of the traffic. The CIR is configurable for dual-bucket bandwidth policers only.
Range	0 to 100000000

action *keyword*

Synopsis	Action for packets violating configured policer rate

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* policer flow-bandwidth-policer *string* action *keyword*
Tree	action
Description	This command configures the action to be performed by single-bucket bandwidth policers for non-conformant traffic. Dual bucket bandwidth policers cannot have their action configured and always mark traffic below CIR as in-profile, between CIR and PIR as out-of-profile, and drop traffic above PIR. Flow policers always discard non-conformant traffic. When multiple application assurance policers are configured against a single flow (including policers at both subscriber and system), the flow/packet is dropped if one of the policers requires the packet to be discarded. This occurs regardless of the action of the other policers.
Options	permit-deny, priority-mark, monitor
Default	permit-deny
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

adaptation-rule

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mbs *number*

Synopsis	Bandwidth policer MBS for time of day override
Context	**configure** application-assurance group *number* policer flow-bandwidth-policer *string* time-of-day-override *number* mbs *number*
Tree	mbs
Description	This command configures the maximum burst size (MBS) for the policer. Nokia recommends configuring MBS larger than twice the MTU for the traffic handled by the policer to allow for some burstiness of the traffic. MBS is configurable for single-bucket, dual-bucket bandwidth, and flow setup rate policers only.
Range	0 to 131071
Units	kilobytes
Default	0
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pir *(number | keyword)*

Synopsis	Peak information rate value for time of day override
Context	**configure** application-assurance group *number* policer flow-bandwidth-policer *string* time-of-day-override *number* pir *(number | keyword)*
Tree	pir
Range	1 to 100000000

Tree	single-bucket-bandwidth-policer
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action for packets violating configured policer rate
Context	**configure** application-assurance group *number* policer single-bucket-bandwidth-policer *string* action *keyword*
Tree	action
Description	This command configures the action to be performed by single-bucket bandwidth policers for non-conformant traffic. Dual bucket bandwidth policers cannot have their action configured and always mark traffic below CIR as in-profile, between CIR and PIR as out-of-profile, and drop traffic above PIR. Flow policers always discard non-conformant traffic. When multiple application assurance policers are configured against a single flow (including policers at both subscriber and system), the flow/packet is dropped if one of the policers requires the packet to be discarded. This occurs regardless of the action of the other policers.
Options	permit-deny, priority-mark, monitor
Default	permit-deny
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

adaptation-rule

Synopsis	Enter the **adaptation-rule** context
Context	**configure** application-assurance group *number* policer single-bucket-bandwidth-policer *string* adaptation-rule
Tree	adaptation-rule

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pir *keyword*

Synopsis	Peak information rate value for the adaptation rule
Context	**configure** application-assurance group *number* policer single-bucket-bandwidth-policer *string* adaptation-rule pir *keyword*
Tree	pir
Description	This command configures the adaptation rule to be used while computing the operational PIR value. The adaptation rule specifies the rules to compute the operational values while maintaining minimum offset.
Options	max, min, closest
Default	closest
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

congestion-override

Synopsis	Enter the **congestion-override** context
Context	**configure** application-assurance group *number* policer single-bucket-bandwidth-policer *string* congestion-override
Tree	congestion-override
Description	Commands in this context configure the congestion bandwidth policer override rates.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mbs *number*

Synopsis	Maximum burst size when in a congested state
Context	**configure** application-assurance group *number* policer single-bucket-bandwidth-policer *string* congestion-override mbs *number*
Tree	mbs
Description	This command configures the maximum burst size (MBS) for the policer. Nokia recommends configuring MBS larger than twice the MTU for the traffic handled by the policer to allow for some burstiness of the traffic. MBS is configurable for single-bucket, dual-bucket bandwidth, and flow setup rate policers only.
Range	0 to 131071

start *string*

Synopsis	Daily start time
Context	**configure** application-assurance group *number* policer single-bucket-bandwidth-policer *string* time-of-day-override *number* time-range daily start *string*
Tree	start
Description	This command configures the daily start time of the policer override. The time format must be [hh:mm]. The hh value is 00 to 24. The mm value is 00, 15, 30, or 45. If hh is 24, mm must be 00.

String Length	3 to 5
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

weekly

Synopsis	Enable the **weekly** context
Context	**configure** application-assurance group *number* policer single-bucket-bandwidth-policer *string* time-of-day-override *number* time-range weekly
Tree	weekly
Description	Commands in this context configure the weekly start and end times for policer override.
Notes	The following elements are part of a choice: **daily** or **weekly**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end

Synopsis	Enable the **end** context
Context	**configure** application-assurance group *number* policer single-bucket-bandwidth-policer *string* time-of-day-override *number* time-range weekly end
Tree	end
Description	Commands in this context configure the weekly end time for policer override.When using a weekly override, the operator can select between which days in the week the policy ends up to the hours or minutes for both start of the day and end of the day.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

day *keyword*

Synopsis	Weekly end day
Context	**configure** application-assurance group *number* policer single-bucket-bandwidth-policer *string* time-of-day-override *number* time-range weekly end day *keyword*
Tree	day
Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Notes	This element is mandatory.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

time *string*

Synopsis	Weekly start time
Context	**configure** application-assurance group *number* policer single-bucket-bandwidth-policer *string* time-of-day-override *number* time-range weekly start time *string*
Tree	time
Description	This command configures the weekly start time of the policer override. The time format must be [hh:mm]. The hh value is 00 to 24. The mm value is 00, 15, 30, or 45. If hh is 24, mm must be 00.
String Length	3 to 5
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-optimizer [tcp-optimizer-name] *string*

Synopsis	Enter the **tcp-optimizer** list instance
Context	**configure** application-assurance group *number* tcp-optimizer *string*
Tree	tcp-optimizer
Description	Commands in this context configure the TCP optimizer policy. When a TCP optimizer policy is removed or deleted, the existing flows using this policy are abandoned, and optimization is stopped.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**tcp-optimizer-name**] *string*

Synopsis	TCP optimizer name
Context	**configure** application-assurance group *number* tcp-optimizer *string*
Tree	tcp-optimizer
Description	This command configures the name of the TCP optimizer policy.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.2.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dack-timeout *number*

Synopsis	Delayed acknowledgment timeout for client and server
Context	**configure** application-assurance group *number* tcp-optimizer *string* dack-timeout *number*
Tree	dack-timeout
Description	This command configures a delay ACK (DACK) timeout for the TCP optimizer. By entering this command a default of 200 ms timeout is enabled for delayed acknowledgment. This value is not configurable.
Range	200
Units	milliseconds
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** application-assurance group *number* tcp-optimizer *string* description *string*
Tree	description
String Length	1 to 80
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high-cpu-backoff *boolean*

Synopsis	Stop optimizing sessions when CPU capacity is limited
Context	**configure** application-assurance group *number* tcp-optimizer *string* high-cpu-backoff *boolean*
Tree	high-cpu-backoff
Description	When configured to **true**, AA stops optimizing TCP sessions when the CPU capacity is limited. AA implements the following CPU utilization thresholds: • level 1 - 75% • level 2 - 85% • level 3 - 90%

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The following describes the functionality of the preceding thresholds:

- **early random bypass stage (level 1)**
  When the CPU utilization is between level 1 and level 2, AA randomly optimizes or bypasses new TCP sessions proportional to the position of the CPU utilization within the range between level 1 and level 2.
- **stop optimization of new flows stage (level 2)**
  When the CPU utilization is at or above level 2, AA stops optimizing new TCP sessions.
- **abandon stage (level 3)**
  When the CPU utilization is at or above level 3, AA abandons existing optimized TCP sessions.

Note: The CPU utilization is measured once per second in each core or worker. The CPU utilization may differ between cores.

When configured to **false**, AA optimizes TCP sessions, regardless of the CPU capacity.

Default	false
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial-cwnd *number*

Synopsis	Initial congestion window of the TCP optimizer
Context	**configure** application-assurance group *number* tcp-optimizer *string* initial-cwnd *number*
Tree	initial-cwnd
Description	This command configures the initial TCP congestion window (cwnd) used during the TCP Slow Start (SS) period.
Range	1 to 256
Default	8
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial-ss-threshold *(number | keyword)*

Synopsis	Initial TCP Slow Start threshold for client and server
Context	**configure** application-assurance group *number* tcp-optimizer *string* initial-ss-threshold *(number | keyword)*
Tree	initial-ss-threshold
Description	This command configures the initial Slow Start (SS) threshold for a specific TCP optimizer policy. Nokia recommends setting the threshold close to the access network Bandwidth Delay Product (BDP).

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	0 to 1000000
Units	kilobytes
Options	auto
Default	1000000
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

network-rtt-threshold *number*

Synopsis	Network round trip time threshold
Context	**configure** application-assurance group *number* tcp-optimizer *string* network-rtt-threshold *number*
Tree	network-rtt-threshold
Description	This command configures the threshold of the Round Trip Time (RTT) delay of the network side (between AA and the content provider) above which TCP Optimization (TCPO) is performed. This enables the operator to disable optimization for content that is served from a location close to the TCP optimizer.
Range	1 to 100
Units	milliseconds
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-stack *keyword*

Synopsis	TCP stack congestion control algorithm
Context	**configure** application-assurance group *number* tcp-optimizer *string* tcp-stack *keyword*
Tree	tcp-stack
Description	This command configures the TCP stack used toward the subscriber. **Note:** The TCP stack used toward the core network is new-reno, and it is not configurable. TCP BBR, BBRv2, TCP Illinois, and TCP Westwood implement a sender-side modification of the TCP congestion window algorithm that improves the performance of TCP Reno in wireless networks with lossy links.
Options	westwood, illinois, new-reno, bbr, bbrv2
Default	westwood
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

url-filter [url-filter-name] *string*

Synopsis	Enter the **url-filter** list instance
Context	**configure** application-assurance group *number* url-filter *string*
Tree	url-filter
Description	Commands in this context configure a URL filter action for flows of a specific type matching this entry. If no URL filters are specified, then no URL filters are evaluated.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**url-filter-name**] *string*

Synopsis	URL filter name
Context	**configure** application-assurance group *number* url-filter *string*
Tree	url-filter
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AA URL filter
Context	**configure** application-assurance group *number* url-filter *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

apply-function-specific-behaviour *boolean*

Synopsis	Use function-specific behavior for action or redirect
Context	**configure** application-assurance group *number* url-filter *string* apply-function-specific-behaviour *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	apply-function-specific-behaviour
Description	When configured to **true**, the function-specific configurations for URL list, ICAP, and web service (**url-list**, **icap**, and **web-service)** are used for default action (**default-action**) and HTTP redirect (**http-redirect**). When configured to **false**, the configuration at the URL filter level (**url-filter**) is used for default action and HTTP redirect.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action

Synopsis	Enter the **default-action** context
Context	**configure** application-assurance group *number* url-filter *string* default-action
Tree	default-action
Description	Commands in this context configure the default action to take effect when the URL filter cannot be used. This may occur in the following cases: • for the local URL list when the URL list is shut down or the file is not loaded due to an error. • in the case of ICAP or web filtering when all TCP connections are busy or down.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

allow

Synopsis	Allow all requests as the default URL filter action
Context	**configure** application-assurance group *number* url-filter *string* default-action allow
Tree	allow
Description	When configured, the router allows all requests as the default URL filter action when the URL filter cannot be used.
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-all

Synopsis	Block all requests as the default URL filter action

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* url-filter *string* default-action block-all
Tree	block-all
Description	When configured, the router blocks all requests as the default URL filter action when the URL filter cannot be used.
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-http-redirect *reference*

Synopsis	HTTP URL name for block and redirect request action
Context	**configure** application-assurance group *number* url-filter *string* default-action block-http-redirect *reference*
Tree	block-http-redirect
Description	This command specifies the URL that the user is directed to when the router blocks traffic. The information page can be different from the page the user is redirected to when the site that the user tried to access is found in the URL filter. This page is configured using the **configure application-assurance group url-filter http-redirect** command.
Reference	**configure** application-assurance group *number* http-redirect *string*
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** application-assurance group *number* url-filter *string* description *string*
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect *reference*

Synopsis	HTTP redirect for a blocked HTTP request

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* url-filter *string* http-redirect *reference*
Tree	http-redirect
Reference	**configure** application-assurance group *number* http-redirect *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-request-filtering *keyword*

Synopsis	HTTP filtering for all HTTP requests
Context	**configure** application-assurance group *number* url-filter *string* http-request-filtering *keyword*
Tree	http-request-filtering
Options	all, first
Default	all
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icap

Synopsis	Enter the **icap** context
Context	**configure** application-assurance group *number* url-filter *string* icap
Tree	icap
Description	Commands in this context configure the URL filter ICAP policy fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-x-header *string*

Synopsis	Custom x-header field name to include in ICAP requests
Context	**configure** application-assurance group *number* url-filter *string* icap custom-x-header *string*
Tree	custom-x-header
Description	This command configures the URL filter ICAP policy to include a new x-header field; the content of the x-header is populated based on the AQP URL filter action which can optionally specify the ASO characteristic value to include in the x-header.
String Length	1 to 32

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action

Synopsis	Enter the **default-action** context
Context	**configure** application-assurance group *number* url-filter *string* icap default-action
Tree	default-action
Description	Commands in this context configure a default action for the URL filter. The default action takes effect when the URL filter cannot be used. This may happen when all TCP connections are busy or down.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

allow

Synopsis	Allow all requests as the default action
Context	**configure** application-assurance group *number* url-filter *string* icap default-action allow
Tree	allow
Description	When configured, this command allows all traffic when the URL filter cannot be used.
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-all

Synopsis	Block all requests as the default action
Context	**configure** application-assurance group *number* url-filter *string* icap default-action block-all
Tree	block-all
Description	When configured, this command blocks all traffic when the URL filter cannot be used.
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

block-http-redirect *reference*

Synopsis	HTTP URL for redirection when URL filter cannot be used
Context	**configure** application-assurance group *number* url-filter *string* icap default-action block-http-redirect *reference*
Tree	block-http-redirect
Description	This command blocks traffic and redirects the user to an information page, which can be different than the page the user is redirected to when the site they attempted to access was found in the URL filter; this page is configured using the **configure application-assurance group url-filter http-redirect** command.
Reference	**configure** application-assurance group *number* http-redirect *string*
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect *reference*

Synopsis	HTTP redirect object used when ICAP blocks HTTP request
Context	**configure** application-assurance group *number* url-filter *string* icap http-redirect *reference*
Tree	http-redirect
Reference	**configure** application-assurance group *number* http-redirect *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [ip-address] *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*

Synopsis	Enter the **server** list instance
Context	**configure** application-assurance group *number* url-filter *string* icap server *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	server
Description	Commands in this context configure the IP address and server port of the ICAP server. In the current release, the system supports IPv4 addresses only for the ICAP server.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**ip-address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	ICAP server IP address
Context	**configure** application-assurance group *number* url-filter *string* icap server *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	server
Description	This command configures the ICAP server address. In the current release, the system supports IPv4 addresses only for the ICAP server.
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Context	**configure** application-assurance group *number* url-filter *string* local-filtering deny-list *reference* default-action block-http-redirect *reference*
Tree	block-http-redirect
Description	This command blocks traffic and redirects the user to an information page, which can be different than the page the user is redirected to when the site they attempted to access was found in the URL filter; this page is configured using the **configure application-assurance group url-filter http-redirect** command.
Reference	**configure** application-assurance group *number* http-redirect *string*
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect *reference*

Synopsis	HTTP redirect object applied to blocked HTTP requests
Context	**configure** application-assurance group *number* url-filter *string* local-filtering deny-list *reference* http-redirect *reference*
Tree	http-redirect
Reference	**configure** application-assurance group *number* http-redirect *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

web-service

Synopsis	Enter the **web-service** context
Context	**configure** application-assurance group *number* url-filter *string* web-service
Tree	web-service
Description	Commands in this context configure the URL filter policy using web-service filtering. The operator must configure the web service, hostname, DNS server to use, the AA interface VLAN ID, and provision the category profiles.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

category-set *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Web service category ID
Context	**configure** application-assurance group *number* url-filter *string* web-service category-set *number*
Tree	category-set
Range	1 to 65535
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

classification-overrides

Synopsis	Enter the **classification-overrides** context
Context	**configure** application-assurance group *number* url-filter *string* web-service classification-overrides
Tree	classification-overrides
Description	Commands in this context create a classification override and allow the operator to manually set the category of a hostname.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** application-assurance group *number* url-filter *string* web-service classification-overrides entry *number*
Tree	entry
Description	Commands in this context configure a classification override, manually setting the category of a hostname.
Max. Instances	200
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

classifier *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Web service classifier
Context	**configure** application-assurance group *number* url-filter *string* web-service classifier *keyword*
Tree	classifier
Options	web-service-1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action

Synopsis	Enter the **default-action** context
Context	**configure** application-assurance group *number* url-filter *string* web-service default-action
Tree	default-action
Description	Commands in this context configure a default action for the URL filter. The default action takes effect when the URL filter cannot be used. This may happen when all TCP connections are busy or down.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

allow

Synopsis	Allow all requests as the default action
Context	**configure** application-assurance group *number* url-filter *string* web-service default-action allow
Tree	allow
Description	This command allows all traffic when the web service is unavailable.
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-all

Synopsis	Block all requests as the default action
Context	**configure** application-assurance group *number* url-filter *string* web-service default-action block-all
Tree	block-all
Description	This command blocks all traffic when the web service is unavailable.
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-http-redirect *reference*

Synopsis	HTTP URL for redirection when traffic is blocked
Context	**configure** application-assurance group *number* url-filter *string* web-service default-action block-http-redirect *reference*
Tree	block-http-redirect
Description	This command specifies the HTTP URL to be redirected to when traffic is blocked. This URL can be different than the URL the user is redirected to when the site they attempted to access was found in the URL filter (which is configured in the **configure application-assurance group url-filter http-redirect** command).
Reference	**configure** application-assurance group *number* http-redirect *string*
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-profile *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Web service default profile
Context	**configure** application-assurance group *number* url-filter *string* web-service default-profile *reference*
Tree	default-profile

protocol [protocol-name] *string*

Synopsis	Enter the **protocol** list instance
Context	**configure** application-assurance protocol *string*
Tree	protocol
Description	Commands in this context configure the administrative state of system-wide protocols.Some protocols are always enabled and cannot be disabled. These are "base protocols" that were present in R1 of the release.Some protocols are disabled by default and can be enabled. There are protocols that were introduced post R1, which are all enabled by default but may be disabled if not desired.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**protocol-name**] *string*

Synopsis	AA protocol name
Context	**configure** application-assurance protocol *string*
Tree	protocol
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the protocol
Context	**configure** application-assurance protocol *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy [rad-acct-plcy-name] *string*

Synopsis	Enter the **radius-accounting-policy** list instance
Context	**configure** application-assurance radius-accounting-policy *string*
Tree	radius-accounting-policy

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure an existing subscriber RADIUS-based accounting policy to use for AA. RADIUS accounting policies are configured in the **configure application-assurance radius-accounting-policy** context.
Max. Instances	8
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**rad-acct-plcy-name**] *string*

Synopsis	AA RADIUS accounting policy name
Context	**configure** application-assurance radius-accounting-policy *string*
Tree	radius-accounting-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** application-assurance radius-accounting-policy *string* description *string*
Tree	description
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interim-update-interval *number*

Synopsis	AA RADIUS accounting policy interim update interval
Context	**configure** application-assurance radius-accounting-policy *string* interim-update-interval *number*
Tree	interim-update-interval
Range	5 to 1080
Units	minutes
Introduced	21.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-server

Synopsis	Enter the **radius-accounting-server** context
Context	**configure** application-assurance radius-accounting-policy *string* radius-accounting-server
Tree	radius-accounting-server
Description	Commands in this context configure an existing subscriber RADIUS-based accounting policy to use for AA. RADIUS accounting policies are configured in the **configure application-assurance radius-accounting-policy** context.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

access-algorithm *keyword*

Synopsis	Access algorithm for the list of RADIUS servers
Context	**configure** application-assurance radius-accounting-policy *string* radius-accounting-server access-algorithm *keyword*
Tree	access-algorithm
Options	direct, round-robin
Default	direct
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

retry *number*

Synopsis	Number of retries for contacting the RADIUS server
Context	**configure** application-assurance radius-accounting-policy *string* radius-accounting-server retry *number*
Tree	retry
Range	1 to 10
Default	3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

router-instance *string*

Synopsis	Router or VPRN service name
Context	**configure** application-assurance radius-accounting-policy *string* radius-accounting-server router-instance *string*
Tree	router-instance
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [server-index] *number*

Synopsis	Enter the **server** list instance
Context	**configure** application-assurance radius-accounting-policy *string* radius-accounting-server server *number*
Tree	server
Description	Commands in this context configure the RADIUS server and the RADIUS server IP address, index, and key values. RADIUS servers are accessed in order from lowest to highest index for authentication requests until a response from a server is received. A higher indexed server is only queried if no response is received from a lower indexed server (which implies that the server is not available). If a response from a server is received, no other RADIUS servers are queried.
Max. Instances	5
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**server-index**] *number*

Synopsis	RADIUS accounting server index
Context	**configure** application-assurance radius-accounting-policy *string* radius-accounting-server server *number*
Tree	server
Description	This command configures the index for the RADIUS server. The index determines the sequence in which the servers are queried for authentication requests. Servers are queried in order from lowest to highest index.
Range	1 to 5
Notes	This element is part of a list key.
Introduced	21.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address *string*

Synopsis	RADIUS server IP address
Context	**configure** application-assurance radius-accounting-policy *string* radius-accounting-server server *number* address *string*
Tree	address
Description	This command configures the IP address of the RADIUS server. Two RADIUS servers cannot have the same IP address. An error message is generated if the server address is a duplicate.
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port *number*

Synopsis	RADIUS server UDP port used for authentication
Context	**configure** application-assurance radius-accounting-policy *string* radius-accounting-server server *number* port *number*
Tree	port
Range	1 to 65535
Default	1813
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

secret *string*

Synopsis	RADIUS server secret key
Context	**configure** application-assurance radius-accounting-policy *string* radius-accounting-server server *number* secret *string*
Tree	secret
Description	This command configures the secret key to access the RADIUS server. This secret key must match the password on the RADIUS server.
String Length	1 to 54
Notes	This element is mandatory.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source-address *string*

Synopsis	Source IP address of RADIUS packets
Context	**configure** application-assurance radius-accounting-policy *string* radius-accounting-server source-address *string*
Tree	source-address
Description	This command configures the source IP address of the RADIUS packet. The system IP address must be configured for the RADIUS client to work. The system IP address must only be configured if the source address is not specified. When this command reverts to its default, the source address is determined at the moment the request is sent. This address is also used in the **nas-ip-address** command in the **configure aaa radius isa-policy accounting include-attributes** and **configure aaa radius isa-policy authentication include-attributes** contexts as it is set to the system IP address if no source address was given.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	RADIUS accounting server response timeout
Context	**configure** application-assurance radius-accounting-policy *string* radius-accounting-server timeout *number*
Tree	timeout
Range	1 to 90
Units	seconds
Default	5
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

significant-change *number*

Synopsis	Change delta for RADIUS accounting record updates
Context	**configure** application-assurance radius-accounting-policy *string* significant-change *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	significant-change
Description	This command configures the number of changes required to generate the record.
Range	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

usage-alert-thresholds

Synopsis	Enter the **usage-alert-thresholds** context
Context	**configure** application-assurance usage-alert-thresholds
Tree	usage-alert-thresholds
Description	Commands in this context configure the AA performance monitoring alerts.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bit-rate-high-wmark *(number | keyword)*

Synopsis	High watermark for bit rate alarms
Context	**configure** application-assurance usage-alert-thresholds bit-rate-high-wmark *(number | keyword)*
Tree	bit-rate-high-wmark
Description	This command configures the high watermark for bit rate alarms. The value must be larger than or equal to the low watermark value.
Range	1 to 100000
Units	megabps
Options	max
Default	max
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bit-rate-low-wmark *number*

Synopsis	Low watermark for bit rate alarms
Context	**configure** application-assurance usage-alert-thresholds bit-rate-low-wmark *number*
Tree	bit-rate-low-wmark

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the utilization of the flow records on the ISA-AA group when the full alarm is cleared by the agent.
Range	0 to 99999
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

datapath-cpu-high-wmark *(number | keyword)*

Synopsis	High watermark for datapath CPU alarms
Context	**configure** application-assurance usage-alert-thresholds datapath-cpu-high-wmark *(number | keyword)*
Tree	datapath-cpu-high-wmark
Description	This command configures the system-wide high watermark threshold as a percentage of the per-ISA datapath core CPU utilization, where an alarm is raised by the agent. CPU usage is the average usage across all datapath cores.
Range	0 to 100
Units	percent
Options	max
Default	95
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

datapath-cpu-low-wmark *number*

Synopsis	Low watermark for datapath CPU alarms
Context	**configure** application-assurance usage-alert-thresholds datapath-cpu-low-wmark *number*
Tree	datapath-cpu-low-wmark
Description	This command configures the system-wide low watermark threshold as a percentage of the per-ISA datapath core CPU utilization, where an alarm is raised by the agent. CPU usage is the average usage across all datapath cores.
Range	0 to 100
Units	percent
Default	90
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

flow-setup-rate-high-wmark *(number | keyword)*

Synopsis	High watermark for flow setup rate
Context	**configure** application-assurance usage-alert-thresholds flow-setup-rate-high-wmark *(number | keyword)*
Tree	flow-setup-rate-high-wmark
Description	This command configures the system-wide high watermark threshold for per-ISA throughput in packets/second when an alarm is raised by the agent. The value must be larger than or equal to the **packet-rate-low-wmark** value.
Range	1 to 2000000
Options	max
Default	max
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-setup-rate-low-wmark *number*

Synopsis	Low watermark for flow setup rate
Context	**configure** application-assurance usage-alert-thresholds flow-setup-rate-low-wmark *number*
Tree	flow-setup-rate-low-wmark
Description	This command configures the flow setup rate on the ISA-AA when a flow setup alarm is raised by the agent.
Range	0 to 1999999
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-table-high-wmark *number*

Synopsis	Flow table high watermark
Context	**configure** application-assurance usage-alert-thresholds flow-table-high-wmark *number*
Tree	flow-table-high-wmark
Description	This command configures the system-wide high watermark threshold as a percentage of the flow table size for the per-ISA utilization of the flow records when a full alarm is raised by the agent.
Range	0 to 100

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	percent
Default	95
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-table-low-wmark *number*

Synopsis	Flow table low watermark
Context	**configure** application-assurance usage-alert-thresholds flow-table-low-wmark *number*
Tree	flow-table-low-wmark
Description	This command configures the system-wide low watermark threshold as a percentage of the flow table size for per-ISA.
Range	0 to 100
Units	percent
Default	90
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packet-rate-high-wmark *(number | keyword)*

Synopsis	Packet rate high watermark
Context	**configure** application-assurance usage-alert-thresholds packet-rate-high-wmark *(number | keyword)*
Tree	packet-rate-high-wmark
Description	This command configures the packet rate on the ISA-AA when a packet rate alarm is raised by the agent.
Range	1 to 148809524
Options	max
Default	max
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packet-rate-low-wmark *number*

Synopsis	Packet rate low watermark
Context	**configure** application-assurance usage-alert-thresholds packet-rate-low-wmark *number*

3.4.1 aps command descriptions

aps [group-id] *number*

Synopsis	Enter the **aps** list instance
Context	**configure** aps *number*
Tree	aps
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[**group-id**] *number*

Synopsis	APS group ID
Context	**configure** aps *number*
Tree	aps
Range	1 to 128
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

advertise-interval *number*

Synopsis	Time between subsequent advertisement messages
Context	**configure** aps *number* advertise-interval *number*
Tree	advertise-interval
Range	10 to 650
Units	deciseconds
Default	10
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

annexb

Synopsis	Enable the **annexb** context
Context	**configure** aps *number* annexb

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	annexb
Notes	The following elements are part of a choice: **annexb** or (**neighbor**, **protect-circuit**, **revert**, and **working-circuit**).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

wait-to-restore-time *number*

Synopsis	Annex B mode operation wait to restore time
Context	**configure** aps *number* annexb wait-to-restore-time *number*
Tree	wait-to-restore-time
Description	This command specifies the delay after which the newly active section becomes the primary section after a switchover from the primary section to the secondary section occurs and the switch request clears normally.
Range	0 to 3600
Units	seconds
Default	300
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

working-circuit *reference*

Synopsis	Working circuit port for the APS group
Context	**configure** aps *number* annexb working-circuit *reference*
Tree	working-circuit
Reference	**configure** port *string*
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

hold-time *number*

Synopsis	Time to wait for an advertisement packet
Context	**configure** aps *number* hold-time *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	hold-time
Range	10 to 650
Units	deciseconds
Default	30
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

neighbor *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Neighbor IP address for multi-chassis APS
Context	**configure** aps *number* neighbor *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	neighbor
Notes	The following elements are part of a choice: **annexb** or (**neighbor**, **protect-circuit**, **revert**, and **working-circuit**).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

protect-circuit *reference*

Synopsis	Protection circuit port for the APS group
Context	**configure** aps *number* protect-circuit *reference*
Tree	protect-circuit
Reference	**configure** port *string*
Notes	The following elements are part of a choice: **annexb** or (**neighbor**, **protect-circuit**, **revert**, and **working-circuit**).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

revert

Synopsis	Enable the **revert** context
Context	**configure** aps *number* revert
Tree	revert
Notes	The following elements are part of a choice: **annexb** or (**neighbor**, **protect-circuit**, **revert**, and **working-circuit**).

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

time *number*

Synopsis	Wait time before switching back to the working circuit
Context	**configure** aps *number* revert time *number*
Tree	time
Range	0 | 60 to 3600
Units	seconds
Default	300
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

switching-mode *keyword*

Synopsis	Switching mode for the APS port
Context	**configure** aps *number* switching-mode *keyword*
Tree	switching-mode
Options	uni-directional, bi-directional
Default	bi-directional
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

working-circuit *reference*

Synopsis	Working circuit port for the APS group
Context	**configure** aps *number* working-circuit *reference*
Tree	working-circuit
Reference	**configure** port *string*
Notes	The following elements are part of a choice: **annexb** or (**neighbor**, **protect-circuit**, **revert**, and **working-circuit**).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

3.5 bfd commands

```
configure
   - bfd
      - apply-groups reference
      - apply-groups-exclude reference
      - bfd-template string
         - apply-groups reference
         - apply-groups-exclude reference
         - echo-receive number
         - multiplier number
         - receive-interval number
         - transmit-interval number
         - type keyword
      - seamless-bfd
         - reflector string
            - admin-state keyword
            - apply-groups reference
            - apply-groups-exclude reference

3.7.1 bof command descriptions

bof

Synopsis	Configure system boot options
Context	bof
Tree	bof
Description	This command creates or edits the boot option file (BOF) for the specified local storage device. A BOF file specifies where the system searches for runtime images, configuration files, and other operational parameters during system initialization. BOF parameters can be modified. Changes can be saved to a specified compact flash. The BOF must be located in the root directory of either an internal or external compact flash local to the system and have the mandatory filename of bof.cfg. When modifications are made to in-memory parameters that are currently in use or operating, the changes are effective immediately. For example, if the IP address of the management port is changed, the change takes place immediately. Only one entry of the BOF configuration command statement can be saved once the statement has been found to be syntactically correct. When opening an existing BOF that is not the BOF used in the most recent boot, a message is issued notifying the user that the parameters will not affect the operation of the node. No default boot option file exists. The router boots with the factory default boot sequence and options.
Introduced	20.10.R1
Platforms	All

auto-boot

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **auto-boot** context
Context	bof auto-boot
Tree	auto-boot
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dhcp

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **dhcp** context
Context	bof auto-boot dhcp
Tree	dhcp
Notes	The following elements are part of a choice: **dhcp** or **ospf**.
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

client-id *(keyword | hex-string | string)*

Note:
The new value of this element takes effect when the router boots.

Synopsis	DHCP client ID
Context	bof auto-boot dhcp client-id *(keyword | hex-string | string)*
Tree	client-id
String Length	3 to 118
Options	use-chassis-mac-address
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

inband

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **inband** context
Context	bof auto-boot dhcp inband
Tree	inband
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

disabled *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Do not use in-band ports
Context	bof auto-boot dhcp inband disabled *boolean*
Tree	disabled
Default	true
Notes	The following elements are part of a choice: **disabled**, **null-encapsulation**, **vlan**, or **vlan-discovery**.
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

null-encapsulation *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use null encapsulation
Context	bof auto-boot dhcp inband null-encapsulation *boolean*
Tree	null-encapsulation
Default	true
Notes	The following elements are part of a choice: **disabled**, **null-encapsulation**, **vlan**, or **vlan-discovery**.
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

vlan *number*

Note:
The new value of this element takes effect when the router boots.

Synopsis	In-band VLAN ID
Context	bof auto-boot dhcp inband vlan *number*
Tree	vlan
Range	1 to 4094

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **disabled**, **null-encapsulation**, **vlan**, or **vlan-discovery**.
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

vlan-discovery *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use VLAN discovery
Context	bof auto-boot dhcp inband vlan-discovery *boolean*
Tree	vlan-discovery
Default	true
Notes	The following elements are part of a choice: **disabled**, **null-encapsulation**, **vlan**, or **vlan-discovery**.
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

include-user-class *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Include user class in auto boot provisioning
Context	bof auto-boot dhcp include-user-class *boolean*
Tree	include-user-class
Default	true
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

ipv4 *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use auto boot with IPv4

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	bof auto-boot dhcp ipv4 *boolean*
Tree	ipv4
Default	true
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

ipv6 *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use auto boot with IPv6
Context	bof auto-boot dhcp ipv6 *boolean*
Tree	ipv6
Default	true
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

management-port *boolean*

Note:
The new value of this element takes effect when the router boots.

configuration

Synopsis	Enter the **configuration** context
Context	bof configuration
Tree	configuration
Introduced	20.10.R1
Platforms	All

encrypt *boolean*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Enable encryption of BOF configuration files
Context	bof configuration encrypt *boolean*
Tree	encrypt
Description	When configured to **true**, this command enables encryption of the BOF using AES256 and SHA256. When the BOF is encrypted on the compact flash, it is still reachable using the BOF interactive menu during node startup, and fields can be modified using the BOF interactive menu.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

encryption-key *string*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Secret key for encryption of configuration files
Context	bof configuration encryption-key *string*
Tree	encryption-key
Description	This command creates a key to be used by AES256 and SHA256 for configuration file encryption and hashing. This key is used for all configuration files (primary, secondary, and tertiary). After creating or deleting a key, save the configuration file with the current encryption key state.

Synopsis	Base system MAC address
Context	bof system base-mac-address *string*
Tree	base-mac-address
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS-20, 7950 XRS-20e, VSR

persistent-indices *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Classic and mixed management mode persistent indices
Context	bof system persistent-indices *boolean*
Tree	persistent-indices
Introduced	20.10.R1
Platforms	All

3.8 call-trace commands

```
configure
   –  call-trace
      –  apply-groups reference
      –  apply-groups-exclude reference
      –  buffering boolean
      –  location keyword
         –  admin-state keyword
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  size-limit (number | keyword)
      –  max-files-number number
      –  primary-cf keyword
      –  trace-profile string
         –  applications
            –  connectivity-management boolean
            –  gx boolean
            –  gy boolean
            –  ludb boolean
            –  msap boolean
            –  nasreq boolean
            –  ppp-event boolean
            –  python boolean
            –  radius-acct boolean
            –  radius-auth boolean
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  description string
         –  events keyword
         –  output
            –  debug
            –  live
               –  fqdn string
               –  ip-address (ipv4-address-no-zone | ipv6-address-no-zone)
               –  port number
               –  router-instance string
            –  local-storage
         –  size-limit number
         –  time-limit number
```

3.8.1 call-trace command descriptions

call-trace

Synopsis	Enter the **call-trace** context
Context	**configure** call-trace
Tree	call-trace
Description	Commands in this context configure the attributes of the call trace debugging functionality.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

buffering *boolean*

Synopsis	Buffer messages until the trace key is known
Context	**configure** call-trace buffering *boolean*
Tree	buffering
Description	When configured to **true**, the router buffers initial messages for sessions where the trace key is not yet known, for example, a username for a PPP session. When the trace key, for example, a username, indicates a match for a traced session, the router sends the buffered messages immediately. If the key does not match a trace, the router discards the buffered messages. When configured to **false**, the router does not buffer any messages and therefore initial messages may not be traced.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

location [location-type] *keyword*

Synopsis	Enter the **location** list instance
Context	**configure** call-trace location *keyword*
Tree	location
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**location-type**] *keyword*

Synopsis	Compact flash card to be used
Context	**configure** call-trace location *keyword*
Tree	location
Options	cf1, cf2
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of compact flash for log storage
Context	**configure** call-trace location *keyword* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

size-limit *(number | keyword)*

Synopsis	Maximum cumulative size of call trace files on the card
Context	**configure** call-trace location *keyword* size-limit *(number | keyword)*
Tree	size-limit
Range	1 to 65536
Options	unlimited
Default	1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-files-number *number*

Synopsis	Maximum number of files call trace can create
Context	**configure** call-trace max-files-number *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	max-files-number
Range	1 to 1024
Default	200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

primary-cf *keyword*

Synopsis	Primary CF card as local storage location
Context	**configure** call-trace primary-cf *keyword*
Tree	primary-cf
Options	cf1, cf2
Default	cf1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trace-profile [name] *string*

Synopsis	Enter the **trace-profile** list instance
Context	**configure** call-trace trace-profile *string*
Tree	trace-profile
Description	Commands in this context configure the attributes of the call-trace profile list.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Call trace profile name
Context	**configure** call-trace trace-profile *string*
Tree	trace-profile
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

applications

Synopsis	Enter the **applications** context
Context	**configure** call-trace trace-profile *string* applications
Tree	applications
Description	Commands in this context configure call trace attributes for the specified application.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connectivity-management *boolean*

Synopsis	Trace messages used for connectivity protocols
Context	**configure** call-trace trace-profile *string* applications connectivity-management *boolean*
Tree	connectivity-management
Description	When configured to **true**, this command enables call trace for connectivity protocols, such as DHCP, ARP, and DHCPv6, and events related to connectivity management; for example, migrant or data-triggered host creation, idling, or session timeout. When configured to **false**, connectivity protocols are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gx *boolean*

Synopsis	Trace Diameter messages used for the Gx application
Context	**configure** call-trace trace-profile *string* applications gx *boolean*
Tree	gx
Description	When configured to **true**, this command enables call trace for Diameter messages used for the Gx application. When configured to **false**, Diameter Gx messages are not traced.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gy *boolean*

Synopsis	Trace Diameter messages used for the Gy application

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** call-trace trace-profile *string* applications gy *boolean*
Tree	gy
Description	When configured to **true**, this command enables call trace for Diameter messages used for the Gy application. When configured to **false**, Diameter Gy messages are not traced.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ludb *boolean*

Synopsis	Trace local user database lookups
Context	**configure** call-trace trace-profile *string* applications ludb *boolean*
Tree	ludb
Description	When configured to **true**, this command enables call trace for Local User Data Base (LUDB) lookups. When configured to **false**, LUDB lookups are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msap *boolean*

Synopsis	Trace MSAP creation events
Context	**configure** call-trace trace-profile *string* applications msap *boolean*
Tree	msap
Description	When configured to **true**, this command enables tracing of Managed Service Access Point (MSAP) creation events. When configured to **false**, MSAP create events are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nasreq *boolean*

Synopsis	Trace Diameter messages used for NASREQ application
Context	**configure** call-trace trace-profile *string* applications nasreq *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	nasreq
Description	When configured to **true**, this command enables call trace for Diameter messages used for the Diameter Network Access Server Requirements (NASREQ) application. When configured to **false**, Diameter NASREQ messages are not traced.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-event *boolean*

Synopsis	Allow tracing for PPP state machine related events
Context	**configure** call-trace trace-profile *string* applications ppp-event *boolean*
Tree	ppp-event
Description	When configured to **true**, events related to the PPP state machine are traced. This configuration may result in a large amount of event messages. When configured to **false**, tracing is not activated for PPP state machine events.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python *boolean*

Synopsis	Trace Python script execution
Context	**configure** call-trace trace-profile *string* applications python *boolean*
Tree	python
Description	When configured to **true**, this command enables tracing of Python script execution. When configured to **false**, Python script execution is not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-acct *boolean*

Synopsis	Trace messages and events for RADIUS-based accounting
Context	**configure** call-trace trace-profile *string* applications radius-acct *boolean*
Tree	radius-acct

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command enables tracing of messages and events related to RADIUS-based accounting. When configured to **false**, RADIUS-based accounting messages and events are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-auth *boolean*

Synopsis	Trace RADIUS authentication messages and events
Context	**configure** call-trace trace-profile *string* applications radius-auth *boolean*
Tree	radius-auth
Description	When configured to **true**, this command enables tracing of messages and events related to RADIUS authentication, including CoA and Disconnect. When configured to **false**, messages and events related to RADIUS authentication are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** call-trace trace-profile *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

events *keyword*

Synopsis	Events to include in the captured trace
Context	**configure** call-trace trace-profile *string* events *keyword*
Tree	events
Options	public-only, all

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

output

Synopsis	Enter the **output** context
Context	**configure** call-trace trace-profile *string* output
Tree	output
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

debug

Synopsis	Enable output to the debug log
Context	**configure** call-trace trace-profile *string* output debug
Tree	debug
Notes	The following elements are part of a choice: **debug**, **live**, or **local-storage**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

live

Synopsis	Enable the **live** context
Context	**configure** call-trace trace-profile *string* output live
Tree	live
Notes	The following elements are part of a choice: **debug**, **live**, or **local-storage**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fqdn *string*

Synopsis	Fully qualified domain name of live output destination
Context	**configure** call-trace trace-profile *string* output live fqdn *string*
Tree	fqdn
String Length	1 to 255

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **fqdn** or **ip-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the live output destination server
Context	**configure** call-trace trace-profile *string* output live ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ip-address
Notes	The following elements are part of a mandatory choice: **fqdn** or **ip-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

port *number*

Synopsis	TCP IP port
Context	**configure** call-trace trace-profile *string* output live port *number*
Tree	port
Range	1 to 65536
Default	29770
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router instance or VPRN service name
Context	**configure** call-trace trace-profile *string* output live router-instance *string*
Tree	router-instance
Default	Base
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

local-storage

Synopsis	Destination for output
Context	**configure** call-trace trace-profile *string* output local-storage
Tree	local-storage
Notes	The following elements are part of a choice: **debug**, **live**, or **local-storage**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

size-limit *number*

Synopsis	Maximum data output for a single call trace operation
Context	**configure** call-trace trace-profile *string* size-limit *number*
Tree	size-limit
Range	1 to 1000
Units	megabytes
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

time-limit *number*

Synopsis	Maximum time for a single call trace job
Context	**configure** call-trace trace-profile *string* time-limit *number*
Tree	time-limit
Range	1 to 604800
Units	seconds
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

3.9 card commands

```
configure
   –  card number
      –  admin-state keyword
      –  apply-groups reference
      –  apply-groups-exclude reference
      –  card-type keyword
      –  fail-on-error boolean
      –  filter-profile keyword
      –  fp number
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  egress
            –  hs-fixed-high-thresh-delta number
            –  hs-pool-policy reference
            –  wred-queue-control
               –  admin-state keyword
               –  buffer-allocation decimal-number
               –  reserved-cbs decimal-number
               –  slope-policy reference
         –  fp-resource-policy reference
         –  hi-bw-mcast-src
            –  alarm boolean
            –  default-paths-only boolean
            –  group number
         –  ingress
            –  access
               –  queue-group reference instance-id number
                  –  accounting-policy reference
                  –  apply-groups reference
                  –  apply-groups-exclude reference
                  –  collect-stats boolean
                  –  description string
                  –  policer-control-policy
                     –  overrides
                        –  apply-groups reference
                        –  apply-groups-exclude reference
                        –  max-rate (number | keyword)
                        –  priority-mbs-thresholds
                           –  min-threshold-separation (number | keyword)
                           –  priority number
                              –  apply-groups reference
                              –  apply-groups-exclude reference
                              –  mbs-contribution (number | keyword)
                     –  policy-name reference
                  –  policer-overrides
                     –  policer reference
                        –  apply-groups reference
                        –  apply-groups-exclude reference
                        –  cbs (number | keyword)
                        –  mbs (number | keyword)
                        –  packet-byte-offset number
                        –  rate
                           –  cir (number | keyword)
                           –  pir (number | keyword)
                        –  stat-mode keyword
            –  dist-cpu-protection
               –  dynamic-enforcement-policer-pool number
            –  mcast-path-management
               –  admin-state keyword

3.9.1 card command descriptions

card [slot-number] *number*

Synopsis	Enter the **card** list instance
Context	**configure** card *number*
Tree	card
Description	Commands in this context cover attributes for specific chassis slots for physical cards. Cards include IOM, IMM, and XCM. In SR OS, cards cover IOM, IMM, and XCM.
Introduced	16.0.R1
Platforms	All

[**slot-number**] *number*

Synopsis	Slot number within the chassis
Context	**configure** card *number*
Tree	card
Description	This command configures a unique value that identifies the card slot within a chassis in the system.
Range	1 to 20
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the card
Context	**configure** card *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

card-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Card type
Context	**configure** card *number* card-type *keyword*
Tree	card-type
Description	This command adds an IOM, IMM, XCM to the device configuration for the slot. The card type can be pre-provisioned, meaning that the card does not need to be installed in the chassis. A card must be provisioned before any contained object can be configured: MDA, XIOM, XMA, MDA-s, connector, or port. A card can only be provisioned in a slot if the card type is allowed in the slot. An error message is generated if an attempt is made to provision a card type that is not allowed. If a card is inserted that does not match the configured card type for the slot, a log event and facility alarm is raised. The alarm is cleared when the correct card type is installed or the configuration is modified. A log event and facility alarm are raised if an administratively enabled card is removed from the chassis. The alarm is cleared when the correct card type is installed or the configuration is modified. A log event is issued when a card is removed that is administratively disabled. Because IMMs do not have the capability to install separate MDAs, the configuration of the MDAs is automatic. This configuration only includes the default options such as default buffer policies. Commands to manage the MDA remain in the MDA configuration context. Some card hardware can support two different firmware loads. One load includes the base Ethernet functionality, including 10G WAN mode, but does not include 1588 port-based timestamping. The second load includes the base Ethernet functionality and 1588 port-based timestamping, but does not include 10G WAN mode. These are identified as two card types that are the same, except for a “-ptp” suffix to indicate the second loadset. A hard reset of the card occurs when switching between the two provisioned types. An appropriate alarm is raised if a partial or complete card failure is detected. The alarm is cleared when the error condition ceases.
Options	xcm-x20, imm40-10gb-sfp, imm4-100gb-cxp, iom4-e, iom-a, imm-1pac-fp3, imm-2pac-fp3, iom4-e-hs, imm4-100gb-cfp4, iom-e, iom-v, iom4-e-b, iom-sar-hm, xcm2-x20, iom-1, xcm-14s, imm40-10gb-sfp-ptp, iom-ixr-r6, imm36-100g-qsfp28, imm48-sfp+2-qsfp28, iom5-e, xcm-7s, imm48-sfp++6-qsfp28, xcm-1s, xcm-2s, imm24-sfp++8-sfp28+2-qsfp28, iom-sar-hmc, imm14-10g-sfp++4-1g-tx, iom-ixr-r4, imm6-qsfpdd+48-sfp56, imm32-qsfp28+4-qsfpdd, i48-800g-qsfpdd-1x, imm36-qsfpdd, imm4-1g-tx+20-1g-sfp+6-10g-sfp+, iom-ixr-r6d, xcm2-7s, i24-800g-qsfpdd-1, imm36-800g-qsfpdd, xcm2-14s, i48-400g-qsfpdd-1, i80-200g-sfpdd+12-400g-qsfpdd-1, i40-200g-sfpdd+6-800g-qsfpdd-1, i80-200g-sfpdd+12-800g-qsfpdd-1x,

Introduced 16.0.R1

Platforms All

fail-on-error *boolean*

Synopsis Set operational state of the card to Failed upon error

Context **configure** card *number* fail-on-error *boolean*

Tree fail-on-error

Description When configured to **true**, this command controls the behavior of the card when any one of a specific set of card level errors is encountered in the system.

When this command is set to **true**, and any one (or more) of the specific errors is detected, the operational state of the card is set to failed. This failed state persists until the **clear card** command is issued (reset) or the card is removed and reinserted (reseated). If the condition persists after reseating the card, contact Nokia support to investigate more.

Nokia only recommends configuring this command to **true** when the network is designed to be able to route traffic around a failed card (redundant cards, nodes, or other paths exist).

The list of specific errors includes the following:

CHASSIS event ID# 2063 - tmnxEqCardPChipMemoryEvent

CHASSIS event ID# 2076 - tmnxEqCardPChipCamEvent

CHASSIS event ID# 2059 - tmnxEqCardPChipError (for ingress Ethernet only)

CHASSIS event ID# 2098 - tmnxEqCardQChipBufMemoryEvent

CHASSIS event ID# 2099 - tmnxEqCardQChipStatsMemoryEvent

CHASSIS event ID# 2101 - tmnxEqCardQChipIntMemoryEvent

CHASSIS event ID# 2103 - tmnxEqCardChipIfCellEvent

On platforms with integrated CPM and IOM, IMM, or XCM, the node is rebooted if this command is set to **true** and one of the card level errors is encountered. The tmnx EqCardPChipError is only considered as a trigger for this command for ingress FCS errors (not egress FCS errors).

Note: On the detection of the event or error in the system, the reporting of the event (logs) and the fail-on-error behavior of the card are independent. Log event control configuration determines whether the events are reported in logs (or SNMP traps, and so on) and the fail-on-error configuration determines the behavior of the card. This implies that the card can be configured to fail-on-error even if the events are suppressed (some may be suppressed in the system by default). To facilitate post-failure analysis, Nokia recommends reporting the specific events or errors and that **configure log log-events** be enabled when this command is set to **true**.

Default false

Introduced	16.0.R1
Platforms	All

filter-profile *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Filter profile for the card
Context	**configure** card *number* filter-profile *keyword*
Tree	filter-profile
Description	This command controls the resources allocated to ingress and egress IPv4 and IPv6 filters on a per-line card basis on the SR-a platform.
Options	none, profile-a
Default	none
Introduced	19.10.R1
Platforms	7750 SR-a

fp [fp-number] *number*

Synopsis	Enter the **fp** list instance
Context	**configure** card *number* fp *number*
Tree	fp
Description	Commands in this context configure forwarding plane (FP) specific options on the card.
Introduced	16.0.R1
Platforms	All

[**fp-number**] *number*

Synopsis	Forwarding plane within the card
Context	**configure** card *number* fp *number*
Tree	fp
Range	1 to 12
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms	All

egress

Synopsis	Enter the **egress** context
Context	**configure** card *number* fp *number* egress
Tree	egress
Introduced	16.0.R1
Platforms	All

hs-fixed-high-thresh-delta *number*

Synopsis	High threshold delta on the forwarding plane
Context	**configure** card *number* fp *number* egress hs-fixed-high-thresh-delta *number*
Tree	hs-fixed-high-thresh-delta
Description	This command specifies the egress aggregate shaper high burst limit threshold delta for this HSQ IOM FP. An aggregate rate can be applied to each egress HSQ queue group, HS secondary shaper, and (for subscribers configured with HS SLA expanded mode) primary shaper that manages the maximum burst limit over a specified shaping rate. Each aggregate shaper supports two thresholds that are used in conjunction with the low burst class setting. The system uses the lowest value attainable for each low threshold aggregate burst limit without causing shaper under run conditions. The high burst limit threshold is determined by adding the configured value of this command to the aggregate low burst limit threshold value. An operator must set this configured value to at least two times the maximum frame size to prevent lower threshold class forwarding from also affecting the higher threshold classes when forwarding larger packet sizes. An insufficiently high threshold delta defeats the intended purpose of mapping classes to the higher threshold.
Range	0 to 65536
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-pool-policy *reference*

Synopsis	HS pool policy
Context	**configure** card *number* fp *number* egress hs-pool-policy *reference*
Tree	hs-pool-policy

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the HS pool policy for the FP. An HS pool policy contains the required parameters to create and size root and mid-tier buffer pools on an HSQ IOM, and applies a slope policy to each. A single HS pool policy is supported per port FP. This command is only applicable to the HSQ IOM (iom4-e-hs) and fails if configured on other card types.
Reference	**configure** qos hs-pool-policy *string*
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

wred-queue-control

Synopsis	Enter the **wred-queue-control** context
Context	**configure** card *number* fp *number* egress wred-queue-control
Tree	wred-queue-control
Description	Commands in this context configure the aggregate Weighted Random Early Detection (WRED) queue options for all WRED queues on an egress forwarding plane.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the WRED queue control function
Context	**configure** card *number* fp *number* egress wred-queue-control admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

buffer-allocation *decimal-number*

Synopsis	Buffer allocation for WRED queue buffer pools
Context	**configure** card *number* fp *number* egress wred-queue-control buffer-allocation *decimal-number*
Tree	buffer-allocation

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command defines the percentage of buffers to set aside for WRED queue buffer pools.
Range	0.01 to 99.99
Units	percent
Default	25.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reserved-cbs *decimal-number*

Synopsis	Buffers for queues operating within CBS thresholds
Context	**configure** card *number* fp *number* egress wred-queue-control reserved-cbs *decimal-number*
Tree	reserved-cbs
Description	This command specifies the percentage of buffers within the WRED mega-pool to set aside for WRED queues operating within the configured CBS thresholds. The forwarding plane protects against WRED queue buffer starvation by setting aside a portion of the buffers within the WRED mega-pool. This threshold defines when a WRED queue requests buffers from the reserved portion of the WRED mega-pool and when it starts requesting buffers from the shared portion of the mega-pool. With proper oversubscription provisioning, a seldom active queue is not denied a buffer from the mega-pool when the shared portion of the mega-pool is congested.
Range	0.01 to 99.99
Units	percent
Default	25.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

slope-policy *reference*

Synopsis	Slope policy for the forwarding plane
Context	**configure** card *number* fp *number* egress wred-queue-control slope-policy *reference*
Tree	slope-policy
Reference	**configure** qos slope-policy *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fp-resource-policy *reference*

WARNING:
Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Resource policy to manage resources on the FP
Context	**configure** card *number* fp *number* fp-resource-policy *reference*
Tree	fp-resource-policy
Description	This command configures an FP resource policy used to manage resources on a forwarding plane that is FP4-based and later. The system creates a default policy that applies to all FP4 and later FPs. If an FP resource policy is removed from an FP, the system automatically applies the default policy to that FP. The system prevents the modification or deletion of the default policy, and the deletion of any user-created policy that is applied to an FP.
Reference	**configure** qos fp-resource-policy *string*
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

hi-bw-mcast-src

Synopsis	Enable the **hi-bw-mcast-src** context
Context	**configure** card *number* fp *number* hi-bw-mcast-src
Tree	hi-bw-mcast-src
Description	Commands in this context configure the attributes to designate the FP as a high-bandwidth IP multicast source, expecting the ingress traffic to include high-bandwidth IP multicast traffic. When configured, the system attempts to allocate a dedicated multicast switch fabric plane (MSFP) to the forwarding plane. When a group is specified, all FPs in the group share the same MSFP.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS

alarm *boolean*

Synopsis	Raise an alarm when multiple traffic taps share a plane
Context	**configure** card *number* fp *number* hi-bw-mcast-src alarm *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	alarm
Description	When configured to **true**, the router generates an event if the MDA must share an MSFP with another MDA in a different group. MDAs within the same group that share an MSFP do not generate an event. Additionally, if a failure occurs during normal operation or resources are removed, the system generates an event if it cannot maintain separation of MSFPs for the MDAs. When configured to **false**, the router does not generate events.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS

default-paths-only *boolean*

Synopsis	Allocate the default paths to dedicated MSFPs
Context	**configure** card *number* fp *number* hi-bw-mcast-src default-paths-only *boolean*
Tree	default-paths-only
Description	When configured to **true**, the system only attempts to allocate the two default paths (one high priority and one low priority) to dedicated MSFPs. When configured to **false**, the default path allocation is disabled.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS

group *number*

Synopsis	Logical MSFP group for the MDA
Context	**configure** card *number* fp *number* hi-bw-mcast-src group *number*
Tree	group
Description	This command specifies the logical MSFP group for the MDA. If a group is specified, all FPs in the group share the same MSFP.
Range	0 to 32
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS

queue-group [queue-group-name] *reference* instance-id *number*

Synopsis	Enter the **queue-group** list instance
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number*
Tree	queue-group
Description	Commands in this context create a named queue group template on the ingress forwarding plane of an IOM or IMM.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[**queue-group-name**] *reference*

Synopsis	Queue group name
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number*
Tree	queue-group
Reference	**configure** qos queue-group-templates ingress queue-group *string*
Notes	This element is part of a list key.
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

instance-id *number*

Synopsis	Instance ID
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number*
Tree	queue-group
Range	1 to 65535
MD-CLI Default	1
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

accounting-policy *reference*

Synopsis	Accounting policy for the FP ingress queue group
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* accounting-policy *reference*
Tree	accounting-policy
Description	This command configures an accounting policy for the FP ingress queue group. You can only apply accounting policies associated with service billing to SAPs. Only associate the accounting policy with one interface at a time.
Reference	**configure** log accounting-policy *number*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

collect-stats *boolean*

Synopsis	Collect statistics on FP ingress queue group
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* collect-stats *boolean*
Tree	collect-stats
Description	When configured to **true**, the system collects accounting and statistical data for the queue group on the FP.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the system still accumulates the statistics; however, the CPU does not obtain the results and write them to the billing file.

If this command is set to **true** (after it had previously been set to **false**), the counters written to the billing file include the traffic collected when the command was set to **false**.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

description *string*

Synopsis	Text description
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policer-control-policy

Synopsis	Enter the **policer-control-policy** context

max-rate *(number | keyword)*

Synopsis	Maximum rate override
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-control-policy overrides max-rate *(number | keyword)*
Tree	max-rate
Description	This command defines the PIR leaky bucket decrement rate of the parent policer. Each time you apply the policer control policy to a SAP or subscriber instance a parent policer is created. Packets not discarded by the child policer associated with the SAP or subscriber instance are evaluated against the leaky bucket of the parent policer. For each packet, the system first decrements the bucket by the correct amount based on the decrement rate to derive the current bucket depth. The system compares the current depth to one of two discard thresholds associated with the packet. The first discard threshold is applied if the Fair Information Rate (FIR) leaky bucket of the child policer is in the confirming state. The second discard threshold is applied if the FIR leaky bucket of the child policer is in the exceed state. Only one of the two thresholds is applied per packet. If the current depth of the parent policer PIR bucket is less than the threshold value, the parent PIR bucket is in the conform state for that particular packet. If the depth is equal to or greater than the applied threshold, the bucket is in the violate state for the packet. If the result is conform, the bucket depth is increased by the size of the packet (plus or minus the per-packet offset setting in the child policer) and the parent policer does not discard the packet. If the result is violate, the bucket depth is not increased and the parent policer discards the packet. When the parent policer discards a packet, the bucket depth increases (PIR, CIR, and FIR) in the parent policer are canceled. This prevents packets that the parent policer discards from consuming the PIR, CIR, and FIR bandwidth of the child policers.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

priority-mbs-thresholds

Synopsis	Enter the **priority-mbs-thresholds** context
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-control-policy overrides priority-mbs-thresholds
Tree	priority-mbs-thresholds
Description	Commands in this context configure the derivative for the shared portion and fair portion for each priority level.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The system uses the shared portion and fair portion values to calculate the discard-unfair and discard-all MBS thresholds that enforce priority-sensitive rate-based discards within the root arbiter parent policer.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

min-threshold-separation *(number | keyword)*

Synopsis Minimum separation between any two active thresholds

Context **configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-control-policy overrides priority-mbs-thresholds min-threshold-separation *(number | keyword)*

Tree min-threshold-separation

Description This command configures the minimum separation between any two active thresholds in the parent policer.

Range 0 to 16777216

Description	Commands in this context configure specific overrides to one or more policers created on the SAP through SAP ingress QoS policies.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policer [policer-id] *reference*

Synopsis	Enter the **policer** list instance
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference*
Tree	policer
Description	Commands in this context create, modify, or delete a policer. Policers are created and used in a similar manner to queues. Unlike queues that have dedicated counters, policers allow various stat-mode settings that define the counters to be associated with the policer. Packet byte offset provides a policer with the ability to modify the size of each packet based on a defined number of bytes. All policers must be created within the QoS policies. After a policer is created, it cannot be deleted from the QoS policy unless all forwarding classes mapped to the policer are first moved to other policers or queues. The system allows a policer to be created on a SAP QoS policy regardless of the ability to support policers on objects where the policy is currently applied. The system only scans the current objects for policer support and sufficient resources to create the policer when a forwarding class is first mapped to the policer ID. If the policer cannot be created because one or more instances of the policy do not support policing or have insufficient resources to create the policer, the forwarding class mapping fails.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[**policer-id**] *reference*

cbs *(number | keyword)*

Synopsis	CBS tolerance allowed by the policer
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* cbs *(number | keyword)*
Tree	cbs
Description	This command configures the CIR leaky bucket exceed threshold of the policer. If the forwarding rate of the policer is equal to or less than the defined CIR, the CIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the forwarding rate increases beyond the profiling rate, the threshold caps the amount of data allowed to be in-profile above the rate.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs *(number | keyword)*

Synopsis	Maximum burst tolerance allowed by the policer
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* mbs *(number | keyword)*
Tree	mbs
Description	This command configures the PIR leaky bucket violate threshold of the policer. Ingress, trusted in-profile packets and untrusted high priority packets use the high priority violate threshold and trusted out-of-profile. Untrusted low priority packets use the low priority violate threshold. If the offered rate of the policer is equal to or less than the defined rate, the PIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the offered rate increases beyond the metering rate, the threshold caps the amount of data allowed above the rate. The low priority violate threshold provides a smaller burst size for the lower priority traffic associated with the policer. Because all lower priority traffic is discarded at the lower burst tolerance size, the remaining burst tolerance is available for higher priority traffic.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

packet-byte-offset *number*

Synopsis Packet size adjustment

Context **configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* packet-byte-offset *number*

Tree packet-byte-offset

Description This command modifies the size of each packet handled by the policer by adding or subtracting a number of bytes. The actual packet size is not modified; only the size used to determine the bucket depth impact is changed.

Use this command to add downstream frame encapsulation or remove portions of packet headers.

When child policers add to or subtract from the packet size, the minimum threshold separation value of the parent policer must be modified by the same amount.

Range -32 to 31

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

rate

Synopsis Enter the **rate** context

Context **configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* rate

Tree rate

Description Commands in this context configure the metering and optional profiling rates of the policer.

The metering rate is used by the system to configure the PIR leaky bucket decrement rate and the profiling rate configures the CIR leaky bucket decrement rate. The decrement function empties the bucket; packets applied to the bucket attempt to fill it based on its packet size. If the bucket fills faster than the rate that it empties, the bucket depth eventually reaches its exceeded (CIR) or violate (PIR) threshold.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir *(number | keyword)*

Synopsis CIR for the policer

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* rate cir *(number | keyword)*
Tree	cir
Description	This command overrides the default CIR rate of the policer. When the policer is first created, the profiling rate defaults to 0 kb/s. When **max** is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the CIR used is equivalent to maximum.
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir *(number | keyword)*

Synopsis	PIR for the policer
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* rate pir *(number | keyword)*
Tree	pir
Description	This command configures the metering rate of the policer for the PIR leaky bucket. When the policer is first created, the metering rate defaults to max. When **max** is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the PIR used is equivalent to maximum.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

stat-mode *keyword*

Synopsis	Stat mode for the policer

Description	Commands in this context configure the distributed CPU protection forwarding plane settings.
Introduced	21.2.R1
Platforms	All

dynamic-enforcement-policer-pool *number*

Synopsis	Number of policers reserved as enforcement policers use
Context	**configure** card *number* fp *number* ingress dist-cpu-protection dynamic-enforcement-policer-pool *number*
Tree	dynamic-enforcement-policer-pool
Description	This command reserves a set of policers for use as dynamic enforcement policers for the Distributed CPU Protection (DCP) feature. Policers are allocated from this pool and instantiated as per-object per-protocol dynamic enforcement policers after a local monitor is triggered for an object, such as a SAP or network interface. A change to this configured value automatically clears the high water mark, timestamp, and failed allocation count. If the command is configured to a value below the currently used or allocated number, all dynamic policers are returned to the free pool (and traffic returns to the local monitors).
Range	1000 to 32000
Introduced	21.2.R1
Platforms	All

max-rate *(number | keyword)*

Synopsis Maximum rate override

Context **configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-control-policy overrides max-rate *(number | keyword)*

Tree max-rate

Description This command defines the PIR leaky bucket decrement rate of the parent policer. Each time you apply the policer control policy to a SAP or subscriber instance a parent policer is created. Packets not discarded by the child policer associated with the SAP or subscriber instance are evaluated against the leaky bucket of the parent policer.

For each packet, the system first decrements the bucket by the correct amount based on the decrement rate to derive the current bucket depth. The system compares the current depth to one of two discard thresholds associated with the packet. The first discard threshold is applied if the Fair Information Rate (FIR) leaky bucket of the child

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

policer is in the confirming state. The second discard threshold is applied if the FIR leaky bucket of the child policer is in the exceed state.

Only one of the two thresholds is applied per packet. If the current depth of the parent policer PIR bucket is less than the threshold value, the parent PIR bucket is in the conform state for that particular packet. If the depth is equal to or greater than the applied threshold, the bucket is in the violate state for the packet.

If the result is conform, the bucket depth is increased by the size of the packet (plus or minus the per-packet offset setting in the child policer) and the parent policer does not discard the packet. If the result is violate, the bucket depth is not increased and the parent policer discards the packet. When the parent policer discards a packet, the bucket depth increases (PIR, CIR, and FIR) in the parent policer are canceled. This prevents packets that the parent policer discards from consuming the PIR, CIR, and FIR bandwidth of the child policers.

Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

priority-mbs-thresholds

Synopsis	Enter the **priority-mbs-thresholds** context
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-control-policy overrides priority-mbs-thresholds
Tree	priority-mbs-thresholds
Description	Commands in this context configure settings to derive the shared portion and fair portion for each priority level. The system uses the shared portion and fair portion values to calculate the discard-unfair and discard-all MBS thresholds that enforce priority-sensitive rate-based discards within the root arbiter parent policer.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

min-threshold-separation *(number | keyword)*

Synopsis	Minimum separation between any two active thresholds
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-control-policy overrides priority-mbs-thresholds min-threshold-separation *(number | keyword)*
Tree	min-threshold-separation

cbs *(number | keyword)*

Synopsis	CBS tolerance allowed by the policer
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* cbs *(number | keyword)*
Tree	cbs
Description	This command configures the CIR leaky bucket exceed threshold of the policer. If the forwarding rate of the policer is equal to or less than the defined CIR, the CIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the forwarding rate increases beyond the profiling rate, the threshold caps the amount of data allowed to be in-profile above the rate.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs *(number | keyword)*

Synopsis	Maximum burst tolerance allowed by the policer

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* mbs *(number | keyword)*
Tree	mbs
Description	This command configures the PIR leaky bucket violate threshold of the policer. Ingress, trusted in-profile packets and untrusted high priority packets use the high priority violate threshold and trusted out-of-profile. Untrusted low priority packets use the low priority violate threshold. If the offered rate of the policer is equal to or less than the defined rate, the PIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the offered rate increases beyond the metering rate, the threshold caps the amount of data allowed above the rate. The low priority violate threshold provides a smaller burst size for the lower priority traffic associated with the policer. Because all lower priority traffic is discarded at the lower burst tolerance size, the remaining burst tolerance is available for higher priority traffic.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

packet-byte-offset *number*

Synopsis	Packet size adjustment
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* packet-byte-offset *number*
Tree	packet-byte-offset
Description	This command modifies the size of each packet handled by the policer by adding or subtracting a number of bytes. The actual packet size is not modified; only the size used to determine the bucket depth impact is changed. Use this command to add downstream frame encapsulation or remove portions of packet headers. When child policers add to or subtract from the packet size, the minimum threshold separation value of the parent policer must be modified by the same amount.
Range	-32 to 31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

© 2024 Nokia.

rate

Synopsis	Enter the **rate** context
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* rate
Tree	rate
Description	Commands in this context configure the metering and optional profiling rates of the policer. The metering rate is used by the system to configure the PIR leaky bucket decrement rate and the profiling rate configures the CIR leaky bucket decrement rate. The decrement function empties the bucket; packets applied to the bucket attempt to fill it based on its packet size. If the bucket fills faster than the rate that it empties, the bucket depth eventually reaches its exceeded (CIR) or violate (PIR) threshold.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir *(number | keyword)*

Synopsis	CIR for the policer
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* rate cir *(number | keyword)*
Tree	cir
Description	This command overrides the default CIR rate of the policer. When the policer is first created, the profiling rate defaults to 0 kb/s. When **max** is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the CIR used is equivalent to maximum.
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir *(number | keyword)*

Synopsis	PIR for the policer
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* rate pir *(number | keyword)*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	pir
Description	This command configures the metering rate of the policer for the PIR leaky bucket. When the policer is first created, the metering rate defaults to max. When **max** is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the PIR used is equivalent to maximum.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

stat-mode *keyword*

Synopsis	Stat mode for the policer
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* stat-mode *keyword*
Tree	stat-mode
Description	This command specifies the forwarding plane counters that allow offered, output, and discard accounting to occur for the policer.
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

queue-policy *reference*

Synopsis	Network queue policy

policy-accounting

Synopsis	Enter the **policy-accounting** context
Context	**configure** card *number* fp *number* ingress policy-accounting
Tree	policy-accounting
Description	Commands in this context configure policy accounting. Use policy accounting to collect statistics about the amount of traffic matching particular routes or to police traffic associated with certain routes as destinations of the traffic.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

classes *number*

Synopsis	Number of accounting classes for the forwarding plane
Context	**configure** card *number* fp *number* ingress policy-accounting classes *number*
Tree	classes
Description	This command specifies the maximum number of source and destination classes that can be instantiated for accounting purposes on the interfaces of a specific card or FP. When unconfigured, resources are not reserved for source or destination classes.
Range	1000 to 128000
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

policers *number*

Synopsis	Number of policer resources for policy accounting
Context	**configure** card *number* fp *number* ingress policy-accounting policers *number*
Tree	policers
Range	1 to 64000
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

ingress-buffer-allocation *decimal-number*

Synopsis	Ingress buffer pool allocation for the forwarding plane
Context	**configure** card *number* fp *number* ingress-buffer-allocation *decimal-number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ingress-buffer-allocation
Description	This command configures an ingress buffer allocation for the FP. Ingress buffer allocation applies to user-accessible buffers (total buffers less those reserved for system use). The ingress buffer allocation determines how much of the user-accessible buffers are available for ingress purposes. The remaining buffers are available for egress purposes.
Range	20.00 to 80.00
Units	percent
Default	50.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

init-extract-prio-mode *keyword*

Synopsis	Initial drop priority mode of extracted traffic
Context	**configure** card *number* fp *number* init-extract-prio-mode *keyword*
Tree	init-extract-prio-mode
Description	This command specifies the scheme to select the initial drop priority of extracted control plane traffic. The initial drop priority of extracted packets can be either low or high priority. The drop priority can be altered subsequently by mechanisms such as CPU protection. High priority traffic receives preferential treatment in control plane congestion situations over low priority traffic.
Options	uniform, l3-classify
Default	uniform
Introduced	16.0.R1
Platforms	All

stable-pool-sizing *boolean*

Synopsis	Enable stable pool sizing for the forwarding plane
Context	**configure** card *number* fp *number* stable-pool-sizing *boolean*
Tree	stable-pool-sizing
Description	When configured to **true**, the router provides a stable buffer pool allocation environment for all default port buffer pools on the forwarding plane. This stable environment is provided at the expense of optimal buffer allocation between the various port buffer pools.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the router disables stable pool sizing on the forwarding plane. Existing buffer pools are resized according to normal pool sizing behavior.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

level *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	License level of the card
Context	**configure** card *number* level *keyword*
Tree	level
Description	This command configures the license level of the card. New generations of cards include variants controlled by hardware and software licensing. For these cards, the license level must be provisioned in addition to the card type. A card cannot become operational unless the provisioned license level matches the license level of the card installed into the slot.The set of license levels varies by card type. The provisioned level controls aspects related to connector provisioning and the consumption of hardware egress user queues and egress policers. Changes to the provisioned license level may be blocked if configuration exists that would not be permitted with the new target license level. If the license level is not specified, the level is set to the highest license level for that card.
Options	unrestricted, he, er, cr, he1200g+, er1200g+, cr1200g+, he400g, er400g, cr400g, he400g+, er400g+, cr400g+, he800g+, er800g+, cr800g+, he4800g+, er4800g+, cr4800g+, he4800g, er4800g, cr4800g, he2400g+, er2400g+, cr2400g+, he2400g, er2400g, cr2400g, he9600g, er9600g, cr9600g, he14400g, er14400g, cr14400g, he14400g+, er14400g+, cr14400g+, he2800g+, er2800g+, cr2800g+, he6000g+, er6000g+, cr6000g+, he18000g+, er18000g+, cr18000g+, he19200g, er19200g, cr19200g
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1se

Tree	egress-xpl
Description	Commands in this context specify settings for the fail-on-error feature.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold *number*

Synopsis	Threshold value for XPL errors
Context	**configure** card *number* mda *number* egress-xpl threshold *number*
Tree	threshold
Description	This command configures the threshold for XPL errors. If the number of XPL errors exceeds the threshold value defined by the **window** *value* command, the MDA is placed in the failed state.
Range	1 to 1000000

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	xpl errors
Default	1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

window *number*

Synopsis	Time interval to measure XPL error frequency
Context	**configure** card *number* mda *number* egress-xpl window *number*
Tree	window
Description	This command configures the time interval used to measure the frequency of XPL errors for the fail-on-error feature. If the number of XPL errors exceeds the threshold value in defined by this command, the MDA is placed in the Failed state.
Range	1 to 1440
Units	minutes
Default	60
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

event [type] *keyword*

Synopsis	Enter the **event** list instance
Context	**configure** card *number* mda *number* event *keyword*
Tree	event
Description	Commands in this context allow the user to control the action taken when a specific hardware error event is raised against the target MDA. If no event action has been created for a specific event type, the management plane of the router ignores the hardware errors related to that event type. The log raised for any event, such as soft-error and memory-error, is tmnxEqHwEvent Detected.
Introduced	19.7.R1
Platforms	All

[**type**] *keyword*

Synopsis	MDA event type being monitored
Context	**configure** card *number* mda *number* event *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	event
Description	This command configures the type of event to be acted upon. • soft-error — Defines the action to take when soft errors are detected on the MDA. • internal-frame-loss — Provides system detected frame loss in the traffic transiting the MDA. • memory-error — Provides the user options to handle MDA memory error events on MDAs. This feature is supported on FP2- and FP3-based Ethernet MDAs and IMMs. • data-link-error — Provides the user options to handle datapath link errors on an MDA.
Options	soft-error, internal-frame-loss, memory-error, datapath-link-error
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	All

action *keyword*

Synopsis	Action when a specific hardware error event is raised
Context	**configure** card *number* mda *number* event *keyword* action *keyword*
Tree	action
Description	This command defines the action taken when a specific hardware error event is detected on the target MDA. When no event action is specified for an event type, the hardware errors related to the event type are ignored by the management plane of the router. Actions include the following: • log-only — Pass the log event to log management. No other action is taken. • reset-mda — Reset the MDA. • fail-mda — Set the operational state of the MDA to Failed. This Failed state persists until the clear mda command is issued (reset) or the MDA is removed and reinserted (re-seated).
Options	none, log-only, reset, fail
Introduced	19.7.R1
Platforms	All

fail-on-error *boolean*

Synopsis	Set operational state to Failed if an error is detected
Context	**configure** card *number* mda *number* fail-on-error *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	fail-on-error
Description	When configured to **true**, the fail-on-error feature is enabled on the MDA. When a defined rate of egress or ingress XPL errors occur on an MDA within a specified time interval, the MDA is placed in the Failed state. This can force an APS switchover or traffic to be rerouted. The purpose of this feature is to avoid situations where traffic is forced to use a physical link that suffers from errors but is still technically operational. The feature uses values configured in the **configure card mda egress-xpl** and **configure card mda ingress-xpl** contexts. See "Fail-on-error overview" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Troubleshooting Guide* for more information.
Default	false
Introduced	16.0.R1
Platforms	All

ingress-xpl

Synopsis	Enter the **ingress-xpl** context
Context	**configure** card *number* mda *number* ingress-xpl
Tree	ingress-xpl
Description	Commands in this context specify settings for ingress XPL error occurrences.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold *number*

Synopsis	Threshold value for XPL errors
Context	**configure** card *number* mda *number* ingress-xpl threshold *number*
Tree	threshold
Description	This command configures the threshold for XPL errors. If the number of XPL errors exceeds the threshold value defined by the **window** *value* command, the MDA is placed in the failed state.
Range	1 to 1000000
Units	xpl errors
Default	1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Synopsis MDA type for the slot

Context **configure** card *number* mda *number* mda-type *keyword*

Tree mda-type

Description This command provisions a specific MDA type to the device configuration for the slot. The MDA can be pre-provisioned and an MDA must be provisioned before connectors or ports can be configured.

A maximum of two MDAs can be provisioned on an IOM or XCM. XMAs are provisioned using MDA commands.

A medium severity alarm is generated if an MDA is inserted that does not match the MDA type configured for the slot. This alarm is cleared when the correct MDA is inserted or the configuration is modified. A high severity alarm is raised when an administratively enabled MDA is removed from the chassis. This alarm is cleared if either the correct MDA type is inserted or the configuration is modified. A low severity alarm is issued if an MDA is removed that is administratively disabled.

An MDA can only be provisioned in a slot if the MDA type is allowed in the MDA slot. An error message is generated when an MDA is provisioned in a slot where it is not allowed.

Some MDA hardware can support two different firmware loads. One load includes the base Ethernet functionality, including 10G WAN mode, but does not include 1588 port-based timestamping. The second load includes the base Ethernet functionality and 1588 port-based timestamping, but does not include 10G WAN mode. These are identified as two MDA types that are the same, except for a "-ptp" suffix to indicate the second loadset. A hard reset of the MDA occurs when switching between the two provisioned types.

An alarm is raised if partial or complete MDA failure is detected. The alarm is cleared when the error condition ceases.

New generations of XMAs include variants controlled through hardware and software licensing. For these XMAs, the license level must be provisioned in addition to the MDA type. An XMA cannot become operational unless the provisioned license level matches the license level of the XMA installed into the slot.

The set of license levels varies by MDA type. The provisioned level controls aspects related to connector provisioning and the consumption of hardware egress queues and egress policers. Changes to the provisioned license level may be blocked if configuration that would not be permitted with the new target license level exists. If the license level is not specified, the level is set to the highest license level for that XMA.

upgrade [upgrade-index] *number*

Synopsis	Enter the **upgrade** list instance
Context	**configure** card *number* mda *number* upgrade *number*
Tree	upgrade
Description	Commands in this context configure the license level upgrade for the MDA. You can apply multiple upgrades to an MDA. The first upgrade must use index 1, then index 2, and so on. When removing upgrades, remove the largest index first, followed by the next largest, and so on. Some upgrades require a hard reset of the MDA to take effect. In general, this is required when the full duplex bandwidth changes as a result of the upgrade.
Introduced	16.0.R4
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

power-save *boolean*

Synopsis	Place card in power-save mode when not in use
Context	**configure** card *number* power-save *boolean*
Tree	power-save
Description	When configured to **true**, this command enables the power-save mode on the card when it is not in use. The power-save mode allows the card to be installed and configured in a platform for future use, while having minimal impact on the overall power consumption. A card placed in the power-save mode is reset, forced into an idle state, and consumes minimal power. In power save mode, the download of a software image to the card is

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

not allowed. The card must be administratively disabled before it is placed in the power-save mode.

Cards in the power save mode do not count in the intelligent power management budget and they also do not pass traffic.

When configured to **false**, this command removes the card from power-save mode.

Default false

Introduced 19.5.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a8, 7750 SR-2e, 7750 SR-3e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

reset-on-recoverable-error *boolean*

Synopsis Reset card for fatal memory parity error on a Q-chip

Context **configure** card *number* reset-on-recoverable-error *boolean*

Tree reset-on-recoverable-error

Description When configured to **true**, the card is reset when a fatal memory parity error is detected on a Q-chip of the card, regardless of the setting of the **fail-on-error** configuration for the card.

When configured to **false**, the recovery action is taken instead of resetting the card.

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e

upgrade [upgrade-index] *number*

Synopsis Enter the **upgrade** list instance

Context **configure** card *number* upgrade *number*

Tree upgrade

Description Commands in this context assign a license level upgrade to the card, XIOM, or XMA. There can be multiple upgrades applied to a card, XIOM, or XMA. The first upgrade must use index 1, and then next index 2, and so on. Also, when removing upgrades, the largest index must be removed first, and then the next largest removed, and so on.

The path indicates the starting level and the new level that will apply due to the upgrade. For example, "cr1200g-cr1600g" can be applied to an XMA that is currently at the cr1200g level and after application of the upgrade, the operational level of the XMA will be cr1600g.

There must be an upgrade license available for the path specified. Available upgrades can be checked using the **show licensing entitlements** command.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Some upgrades require a hard reset of the card or MDA to take effect. In general, this is required when the Full Duplex bandwidth is being changed.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-1se

rate-calculation-minimum

Synopsis	Enter the **rate-calculation-minimum** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** card *number* virtual-scheduler-adjustment interval rate-calculation-minimum
Tree	rate-calculation-minimum
Description	Commands in this context override the default minimum time that must elapse before a policer or queue's offered rate can be recalculated. A minimum time between offered rate calculations is enforced to both prevent inaccurate estimation of the offered rate and excessive input to the virtual scheduler process. To smooth out rapidly fluctuating offered rates, the system averages the measured offered rate with a window of previously measured offered traffic statistics and knowledge of the time between the samples.
Introduced	16.0.R1
Platforms	All

fast-queue *decimal-number*

Synopsis	Minimum rate calculation time for fast queues
Context	**configure** card *number* virtual-scheduler-adjustment interval rate-calculation-minimum fast-queue *decimal-number*

scheduler-run-minimum *decimal-number*

Synopsis	Minimum time of the scheduler run
Context	**configure** card *number* virtual-scheduler-adjustment interval scheduler-run-minimum *decimal-number*
Tree	scheduler-run-minimum
Description	This command overrides the default minimum time that must elapse before a virtual scheduler can redistribute bandwidth based on changes to the offered rates of member policers or queues. A minimum run interval is enforced to manage the number of batched queue changes before reacting to the changed rates. Because the periodic function of determining policer or queue offered rates is performed sequentially, the interval allows the policer and queue rates to be determined before the bandwidth distribution to the policers and queues.
Range	0.01 to 1000.00
Units	percent
Default	100.00
Introduced	16.0.R1
Platforms	All

task-scheduling *decimal-number*

Synopsis	Task scheduling interval
Context	**configure** card *number* virtual-scheduler-adjustment interval task-scheduling *decimal-number*
Tree	task-scheduling
Description	This command overrides the system default time interval for scheduling the hierarchical virtual scheduler task. By default, the system wakes the virtual scheduler task every 50 ms which is equivalent to five 10 ms timer ticks.
Range	0.01 to 1000.00
Units	percent
Default	100.00
Introduced	16.0.R1
Platforms	All

slow-queue-threshold-rate *number*

Synopsis	Slow queue threshold rate

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** card *number* virtual-scheduler-adjustment slow-queue-threshold-rate *number*
Tree	slow-queue-threshold-rate
Description	This command overrides the system default threshold rate used to place policers and queues in the slow queue category. Slow rate policers and queues use a different minimum rate calculation interval time than fast rate queues. The fast rate threshold is derived by multiplying the adjusted slow rate threshold by a factor of 1.5. Configuring a value of zero (0) forces all policers and queues to be treated as fast rate queues.
Range	0 to 1000000
Units	kilobps
Default	1000
Introduced	16.0.R1
Platforms	All

xiom [xiom-slot] *string*

Synopsis	Enter the **xiom** list instance
Context	**configure** card *number* xiom *string*
Tree	xiom
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

[**xiom-slot**] *string*

Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

fail-on-error *boolean*

Synopsis	Set operational state of the card to failed on error
Context	**configure** card *number* xiom *string* fail-on-error *boolean*
Tree	fail-on-error
Description	When configured to **true**, the operational state of the card is set to failed when at least one of a specific set of card-level errors is detected. The failed state persists until the operator reseats the card or resets it using the **clear** command.
Default	false
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

level *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	License level of the XIOM
Context	**configure** card *number* xiom *string* level *keyword*
Tree	level
Description	This command provisions the license level of the XIOM, which controls aspects related to connector provisioning and consumption of hardware egress queues and policers. An XIOM only becomes operational if the provisioned license level matches the license level of the card installed into the slot. The set of license levels varies by XIOM type. Changes to the provisioned license level may be blocked if a configuration exists that is not permitted with the new target license level. If the license level is not specified, the level is set to the highest license level for the XIOM.

mda-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MDA-s type provisioned for the XIOM slot
Context	**configure** card *number* xiom *string* mda *number* mda-type *keyword*
Tree	mda-type
Description	This command provisions the MDA-s type for the XIOM slot. The MDA-s type can be preprovisioned, which means that the MDA-s does not have to be installed in the chassis. You can preprovision the MDA type before you install the MDA in the chassis. An MDA-s can only be provisioned in a slot that is vacant. No other MDA-s can be provisioned (configured) for that particular slot. An error message or log event is generated if the wrong MDA type is provisioned or inserted.
Options	ms6-200gb-cfp2-dco, ms3-200gb-cfp2-dco, ms16-100gb-sfpdd+4-100gb-qsfp28, ms18-100gb-qsfp28, ms4-400gb-qsfpdd+4-100gb-qsfp28, ms24-10/100gb-sfpdd, ms2-400gb-qsfpdd+2-100gb-qsfp28, ms8-100gb-sfpdd+2-100gb-qsfp28, ms16-sdd+4-qsfp28-b, ms8-sdd+2-qsfp28-b, mse24-200g-sfpdd, mse6-800g-cfp2-dco, mse14-800g+4-400g, m36-800g-qsfpdd, mse6-800g-qsfpdd, m36-400g-qsfp112
Introduced	20.2.R1

upgrade [upgrade-index] *number*

Synopsis	Enter the **upgrade** list instance
Context	**configure** card *number* xiom *string* upgrade *number*
Tree	upgrade
Description	Commands in this context assign a license level upgrade to the XIOM. Multiple upgrades can be applied to an XIOM. The first upgrade must use index 1, then index 2, and so on. When removing upgrades, the largest index must be removed first, followed by the next largest, and so on. Some upgrades require a hard reset of the XIOM to take effect. In general, this is required when the Full Duplex bandwidth is changed as a result of the upgrade.
Introduced	20.2.R1
Platforms	7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

xiom-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis XIOM type

Context **configure** card *number* xiom *string* xiom-type *keyword*

Tree xiom-type

Description This command associates the XIOM type with the slot.

The XIOM type can be preprovisioned, which means that the XIOM does not have to be installed in the chassis.

An XIOM must be provisioned before an MDA-s, a connector, or a port can be configured. An XIOM can only be provisioned in a slot that is vacant. After an XIOM is provisioned in the slot, no other XIOM can be provisioned (configured) for the slot.

An XIOM can only be provisioned in a slot if the XIOM type is allowed in the slot. An error message is generated if an attempt is made to provision an XIOM type that is not allowed.

If an XIOM is inserted that does not match the configured XIOM type for the slot, then a log event and a facility alarm are raised. The alarm is cleared when the correct XIOM type is installed or the configuration is modified.

A log event and a facility alarm are raised if an administratively enabled XIOM is removed from the chassis. The alarm is cleared when the correct XIOM type is installed or the configuration is modified. A log event is issued when an XIOM is removed that is administratively disabled.

XIOMs are controlled by hardware and software licensing. In addition to the XIOM type, the license level must be provisioned using the **level** command.

Options iom-s-3.0t, iom-s-1.5t, iom2-se-6.0t, iom2-se-3.0t, x2-s36-800g-qsfpdd-6.0t, x2-s36-400g-qsfp112-3.0t

3.10.1 cflowd command descriptions

cflowd

Synopsis	Enable the **cflowd** context
Context	**configure** cflowd
Tree	cflowd
Introduced	16.0.R1
Platforms	All

active-flow-timeout *number*

Synopsis	Maximum time before an active flow is exported
Context	**configure** cflowd active-flow-timeout *number*
Tree	active-flow-timeout
Description	This command configures the maximum time before an active flow is aged out of the active cache. If an individual flow is active for the configured time, the flow is exported and a new flow is created on the next packet sampled for the flow. This value is set for a flow when the flow is initially created in the active cache table and does not change dynamically.
Range	30 to 36000
Units	seconds
Default	1800
Introduced	20.2.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of cflowd
Context	**configure** cflowd admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

analyze-gre-payload *boolean*

Synopsis	Perform cflowd analysis on the inner IP packet
Context	**configure** cflowd analyze-gre-payload *boolean*
Tree	analyze-gre-payload
Default	false
Introduced	16.0.R1
Platforms	All

analyze-l2tp-traffic *boolean*

Synopsis	Analyze the inner IP header of an L2TP packet
Context	**configure** cflowd analyze-l2tp-traffic *boolean*
Tree	analyze-l2tp-traffic
Description	When configured to **true**, cflowd looks for and analyzes the inner IP header of an L2TPv2 frame. L2TPv2 traffic is identified by either the source or destination UDP port numbering that is set to 1701. When configured to **false**, the analysis is not performed.
Default	false
Introduced	19.10.R1
Platforms	All

analyze-v4overv6-traffic *boolean*

Synopsis	Analyze the inner IPv4 packet within an IPv6 packet
Context	**configure** cflowd analyze-v4overv6-traffic *boolean*
Tree	analyze-v4overv6-traffic
Description	When configured to **true**, cflowd looks for and analyzes the inner IPv4 header of IPv4overIPv6 frames that include MAP-E as well as DSLite and SAM traffic. When configured to **false**, the analysis is not performed.
Default	false
Introduced	19.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

cache-size *number*

Synopsis	Maximum number of active flows in the flow cache table
Context	**configure** cflowd cache-size *number*
Tree	cache-size
Range	1000 to 4000000
Units	flows
Introduced	16.0.R1
Platforms	All

collector [ip-address] *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*

Synopsis	Enter the **collector** list instance
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	collector
Max. Instances	8
Introduced	16.0.R1
Platforms	All

[**ip-address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the remote cflowd collector host
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	collector
Description	This command specifies the IP address of the remote cflowd collector host to receive the exported cflowd data.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

port *number*

Synopsis	UDP port number of the remote cflowd collector host
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	collector

router [router-instance] *string*

Synopsis Add a list entry for **router**

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter router *string*
Tree	router
Description	This command adds an entry to the list of router instances that can send flow data to the associated Cflowd Collector.
Introduced	16.0.R1
Platforms	All

[**router-instance**] *string*

Synopsis	Router instance name
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter router *string*
Tree	router
Description	This command specifies the router instance name. Only "Base" is supported.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

router-instance *string*

Synopsis	Router or service name
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* router-instance *string*
Tree	router-instance
Description	This command specifies the routing instance used to route traffic to the associated collector IP address. The "Base" routing instance is the fallback if no route is found. No fallback mechanism is supported for "Base" and "VPRN".
Default	management
Introduced	16.0.R1
Platforms	All

template-set *keyword*

Synopsis	Templates sent to the collector

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* template-set *keyword*
Tree	template-set
Description	This command specifies the set of templates sent to the collector when using cflowd Version 9 or Version 10.
Options	not-applicable, basic, mpls-ip, l2-ip, mpls-transport, compact, fastpath
Introduced	16.0.R1
Platforms	All

version *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Flow data collector version
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* version *number*
Tree	version
Range	5 | 8 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

enhanced-distribution *boolean*

Synopsis	Include ingress port ID in hashing algorithm for cflowd
Context	**configure** cflowd enhanced-distribution *boolean*
Tree	enhanced-distribution
Default	false
Introduced	16.0.R1
Platforms	7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

export-mode *keyword*

Synopsis	Export mode for flow data
Context	**configure** cflowd export-mode *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	export-mode
Options	automatic, manual
Default	automatic
Introduced	16.0.R1
Platforms	All

inactive-flow-timeout *number*

Synopsis	Time without matching packet before flow is inactive
Context	**configure** cflowd inactive-flow-timeout *number*
Tree	inactive-flow-timeout
Description	This command configures the time interval that must elapse without a packet matching a flow before the flow is considered inactive. This value is set for a flow when the flow is initially created in the active cache table and does not change dynamically.
Range	10 to 600
Units	seconds
Default	15
Introduced	20.2.R1
Platforms	All

inband-collector-export-only *boolean*

Synopsis	Export the traffic to all collectors only via in-band interfaces
Context	**configure** cflowd inband-collector-export-only *boolean*
Tree	inband-collector-export-only
Default	false
Introduced	16.0.R1
Platforms	All

overflow *number*

Synopsis	Percentage of entries to remove from Cflowd cache when the maximum number of entries is exceeded
Context	**configure** cflowd overflow *number*
Tree	overflow

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 50
Units	percent
Default	1
Introduced	16.0.R1
Platforms	All

sample-profile [profile-id] *number*

Synopsis	Enter the **sample-profile** list instance
Context	**configure** cflowd sample-profile *number*
Tree	sample-profile
Max. Instances	5
Introduced	19.5.R1
Platforms	All

[**profile-id**] *number*

Synopsis	The unique specifier of this sample-profile
Context	**configure** cflowd sample-profile *number*
Tree	sample-profile
Range	1 to 5
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

metering-process *keyword*

Synopsis	Metering process for samples taken
Context	**configure** cflowd sample-profile *number* metering-process *keyword*
Tree	metering-process
Description	This command specifies the type of metering process to use for the samples taken from the associated interfaces.
Options	standard, fp-accelerated
Default	standard

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7750 SR-7s, 7750 SR-14s, 7950 XRS-20e

sample-rate *number*

Synopsis	Cflowd sampling rate for sample profile ID
Context	**configure** cflowd sample-profile *number* sample-rate *number*
Tree	sample-rate
Description	This command defines the cflowd sampling rate for the sample profile ID. The sample rate indicates that the associated interface samples 1 in N packets for cflowd analysis. You can only associate one rate profile below 1:256 with a specific IOM, IMM, or XMA.
Range	1 to 60000
Default	1000
Introduced	19.5.R1
Platforms	All

template-retransmit *number*

Synopsis	Time to resend template information
Context	**configure** cflowd template-retransmit *number*
Tree	template-retransmit
Range	10 to 600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	All

use-vrtr-if-index *boolean*

3.11 chassis commands

```
configure
   –  chassis keyword chassis-number number
      –  apply-groups reference
      –  apply-groups-exclude reference
      –  monitor-filter-door boolean
      –  peq number
         –  admin-state keyword
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  input-power-mode number
         –  peq-type keyword
      –  power-connection-module number
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  pcm-type keyword
      –  power-shelf number
         –  admin-state keyword
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  description string
         –  power-module number
            –  admin-state keyword
            –  apply-groups reference
            –  apply-groups-exclude reference
            –  power-module-type keyword
         –  power-shelf-type keyword
      –  power-supply number
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  power-supply-type keyword
```

3.11.1 chassis command descriptions

chassis [chassis-class] *keyword* chassis-number *number*

Synopsis	Enter the **chassis** list instance
Context	**configure** chassis *keyword* chassis-number *number*
Tree	chassis
Introduced	16.0.R1
Platforms	All

[**chassis-class**] *keyword*

Synopsis	Functional use of the physical chassis
Context	**configure** chassis *keyword* chassis-number *number*
Tree	chassis
Options	router, ethernet-satellite
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

chassis-number *number*

Synopsis	Unique index to identify this physical chassis
Context	**configure** chassis *keyword* chassis-number *number*
Tree	chassis
Range	1 to 100
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

monitor-filter-door *boolean*

Synopsis	Allow filter door monitoring
Context	**configure** chassis *keyword* chassis-number *number* monitor-filter-door *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	monitor-filter-door
Default	false
Introduced	16.0.R1
Platforms	7750 SR-7s, 7750 SR-14s

peq [peq-slot] *number*

Synopsis	Enter the **peq** list instance
Context	**configure** chassis *keyword* chassis-number *number* peq *number*
Tree	peq
Introduced	16.0.R1
Platforms	7750 SR-12e, 7950 XRS

[**peq-slot**] *number*

Synopsis	Unique identifier index for a power supply tray in the chassis
Context	**configure** chassis *keyword* chassis-number *number* peq *number*
Tree	peq
Range	1 to 31
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-12e, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the PEQ
Context	**configure** chassis *keyword* chassis-number *number* peq *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7750 SR-12e, 7950 XRS

Use subject to Terms available at: www.nokia.com/terms.

input-power-mode *number*

Synopsis	Input power mode of the PEQ
Context	**configure** chassis *keyword* chassis-number *number* peq *number* input-power-mode *number*
Tree	input-power-mode
Range	60 | 80
Units	amperes
Introduced	16.0.R1
Platforms	7750 SR-12e, 7950 XRS

peq-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	APEQ type
Context	**configure** chassis *keyword* chassis-number *number* peq *number* peq-type *keyword*
Tree	peq-type
Options	apeq-dc-2000, apeq-dc-2200-2800, apeq-ac-3000, apeq-hvdc-3000, apeq-dc-4275, ixr-ac-hvdc-3000, ixr-dc-3000, apeq-ac-4400
Introduced	16.0.R1
Platforms	7750 SR-12e, 7950 XRS

power-connection-module [pcm-slot] *number*

Synopsis	Enter the **power-connection-module** list instance
Context	**configure** chassis *keyword* chassis-number *number* power-connection-module *number*
Tree	power-connection-module
Introduced	16.0.R1
Platforms	7950 XRS-20e

[**pcm-slot**] *number*

Synopsis	Unique identifier index for a power control module in the chassis
Context	**configure** chassis *keyword* chassis-number *number* power-connection-module *number*

3.13.1 debug command descriptions

debug

Synopsis	Configure application or protocol tracing
Context	debug
Tree	debug
Description	Commands in this context enable detailed debugging information for various protocols and router functions.
Introduced	21.5.R1
Platforms	All

aaa

Synopsis	Enter the **aaa** context
Context	debug aaa
Tree	aaa
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

diameter

Synopsis	Enter the **diameter** context
Context	debug aaa diameter
Tree	diameter
Description	Commands in this context configure Diameter Base parameters.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

application

Synopsis	Enter the **application** context
Context	debug aaa diameter application
Tree	application

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure debugging for Diameter session-aware application messages and application message processing failures, for example, in the case of an unknown Diameter session ID.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failures *boolean*

Synopsis	Debug Diameter application failures
Context	debug aaa diameter application failures *boolean*
Tree	failures
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy [name] *string*

Synopsis	Enter the **policy** list instance
Context	debug aaa diameter application policy *string*
Tree	policy
Max. Instances	32
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Diameter application policy name
Context	debug aaa diameter application policy *string*
Tree	policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

failures *boolean*

Synopsis	Debug Diameter application failures
Context	debug aaa diameter application policy *string* failures *boolean*
Tree	failures
Default	true
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

messages *boolean*

Synopsis	Debug Diameter application messages
Context	debug aaa diameter application policy *string* messages *boolean*
Tree	messages
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

node [origin-host] *string*

Synopsis	Enter the **node** list instance
Context	debug aaa diameter node *string*
Tree	node
Max. Instances	32
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**origin-host**] *string*

Synopsis	Origin host of the Diameter node
Context	debug aaa diameter node *string*
Tree	node
String Length	1 to 80
Notes	This element is part of a list key.
Introduced	23.3.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failures *boolean*

Synopsis	Debug Diameter node failures
Context	debug aaa diameter node *string* failures *boolean*
Tree	failures
Description	When configured to **true**, the system debugs Diameter node-level failures that occur before the peer is determined. For example, when no route for a message is found in the realm routing table.
Default	true
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer [index] *number*

Synopsis	Enter the **peer** list instance
Context	debug aaa diameter node *string* peer *number*
Tree	peer
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**index**] *number*

Synopsis	Index of the peer in the Diameter node
Context	debug aaa diameter node *string* peer *number*
Tree	peer
Range	1 to 5
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failures *boolean*

Synopsis	Debug Diameter peer failures
Context	debug aaa diameter node *string* peer *number* failures *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	failures
Default	true
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

messages *boolean*

Synopsis	Debug Diameter peer messages
Context	debug aaa diameter node *string* peer *number* messages *boolean*
Tree	messages
Description	When configured to **true**, the system debugs peer-level messages that are required to bring up, maintain, and tear down a peering connection, for example, Capabilities Exchange and Device Watchdog messages.
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

relayed-messages *boolean*

Synopsis	Debug relayed Diameter messages
Context	debug aaa diameter node *string* relayed-messages *boolean*
Tree	relayed-messages
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

call-trace

Synopsis	Enter the **call-trace** context
Context	debug call-trace
Tree	call-trace
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipoe

Synopsis	Enter the **ipoe** context
Context	debug call-trace ipoe
Tree	ipoe
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trace [name] *string*

Synopsis	Enter the **trace** list instance
Context	debug call-trace ipoe trace *string*
Tree	trace
Max. Instances	50
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Unique trace name
Context	debug call-trace ipoe trace *string*
Tree	trace
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Circuit ID of the sessions to trace
Context	debug call-trace ipoe trace *string* circuit-id *string*
Tree	circuit-id

client-db [name] *string*

Synopsis	Add a list entry for **client-db**
Context	debug ipsec client-db *string*
Tree	client-db
Description	This command adds a list entry for debugging the specified IPsec client database.
Max. Instances	1000
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	IPsec client database name
Context	debug ipsec client-db *string*
Tree	client-db
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gateway [name] *string*

Synopsis	Enter the **gateway** list instance
Context	debug ipsec gateway *string*
Tree	gateway
Description	Commands in this context configure debugging for dynamic IPsec tunnels that terminate on the specified IPsec gateway. Specify the tunnel to debug using either its source address or source subnet, by using the **debug ipsec gateway tunnel** command. If a subnet is specified, the system enables debugging for all tunnels with source addresses in the specified subnet.
Max. Instances	16
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

Tree	suppress-dpd-debug
Default	false
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2tp

Synopsis	Enter the **l2tp** context
Context	debug l2tp
Tree	l2tp
Introduced	23.7.R1
Platforms	All

predictable-id-assignment *boolean*

Synopsis	Enable predictable tunnel and session ID assignment
Context	debug l2tp predictable-id-assignment *boolean*
Tree	predictable-id-assignment
Default	false
Introduced	23.7.R1
Platforms	All

lag [lag-name] *string*

Synopsis	Enter the **lag** list instance
Context	debug lag *string*
Tree	lag
Description	Commands in this context configure debugging for Link Aggregation Group (LAG).
Introduced	22.7.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**lag-name**] *string*

Synopsis	LAG name
Context	debug lag *string*
Tree	lag
Description	This command specifies the LAG name. In model-driven interfaces, the LAG name is used for configuration references and **show** commands. A service provider or administrator can use the defined LAG name to identify and manage LAGs within the SR OS platforms. The LAG name must always start with "lag-".
String Length	1 to 27
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	All

bfd *boolean*

Synopsis	Enable debugging for BFD
Context	debug lag *string* bfd *boolean*
Tree	bfd
Default	false
Introduced	22.7.R1
Platforms	All

config *boolean*

Synopsis	Enable debugging for configuration changes
Context	debug lag *string* config *boolean*
Tree	config
Default	false
Introduced	22.7.R1
Platforms	All

iom-updates *boolean*

Synopsis	Enable debugging for IOM updates

dhcp

Synopsis	Enter the **dhcp** context
Context	debug router *string* dhcp
Tree	dhcp
Description	Commands in this context enable DHCP debug for all packets in the specified routing instance or VPRN service, or for specific packets matching the specific MAC addresses, SAP identifiers, or interface names. When a DHCP packet matches a specified filter and is conforming the configured debug mode for that filter, the packet debug is available in the specified detail level. DHCP debug filter criteria are applied in the following order: **1.** MAC address **2.** SAP identifier **3.** interface names **4.** all packets Up to 8 MAC address filters, 8 SAP identifier filters, 4 interface name filters, and 4 all-packet filters can be specified simultaneously across all routing instances and VPRN services.
Introduced	22.10.R1
Platforms	All

Use subject to Terms available at: www.nokia.com/terms.

Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service vpls *string* ppp events dhcp-client terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tp

Synopsis	Enable the **l2tp** context
Context	debug service vpls *string* ppp events l2tp
Tree	l2tp
Description	Commands in this context configure debugging events for L2TP sessions.
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service vpls *string* ppp events l2tp terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address-assignment

Synopsis	Enable the **local-address-assignment** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug service vpls *string* ppp events local-address-assignment
Tree	local-address-assignment
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service vpls *string* ppp events local-address-assignment terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp

Synopsis	Enable the **ppp** context
Context	debug service vpls *string* ppp events ppp
Tree	ppp
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service vpls *string* ppp events ppp terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac [address] *string*

Synopsis	Add a list entry for **mac**
Context	debug service vpls *string* ppp mac *string*
Tree	mac
Max. Instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *string*

Synopsis	MAC address of the PPPoE session to debug
Context	debug service vpls *string* ppp mac *string*
Tree	mac
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enable the **packets** context
Context	debug service vpls *string* ppp packets
Tree	packets
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all packets
Context	debug service vpls *string* ppp packets all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

detail-level *keyword*

Synopsis	Detail level of the PPP packet debug output
Context	debug service vpls *string* ppp packets detail-level *keyword*
Tree	detail-level
Options	low, medium, high
Default	high
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-client *boolean*

Synopsis	Enable DHCP client packet debugging
Context	debug service vpls *string* ppp packets dhcp-client *boolean*
Tree	dhcp-client
Default	false
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discovery

Synopsis	Enter the **discovery** context
Context	debug service vpls *string* ppp packets discovery
Tree	discovery
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all discovery packets
Context	debug service vpls *string* ppp packets discovery all

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	all
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padi *boolean*

Synopsis	Enable PPP debugging for PADI discovery packets
Context	debug service vpls *string* ppp packets discovery padi *boolean*
Tree	padi
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pado *boolean*

Synopsis	Enable PPP debugging for PADO discovery packets
Context	debug service vpls *string* ppp packets discovery pado *boolean*
Tree	pado
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padr *boolean*

Synopsis	Enable PPP debugging for PADR discovery packets
Context	debug service vpls *string* ppp packets discovery padr *boolean*
Tree	padr
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pads *boolean*

Synopsis	Enable PPP debugging for PADS discovery packets
Context	debug service vpls *string* ppp packets discovery pads *boolean*
Tree	pads
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padt *boolean*

Synopsis	Enable PPP debugging for PADT discovery packets
Context	debug service vpls *string* ppp packets discovery padt *boolean*
Tree	padt
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	PPP packets present in the debug output
Context	debug service vpls *string* ppp packets mode *keyword*
Tree	mode
Options	dropped-only, ingress-and-dropped, egress-ingress-and-dropped
Default	dropped-only
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-session

Synopsis	Enter the **ppp-session** context
Context	debug service vpls *string* ppp packets ppp-session
Tree	ppp-session

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all PPP session packets
Context	debug service vpls *string* ppp packets ppp-session all
Tree	all
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

chap *boolean*

Synopsis	Enable PPP debugging for CHAP authentication packets
Context	debug service vpls *string* ppp packets ppp-session chap *boolean*
Tree	chap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipcp *boolean*

Synopsis	Enable PPP debugging for IPCP NCP packets
Context	debug service vpls *string* ppp packets ppp-session ipcp *boolean*
Tree	ipcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

ipv6cp *boolean*

Synopsis	Enable PPP debugging for IPv6CP NCP packets
Context	debug service vpls *string* ppp packets ppp-session ipv6cp *boolean*
Tree	ipv6cp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lcp *boolean*

Synopsis	Enable PPP debugging for LCP link establishment packets
Context	debug service vpls *string* ppp packets ppp-session lcp *boolean*
Tree	lcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pap *boolean*

Synopsis	Enable PPP debugging for PAP authentication packets
Context	debug service vpls *string* ppp packets ppp-session pap *boolean*
Tree	pap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id [id] *string*

Synopsis	Add a list entry for **remote-id**
Context	debug service vpls *string* ppp remote-id *string*
Tree	remote-id

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. Instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *string*

Synopsis	Remote ID of the PPPoE session to debug
Context	debug service vpls *string* ppp remote-id *string*
Tree	remote-id
String Length	1 to 255
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *string*

Synopsis	Add a list entry for **sap**
Context	debug service vpls *string* ppp sap *string*
Tree	sap
Max. Instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *string*

Synopsis	SAP ID of the PPPoE session to debug
Context	debug service vpls *string* ppp sap *string*
Tree	sap
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tp

Synopsis	Enable the **l2tp** context
Context	debug service vprn *string* ppp events l2tp
Tree	l2tp
Description	Commands in this context configure debugging events for L2TP sessions.
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service vprn *string* ppp events l2tp terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address-assignment

Synopsis	Enable the **local-address-assignment** context
Context	debug service vprn *string* ppp events local-address-assignment
Tree	local-address-assignment
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service vprn *string* ppp events local-address-assignment terminate-only *boolean*
Tree	terminate-only

© 2024 Nokia.

dhcp-client *boolean*

Synopsis	Enable DHCP client packet debugging
Context	debug service vprn *string* ppp packets dhcp-client *boolean*
Tree	dhcp-client
Default	false
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discovery

Synopsis	Enter the **discovery** context
Context	debug service vprn *string* ppp packets discovery
Tree	discovery
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all discovery packets
Context	debug service vprn *string* ppp packets discovery all
Tree	all
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padi *boolean*

Synopsis	Enable PPP debugging for PADI discovery packets
Context	debug service vprn *string* ppp packets discovery padi *boolean*
Tree	padi
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pado *boolean*

Synopsis	Enable PPP debugging for PADO discovery packets
Context	debug service vprn *string* ppp packets discovery pado *boolean*
Tree	pado
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padr *boolean*

Synopsis	Enable PPP debugging for PADR discovery packets
Context	debug service vprn *string* ppp packets discovery padr *boolean*
Tree	padr
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pads *boolean*

Synopsis	Enable PPP debugging for PADS discovery packets
Context	debug service vprn *string* ppp packets discovery pads *boolean*
Tree	pads
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

padt *boolean*

Synopsis	Enable PPP debugging for PADT discovery packets
Context	debug service vprn *string* ppp packets discovery padt *boolean*
Tree	padt
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	PPP packets present in the debug output
Context	debug service vprn *string* ppp packets mode *keyword*
Tree	mode
Options	dropped-only, ingress-and-dropped, egress-ingress-and-dropped
Default	dropped-only
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-session

Synopsis	Enter the **ppp-session** context
Context	debug service vprn *string* ppp packets ppp-session
Tree	ppp-session
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all PPP session packets
Context	debug service vprn *string* ppp packets ppp-session all
Tree	all
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).

© 2024 Nokia.

lcp *boolean*

Synopsis	Enable PPP debugging for LCP link establishment packets
Context	debug service vprn *string* ppp packets ppp-session lcp *boolean*
Tree	lcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pap *boolean*

Synopsis	Enable PPP debugging for PAP authentication packets
Context	debug service vprn *string* ppp packets ppp-session pap *boolean*
Tree	pap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id [id] *string*

Synopsis	Add a list entry for **remote-id**
Context	debug service vprn *string* ppp remote-id *string*
Tree	remote-id
Max. Instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *string*

Synopsis	Remote ID of the PPPoE session to debug
Context	debug service vprn *string* ppp remote-id *string*
Tree	remote-id
String Length	1 to 255

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *string*

Synopsis	Add a list entry for **sap**
Context	debug service vprn *string* ppp sap *string*
Tree	sap
Max. Instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *string*

Synopsis	SAP ID of the PPPoE session to debug
Context	debug service vprn *string* ppp sap *string*
Tree	sap
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-name [name] *string*

Synopsis	Add a list entry for **user-name**
Context	debug service vprn *string* ppp user-name *string*
Tree	user-name
Max. Instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

[**name**] *string*

Synopsis	Username of the PPPoE session to debug
Context	debug service vprn *string* ppp user-name *string*
Tree	user-name
Description	This command configures the username of the PPPoE sesssion to debug. Only packets after the PAP or CHAP authentication are logged. If the purpose is to include PPPoE discovery packets in the debug log, configure a MAC filter instead.
String Length	1 to 255
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-mgmt

Synopsis	Enter the **subscriber-mgmt** context
Context	debug subscriber-mgmt
Tree	subscriber-mgmt
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp

Synopsis	Enter the **gtp** context
Context	debug subscriber-mgmt gtp
Tree	gtp
Description	This command enables the context to configure box-wide GTP parameters and profiles.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

events *boolean*

Synopsis	Enable GTP event debugging
Context	debug subscriber-mgmt gtp events *boolean*
Tree	events
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi [imsi-instance] *string*

Synopsis	Add a list entry for **imsi**
Context	debug subscriber-mgmt gtp imsi *string*
Tree	imsi
Max. Instances	8
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**imsi-instance**] *string*

Synopsis	IMSI of GTP sessions to debug
Context	debug subscriber-mgmt gtp imsi *string*
Tree	imsi
String Length	0 to 15
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enable the **packets** context
Context	debug subscriber-mgmt gtp packets
Tree	packets
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the GTP packet debug output
Context	debug subscriber-mgmt gtp packets detail-level *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	detail-level
Options	high, low
Default	low
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	GTP packets to include in the debug output
Context	debug subscriber-mgmt gtp packets mode *keyword*
Tree	mode
Options	all, dropped
Default	dropped
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer [address] *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string*

Synopsis	Enter the **peer** list instance
Context	debug subscriber-mgmt gtp peer *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string*
Tree	peer
Max. Instances	8
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Remote IP address of the GTP peer
Context	debug subscriber-mgmt gtp peer *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string*
Tree	peer
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-management

Synopsis	Enter the **remote-management** context
Context	debug system management-interface remote-management
Tree	remote-management
Description	Commands in this context configure the SR OS node to use the remote management service. Configuring remote management enables the SR OS node to report itself to a remote manager service running on a remote server, so that it is included in the dynamic list of available nodes. The manager service streamlines the management of multiple SR OS nodes running different SR OS versions using the same client application providing a similar shell to the MD-CLI.
Introduced	21.7.R1
Platforms	All

manager

Synopsis	Enter the **manager** context
Context	debug system management-interface remote-management manager
Tree	manager
Description	Commands in this context configure specific manager-related commands. Commands configured in this context take precedence over command values specified directly in the **configure management-interface remote-management** context. If a command is not configured in this context, the command setting is inherited from the higher level context.
Introduced	21.7.R1
Platforms	All

3.15.1 eth-cfm command descriptions

eth-cfm

Synopsis	Enter the **eth-cfm** context
Context	**configure** eth-cfm
Tree	eth-cfm
Description	Commands in this context configure ETH-CFM parameters.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

default-domain

Synopsis	Enter the **default-domain** context
Context	**configure** eth-cfm default-domain
Tree	default-domain
Description	Commands in this context configure MIP creation parameters per index (**bridge-identifier** *bridge-id* **vlan** *vlan-id*) if the MIP creation statement exists as part of the service connection. The MIP creation statement must be present on the connection before any configuration can occur for a MIP under this context. Whether a MIP uses the **default-domain** creation method is determined by the MIP authoritative nature of the **eth-cfm domain association**. The **eth-cfm default-domain** MIP creation is considered only if the **eth-cfm domain association** is not authoritative.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bridge-identifier [bridge-name] *string* vlan *(number | keyword)*

Synopsis	Enter the **bridge-identifier** list instance
Context	**configure** eth-cfm default-domain bridge-identifier *string* vlan *(number | keyword)*
Tree	bridge-identifier
Description	Commands in this context configure the references required to link the CFM function with the service context, allowing the entry of MIP-specific parameters for the index in the default domain table. The **info** and **info detail** commands do not display any entries for the instance unless they have previously been accessed. The possible candidates for the instance can be located using the **show eth-cfm default-domain** command.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**bridge-name**] *string*

Synopsis	Bridge name in the default domain table
Context	**configure** eth-cfm default-domain bridge-identifier *string* vlan *(number | keyword)*
Tree	bridge-identifier
Description	This command specifies the bridge name to enter in the default domain associated with the MIP.
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan *(number | keyword)*

Synopsis	VLAN ID for the default domain
Context	**configure** eth-cfm default-domain bridge-identifier *string* vlan *(number | keyword)*
Tree	bridge-identifier
Description	This command configures a VLAN ID for the default domain.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

id-permission *keyword*

Synopsis	Strategy for the inclusion of Sender ID TLV information
Context	**configure** eth-cfm default-domain bridge-identifier *string* vlan *(number | keyword)* id-permission *keyword*
Tree	id-permission
Description	This command specifies how the Sender ID TLV information is included for installed MEPs and MIPs. The Sender ID TLV is supported for ETH-CCM, ETH-LB, and ETH-LB PDUs.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	none, chassis, defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mhf-creation

Synopsis	Enter the **mhf-creation** context
Context	**configure** eth-cfm default-domain bridge-identifier *string* vlan *(number | keyword)* mhf-creation
Tree	mhf-creation
Description	Commands in this context configure the MIP method of creation. MIP creation mode and other factors are part of the MIP creation authority (**association** or **default-domain**) logic. The MIP creation algorithm may result in multiple potential MIPs. Only the lowest-level valid MIP is instantiated.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

level *(number | keyword)*

Synopsis	Requested level of the MIP
Context	**configure** eth-cfm default-domain bridge-identifier *string* vlan *(number | keyword)* mhf-creation level *(number | keyword)*
Tree	level
Description	This command configures the requested level of the MIP. This is used by the MIP creation algorithm to determine its validity in comparison to other ETH-CFM MIPs and MEPs. If the level is configured as **defer**, the level value is inherited from the global read-only system values.
Range	0 to 7
Options	defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mhf-type *keyword*

Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip-ltr-priority *(number | keyword)*

Synopsis	Priority of the Linktrace Response
Context	**configure** eth-cfm default-domain bridge-identifier *string* vlan *(number | keyword)* mip-ltr-priority *(number | keyword)*
Tree	mip-ltr-priority
Description	This command allows the operator to set the priority of the Linktrace Response Message (ETH-LTR) from a MIP for this association.
Range	0 to 7
Options	defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

domain [md-admin-name] *string*

Synopsis	Enter the **domain** list instance
Context	**configure** eth-cfm domain *string*

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

association [ma-admin-name] *string*

Synopsis	Enter the **association** list instance
Context	**configure** eth-cfm domain *string* association *string*
Tree	association
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**ma-admin-name**] *string*

Synopsis	Domain association name
Context	**configure** eth-cfm domain *string* association *string*
Tree	association
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

auto-mep-discovery *boolean*

Synopsis	Allow remote MEP automatic discovery
Context	**configure** eth-cfm domain *string* association *string* auto-mep-discovery *boolean*
Tree	auto-mep-discovery
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bridge-identifier [bridge-name] *string*

Synopsis	Enter the **bridge-identifier** list instance
Context	**configure** eth-cfm domain *string* association *string* bridge-identifier *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	bridge-identifier
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**bridge-name**] *string*

Synopsis	Bridge name that links to the service
Context	**configure** eth-cfm domain *string* association *string* bridge-identifier *string*
Tree	bridge-identifier
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

id-permission *keyword*

Synopsis	Strategy for the inclusion of Sender ID TLV information
Context	**configure** eth-cfm domain *string* association *string* bridge-identifier *string* id-permission *keyword*
Tree	id-permission
Description	This command specifies how the Sender ID TLV information is included for installed MEPs and MIPs. The Sender ID TLV is supported for ETH-CCM, ETH-LB, and ETH-LB PDUs.
Options	none, chassis
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mhf-creation *keyword*

Synopsis	MIP method of creation
Context	**configure** eth-cfm domain *string* association *string* bridge-identifier *string* mhf-creation *keyword*
Tree	mhf-creation

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	none, default, explicit, static
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip-ltr-priority *number*

Synopsis	Priority of the Linktrace Response Message (ETH-LTR) from a MIP
Context	**configure** eth-cfm domain *string* association *string* bridge-identifier *string* mip-ltr-priority *number*
Tree	mip-ltr-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan *number*

Synopsis	VLAN ID for the default domain index
Context	**configure** eth-cfm domain *string* association *string* bridge-identifier *string* vlan *number*
Tree	vlan
Range	1 to 4094
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-hold-time

Synopsis	Enter the **ccm-hold-time** context
Context	**configure** eth-cfm domain *string* association *string* ccm-hold-time
Tree	ccm-hold-time
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

down *number*

Synopsis	Additional time before a MEP declares a fault, in CCM timeout conditions

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-cfm domain *string* association *string* ccm-hold-time down *number*
Tree	down
Range	1 to 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-interval *keyword*

Synopsis	CCM transmission interval for all MEPs in association
Context	**configure** eth-cfm domain *string* association *string* ccm-interval *keyword*
Tree	ccm-interval
Options	300hz, 10ms, 100ms, 1s, 10s, 60s, 600s
Default	10s
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

facility-id-permission *keyword*

Synopsis	Sender ID TLV information for facility base MEPs
Context	**configure** eth-cfm domain *string* association *string* facility-id-permission *keyword*
Tree	facility-id-permission
Options	none, chassis
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

icc-based *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in ICC-based format
Context	**configure** eth-cfm domain *string* association *string* icc-based *string*
Tree	icc-based

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String Length	8 to 13
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

integer *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in integer format
Context	**configure** eth-cfm domain *string* association *string* integer *number*
Tree	integer
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ma-index *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association (MA) table index
Context	**configure** eth-cfm domain *string* association *string* ma-index *number*
Tree	ma-index
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-mep [mep-id] *number*

Synopsis	Enter the **remote-mep** list instance

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-cfm domain *string* association *string* remote-mep *number*
Tree	remote-mep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**mep-id**] *number*

Synopsis	Remote MEP ID
Context	**configure** eth-cfm domain *string* association *string* remote-mep *number*
Tree	remote-mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-mac *string*

Synopsis	Remote MAC Address for transmitting CFM packets to remote MEPs
Context	**configure** eth-cfm domain *string* association *string* remote-mep *number* remote-mac *string*
Tree	remote-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

string *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in raw ASCII string format
Context	**configure** eth-cfm domain *string* association *string* string *string*
Tree	string
String Length	1 to 45
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vid *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Primary VLAN ID for the Maintenance Association name
Context	**configure** eth-cfm domain *string* association *string* vid *number*
Tree	vid
Range	0 to 4094
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vpn-id *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN ID for the Maintenance Association name
Context	**configure** eth-cfm domain *string* association *string* vpn-id *string*
Tree	vpn-id
String Length	0 to 15
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

3.16.1 eth-ring command descriptions

eth-ring [ring-index] *number*

Synopsis	Enter the **eth-ring** list instance
Context	**configure** eth-ring *number*
Tree	eth-ring
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**ring-index**] *number*

Synopsis	Ring ID
Context	**configure** eth-ring *number*
Tree	eth-ring
Range	1 to 128
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the Ethernet ring
Context	**configure** eth-ring *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-hold-time

Synopsis	Enter the **ccm-hold-time** context
Context	**configure** eth-ring *number* ccm-hold-time
Tree	ccm-hold-time

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

down *number*

Synopsis	Hold timer for down event dampening
Context	**configure** eth-ring *number* ccm-hold-time down *number*
Tree	down
Range	1 to 5000
Units	centiseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

up *number*

Synopsis	Hold timer for recovery reporting
Context	**configure** eth-ring *number* ccm-hold-time up *number*
Tree	up
Range	0 to 5000
Units	deciseconds
Default	20
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

compatible-version *number*

Synopsis	Compatibility version for the Ethernet ring
Context	**configure** eth-ring *number* compatible-version *number*
Tree	compatible-version
Range	1 to 2
Default	2
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *string*

Synopsis	Text description
Context	**configure** eth-ring *number* description *string*
Tree	description
String Length	0 to 80
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

guard-time *number*

Synopsis	Ethernet ring guard time
Context	**configure** eth-ring *number* guard-time *number*
Tree	guard-time
Range	1 to 20
Units	deciseconds
Default	5
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

node-id *string*

Synopsis	MAC address of the RPL link
Context	**configure** eth-ring *number* node-id *string*
Tree	node-id
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

path [path-index] *string*

Synopsis	Enter the **path** list instance
Context	**configure** eth-ring *number* path *string*
Tree	path
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alarm-notification

Synopsis	Enter the **alarm-notification** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification
Tree	alarm-notification
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm. Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-alarm-time *number*
Tree	fng-alarm-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-reset-time *number*
Tree	fng-reset-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm *boolean*

Synopsis	Generate CCM messages
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm *boolean*
Tree	ccm
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-ltm-priority *number*
Tree	ccm-ltm-priority
Range	0 to 7

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	7
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-padding-size *number*
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval)** is less than 1 second.
Range	3 to 1500
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

control-mep *boolean*

Synopsis	Enable Ethernet ring control on the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* control-mep *boolean*
Tree	control-mep
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* description *string*
Tree	description
String Length	1 to 80

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-test

Synopsis	Enable the **eth-test** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the **oam eth-cfm eth-test** command.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test bit-error-threshold *number*
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the **test-pattern** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern crc-tlv *boolean*
Tree	crc-tlv
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern pattern *keyword*
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the **grace** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

eth-ed

Synopsis	Enter the **eth-ed** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed max-rx-defect-window *number*
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed priority *number*
Tree	priority
Range	0 to 7
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed rx-eth-ed *boolean*
Tree	rx-eth-ed

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed tx-eth-ed *boolean*
Tree	tx-eth-ed
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the **eth-vsm-grace** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace rx-eth-vsm-grace *boolean*
Tree	rx-eth-vsm-grace
Description	When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to **false**, the router disables the Nokia Grace function.
Default	true

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace tx-eth-vsm-grace *boolean*
Tree	tx-eth-vsm-grace
Description	When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* low-priority-defect *keyword*
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	all-def
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MEP

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* mac-address *string*
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* one-way-delay-threshold *number*
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-and-raps-tag *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Port ID and Ring APS tag ID
Context	**configure** eth-ring *number* path *string* port-and-raps-tag *string*
Tree	port-and-raps-tag
String Length	1 to 45
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.

rpl-end *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable path as a Ring Protection Link (RPL) end
Context	**configure** eth-ring *number* path *string* rpl-end *boolean*
Tree	rpl-end
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

revert-time *number*

Synopsis	Revert time for the Ethernet ring
Context	**configure** eth-ring *number* revert-time *number*
Tree	revert-time
Range	0 | 60 to 720
Units	seconds
Default	300
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rpl-node *keyword*

Synopsis	Ring Protection Link (RPL) type for the Ethernet ring
Context	**configure** eth-ring *number* rpl-node *keyword*
Tree	rpl-node
Options	owner, neighbor
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sub-ring

Synopsis	Enter the **sub-ring** context
Context	**configure** eth-ring *number* sub-ring

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	sub-ring
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interconnect

Synopsis	Enter the **interconnect** context
Context	**configure** eth-ring *number* sub-ring interconnect
Tree	interconnect
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

propagate-topology-change *boolean*

Synopsis	Propagate topology changes
Context	**configure** eth-ring *number* sub-ring interconnect propagate-topology-change *boolean*
Tree	propagate-topology-change
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ring-id *reference*

Synopsis	Ring instance of the connection ring for the sub-ring
Context	**configure** eth-ring *number* sub-ring interconnect ring-id *reference*
Tree	ring-id
Reference	**configure** eth-ring *number*
Notes	The following elements are part of a choice: **ring-id** or **vpls**.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vpls

Synopsis	Connect sub-ring to VPLS ID that contains sub-ring SAP
Context	**configure** eth-ring *number* sub-ring interconnect vpls

3.17.1 filter command descriptions

filter

Synopsis	Enter the **filter** context
Context	**configure** filter
Tree	filter
Introduced	16.0.R1
Platforms	All

dhcp-filter [filter-id] *number*

Synopsis	Enter the **dhcp-filter** list instance
Context	**configure** filter dhcp-filter *number*
Tree	dhcp-filter
Introduced	16.0.R1
Platforms	All

[**filter-id**] *number*

Synopsis	Unique DHCP filter policy ID
Context	**configure** filter dhcp-filter *number*
Tree	dhcp-filter
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

default-action

Synopsis	Enable the **default-action** context
Context	**configure** filter dhcp-filter *number* default-action
Tree	default-action
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

bypass-host-creation

Synopsis	Host creation options to bypass
Context	**configure** filter dhcp-filter *number* default-action bypass-host-creation
Tree	bypass-host-creation
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis	DHCP host creation when the filter entry is matched
Context	**configure** filter dhcp-filter *number* default-action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	**configure** filter dhcp-filter *number* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** filter dhcp-filter *number* entry *number*
Tree	entry

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. Instances	10
Introduced	16.0.R1
Platforms	All

[**entry-id**] *number*

Synopsis	DHCP filter entry ID
Context	**configure** filter dhcp-filter *number* entry *number*
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

action

Synopsis	Enable the **action** context
Context	**configure** filter dhcp-filter *number* entry *number* action
Tree	action
Introduced	16.0.R1
Platforms	All

bypass-host-creation

Synopsis	Host creation options to bypass
Context	**configure** filter dhcp-filter *number* entry *number* action bypass-host-creation
Tree	bypass-host-creation
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis	DHCP host creation when the filter entry is matched

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter dhcp-filter *number* entry *number* action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	All

option

Synopsis	Enable the **option** context
Context	**configure** filter dhcp-filter *number* entry *number* option
Tree	option
Introduced	16.0.R1
Platforms	All

absent

Synopsis	Require the absence of related option
Context	**configure** filter dhcp-filter *number* entry *number* option absent
Tree	absent
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enable the **match** context
Context	**configure** filter dhcp-filter *number* entry *number* option match
Tree	match
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	16.0.R1
Platforms	All

exact *boolean*

Synopsis	Use an exact match pattern (not partial)

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter dhcp-filter *number* entry *number* option match exact *boolean*
Tree	exact
Default	false
Introduced	16.0.R1
Platforms	All

hex *string*

Synopsis	Matching pattern for the filtered option
Context	**configure** filter dhcp-filter *number* entry *number* option match hex *string*
Tree	hex
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: **hex** or **string**.
Introduced	16.0.R1
Platforms	All

invert *boolean*

Synopsis	Invert (partial) matching criteria
Context	**configure** filter dhcp-filter *number* entry *number* option match invert *boolean*
Tree	invert
Default	false
Introduced	16.0.R1
Platforms	All

string *string*

Synopsis	Matching pattern for the filtered option
Context	**configure** filter dhcp-filter *number* entry *number* option match string *string*
Tree	string
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: **hex** or **string**.
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.

number *number*

Synopsis	Number for DHCP or DHCPv6 option to filter on
Context	**configure** filter dhcp-filter *number* entry *number* option number *number*
Tree	number
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

present

Synopsis	Require the presence of related option
Context	**configure** filter dhcp-filter *number* entry *number* option present
Tree	present
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	16.0.R1
Platforms	All

dhcp6-filter [filter-id] *number*

Synopsis	Enter the **dhcp6-filter** list instance
Context	**configure** filter dhcp6-filter *number*
Tree	dhcp6-filter
Introduced	16.0.R1
Platforms	All

[**filter-id**] *number*

Synopsis	Unique DHCP filter policy ID
Context	**configure** filter dhcp6-filter *number*
Tree	dhcp6-filter
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1

© 2024 Nokia.

Platforms	All

default-action

Synopsis	Enable the **default-action** context
Context	**configure** filter dhcp6-filter *number* default-action
Tree	default-action
Introduced	16.0.R1
Platforms	All

bypass-host-creation

Synopsis	Enable the **bypass-host-creation** context
Context	**configure** filter dhcp6-filter *number* default-action bypass-host-creation
Tree	bypass-host-creation
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

na *boolean*

Synopsis	Bypass the DHCPv6 NA host creation
Context	**configure** filter dhcp6-filter *number* default-action bypass-host-creation na *boolean*
Tree	na
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pd *boolean*

Synopsis	Bypass the DHCPv6 PD host creation
Context	**configure** filter dhcp6-filter *number* default-action bypass-host-creation pd *boolean*
Tree	pd
Default	true
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis	Drop DHCPv6 message (do not process)
Context	**configure** filter dhcp6-filter *number* default-action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	All

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** filter gre-tunnel-template *string* ipv4
Tree	ipv4
Notes	The following elements are part of a choice: **ipv4** or **ipv6**.
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

destination-address [address] *string*

Synopsis	Add a list entry for **destination-address**
Context	**configure** filter gre-tunnel-template *string* ipv4 destination-address *string*
Tree	destination-address
Description	This command defines a destination for the GRE IP header used to encapsulate the matching IPv4/IPv6 packet. A single destination address can be specified for an IPv6 **gre-tunnel-template**. Traffic matching the associated IPv4 or IPv6 filter is hashed across any available ECMP or UCMP route next hop available to the destination address. If no destination address is available, then matching traffic follows the configured **pbr-down-action-override** action, if configured. If no **pbr-down-action-override** is configured traffic is discarded.
Max. Instances	32
Introduced	16.0.R1
Platforms	All

[**address**] *string*

Synopsis	Destination IPv4 address
Context	**configure** filter gre-tunnel-template *string* ipv4 destination-address *string*
Tree	destination-address
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

gre-key *(keyword | number)*

Synopsis	GRE key
Context	**configure** filter gre-tunnel-template *string* ipv4 gre-key *(keyword | number)*
Tree	gre-key
Max. Range	0 to 4294967295
Options	if-index
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

skip-ttl-decrement *boolean*

Synopsis	Decrement TTL
Context	**configure** filter gre-tunnel-template *string* ipv4 skip-ttl-decrement *boolean*
Tree	skip-ttl-decrement
Default	false
Introduced	16.0.R1
Platforms	All

source-address *string*

Synopsis	Source IP address of the GRE encapsulated
Context	**configure** filter gre-tunnel-template *string* ipv4 source-address *string*
Tree	source-address
Introduced	16.0.R1
Platforms	All

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** filter gre-tunnel-template *string* ipv6
Tree	ipv6
Notes	The following elements are part of a choice: **ipv4** or **ipv6**.
Introduced	22.7.R1
Platforms	All

destination-address [address] *string*

Synopsis	Add a list entry for **destination-address**
Context	**configure** filter gre-tunnel-template *string* ipv6 destination-address *string*
Tree	destination-address
Max. Instances	1
Introduced	22.7.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**address**] *string*

Synopsis	IPv6 destination address
Context	**configure** filter gre-tunnel-template *string* ipv6 destination-address *string*
Tree	destination-address
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	All

gre-key *keyword*

Synopsis	Include a key value in GRE header
Context	**configure** filter gre-tunnel-template *string* ipv6 gre-key *keyword*
Tree	gre-key
Description	This command includes a key value in the GRE header of ifIndex of the ingress interface.
Options	if-index
Introduced	22.7.R1
Platforms	All

skip-hop-decrement *boolean*

Synopsis	Decrement TTL of the received packet
Context	**configure** filter gre-tunnel-template *string* ipv6 skip-hop-decrement *boolean*
Tree	skip-hop-decrement
Description	When configured to **true**, the system decrements the TTL of the IP packet matching the IPv4 or IPv6 filter when it is encapsulated into the GRE tunnel header. When configured to **false**, the system increases the TTL of the received packet.
Default	false
Introduced	22.7.R1
Platforms	All

source-address *string*

Synopsis	Source IPv6 address of the GRE encapsulated

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter gre-tunnel-template *string* ipv6 source-address *string*
Tree	source-address
Introduced	22.7.R1

gtp-local-breakout

Synopsis	Break out matching traffic locally from a GTP tunnel for GTP-subscriber-hosts, or forward for other entities
Context	**configure** filter ip-filter *string* entry *number* action gtp-local-breakout
Tree	gtp-local-breakout
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect

Synopsis	Enable the **http-redirect** context
Context	**configure** filter ip-filter *string* entry *number* action http-redirect
Tree	http-redirect
Description	Commands in this context configure the filter entry action for HTTP redirection.
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

allow-override *boolean*

Synopsis	Override the HTTP redirect URL by a RADIUS VSA
Context	**configure** filter ip-filter *string* entry *number* action http-redirect allow-override *boolean*
Tree	allow-override
Description	This command specifies whether the RADIUS VSA can override the configured HTTP redirect URL for this filter entry. When configured to **true**, the RADIUS VSA can override the HTTP redirect URL. When configured to **false**, the HTTP redirect URL is not overriden. This does not apply if the CPF option is specified for the URL.
Default	false
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

url *(keyword | http-redirect-url)*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	URL used for HTTP redirect action
Context	**configure** filter ip-filter *string* entry *number* action http-redirect url *(keyword | http-redirect-url)*
Tree	url
Description	This command specifies the URL to use for HTTP redirection for this filter entry. A URL can be specified or the CPF option can be used for BNG CUPS ESM sessions only. The following macro substitutions may be used: $URL — request-URI in the HTTP GET request received $MAC — a string that represents the MAC address of the subscriber host $IP — a string that represents the IP address of the subscriber host $SUB — a string that represents the subscriber ID $SAP — a string that represents a SAP ID $SAPDESC — description string configured on the SAP $CID — a string that represents the circuit ID or interface ID of the subscriber host (hexadecimal format) $RID — a string that represents the remote ID of the subscriber host (hexadecimal format)
String Length	1 to 255
Options	from-cpf
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

ignore-match

Synopsis	Ignore match criteria for the entry
Context	**configure** filter ip-filter *string* entry *number* action ignore-match
Tree	ignore-match

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

l2-aware-nat-bypass *boolean*

Synopsis	Divert traffic from an L2-Aware NAT subscriber
Context	**configure** filter ip-filter *string* entry *number* action l2-aware-nat-bypass *boolean*
Tree	l2-aware-nat-bypass
Description	When configured to **true**, the filter action selectively diverts traffic from a L2-Aware NAT subscriber away from NAT. This action is only applicable to L2-Aware NAT subscribers and must be configured together with action **accept**. Traffic identified in the match condition bypasses L2-Aware NAT. An example is to bypass NAT for on-net destinations (within the customer network). For selective NAT bypass to take effect, in addition to IP filter configuration, the L2-Aware NAT subscriber must be specifically enabled for selective bypass via the allow-bypass configuration option in the **configure subscriber-mgmt sub-profile nat allow-bypass** context. When configured to **false**, traffic that is not classified for bypass automatically diverts to L2-Aware NAT, unless it is explicitly configured in the IP filter action to be dropped.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat

Synopsis	Enable the **nat** context
Context	**configure** filter ip-filter *string* entry *number* action nat
Tree	nat
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

nat-policy *reference*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT policy name when action is NAT
Context	**configure** filter ip-filter *string* entry *number* action nat nat-policy *reference*

Synopsis	Enable the **ttl** context
Context	**configure** filter ip-filter *string* entry *number* action rate-limit ttl
Tree	ttl
Notes	The following elements are part of a choice: **packet-length** or **ttl**.
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Equal to condition match value
Context	**configure** filter ip-filter *string* entry *number* action rate-limit ttl eq *number*
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

gt *number*

Synopsis	Greater than condition match value
Context	**configure** filter ip-filter *string* entry *number* action rate-limit ttl gt *number*
Tree	gt
Range	0 to 254

© 2024 Nokia.

Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than condition match value
Context	**configure** filter ip-filter *string* entry *number* action rate-limit ttl lt *number*
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** filter ip-filter *string* entry *number* action rate-limit ttl range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the range
Context	**configure** filter ip-filter *string* entry *number* action rate-limit ttl range end *number*
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

start *number*

Synopsis	Lower bound of the range
Context	**configure** filter ip-filter *string* entry *number* action rate-limit ttl range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

reassemble

Synopsis	Forward matching packets to reassembly function
Context	**configure** filter ip-filter *string* entry *number* action reassemble
Tree	reassemble
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remark

Synopsis	Enable the **remark** context
Context	**configure** filter ip-filter *string* entry *number* action remark
Tree	remark
Introduced	16.0.R1
Platforms	All

dscp *keyword*

Synopsis	Destination SAP
Context	**configure** filter ip-filter *string* entry *number* action remark dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef,

	cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

secondary

Synopsis	Enable the **secondary** context
Context	**configure** filter ip-filter *string* entry *number* action secondary
Tree	secondary
Introduced	16.0.R1
Platforms	All

forward

Synopsis	Enter the **forward** context
Context	**configure** filter ip-filter *string* entry *number* action secondary forward
Tree	forward
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

next-hop

Synopsis	Enable the **next-hop** context
Context	**configure** filter ip-filter *string* entry *number* action secondary forward next-hop
Tree	next-hop
Notes	The following elements are part of a choice: **next-hop**, **sap**, **sdp**, or **vprn-target**.
Introduced	16.0.R1
Platforms	All

nh-ip-vrf

Synopsis	Enable the **nh-ip-vrf** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *string* entry *number* action secondary forward next-hop nh-ip-vrf
Tree	nh-ip-vrf
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

address *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv4 address of next hop to forward matching packets
Context	**configure** filter ip-filter *string* entry *number* action secondary forward next-hop nh-ip-vrf address *string*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

indirect *boolean*

Synopsis	Allow next hop to be indirectly reachable
Context	**configure** filter ip-filter *string* entry *number* action secondary forward next-hop nh-ip-vrf indirect *boolean*
Tree	indirect
Default	false
Introduced	16.0.R1
Platforms	All

router-instance *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context for route lookup for forwarding packets

© 2024 Nokia.

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vprn-target

Synopsis	Enable the **vprn-target** context
Context	**configure** filter ip-filter *string* entry *number* action secondary forward vprn-target
Tree	vprn-target
Notes	The following elements are part of a choice: **next-hop**, **sap**, **sdp**, or **vprn-target**.
Introduced	21.7.R1
Platforms	All

adv-prefix *string*

Synopsis	Advertised IP prefix for the target destination
Context	**configure** filter ip-filter *string* entry *number* action secondary forward vprn-target adv-prefix *string*
Tree	adv-prefix
Introduced	21.7.R1
Platforms	All

bgp-nh *string*

Synopsis	Target BGP next hop IP address
Context	**configure** filter ip-filter *string* entry *number* action secondary forward vprn-target bgp-nh *string*
Tree	bgp-nh
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	All

lsp *string*

Synopsis	LSP that is specified to forward a packet matching this entry

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *string* entry *number* action secondary forward vprn-target lsp *string*
Tree	lsp
String Length	1 to 64
Introduced	21.7.R1
Platforms	All

vprn *reference*

Synopsis	Routing context used for route lookup
Context	**configure** filter ip-filter *string* entry *number* action secondary forward vprn-target vprn *reference*
Tree	vprn
Reference	**configure** service vprn *string*
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	All

remark

Synopsis	Enable the **remark** context
Context	**configure** filter ip-filter *string* entry *number* action secondary remark
Tree	remark
Introduced	16.0.R1
Platforms	All

dscp *keyword*

Synopsis	Destination SAP
Context	**configure** filter ip-filter *string* entry *number* action secondary remark dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is mandatory.

Introduced	16.0.R1
Platforms	All

tcp-mss-adjust

Synopsis	Adjust MSS option of TCP matching packets to configured value of tcp-mss in router interface context
Context	**configure** filter ip-filter *string* entry *number* action tcp-mss-adjust
Tree	tcp-mss-adjust
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** filter ip-filter *string* entry *number* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

egress-pbr *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PBR that has an effect when this filter is applied on egress
Context	**configure** filter ip-filter *string* entry *number* egress-pbr *keyword*
Tree	egress-pbr
Options	true, true-with-l4lb
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

filter-sample *boolean*

Synopsis	Sample matching traffic if IP interface is set to cflowd ACL mode
Context	**configure** filter ip-filter *string* entry *number* filter-sample *boolean*
Tree	filter-sample
Default	false
Introduced	16.0.R1
Platforms	All

interface-sample *boolean*

Synopsis	Sample matching traffic if IP interface is set to cflowd interface mode
Context	**configure** filter ip-filter *string* entry *number* interface-sample *boolean*
Tree	interface-sample
Default	true
Introduced	16.0.R1
Platforms	All

log *reference*

Synopsis	Log that is used for packets matching this entry
Context	**configure** filter ip-filter *string* entry *number* log *reference*
Tree	log
Reference	**configure** filter log *number*
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enter the **match** context
Context	**configure** filter ip-filter *string* entry *number* match
Tree	match
Description	Commands in this context configure match criteria for the filter entry. When the match criteria are satisfied, the action associated with the match criteria is executed.
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

destination-class *number*

Synopsis	Destination class as a match criterion
Context	**configure** filter ip-filter *string* entry *number* match destination-class *number*
Tree	destination-class
Description	This command configures the BGP destination class value as a match criterion. Filtering egress traffic on the destination class requires the **destination-class-lookup** command (under the **ingress** context for the service interface) to be enabled (set to **true**).
Range	1 to 255
Introduced	20.7.R1
Platforms	All

dscp *keyword*

Synopsis	DSCP used as an IP filter match criterion
Context	**configure** filter ip-filter *string* entry *number* match dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** filter ip-filter *string* entry *number* match dst-ip
Tree	dst-ip
Notes	The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).
Introduced	16.0.R1
Platforms	All

address *(ipv4-prefix-with-host-bits | ipv4-address)*

Synopsis	IPv4 address used as the match criterion

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *string* entry *number* match dst-ip address *(ipv4-prefix-with-host-bits | ipv4-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	All

ip-prefix-list *reference*

Synopsis	IPv4 address prefix list used as match criterion
Context	**configure** filter ip-filter *string* entry *number* match dst-ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** filter match-list ip-prefix-list *string*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	All

mask *string*

Synopsis	IPv4 address mask used as the match criterion
Context	**configure** filter ip-filter *string* entry *number* match dst-ip mask *string*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	All

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** filter ip-filter *string* entry *number* match dst-port
Tree	dst-port
Description	Commands in this context configure match criteria for the destination port.
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1

© 2024 Nokia.

Context	**configure** filter ip-filter *string* entry *number* match ttl range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	All

pbr-down-action-override *keyword*

Synopsis	Action when PBR or PBF target for this entry is not available
Context	**configure** filter ip-filter *string* entry *number* pbr-down-action-override *keyword*
Tree	pbr-down-action-override
Options	drop, forward, filter-default-action
Introduced	16.0.R1
Platforms	All

sample-profile *reference*

Synopsis	Cflowd sample profile ID to match packets
Context	**configure** filter ip-filter *string* entry *number* sample-profile *reference*
Tree	sample-profile

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command allows traffic matching an IPv4 or IPv6 filter to be sampled for cflowd processing using a specific sample profile ID. This option is only compatible if the associated interface is configured for interface-based sampling and is only supported for ingress sampling. An IP filter can only specify a single alternate sample profile ID for cflowd sampling, but the ID can be used in multiple entries.
Reference	**configure** cflowd sample-profile *number*
Introduced	20.10.R1
Platforms	All

sticky-dest *(number | keyword)*

Synopsis	Time before action with available PBR or PBF destination and highest priority
Context	**configure** filter ip-filter *string* entry *number* sticky-dest *(number | keyword)*
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	16.0.R1
Platforms	All

filter-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP filter ID
Context	**configure** filter ip-filter *string* filter-id *number*
Tree	filter-id
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

scope *keyword*

Synopsis	Scope of the filter definition
Context	**configure** filter ip-filter *string* scope *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	scope
Description	This command configures the filter policy scope. If the scope of the policy is **template** and is applied to one or more services or network interfaces, the scope cannot be changed.
Options	exclusive, template, embedded, system, cpm
Default	template
Introduced	16.0.R1
Platforms	All

shared-policer *boolean*

Synopsis	Share policer among active ports in the LAG
Context	**configure** filter ip-filter *string* shared-policer *boolean*
Tree	shared-policer
Description	When configured to **true**, and when the filter policy is configured on a LAG endpoint, the system programs the policer rates in the filter policy per line card FP of the LAG based on the number of active ports in the LAG for each FP. When configured to **false**, and when the filter policy is configured on a LAG endpoint, the system programs the same policer rate on each line card FP of the LAG.
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

subscriber-mgmt

Synopsis	Enter the **subscriber-mgmt** context
Context	**configure** filter ip-filter *string* subscriber-mgmt

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Set of match criteria for the filter policy
Context	**configure** filter ip-filter *string* type *keyword*
Tree	type
Description	This command configures the filter policy type that defines the list of match criteria supported in a filter policy.
Options	normal, src-mac, packet-length, destination-class
Default	normal
Introduced	19.5.R1
Platforms	All

ipv6-exception [filter-name] *string*

Synopsis	Enter the **ipv6-exception** list instance
Context	**configure** filter ipv6-exception *string*
Tree	ipv6-exception
Introduced	20.10.R1
Platforms	VSR

[**filter-name**] *string*

Synopsis	Filter name
Context	**configure** filter ipv6-exception *string*
Tree	ipv6-exception
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *string*

Synopsis	Text description
Context	**configure** filter ipv6-exception *string* description *string*
Tree	description
String Length	1 to 80
Introduced	20.10.R1
Platforms	VSR

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** filter ipv6-exception *string* entry *number*
Tree	entry
Introduced	20.10.R1
Platforms	VSR

[**entry-id**] *number*

Synopsis	ID for a match criteria and the corresponding action
Context	**configure** filter ipv6-exception *string* entry *number*
Tree	entry
Range	1 to 2097151
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	VSR

description *string*

Synopsis	Text description
Context	**configure** filter ipv6-exception *string* entry *number* description *string*
Tree	description
String Length	1 to 80
Introduced	20.10.R1
Platforms	VSR

match

Synopsis	Enter the **match** context
Context	**configure** filter ipv6-exception *string* entry *number* match
Tree	match
Introduced	20.10.R1
Platforms	VSR

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** filter ipv6-exception *string* entry *number* match dst-ip
Tree	dst-ip
Introduced	20.10.R1
Platforms	VSR

address *(ipv6-prefix-with-host-bits | ipv6-address)*

Synopsis	IPv6 address used as the match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match dst-ip address *(ipv6-prefix-with-host-bits | ipv6-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	20.10.R1
Platforms	VSR

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match dst-ip ipv6-prefix-list *reference*
Tree	ipv6-prefix-list
Reference	**configure** filter match-list ipv6-prefix-list *string*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	20.10.R1
Platforms	VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mask *string*

Synopsis	IPv6 address mask used as the match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match dst-ip mask *string*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	20.10.R1
Platforms	VSR

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** filter ipv6-exception *string* entry *number* match dst-port
Tree	dst-port
Description	Commands in this context configure match criteria for the destination port.
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	20.10.R1
Platforms	VSR

eq *number*

Synopsis	Exact value as the match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match dst-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	20.10.R1
Platforms	VSR

gt *number*

Synopsis	Greater than value as the match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match dst-port gt *number*
Tree	gt
Range	0 to 65534

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	20.10.R1
Platforms	VSR

lt *number*

Synopsis	Less than value as the match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match dst-port lt *number*
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	20.10.R1
Platforms	VSR

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match dst-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *string*
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	20.10.R1
Platforms	VSR

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-exception *string* entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	20.10.R1
Platforms	VSR

© 2024 Nokia.

end *number*

Synopsis	Upper bound of the port range
Context	**configure** filter ipv6-exception *string* entry *number* match dst-port range end *number*
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	VSR

start *number*

Synopsis	Lower bound of the port range
Context	**configure** filter ipv6-exception *string* entry *number* match dst-port range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	VSR

icmp

Synopsis	Enter the **icmp** context
Context	**configure** filter ipv6-exception *string* entry *number* match icmp
Tree	icmp
Introduced	20.10.R1
Platforms	VSR

code *number*

Synopsis	ICMPv6 code value to match
Context	**configure** filter ipv6-exception *string* entry *number* match icmp code *number*
Tree	code
Range	0 to 255
Introduced	20.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	VSR

type *number*

Synopsis	ICMPv6 type value to match
Context	**configure** filter ipv6-exception *string* entry *number* match icmp type *number*
Tree	type
Range	0 to 255
Introduced	20.10.R1
Platforms	VSR

next-header *(number | keyword)*

Synopsis	IP protocol to match
Context	**configure** filter ipv6-exception *string* entry *number* match next-header *(number | keyword)*
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	20.10.R1
Platforms	VSR

port

Synopsis	Enter the **port** context
Context	**configure** filter ipv6-exception *string* entry *number* match port
Tree	port
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	20.10.R1
Platforms	VSR

eq *number*

Synopsis	Exact value as the match criterion

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-exception *string* entry *number* match port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	20.10.R1
Platforms	VSR

gt *number*

Synopsis	Greater than value as the match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match port gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	20.10.R1
Platforms	VSR

lt *number*

Synopsis	Less than value as the match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match port lt *number*
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	20.10.R1
Platforms	VSR

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *string*
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.

Introduced	20.10.R1
Platforms	VSR

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-exception *string* entry *number* match port range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	20.10.R1
Platforms	VSR

end *number*

Synopsis	Upper bound of the port range
Context	**configure** filter ipv6-exception *string* entry *number* match port range end *number*
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	VSR

start *number*

Synopsis	Lower bound of the port range
Context	**configure** filter ipv6-exception *string* entry *number* match port range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	VSR

src-ip

Synopsis	Enter the **src-ip** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-exception *string* entry *number* match src-ip
Tree	src-ip
Introduced	20.10.R1
Platforms	VSR

address *(ipv6-prefix-with-host-bits | ipv6-address)*

Synopsis	IPv6 address used as the match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match src-ip address *(ipv6-prefix-with-host-bits | ipv6-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	20.10.R1
Platforms	VSR

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match src-ip ipv6-prefix-list *reference*
Tree	ipv6-prefix-list
Reference	**configure** filter match-list ipv6-prefix-list *string*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	20.10.R1
Platforms	VSR

mask *string*

Synopsis	IPv6 address mask used as the match criterion
Context	**configure** filter ipv6-exception *string* entry *number* match src-ip mask *string*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	20.10.R1
Platforms	VSR
