Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the **configure router bfd** context.
Reference	**configure** bfd bfd-template *string*
Introduced	21.2.R1
Platforms	All

failure-action *keyword*

Synopsis	VCCV BFD action taken on the SDP binding

Context	**configure** service vprn *string* interface *string* spoke-sdp *string* bfd failure-action *keyword*
Tree	failure-action
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the **configure router bfd** context.
Options	none, down
Default	none
Introduced	21.2.R1
Platforms	All

wait-for-up-timer *number*

Synopsis	Time waited for BFD up status
Context	**configure** service vprn *string* interface *string* spoke-sdp *string* bfd wait-for-up-timer *number*
Tree	wait-for-up-timer
Description	This command configures the time interval that is used to wait for a BFD session to come up. This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP.
Range	1 to 60
Units	seconds
Introduced	21.2.R1
Platforms	All

collect-stats *boolean*

Synopsis	Allow agent to collect accounting statistics

Tree	collect-lmm-fc-stats

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure per forwarding class (FC) LMM information collection. The commands **fc-in-profile** and **fc** in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively. This command and the **collect-lmm-stats** command are mutually exclusive when there is entity resource contention.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc *keyword*

Synopsis	Forwarding class name for profile-unaware counter
Context	**configure** service vprn *string* interface *string* spoke-sdp *string* eth-cfm collect-lmm-fc-stats fc *keyword*
Tree	fc
Description	This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter. An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the **fc-in-profile** command under the **collect-lmm-fc-stats** context. When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc-in-profile *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	**configure** service vprn *string* interface *string* spoke-sdp *string* eth-cfm collect-lmm-fc-stats fc-in-profile *keyword*
Tree	fc-in-profile
Description	This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the **fc** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	**configure** service vprn *string* interface *string* spoke-sdp *string* eth-cfm collect-lmm-stats *boolean*
Tree	collect-lmm-stats
Description	When configured to **true**, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings. The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters. When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the **eth-vsm-grace** context
Context	**configure** service vprn *string* interface *string* spoke-sdp *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	**configure** service vprn *string* interface *string* spoke-sdp *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace rx-eth-vsm-grace *boolean*
Tree	rx-eth-vsm-grace
Description	When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to **false**, the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** service vprn *string* interface *string* spoke-sdp *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace tx-eth-vsm-grace *boolean*
Tree	tx-eth-vsm-grace
Description	When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** service vprn *string* interface *string* spoke-sdp *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* low-priority-defect *keyword*
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	**configure** service vprn *string* interface *string* spoke-sdp *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* one-way-delay-threshold *number*
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-levels *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* interface *string* spoke-sdp *string* eth-cfm squelch-ingress-levels *number*
Tree	squelch-ingress-levels
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option. The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hash-label

Synopsis	Enable the **hash-label** context
Context	**configure** service vprn *string* interface *string* spoke-sdp *string* hash-label
Tree	hash-label
Description	Commands in this context configure the use of hash labels for egress datapaths. For information about hash-label handling, see the "Hash labels" section of the *7450 ESS, 7750 SR, 7950 XRS, and VSR MPLS Guide*.
Notes	The following elements are part of a choice: **entropy-label** or **hash-label**.
Introduced	16.0.R1
Platforms	All

signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	**configure** service vprn *string* interface *string* spoke-sdp *string* hash-label signal-capability
Tree	signal-capability
Description	When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.

ipsec

Synopsis	Enter the **ipsec** context
Context	**configure** service vprn *string* ipsec
Tree	ipsec
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

allow-reverse-route-override-type *keyword*

Synopsis	System behavior for new reverse route
Context	**configure** service vprn *string* ipsec allow-reverse-route-override-type *keyword*
Tree	allow-reverse-route-override-type
Description	This command specifies the system behavior when a new reverse route overlaps with an existing reverse route. When unconfigured, the system does not allow a new dynamic LAN-to-LAN tunnel that terminates in the private VPRN service to be created with an overlapping reverse route.
Options	same-idi, any-idi
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multi-chassis-shunt-interface [name] *reference*

Synopsis	Enter the **multi-chassis-shunt-interface** list instance
Context	**configure** service vprn *string* ipsec multi-chassis-shunt-interface *reference*
Tree	multi-chassis-shunt-interface
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *reference*

Synopsis	Multi-chassis shunt interface name
Context	**configure** service vprn *string* ipsec multi-chassis-shunt-interface *reference*
Tree	multi-chassis-shunt-interface
Reference	**configure** service vprn *string* interface *string*
Notes	This element is part of a list key.

Tree	mtu
Range	1280 to 9800
Introduced	16.0.R1
Platforms	All

nd-router-preference *keyword*

Synopsis	Default router preference for Router Advertisements
Context	**configure** service vprn *string* ipv6 router-advertisement interface *reference* nd-router-preference *keyword*
Tree	nd-router-preference
Description	This command configures the default router preference for Router Advertisements (RAs) and allows IPv6 hosts to discover and select a default gateway address by listening to RAs. This feature provides basic traffic engineering functionality for host devices. When this command is applied, the router advertises the respective router preference to the connected host to assist in its selection of the most appropriate default gateway on a link. This extension is backward compatible, both for routers (setting the router preference bits) and hosts (interpreting the router preference bits). These bits are ignored by hosts that do not implement the RFC 4191 functionality by configuring this command. Similarly, hosts that do not implement the RFC 4191 functionality interpret the values sent by devices that do not implement the RFC 4191 extension as a medium preference.
Options	medium, high, low
Default	medium

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	**configure** service vprn *string* isis *number* export-policy *reference*
Tree	export-policy
Description	This command configures export routing policies for the routes exported from the routing table to IS-IS. If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS. If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied. If the **aggregate** command is also configured in the **configure router** context, the aggregation is applied before the export policy is applied. Routing policies are created in the **configure router policy-options** context.
Reference	**configure** policy-options policy-statement *string*
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1

bfd-liveness

Synopsis	Enter the **bfd-liveness** context
Context	**configure** service vprn *string* isis *number* interface *string* bfd-liveness
Tree	bfd-liveness
Description	Commands in this context enable the use of bidirectional forwarding (BFD) to control IPv4 and IPv6 adjacencies. Enabling BFD on an IPv4 or IPv6 protocol interface ties the protocol interface state to the BFD session state between the local and remote nodes. BFD must be enabled on the applicable IP interface.

mru-mismatch-detection *boolean*

Synopsis	Enable detection of MRU mismatch
Context	**configure** service vprn *string* isis *number* mru-mismatch-detection *boolean*
Tree	mru-mismatch-detection
Description	When configured to **true**, this command verifies that the received IS-IS Hello (IIH) packet size does not exceed the configured maximum port MTU size. The received IIH packet is dropped when its size exceeds the maximum port MTU size. When configured to **false**, the IS-IS router instance will not drop oversized IIH packets. By default, FP-based hardware can receive oversized packets but it will not originate them.
Default	false
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multi-topology

Tree	overload-export-interlevel
Default	false
Introduced	16.0.R1
Platforms	All

overload-fib-error-notify-only

Synopsis	Enable the **overload-fib-error-notify-only** context
Context	**configure** service vprn *string* isis *number* overload-fib-error-notify-only
Tree	overload-fib-error-notify-only
Description	Commands in this context configure the IS-IS router to send a notification when an overload condition occurs while programming the FIB, instead of advertising the overload condition of the router in the IS-IS LSP. **Note**: Nokia recommends being careful using this command. When you configure the router not to advertise the IS-IS overload state in the IS-IS LSP, other routers are not instructed to take the overloaded router out of the IS-IS forwarding topology and this will cause suboptimal forwarding and non-deterministic behavior on the overloaded router. To avoid changing the default IS-IS overflow behavior, leave this command disabled. When this command is configured, the IS-IS router enters a suboptimal state where it sends only a notification trap; transit traffic can still use the router in this state.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The IS-IS router tracks the segment routing prefix SIDs where FIB programming failed. With the **retry** command configured, the router retries programming the segment routing prefix SIDs in the FIB using this tracked information.

When this command is not configured, during normal operation, the system may force the router to enter an overload state because of a lack of FIB resources. In this state, the router is used to terminate traffic and is not used to transit traffic.

Introduced	23.7.R1
Platforms	All

retry *number*

Synopsis	Time to retry programming failed entries in the FIB
Context	**configure** service vprn *string* isis *number* overload-fib-error-notify-only retry *number*
Tree	retry
Description	This command configures the time the router uses to retry programming the failed entries in the FIB. The **overload-fib-error-notify-only** command must be configured to use the retry timer. The removal of the **overload-fib-error-notify-only** configuration causes the system to program the failed entries in the FIB by triggering an immediate SPF.
Range	10 to 1800
Units	seconds
Default	10
Introduced	23.7.R1
Platforms	All

overload-on-boot

Synopsis	Enable the **overload-on-boot** context

calling-number *boolean*

Synopsis	Calling Number AVP to exclude
Context	**configure** service vprn *string* l2tp exclude-avps calling-number *boolean*
Tree	calling-number
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

initial-rx-lcp-conf-req *boolean*

Synopsis	Exclude the Initial Received LCP CONFREQ AVP
Context	**configure** service vprn *string* l2tp exclude-avps initial-rx-lcp-conf-req *boolean*
Tree	initial-rx-lcp-conf-req
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover

Synopsis	Enter the **failover** context
Context	**configure** service vprn *string* l2tp failover
Tree	failover
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-max-session-lifetime *number*

Synopsis	Subset of sessions that this system attempts to synchronize in the Session State Synchronization phase
Context	**configure** service vprn *string* l2tp failover recovery-max-session-lifetime *number*
Tree	recovery-max-session-lifetime
Range	2 to 4294967295
Units	centiseconds
Default	2
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-method *keyword*

Synopsis	Recovery method of the sequence numbers after failover
Context	**configure** service vprn *string* l2tp failover recovery-method *keyword*
Tree	recovery-method
Options	mcs, recovery-tunnel
Default	mcs
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-time *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	**configure** service vprn *string* l2tp failover recovery-time *number*
Tree	recovery-time
Range	0 to 900
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-srrp [id] *reference*

Synopsis	Enter the **track-srrp** list instance
Context	**configure** service vprn *string* l2tp failover track-srrp *reference*
Tree	track-srrp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *reference*

Synopsis	SRRP instance ID for multi-chassis redundancy failover
Context	**configure** service vprn *string* l2tp failover track-srrp *reference*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	track-srrp
Reference	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone* | *ipv6-address-no-zone)* sync track-srrp *number*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer *reference*

Synopsis	Multi-chassis peer address
Context	**configure** service vprn *string* l2tp failover track-srrp *reference* peer *reference*
Tree	peer
Reference	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone* | *ipv6-address-no-zone)*
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sync-tag *string*

Synopsis	Synchronization tag on the multi-chassis peer
Context	**configure** service vprn *string* l2tp failover track-srrp *reference* sync-tag *string*
Tree	sync-tag
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group [tunnel-group-name] *string*

Synopsis	Enter the **group** list instance
Context	**configure** service vprn *string* l2tp group *string*
Tree	group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**tunnel-group-name**] *string*

Synopsis	Tunnel group name
Context	**configure** service vprn *string* l2tp group *string*
Tree	group
String Length	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the L2TP tunnel group
Context	**configure** service vprn *string* l2tp group *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

avp-hiding *keyword*

Synopsis	The AVP hiding algorithm
Context	**configure** service vprn *string* l2tp group *string* avp-hiding *keyword*
Tree	avp-hiding
Options	never, sensitive, always
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

challenge *keyword*

Synopsis	Enable use of challenge-response authentication
Context	**configure** service vprn *string* l2tp group *string* challenge *keyword*
Tree	challenge
Options	false, true

© 2024 Nokia.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** service vprn *string* l2tp group *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destruct-timeout *number*

Synopsis	Destruction timeout
Context	**configure** service vprn *string* l2tp group *string* destruct-timeout *number*
Tree	destruct-timeout
Range	60 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ethernet-tunnel

Synopsis	Enter the **ethernet-tunnel** context
Context	**configure** service vprn *string* l2tp group *string* ethernet-tunnel
Tree	ethernet-tunnel
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reconnect-timeout *(number | keyword)*

Synopsis	Timeout for a session setup retry at group level
Context	**configure** service vprn *string* l2tp group *string* ethernet-tunnel reconnect-timeout *(number | keyword)*
Tree	reconnect-timeout

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	10 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover

Synopsis	Enter the **failover** context
Context	**configure** service vprn *string* l2tp group *string* failover
Tree	failover
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-method *keyword*

Synopsis	Recovery method of the sequence numbers after failover
Context	**configure** service vprn *string* l2tp group *string* failover recovery-method *keyword*
Tree	recovery-method
Options	mcs, recovery-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-time *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	**configure** service vprn *string* l2tp group *string* failover recovery-time *number*
Tree	recovery-time
Range	0 to 900
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

hello-interval *(number | keyword)*

Synopsis	Hello interval
Context	**configure** service vprn *string* l2tp group *string* hello-interval *(number | keyword)*
Tree	hello-interval
Range	10 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout *(number | keyword)*

Synopsis	Idle timeout
Context	**configure** service vprn *string* l2tp group *string* idle-timeout *(number | keyword)*
Tree	idle-timeout
Range	0 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tpv3

Synopsis	Enter the **l2tpv3** context
Context	**configure** service vprn *string* l2tp group *string* l2tpv3
Tree	l2tpv3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cookie-length *(number | keyword)*

Synopsis	Cookie field length
Context	**configure** service vprn *string* l2tp group *string* l2tpv3 cookie-length *(number | keyword)*
Tree	cookie-length
Range	4 | 8

© 2024 Nokia.

Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

digest-type *keyword*

Synopsis	Hashing algorithm that calculates the message digest
Context	**configure** service vprn *string* l2tp group *string* l2tpv3 digest-type *keyword*
Tree	digest-type
Options	none, md5, sha1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nonce-length *number*

Synopsis	Length for the local L2TPv3 nonce (random number)
Context	**configure** service vprn *string* l2tp group *string* l2tpv3 nonce-length *number*
Tree	nonce-length
Range	0 | 16 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis	L2TPv3 password
Context	**configure** service vprn *string* l2tp group *string* l2tpv3 password *string*
Tree	password
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

private-tcp-mss-adjust *(number | keyword)*

Synopsis	TCP maximum segment size (MSS) on private network
Context	**configure** service vprn *string* l2tp group *string* l2tpv3 private-tcp-mss-adjust *(number | keyword)*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	private-tcp-mss-adjust
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

public-tcp-mss-adjust *(number | keyword)*

Synopsis	TCP Maximum Segment Size (MSS) on public network
Context	**configure** service vprn *string* l2tp group *string* l2tpv3 public-tcp-mss-adjust *(number | keyword)*
Tree	public-tcp-mss-adjust
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pw-cap-list

Synopsis	Enter the **pw-cap-list** context
Context	**configure** service vprn *string* l2tp group *string* l2tpv3 pw-cap-list
Tree	pw-cap-list
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ethernet *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise Ethernet pseudowire type
Context	**configure** service vprn *string* l2tp group *string* l2tpv3 pw-cap-list ethernet *boolean*
Tree	ethernet

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ethernet-vlan *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise Ethernet VLAN pseudowire type
Context	**configure** service vprn *string* l2tp group *string* l2tpv3 pw-cap-list ethernet-vlan *boolean*
Tree	ethernet-vlan
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rem-router-id *string*

Synopsis	Filter on remote router ID
Context	**configure** service vprn *string* l2tp group *string* l2tpv3 rem-router-id *string*
Tree	rem-router-id
Default	0.0.0.0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-password-change *boolean*

Synopsis	Enable tracking of password changes
Context	**configure** service vprn *string* l2tp group *string* l2tpv3 track-password-change *boolean*
Tree	track-password-change
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac

Synopsis	Enter the **lac** context
Context	**configure** service vprn *string* l2tp group *string* lac
Tree	lac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

df-bit *keyword*

Synopsis	DF (do not fragment) bit in data traffic transmitted as LAC
Context	**configure** service vprn *string* l2tp group *string* lac df-bit *keyword*
Tree	df-bit
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lns

Synopsis	Enter the **lns** context
Context	**configure** service vprn *string* l2tp group *string* lns
Tree	lns
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lns-group *reference*

Synopsis	ISA LNS group
Context	**configure** service vprn *string* l2tp group *string* lns lns-group *reference*
Tree	lns-group
Reference	**configure** isa lns-group *number*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

load-balance-method *keyword*

Synopsis	New sessions for L2TP ISA MDA
Context	**configure** service vprn *string* l2tp group *string* lns load-balance-method *keyword*
Tree	load-balance-method
Options	per-session, per-tunnel
Default	per-session
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mlppp

Synopsis	Enter the **mlppp** context
Context	**configure** service vprn *string* l2tp group *string* lns mlppp
Tree	mlppp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of MLPPP in the L2TP tunnel group
Context	**configure** service vprn *string* l2tp group *string* lns mlppp admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

endpoint

Synopsis	Enter the **endpoint** context
Context	**configure** service vprn *string* l2tp group *string* lns mlppp endpoint
Tree	endpoint
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

© 2024 Nokia.

ip *(ipv4-address | keyword)*

Synopsis	Endpoint ID as an IP address
Context	**configure** service vprn *string* l2tp group *string* lns mlppp endpoint ip *(ipv4-address | keyword)*
Tree	ip
Options	system
Notes	The following elements are part of a choice: **ip** or **mac**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

mac *(mac-address | keyword)*

Synopsis	Endpoint ID as a MAC address
Context	**configure** service vprn *string* l2tp group *string* lns mlppp endpoint mac *(mac-address | keyword)*
Tree	mac
Options	system
Notes	The following elements are part of a choice: **ip** or **mac**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

interleave *boolean*

Synopsis	Enable link fragmentation and interleaving
Context	**configure** service vprn *string* l2tp group *string* lns mlppp interleave *boolean*
Tree	interleave
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

max-fragment-delay *(number | keyword)*

Synopsis	Maximum fragment delay caused by transmission on a link
Context	**configure** service vprn *string* l2tp group *string* lns mlppp max-fragment-delay *(number | keyword)*

© 2024 Nokia.

Tree	max-fragment-delay
Range	5 to 1000
Units	milliseconds
Options	no-fragmentation
Default	no-fragmentation
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

max-links *number*

Synopsis	Maximum MLPPP links
Context	**configure** service vprn *string* l2tp group *string* lns mlppp max-links *number*
Tree	max-links
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

reassembly-timeout *number*

Synopsis	Reassembly timeout
Context	**configure** service vprn *string* l2tp group *string* lns mlppp reassembly-timeout *number*
Tree	reassembly-timeout
Range	100 | 1000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

short-sequence-numbers *boolean*

Synopsis	Request a peer to send short sequence numbers
Context	**configure** service vprn *string* l2tp group *string* lns mlppp short-sequence-numbers *boolean*
Tree	short-sequence-numbers

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

ppp

Synopsis	Enter the **ppp** context
Context	**configure** service vprn *string* l2tp group *string* lns ppp
Tree	ppp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication *keyword*

Synopsis	PPP authentication protocol to negotiate
Context	**configure** service vprn *string* l2tp group *string* lns ppp authentication *keyword*
Tree	authentication
Options	pap, chap, pref-chap, pref-pap
Default	pref-chap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication-policy *string*

Synopsis	Authentication policy when a DHCP message is received
Context	**configure** service vprn *string* l2tp group *string* lns ppp authentication-policy *string*
Tree	authentication-policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

chap-challenge-length

Synopsis	Enter the **chap-challenge-length** context
Context	**configure** service vprn *string* l2tp group *string* lns ppp chap-challenge-length

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	chap-challenge-length
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of the PPP CHAP challenge length
Context	**configure** service vprn *string* l2tp group *string* lns ppp chap-challenge-length end *number*
Tree	end
Range	8 to 64
Units	octets
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	Lower bound of the PPP CHAP challenge length
Context	**configure** service vprn *string* l2tp group *string* lns ppp chap-challenge-length start *number*
Tree	start
Range	8 to 64
Units	octets
Default	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-group-interface

Synopsis	Enter the **default-group-interface** context
Context	**configure** service vprn *string* l2tp group *string* lns ppp default-group-interface
Tree	default-group-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

interval *number*

Synopsis	PPP keepalive interval
Context	**configure** service vprn *string* l2tp group *string* lns ppp keepalive interval *number*
Tree	interval
Range	10 to 300
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multiplier *number*

Synopsis	PPP keepalive multiplier
Context	**configure** service vprn *string* l2tp group *string* lns ppp keepalive multiplier *number*
Tree	multiplier
Range	1 to 5
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lcp-force-ack-accm *boolean*

Synopsis	Force acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option
Context	**configure** service vprn *string* l2tp group *string* lns ppp lcp-force-ack-accm *boolean*
Tree	lcp-force-ack-accm
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lcp-ignore-magic-numbers *boolean*

Synopsis	Check magic number in echo request and reply messages
Context	**configure** service vprn *string* l2tp group *string* lns ppp lcp-ignore-magic-numbers *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	lcp-ignore-magic-numbers
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu *number*

Synopsis	Maximum PPP MTU size
Context	**configure** service vprn *string* l2tp group *string* lns ppp mtu *number*
Tree	mtu
Range	512 to 9212
Units	octets
Default	1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

proxy-authentication *boolean*

Synopsis	Use authentication AVPs that are received from LAC
Context	**configure** service vprn *string* l2tp group *string* lns ppp proxy-authentication *boolean*
Tree	proxy-authentication
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

proxy-lcp *boolean*

Synopsis	Proxy LCP AVPs that are received from LAC
Context	**configure** service vprn *string* l2tp group *string* lns ppp proxy-lcp *boolean*
Tree	proxy-lcp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

reject-disabled-ncp *boolean*

Synopsis	Force LCP Protocol Reject for IPv6CP Configure Request
Context	**configure** service vprn *string* l2tp group *string* lns ppp reject-disabled-ncp *boolean*
Tree	reject-disabled-ncp
Default	false
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-db *string*

Synopsis	Local user database for PPP PAP and CHAP authentication
Context	**configure** service vprn *string* l2tp group *string* lns ppp user-db *string*
Tree	user-db
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-address *string*

Synopsis	Local address
Context	**configure** service vprn *string* l2tp group *string* local-address *string*
Tree	local-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-name *string*

Synopsis	Local host name used to distinguish tunnels
Context	**configure** service vprn *string* l2tp group *string* local-name *string*
Tree	local-name
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

max-retries-estab *number*

Synopsis	Maximum retries for established tunnels
Context	**configure** service vprn *string* l2tp group *string* max-retries-estab *number*
Tree	max-retries-estab
Range	2 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-not-estab *number*

Synopsis	Maximum retries for unestablished tunnels
Context	**configure** service vprn *string* l2tp group *string* max-retries-not-estab *number*
Tree	max-retries-not-estab
Range	2 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis	Password between L2TP LAC and LNS
Context	**configure** service vprn *string* l2tp group *string* password *string*
Tree	password
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

protocol *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Protocol version
Context	**configure** service vprn *string* l2tp group *string* protocol *keyword*
Tree	protocol
Options	v2, v3, v3draft

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	v2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis	RADIUS accounting policy
Context	**configure** service vprn *string* l2tp group *string* radius-accounting-policy *reference*
Tree	radius-accounting-policy
Reference	**configure** aaa radius l2tp-accounting-policy *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive-window-size *number*

Synopsis	L2TP receive window size
Context	**configure** service vprn *string* l2tp group *string* receive-window-size *number*
Tree	receive-window-size
Range	4 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-assign-method *keyword*

Synopsis	Session assignment method
Context	**configure** service vprn *string* l2tp group *string* session-assign-method *keyword*
Tree	session-assign-method
Options	existing-first, weighted, weighted-random
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-limit *(number | keyword)*

Synopsis	Session limit
Context	**configure** service vprn *string* l2tp group *string* session-limit *(number | keyword)*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	session-limit
Range	1 to 250000
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel [tunnel-name] *string*

Synopsis	Enter the **tunnel** list instance
Context	**configure** service vprn *string* l2tp group *string* tunnel *string*
Tree	tunnel
Max. Instances	31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**tunnel-name**] *string*

Synopsis	Tunnel name
Context	**configure** service vprn *string* l2tp group *string* tunnel *string*
Tree	tunnel
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the L2TP tunnel
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

auto-establish *boolean*

Synopsis	Allow the tunnel to be automatically set up by the system
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* auto-establish *boolean*
Tree	auto-establish
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

avp-hiding *keyword*

Synopsis	The AVP hiding algorithm
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* avp-hiding *keyword*
Tree	avp-hiding
Options	never, sensitive, always
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

challenge *keyword*

Synopsis	Enable use of challenge-response authentication
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* challenge *keyword*
Tree	challenge
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

destruct-timeout *number*

Synopsis	Destruction timeout
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* destruct-timeout *number*
Tree	destruct-timeout
Range	60 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover

Synopsis	Enter the **failover** context
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* failover
Tree	failover
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-method *keyword*

Synopsis	Recovery method of the sequence numbers after failover
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* failover recovery-method *keyword*
Tree	recovery-method
Options	mcs, recovery-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-time *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* failover recovery-time *number*
Tree	recovery-time
Range	0 to 900
Units	seconds

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hello-interval *(number | keyword)*

Synopsis	Hello interval
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* hello-interval *(number | keyword)*
Tree	hello-interval
Range	10 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout *(number | keyword)*

Synopsis	Idle timeout
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* idle-timeout *(number | keyword)*
Tree	idle-timeout
Range	0 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tpv3

Synopsis	Enter the **l2tpv3** context
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* l2tpv3
Tree	l2tpv3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

private-tcp-mss-adjust *(number | keyword)*

Synopsis	TCP maximum segment size (MSS) on private network
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* l2tpv3 private-tcp-mss-adjust *(number | keyword)*
Tree	private-tcp-mss-adjust
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

public-tcp-mss-adjust *(number | keyword)*

Synopsis	TCP maximum segment size (MSS) on public network
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* l2tpv3 public-tcp-mss-adjust *(number | keyword)*
Tree	public-tcp-mss-adjust
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac

Synopsis	Enter the **lac** context
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lac
Tree	lac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

df-bit *keyword*

Synopsis	DF (do not fragment) bit in data traffic transmitted as LAC
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lac df-bit *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	df-bit
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lns

Synopsis	Enter the **lns** context
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns
Tree	lns
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lns-group *reference*

Synopsis	ISA LNS group
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns lns-group *reference*
Tree	lns-group
Reference	**configure** isa lns-group *number*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

load-balance-method *keyword*

Synopsis	New sessions for L2TP ISA MDA
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns load-balance-method *keyword*
Tree	load-balance-method
Options	per-session, per-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mlppp

Synopsis	Enter the **mlppp** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns mlppp
Tree	mlppp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of MLPPP in the L2TP tunnel
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns mlppp admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

endpoint

Synopsis	Enter the **endpoint** context
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns mlppp endpoint
Tree	endpoint
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

ip *(ipv4-address | keyword)*

Synopsis	Endpoint ID as an IP address
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns mlppp endpoint ip *(ipv4-address | keyword)*
Tree	ip
Options	system
Notes	The following elements are part of a choice: **ip** or **mac**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mac *(mac-address | keyword)*

Synopsis	Endpoint ID as a MAC address
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns mlppp endpoint mac *(mac-address | keyword)*
Tree	mac
Options	system
Notes	The following elements are part of a choice: **ip** or **mac**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

interleave *keyword*

Synopsis	Use of Link fragmentation and interleaving
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns mlppp interleave *keyword*
Tree	interleave
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

max-fragment-delay *number*

Synopsis	Maximum fragment delay caused by transmission on a link
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns mlppp max-fragment-delay *number*
Tree	max-fragment-delay
Range	5 to 1000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

max-links *number*

Synopsis	Maximum MLPPP links
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns mlppp max-links *number*
Tree	max-links

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

reassembly-timeout *number*

Synopsis	Reassembly timeout
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns mlppp reassembly-timeout *number*
Tree	reassembly-timeout
Range	100 | 1000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

short-sequence-numbers *keyword*

Synopsis	Request a peer to send short sequence numbers
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns mlppp short-sequence-numbers *keyword*
Tree	short-sequence-numbers
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

ppp

Synopsis	Enter the **ppp** context
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns ppp
Tree	ppp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication *keyword*

Synopsis	PPP authentication protocol to negotiate

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns ppp authentication *keyword*
Tree	authentication
Options	pap, chap, pref-chap, pref-pap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication-policy *string*

Synopsis	Authentication policy when a DHCP message is received
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns ppp authentication-policy *string*
Tree	authentication-policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

chap-challenge-length

Synopsis	Enter the **chap-challenge-length** context
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns ppp chap-challenge-length
Tree	chap-challenge-length
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of the PPP CHAP challenge length
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns ppp chap-challenge-length end *number*
Tree	end
Range	8 to 64
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

start *number*

Synopsis	Lower bound of the PPP CHAP challenge length
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns ppp chap-challenge-length start *number*
Tree	start
Range	8 to 64
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-group-interface

Synopsis	Enter the **default-group-interface** context
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns ppp default-group-interface
Tree	default-group-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interface *string*

Synopsis	Group interface
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns ppp default-group-interface interface *string*
Tree	interface
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

service-name *string*

Synopsis	Administrative service name
Context	**configure** service vprn *string* l2tp group *string* tunnel *string* lns ppp default-group-interface service-name *string*
Tree	service-name

group-session-limit *number*

Synopsis	L2TP session limit for each group of this router
Context	**configure** service vprn *string* l2tp group-session-limit *number*
Tree	group-session-limit
Range	1 to 250000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hello-interval *(number | keyword)*

Synopsis	Hello interval
Context	**configure** service vprn *string* l2tp hello-interval *(number | keyword)*
Tree	hello-interval
Range	10 to 3600
Units	seconds
Options	infinite
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout *(number | keyword)*

Synopsis	Idle timeout
Context	**configure** service vprn *string* l2tp idle-timeout *(number | keyword)*
Tree	idle-timeout
Range	0 to 3600
Units	seconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-avps

Synopsis	Enter the **ignore-avps** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* l2tp ignore-avps
Tree	ignore-avps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sequencing-required *boolean*

Synopsis	Ignore Sequencing Required AVP
Context	**configure** service vprn *string* l2tp ignore-avps sequencing-required *boolean*
Tree	sequencing-required
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tpv3

Synopsis	Enter the **l2tpv3** context
Context	**configure** service vprn *string* l2tp l2tpv3
Tree	l2tpv3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cookie-length *number*

Synopsis	Cookie field length
Context	**configure** service vprn *string* l2tp l2tpv3 cookie-length *number*
Tree	cookie-length
Range	4 | 8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

digest-type *keyword*

Synopsis	Hashing algorithm that calculates the message digest
Context	**configure** service vprn *string* l2tp l2tpv3 digest-type *keyword*

© 2024 Nokia.

max-list-length *(number | keyword)*

Synopsis	Number of tunnels or peers in the denylist
Context	**configure** service vprn *string* l2tp tunnel-selection-blacklist max-list-length *(number | keyword)*
Tree	max-list-length
Range	1 to 65535
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-time *number*

Synopsis	Time that a tunnel or peer can remain in the denylist
Context	**configure** service vprn *string* l2tp tunnel-selection-blacklist max-time *number*
Tree	max-time
Range	1 to 60
Units	minutes
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout-action *keyword*

Synopsis	Action when a tunnel or peer exceeds time in denylist
Context	**configure** service vprn *string* l2tp tunnel-selection-blacklist timeout-action *keyword*
Tree	timeout-action
Options	remove-from-blacklist, try-one-session
Default	remove-from-blacklist
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel-session-limit *number*

Synopsis	L2TP session limit for each tunnel of this router

Context	**configure** service vprn *string* l2tp tunnel-session-limit *number*
Tree	tunnel-session-limit
Range	1 to 65534
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

label-mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allocation mode for VPRN service labels
Context	**configure** service vprn *string* label-mode *keyword*
Tree	label-mode
Options	vrf, next-hop
Default	vrf
Introduced	16.0.R1
Platforms	All

local-routes-domain-id *string*

Synopsis	Local routes domain ID
Context	**configure** service vprn *string* local-routes-domain-id *string*
Tree	local-routes-domain-id
Description	This command specifies the domain ID that is used in the D-PATH attribute for local routes before those routes are exported to a BGP neighbor using BGP-IPVPN, EVPN-IFF, EVPN-IFL, or PE-CE BGP. A local route is a non-BGP route installed in the VPRN route table and learned using static route or an IGP. The domain IDs are used in the D-PATH attribute, in accordance with draft-ietf-bess-evpn-ipvpn-interworking. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN IFL and BGP IPVPN). Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).
Introduced	21.10.R1

facility *keyword*

Synopsis	Facility code for messages
Context	**configure** service vprn *string* log syslog *string* facility *keyword*
Tree	facility
Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Default	local7
Introduced	16.0.R1
Platforms	All

hostname

Synopsis	Enter the **hostname** context
Context	**configure** service vprn *string* log syslog *string* hostname
Tree	hostname
Description	Commands in this context control how the HOSTNAME field of syslog messages is populated. If no command option is configured, the HOSTNAME is populated with an IP address.
Introduced	23.7.R1
Platforms	All

use-system-name

Synopsis	Enable the **use-system-name** context
Context	**configure** service vprn *string* log syslog *string* hostname use-system-name
Tree	use-system-name
Description	Commands in this context configure the system to use the system name configured with the **configure system name** command as the HOSTNAME field of syslog messages. Do not use any spaces in the system name if it is used for the syslog HOSTNAME.
Notes	The following elements are part of a choice: **use-system-name**, **use-vprn-name**, or **value**.
Introduced	23.7.R1
Platforms	All

use-vprn-name

Synopsis	Enable the **use-vprn-name** context
Context	**configure** service vprn *string* log syslog *string* hostname use-vprn-name
Tree	use-vprn-name
Description	Commands in this context configure the system to use the VPRN service name configured with the **configure service vprn service-name** command as the HOSTNAME field of syslog messages sent in this VPRN. Do not use any spaces in the VPRN name if it is used for the syslog HOSTNAME.
Notes	The following elements are part of a choice: **use-system-name**, **use-vprn-name**, or **value**.
Introduced	23.7.R1
Platforms	All

value *string*

Synopsis	Syslog HOSTNAME field value
Context	**configure** service vprn *string* log syslog *string* hostname value *string*
Tree	value
Description	This command configures a string as the HOSTNAME field of syslog messages. Do not use any spaces in the string used for the syslog HOSTNAME.
String Length	1 to 255
Notes	The following elements are part of a choice: **use-system-name**, **use-vprn-name**, or **value**.
Introduced	23.7.R1
Platforms	All

log-prefix *(keyword | string)*

Synopsis	Prefix string to log message sent to target syslog host
Context	**configure** service vprn *string* log syslog *string* log-prefix *(keyword | string)*
Tree	log-prefix
String Length	1 to 32
Options	no-prefix
Default	TMNX
Introduced	16.0.R1

Platforms	All

port *number*

Synopsis	Destination port when sending syslog over UDP
Context	**configure** service vprn *string* log syslog *string* port *number*
Tree	port
Range	0 | 1 to 65535
Default	514
Introduced	16.0.R1
Platforms	All

severity *keyword*

Synopsis	Severity level threshold for the syslog message
Context	**configure** service vprn *string* log syslog *string* severity *keyword*
Tree	severity
Options	emergency, alert, critical, error, warning, notice, info, debug
Default	info
Introduced	16.0.R1
Platforms	All

tls-client-profile *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	TLS client profile used to encrypt syslog communication
Context	**configure** service vprn *string* log syslog *string* tls-client-profile *reference*
Tree	tls-client-profile
Description	This command specifies the Transport Layer Security (TLS) client profile used to encrypt syslog communications. When configured, syslog messages are sent using TLS. Any change to this command results in a brief interruption of the event log, which may cause the loss of a few syslog messages. When this command is unconfigured, the syslog messages are sent over UDP.

Reference	**configure** system security tls client-tls-profile *string*
Introduced	21.10.R1
Platforms	All

management

Synopsis	Enable the **management** context
Context	**configure** service vprn *string* management
Tree	management
Description	Commands in this context control which management protocols can be used to access the SR OS router via the VPRN router instance. For SNMP control, see the **configure service vprn snmp access** command.
Introduced	16.0.R4
Platforms	All

allow-ftp *boolean*

Synopsis	Allow access to the FTP server
Context	**configure** service vprn *string* management allow-ftp *boolean*
Tree	allow-ftp
Description	When configured to **true**, this command allows FTP access to the SR OS router via the VPRN router instance. When configured to **false**, this command disallows access to the SR OS FTP server.
Default	false
Introduced	16.0.R6
Platforms	All

allow-grpc *boolean*

Synopsis	Allow access to the gRPC server
Context	**configure** service vprn *string* management allow-grpc *boolean*
Tree	allow-grpc
Description	When configured to **true**, this command allows access to the gRPC server via the VPRN router instance. When configured to **false**, this command disallows gRPC server access.
Default	false

policy *reference*

Synopsis	Multicast CAC policy name
Context	**configure** service vprn *string* mld forwarding-group-interface forwarding-service *string* group-interface-name *reference* mcac policy *reference*
Tree	policy
Description	This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment. Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode. If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect. Hierarchical MCAC (HMCAC) is supported on two levels simultaneously: • subscriber level and redirected interface when redirection is configured • subscriber level and group-interface level when redirection is unconfigured In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).
Reference	**configure** mcac policy *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy *reference*

Synopsis	Multicast CAC policy name
Context	**configure** service vprn *string* mld group-interface *reference* mcac policy *reference*
Tree	policy
Description	This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment. Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode. If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect. Hierarchical MCAC (HMCAC) is supported on two levels simultaneously: • subscriber level and redirected interface when redirection is configured • subscriber level and group-interface level when redirection is unconfigured In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

local-address *string*

Synopsis	Local end IP address of the MSDP group
Context	**configure** service vprn *string* msdp group *string* local-address *string*
Tree	local-address
Description	This command configures the local end address of an MSDP session. For MSDP to function, at least one peer with a local address must be configured. This address must be present on the node and is used to validate incoming connections to the peer and to establish connections to the remote peer. The specified IP address is validated and used as the local address for MSDP peers from that point. If a subsequent address is configured, it replaces the existing configuration and terminates any existing sessions When a session is terminated, all information pertaining to and learned from that peer is removed. When a new peering session is created or a peering session is lost, an event message is generated.
Introduced	19.10.R1
Platforms	All

mode *keyword*

Synopsis	Topology of the group of peers
Context	**configure** service vprn *string* msdp group *string* mode *keyword*
Tree	mode
Description	This command configures the MSDP group topology. MSDP peers can be grouped in a full-mesh topology to prevent excessive flooding of SA messages to neighboring peers. In a mesh group, SA messages received from a mesh group member are always accepted but are not flooded to other members of the same mesh group. These SA messages are only flooded to non-mesh group peers or members of other mesh groups.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Note: In a meshed configuration, all members of the group must have a peer connection with every other mesh group member. If this rule is not adhered to, unpredictable results may occur.

authentication-key *string*

Synopsis	MD5 authentication key for the MSDP peering session
Context	**configure** service vprn *string* msdp group *string* peer *string* authentication-key *string*
Tree	authentication-key
Description	This command configures a Message Digest 5 (MD5) authentication key to be used with a specific MSDP peering session. The authentication key is not inherited from the global or group level and must be configured per peer.
String Length	1 to 370
Introduced	19.10.R1
Platforms	All

default-peer *boolean*

Synopsis	Set the peer as a default MSDP peer
Context	**configure** service vprn *string* msdp group *string* peer *string* default-peer *boolean*
Tree	default-peer
Description	When configured to **true**, the system sets the peer as a default MSDP peer. All SA messages from a default peer are accepted without the usual peer-reverse-path-forwarding (RPF) check. Unlike the normal multicast RPF checks, the peer-RPF check stops SA messages from looping. When configured to **false**, the system sets the peer as a non-default peer, which forces all SA messages from the peer to be RPF checked.

kat-type5-advertisement-withdraw *boolean*

Synopsis	Enable KATs on source PEs for ng-MVPN deployments
Context	**configure** service vprn *string* mvpn intersite-shared kat-type5-advertisement-withdraw *boolean*
Tree	kat-type5-advertisement-withdraw
Description	When configured to **true**, this command specifies that the MVPN Type-5 “Source Active AD routes” are not removed even if all receivers are removed from the tree.
Default	false
Introduced	19.5.R1
Platforms	All

persistent-type5-advertisement *boolean*

Synopsis	Ensure Type-5 S-A routes are generated for MCAST source

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* mvpn intersite-shared persistent-type5-advertisement *boolean*
Tree	persistent-type5-advertisement
Description	When configured to **true**, this command removes the MVPN Type-5 “Source Active AD routes” even if receivers are present but the keepalive timer (KAT) has timed out because of no traffic.
Default	false
Introduced	19.5.R1
Platforms	All

mdt-type *keyword*

Synopsis	MVPN instance type per PE node
Context	**configure** service vprn *string* mvpn mdt-type *keyword*
Tree	mdt-type
Options	sender-only, receiver-only, sender-receiver
Default	sender-receiver
Introduced	19.5.R1
Platforms	All

provider-tunnel

Synopsis	Enter the **provider-tunnel** context
Context	**configure** service vprn *string* mvpn provider-tunnel
Tree	provider-tunnel
Introduced	19.5.R1
Platforms	All

inclusive

Synopsis	Enter the **inclusive** context
Context	**configure** service vprn *string* mvpn provider-tunnel inclusive

Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

mldp

Synopsis	Enable the **mldp** context
Context	**configure** service vprn *string* mvpn provider-tunnel inclusive mldp
Tree	mldp
Notes	The following elements are part of a choice: **bier**, **mldp**, **p2mp-sr**, **pim**, or **rsvp**.
Introduced	19.5.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of MLDP LSP use for tunnels
Context	**configure** service vprn *string* mvpn provider-tunnel inclusive mldp admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.5.R1
Platforms	All

p2mp-sr

Synopsis	Enable the **p2mp-sr** context
Context	**configure** service vprn *string* mvpn provider-tunnel inclusive p2mp-sr
Tree	p2mp-sr
Notes	The following elements are part of a choice: **bier**, **mldp**, **p2mp-sr**, **pim**, or **rsvp**.
Introduced	21.5.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state for P2MP SR
Context	**configure** service vprn *string* mvpn provider-tunnel inclusive p2mp-sr admin-state *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.5.R1
Platforms	All

bfd-leaf *boolean*

Synopsis	Enable unidirectional multipoint BFD on the leaf PE
Context	**configure** service vprn *string* mvpn provider-tunnel inclusive p2mp-sr bfd-leaf *boolean*
Tree	bfd-leaf
Description	When configured to **true**, this command enables unidirectional multipoint BFD sessions on a receiver (leaf) PE node for upstream fast failure detection over P2MP SR tree LSP.
Default	false
Introduced	21.10.R1
Platforms	All

bfd-root

Synopsis	Enable the **bfd-root** context
Context	**configure** service vprn *string* mvpn provider-tunnel inclusive p2mp-sr bfd-root
Tree	bfd-root
Introduced	21.10.R1
Platforms	All

multiplier *number*

Synopsis	Multiplier for the transmit interval of the BFD session
Context	**configure** service vprn *string* mvpn provider-tunnel inclusive p2mp-sr bfd-root multiplier *number*
Tree	multiplier
Description	This command configures the multiplier for the transmit interval. The interval and the multiplier are used to calculate the detection time, which is the period of time without receiving BFD packets after which the session failure is determined.
Range	1 to 20
Default	3

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

min-first-fragment-size-rx *number*

Synopsis	Minimum MTU size for upstream packets
Context	**configure** service vprn *string* nat inside large-scale dual-stack-lite endpoint *string* min-first-fragment-size-rx *number*
Tree	min-first-fragment-size-rx
Description	This command configures the minimum MTU size for the first fragment in the upstream direction. This command can be used to enable processing of first IPv6 fragments smaller than 1280 bytes. RFC 8200 recommends the minimum MTU in IPv6 be 1280 bytes which allows fragmentation only for packets that are larger than 1280 bytes. If a first fragment is smaller than 1280 bytes, DS-lite implementation in the SR OS, by default, drops the first fragment.
Range	512 to 1280
Default	1280
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reassembly *boolean*

Tree	first-outside-address
Notes	This element is mandatory.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-subscriber-limit *number*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Largest value for all subscriber limits in each deterministic pool
Context	**configure** service vprn *string* nat inside large-scale nat44 max-subscriber-limit *number*
Tree	max-subscriber-limit
Range	1 | 2 | 4 | 8 | 16 | 32 | 64 | 128 | 256 | 512 | 1024 | 2048 | 4096 | 8192 | 16384 | 32768
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-import *reference*

Synopsis	Import BGP-VPN routes in NAT inside routing context
Context	**configure** service vprn *string* nat inside large-scale nat44 nat-import *reference*
Tree	nat-import
Description	This command references an import policy to determine the routes that should be installed in the routing table as NAT routes, which are used to steer traffic to NAT. A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route is associated with a NAT policy that maps traffic destined into a NAT pool and outside routing context. If the NAT policy is not explicitly configured in the import route-policy, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context. All BGP-VPN routes that are destined to be imported into NAT inside routing context must be configured with action-type accept in the route policy.
Reference	**configure** policy-options policy-statement *string*
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Outside IP address allocation mode for a NAT subscriber
Context	**configure** service vprn *string* nat outside pool *string* address-pooling *keyword*
Tree	address-pooling
Description	This command configures address pooling which defines a relationship between the NAT subscriber and its outside IP address(es). The behavior in NAT, as defined in RFC 7857, strongly recommends that the NAT subscribers be mapped to a single outside IP address. If this outside IP address runs out of ports, no new ports for the subscriber are allocated. This behavior is called paired address pooling. The alternative behavior is arbitrary address pooling, where a NAT subscriber is mapped to multiple IP addresses when the current outside IP address runs out of ports. This way, the subscriber becomes associated with multiple outside IP addresses. While this results in better resource utilization in NAT, it may negatively affect the behavior of some applications.
Options	paired, arbitrary
Default	paired
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp-echo-reply *boolean*

Synopsis	Allow NAT pool IP addresses to respond to ICMP PINGs
Context	**configure** service vprn *string* nat outside pool *string* icmp-echo-reply *boolean*
Tree	icmp-echo-reply
Description	This command allows IP addresses in the NAT pool to respond to ICMP Echo requests (PINGs). The configuration can be toggled while the pool is in use. In L2-aware NAT when port-block-extensions is disabled, the reply from an outside IP address is generated only when this IP address has at least one host (binding) behind it. In L2-aware NAT when port-block-extensions is enabled, the reply from an outside IP address is generated regardless if a binding is present. In LSN, the reply from an outside IP address is generated regardless if a binding is present.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2-aware

Synopsis	Enter the **l2-aware** context
Context	**configure** service vprn *string* nat outside pool *string* l2-aware
Tree	l2-aware
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-host

Synopsis	Enable the **default-host** context
Context	**configure** service vprn *string* nat outside pool *string* l2-aware default-host
Tree	default-host
Description	Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated. Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The rate of redirected unknown traffic can be restricted by configuration.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router-instance *string*

Synopsis Router instance of the DMZ

subscriber-limit *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of L2-Aware NAT subscribers per outside address
Context	**configure** service vprn *string* nat outside pool *string* l2-aware port-block-extension subscriber-limit *number*
Tree	subscriber-limit
Description	When port-block extensions for the L2-Aware subscribers are enabled, the port space for an outside IP address is divided into the following: • well-known port (this is a fixed and permanently allocated block of ports for all NAT types) • static port-forwarding range (if enabled by configuration) • port range allocated for initial port blocks of each L2-Aware subscriber • port range allocated for extended port blocks for the remainder after the three previous port ranges The number of L2-Aware NAT subscribers per an outside IP address multiplied by the size of the initial port-block size determines the size of the port range reserved for initial port-blocks of each subscriber. The lower boundary of the extended port range is determined by adding the upper boundary of the configured port forwarding range and the size of the port range allocated for initial port blocks.
Range	2 to 2000
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dynamic-block-reservation *boolean*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Reserve dynamic block for subscriber
Context	**configure** service vprn *string* nat outside pool *string* port-forwarding dynamic-block-reservation *boolean*
Tree	dynamic-block-reservation
Description	When configured to **true**, the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged. The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released. Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address. When configured to **false**, dynamic port blocks are not reserved when the first port forward for the subscriber is created.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range-end *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	End of the wildcard range for port forwards
Context	**configure** service vprn *string* nat outside pool *string* port-forwarding range-end *number*
Tree	range-end
Description	This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the **range-start** command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If unconfigured, the **range-end** implicit value is set to 1023, that represents the end of the well-known port range that is always enabled.

Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.

Range	0 | 1023 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range-start *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Start of the wildcard range for port forwards
Context	**configure** service vprn *string* nat outside pool *string* port-forwarding range-start *number*
Tree	range-start
Description	This command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the **range-end** command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool. Port 0 is always excluded from the port forwarding range. Port forwards are supported only in pools in Network Address and Port Translation (NAPT) mode. Pools in 1:1 mode do not support configured port forwards.
Range	0 | 1 | 1025 to 65535
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-reservation

Synopsis	Enter the **port-reservation** context
Context	**configure** service vprn *string* nat outside pool *string* port-reservation
Tree	port-reservation
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-blocks *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Port block size for NAT subscribers
Context	**configure** service vprn *string* nat outside pool *string* port-reservation port-blocks *number*
Tree	port-blocks
Description	In CGN, this command specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block. For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the **l2-aware port-block-extension** hierarchy in the NAT pool.
Range	0 to 64512
Notes	The following elements are part of a choice: **port-blocks** or **ports**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ports *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Size of the port block for NAT subscribers
Context	**configure** service vprn *string* nat outside pool *string* port-reservation ports *number*
Tree	ports
Description	For carrier-grade NAT (CGN), this command specifies the size of port blocks for NAT subscribers in the NAT pool. For Layer 2 aware NAT, this command specifies the size of the initial port block of a subscriber in the pool. Additional port blocks (extended port blocks) for the Layer 2

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

aware subscriber must be explicitly enabled under the **l2-aware port-block-extension** hierarchy in the NAT pool.

This command does not affect the size of extended port blocks.

For deterministic pools, the port range begins with zero. However, for non-deterministic pools, the port range begins with one.

Range	0 to 64512
Notes	The following elements are part of a choice: **port-blocks** or **ports**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Platforms	All

transmit-interval *number*

Synopsis	BFD transmit interval over this interface
Context	**configure** service vprn *string* network-interface *string* ipv4 bfd transmit-interval *number*
Tree	transmit-interval
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

type *keyword*

Synopsis	Local termination point for the BFD session
Context	**configure** service vprn *string* network-interface *string* ipv4 bfd type *keyword*
Tree	type
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: • **auto** (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the **cpm-np**. • **cpm-np** – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.
Options	cpm-np, auto, fp
Default	auto
Introduced	16.0.R1

link-map-profile *number*

Synopsis	LAG link map profile for a SAP or network interface
Context	**configure** service vprn *string* network-interface *string* lag link-map-profile *number*
Tree	link-map-profile
Description	This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration. If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.
Range	1 to 64
Introduced	16.0.R1
Platforms	All

per-link-hash

Synopsis	Enter the **per-link-hash** context
Context	**configure** service vprn *string* network-interface *string* lag per-link-hash
Tree	per-link-hash
Introduced	16.0.R1
Platforms	All

class *number*

Synopsis	Class used on LAG egress using weighted per-link-hash
Context	**configure** service vprn *string* network-interface *string* lag per-link-hash class *number*
Tree	class
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	All

weight *number*

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	**configure** service vprn *string* network-interface *string* lag per-link-hash weight *number*

Tree	weight
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	All

load-balancing

Synopsis	Enter the **load-balancing** context
Context	**configure** service vprn *string* network-interface *string* load-balancing
Tree	load-balancing
Introduced	16.0.R1
Platforms	All

flow-label-load-balancing *boolean*

Synopsis	Enable flow label load balancing
Context	**configure** service vprn *string* network-interface *string* load-balancing flow-label-load-balancing *boolean*
Tree	flow-label-load-balancing
Description	When configured to **true**, the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface. When configured to **false**, the router disables load balancing in ECMP and LAG.
Default	false
Introduced	21.5.R1
Platforms	All

ip-load-balancing *keyword*

Synopsis	IP load-balancing algorithm
Context	**configure** service vprn *string* network-interface *string* load-balancing ip-load-balancing *keyword*
Tree	ip-load-balancing
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the **l4-load-balancing**

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	command is enabled, this command also includes the source or destination port in the hash inputs.
Options	both, destination, source, inner-ip
Default	both
Introduced	16.0.R3
Platforms	All

lsr-load-balancing *keyword*

Synopsis	LSR load-balancing algorithm
Context	**configure** service vprn *string* network-interface *string* load-balancing lsr-load-balancing *keyword*
Tree	lsr-load-balancing
Description	This command specifies whether the IP header is used in the LAG and ECMP LSR hashing algorithm. This is the per-interface setting.
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid
Introduced	16.0.R1
Platforms	All

spi-load-balancing *boolean*

Synopsis	Enable SPI use in hashing
Context	**configure** service vprn *string* network-interface *string* load-balancing spi-load-balancing *boolean*
Tree	spi-load-balancing
Description	When configured to **true**, the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting.
Default	false
Introduced	16.0.R1
Platforms	All

teid-load-balancing *boolean*

Synopsis	Enable use of TEID in hashing
Context	**configure** service vprn *string* network-interface *string* load-balancing teid-load-balancing *boolean*
Tree	teid-load-balancing

authentication-keychain *reference*

Synopsis	Keychain used to authenticate broadcast messages
Context	**configure** service vprn *string* ntp broadcast *reference* authentication-keychain *reference*
Tree	authentication-keychain
Description	This command configures the keychain used to authenticate messages sent by this node. The keychain infrastructure is queried using this keychain name to get the youngest key used for generating the authentication value for the message. When an NTP packet is received by this node, the keychain infrastructure is queried using the keychain name and the key ID extracted from the received message to get the key used to perform the authentication check. If authentication does not pass, the packet is rejected. Keychain entries also have a direction. The key ID and authentication keychain are mutually exclusive. When neither one is set, for example, the key ID has a value of '0' and the value of this command is empty, no authentication is performed.
Reference	**configure** system security keychains keychain *string*
Notes	The following elements are part of a choice: **authentication-keychain** or **key-id**.
Introduced	23.10.R1
Platforms	All

key-id *reference*

Default	false
Introduced	16.0.R1
Platforms	All

strict *boolean*

Synopsis	Enable BFD strict mode
Context	**configure** service vprn *string* ospf *number* area *string* interface *string* bfd-liveness strict *boolean*
Tree	strict
Description	When configured to **true**, the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to **true**, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set. During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.
Default	false
Introduced	23.3.R1
Platforms	All

strict-mode-holddown *number*

Synopsis	Adjacency up time delay after BFD session establishment
Context	**configure** service vprn *string* ospf *number* area *string* interface *string* bfd-liveness strict-mode-holddown *number*
Tree	strict-mode-holddown
Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	23.3.R1

Synopsis	Interface type
Context	**configure** service vprn *string* ospf *number* area *string* interface *string* interface-type *keyword*
Tree	interface-type
Description	This command specifies the interface type. **broadcast** - Broadcast network

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet.

non-broadcast - Non-broadcast network

point-to-point - Point-to-point link

Set the interface type of an Ethernet link to **point-to-point** to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.

p2mp-nbma - Point-to-multipoint on a link without broadcast or multicast support

No designated router or backup designated router is elected on this type of interface and all OSPF neighbors connect through individual point-to-point links. Only VPRN and IES services interfaces support this interface type.

secondary - Multiple secondary adjacencies allowed

A **secondary** interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.

Options	broadcast, non-broadcast, point-to-point, secondary, p2mp-nbma
Introduced	16.0.R1

compatible-rfc1583 *boolean*

Synopsis	OSPF summary and external route calculations
Context	**configure** service vprn *string* ospf *number* compatible-rfc1583 *boolean*
Tree	compatible-rfc1583
Default	true
Introduced	16.0.R1
Platforms	All

export-limit

Synopsis	Enable the **export-limit** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* ospf *number* export-limit
Tree	export-limit
Introduced	16.0.R1
Platforms	All

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	**configure** service vprn *string* ospf *number* export-limit log-percent *number*
Tree	log-percent
Range	1 to 100
Introduced	16.0.R1
Platforms	All

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	**configure** service vprn *string* ospf *number* export-limit number *number*
Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	**configure** service vprn *string* ospf *number* export-policy *reference*
Tree	export-policy
Description	This command configures export routing policies for the routes exported from the routing table to IS-IS. If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS. If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	If the **aggregate** command is also configured in the **configure router** context, the aggregation is applied before the export policy is applied. Routing policies are created in the **configure router policy-options** context.
Reference	**configure** policy-options policy-statement *string*
Max. Instances	5
Notes	This element is ordered by the user.

Platforms	All

strict *boolean*

Synopsis	Enable BFD strict mode
Context	**configure** service vprn *string* ospf3 *number* area *string* interface *string* bfd-liveness strict *boolean*
Tree	strict
Description	When configured to **true**, the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to **true**, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set. During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.
Default	false
Introduced	23.3.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

strict-mode-holddown *number*

Synopsis	Adjacency up time delay after BFD session establishment
Context	**configure** service vprn *string* ospf3 *number* area *string* interface *string* bfd-liveness strict-mode-holddown *number*
Tree	strict-mode-holddown
Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	23.3.R1
Platforms	All

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	**configure** service vprn *string* ospf3 *number* area *string* interface *string* dead-interval *number*

interface-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	**configure** service vprn *string* ospf3 *number* area *string* interface *string* interface-type *keyword*
Tree	interface-type
Description	This command specifies the interface type. **broadcast** - Broadcast network To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet. **non-broadcast** - Non-broadcast network **point-to-point** - Point-to-point link Set the interface type of an Ethernet link to **point-to-point** to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point. **p2mp-nbma** - Point-to-multipoint on a link without broadcast or multicast support No designated router or backup designated router is elected on this type of interface and all OSPF neighbors connect through individual point-to-point links. Only VPRN and IES services interfaces support this interface type. **secondary** - Multiple secondary adjacencies allowed A **secondary** interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.
Options	broadcast, non-broadcast, point-to-point, secondary, p2mp-nbma
Introduced	16.0.R1
Platforms	All

load-balancing-weight *number*

Synopsis	Configure load-balancing-weight.
Context	**configure** service vprn *string* ospf3 *number* area *string* interface *string* load-balancing-weight *number*

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	**configure** service vprn *string* ospf3 *number* export-policy *reference*
Tree	export-policy
Description	This command configures export routing policies for the routes exported from the routing table to IS-IS. If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS. If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied. If the **aggregate** command is also configured in the **configure router** context, the aggregation is applied before the export policy is applied. Routing policies are created in the **configure router policy-options** context.
Reference	**configure** policy-options policy-statement *string*
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1

Synopsis Use LAG port weight in calculating MCAC constraints

Context **configure** service vprn *string* pim interface *string* mcac mc-constraints use-lag-port-weight *boolean*

Tree use-lag-port-weight

Description When configured to **true**, port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.

Default false

Introduced 16.0.R1

Platforms All

policy *reference*

Synopsis Multicast CAC policy name

Context **configure** service vprn *string* pim interface *string* mcac policy *reference*

Tree policy

Description This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.

Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.

If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.

Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:

- subscriber level and redirected interface when redirection is configured
- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

Reference **configure** mcac policy *string*

Platforms	All

rpf-table *keyword*

Synopsis	Route table for RPF lookup
Context	**configure** service vprn *string* pim ipv4 rpf-table *keyword*
Tree	rpf-table
Options	rtable-m, rtable-u, both
Default	rtable-u
Introduced	16.0.R1
Platforms	All

source-address

Synopsis	Enter the **source-address** context
Context	**configure** service vprn *string* pim ipv4 source-address
Tree	source-address
Description	Commands in this context configure the source IP address for PIM messages.
Introduced	23.3.R1
Platforms	All

register-message *string*

Synopsis	Source IPv4 address for PIM register messages
Context	**configure** service vprn *string* pim ipv4 source-address register-message *string*
Tree	register-message
Description	This command configures the source IPv4 address for register messages in this PIM instance. The IP address can be set to any unicast address, regardless of whether it resides on the node. Ensure that the specified IP address is configured on the router as a loopback or interface IP address. When unconfigured, the source IP address for register messages is selected by choosing the smallest IP address from available interfaces on the node.
Introduced	23.3.R1
Platforms	All

Introduced	16.0.R1
Platforms	All

hash-mask-len *number*

Synopsis	Length for bootstrap hash mask
Context	**configure** service vprn *string* pim rp ipv4 bsr-candidate hash-mask-len *number*
Tree	hash-mask-len
Range	0 to 32
Default	30
Introduced	16.0.R1
Platforms	All

priority *number*

Synopsis	Bootstrap priority of the router
Context	**configure** service vprn *string* pim rp ipv4 bsr-candidate priority *number*
Tree	priority
Range	0 to 255
Default	0
Introduced	16.0.R1
Platforms	All

candidate *boolean*

Synopsis	Enable auto-RP to advertise candidate RP information
Context	**configure** service vprn *string* pim rp ipv4 candidate *boolean*
Tree	candidate
Description	When configured to **true**, the auto-RP is enabled to advertise the candidate RP information. The auto-RP candidate RP announces the candidate RP messages on the 224.0.1.39 multicast address. This functionality is in addition to the listener functionality enabled by the auto RP discovery. When configured to **false**, the candidate RP information is not specified.
Default	false
Introduced	20.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mapping-agent *boolean*

Synopsis	Enable the mapping agent on the node
Context	**configure** service vprn *string* pim rp ipv4 mapping-agent *boolean*
Tree	mapping-agent
Description	When configured to **true**, the mapping agent is enabled on the node. The auto-RP MA observes the **auto-rp-announcement** messages, selects the RP and generates the RP discovery 224.0.1.40 messages. This functionality is in addition to the auto-RP discovery functionality.
Default	false
Introduced	20.10.R1
Platforms	All

rp-candidate

Synopsis	Enter the **rp-candidate** context
Context	**configure** service vprn *string* pim rp ipv4 rp-candidate
Tree	rp-candidate
Introduced	16.0.R1
Platforms	All

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor *(number | keyword)*

Synopsis	Matching Vendor ID to RADIUS server policy
Context	**configure** service vprn *string* radius proxy *string* attribute-matching vendor *(number | keyword)*
Tree	vendor
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cache

Synopsis	Enter the **cache** context
Context	**configure** service vprn *string* radius proxy *string* cache
Tree	cache
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the RADIUS proxy cache
Context	**configure** service vprn *string* radius proxy *string* cache admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

key

Synopsis	Enable the **key** context
Context	**configure** service vprn *string* radius proxy *string* cache key

© 2024 Nokia.

Tree	key
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

attribute-type *number*

Synopsis	RADIUS attribute type to cache for this RADIUS proxy server
Context	**configure** service vprn *string* radius proxy *string* cache key attribute-type *number*
Tree	attribute-type
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

packet-type *keyword*

Synopsis	Packet type of the RADIUS messages
Context	**configure** service vprn *string* radius proxy *string* cache key packet-type *keyword*
Tree	packet-type
Options	access-request, access-accept
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor *(number | keyword)*

Synopsis	RADIUS Vendor ID
Context	**configure** service vprn *string* radius proxy *string* cache key vendor *(number | keyword)*
Tree	vendor
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Idle timeout value
Context	**configure** service vprn *string* radius proxy *string* cache timeout *number*
Tree	timeout
Range	60 to 3600
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-accounting

Synopsis	Enter the **track-accounting** context
Context	**configure** service vprn *string* radius proxy *string* cache track-accounting
Tree	track-accounting
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-off *boolean*

Synopsis	Remove all ESM hosts associated with the RADIUS client
Context	**configure** service vprn *string* radius proxy *string* cache track-accounting accounting-off *boolean*
Tree	accounting-off
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-on *boolean*

Synopsis	Remove all ESM hosts associated with the RADIUS client
Context	**configure** service vprn *string* radius proxy *string* cache track-accounting accounting-on *boolean*
Tree	accounting-on
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-update *boolean*

Synopsis	Update the ESM host with the RADIUS client that generated the interim update
Context	**configure** service vprn *string* radius proxy *string* cache track-accounting interim-update *boolean*
Tree	interim-update
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start *boolean*

Synopsis	Update host with client that generated accounting-start
Context	**configure** service vprn *string* radius proxy *string* cache track-accounting start *boolean*
Tree	start
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stop *boolean*

Synopsis	Remove ESM host and forward accounting-stop packet
Context	**configure** service vprn *string* radius proxy *string* cache track-accounting stop *boolean*
Tree	stop
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-authentication

Synopsis	Enter the **track-authentication** context
Context	**configure** service vprn *string* radius proxy *string* cache track-authentication
Tree	track-authentication

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accept *boolean*

Synopsis	Track Access-Accept message for mobility
Context	**configure** service vprn *string* radius proxy *string* cache track-authentication accept *boolean*
Tree	accept
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-delete-hold-time *number*

Synopsis	Delete hold time
Context	**configure** service vprn *string* radius proxy *string* cache track-delete-hold-time *number*
Tree	track-delete-hold-time
Range	0 to 6000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis	Enter the **defaults** context
Context	**configure** service vprn *string* radius proxy *string* defaults
Tree	defaults
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-server-policy *string*

Synopsis	Default accounting RADIUS server policy
Context	**configure** service vprn *string* radius proxy *string* defaults accounting-server-policy *string*

Synopsis	Purpose of the RADIUS proxy
Context	**configure** service vprn *string* radius proxy *string* purpose *keyword*
Tree	purpose
Options	accounting, authentication, accounting-authentication
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy
Context	**configure** service vprn *string* radius proxy *string* python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

secret *string*

Synopsis	Format of the secret key to access the RADIUS proxy server
Context	**configure** service vprn *string* radius proxy *string* secret *string*
Tree	secret
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

send-accounting-response *boolean*

Synopsis	Allow RADIUS proxy server to respond to Accounting-Response messages
Context	**configure** service vprn *string* radius proxy *string* send-accounting-response *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	send-accounting-response
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wlan-gw

Synopsis	Enter the **wlan-gw** context
Context	**configure** service vprn *string* radius proxy *string* wlan-gw
Tree	wlan-gw
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

address *string*

Synopsis	IPv4 address of the distributed RADIUS proxy server
Context	**configure** service vprn *string* radius proxy *string* wlan-gw address *string*
Tree	address
Description	This command configures the IPv4 address of the distributed RADIUS proxy server for use by the access points.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *string*

Synopsis	IPv6 address of the distributed RADIUS proxy server
Context	**configure** service vprn *string* radius proxy *string* wlan-gw ipv6-address *string*
Tree	ipv6-address
Description	This command configures the IPv6 address of the distributed RADIUS proxy server for use by the access points.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	ISA WLAN gateway group
Context	**configure** service vprn *string* radius proxy *string* wlan-gw-group *reference*
Tree	wlan-gw-group
Reference	**configure** isa wlan-gw-group *number*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [name] *string*

Synopsis	Enter the **server** list instance
Context	**configure** service vprn *string* radius server *string*
Tree	server
Max. Instances	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	External RADIUS server name
Context	**configure** service vprn *string* radius server *string*
Tree	server
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accept-coa *boolean*

Synopsis	Process Change of Authorization (CoA) messages
Context	**configure** service vprn *string* radius server *string* accept-coa *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	accept-coa
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-port *number*

Synopsis	UDP port number of the RADIUS for accounting events
Context	**configure** service vprn *string* radius server *string* acct-port *number*
Tree	acct-port
Range	1 to 65535
Default	1813
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the RADIUS server
Context	**configure** service vprn *string* radius server *string* address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auth-port *number*

Synopsis	UDP port number of the RADIUS to be used as match criteria
Context	**configure** service vprn *string* radius server *string* auth-port *number*
Tree	auth-port
Range	1 to 65535
Default	1812
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time

Synopsis	Enter the **hold-time** context
Context	**configure** service vprn *string* redundant-interface *string* hold-time
Tree	hold-time
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** service vprn *string* redundant-interface *string* hold-time ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

down

Synopsis	Enter the **down** context
Context	**configure** service vprn *string* redundant-interface *string* hold-time ipv4 down
Tree	down
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	**configure** service vprn *string* redundant-interface *string* hold-time ipv4 down init-only *boolean*
Tree	init-only
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	**configure** service vprn *string* rip group *string* neighbor *string* split-horizon *boolean*
Tree	split-horizon
Description	When configured to **true**, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**. this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.

timeout *number*

Synopsis	RIP timeout timer
Context	**configure** service vprn *string* ripng group *string* timers timeout *number*
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

update *number*

Synopsis	Timer that controls the frequency of updates
Context	**configure** service vprn *string* ripng group *string* timers update *number*
Tree	update
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

import-policy *reference*

Synopsis	Import policies to decide routes for routing table
Context	**configure** service vprn *string* ripng import-policy *reference*
Tree	import-policy
Reference	**configure** policy-options policy-statement *string*
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

Range	1 to 255
Default	100
Introduced	16.0.R4
Platforms	All

receive *keyword*

Synopsis	Accepted version on received packets
Context	**configure** service vprn *string* ripng receive *keyword*
Tree	receive
Options	none, ripng
Default	ripng
Introduced	16.0.R4
Platforms	All

send *keyword*

Synopsis	RIPng version and method used to send RIPng updates
Context	**configure** service vprn *string* ripng send *keyword*
Tree	send
Options	none, ripng
Default	ripng
Introduced	16.0.R4
Platforms	All

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	**configure** service vprn *string* ripng split-horizon *boolean*
Tree	split-horizon
Description	When configured to **true**, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity). When configured to **false**, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	learned the route, with the advertised metric equaling an increment of the metric-in value.
Default	true
Introduced	16.0.R4
Platforms	All

timers

Synopsis	Enable the **timers** context
Context	**configure** service vprn *string* ripng timers
Tree	timers
Introduced	16.0.R4
Platforms	All

flush *number*

Synopsis	RIP flush timer
Context	**configure** service vprn *string* ripng timers flush *number*
Tree	flush
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

timeout *number*

Synopsis	RIP timeout timer
Context	**configure** service vprn *string* ripng timers timeout *number*
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.

community [community-string] *string*

Synopsis	Enter the **community** list instance
Context	**configure** service vprn *string* snmp community *string*
Tree	community
Description	Commands in this context set the SNMP community names to be used with the associated VPRN instance. These VPRN community names are used to associate SNMP v1/v2c requests with a particular VPRN context and to return a reply that contains VPRN-specific data or limit SNMP access to data in a specific VPRN instance. VPRN SNMP communities configured with an access permission of 'r' are automatically associated with the default access group "snmp-vprn-ro” and the “vprn-view” view (read only). VPRN SNMP communities configured with an access permission of 'rw' are automatically associated with the default access group "snmp-vprn” and the “vprn-view” view (read/write). The community in an SNMP v1/v2 request determines the SNMP context (that is, the VPRN number for accessing SNMP tables) and not the VPRN of the incoming interface on which the request was received. For example, when an SNMP request arrives on VPRN 5 interface “ringo” with a destination IP address equal to the “ringo” interface, but the community in the SNMP request is the community configured against VPRN 101, the SNMP request is processed using the VPRN 101 context. (the response contains information about VPRN 101). Nokia recommends avoiding the use of a simple series of VPRN SNMP community values that are similar to each other (for example, avoid my-vprncomm-1, my-vprn-comm-2, and so on).
Introduced	16.0.R5

Tree	static-routes
Introduced	16.0.R1
Platforms	All

hold-down

Synopsis	Enable the **hold-down** context
Context	**configure** service vprn *string* static-routes hold-down
Tree	hold-down
Description	Commands in this context enable the hold-down time feature globally for static routes in the system. The static route hold-down time is a mechanism to protect from rapid, fluctuating state changes of static routes resulting from issues with reachability because of link flap. The commands in this context apply to all static routes in the VPRN and the base router instance in which this hold-down time is configured in.
Introduced	16.0.R1
Platforms	All

initial *number*

Synopsis	Value for the initial hold-down time
Context	**configure** service vprn *string* static-routes hold-down initial *number*
Tree	initial
Description	This command specifies the initial value of the hold-down time globally for static routes in the system. When a static route is ready to become active, it remains inactive for the hold-down time before activating the static-route. If, during this hold-down period, the static route

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	becomes inactive again because of factors such as interface failure, the hold-down timer is reset, effectively postponing the activation of the route until the next opportunity.
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

max-value *number*

Synopsis	Maximum value of the hold-down time
Context	**configure** service vprn *string* static-routes hold-down max-value *number*
Tree	max-value
Description	This command specifies the maximum value of the hold-down time globally for static routes in the system.
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Multiplier of the previous hold-down time
Context	**configure** service vprn *string* static-routes hold-down multiplier *number*
Tree	multiplier
Description	This command specifies the multiplier value by which the previous hold-down time is multiplied to calculate the new one. This value applies globally for static routes in the system.
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

route [ip-prefix] *(ipv4-prefix | ipv6-prefix)* route-type *keyword*

cpe-check [address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Enter the **cpe-check** list instance
Context	**configure** service vprn *string* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* indirect *(ipv4-address-no-zone | ipv6-address-no-zone)* cpe-check *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	cpe-check
Description	When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device. This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route. **Note**: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of **cpe-ping**, the node paces these minor events.
Max. Instances	1
Introduced	16.0.R1

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Backup next-hop IP address
Context	**configure** service vprn *string* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* next-hop *(ipv4-address-with-zone | ipv6-address-with-zone)* backup-next-hop address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Description	This command specifies the backup IP forwarding address that is used for static route Fast ReRoute (FRR). The configured address, if reachable, acts as pre-installed backup forwarding information that can be used when the primary IP next-hop suddenly fails. The configured backup next-hop IP address can be directly or indirectly connected (using an IGP or tunnel) to the node. The backup next-hop forwarding information or the Next-hop Label Forwarding Entry (NHLFE) tunnel forwarding information from the IP Routing Table Manager (RTM) is used to preconfigure an IP fast-reroute backup path. One backup next-hop address can protect a single primary static route entry next-hop address without ECMP and it is only activated when the primary next-hop has no active ECMP. The configured IP address can be either on the network or the access side.
Introduced	21.2.R1
Platforms	All

cflowd-parameters

Synopsis	Enter the **cflowd-parameters** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* cflowd-parameters
Tree	cflowd-parameters
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sampling [sampling-type] *keyword*

Synopsis	Enter the **sampling** list instance
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* cflowd-parameters sampling *keyword*
Tree	sampling
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sampling-type**] *keyword*

Synopsis	Traffic sampling type
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* cflowd-parameters sampling *keyword*
Tree	sampling
Description	This command configures the type of traffic to be sampled on the associated IP interface.
Options	unicast, multicast, both
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Direction of traffic for cflowd sampling
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* cflowd-parameters sampling *keyword* direction *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	direction
Description	This command configures the direction in which sampling occurs on the associated IP interfaces.
Options	ingress-only, egress-only, both
Default	ingress-only
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sample-profile *(keyword | number)*

Synopsis	Sample profile ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* cflowd-parameters sampling *keyword* sample-profile *(keyword | number)*
Tree	sample-profile
Description	This command defines the sampling rate profile associated with this interface.
Max. Range	0 to 4294967295
Options	1
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Type of cflowd analysis
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* cflowd-parameters sampling *keyword* type *keyword*
Tree	type
Description	This command configures the cflowd sampling type on the associated IP interface.
Options	acl, interface
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

data-trigger

Synopsis	Enter the **data-trigger** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* data-trigger
Tree	data-trigger
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accept-ipv6-link-local-address *boolean*

Synopsis	Enable IPv6 Link Local Address to start authentication
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* data-trigger accept-ipv6-link-local-address *boolean*
Tree	accept-ipv6-link-local-address
Description	When configured to **true**, the system triggers authentication of the subscriber based on an IPv6 packet with a source IP Link Local Address (LLA). The authentication trigger only occurs if the anti-spoof is type nh-mac. If the anti-spoof is not nh-mac, the packet with an IPv6 LLA is ignored. When configured to **false**, the system ignores all IPv6 packets with a LLA as a source IP address.
Default	false
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of data-triggered host creation
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* data-trigger admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* description *string*

bfd

Synopsis	Enter the **bfd** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 bfd
Tree	bfd
Description	Commands in this context configure the attributes of bidirectional forwarding detection (BFD) sessions that control the state of ESM dynamic BGP peers.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 bfd admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 bfd echo-receive *number*
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 bfd multiplier *number*
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive *number*

Synopsis	BFD receive interval over this interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 bfd receive *number*
Tree	receive
Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

transmit-interval *number*

Synopsis	BFD transmit interval over this interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 bfd transmit-interval *number*
Tree	transmit-interval
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.
Range	10 to 100000
Units	milliseconds

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Local termination point for the BFD session
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 bfd type *keyword*
Tree	type
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: • **auto** (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the **cpm-np**. • **cpm-np** – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.
Options	cpm-np, auto, fp
Default	auto
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

dhcp

Synopsis	Enter the **dhcp** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp
Tree	dhcp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCP

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp client-applications dhcp *boolean*
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Enable PPPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp client-applications ppp *boolean*
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

description *string*

Synopsis	Text description
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

filter *reference*

Synopsis	DHCP filter ID for the group interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp filter *reference*
Tree	filter
Reference	**configure** filter dhcp-filter *number*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gi-address *string*

Synopsis	GI address for the DHCP relay
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp gi-address *string*
Tree	gi-address
Description	This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay. By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lease-populate

Synopsis	Enter the **lease-populate** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp lease-populate
Tree	lease-populate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2-header

Synopsis	Enable the **l2-header** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp lease-populate l2-header
Tree	l2-header
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac *string*

Synopsis	IEEE address used in anti-spoofing entries for the SAP
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp lease-populate l2-header mac *string*
Tree	mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-leases *number*

Synopsis	Maximum number of DHCPv4 leases
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp lease-populate max-leases *number*
Tree	max-leases
Range	1 to 511999
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

match-circuit-id *boolean*

Synopsis	Enable Option 82 circuit ID on relayed DHCP packets
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp match-circuit-id *boolean*
Tree	match-circuit-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

offer-selection

Synopsis	Enter the **offer-selection** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp offer-selection
Tree	offer-selection
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac

Synopsis	Enter the **client-mac** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp offer-selection client-mac
Tree	client-mac
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp offer-selection client-mac discover-delay *number*
Tree	discover-delay
Description	This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-address *keyword*

Synopsis	Designated client MAC addresses for Offer selection
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp offer-selection client-mac mac-address *keyword*
Tree	mac-address
Description	This command specifies the client MAC addresses for which the Discover delay applies.
Options	odd, even
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp offer-selection discover-delay *number*
Tree	discover-delay
Description	This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [ipv4-address] *string*

Synopsis	Enter the **server** list instance
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp offer-selection server *string*
Tree	server

© 2024 Nokia.

Max. Instances	8
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ipv4-address**] *string*

Synopsis	IP address of the DHCP server
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp offer-selection server *string*
Tree	server
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp offer-selection server *string* discover-delay *number*
Tree	discover-delay
Description	This command configures the time to delay DHCP Discover messages sent to the server.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option-82

Synopsis	Enter the **option-82** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82
Tree	option-82

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 action *keyword*
Tree	action
Options	replace, drop, keep
Default	keep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id

Synopsis	Enter the **circuit-id** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 circuit-id
Tree	circuit-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 circuit-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ifindex

Synopsis	Use the interface index for the circuit ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 circuit-id ifindex
Tree	ifindex
Notes	The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

none

Synopsis	Do not include the circuit ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 circuit-id none
Tree	none
Notes	The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id

Synopsis	Use the SAP ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 circuit-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 circuit-id vlan-ascii-tuple

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	vlan-ascii-tuple
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id

Synopsis	Enter the **remote-id** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 remote-id
Tree	remote-id
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

Synopsis	User-defined ASCII string for the remote ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 remote-id ascii-string *string*
Tree	ascii-string
String Length	1 to 32
Notes	The following elements are part of a choice: **ascii-string**, **mac**, or **none**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac

Synopsis	Use the MAC address for the remote ID

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 remote-id mac
Tree	mac
Notes	The following elements are part of a choice: **ascii-string**, **mac**, or **none**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

none

Synopsis	Do not include the remote ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 remote-id none
Tree	none
Notes	The following elements are part of a choice: **ascii-string**, **mac**, or **none**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor-specific-option

Synopsis	Enter the **vendor-specific-option** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 vendor-specific-option
Tree	vendor-specific-option
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp option-82 vendor-specific-option client-mac-address *boolean*
Tree	client-mac-address
Default	false
Introduced	16.0.R1

© 2024 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy name
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp python-policy *reference*
Tree	python-policy
Description	This command associates a Python policy name with the interface.
Reference	**configure** python python-policy *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

relay-proxy

Synopsis	Enable the **relay-proxy** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp relay-proxy
Tree	relay-proxy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

release-update-src-ip *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp relay-proxy release-update-src-ip *boolean*
Tree	release-update-src-ip
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

siaddr-override *string*

Synopsis	DHCP server IP address for address hiding function

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp relay-proxy siaddr-override *string*
Tree	siaddr-override
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

release-include-gi-address *boolean*

Synopsis	Include gateway IP address in DHCP Release messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp release-include-gi-address *boolean*
Tree	release-include-gi-address
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *string*

Synopsis	IP addresses for DHCP server requests
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp server *string*
Tree	server
Description	This command configures a list of servers that this interface forwards requests to. The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

src-ip-addr *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp src-ip-addr *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	src-ip-addr
Options	auto, gi-address
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trusted *boolean*

Synopsis	Relay untrusted packets
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp trusted *boolean*
Tree	trusted
Description	When configured to **true**, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request. A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit. This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local user database for authentication
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 dhcp user-db *reference*
Tree	user-db
Reference	**configure** subscriber-mgmt local-user-db *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis	Enter the **icmp** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp
Tree	icmp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp mask-reply *boolean*
Tree	mask-reply
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

param-problem

Synopsis	Enter the **param-problem** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp param-problem
Tree	param-problem
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp param-problem admin-state *keyword*
Tree	admin-state
Options	enable, disable

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp param-problem number *number*
Tree	number
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp param-problem seconds *number*
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redirects

Synopsis	Enter the **redirects** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp redirects
Tree	redirects
Description	Commands in this context configure the settings for ICMP redirect messages generated by the interface. The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp redirects admin-state *keyword*
Tree	admin-state
Options	enable, disable

ttl-expired

Synopsis	Enter the **ttl-expired** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp ttl-expired
Tree	ttl-expired
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending TTL expired messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp ttl-expired admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of TTL expired messages to send
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp ttl-expired number *number*
Tree	number
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time used to limit the number of TTL expired messages

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp ttl-expired seconds *number*
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-matching-address *boolean*

Synopsis	Use the subscriber interface address as source address
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp ttl-expired use-matching-address *boolean*
Tree	use-matching-address
Description	When configured to **true**, the system uses a matching subscriber interface address as the source address of the ICMP TTL expired message. For matching to occur, the source address of the offending packet must be in the same subnet of the subscriber interface address. When configured to **false**, the system uses the first configured address.
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

unreachables

Synopsis	Enter the **unreachables** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 icmp unreachables
Tree	unreachables
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-df-bit *boolean*

Synopsis	Ignore DF bit in the IPv4 header when fragmenting

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 ignore-df-bit *boolean*
Tree	ignore-df-bit
Description	When configured to **true**, fragmentation is applied according to the applicable egress MTU instead of the DF bit for frames egressing the WLAN-GW group. The DF bit is reset for frames that are fragmented. When configured to **false**, the router fragments a packet larger than the MTU if the DF bit is set to 0 and drops the packet if the DF bit is set to 1.
Default	false
Introduced	20.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

neighbor-discovery

Synopsis	Enter the **neighbor-discovery** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 neighbor-discovery
Tree	neighbor-discovery
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-proxy-arp *boolean*

Synopsis	Enable local proxy ARP on interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 neighbor-discovery local-proxy-arp *boolean*
Tree	local-proxy-arp
Description	When configured to **true**, the router enables local proxy ARP on the interface. When configured to **false**, the router does not respond to ARP requests for addresses on the same subnet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

populate *boolean*

Synopsis	Allow population of static and dynamic hosts

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv4 neighbor-discovery populate *boolean*

router-solicitation *boolean*

Synopsis	Enable auto-reply for RS
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 auto-reply router-solicitation *boolean*
Tree	router-solicitation
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bfd

Synopsis	Enter the **bfd** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 bfd
Tree	bfd
Description	Commands in this context configure the attributes of bidirectional forwarding detection (BFD) sessions that control the state of ESM dynamic BGP peers.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 bfd admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 bfd echo-receive *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 bfd multiplier *number*
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive *number*

Synopsis	BFD receive interval over this interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 bfd receive *number*
Tree	receive
Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

transmit-interval *number*

Synopsis	BFD transmit interval over this interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 bfd transmit-interval *number*
Tree	transmit-interval
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Local termination point for the BFD session
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 bfd type *keyword*
Tree	type
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: • **auto** (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the **cpm-np**. • **cpm-np** – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.
Options	cpm-np, auto, fp
Default	auto
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dhcp6

Synopsis	Enter the **dhcp6** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6
Tree	dhcp6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-client-id-change *boolean*

Synopsis	Allow changes to the client ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 allow-client-id-change *boolean*
Tree	allow-client-id-change
Default	false
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

filter *reference*

Synopsis	DHCPv6 filter
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 filter *reference*
Tree	filter
Reference	**configure** filter dhcp6-filter *number*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option

Synopsis	Enter the **option** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 option
Tree	option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface-id

Synopsis	Enter the **interface-id** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 option interface-id
Tree	interface-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-tuple

Synopsis	Use ASCII-encoded concatenated tuple
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 option interface-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

if-index

Synopsis	Use interface index in the DHCPv6 relay packet
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 option interface-id if-index
Tree	if-index
Notes	The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id

Synopsis	Use SAP ID in interface ID option in relay packet
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 option interface-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.

Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	String for interface ID option in DHCPv6 relay packet
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 option interface-id string *string*
Tree	string
String Length	1 to 80
Notes	The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis	Send remote ID option in the DHCPv6 relay packet
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 option remote-id *boolean*
Tree	remote-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

override-slaac *boolean*

Synopsis	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 override-slaac *boolean*
Tree	override-slaac
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

pd-managed-route

Synopsis	Enable the **pd-managed-route** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 pd-managed-route
Tree	pd-managed-route
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-hop *keyword*

Synopsis	Next hop type
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 pd-managed-route next-hop *keyword*
Tree	next-hop
Options	ipv4, ipv6
Default	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis	Enter the **proxy-server** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 proxy server
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server client-applications dhcp *boolean*
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Allow PPPoE clients to use DHCP relay functionality
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server client-applications ppp *boolean*
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *(number | keyword)*

Synopsis	Time for prefix to remain preferred on this interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server preferred-lifetime *(number | keyword)*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	preferred-lifetime
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rebind-timer *number*

Synopsis	Rebind timer (T2) for this interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server rebind-timer *number*
Tree	rebind-timer
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

renew-timer *number*

Synopsis	Renew timer (T1)
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server renew-timer *number*
Tree	renew-timer
Range	0 to 604800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server-id

Synopsis	Enter the **server-id** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server server-id
Tree	server-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en-ascii *string*

Synopsis	Vendor-assigned ID based on Enterprise Number (DUID-EN)
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server server-id duid-en-ascii *string*
Tree	duid-en-ascii
String Length	1 to 58
Notes	The following elements are part of a choice: **duid-en-ascii**, **duid-en-hex**, or **duid-ll**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en-hex *string*

Synopsis	DUID system ID in hexadecimal format
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server server-id duid-en-hex *string*
Tree	duid-en-hex
String Length	1 to 118
Notes	The following elements are part of a choice: **duid-en-ascii**, **duid-en-hex**, or **duid-ll**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-ll

Synopsis	Use link-layer address (DUID-LL) as DUID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server server-id duid-ll
Tree	duid-ll
Notes	The following elements are part of a choice: **duid-en-ascii**, **duid-en-hex**, or **duid-ll**.
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *(number | keyword)*

Synopsis	Time for prefix to remain valid on this interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 proxy-server valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

relay

Synopsis	Enter the **relay** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay
Tree	relay
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

advertise-selection

Synopsis	Enter the **advertise-selection** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection
Tree	advertise-selection
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac

Synopsis	Enter the **client-mac** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection client-mac
Tree	client-mac
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-address *keyword*

Synopsis	Designated client MAC addresses for Advertise selection
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection client-mac mac-address *keyword*
Tree	mac-address
Options	odd, even

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the **preference-option** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection client-mac preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection client-mac preference-option value *number*
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection client-mac solicit-delay *number*
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages sent from the designated client MAC addresses.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

preference-option

Synopsis	Enter the **preference-option** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection preference-option value *number*
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [ipv6-address] *string*

Synopsis	Enter the **server** list instance
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection server *string*
Tree	server
Max. Instances	8
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[ipv6-address] *string*

Synopsis	IP address of the DHCPv6 server

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection server *string*
Tree	server
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the **preference-option** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection server *string* preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection server *string* preference-option value *number*
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection server *string* solicit-delay *number*
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages sent to the server.
Range	1 to 100

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay advertise-selection solicit-delay *number*
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages. The delay is applied to DHCPv6 Solicit messages for which no overriding value is configured in the **server** instance or the **client-mac** context.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay client-applications dhcp *boolean*
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ppp *boolean*

Synopsis	Allow the PPP application to use DHCP relay functionality
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay client-applications ppp *boolean*
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-split

Synopsis	Enter the **lease-split** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay lease-split
Tree	lease-split
Description	Commands in this context configure DHCPv6 lease split. DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following: • the renew time T1 committed by the server (long renew time) • half of the preferred lifetime committed by the server when T1 committed by the server equals zero
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 lease split
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay lease-split admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *number*

Synopsis	DHCPv6 lease split valid lifetime (short lease time)
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay lease-split valid-lifetime *number*
Tree	valid-lifetime
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-address *string*

Synopsis	Link address for the DHCPv6 relay messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay link-address *string*
Tree	link-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *string*

Synopsis	DHCP6 servers to which the DHCP6 requests are forwarded
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay server *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	server
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-address *string*

Synopsis	Source IPv6 address for the DHCPv6 relay messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 relay source-address *string*
Tree	source-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

snooping

Synopsis	Enter the **snooping** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 snooping
Tree	snooping
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 snooping
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 dhcp6 snooping admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

© 2024 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dad-snooping *boolean*

Synopsis	Populate table via duplicate address detection packets
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 neighbor-discovery dad-snooping *boolean*
Tree	dad-snooping
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

neighbor-limit *number*

Synopsis	Maximum neighbor entries learned per SLAAC host
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 neighbor-discovery neighbor-limit *number*
Tree	neighbor-limit
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qos-route-lookup *keyword*

Synopsis	QoS route lookup
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 qos-route-lookup *keyword*
Tree	qos-route-lookup
Options	destination
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

router-advertisements

Synopsis	Enter the **router-advertisements** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements
Tree	router-advertisements
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of router advertisements
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-mcast *keyword*

Synopsis	Protocol with forced multicast
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements force-mcast *keyword*
Tree	force-mcast
Options	ip, ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-advertisement-interval *number*

Synopsis	Maximum advertisement interval
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements max-advertisement-interval *number*
Tree	max-advertisement-interval
Range	900 to 1800

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-advertisement-interval *number*

Synopsis	Minimum advertisement interval
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements min-advertisement-interval *number*
Tree	min-advertisement-interval
Range	900 to 1350
Units	seconds
Default	900
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

options

Synopsis	Enter the **options** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements options
Tree	options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

current-hop-limit *number*

Synopsis	Hop limit to be advertised
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements options current-hop-limit *number*
Tree	current-hop-limit
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dns

Synopsis	Enter the **dns** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements options dns
Tree	dns
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-rdnss *boolean*

Synopsis	Include the RDNSS server option 25
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements options dns include-rdnss *boolean*
Tree	include-rdnss
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rdnss-lifetime *(number | keyword)*

Synopsis	Maximum time for the RDNSS address to remain valid
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements options dns rdnss-lifetime *(number | keyword)*
Tree	rdnss-lifetime
Range	900 to 3600
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-configuration *boolean*

Synopsis	Managed address configuration flag

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements options managed-configuration *boolean*
Tree	managed-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mtu *(number | keyword)*

Synopsis	Advertised MTU value
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements options mtu *(number | keyword)*
Tree	mtu
Range	1280 to 9212
Units	bytes
Options	not-included
Default	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other-stateful-configuration *boolean*

Synopsis	Other stateful configuration flag
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements options other-stateful-configuration *boolean*
Tree	other-stateful-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reachable-time *number*

Synopsis	Reachable time for advertisements
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements options reachable-time *number*
Tree	reachable-time

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retransmit-timer *number*

Synopsis	Retransmit time in router advertisements from interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements options retransmit-timer *number*
Tree	retransmit-timer
Range	0 to 1800000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-lifetime *(number | keyword)*

Synopsis	Router lifetime
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements options router-lifetime *(number | keyword)*
Tree	router-lifetime
Range	2700 to 9000
Units	seconds
Options	no-default-router
Default	4500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-options

Synopsis	Enter the **prefix-options** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements prefix-options

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	prefix-options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

autonomous *boolean*

Synopsis	Value of the autonomous flag
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements prefix-options autonomous *boolean*
Tree	autonomous
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-link *boolean*

Synopsis	Assign the prefix to an interface on the specified link
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements prefix-options on-link *boolean*
Tree	on-link
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *(number | keyword)*

Synopsis	Time for a prefix to remain preferred
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements prefix-options preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

valid-lifetime *(number | keyword)*

Synopsis	Time for a prefix to remain valid
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-advertisements prefix-options valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-solicit

Synopsis	Enter the **router-solicit** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-solicit
Tree	router-solicit
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of router-solicit authentication
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-solicit admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

inactivity-timer *(number | keyword)*

Synopsis	Time before an inactive host is removed

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-solicit inactivity-timer *(number | keyword)*
Tree	inactivity-timer
Range	1 to 31536000
Units	seconds
Options	infinite
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-auth-interval *number*

Synopsis	Minimum time between successive authentication attempts
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-solicit min-auth-interval *number*
Tree	min-auth-interval
Range	1 to 360000
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

Synopsis	Local user database used for authentication
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 router-solicit user-db *reference*
Tree	user-db
Reference	**configure** subscriber-mgmt local-user-db *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

urpf-check

Synopsis	Enable the **urpf-check** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 urpf-check
Tree	urpf-check
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	Unicast RPF check mode
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* ipv6 urpf-check mode *keyword*
Tree	mode
Options	strict, loose, strict-no-ecmp
Default	strict
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address-assignment

Synopsis	Enter the **local-address-assignment** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* local-address-assignment
Tree	local-address-assignment
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of Local Address Assignment
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* local-address-assignment admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

collect-lmm-fc-stats

Synopsis	Enter the **collect-lmm-fc-stats** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* eth-cfm collect-lmm-fc-stats
Tree	collect-lmm-fc-stats
Description	Commands in this context configure per forwarding class (FC) LMM information collection. The commands **fc-in-profile** and **fc** in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively. This command and the **collect-lmm-stats** command are mutually exclusive when there is entity resource contention.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

fc *keyword*

Synopsis	Forwarding class name for profile-unaware counter
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* eth-cfm collect-lmm-fc-stats fc *keyword*
Tree	fc
Description	This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter. An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the **fc-in-profile** command under the **collect-lmm-fc-stats** context. When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fc-in-profile *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* eth-cfm collect-lmm-fc-stats fc-in-profile *keyword*
Tree	fc-in-profile
Description	This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter. An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the **fc** command under the **collect-lmm-fc-stats** context. When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

collect-lmm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* eth-cfm collect-lmm-stats *boolean*
Tree	collect-lmm-stats
Description	When configured to **true**, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings. The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters. When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-ltm-priority *number*
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-padding-size *number*
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval)** is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

csf

Synopsis	Enable the **csf** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* csf

Tree	rx-eth-vsm-grace
Description	When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to **false**, the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace tx-eth-vsm-grace *boolean*
Tree	tx-eth-vsm-grace
Description	When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* low-priority-defect *keyword*
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon

squelch-ingress-levels *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* eth-cfm squelch-ingress-levels *number*
Tree	squelch-ingress-levels
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option. The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

lag

Synopsis	Enter the **lag** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* lag
Tree	lag
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-map-profile *number*

Synopsis	LAG link map profile for a SAP or network interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* lag link-map-profile *number*
Tree	link-map-profile
Description	This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration. If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the static host
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp-string *string*

Synopsis	ANCP string
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* ancp-string *string*
Tree	ancp-string
String Length	1 to 63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile

Synopsis	Enter the **app-profile** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* app-profile
Tree	app-profile
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

profile *reference*

Synopsis	Application profile used by the static host
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* app-profile profile *reference*
Tree	profile
Reference	**configure** application-assurance group *number* partition *number* policy app-profile *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

scope *keyword*

Synopsis	Scope of the static host application profile
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* app-profile scope *keyword*
Tree	scope
Options	subscriber, mac
Default	subscriber
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

int-dest-id *string*

Synopsis	Intermediate destination ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* int-dest-id *string*
Tree	int-dest-id
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-linking *string*

Synopsis	IPv6 host linked with IPv4 host via learned MAC address
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* mac-linking *string*
Tree	mac-linking

© 2024 Nokia.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-route [ipv6-prefix] *string*

Synopsis	Enter the **managed-route** list instance
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string*
Tree	managed-route
Description	Commands in this context configure managed route parameters.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ipv6-prefix**] *string*

Synopsis	Managed route prefix associated with IPv6 static host
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string*
Tree	managed-route
Description	This command configures the managed route prefix. The prefix length must be in the range of 1 to 128.
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cpe-check

Synopsis	Enable the **cpe-check** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check
Tree	cpe-check
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the target CPE device
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check destination-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	destination-ip-address
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drop-count *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check drop-count *number*
Tree	drop-count
Range	1 to 255
Default	3
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failed-action

Synopsis	Enter the **failed-action** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check failed-action
Tree	failed-action
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

metric *number*

Synopsis	Metric associated with the provisioned managed route

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check failed-action metric *number*
Tree	metric
Max. Range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: (**metric**, **preference**, and **tag**) or **withdraw**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis	Preference associated to the provisioned managed route
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check failed-action preference *number*
Tree	preference
Range	0 to 255
Notes	The following elements are part of a choice: (**metric**, **preference**, and **tag**) or **withdraw**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tag *number*

Synopsis	Route tag used if CPE check fails
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check failed-action tag *number*
Tree	tag
Max. Range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: (**metric**, **preference**, and **tag**) or **withdraw**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

withdraw *boolean*

Synopsis	Withdraw the route when the CPE check fails
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check failed-action withdraw *boolean*
Tree	withdraw
Default	false
Notes	The following elements are part of a choice: (**metric**, **preference**, and **tag**) or **withdraw**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check interval *number*
Tree	interval
Range	1 to 255
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

log *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check log *boolean*
Tree	log
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padding-size *number*

Synopsis	Padding size for CPE connectivity checks

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check padding-size *number*
Tree	padding-size
Range	0 to 16384
Units	bytes
Default	56
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source IP address used in the ICMP messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check source-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	source-ip-address
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Time interval determining that a ping is missed
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* cpe-check timeout *number*
Tree	timeout
Range	1 to 10
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

metric *number*

Synopsis	Metric associated with the managed route
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* managed-route *string* metric *number*
Tree	metric

© 2024 Nokia.

Range	1 to 2147483647
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv

Synopsis	Enter the **shcv** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* shcv
Tree	shcv
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	SLA profile name
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* sla-profile *reference*
Tree	sla-profile
Reference	**configure** subscriber-mgmt sla-profile *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Sub-profile name
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* sub-profile *reference*
Tree	sub-profile
Reference	**configure** subscriber-mgmt sub-profile *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis	Enter the **subscriber-id** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* subscriber-id
Tree	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	Subscriber identification
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* subscriber-id string *string*
Tree	string
String Length	1 to 64
Notes	The following elements are part of a choice: **string** or **use-sap-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-sap-id

Synopsis	Use the SAP id as subscriber ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host ipv6 *string* mac *string* subscriber-id use-sap-id
Tree	use-sap-id
Notes	The following elements are part of a choice: **string** or **use-sap-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-learning

Synopsis	Enter the **mac-learning** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host mac-learning
Tree	mac-learning
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

data-triggered *boolean*

Synopsis	Enable learning of MAC addresses from data packets
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host mac-learning data-triggered *boolean*
Tree	data-triggered
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

single-mac *boolean*

Synopsis	Enforce single MAC address and subscriber for the SAP
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* static-host mac-learning single-mac *boolean*
Tree	single-mac
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-sla-mgmt

Synopsis	Enter the **sub-sla-mgmt** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* sub-sla-mgmt
Tree	sub-sla-mgmt
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of SAP subscriber management
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* sub-sla-mgmt admin-state *keyword*
Tree	admin-state
Options	enable, disable

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis	Enter the **defaults** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* sub-sla-mgmt defaults
Tree	defaults
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Default application profile name for this SAP
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap *string* sub-sla-mgmt defaults app-profile *reference*

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis	Enter the **subscriber-id** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap-parameters sub-sla-mgmt defaults subscriber-id
Tree	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-id

Synopsis	Subscriber ID that is autogenerated
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap-parameters sub-sla-mgmt defaults subscriber-id auto-id
Tree	auto-id
Notes	The following elements are part of a choice: **auto-id** or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	String to be used as default subscriber ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap-parameters sub-sla-mgmt defaults subscriber-id string *string*
Tree	string
String Length	1 to 64
Notes	The following elements are part of a choice: **auto-id** or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy *reference*

Synopsis	Subscriber identification policy

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* sap-parameters sub-sla-mgmt sub-ident-policy *reference*
Tree	sub-ident-policy
Reference	**configure** subscriber-mgmt sub-ident-policy *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv-policy *reference*

Synopsis	SHCV policy for IPv4 and IPv6 subscriber hosts
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* shcv-policy *reference*
Tree	shcv-policy
Reference	**configure** subscriber-mgmt shcv-policy *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv-policy-ipv4 *reference*

Synopsis	SHCV for IPv4 subscriber hosts
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* shcv-policy-ipv4 *reference*
Tree	shcv-policy-ipv4
Reference	**configure** subscriber-mgmt shcv-policy *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv-policy-ipv6 *reference*

Synopsis	SHCV for IPv6 subscriber hosts
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* shcv-policy-ipv6 *reference*
Tree	shcv-policy-ipv6
Reference	**configure** subscriber-mgmt shcv-policy *string*
Introduced	16.0.R1

srrp [srrp-id] *number*

Synopsis	Enter the **srrp** list instance
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* srrp *number*
Tree	srrp
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**srrp-id**] *number*

Synopsis	SRRP instance ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* srrp *number*
Tree	srrp
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of SRRP
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* srrp *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bfd-liveness

Synopsis	Enable the **bfd-liveness** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* srrp *number* bfd-liveness
Tree	bfd-liveness
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dest-ip *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination IPv4 prefix
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* srrp *number* bfd-liveness dest-ip *string*
Tree	dest-ip
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface-name *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* srrp *number* bfd-liveness interface-name *string*
Tree	interface-name
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preempt *boolean*

Synopsis	Allow the SRRP instance to override an existing master
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* srrp *number* preempt *boolean*
Tree	preempt
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

priority *number*

Synopsis	Priority for this interface at this level
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* srrp *number* priority *number*
Tree	priority
Range	1 to 254
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

send-fib-population-packets *keyword*

Synopsis	Mode used to send FIB population packets on switchover
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* srrp *number* send-fib-population-packets *keyword*
Tree	send-fib-population-packets
Options	all, outer-tag-only
Default	all
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suppress-aa-sub *boolean*

Synopsis	Enable application assurance suppression for ESM subscribers

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* suppress-aa-sub *boolean*
Tree	suppress-aa-sub
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tos-marking-state *keyword*

Synopsis	TOS marking state
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* tos-marking-state *keyword*
Tree	tos-marking-state
Options	trusted, untrusted
Default	trusted
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Group interface type
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* type *keyword*
Tree	type
Options	plain, lns, wlan-gw, gtp, bonding
Default	plain
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wlan-gw

Synopsis	Enter the **wlan-gw** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	wlan-gw
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of WLAN Gateway
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gateway-address [address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Enter the **gateway-address** list instance
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw gateway-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	gateway-address
Max. Instances	10
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Gateway endpoint address of the WLAN Gateway tunnel
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw gateway-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	gateway-address
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

purpose

Synopsis	Enter the **purpose** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw gateway-address *(ipv4-address-no-zone | ipv6-address-no-zone)* purpose
Tree	purpose
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect *boolean*

Synopsis	Use tunnel IP address for crosse-connect traffic
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw gateway-address *(ipv4-address-no-zone | ipv6-address-no-zone)* purpose xconnect *boolean*
Tree	xconnect
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gateway-router *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Routing instance the WLAN-GW endpoint resides in
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw gateway-router *string*
Tree	gateway-router
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

group-encryption

Synopsis	Enter the **group-encryption** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw group-encryption

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	group-encryption
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

encryption-keygroup-inbound *reference*

Synopsis	Encryption keygroup for inbound traffic
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw group-encryption encryption-keygroup-inbound *reference*
Tree	encryption-keygroup-inbound
Reference	**configure** group-encryption encryption-keygroup *number*
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

encryption-keygroup-outbound *reference*

Synopsis	Encryption keygroup for inbound traffic
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw group-encryption encryption-keygroup-outbound *reference*
Tree	encryption-keygroup-outbound
Reference	**configure** group-encryption encryption-keygroup *number*
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2-ap

Synopsis	Enter the **l2-ap** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw l2-ap
Tree	l2-ap
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

access-point [sap-id] *string*

Synopsis	Enter the **access-point** list instance

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw l2-ap access-point *string*
Tree	access-point
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *string*

Synopsis	SAP ID for the Layer 2 access point
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw l2-ap access-point *string*
Tree	access-point
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the L2 access points
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw l2-ap access-point *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

encap-type *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service encapsulation type of this access point
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw l2-ap access-point *string* encap-type *keyword*

Tree	encap-type
Options	null, dot1q, qinq
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

epipe-sap-template *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Parameters template for the L2 access point SAP
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw l2-ap access-point *string* epipe-sap-template *reference*
Tree	epipe-sap-template
Reference	**configure** service template epipe-sap-template *string*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

auto-sub-id-fmt *keyword*

Synopsis	Format of the auto-generated subscriber ID
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw l2-ap auto-sub-id-fmt *keyword*
Tree	auto-sub-id-fmt
Options	include-ap-tags, sap-only
Default	include-ap-tags
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-encap-type *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default encapsulation type for Layer 2 access points

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw l2-ap default-encap-type *keyword*
Tree	default-encap-type
Options	null, dot1q, qinq
Default	null
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the **lanext** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw lanext
Tree	lanext
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-bd *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of bridge domains
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw lanext max-bd *number*
Tree	max-bd
Range	1 to 131071
Default	131071
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

learn-ap-mac

Synopsis	Enable the **learn-ap-mac** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw learn-ap-mac
Tree	learn-ap-mac
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

delay-auth *boolean*

Synopsis	Delay AP-MAC until after ARP/ND authentication response
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw learn-ap-mac delay-auth *boolean*
Tree	delay-auth
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mcs-peer

Synopsis	Enable the **mcs-peer** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw mcs-peer
Tree	mcs-peer
Description	Commands in this context configure a multi-chassis synchronization peer.
Introduced	23.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

address *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the MCS peer
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw mcs-peer address *reference*
Tree	address
Description	This command configures the IPv4 address or the global IPv6 unicast address for a multi-chassis synchronization peer.
Reference	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone | ipv6-address-no-zone)*
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

sync-tag *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag shared by MCS peers
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw mcs-peer sync-tag *string*
Tree	sync-tag
Description	This command configures the synchronization tag for synchronization of ESM and the tunnel state for ESM over soft-GRE with an MCS peer.
String Length	1 to 32
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mobility

Synopsis	Enter the **mobility** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw mobility
Tree	mobility
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis	Minimum time between two mobility events for single UE
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw mobility hold-time *number*
Tree	hold-time
Range	0 to 255
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

inter-tunnel-type *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable mobility between terminating tunnel types
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw mobility inter-tunnel-type *boolean*
Tree	inter-tunnel-type
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

inter-vlan *boolean*

Synopsis	Allow mobility within different VLANs of the same range

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw mobility inter-vlan *boolean*
Tree	inter-vlan
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

trigger

Synopsis	Enter the **trigger** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw mobility trigger
Tree	trigger
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

control *boolean*

Synopsis	Use control traffic as a mobility trigger
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw mobility trigger control *boolean*
Tree	control
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

data *boolean*

Synopsis	Use data traffic as mobility trigger
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw mobility trigger data *boolean*
Tree	data
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

iapp *boolean*

Synopsis	Use IAPP messages as a mobility trigger
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw mobility trigger iapp *boolean*
Tree	iapp
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

oper-down-on-group-degrade *boolean*

Synopsis	Bring interface down when the ISA WLAN Gateway degraded
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw oper-down-on-group-degrade *boolean*
Tree	oper-down-on-group-degrade
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

promiscuous-mode *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable promiscuous mode for this group interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw promiscuous-mode *boolean*
Tree	promiscuous-mode
Description	When configured to **true**, the router accepts all traffic, including traffic that is not destined for a WLAN gateway group interface MAC or virtual MAC address for ESM processing. When configured to **false**, the router only accepts traffic that is destined for a WLAN gateway group interface MAC or virtual MAC address for ESM processing.
Default	false
Introduced	23.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tcp-mss-adjust *number*

Synopsis	TCP Maximum Segment Size (MSS) adjustment for gateway
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw tcp-mss-adjust *number*
Tree	tcp-mss-adjust
Range	160 to 10240
Units	bytes
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-egress-qos

Synopsis	Enter the **tunnel-egress-qos** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw tunnel-egress-qos
Tree	tunnel-egress-qos
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of egress QoS for WLAN-GW tunnels
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw tunnel-egress-qos admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

agg-rate-limit *(number | keyword)*

Synopsis	HQoS aggregate rate limit
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw tunnel-egress-qos agg-rate-limit *(number | keyword)*
Tree	agg-rate-limit
Range	1 to 100000000
Options	max
Default	max
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

granularity *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Granularity of the egress shaping for WLAN Gateway
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw tunnel-egress-qos granularity *keyword*
Tree	granularity
Options	per-tunnel – Applied to each tunnel per-retailer – Applied to each retailer Mobile Network Operator's fraction of the tunnel payload
Default	per-tunnel
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hold-time *(number | keyword)*

Synopsis	Minimum time to hold egress shaping resources
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw tunnel-egress-qos hold-time *(number | keyword)*
Tree	hold-time
Range	1 to 86400
Units	seconds
Options	infinite

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

multi-client-only *boolean*

Synopsis	Allow shaping for tunnel traffic for multiple UEs
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw tunnel-egress-qos multi-client-only *boolean*
Tree	multi-client-only
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

qos *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress QoS policy linked with each interface tunnel
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw tunnel-egress-qos qos *reference*
Tree	qos
Reference	**configure** qos sap-egress *string*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler-policy *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress scheduler policy linked with each tunnel
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw tunnel-egress-qos scheduler-policy *reference*
Tree	scheduler-policy

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Reference	**configure** qos scheduler-policy *string*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-encaps

Synopsis	Enter the **tunnel-encaps** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw tunnel-encaps
Tree	tunnel-encaps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

learn-l2tp-cookie *(keyword | hex-string)*

Synopsis	System that learns the cookie from L2TP tunnels terminating on this interface
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw tunnel-encaps learn-l2tp-cookie *(keyword | hex-string)*
Tree	learn-l2tp-cookie
String Length	6
Options	never – Never interpret the cookie always – Interpret cookie regardless of first two octets value
Default	never
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-range [range] *string*

Synopsis	Enter the **vlan-range** list instance
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string*
Tree	vlan-range
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**range**] *string*

Synopsis	IEEE 802.1q VLAN tag range
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string*
Tree	vlan-range
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication

Synopsis	Enter the **authentication** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* authentication
Tree	authentication
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis	Minimum time UE held down after failed authentication
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* authentication hold-time *number*
Tree	hold-time
Range	0 to 3600
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

local

Synopsis	Enable the **local** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* authentication local
Tree	local

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

coa-policy *reference*

Synopsis	RADIUS ISA policy applied to CoA or disconnect messages
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* authentication local coa-policy *reference*
Tree	coa-policy
Reference	**configure** aaa radius isa-policy *string*
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-ue-state *keyword*

Synopsis	UE state accepted for immediate authentication
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* authentication local default-ue-state *keyword*
Tree	default-ue-state
Options	portal – Portal redirect UE using the http-redirect-policy dsm – DSM UE using DSM parameters
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

on-control-plane *boolean*

Synopsis	Allow authentication on first control plane packet
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* authentication on-control-plane *boolean*
Tree	on-control-plane
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

policy *reference*

Synopsis	RADIUS policy for authentication
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* authentication policy *reference*
Tree	policy
Reference	**configure** aaa radius isa-policy *string*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-mismatch-timeout *number*

Synopsis	Timeout if packet received with a non-matching VLAN tag
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* authentication vlan-mismatch-timeout *number*
Tree	vlan-mismatch-timeout
Range	5 to 60
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

data-triggered-ue-creation

Synopsis	Enter the **data-triggered-ue-creation** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* data-triggered-ue-creation
Tree	data-triggered-ue-creation
Description	Commands in this context configure data-triggered subscriber creation for Wi-Fi subscribers. Data-triggered UE creation only works upon receipt of TCP and UDP packets.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of data-triggered UE creation
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* data-triggered-ue-creation admin-state *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arp *boolean*

Synopsis	Authenticate ARP packets received from an unknown UE
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* data-triggered-ue-creation arp *boolean*
Tree	arp
Default	false
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

create-proxy-cache-entry

Synopsis	Enter the **create-proxy-cache-entry** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* data-triggered-ue-creation create-proxy-cache-entry
Tree	create-proxy-cache-entry
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-format *string*

Synopsis	MAC address format
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* data-triggered-ue-creation create-proxy-cache-entry mac-format *string*
Tree	mac-format
String Length	2 to 7
Default	aa:
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

proxy-server

Synopsis	Enable the **proxy-server** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* data-triggered-ue-creation create-proxy-cache-entry proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	RADIUS Proxy server name
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* data-triggered-ue-creation create-proxy-cache-entry proxy-server name *string*
Tree	name
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router instance of the RADIUS proxy server
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* data-triggered-ue-creation create-proxy-cache-entry proxy-server router-instance *string*
Tree	router-instance
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ospf *boolean*

Synopsis	Authenticate OSPF packets received from an unknown UE
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* data-triggered-ue-creation ospf *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ospf
Description	When configured to **true**, the system triggers UE authentication based on OSPFv2 or OSPFv3 packets. These packets are used with the dynamic VPLS service.
Default	false
Introduced	23.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp4

Synopsis	Enter the **dhcp4** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dhcp4
Tree	dhcp4
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCPv4
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dhcp4 admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns *string*

Synopsis	DNS servers signaled in DHCP
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dhcp4 dns *string*
Tree	dns
Max. Instances	2
Notes	This element is ordered by the user.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2-aware-ip-address *(ipv4-unicast-address | keyword)*

Synopsis	L2-Aware NAT inside IP address
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dhcp4 l2-aware-ip-address *(ipv4-unicast-address | keyword)*
Tree	l2-aware-ip-address
Options	from-pool – IP address allocated from a pool
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lease-time

Synopsis	Enter the **lease-time** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dhcp4 lease-time
Tree	lease-time
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

active *number*

Synopsis	Lease time an authenticated user
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dhcp4 lease-time active *number*
Tree	active
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

initial *number*

Synopsis	Lease time for migrant user (unauthenticated)
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dhcp4 lease-time initial *number*
Tree	initial
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

nbns *string*

Synopsis	NetBIOS servers signaled in DHCP
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dhcp4 nbns *string*
Tree	nbns
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1

Tree	accounting-statistics
Default	false
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

profile *reference*

Synopsis	AA application profile used for portal authentication
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm application-assurance profile *reference*
Tree	profile
Reference	**configure** application-assurance group *number* partition *number* policy app-profile *string*
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

url-parameter *string*

Synopsis	AA URL parameter included for HTTP portal redirect
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm application-assurance url-parameter *string*
Tree	url-parameter
String Length	1 to 247
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

captive-portal-api-url *string*

Synopsis	Captive portal URL
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm captive-portal-api-url *string*
Tree	captive-portal-api-url
Description	This command specifies a URL for an RFC 8908 captive portal API server that is included in DHCP, RA, and DHCPv6 messages as described in RFC 8910. This command supports the same macro substitutions as the **configure subscriber-mgmt http-redirect-policy url** command. This command is mutually exclusive with the **one-time-redirect** and **send-unrestricted-portal-url** commands in the same context.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When unconfigured, the WLAN-GW populates the URL in DHCP, RA, and DHCPv6 messages based on whether redirect is applied and the value of the **one-time-redirect** command.

String Length	1 to 255
Introduced	24.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis	Enter the **egress** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm egress
Tree	egress
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *reference*

Synopsis	Policer for egress traffic
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm egress policer *reference*
Tree	policer
Reference	**configure** subscriber-mgmt isa-policer *string*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis	Enter the **ingress** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm ingress
Tree	ingress
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

ip-filter *reference*

Synopsis	Filter for ingress traffic
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm ingress ip-filter *reference*
Tree	ip-filter
Reference	**configure** subscriber-mgmt isa-filter *string*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *reference*

Synopsis	Policer for ingress traffic
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm ingress policer *reference*
Tree	policer
Reference	**configure** subscriber-mgmt isa-policer *string*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

soft-quota-exhausted-filter *reference*

Synopsis	Filter applied when soft volume quota is reached
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm ingress soft-quota-exhausted-filter *reference*
Tree	soft-quota-exhausted-filter
Description	This command applies a filter when a soft volume quota is reached. The filter replaces the currently applied filter (which can be preconfigured using the **ip-filter** command in the **configure service vprn subscriber-interface group-interface wlan-gw vlan-range dsm ingress ip-filter** context or be set using a RADIUS CoA message) for the UE upon quota exhaustion. If the quota is extended using a RADIUS CoA message, the filter is automatically reverted. Configuration changes apply only to new DSM UEs and not to existing UEs.
Reference	**configure** subscriber-mgmt isa-filter *string*
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

one-time-redirect

Synopsis	Enter the **one-time-redirect** context
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm one-time-redirect
Tree	one-time-redirect
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

port *number*

Synopsis	Destination port of packets for HTTP redirect
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm one-time-redirect port *number*
Tree	port
Range	1 to 65535
Default	80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

url *string*

Synopsis	URL for redirected HTTP protocol packets
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm one-time-redirect url *string*
Tree	url
String Length	1 to 255
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

send-unrestricted-portal-url *boolean*

Synopsis	Send an indicator if no captive portal is enabled
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm send-unrestricted-portal-url *boolean*
Tree	send-unrestricted-portal-url
Description	When configured to **true**, the router sends the special URL indicator urn:ietf:params:capport:unrestricted in DHCP, DHCPv6, and RA messages, to indicate

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

to the client that no captive portal is enabled. This allows the client to disable all portal detection logic, thereby optimizing the user experience.

Default false

Introduced 24.3.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

volume-quota-direction *keyword*

Synopsis Volume quota direction for WLAN GW

Context **configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dsm volume-quota-direction *keyword*

Tree volume-quota-direction

Description This command specifies the direction that volume quotas are applied. Configuration changes apply only to new DSM UEs and not to existing UEs.

Options both – Both directions
ingress – Ingress direction (upstream)
egress – Egress direction (downstream)

Default both

Introduced 21.7.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dynamic-service *boolean*

Synopsis Dynamically assign WLAN-GW subscriber to a VPLS service

Context **configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* dynamic-service *boolean*

Tree dynamic-service

Description When configured to **true**, the WLAN-GW subscriber is dynamically assigned to a VPLS service, based on RADIUS authentication reply attributes. This feature is used in conjunction with the **configure service vpls wlan-gw wlan-gw-group** command.

See "Dynamic VPLS service" in the *7450 ESS, 7750 SR, and VSR Triple Play Service Delivery Architecture Guide* for more information about the dynamic VPLS service feature.

Default false

Introduced 23.3.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

extension [extension-range] *string*

Synopsis	Add a list entry for **extension**
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* extension *string*
Tree	extension
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**extension-range**] *string*

Synopsis	VLAN tag range used for matching
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* extension *string*
Tree	extension
Description	This command configures the additional VLAN range that is used for matching. Any traffic within the extension range is considered part of the same VLAN range for purposes of intra-SSID mobility.
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect-policy *reference*

Synopsis	Default HTTP redirect policy for portal authentication
Context	**configure** service vprn *string* subscriber-interface *string* group-interface *string* wlan-gw vlan-range *string* http-redirect-policy *reference*
Tree	http-redirect-policy
Reference	**configure** subscriber-mgmt http-redirect-policy *string*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

host-limit *number*

Synopsis	Maximum number of ARP hosts
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 arp-host host-limit *number*
Tree	host-limit
Range	1 to 524287
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bfd

Synopsis	Enter the **bfd** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 bfd
Tree	bfd
Description	Commands in this context configure the attributes of bidirectional forwarding detection (BFD) sessions that control the state of ESM dynamic BGP peers.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 bfd admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 bfd echo-receive *number*
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 bfd multiplier *number*
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive *number*

Synopsis	BFD receive interval over this interface

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* ipv4 bfd receive *number*
Tree	receive
Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

transmit-interval *number*

Synopsis	BFD transmit interval over this interface
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 bfd transmit-interval *number*
Tree	transmit-interval
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Local termination point for the BFD session
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 bfd type *keyword*
Tree	type
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: • **auto** (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the **cpm-np**.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- **cpm-np** – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.
- **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.

Options	cpm-np, auto, fp
Default	auto
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

default-dns *string*

Synopsis	Default DNS server addresses
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 default-dns *string*
Tree	default-dns
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp

Synopsis	Enter the **dhcp** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp
Tree	dhcp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCP
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp client-applications dhcp *boolean*
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Enable PPPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp client-applications ppp *boolean*
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

gi-address *string*

Synopsis	GI address for the DHCP relay
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp gi-address *string*
Tree	gi-address
Description	This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay. By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-populate

Synopsis	Enter the **lease-populate** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp lease-populate
Tree	lease-populate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-leases *number*

Synopsis	Maximum number of DHCPv4 leases
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp lease-populate max-leases *number*
Tree	max-leases
Range	0 to 511999
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

offer-selection

Synopsis	Enter the **offer-selection** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp offer-selection
Tree	offer-selection
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac

Synopsis	Enter the **client-mac** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp offer-selection client-mac
Tree	client-mac
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp offer-selection client-mac discover-delay *number*
Tree	discover-delay
Description	This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-address *keyword*

Synopsis	Designated client MAC addresses for Offer selection
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp offer-selection client-mac mac-address *keyword*
Tree	mac-address
Description	This command specifies the client MAC addresses for which the Discover delay applies.
Options	odd, even

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp offer-selection discover-delay *number*
Tree	discover-delay
Description	This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [ipv4-address] *string*

Synopsis	Enter the **server** list instance
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp offer-selection server *string*
Tree	server
Max. Instances	8
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ipv4-address**] *string*

Synopsis	IP address of the DHCP server
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp offer-selection server *string*
Tree	server
Notes	This element is part of a list key.
Introduced	20.10.R1

© 2024 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp offer-selection server *string* discover-delay *number*
Tree	discover-delay
Description	This command configures the time to delay DHCP Discover messages sent to the server.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option-82

Synopsis	Enter the **option-82** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp option-82
Tree	option-82
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor-specific-option

Synopsis	Enter the **vendor-specific-option** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv4 dhcp option-82 vendor-specific-option
Tree	vendor-specific-option
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

allow-unmatching-prefixes *boolean*

Synopsis	Allow subscriber hosts without a matching prefix
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 allow-unmatching-prefixes *boolean*
Tree	allow-unmatching-prefixes
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bfd

Synopsis	Enter the **bfd** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 bfd
Tree	bfd
Description	Commands in this context configure the attributes of bidirectional forwarding detection (BFD) sessions that control the state of ESM dynamic BGP peers.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 bfd admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 bfd echo-receive *number*
Tree	echo-receive
Range	100 to 100000

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 bfd multiplier *number*
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive *number*

Synopsis	BFD receive interval over this interface
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 bfd receive *number*
Tree	receive
Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

transmit-interval *number*

Synopsis	BFD transmit interval over this interface
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 bfd transmit-interval *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	transmit-interval
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Local termination point for the BFD session
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 bfd type *keyword*
Tree	type
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: • **auto** (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the **cpm-np**. • **cpm-np** – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.
Options	cpm-np, auto, fp
Default	auto
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

default-dns *string*

Synopsis	Default DNS server addresses
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 default-dns *string*
Tree	default-dns
Max. Instances	2

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delegated-prefix-length *(number | keyword)*

Synopsis	IPv6 delegated prefix length
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 delegated-prefix-length *(number | keyword)*
Tree	delegated-prefix-length
Range	48 to 64
Options	variable
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp6

Synopsis	Enter the **dhcp6** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6
Tree	dhcp6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-client-id-change *boolean*

Synopsis	Allow changes to the client ID
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 allow-client-id-change *boolean*
Tree	allow-client-id-change
Default	false
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

override-slaac *boolean*

Synopsis	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 override-slaac *boolean*
Tree	override-slaac
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pd-managed-route

Synopsis	Enable the **pd-managed-route** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 pd-managed-route
Tree	pd-managed-route
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-hop *keyword*

Synopsis	Next hop type
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 pd-managed-route next-hop *keyword*
Tree	next-hop
Options	ipv4, ipv6
Default	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis	Enter the **proxy-server** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 proxy server
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server client-applications dhcp *boolean*
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Allow PPPoE clients to use DHCP relay functionality
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server client-applications ppp *boolean*
Tree	ppp

© 2024 Nokia.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *(number | keyword)*

Synopsis	Time for prefix to remain preferred on this interface
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rebind-timer *number*

Synopsis	Rebind timer (T2) for this interface
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server rebind-timer *number*
Tree	rebind-timer
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

renew-timer *number*

Synopsis	Renew timer (T1)
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server renew-timer *number*
Tree	renew-timer
Range	0 to 604800

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server-id

Synopsis	Enter the **server-id** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server server-id
Tree	server-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en-ascii *string*

Synopsis	Vendor-assigned ID based on Enterprise Number (DUID-EN)
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server server-id duid-en-ascii *string*
Tree	duid-en-ascii
String Length	1 to 58
Notes	The following elements are part of a choice: **duid-en-ascii**, **duid-en-hex**, or **duid-ll**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en-hex *string*

Synopsis	DUID system ID in hexadecimal format
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server server-id duid-en-hex *string*
Tree	duid-en-hex
String Length	1 to 118
Notes	The following elements are part of a choice: **duid-en-ascii**, **duid-en-hex**, or **duid-ll**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

duid-ll

Synopsis	Use link-layer address (DUID-LL) as DUID
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server server-id duid-ll
Tree	duid-ll
Notes	The following elements are part of a choice: **duid-en-ascii**, **duid-en-hex**, or **duid-ll**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *(number | keyword)*

Synopsis	Time for prefix to remain valid on this interface
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 proxy-server valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

relay

Synopsis	Enter the **relay** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay
Tree	relay
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

advertise-selection

Synopsis	Enter the **advertise-selection** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection
Tree	advertise-selection
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac

Synopsis	Enter the **client-mac** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection client-mac
Tree	client-mac
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

mac-address *keyword*

Synopsis	Designated client MAC addresses for Advertise selection
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection client-mac mac-address *keyword*
Tree	mac-address
Options	odd, even
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the **preference-option** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection client-mac preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection client-mac preference-option value *number*
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection client-mac solicit-delay *number*
Tree	solicit-delay

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the time to delay DHCPv6 Solicit messages sent from the designated client MAC addresses.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the **preference-option** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection preference-option value *number*
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [ipv6-address] *string*

Synopsis	Enter the **server** list instance
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection server *string*
Tree	server
Max. Instances	8
Notes	The following elements are part of a choice: **client-mac** or **server**.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ipv6-address**] *string*

Synopsis	IP address of the DHCPv6 server
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection server *string*
Tree	server
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the **preference-option** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection server *string* preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection server *string* preference-option value *number*
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection server *string* solicit-delay *number*
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages sent to the server.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay advertise-selection solicit-delay *number*
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages. The delay is applied to DHCPv6 Solicit messages for which no overriding value is configured in the **server** instance or the **client-mac** context.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay client-applications dhcp *boolean*
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Allow PPPoE clients to use DHCP relay functionality
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay client-applications ppp *boolean*
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-split

Synopsis	Enter the **lease-split** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay lease-split
Tree	lease-split
Description	Commands in this context configure DHCPv6 lease split.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following:

- the renew time T1 committed by the server (long renew time)
- half of the preferred lifetime committed by the server when T1 committed by the server equals zero

Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 lease split
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay lease-split admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *number*

Synopsis	DHCPv6 lease split valid lifetime (short lease time)
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay lease-split valid-lifetime *number*
Tree	valid-lifetime
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-address *string*

Synopsis	Link address for the DHCPv6 relay messages
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay link-address *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	link-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *string*

Synopsis	DHCP6 servers to which the DHCP6 requests are forwarded
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay server *string*
Tree	server
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-address *string*

Synopsis	Source IPv6 address for the DHCPv6 relay messages
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 dhcp6 relay source-address *string*
Tree	source-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-bridged-mode *boolean*

Synopsis	Enable IPv6 IPoE bridged mode
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 ipoe-bridged-mode *boolean*
Tree	ipoe-bridged-mode
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-local-address

Synopsis	Enter the **link-local-address** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 link-local-address
Tree	link-local-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address *string*

Synopsis	IPv6 link local address
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 link-local-address address *string*
Tree	address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix [ipv6-prefix] *string*

Synopsis	Enter the **prefix** list instance
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 prefix *string*
Tree	prefix
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[ipv6-prefix] *string*

Synopsis	IPv6 address for a router interface
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 prefix *string*
Tree	prefix
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

holdup-time *number*

Synopsis	Time to wait before route accepts new state attribute
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 prefix *string* holdup-time *number*
Tree	holdup-time
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Host type for subscriber interface prefixes
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 prefix *string* host-type *keyword*
Tree	host-type
Options	pd – IPv6 ESM hosts for DHCPv6 prefix-delegation wan – ESM hosts for DHCPv6 addresses or by WAN interface pd-wan – Both prefix-delegation and ESM hosts
Default	pd
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-srrp *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 prefix *string* track-srrp *number*
Tree	track-srrp
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-advertisements

Synopsis	Enter the **router-advertisements** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements
Tree	router-advertisements
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of router advertisements
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-mcast *keyword*

Synopsis	Protocol with forced multicast
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements force-mcast *keyword*
Tree	force-mcast
Options	ip, ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-advertisement-interval *number*

Synopsis	Maximum advertisement interval
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements max-advertisement-interval *number*
Tree	max-advertisement-interval
Range	900 to 1800

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-advertisement-interval *number*

Synopsis	Minimum advertisement interval
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements min-advertisement-interval *number*
Tree	min-advertisement-interval
Range	900 to 1350
Units	seconds
Default	900
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

options

Synopsis	Enter the **options** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements options
Tree	options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

current-hop-limit *number*

Synopsis	Hop limit to be advertised
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements options current-hop-limit *number*
Tree	current-hop-limit
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

dns

Synopsis	Enter the **dns** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements options dns
Tree	dns
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-rdnss *boolean*

Synopsis	Include the RDNSS server option 25
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements options dns include-rdnss *boolean*
Tree	include-rdnss
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rdnss-lifetime *(number | keyword)*

Synopsis	Maximum time for the RDNSS address to remain valid
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements options dns rdnss-lifetime *(number | keyword)*
Tree	rdnss-lifetime
Range	900 to 3600
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-configuration *boolean*

Synopsis	Managed address configuration flag

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements options managed-configuration *boolean*
Tree	managed-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mtu *(number | keyword)*

Synopsis	Advertised MTU value
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements options mtu *(number | keyword)*
Tree	mtu
Range	1280 to 9212
Units	bytes
Options	not-included
Default	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other-stateful-configuration *boolean*

Synopsis	Other stateful configuration flag
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements options other-stateful-configuration *boolean*
Tree	other-stateful-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reachable-time *number*

Synopsis	Reachable time for advertisements
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements options reachable-time *number*
Tree	reachable-time

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retransmit-timer *number*

Synopsis	Retransmit time in router advertisements from interface
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements options retransmit-timer *number*
Tree	retransmit-timer
Range	0 to 1800000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-lifetime *(number | keyword)*

Synopsis	Router lifetime
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements options router-lifetime *(number | keyword)*
Tree	router-lifetime
Range	2700 to 9000
Units	seconds
Options	no-default-router
Default	4500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-options

Synopsis	Enter the **prefix-options** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements prefix-options

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	prefix-options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

autonomous *boolean*

Synopsis	Value of the autonomous flag
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements prefix-options autonomous *boolean*
Tree	autonomous
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-link *boolean*

Synopsis	Assign the prefix to an interface on the specified link
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements prefix-options on-link *boolean*
Tree	on-link
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *(number | keyword)*

Synopsis	Time for a prefix to remain preferred
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements prefix-options preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

valid-lifetime *(number | keyword)*

Synopsis	Time for a prefix to remain valid
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-advertisements prefix-options valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-solicit

Synopsis	Enter the **router-solicit** context
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-solicit
Tree	router-solicit
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

inactivity-timer *(number | keyword)*

Synopsis	Time before an inactive host is removed
Context	**configure** service vprn *string* subscriber-interface *string* ipv6 router-solicit inactivity-timer *(number | keyword)*
Tree	inactivity-timer
Range	1 to 31536000
Units	seconds
Options	infinite
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address-assignment

Synopsis	Enter the **local-address-assignment** context
Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment
Tree	local-address-assignment
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of Local Address Assignment
Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment ipv4 client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

ppp *boolean*

Synopsis	Request local addresses for PPP IPCP hosts
Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment ipv4 client-applications ppp *boolean*
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-pool *string*

Synopsis	Default pools
Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment ipv4 default-pool *string*
Tree	default-pool
String Length	1 to 32
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *reference*

Synopsis	Local DHCPv4 server for local pools management
Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment ipv4 server *reference*
Tree	server
Reference	**configure** service vprn *string* dhcp-server dhcpv4 *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment ipv6

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment ipv6 client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-slaac *boolean*

Synopsis	Request local addresses for IPoE SLAAC hosts
Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment ipv6 client-applications ipoe-slaac *boolean*
Tree	ipoe-slaac
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-wan *boolean*

Synopsis	Request local addresses for IPoE IA NA hosts
Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment ipv6 client-applications ipoe-wan *boolean*
Tree	ipoe-wan
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-slaac *boolean*

Synopsis	Request local addresses for PPP SLAAC hosts

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment ipv6 client-applications ppp-slaac *boolean*
Tree	ppp-slaac
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *reference*

Synopsis	Local DHCPv6 server for local pools management
Context	**configure** service vprn *string* subscriber-interface *string* local-address-assignment ipv6 server *reference*
Tree	server
Reference	**configure** service vprn *string* dhcp-server dhcpv6 *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe

Synopsis	Enter the **pppoe** context
Context	**configure** service vprn *string* subscriber-interface *string* pppoe
Tree	pppoe
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** service vprn *string* subscriber-interface *string* pppoe description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wlan-gw

Synopsis	Enable the **wlan-gw** context
Context	**configure** service vprn *string* subscriber-interface *string* wlan-gw
Tree	wlan-gw
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

pool-manager

Synopsis	Enter the **pool-manager** context
Context	**configure** service vprn *string* subscriber-interface *string* wlan-gw pool-manager
Tree	pool-manager
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp6-client

Synopsis	Enter the **dhcp6-client** context
Context	**configure** service vprn *string* subscriber-interface *string* wlan-gw pool-manager dhcp6-client
Tree	dhcp6-client
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcpv4-nat

Synopsis	Enter the **dhcpv4-nat** context
Context	**configure** service vprn *string* subscriber-interface *string* wlan-gw pool-manager dhcp6-client dhcpv4-nat
Tree	dhcpv4-nat
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 client entity

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-interface *string* wlan-gw pool-manager dhcp6-client dhcpv4-nat admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

link-address *string*

Synopsis	IPv6 address in the link address field of relay header
Context	**configure** service vprn *string* subscriber-interface *string* wlan-gw pool-manager dhcp6-client dhcpv4-nat link-address *string*
Tree	link-address
Default	::
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

pool-name *string*

Synopsis	Pool name to be sent in the DHCPv6 messages
Context	**configure** service vprn *string* subscriber-interface *string* wlan-gw pool-manager dhcp6-client dhcpv4-nat pool-name *string*
Tree	pool-name
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ia-na

Synopsis	Enter the **ia-na** context
Context	**configure** service vprn *string* subscriber-interface *string* wlan-gw pool-manager dhcp6-client ia-na
Tree	ia-na
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

routed-subnet-transparent-forward *boolean*

Synopsis	Transparently forward DHCPv4 from CPE LAN over IPoE
Context	**configure** service vprn *string* subscriber-mgmt dhcpv4 routed-subnet-transparent-forward *boolean*
Tree	routed-subnet-transparent-forward
Description	When configured to **true**, the router transparently forwards DHCPv4 packets received on a subscriber interface with a source IP in a routed subnet that is associated with a routed IPoE session or host. Supported routed subnets are: • RADIUS and NASREQ framed routes • routes learned via an ESM dynamic BGP peer • managed routes that are associated with a static IPv4 host When configured to **false**, the system disables transparent forwarding of DHCPv4 packets.
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multi-chassis-shunt-id *number*

Synopsis	Shunt ID for a pair of resilient nodes
Context	**configure** service vprn *string* subscriber-mgmt multi-chassis-shunt-id *number*
Tree	multi-chassis-shunt-id
Description	This command configures the shunt ID that is used to shunt downstream traffic from a standby node to an active node. Because this ID identifies the traffic service on the standby node, the same ID must be configured per service on each node. This configuration is required for inter-BNG-UP resiliency shunting, but not for non-BNG-UP shunting. However, when configured, it is also used for shunting non-BNG-UP sessions in the same service.
Range	1 to 8191
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

up-resiliency

Synopsis	Enter the **up-resiliency** context
Context	**configure** service vprn *string* subscriber-mgmt up-resiliency

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	up-resiliency
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

monitor-oper-group [oper-group] *reference*

Synopsis	Enter the **monitor-oper-group** list instance
Context	**configure** service vprn *string* subscriber-mgmt up-resiliency monitor-oper-group *reference*
Tree	monitor-oper-group
Description	Commands in this context define parameters to derive the service health based on monitored operational groups. The BNG UPF sends the health value to the BNG CPF. The BNG CPF uses the value to determine the need for a BNG UPF status change (active or standby). **Note:** The following is only applicable for the **configure service vpls capture-sap** context.If the configured groups are not the same for all capture SAPs sharing the same underlying port or LAG, the configuration of a Layer 2 access ID alias is required, or else the system chooses arbitrarily one set of configured groups.
Max. Instances	2
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**oper-group**] *reference*

Synopsis	Operational group name
Context	**configure** service vprn *string* subscriber-mgmt up-resiliency monitor-oper-group *reference*
Tree	monitor-oper-group
Reference	**configure** service oper-group *string*
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

health-drop *number*

Synopsis	Number subtracted from the health value per failure

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *string* subscriber-mgmt up-resiliency monitor-oper-group *reference* health-drop *number*
Tree	health-drop
Description	This command configures the drop in the health value for every operational group member failure. Every failure of an operational group member decreases the base health value to a possible minimum of 0.
Range	1 to 100
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-ipv6-udp-checksum-zero *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	**configure** service vprn *string* twamp-light reflector allow-ipv6-udp-checksum-zero *boolean*
Tree	allow-ipv6-udp-checksum-zero
Description	When configured to **true**, this command allows the processing of IPv6 packets that arrive with a UDP checksum of zero. The destination UDP ports that are registered as TWAMP Test packets as part of this template allow this behavior. When configured to **false**, IPv6 packets that arrive with a UDP checksum of zero are discarded.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

type *keyword*

Synopsis	Processing behavior type for the reflector
Context	**configure** service vprn *string* twamp-light reflector type *keyword*
Tree	type
Description	This command configures the processing behavior of the TWAMP Light reflector. When the value is **twamp-light** the reflector does not check the received PDU as a traditional base TWAMP Light packet without TLV processing. When the value is **stamp**, the reflector attempts to find and process supported STAMP TLVs that follow the base STAMP packet. In mixed environments where different types of Session-Senders may be targeting a common TWAMP Light reflector, set the value to **stamp**. When the reflector is operating in **stamp** mode, the primary parsing is based on STAMP, checking and processing known TLVs, or determining if the arriving PDU is a TWAMP Light PDU. A Session-Sender launching a TWAMP Light-based packet must use all zeros padding pattern when the pad size is non zero.
Options	stamp, twamp-light
Default	twamp-light
Introduced	22.7.R1

3.45.1 subscriber-mgmt command descriptions

subscriber-mgmt

Synopsis	Enter the **subscriber-mgmt** context
Context	**configure** subscriber-mgmt
Tree	subscriber-mgmt
Description	Commands in this context configure subscriber management attributes, policies, and profiles.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accu-stats-policy [name] *string*

Synopsis	Enter the **accu-stats-policy** list instance
Context	**configure** subscriber-mgmt accu-stats-policy *string*
Tree	accu-stats-policy
Description	Commands in this context configure a storage policy for cumulative statistics for subscribers. The policy defines the direction for the policer or the queue to be stored. The policy stores subscriber statistics even if the subscriber session has ended. The subscriber statistics can be viewed even if the subscriber is offline. When the subscriber session ends, the statistics are added to the past statistics stored in memory so that all previous session statistics are accumulated. The accumulated statistics are not persistent; they are only stored in memory and reset to zero when the chassis reboots.
Max. Instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Policy name
Context	**configure** subscriber-mgmt accu-stats-policy *string*
Tree	accu-stats-policy
String Length	1 to 32

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp

Synopsis	Enter the **ancp** context
Context	**configure** subscriber-mgmt ancp
Tree	ancp
Description	Commands in this context configure Access Node Control Protocol (ANCP) settings.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp-policy [name] *string*

Synopsis	Enter the **ancp-policy** list instance
Context	**configure** subscriber-mgmt ancp ancp-policy *string*
Tree	ancp-policy
Description	Commands in this context configure the specified ANCP policy, which can be associated with either an ANCP string (static) or a subscriber-profile (dynamic), and define the behavior of hosts belonging to these profiles. ANCP policies control rates and subscribers based on port-up/port-down messages from the access node. When configured, the node stops SHCV to a host that is part of a port that is down (by port-down message). When a port-up message is received for the port that was down, the node initiates the SHCV process immediately to verify connectivity. When ANCP is used with ESM, all hosts of a subscriber are updated with the ANCP string last associated with the subscriber.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Policy name
Context	**configure** subscriber-mgmt ancp ancp-policy *string*
Tree	ancp-policy
String Length	1 to 32

© 2024 Nokia.

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis	Enter the **egress** context
Context	**configure** subscriber-mgmt ancp ancp-policy *string* egress
Tree	egress
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-adjustment *number*

Synopsis	Rate adjustment for the scheduler
Context	**configure** subscriber-mgmt ancp ancp-policy *string* egress rate-adjustment *number*
Tree	rate-adjustment
Description	This command configures the rate adjustment for the scheduler. This setting is used when the rate returned by the DSLAM is calculated with a different encapsulation than the SR node. The node adjusts the rate by the percentage specified as: DSLAM_RATE * (adjustment rate)/100 — (rate reduction)
Range	1 to 200
Units	percent
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-modify

Synopsis	Enter the **rate-modify** context
Context	**configure** subscriber-mgmt ancp ancp-policy *string* egress rate-modify
Tree	rate-modify
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

agg-rate

Synopsis	Maximum total rate for all subscriber egress queues
Context	**configure** subscriber-mgmt ancp ancp-policy *string* egress rate-modify agg-rate
Tree	agg-rate
Description	This command specifies the maximum total rate for all subscriber egress queues for each subscriber associated with the policy.
Notes	The following elements are part of a choice: **agg-rate** or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scheduler *string*

Synopsis	Scheduler to be applied for rate modification
Context	**configure** subscriber-mgmt ancp ancp-policy *string* egress rate-modify scheduler *string*
Tree	scheduler
String Length	1 to 32
Notes	The following elements are part of a choice: **agg-rate** or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-monitor

Synopsis	Enter the **rate-monitor** context
Context	**configure** subscriber-mgmt ancp ancp-policy *string* egress rate-monitor
Tree	rate-monitor
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alarm *boolean*

Synopsis	Generate SNMP notification when monitor event is raised
Context	**configure** subscriber-mgmt ancp ancp-policy *string* egress rate-monitor alarm *boolean*
Tree	alarm
Description	When configured to **true**, the system generates an alarm (trap) to the management system including the rate, the ANCP policy name, and the ANCP string when the monitored rate is below the configured rate.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, no alarm is generated.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate *number*

Synopsis	Rate below which the system generates an event
Context	**configure** subscriber-mgmt ancp ancp-policy *string* egress rate-monitor rate *number*
Tree	rate
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-reduction *number*

Synopsis	Constant rate reduction to specified DSLAM rate
Context	**configure** subscriber-mgmt ancp ancp-policy *string* egress rate-reduction *number*
Tree	rate-reduction
Description	This command configures a constant rate reduction to the rate specified by the DSLAM. This setting is used if the node must adjust the rate to a value that is offset (for example by a fixed multicast dedicated bandwidth) compared to the total available on the DSLAM. The rate is calculated as: DSLAM_RATE * (adjustment rate)/100 — (rate reduction)
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis	Enter the **ingress** context
Context	**configure** subscriber-mgmt ancp ancp-policy *string* ingress
Tree	ingress
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-adjustment *number*

Synopsis	Rate adjustment for the scheduler
Context	**configure** subscriber-mgmt ancp ancp-policy *string* ingress rate-adjustment *number*
Tree	rate-adjustment
Description	This command configures the rate adjustment for the scheduler. This setting is used when the rate returned by the DSLAM is calculated with a different encapsulation than the SR node. The node adjusts the rate by the percentage specified as: DSLAM_RATE * (adjustment rate)/100 — (rate reduction)
Range	1 to 200
Units	percent
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-modify

Synopsis	Enter the **rate-modify** context
Context	**configure** subscriber-mgmt ancp ancp-policy *string* ingress rate-modify
Tree	rate-modify
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scheduler *string*

Synopsis	Scheduler to be applied for rate modification
Context	**configure** subscriber-mgmt ancp ancp-policy *string* ingress rate-modify scheduler *string*
Tree	scheduler
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-monitor

Synopsis	Enter the **rate-monitor** context
Context	**configure** subscriber-mgmt ancp ancp-policy *string* ingress rate-monitor
Tree	rate-monitor
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alarm *boolean*

Synopsis	Generate SNMP notification when monitor event is raised
Context	**configure** subscriber-mgmt ancp ancp-policy *string* ingress rate-monitor alarm *boolean*
Tree	alarm
Description	When configured to **true**, the system generates an alarm (trap) to the management system including the rate, the ANCP policy name, and the ANCP string when the monitored rate is below the configured rate. When configured to **false**, no alarm is generated.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate *number*

Synopsis	Rate below which the system generates an event
Context	**configure** subscriber-mgmt ancp ancp-policy *string* ingress rate-monitor rate *number*
Tree	rate
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-reduction *number*

Synopsis	Constant rate reduction to specified DSLAM rate
Context	**configure** subscriber-mgmt ancp ancp-policy *string* ingress rate-reduction *number*
Tree	rate-reduction

port-down

Synopsis	Enter the **port-down** context
Context	**configure** subscriber-mgmt ancp ancp-policy *string* port-down
Tree	port-down
Description	Commands in this context configure the actions taken on port-down.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suspend-shcv

Synopsis	Enable the **suspend-shcv** context
Context	**configure** subscriber-mgmt ancp ancp-policy *string* port-down suspend-shcv
Tree	suspend-shcv
Description	Commands in this context specify the configuration to suspend SHCV for the hosts defined with the ANCP policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alarm *boolean*

Synopsis	Send an alarm before suspending SHCV
Context	**configure** subscriber-mgmt ancp ancp-policy *string* port-down suspend-shcv alarm *boolean*
Tree	alarm
Default	false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis	Time that SHCV is suspended
Context	**configure** subscriber-mgmt ancp ancp-policy *string* port-down suspend-shcv hold-time *number*
Tree	hold-time
Description	This command configures the time that the node suspends SHCV. When unconfigured, SHCV is suspended until a port-up message is received.
Range	1 to 7200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp-static-map

Synopsis	Enter the **ancp-static-map** context
Context	**configure** subscriber-mgmt ancp ancp-static-map
Tree	ancp-static-map
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multi-service-site-entry [ancp-string] *string* customer-name *reference* customer-site-name *reference*

Synopsis	Enter the **multi-service-site-entry** list instance
Context	**configure** subscriber-mgmt ancp ancp-static-map multi-service-site-entry *string* customer-name *reference* customer-site-name *reference*
Tree	multi-service-site-entry
Description	Commands in this context configure the ANCP key mapping (usually the circuit ID of the DSLAM port) to a customer, site, and scheduler name when Multi-Service site (MSS) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**ancp-string**] *string*

Synopsis	ANCP string
Context	**configure** subscriber-mgmt ancp ancp-static-map multi-service-site-entry *string* customer-name *reference* customer-site-name *reference*
Tree	multi-service-site-entry
String Length	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

customer-name *reference*

Synopsis	Customer ID
Context	**configure** subscriber-mgmt ancp ancp-static-map multi-service-site-entry *string* customer-name *reference* customer-site-name *reference*
Tree	multi-service-site-entry
Reference	**configure** service customer *string*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

customer-site-name *reference*

Synopsis	Service customer multi-service site name
Context	**configure** subscriber-mgmt ancp ancp-static-map multi-service-site-entry *string* customer-name *reference* customer-site-name *reference*
Tree	multi-service-site-entry
Reference	**configure** service customer *string* multi-service-site *string*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

ancp-policy *reference*

Synopsis	ANCP policy name
Context	**configure** subscriber-mgmt ancp ancp-static-map multi-service-site-entry *string* customer-name *reference* customer-site-name *reference* ancp-policy *reference*
Tree	ancp-policy
Reference	**configure** subscriber-mgmt ancp ancp-policy *string*
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-entry [ancp-string] *string* sap-id *string*

Synopsis	Enter the **sap-entry** list instance
Context	**configure** subscriber-mgmt ancp ancp-static-map sap-entry *string* sap-id *string*
Tree	sap-entry
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ancp-string**] *string*

Synopsis	ANCP key name
Context	**configure** subscriber-mgmt ancp ancp-static-map sap-entry *string* sap-id *string*
Tree	sap-entry
String Length	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id *string*

Synopsis	SAP ID
Context	**configure** subscriber-mgmt ancp ancp-static-map sap-entry *string* sap-id *string*
Tree	sap-entry
String Length	1 to 45
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp-policy *reference*

Synopsis	ANCP policy name
Context	**configure** subscriber-mgmt ancp ancp-static-map sap-entry *string* sap-id *string* ancp-policy *reference*
Tree	ancp-policy
Reference	**configure** subscriber-mgmt ancp ancp-policy *string*
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-origin

Synopsis	Enter the **authentication-origin** context
Context	**configure** subscriber-mgmt authentication-origin
Tree	authentication-origin
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

overrides

Synopsis	Enter the **overrides** context
Context	**configure** subscriber-mgmt authentication-origin overrides
Tree	overrides
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

priority [id] *number*

Synopsis	Enter the **priority** list instance
Context	**configure** subscriber-mgmt authentication-origin overrides priority *number*
Tree	priority

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context arrange the relative order of authentication priorities.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Authentication origin priority override
Context	**configure** subscriber-mgmt authentication-origin overrides priority *number*
Tree	priority
Description	This command configures the insert position of the authentication origin priority override.
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source *keyword*

Synopsis	Source of authentication priority
Context	**configure** subscriber-mgmt authentication-origin overrides priority *number* source *keyword*
Tree	source
Description	This command specifies the prioritization of authentication sources.
Options	python, diameter-gx, ludb, radius, diameter-nasreq, gtp, dhcp, local-address-assignment, pfcp, config
Notes	This element is mandatory.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-sub-id

Synopsis	Enter the **auto-sub-id** context
Context	**configure** subscriber-mgmt auto-sub-id
Tree	auto-sub-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

implicit-generation *boolean*

Synopsis	Generate implicitly a subscriber ID when not provided
Context	**configure** subscriber-mgmt auto-sub-id implicit-generation *boolean*
Tree	implicit-generation
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-key *keyword*

Synopsis	Auto-generated subscriber ID key1 for IPoE hosts
Context	**configure** subscriber-mgmt auto-sub-id ipoe-key *keyword*
Tree	ipoe-key
Options	mac, sap-id, circuit-id, remote-id, dual-stack-remote-id, service-name
Max. Instances	4
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-key *keyword*

Synopsis	Auto-generated subscriber identifier key1 for PPP hosts
Context	**configure** subscriber-mgmt auto-sub-id ppp-key *keyword*
Tree	ppp-key
Options	mac, sap-id, circuit-id, remote-id, session-id
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bgp-peering-policy [name] *string*

Synopsis	Enter the **bgp-peering-policy** list instance
Context	**configure** subscriber-mgmt bgp-peering-policy *string*
Tree	bgp-peering-policy
Max. Instances	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	BGP peer policy name
Context	**configure** subscriber-mgmt bgp-peering-policy *string*
Tree	bgp-peering-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

advertise-inactive *boolean*

Synopsis	Advertise inactive BGP routes to other BGP peers
Context	**configure** subscriber-mgmt bgp-peering-policy *string* advertise-inactive *boolean*
Tree	advertise-inactive
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

aggregator-id-zero *boolean*

Synopsis	Add router ID to BGP aggregator path attribute
Context	**configure** subscriber-mgmt bgp-peering-policy *string* aggregator-id-zero *boolean*
Tree	aggregator-id-zero
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

as-override *boolean*

Synopsis	Replace the peer ASN with the local ASN in AS Path
Context	**configure** subscriber-mgmt bgp-peering-policy *string* as-override *boolean*
Tree	as-override
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

asn-4-byte *boolean*

Synopsis	Enable the use of 4-byte ASNs
Context	**configure** subscriber-mgmt bgp-peering-policy *string* asn-4-byte *boolean*
Tree	asn-4-byte
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-key *string*

Synopsis	BGP authentication key for all peers
Context	**configure** subscriber-mgmt bgp-peering-policy *string* authentication-key *string*
Tree	authentication-key
String Length	1 to 370
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-keychain *reference*

Synopsis	Keychain name used for the TCP session
Context	**configure** subscriber-mgmt bgp-peering-policy *string* authentication-keychain *reference*
Tree	authentication-keychain
Reference	**configure** system security keychains keychain *string*
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	**configure** subscriber-mgmt bgp-peering-policy *string* bfd-liveness *boolean*
Tree	bfd-liveness
Description	When configured to **true**, this command enables the use of Bi-directional Forwarding Detection (BFD) to control the state of an ESM dynamic BGP peer that is set up with the BGP peering policy. The parameters used for the BFD session are configured in the BFD context of the group interface or retail subscriber interface. When configured to **false**, this command disables the use of BFD for new ESM dynamic BGP peers that are set up with the BGP peering policy.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-reflect *boolean*

Synopsis	Enable client reflection of routes to all client peers
Context	**configure** subscriber-mgmt bgp-peering-policy *string* client-reflect *boolean*
Tree	client-reflect
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cluster *string*

Synopsis	Cluster ID for route reflector server
Context	**configure** subscriber-mgmt bgp-peering-policy *string* cluster *string*
Tree	cluster
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	**configure** subscriber-mgmt bgp-peering-policy *string* connect-retry *number*
Tree	connect-retry
Range	1 to 65535

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

damping *boolean*

Synopsis	Use BGP route damping for learned routes
Context	**configure** subscriber-mgmt bgp-peering-policy *string* damping *boolean*
Tree	damping
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt bgp-peering-policy *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

export *reference*

Synopsis	Export route policies to control advertised routes
Context	**configure** subscriber-mgmt bgp-peering-policy *string* export *reference*
Tree	export
Reference	**configure** policy-options policy-statement *string*
Max. Instances	15
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

family

Synopsis	Enter the **family** context
Context	**configure** subscriber-mgmt bgp-peering-policy *string* family
Tree	family
Description	Commands in this context specify the BGP address families supported by the ESM dynamic BGP peers. When no address family is configured, the IPv4 address family is supported on BGPv4 peers and the IPv6 address family is supported on BGPv6 peers.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4 *boolean*

Synopsis	Advertise MP-BGP support for the IPv4 address family
Context	**configure** subscriber-mgmt bgp-peering-policy *string* family ipv4 *boolean*
Tree	ipv4
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the IPv6 address family
Context	**configure** subscriber-mgmt bgp-peering-policy *string* family ipv6 *boolean*
Tree	ipv6
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fast-external-failover *boolean*

Synopsis	Enable/disable BGP fast external failover.
Context	**configure** subscriber-mgmt bgp-peering-policy *string* fast-external-failover *boolean*
Tree	fast-external-failover
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

hold-time *number*

Synopsis	BGP hold time before closing connection
Context	**configure** subscriber-mgmt bgp-peering-policy *string* hold-time *number*
Tree	hold-time
Range	0 | 3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

import *reference*

Synopsis	Import route policies to control advertised routes
Context	**configure** subscriber-mgmt bgp-peering-policy *string* import *reference*
Tree	import
Reference	**configure** policy-options policy-statement *string*
Max. Instances	15
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

keepalive *number*

Synopsis	BGP keepalive timer
Context	**configure** subscriber-mgmt bgp-peering-policy *string* keepalive *number*
Tree	keepalive
Range	0 to 21845
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Local IP address used when communicating with BGP peers

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt bgp-peering-policy *string* local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-as

Synopsis	Enter the **local-as** context
Context	**configure** subscriber-mgmt bgp-peering-policy *string* local-as
Tree	local-as
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

as-number *number*

Synopsis	AS number to be advertised to peer
Context	**configure** subscriber-mgmt bgp-peering-policy *string* local-as as-number *number*
Tree	as-number
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

private *boolean*

Synopsis	Hide local AS number in paths learned from peering
Context	**configure** subscriber-mgmt bgp-peering-policy *string* local-as private *boolean*
Tree	private
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-preference *number*

Synopsis	Local preference for incoming routes if not specified
Context	**configure** subscriber-mgmt bgp-peering-policy *string* local-preference *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	local-preference
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

loop-detect *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	**configure** subscriber-mgmt bgp-peering-policy *string* loop-detect *keyword*
Tree	loop-detect
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

med-out *(number | keyword)*

Synopsis	Multi-Exit Discriminator (MED) advertising
Context	**configure** subscriber-mgmt bgp-peering-policy *string* med-out *(number | keyword)*
Tree	med-out
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-route-advertisement *number*

Synopsis	Minimum interval for prefix to be advertised to a peer
Context	**configure** subscriber-mgmt bgp-peering-policy *string* min-route-advertisement *number*
Tree	min-route-advertisement
Range	1 to 255
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

multihop *number*

Synopsis	TTL value entered in IP header of packets sent to peer
Context	**configure** subscriber-mgmt bgp-peering-policy *string* multihop *number*
Tree	multihop
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-hop-self *boolean*

Synopsis	Set net hop path attribute to self when advertising
Context	**configure** subscriber-mgmt bgp-peering-policy *string* next-hop-self *boolean*
Tree	next-hop-self
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

passive *boolean*

Synopsis	Wait passively for BGP peer to connect
Context	**configure** subscriber-mgmt bgp-peering-policy *string* passive *boolean*
Tree	passive
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer-as *number*

Synopsis	AS number for remote peer
Context	**configure** subscriber-mgmt bgp-peering-policy *string* peer-as *number*
Tree	peer-as
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

preference *number*

Synopsis	Route preference for routes learned via configured peer
Context	**configure** subscriber-mgmt bgp-peering-policy *string* preference *number*
Tree	preference
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-limits [family] *keyword*

Synopsis	Enter the **prefix-limits** list instance
Context	**configure** subscriber-mgmt bgp-peering-policy *string* prefix-limits *keyword*
Tree	prefix-limits
Description	Commands in this context limit the number of BGP routes per address family received from a BGP peer and define the actions when crossing the configured maximum.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**family**] *keyword*

Synopsis	Address family to which the limit applies
Context	**configure** subscriber-mgmt bgp-peering-policy *string* prefix-limits *keyword*
Tree	prefix-limits
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout *number*

Synopsis	Time BGP peering remains idle before reconnecting
Context	**configure** subscriber-mgmt bgp-peering-policy *string* prefix-limits *keyword* idle-timeout *number*
Tree	idle-timeout
Description	This command configures the time in minutes before a BGP peer is automatically re-established after reaching the prefix limit.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When unconfigured, the BGP peer stays down until the operator performs a reset. This command and **log-only** cannot be configured simultaneously.

Range 1 to 1024

Introduced 23.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

log-only *boolean*

Synopsis Send warning message at threshold instead of take-down

Context **configure** subscriber-mgmt bgp-peering-policy *string* prefix-limits *keyword* log-only *boolean*

Tree log-only

Description When configured to **true**, the router disables the BGP session from being taken down upon reaching the prefix limit. Instead, only a warning message is sent when the limit is reached. A warning message is also sent when the configured threshold percentage of the limit is reached.

This command and **idle-timeout** cannot be configured simultaneously.

When configured to **false**, the router generates a log event and takes the BGP session down upon reaching the prefix limit.

Default false

Introduced 23.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum *number*

Synopsis Maximum number of routes to be learned from a peer

Context **configure** subscriber-mgmt bgp-peering-policy *string* prefix-limits *keyword* maximum *number*

Tree maximum

Description This command configures the maximum number of BGP routes of the specified address family that can be received from a peer before administrative action is taken.

When **log-only** is unconfigured, the BGP session is taken down whenever the limit of any family is exceeded even if the limits of the other family has not been exceeded.

Range 1 to 4294967295

Notes This element is mandatory.

Introduced 23.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

post-import *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	**configure** subscriber-mgmt bgp-peering-policy *string* prefix-limits *keyword* post-import *boolean*
Tree	post-import
Description	When configured to **true**, the system limits the number of routes that are accepted by import policies. Routes rejected by import policies are not counted against the configured limit. When configured to **false**, the system limits the number of routes to all routes received from the peer.
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

threshold *number*

Synopsis	Percentage threshold that triggers a warning message
Context	**configure** subscriber-mgmt bgp-peering-policy *string* prefix-limits *keyword* threshold *number*
Tree	threshold
Range	1 to 100
Default	90
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remove-private

Synopsis	Enable the **remove-private** context
Context	**configure** subscriber-mgmt bgp-peering-policy *string* remove-private
Tree	remove-private
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

limited *boolean*

Synopsis	Remove private AS numbers up to first public ASN encountered

© 2024 Nokia.

ccrt-replay

Synopsis	Enable the **ccrt-replay** context
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx ccrt-replay
Tree	ccrt-replay
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Time between consecutive CCR-T replay attempts
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx ccrt-replay interval *number*
Tree	interval
Range	60 to 86400
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-lifetime *number*

Synopsis	Maximum time that CCR-t messages are replayed
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx ccrt-replay max-lifetime *number*
Tree	max-lifetime
Description	This command specifies the maximum time that CCR-t messages for Diameter Gx sessions that belong to the Diameter application policy are replayed.
Range	1 to 24
Units	hours
Default	24
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

credit-mcs-interval *number*

Synopsis	Volume syncing interval for usage monitoring
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx credit-mcs-interval *number*
Tree	credit-mcs-interval

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the MCS interval at which the accounting data of subscriber hosts is updated.
Range	5 to 60
Units	minutes
Default	10
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-realm-learning *boolean*

Synopsis	Learn the destination realm from the incoming messages
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx destination-realm-learning *boolean*
Tree	destination-realm-learning
Description	When configured to **true**, destination realm learning is enabled on the application level. The destination realm is a mandatory configuration parameter used in outgoing Credit Control Request messages (CCR). The configured destination realm is always used in the initial request (CCR-I) message. The consecutive request message of a Gx session can use the destination realm learned from the replies. When configured to **false**, destination realm learning is disabled and the configured destination realm is used in outgoing request messages.
Default	true
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

features

Synopsis	Enter the **features** context
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx features
Tree	features
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

extended-bandwidth *boolean*

Synopsis	Negotiate support for extended bandwidth AVPs

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx features extended-bandwidth *boolean*
Tree	extended-bandwidth
Description	When configured to **true**, negotiation occurs for the support of extended AVPs that are capable of supporting bandwidth values greater than (2^32 –1) b/s. The extended AVPs allow bitrates in kb/s and are as follows: • Extended-GBR-DL (AVP code 2850) • Extended-GBR-UL (AVP code 2851) • Extended-Max-Requested-BW-DL (AVP code 554) • Extended-Max-Requested-BW-UL (AVP code 555) • Extended-APN-AMBR-DL (AVP code 2848) • Extended-APN-AMBR-UL (AVP code 2849) When configured to **false**, the extended AVPs are not supported.
Default	false
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-avp

Synopsis	Enter the **include-avp** context
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx include-avp
Tree	include-avp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

an-gw-address *boolean*

Synopsis	Include the IP address of this gateway
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx include-avp an-gw-address *boolean*
Tree	an-gw-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rai *boolean*

Synopsis	Include the routing area identity
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx include-avp rai *boolean*
Tree	rai
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

rat-type *boolean*

Synopsis	Include the RAT type
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx include-avp rat-type *boolean*
Tree	rat-type
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sgsn-mcc-mnc *boolean*

Synopsis	Include the 3GPP-SGSN-MCC-MNC AVP
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx include-avp sgsn-mcc-mnc *boolean*
Tree	sgsn-mcc-mnc
Description	When configured to **true**, this command enables the inclusion of the 3GPP-SGSN-MCC-MNC AVP, which contains the MCC and MNC as configured under **configure subscriber-mgmt gtp serving-network**.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

supported-features *boolean*

Synopsis	Include the supported features
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx include-avp supported-features *boolean*
Tree	supported-features
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-equipment-info

Synopsis	Enable the **user-equipment-info** context
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx include-avp user-equipment-info
Tree	user-equipment-info
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Information for User-Equipment-Info attribute
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx include-avp user-equipment-info type *keyword*
Tree	type
Options	imeisv, mac, eui64, modified-eui64
Default	mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-location-info *boolean*

Synopsis	Include the 3GPP-User-Location-Information AVP
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx include-avp user-location-info *boolean*
Tree	user-location-info

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command enables the inclusion of the 3GPP-User-Location-Information AVP as signaled in the incoming GTP setup message.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-format *string*

Synopsis	MAC address format
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx mac-format *string*
Tree	mac-format
String Length	2 to 7
Default	aa:
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

report-ip-address-event *boolean*

Synopsis	Enable CCR-u messages on IP address allocation events
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx report-ip-address-event *boolean*
Tree	report-ip-address-event
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-qos-mapping

Synopsis	Enter the **three-gpp-qos-mapping** context
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping
Tree	three-gpp-qos-mapping
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

apn-ambr-dl

Synopsis	Enter the **apn-ambr-dl** context
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-dl
Tree	apn-ambr-dl
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

aggregate-rate

Synopsis	Map to an aggregate rate
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-dl aggregate-rate
Tree	aggregate-rate
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **hs-sla-agg-rate**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *string*

Synopsis	Arbiter name to be overridden
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-dl arbiter *string*
Tree	arbiter
String Length	1 to 32
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **hs-sla-agg-rate**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hs-sla-agg-rate

Synopsis	Map to an HS SLA aggregate rate
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-dl hs-sla-agg-rate
Tree	hs-sla-agg-rate

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **hs-sla-agg-rate**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ignore-override

Synopsis	no override on apn-ambr-dl
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-dl ignore-override
Tree	ignore-override
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **hs-sla-agg-rate**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	Policer ID to be overidden
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-dl policer *number*
Tree	policer
Range	1 to 63
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **hs-sla-agg-rate**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue *number*

Synopsis	Queue ID to be overridden
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-dl queue *number*
Tree	queue
Range	1 to 8
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **hs-sla-agg-rate**, **ignore-override**, **policer**, **queue**, or **scheduler**.

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler *string*

Synopsis	Name of the scheduler to be overridden
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-dl scheduler *string*
Tree	scheduler
String Length	1 to 32
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **hs-sla-agg-rate**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

apn-ambr-ul

Synopsis	Enter the **apn-ambr-ul** context
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-ul
Tree	apn-ambr-ul
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *string*

Synopsis	Arbiter name to be overridden
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-ul arbiter *string*
Tree	arbiter
String Length	1 to 32
Notes	The following elements are part of a choice: **arbiter**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

ignore-override

Synopsis	no override on apn-ambr-ul
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-ul ignore-override
Tree	ignore-override
Notes	The following elements are part of a choice: **arbiter**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	Policer ID to be overridden
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-ul policer *number*
Tree	policer
Range	1 to 63
Notes	The following elements are part of a choice: **arbiter**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue *number*

Synopsis	Queue ID to be overridden
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-ul queue *number*
Tree	queue
Range	1 to 32
Notes	The following elements are part of a choice: **arbiter**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler *string*

Synopsis	Name of the scheduler to be overridden
Context	**configure** subscriber-mgmt diameter-gx-policy *string* gx three-gpp-qos-mapping apn-ambr-ul scheduler *string*
Tree	scheduler
String Length	1 to 32
Notes	The following elements are part of a choice: **arbiter**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

node

Synopsis	Enter the **node** context
Context	**configure** subscriber-mgmt diameter-gx-policy *string* node
Tree	node
Notes	The following elements are part of a choice: **node** or **peer-policy**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-realm *string*

Synopsis	Destination-Realm AVP used by the Diameter peer policy
Context	**configure** subscriber-mgmt diameter-gx-policy *string* node destination-realm *string*
Tree	destination-realm
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin-host *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Origin-Host AVP used by the Diameter policy

© 2024 Nokia.

Context	**configure** subscriber-mgmt diameter-gx-policy *string* node origin-host *reference*
Tree	origin-host
Reference	**configure** aaa diameter node *string*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-failure

Synopsis	Enter the **on-failure** context
Context	**configure** subscriber-mgmt diameter-gx-policy *string* on-failure
Tree	on-failure
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover *boolean*

Synopsis	Session peer failover
Context	**configure** subscriber-mgmt diameter-gx-policy *string* on-failure failover *boolean*
Tree	failover
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

handling *keyword*

Synopsis	Session peer failure handling
Context	**configure** subscriber-mgmt diameter-gx-policy *string* on-failure handling *keyword*
Tree	handling
Options	terminate, continue, retry-and-terminate
Default	terminate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

tx-timer *number*

Synopsis	Maximum wait time for a pending session request
Context	**configure** subscriber-mgmt diameter-gx-policy *string* tx-timer *number*
Tree	tx-timer
Range	10 to 1000
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

diameter-gy-policy [name] *string*

Synopsis	Enter the **diameter-gy-policy** list instance
Context	**configure** subscriber-mgmt diameter-gy-policy *string*
Tree	diameter-gy-policy
Max. Instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Diameter application policy name
Context	**configure** subscriber-mgmt diameter-gy-policy *string*
Tree	diameter-gy-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt diameter-gy-policy *string* description *string*
Tree	description

© 2024 Nokia.

String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gy

Synopsis	Enter the **gy** context
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy
Tree	gy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

avp-subscription-id

Synopsis	Enter the **avp-subscription-id** context
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy avp-subscription-id
Tree	avp-subscription-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin *keyword*

Synopsis	Origin for the Subscription-Id-Data AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy avp-subscription-id origin *keyword*
Tree	origin
Options	subscriber-id, circuit-id, imsi, msisdn, imei, dual-stack-remote-id, mac, username, nas-port-id
Default	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Origin for the Subscription-Id-Type AVP

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy avp-subscription-id type *keyword*
Tree	type
Options	e164, imsi, nai, private
Default	private
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ccrt-replay

Synopsis	Enable the **ccrt-replay** context
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy ccrt-replay
Tree	ccrt-replay
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval at which CCR-t messages are replayed
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy ccrt-replay interval *number*
Tree	interval
Description	This command specifies the interval at which CCR-t messages for Diameter Gy sessions that belong to the Diameter application policy are replayed, until a valid CCA-t response is received or until the configured maximum lifetime period expires.
Range	60 to 86400
Default	3600
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-lifetime *number*

Synopsis	Maximum time that CCR-t messages are replayed
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy ccrt-replay max-lifetime *number*
Tree	max-lifetime
Description	This command specifies the maximum period of time that CCR-t messages for Diameter Gy sessions that belong to the Diameter application policy are replayed.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 24
Units	hours
Default	24
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-realm-learning *boolean*

Synopsis	Learn the destination realm from the incoming messages
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy destination-realm-learning *boolean*
Tree	destination-realm-learning
Description	When configured to **true**, destination realm learning is enabled on the application level. The destination realm is a mandatory configuration parameter used in outgoing Credit Control Request messages (CCR). The configured destination realm is always used in the initial request (CCR-I) message. The consecutive request message of a Gy session can use the destination realm learned from the replies. When configured to **false**, destination realm learning is disabled and the configured destination realm is used in outgoing request messages.
Default	true
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

extended-failure-handling

Synopsis	Enter the **extended-failure-handling** context
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy extended-failure-handling
Tree	extended-failure-handling
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of Extended Failure Handling
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy extended-failure-handling admin-state *keyword*
Tree	admin-state

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-credit

Synopsis	Enter the **interim-credit** context
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy extended-failure-handling interim-credit
Tree	interim-credit
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-attempts *(number | keyword)*

Synopsis	Attempts to retry setting up a session to the OCS
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy extended-failure-handling interim-credit max-attempts *(number | keyword)*
Tree	max-attempts
Range	1 to 4294967295
Options	infinite
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reporting *boolean*

Synopsis	Report interim Credit
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy extended-failure-handling interim-credit reporting *boolean*
Tree	reporting
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

category-map

Synopsis	Use the category map name in use for this session
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp charging-rule-base-name category-map
Tree	category-map
Notes	The following elements are part of a choice: **category-map**, **not-included**, or **user-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

not-included

Synopsis	Do not include Charging-Rule-Base-Name AVP in Diameter DCCA CCR messages
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp charging-rule-base-name not-included
Tree	not-included
Notes	The following elements are part of a choice: **category-map**, **not-included**, or **user-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-string *string*

Synopsis	String for charging rule base name
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp charging-rule-base-name user-string *string*
Tree	user-string
String Length	1 to 64
Notes	The following elements are part of a choice: **category-map**, **not-included**, or **user-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ggsn-address

Synopsis	Enable the **ggsn-address** context
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp ggsn-address
Tree	ggsn-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Address type of GGSN address AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp ggsn-address type *keyword*
Tree	type
Options	ipv4, ipv6
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pdp-context-type *boolean*

Synopsis	Include the DCCA PDP-Context-Type AVP Parameter
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp pdp-context-type *boolean*
Tree	pdp-context-type
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ps-information *boolean*

Synopsis	Enable reporting of AVPs in grouped PS-Information AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp ps-information *boolean*
Tree	ps-information
Default	false
Introduced	16.0.R1

© 2024 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-context-id

Synopsis	Enable the **service-context-id** context
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp service-context-id
Tree	service-context-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

id *string*

Synopsis	Name for the service context ID AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp service-context-id id *string*
Tree	id
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-charging-characteristics *boolean*

Synopsis	DCCA 3GPP charging characteristics AVP parameter
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp three-gpp-charging-characteristics *boolean*
Tree	three-gpp-charging-characteristics
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-charging-id *keyword*

Synopsis	DCCA 3GPP charging ID AVP parameter
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp three-gpp-charging-id *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	three-gpp-charging-id
Options	false, auto, esm-info, id
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-ggsn-ipv4-address *boolean*

Synopsis	Include the 3GPP-GGSN Address in Diameter Gy messages
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp three-gpp-ggsn-ipv4-address *boolean*
Tree	three-gpp-ggsn-ipv4-address
Description	When configured to **true**, this command includes the 3GPP GGSN Address AVP in the Diameter Gy messages. The value is set to the source IPv4 address that is used for outgoing diameter messages.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-ggsn-ipv6-address *boolean*

Synopsis	Include the 3GPP-GGSN-Ipv6 address
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp three-gpp-ggsn-ipv6-address *boolean*
Tree	three-gpp-ggsn-ipv6-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-gprs-negotiated-qos-profile *boolean*

Synopsis	Include the 3GPP GPRS-QoS-Negotiated-Profile AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp three-gpp-gprs-negotiated-qos-profile *boolean*
Tree	three-gpp-gprs-negotiated-qos-profile
Default	true

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-imsi *keyword*

Synopsis	Origin of the information to send in the IMSI AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp three-gpp-imsi *keyword*
Tree	three-gpp-imsi
Options	false, subscriber-id, circuit-id, imsi
Default	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-nsapi *boolean*

Synopsis	Include the 3GPP-NSAPI
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp three-gpp-nsapi *boolean*
Tree	three-gpp-nsapi
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-rat-type

Synopsis	Enable the **three-gpp-rat-type** context
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp three-gpp-rat-type
Tree	three-gpp-rat-type
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *number*

Synopsis	Value for 3GPP-RAT-Type AVP

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp three-gpp-rat-type type *number*
Tree	type
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-selection-mode *boolean*

Synopsis	DCCA 3GPP selection mode AVP parameter
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp three-gpp-selection-mode *boolean*
Tree	three-gpp-selection-mode
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-session-stop-indicator *boolean*

Synopsis	DCCA 3GPP session stop indicator AVP parameter
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp three-gpp-session-stop-indicator *boolean*
Tree	three-gpp-session-stop-indicator
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-user-location-info *boolean*

Synopsis	DCCA 3GPP session stop indicator AVP parameter
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp three-gpp-user-location-info *boolean*
Tree	three-gpp-user-location-info
Default	false
Introduced	16.0.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-equipment-info-type

Synopsis	Enable the **user-equipment-info-type** context
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp user-equipment-info-type
Tree	user-equipment-info-type
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Information to include in User-Equipment-Info attribute
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy include-avp user-equipment-info-type type *keyword*
Tree	type
Options	imeisv
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-format *string*

Synopsis	MAC address format
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy mac-format *string*
Tree	mac-format
String Length	2 to 7
Default	aa:
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

out-of-credit-reporting *keyword*

Synopsis	Reporting reason when final granted units are consumed
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy out-of-credit-reporting *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	out-of-credit-reporting
Options	final, quota-exhausted
Default	final
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor-support *keyword*

Synopsis	Vendor support type announced in capability exchange
Context	**configure** subscriber-mgmt diameter-gy-policy *string* gy vendor-support *keyword*
Tree	vendor-support
Options	vodafone, three-gpp
Default	three-gpp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

node

Synopsis	Enter the **node** context
Context	**configure** subscriber-mgmt diameter-gy-policy *string* node
Tree	node
Notes	The following elements are part of a choice: **node** or **peer-policy**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-realm *string*

Synopsis	Destination-Realm AVP used by the Diameter peer policy
Context	**configure** subscriber-mgmt diameter-gy-policy *string* node destination-realm *string*
Tree	destination-realm
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

format *keyword*

Synopsis	Format type for username
Context	**configure** subscriber-mgmt diameter-nasreq-policy *string* nasreq user-name format *keyword*
Tree	format
Options	mac, circuit-id, tuple, ascii-converted-circuit-id, ascii-converted-tuple, dhcp-client-vendor-opts, mac-giaddr, nas-port-id
Default	mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

operation *keyword*

Synopsis	Operation to perform
Context	**configure** subscriber-mgmt diameter-nasreq-policy *string* nasreq user-name operation *keyword*
Tree	operation
Options	append, strip, replace, default
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

node

Synopsis	Enter the **node** context
Context	**configure** subscriber-mgmt diameter-nasreq-policy *string* node
Tree	node
Notes	The following elements are part of a choice: **node** or **peer-policy**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

destination-realm *string*

Synopsis	Destination-Realm AVP used by the Diameter peer policy
Context	**configure** subscriber-mgmt diameter-nasreq-policy *string* node destination-realm *string*
Tree	destination-realm
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin-host *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Origin-Host AVP used by the Diameter policy
Context	**configure** subscriber-mgmt diameter-nasreq-policy *string* node origin-host *reference*
Tree	origin-host
Reference	**configure** aaa diameter node *string*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-failure

Synopsis	Enter the **on-failure** context
Context	**configure** subscriber-mgmt diameter-nasreq-policy *string* on-failure
Tree	on-failure
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover *boolean*

Synopsis	Session peer failover
Context	**configure** subscriber-mgmt diameter-nasreq-policy *string* on-failure failover *boolean*
Tree	failover
Default	true
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

handling *keyword*

Synopsis	Session peer failure handling
Context	**configure** subscriber-mgmt diameter-nasreq-policy *string* on-failure handling *keyword*
Tree	handling
Options	terminate, continue, retry-and-terminate
Default	terminate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tx-timer *number*

Synopsis	Maximum wait time for a pending session request
Context	**configure** subscriber-mgmt diameter-nasreq-policy *string* tx-timer *number*
Tree	tx-timer
Range	10 to 1000
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

explicit-subscriber-map

Synopsis	Enter the **explicit-subscriber-map** context
Context	**configure** subscriber-mgmt explicit-subscriber-map
Tree	explicit-subscriber-map
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

entry [subscriber-id] *string*

Synopsis	Enter the **entry** list instance
Context	**configure** subscriber-mgmt explicit-subscriber-map entry *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	entry
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**subscriber-id**] *string*

Synopsis	Subscriber Identification string
Context	**configure** subscriber-mgmt explicit-subscriber-map entry *string*
Tree	entry
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alias *string*

Synopsis	Alias for subscriber identification string
Context	**configure** subscriber-mgmt explicit-subscriber-map entry *string* alias *string*
Tree	alias
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Application profile name
Context	**configure** subscriber-mgmt explicit-subscriber-map entry *string* app-profile *reference*
Tree	app-profile
Reference	**configure** application-assurance group *number* partition *number* policy app-profile *string*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	SLA profile name

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt explicit-subscriber-map entry *string* sla-profile *reference*
Tree	sla-profile
Reference	**configure** subscriber-mgmt sla-profile *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Subscriber profile name
Context	**configure** subscriber-mgmt explicit-subscriber-map entry *string* sub-profile *reference*
Tree	sub-profile
Reference	**configure** subscriber-mgmt sub-profile *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface-statistics

Synopsis	Enter the **group-interface-statistics** context
Context	**configure** subscriber-mgmt group-interface-statistics
Tree	group-interface-statistics
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state for statistics collection
Context	**configure** subscriber-mgmt group-interface-statistics admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

group-interface-template [name] *string*

Synopsis	Enter the **group-interface-template** list instance
Context	**configure** subscriber-mgmt group-interface-template *string*
Tree	group-interface-template
Description	Commands in this context configure a template for automatically-generated group interfaces that is used when creating CUPS sessions. A template with the name "default" is used when no other instance is created, however, the "default" template must be explicitly provisioned.
Max. Instances	256
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Identifies this group interface template template
Context	**configure** subscriber-mgmt group-interface-template *string*
Tree	group-interface-template
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt group-interface-template *string* description *string*
Tree	description
String Length	1 to 80
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	IP MTU applied to outgoing packets
Context	**configure** subscriber-mgmt group-interface-template *string* ip-mtu *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ip-mtu
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.
Range	512 to 9786
Units	bytes
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** subscriber-mgmt group-interface-template *string* ipv4
Tree	ipv4
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis	Enter the **icmp** context
Context	**configure** subscriber-mgmt group-interface-template *string* ipv4 icmp
Tree	icmp
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	**configure** subscriber-mgmt group-interface-template *string* ipv4 icmp mask-reply *boolean*
Tree	mask-reply
Default	true
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

param-problem

Synopsis	Enter the **param-problem** context
Context	**configure** subscriber-mgmt group-interface-template *string* ipv4 icmp param-problem
Tree	param-problem
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	**configure** subscriber-mgmt group-interface-template *string* ipv4 icmp param-problem admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	**configure** subscriber-mgmt group-interface-template *string* ipv4 icmp param-problem number *number*
Tree	number
Range	10 to 1000
Default	100
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	**configure** subscriber-mgmt group-interface-template *string* ipv4 icmp param-problem seconds *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redirects

Synopsis	Enter the **redirects** context
Context	**configure** subscriber-mgmt group-interface-template *string* ipv4 icmp redirects
Tree	redirects
Description	Commands in this context configure the settings for ICMP redirect messages generated by the interface. The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	**configure** subscriber-mgmt group-interface-template *string* ipv4 icmp redirects admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	**configure** subscriber-mgmt group-interface-template *string* ipv4 icmp redirects number *number*
Tree	number

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trigger-packet

Synopsis	Enter the **trigger-packet** context
Context	**configure** subscriber-mgmt group-interface-template *string* trigger-packet
Tree	trigger-packet
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

data *boolean*

Synopsis	Sample and forward data packets
Context	**configure** subscriber-mgmt group-interface-template *string* trigger-packet data *boolean*
Tree	data
Description	When configured to **true**, the router processes data-trigger packets on dynamic SAPs. Data-trigger packets must also be enabled on the capture SAP.
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp

Synopsis	Enter the **gtp** context
Context	**configure** subscriber-mgmt gtp
Tree	gtp
Description	This command enables the context to configure box-wide GTP parameters and profiles.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

apn-policy [name] *string*

Synopsis	Enter the **apn-policy** list instance
Context	**configure** subscriber-mgmt gtp apn-policy *string*
Tree	apn-policy

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. Instances	128
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	APN policy name for a new incoming GTP connection
Context	**configure** subscriber-mgmt gtp apn-policy *string*
Tree	apn-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

apn [apn-name] *string*

Synopsis	Enter the **apn** list instance
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string*
Tree	apn
Max. Instances	1024
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**apn-name**] *string*

Synopsis	GTP APN name
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string*
Tree	apn
String Length	1 to 80
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

uplink

Synopsis	Enable the **uplink** context
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* ambr-qos-mapping uplink
Tree	uplink
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *string*

Synopsis	Name of arbiter to be overridden
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* ambr-qos-mapping uplink arbiter *string*
Tree	arbiter
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	Map the uplink APN-AMBR rate to a policer PIR override
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* ambr-qos-mapping uplink policer *number*
Tree	policer
Range	1 to 63
Notes	The following elements are part of a mandatory choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue *number*

Synopsis	Map the uplink APN-AMBR rate to a queue PIR override
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* ambr-qos-mapping uplink queue *number*
Tree	queue
Range	1 to 32
Notes	The following elements are part of a mandatory choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler *string*

Synopsis	Name of scheduler to be overridden
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* ambr-qos-mapping uplink scheduler *string*
Tree	scheduler
String Length	1 to 32
Notes	The following elements are part of a mandatory choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis	Enter the **defaults** context
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* defaults
Tree	defaults
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

group-interface

Synopsis	Enable the **group-interface** context
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* defaults group-interface
Tree	group-interface

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	Group interface name
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* defaults group-interface name *string*
Tree	name
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

svc-name *string*

Synopsis	Service name where the group interface resides
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* defaults group-interface svc-name *string*
Tree	svc-name
String Length	1 to 64
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

diameter-nasreq-policy *reference*

Synopsis	NASREQ authentication policy name
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* diameter-nasreq-policy *reference*
Tree	diameter-nasreq-policy
Reference	**configure** subscriber-mgmt diameter-nasreq-policy *string*
Notes	The following elements are part of a choice: **diameter-nasreq-policy**, **radius-auth-policy**, or **user-db**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-auth-policy *reference*

Synopsis	RADIUS authentication policy name
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* radius-auth-policy *reference*
Tree	radius-auth-policy
Reference	**configure** subscriber-mgmt radius-authentication-policy *string*
Notes	The following elements are part of a choice: **diameter-nasreq-policy**, **radius-auth-policy**, or **user-db**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

skip-gtp-ipv4-allocation *boolean*

Synopsis	defer IPv4 address allocation to DHCP
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* skip-gtp-ipv4-allocation *boolean*
Tree	skip-gtp-ipv4-allocation
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

Synopsis	Local user database name
Context	**configure** subscriber-mgmt gtp apn-policy *string* apn *string* user-db *reference*
Tree	user-db
Reference	**configure** subscriber-mgmt local-user-db *string*
Notes	The following elements are part of a choice: **diameter-nasreq-policy**, **radius-auth-policy**, or **user-db**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-held-uplink-sessions *number*

Synopsis	Maximum GTP sessions held while UE is disconnected
Context	**configure** subscriber-mgmt gtp max-held-uplink-sessions *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	max-held-uplink-sessions
Range	0 to 500000
Default	2000
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer-profile [name] *string*

Synopsis	Enter the **peer-profile** list instance
Context	**configure** subscriber-mgmt gtp peer-profile *string*
Tree	peer-profile
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Peer profile name
Context	**configure** subscriber-mgmt gtp peer-profile *string*
Tree	peer-profile
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt gtp peer-profile *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

interface-type *keyword*

Synopsis	3GPP interface type for connections toward this peer
Context	**configure** subscriber-mgmt gtp peer-profile *string* interface-type *keyword*
Tree	interface-type
Options	gn, s2a, s2b, s11
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-ttl *number*

Synopsis	IP header TTL value for GTP control messages
Context	**configure** subscriber-mgmt gtp peer-profile *string* ip-ttl *number*
Tree	ip-ttl
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

keep-alive

Synopsis	Enter the **keep-alive** context
Context	**configure** subscriber-mgmt gtp peer-profile *string* keep-alive
Tree	keep-alive
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of GTP-C echo request messages
Context	**configure** subscriber-mgmt gtp peer-profile *string* keep-alive admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

interval *number*

Synopsis	Frequency for sending keepalives
Context	**configure** subscriber-mgmt gtp peer-profile *string* keep-alive interval *number*
Tree	interval
Range	60 to 180
Units	seconds
Default	60
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

retry-count *number*

Synopsis	Time between echo retries toward the same peer
Context	**configure** subscriber-mgmt gtp peer-profile *string* keep-alive retry-count *number*
Tree	retry-count
Range	1 to 15
Default	4
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Timeout after which echo request is deemed unanswered
Context	**configure** subscriber-mgmt gtp peer-profile *string* keep-alive timeout *number*
Tree	timeout
Range	1 to 20
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-retransmit

Synopsis	Enter the **message-retransmit** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt gtp peer-profile *string* message-retransmit
Tree	message-retransmit
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

retry-count *number*

Synopsis	Maximum unanswered retries before message deemed failed
Context	**configure** subscriber-mgmt gtp peer-profile *string* message-retransmit retry-count *number*
Tree	retry-count
Range	1 to 8
Default	3
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Timeout after which a message is considered unanswered
Context	**configure** subscriber-mgmt gtp peer-profile *string* message-retransmit timeout *number*
Tree	timeout
Range	1 to 30
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy for MGW profile packets sent or received
Context	**configure** subscriber-mgmt gtp peer-profile *string* python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *string*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

s11

Synopsis	Enter the **s11** context
Context	**configure** subscriber-mgmt gtp peer-profile *string* s11
Tree	s11
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

change-reporting-action *(number | keyword)*

Synopsis	Value of change reporting action IE sends to the peer
Context	**configure** subscriber-mgmt gtp peer-profile *string* s11 change-reporting-action *(number | keyword)*
Tree	change-reporting-action
Description	This command specifies the value of the change reporting action IE sends to the peer in applicable messages. The peer needs to indicate support first using the appropriate flag in the indication IE. This can be overridden by AAA, if AAA explicitly request notification changes for either ECGI, TAI or both. If AAA does not request any notification changes or only the generic location changes, the configured value is used. When unconfigured, this command indicates that the IE is not sent, unless specified by AAA.
Range	0 to 255
Options	cgi-sai, rai, tai, ecgi, cgi-sai-rai, tai-ecgi
Introduced	16.0.R5
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-marker-count *number*

Synopsis	Number of GTP-U end marker packets that are sent
Context	**configure** subscriber-mgmt gtp peer-profile *string* s11 end-marker-count *number*
Tree	end-marker-count
Description	This command specifies the number of end marker packets that are sent when it is certain no more packets will be sent over the corresponding GTP-U tunnel, such as after a completed mobility event.
Range	0 to 5
Default	1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R5
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4-mtu *number*

Synopsis	IPv4-MTU PCO sent in S11 GTP messages
Context	**configure** subscriber-mgmt gtp peer-profile *string* s11 ipv4-mtu *number*
Tree	ipv4-mtu
Range	512 to 9000
Default	1400
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** subscriber-mgmt gtp peer-profile *string* s11 qos
Tree	qos
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ambr

Synopsis	Enter the **ambr** context
Context	**configure** subscriber-mgmt gtp peer-profile *string* s11 qos ambr
Tree	ambr
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

down-link *number*

Synopsis	Downlink Aggregated Maximum Bit Rate (AMBR)
Context	**configure** subscriber-mgmt gtp peer-profile *string* s11 qos ambr down-link *number*
Tree	down-link
Range	0 to 10000000

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	kilobps
Default	20000
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

up-link *number*

Synopsis	Uplink Aggregated Maximum Bit Rate (AMBR)
Context	**configure** subscriber-mgmt gtp peer-profile *string* s11 qos ambr up-link *number*
Tree	up-link
Range	0 to 10000000
Units	kilobps
Default	10000
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arp *number*

Synopsis	Allocation or retention priority
Context	**configure** subscriber-mgmt gtp peer-profile *string* s11 qos arp *number*
Tree	arp
Range	1 to 15
Default	1
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

down-link

Synopsis	Enter the **down-link** context
Context	**configure** subscriber-mgmt gtp peer-profile *string* s11 qos down-link
Tree	down-link
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

protocol-configuration-options *keyword*

Synopsis	Information Element for Protocol Configuration Options
Context	**configure** subscriber-mgmt gtp peer-profile *string* uplink protocol-configuration-options *keyword*
Tree	protocol-configuration-options
Options	pco, apco
Default	pco
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

rat-type *(number | keyword)*

Synopsis	Default Radio Access Type (RAT) signaled in GTP setup
Context	**configure** subscriber-mgmt gtp peer-profile *string* uplink rat-type *(number | keyword)*
Tree	rat-type
Description	This command configures the default Radio Access Technology (RAT) type signaled during GTP setup. RAT identifies the underlying physical connection method for a radio-based communication network. This can be overridden by RADIUS.
Range	0 to 255

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	utran, geran, wlan, gan, hspa, eutran, virtual
Default	wlan
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

report-wlan-location *boolean*

Synopsis	Report WLAN or cellular location of UE during setup
Context	**configure** subscriber-mgmt gtp peer-profile *string* uplink report-wlan-location *boolean*
Tree	report-wlan-location
Description	When configured to **true**, this command enables reporting of the WLAN location or cellular location of the UE in the signaling interface (S2a or Gn) between the WLAN GW and the mobile gateway (PGW or GGSN). When configured to **false**, this command disables location reporting.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-hold-time *(number | keyword)*

Synopsis	Time to hold a GTP session after its UE is disconnected
Context	**configure** subscriber-mgmt gtp peer-profile *string* uplink session-hold-time *(number | keyword)*
Tree	session-hold-time
Range	0 to 3600
Units	seconds
Options	remaining-lease-time
Default	30
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

serving-network

Synopsis	Enable the **serving-network** context
Context	**configure** subscriber-mgmt gtp serving-network
Tree	serving-network

portal-hold-time *number*

Synopsis	Time to hold redirect forwarding resources
Context	**configure** subscriber-mgmt http-redirect-policy *string* portal-hold-time *number*
Tree	portal-hold-time
Range	1 to 60
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

url *string*

Synopsis	HTTP URL to which the matching traffic is redirected
Context	**configure** subscriber-mgmt http-redirect-policy *string* url *string*
Tree	url
Description	This command configures the HTTP redirect URL to which the matching traffic is redirected. Use the following variables to insert subscriber session data in the URL: • $URL (Request-URI in the HTTP GET Request received) • $MAC (a string that represents the MAC address of the subscriber host) • $IP (a string that represents the IP address of the subscriber host) • $NASIP (a string that represents the RADIUS IP address of the ISA/ESA-VM)
String Length	1 to 255
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

igmp-policy [name] *string*

Synopsis	Enter the **igmp-policy** list instance
Context	**configure** subscriber-mgmt igmp-policy *string*
Tree	igmp-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Policy name

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt igmp-policy *string*
Tree	igmp-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt igmp-policy *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

egress-rate-modify

Synopsis	Enter the **egress-rate-modify** context
Context	**configure** subscriber-mgmt igmp-policy *string* egress-rate-modify
Tree	egress-rate-modify
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

agg-rate

Synopsis	Maximum total rate for all subscriber egress queues
Context	**configure** subscriber-mgmt igmp-policy *string* egress-rate-modify agg-rate
Tree	agg-rate
Description	This command specifies the maximum total rate for all subscriber egress queues for each subscriber associated with the policy.
Notes	The following elements are part of a choice: **agg-rate** or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

scheduler *string*

Synopsis	Scheduler to be applied for rate modification
Context	**configure** subscriber-mgmt igmp-policy *string* egress-rate-modify scheduler *string*
Tree	scheduler
String Length	1 to 32
Notes	The following elements are part of a choice: **agg-rate** or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fast-leave *boolean*

Synopsis	Enable fast leave
Context	**configure** subscriber-mgmt igmp-policy *string* fast-leave *boolean*
Tree	fast-leave
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	**configure** subscriber-mgmt igmp-policy *string* import-policy *reference*
Tree	import-policy
Reference	**configure** policy-options policy-statement *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-group-sources *number*

Synopsis	Maximum number of group sources for this interface
Context	**configure** subscriber-mgmt igmp-policy *string* maximum-number-group-sources *number*
Tree	maximum-number-group-sources
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than

© 2024 Nokia.

the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.

Range	1 to 32000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-groups *number*

Synopsis	Maximum number of groups for this interface
Context	**configure** subscriber-mgmt igmp-policy *string* maximum-number-groups *number*
Tree	maximum-number-groups
Range	1 to 16000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-sources *number*

Synopsis	Maximum number of sources that are allowed per group
Context	**configure** subscriber-mgmt igmp-policy *string* maximum-number-sources *number*
Tree	maximum-number-sources
Range	1 to 1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multicast-reporter

Synopsis	Enter the **multicast-reporter** context
Context	**configure** subscriber-mgmt igmp-policy *string* multicast-reporter
Tree	multicast-reporter
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the multicast reporter
Context	**configure** subscriber-mgmt igmp-policy *string* multicast-reporter admin-state *keyword*

Default	per-sap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-alert-check *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	**configure** subscriber-mgmt igmp-policy *string* router-alert-check *boolean*
Tree	router-alert-check
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

static

Synopsis	Enter the **static** context
Context	**configure** subscriber-mgmt igmp-policy *string* static
Tree	static
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group [group-address] *string*

Synopsis	Enter the **group** list instance
Context	**configure** subscriber-mgmt igmp-policy *string* static group *string*
Tree	group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**group-address**] *string*

Synopsis	Group address of static IGMP multicast channel
Context	**configure** subscriber-mgmt igmp-policy *string* static group *string*
Tree	group

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source [source-address] *string*

Synopsis	Add a list entry for **source**
Context	**configure** subscriber-mgmt igmp-policy *string* static group *string* source *string*
Tree	source
Notes	The following elements are part of a mandatory choice: **source** or **starg**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**source-address**] *string*

Synopsis	Source IP address of multicast channel sending data
Context	**configure** subscriber-mgmt igmp-policy *string* static group *string* source *string*
Tree	source
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

starg

Synopsis	any source address (*,G)
Context	**configure** subscriber-mgmt igmp-policy *string* static group *string* starg
Tree	starg
Notes	The following elements are part of a mandatory choice: **source** or **starg**.
Introduced	16.0.R2

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	ISA filter entry ID
Context	**configure** subscriber-mgmt isa-filter *string* ipv6 entry *number*
Tree	entry
Range	1 to 1024
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enable the **action** context
Context	**configure** subscriber-mgmt isa-filter *string* ipv6 entry *number* action
Tree	action
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drop

Synopsis	A packet matching the entry will be dropped
Context	**configure** subscriber-mgmt isa-filter *string* ipv6 entry *number* action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **drop**, **forward**, or **http-redirect**.
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

forward

Synopsis	A packet matching the entry will be forwarded
Context	**configure** subscriber-mgmt isa-filter *string* ipv6 entry *number* action forward
Tree	forward

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **drop**, **forward**, or **http-redirect**.
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

http-redirect

Synopsis	Enable the **http-redirect** context
Context	**configure** subscriber-mgmt isa-filter *string* ipv6 entry *number* action http-redirect
Tree	http-redirect
Description	Commands in this context apply the HTTP redirect functionality to HTTP flows that match the entry. Other packets are dropped.
Notes	The following elements are part of a mandatory choice: **drop**, **forward**, or **http-redirect**.
Introduced	20.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

url *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	HTTP URL to which the matching traffic is redirected
Context	**configure** subscriber-mgmt isa-filter *string* ipv6 entry *number* action http-redirect url *string*
Tree	url
Description	This command specifies the URL to which HTTP flows matching the entry are redirected. The URL can be overridden by AAA. Only macros $URL, $MAC, $IP are supported. For unsupported macros, the string is not modified.
String Length	1 to 255
Notes	This element is mandatory.
Introduced	20.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Action for unresolved SF-IP or ESI

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* action *keyword* fail-action *keyword*
Tree	fail-action
Options	drop, accept
Default	accept
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

forward

Synopsis	Enable the **forward** context
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* action *keyword* forward
Tree	forward
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esi *string*

Synopsis	ESI for the action in the VAS filter entry
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* action *keyword* forward esi *string*
Tree	esi
Default	00:00:00:00:00:00:00:00:00:00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sf-ip *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Forwarding SF IP address for the action
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* action *keyword* forward sf-ip *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	sf-ip
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

svc *reference*

Synopsis	EVPN service used for forwarding packets
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* action *keyword* forward svc *reference*
Tree	svc
Reference	**configure** subscriber-mgmt isa-service-chaining evpn *string*
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

insert-nsh

Synopsis	Enter the **insert-nsh** context
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* action *keyword* insert-nsh
Tree	insert-nsh
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

meta-data

Synopsis	Enter the **meta-data** context
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* action *keyword* insert-nsh meta-data
Tree	meta-data
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

insert-subscriber-id

Synopsis	Insert the subscriber-id in the NSH
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* action *keyword* insert-nsh meta-data insert-subscriber-id
Tree	insert-subscriber-id
Notes	The following elements are part of a choice: **insert-subscriber-id** or **opaque-data**.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque-data *string*

Synopsis	Opaque meta-data for the NSH
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* action *keyword* insert-nsh meta-data opaque-data *string*
Tree	opaque-data
String Length	10|18|26|34
Notes	The following elements are part of a choice: **insert-subscriber-id** or **opaque-data**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

svc-path

Synopsis	Enable the **svc-path** context
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* action *keyword* insert-nsh svc-path
Tree	svc-path
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

path-id *number*

Synopsis	Path ID in the base part of NSH
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* action *keyword* insert-nsh svc-path path-id *number*
Tree	path-id
Range	1 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

svc-index *number*

Synopsis	Service index inserted in the base part of NSH
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* action *keyword* insert-nsh svc-path svc-index *number*
Tree	svc-index
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the VAS filter
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	Enter the **match** context
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* match
Tree	match
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

foreign-ip *(ipv4-unicast-prefix | ipv4-unicast-address)*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Foreign IP address or prefix for match criterion
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* match foreign-ip *(ipv4-unicast-prefix | ipv4-unicast-address)*
Tree	foreign-ip
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

foreign-port *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Foreign TCP or UDP port as the match criterion
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* match foreign-port *number*
Tree	foreign-port
Range	1 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

protocol *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP protocol to match the VAS filter
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *string* entry *number* match protocol *keyword*
Tree	protocol
Options	tcp-udp – TCP and UDP none – Matching disabled by the IP protocol icmp – ICMP tcp – TCP udp – UDP
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-user-db [name] *string*

Synopsis	Enter the **local-user-db** list instance
Context	**configure** subscriber-mgmt local-user-db *string*
Tree	local-user-db
Max. Instances	127
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Local user database name
Context	**configure** subscriber-mgmt local-user-db *string*
Tree	local-user-db
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the local user database
Context	**configure** subscriber-mgmt local-user-db *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt local-user-db *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe

Synopsis	Enter the **ipoe** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe
Tree	ipoe
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host [host-name] *string*

Synopsis	Enter the **host** list instance
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string*
Tree	host
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**host-name**] *string*

Synopsis	Host name
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string*
Tree	host
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the host
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication

Synopsis	Enter the **authentication** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* authentication
Tree	authentication
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auth-domain-name *string*

Synopsis	Domain name appended to the username for the host
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* authentication auth-domain-name *string*
Tree	auth-domain-name
String Length	1 to 32

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gx-policy *string*

Synopsis	Diameter application policy
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* authentication gx-policy *string*
Tree	gx-policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nasreq-auth-policy *string*

Synopsis	Diameter NASREQ application policy for authentication
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* authentication nasreq-auth-policy *string*
Tree	nasreq-auth-policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-auth-policy *string*

Synopsis	Host authentication policy
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* authentication radius-auth-policy *string*
Tree	radius-auth-policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp-interface

Synopsis	Enable the **gtp-interface** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* gtp-interface
Tree	gtp-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	IP interface name
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* gtp-interface name *string*
Tree	name
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-id *number*

Synopsis	Service ID
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* gtp-interface service-id *number*
Tree	service-id
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381 | 2148278382 | 2148278383 to 2148278386
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-identification

Synopsis	Enter the **host-identification** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* host-identification
Tree	host-identification
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id

Synopsis	Enter the **circuit-id** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* host-identification circuit-id
Tree	circuit-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Circuit ID as ASCII string
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* host-identification circuit-id ascii-string *string*
Tree	ascii-string
String Length	1 to 127
Notes	The following elements are part of a choice: **ascii-string** or **hex-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Circuit ID as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* host-identification circuit-id hex-string *string*
Tree	hex-string
String Length	1 to 256

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **ascii-string** or **hex-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

derived-id *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Derived ID string
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* host-identification derived-id *string*
Tree	derived-id
String Length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

encap-tag-range

Synopsis	Enable the **encap-tag-range** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* host-identification encap-tag-range
Tree	encap-tag-range
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

from *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Start tag
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* host-identification encap-tag-range from *string*
Tree	from
String Length	1 to 11

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

to *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	End tag
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* host-identification encap-tag-range to *string*
Tree	to
String Length	1 to 11
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

encap-tag-separate-range

Synopsis	Enter the **encap-tag-separate-range** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* host-identification encap-tag-separate-range
Tree	encap-tag-separate-range
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

inner

Synopsis	Enter the **inner** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* host-identification encap-tag-separate-range inner
Tree	inner
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Tree	subscriber-id
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address

Synopsis	Enter the **address** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv4 address
Tree	address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gi-address *keyword*

Synopsis	Use gi-address to select a pool with the given scope
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv4 address gi-address *keyword*
Tree	gi-address
Options	subnet-scope, pool-scope
Notes	The following elements are part of a choice: **gi-address**, **ip-address**, **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-address *string*

Synopsis	Fixed IPv4 address of the host

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv4 address ip-address *string*
Tree	ip-address
Notes	The following elements are part of a choice: **gi-address**, **ip-address**, **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pool

Synopsis	Enable the **pool** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv4 address pool
Tree	pool
Notes	The following elements are part of a choice: **gi-address**, **ip-address**, **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delimiter *string*

Synopsis	Delimiter separating primary and secondary pool names
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv4 address pool delimiter *string*
Tree	delimiter
String Length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

primary *string*

Synopsis	Primary pool name
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv4 address pool primary *string*
Tree	primary
String Length	1 to 32
Notes	This element is mandatory.

© 2024 Nokia.

gi-address *string*

Synopsis	GI addresses based on the host entry in the LUDB
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv4 gi-address *string*
Tree	gi-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option [number] *(number | keyword)*

Synopsis	Enter the **option** list instance
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv4 option *(number | keyword)*
Tree	option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCP option to send identification strings to client
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv4 option *(number | keyword)*
Tree	option
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

Synopsis	DHCP option specified as an ASCII string
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv4 option *(number | keyword)* ascii-string *string*
Tree	ascii-string
String Length	1 to 127

timers

Synopsis	Enter the **timers** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv6 timers
Tree	timers
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *(number | keyword)*

Synopsis	Time for a lease to remain preferred
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv6 timers preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	300 to 315446399
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rebind *number*

Synopsis	Rebind timer (T2)
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv6 timers rebind *number*
Tree	rebind
Range	0 to 1209600
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

renew *number*

Synopsis	Renew timer (T1)
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv6 timers renew *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	renew
Range	0 to 604800
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *(number | keyword)*

Synopsis	Time for a lease to remain valid
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* ipv6 timers valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	300 to 315446399
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

match-radius-proxy-cache

Synopsis	Enter the **match-radius-proxy-cache** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* match-radius-proxy-cache
Tree	match-radius-proxy-cache
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fail-action *keyword*

Synopsis	Action when no match is found
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* match-radius-proxy-cache fail-action *keyword*
Tree	fail-action
Options	continue, drop
Default	drop
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-format *string*

Synopsis	MAC address format
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* match-radius-proxy-cache mac-format *string*
Tree	mac-format
String Length	2 to 7
Default	aa:
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis	Enter the **match** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* match-radius-proxy-cache match
Tree	match
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Match circuit ID in DHCP Option 82
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* match-radius-proxy-cache match circuit-id *boolean*
Tree	circuit-id
Notes	The following elements are part of a choice: **circuit-id**, (**ipv4-option** and **ipv6-option**), **mac**, or **remote-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-option *number*

Synopsis	DHCP option number

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* match-radius-proxy-cache match ipv4-option *number*
Tree	ipv4-option
Range	1 to 254
Notes	The following elements are part of a choice: **circuit-id**, (**ipv4-option** and **ipv6-option**), **mac**, or **remote-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-option *number*

Synopsis	DHCPv6 option number
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* match-radius-proxy-cache match ipv6-option *number*
Tree	ipv6-option
Range	1 to 65535
Notes	The following elements are part of a choice: **circuit-id**, (**ipv4-option** and **ipv6-option**), **mac**, or **remote-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac *boolean*

Synopsis	Match MAC address of DHCP client
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* match-radius-proxy-cache match mac *boolean*
Tree	mac
Default	true
Notes	The following elements are part of a choice: **circuit-id**, (**ipv4-option** and **ipv6-option**), **mac**, or **remote-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis	Match remote ID in DHCP Option 82

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* match-radius-proxy-cache match remote-id *boolean*
Tree	remote-id
Notes	The following elements are part of a choice: **circuit-id**, (**ipv4-option** and **ipv6-option**), **mac**, or **remote-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server

Synopsis	Enable the **server** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* match-radius-proxy-cache server
Tree	server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	Local user database server name
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* match-radius-proxy-cache server name *string*
Tree	name
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service *number*

Synopsis	Service ID
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* match-radius-proxy-cache server service *number*
Tree	service
Range	1 to 2147483647
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mld-import [policy-name] *string*

Synopsis	Add a list entry for **mld-import**
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* mld-import *string*
Tree	mld-import
Max. Instances	14
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**policy-name**] *string*

Synopsis	MLD import policy used to control the multicast group
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* mld-import *string*
Tree	mld-import
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msap-defaults

Synopsis	Enter the **msap-defaults** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* msap-defaults
Tree	msap-defaults
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

Synopsis	Enable the **group-interface** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* msap-defaults group-interface
Tree	group-interface

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	IP interface name
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* msap-defaults group-interface name *string*
Tree	name
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix *keyword*

Synopsis	Prefix to the IP interface name
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* msap-defaults group-interface prefix *keyword*
Tree	prefix
Options	port-id
Notes	The following elements are part of a choice: **prefix** or **suffix**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix *keyword*

Synopsis	Suffix for the group interface
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* msap-defaults group-interface suffix *keyword*
Tree	suffix
Options	port-id
Notes	The following elements are part of a choice: **prefix** or **suffix**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

policy *string*

Synopsis	MSAP policy
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* msap-defaults policy *string*
Tree	policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service *number*

Synopsis	Service ID
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* msap-defaults service *number*
Tree	service
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381 | 2148278382 | 2148278383 to 2148278386
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy

Synopsis	Enter the **radius-accounting-policy** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* radius-accounting-policy
Tree	radius-accounting-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duplicate *string*

Synopsis	RADIUS accounting policy for generating duplicate accounting information
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* radius-accounting-policy duplicate *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	duplicate
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	RADIUS accounting policy name
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* radius-accounting-policy name *string*
Tree	name
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retail-service-id *number*

Synopsis	Configure the retail service-id
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* retail-service-id *number*
Tree	retail-service-id
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381 | 2148278382 | 2148278383 to 2148278386
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rip-policy *string*

Synopsis	RIP policy
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* rip-policy *string*
Tree	rip-policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

to-client-options

Synopsis	Enter the **to-client-options** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options
Tree	to-client-options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-option [number] *(number | keyword)*

Synopsis	Enter the **ipv4-option** list instance
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options ipv4-option *(number | keyword)*
Tree	ipv4-option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCP option to send identification strings to client
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options ipv4-option *(number | keyword)*
Tree	ipv4-option
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

Synopsis	DHCP option specified as an ASCII string
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options ipv4-option *(number | keyword)* ascii-string *string*
Tree	ascii-string
String Length	1 to 127

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	DHCP option as time duration
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options ipv4-option *(number | keyword)* duration *number*
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Empty DHCP option
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options ipv4-option *(number | keyword)* empty
Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options ipv4-option *(number | keyword)* hex-string *string*
Tree	hex-string
String Length	1 to 256

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-address *string*

Synopsis	DHCP option as a list of IPv4 addresses
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options ipv4-option *(number | keyword)* ipv4-address *string*
Tree	ipv4-address
Max. Instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**. This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

netbios-node-type *keyword*

Synopsis	DHCP option as NetBIOS node type
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options ipv4-option *(number | keyword)* netbios-node-type *keyword*
Tree	netbios-node-type
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-option [number] *(number | keyword)*

Synopsis	Enter the **ipv6-option** list instance
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options ipv6-option *(number | keyword)*
Tree	ipv6-option

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCP option to send as identification string
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options ipv6-option *(number | keyword)*
Tree	ipv6-option
Range	1 to 65535
Options	dns-server, domain-name
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

Synopsis	DHCP option specified as an ASCII string
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options ipv6-option *(number | keyword)* ascii-string *string*
Tree	ascii-string
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-string *string*

Synopsis	DHCP option specified as a domain name
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-client-options ipv6-option *(number | keyword)* domain-string *string*
Tree	domain-string
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.

Tree	hex-string
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *string*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* to-server-options ipv6-option *(number | keyword)* ipv6-address *string*
Tree	ipv6-address
Max. Instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**. This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wpp

Synopsis	Enter the **wpp** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* wpp
Tree	wpp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

initial

Synopsis	Enter the **initial** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* wpp initial
Tree	initial
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *string*

Synopsis	Initial application profile name
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* wpp initial app-profile *string*
Tree	app-profile
String Length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sla-profile *string*

Synopsis	Initial SLA profile
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* wpp initial sla-profile *string*
Tree	sla-profile
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *string*

Synopsis	Initial subscriber profile
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* wpp initial sub-profile *string*
Tree	sub-profile
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal

Synopsis	Enter the **portal** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* wpp portal
Tree	portal
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	Web portal server name
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* wpp portal name *string*
Tree	name
String Length	1 to 32
Notes	The following elements are part of a choice: **portal-group** or (**name** and **router-instance**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal-group *string*

Synopsis	WPP portal group for this interface
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* wpp portal portal-group *string*
Tree	portal-group
String Length	1 to 32
Notes	The following elements are part of a choice: **portal-group** or (**name** and **router-instance**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *(keyword | number)*

Synopsis	Virtual router instance of the WPP portal for the host
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* wpp portal router-instance *(keyword | number)*
Tree	router-instance
Range	1 to 2147483647
Options	base
Default	base
Notes	The following elements are part of a choice: **portal-group** or (**name** and **router-instance**).

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

restore-to-initial-on-disconnect *keyword*

Synopsis	Restore initial profiles after a host has disconnected
Context	**configure** subscriber-mgmt local-user-db *string* ipoe host *string* wpp restore-to-initial-on-disconnect *keyword*
Tree	restore-to-initial-on-disconnect
Options	restore, no-restore
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mask type *keyword*

Synopsis	Enter the **mask** list instance
Context	**configure** subscriber-mgmt local-user-db *string* ipoe mask type *keyword*
Tree	mask
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Matching type to identify a host
Context	**configure** subscriber-mgmt local-user-db *string* ipoe mask type *keyword*
Tree	mask
Options	circuit-id, remote-id, sap-id, string, system-id, option60
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix

Synopsis	Enable the **prefix** context
Context	**configure** subscriber-mgmt local-user-db *string* ipoe mask type *keyword* prefix

© 2024 Nokia.

outer

Synopsis	Enter the **outer** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* host-identification encap-tag-separate-range outer
Tree	outer
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the outer encapsulation tag range
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* host-identification encap-tag-separate-range outer end *number*
Tree	end
Description	This command configures an outer end tag for the range of encapsulation tags used for host identification.
Range	0 to 4094
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the outer encapsulation tag range

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile-string *string*

Synopsis	SLA profile string
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* identification sla-profile-string *string*
Tree	sla-profile-string
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

spi-sharing-group-id *number*

Synopsis	SPI sharing group ID
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* identification spi-sharing-group-id *number*
Tree	spi-sharing-group-id
Range	0 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile-string *string*

Synopsis	Sub profile string
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* identification sub-profile-string *string*
Tree	sub-profile-string
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id *string*

Synopsis	Subscriber ID

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* identification subscriber-id *string*
Tree	subscriber-id
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address

Synopsis	Enter the **address** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 address
Tree	address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gi-address *keyword*

Synopsis	Use gi-address to select a pool with the given scope
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 address gi-address *keyword*
Tree	gi-address
Options	subnet-scope, pool-scope
Notes	The following elements are part of a choice: **gi-address**, (**ip-address** and **prefix-length**), **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

ip-address *string*

Synopsis	Fixed IPv4 address of the host
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 address ip-address *string*
Tree	ip-address
Notes	The following elements are part of a choice: **gi-address**, (**ip-address** and **prefix-length**), **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pool

Synopsis	Enable the **pool** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 address pool
Tree	pool
Notes	The following elements are part of a choice: **gi-address**, (**ip-address** and **prefix-length**), **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delimiter *string*

Synopsis	Delimiter separating primary and secondary pool names
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 address pool delimiter *string*
Tree	delimiter
String Length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

primary *string*

Synopsis	Primary pool name
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 address pool primary *string*
Tree	primary

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

secondary *string*

Synopsis	Secondary pool name
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 address pool secondary *string*
Tree	secondary
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-length *number*

Synopsis	IPv4 host address prefix length
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 address prefix-length *number*
Tree	prefix-length
Range	1 to 32
Default	32
Notes	The following elements are part of a choice: **gi-address**, (**ip-address** and **prefix-length**), **pool**, or **use-pool-from-client**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-pool-from-client

Synopsis	Enable the **use-pool-from-client** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 address use-pool-from-client
Tree	use-pool-from-client
Notes	The following elements are part of a choice: **gi-address**, (**ip-address** and **prefix-length**), **pool**, or **use-pool-from-client**.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delimiter *string*

Synopsis	Delimiter character to combine primary and secondary pool names
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 address use-pool-from-client delimiter *string*
Tree	delimiter
String Length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-df-bit *boolean*

Synopsis	Ignore the DF bit in the IPv4 header when fragmenting
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 ignore-df-bit *boolean*
Tree	ignore-df-bit
Description	When configured to **true**, the router ignores the DF bit in the IPv4 header for frames egressing the subscriber interface. The frames are fragmented according the applicable egress MTU. The DF bit is reset for frames that are fragmented. This command applies to PPPoE PTA and L2TP LNS frames only. It is not applicable for L2TP LAC frames. When configured to **false**, the router does not ignore the DF bit in the IPv4 header for frames egressing the subscriber interface.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option [number] *(number | keyword)*

Synopsis	Enter the **option** list instance
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 option *(number | keyword)*
Tree	option
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCP option to send identification strings to client
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 option *(number | keyword)*
Tree	option
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

Synopsis	DHCP option specified as an ASCII string
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 option *(number | keyword)* ascii-string *string*
Tree	ascii-string
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	DHCP option as time duration
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 option *(number | keyword)* duration *number*
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Empty DHCP option.
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 option *(number | keyword)* empty
Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 option *(number | keyword)* hex-string *string*
Tree	hex-string
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-address *string*

Synopsis	DHCP option as a list of IPv4 addresses
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv4 option *(number | keyword)* ipv4-address *string*
Tree	ipv4-address
Max. Instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**. This element is ordered by the user.

© 2024 Nokia.

slaac-prefix-pool *string*

Synopsis	IPv6 SLAAC prefix pool of this host
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv6 slaac-prefix-pool *string*
Tree	slaac-prefix-pool
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timers

Synopsis	Enter the **timers** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv6 timers
Tree	timers
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *(number | keyword)*

Synopsis	Time for a lease to remain preferred
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv6 timers preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	300 to 315446399
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rebind *number*

Synopsis	Rebind timer (T2)
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv6 timers rebind *number*
Tree	rebind
Range	0 to 1209600

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

renew *number*

Synopsis	Renew timer (T1)
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv6 timers renew *number*
Tree	renew
Range	0 to 604800
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *(number | keyword)*

Synopsis	Time for a lease to remain valid
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ipv6 timers valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	300 to 315446399
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tp

Synopsis	Enter the **l2tp** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* l2tp
Tree	l2tp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

group

Synopsis	Enable the **group** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* l2tp group
Tree	group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	L2TP tunnel group name
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* l2tp group name *string*
Tree	name
String Length	1 to 63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-id *number*

Synopsis	Service ID for the L2TP tunnel group
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* l2tp group service-id *number*
Tree	service-id
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lns-interface

Synopsis	Enable the **lns-interface** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* lns-interface
Tree	lns-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

name *string*

Synopsis	IP interface name
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* lns-interface name *string*
Tree	name
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-id *number*

Synopsis	Service ID
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* lns-interface service-id *number*
Tree	service-id
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381 | 2148278382 | 2148278383 to 2148278386
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mld-import [policy-name] *string*

Synopsis	Add a list entry for **mld-import**
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* mld-import *string*
Tree	mld-import
Max. Instances	14
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

[**policy-name**] *string*

Synopsis	MLD import policy used to control the multicast group
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* mld-import *string*
Tree	mld-import
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msap-defaults

Synopsis	Enter the **msap-defaults** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* msap-defaults
Tree	msap-defaults
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

Synopsis	Enable the **group-interface** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* msap-defaults group-interface
Tree	group-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	IP interface name
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* msap-defaults group-interface name *string*
Tree	name
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1

© 2024 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix *keyword*

Synopsis	Prefix to the IP interface name
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* msap-defaults group-interface prefix *keyword*
Tree	prefix
Options	port-id
Notes	The following elements are part of a choice: **prefix** or **suffix**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix *keyword*

Synopsis	Suffix for the group interface
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* msap-defaults group-interface suffix *keyword*
Tree	suffix
Options	port-id
Notes	The following elements are part of a choice: **prefix** or **suffix**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy *string*

Synopsis	MSAP policy
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* msap-defaults policy *string*
Tree	policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

service *number*

Synopsis	Service ID
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* msap-defaults service *number*
Tree	service
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381 | 2148278382 | 2148278383 to 2148278386
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pado-delay *number*

Synopsis	Delay timeout before sending a PADO
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* pado-delay *number*
Tree	pado-delay
Range	1 to 30
Units	deciseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password

Synopsis	Enter the **password** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* password
Tree	password
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

chap *string*

Synopsis	CHAP protocol
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* password chap *string*
Tree	chap
String Length	1 to 115

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **chap**, **ignore**, or **pap**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore

Synopsis	Ignore the PAP and CHAP passwords
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* password ignore
Tree	ignore
Notes	The following elements are part of a choice: **chap**, **ignore**, or **pap**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pap *string*

Synopsis	PAP for the password
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* password pap *string*
Tree	pap
String Length	1 to 115
Notes	The following elements are part of a choice: **chap**, **ignore**, or **pap**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-policy-parameters

Synopsis	Enter the **ppp-policy-parameters** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ppp-policy-parameters
Tree	ppp-policy-parameters
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

keepalive

Synopsis	Enable the **keepalive** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ppp-policy-parameters keepalive
Tree	keepalive
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-up-multiplier *number*

Synopsis	PPP LCP keepalive hold up multiplier override
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ppp-policy-parameters keepalive hold-up-multiplier *number*
Tree	hold-up-multiplier
Description	This command configures the number of LCP echo replies that can be missed before the PPP session is brought down and overrides the value configured in the **configure subscriber-mgmt ppp-policy** context for PPPoE PTA sessions or in the **configure l2tp group** context for L2TP LNS sessions.
Range	1 to 5
Default	3
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	PPP LCP keepalive interval override
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ppp-policy-parameters keepalive interval *number*
Tree	interval
Description	This command configures the time interval in seconds at which LCP echo requests are transmitted for the PPP session and overrides the value configured in the **configure subscriber-mgmt ppp-policy** context for PPPoE PTA sessions or the **configure l2tp group** context for L2TP LNS sessions.
Range	4 to 300
Units	seconds
Default	30
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-sessions-per-mac *number*

Synopsis	Maximum number of sessions per MAC address
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* ppp-policy-parameters max-sessions-per-mac *number*
Tree	max-sessions-per-mac
Description	This command sets the maximum PPP sessions that can be opened for a specified MAC address.
Range	1 to 8191
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy

Synopsis	Enter the **radius-accounting-policy** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* radius-accounting-policy
Tree	radius-accounting-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duplicate *string*

Synopsis	RADIUS accounting policy for generating duplicate accounting information
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* radius-accounting-policy duplicate *string*
Tree	duplicate
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	RADIUS accounting policy name
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* radius-accounting-policy name *string*
Tree	name
String Length	1 to 32

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retail-service-id *number*

Synopsis	Configure the retail service-id
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* retail-service-id *number*
Tree	retail-service-id
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381 | 2148278382 | 2148278383 to 2148278386
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rip-policy *string*

Synopsis	RIP policy
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* rip-policy *string*
Tree	rip-policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

steering-profile *string*

Synopsis	Steering profile
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* steering-profile *string*
Tree	steering-profile
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

to-client-options

Synopsis	Enter the **to-client-options** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* to-client-options
Tree	to-client-options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-option [number] *(number | keyword)*

Synopsis	Enter the **ipv6-option** list instance
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* to-client-options ipv6-option *(number | keyword)*
Tree	ipv6-option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCP option to send as identification string
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* to-client-options ipv6-option *(number | keyword)*
Tree	ipv6-option
Range	1 to 65535
Options	dns-server, domain-name
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

Synopsis	DHCP option specified as an ASCII string
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* to-client-options ipv6-option *(number | keyword)* ascii-string *string*
Tree	ascii-string
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-string *string*

Synopsis	DHCP option specified as a domain name
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* to-client-options ipv6-option *(number | keyword)* domain-string *string*
Tree	domain-string
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Empty DHCP option
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* to-client-options ipv6-option *(number | keyword)* empty
Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* to-client-options ipv6-option *(number | keyword)* hex-string *string*
Tree	hex-string
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

ipv6-address *string*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	**configure** subscriber-mgmt local-user-db *string* ppp host *string* to-client-options ipv6-option *(number | keyword)* ipv6-address *string*
Tree	ipv6-address
Max. Instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**. This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mask type *keyword*

Synopsis	Enter the **mask** list instance
Context	**configure** subscriber-mgmt local-user-db *string* ppp mask type *keyword*
Tree	mask
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Matching type to identify a host
Context	**configure** subscriber-mgmt local-user-db *string* ppp mask type *keyword*
Tree	mask
Options	circuit-id, mac, remote-id, user-name, service-name, sap-id
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix

Synopsis	Enable the **prefix** context
Context	**configure** subscriber-mgmt local-user-db *string* ppp mask type *keyword* prefix

sticky-msaps *boolean*

Synopsis	Prevent MSAPs from being deleted
Context	**configure** subscriber-mgmt msap-policy *string* sticky-msaps *boolean*
Tree	sticky-msaps
Description	When configured to **true**, MSAPs associated with the specified MSAP policy are not removed unless a manual **clear** command is issued. This feature is useful if historical statistics records on MSAPs need to be retained. It can also reduce host creation time because the MSAP is already created. When configured to **false**, MSAPs can be automatically removed when a host creation fails or when a subscriber is no longer associated with the MSAP, for example, when a subscriber ends the session.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sticky-msaps-idle-timeout *number*

Synopsis	Timeout used for sticky MSAPs
Context	**configure** subscriber-mgmt msap-policy *string* sticky-msaps-idle-timeout *number*
Tree	sticky-msaps-idle-timeout
Description	This command configures the timeout interval which determines when idle sticky MSAPs can be removed. By default, MSAPs are deleted shortly after the subscriber session ends. The system is prevented from automatically deleting sticky MSAPs after the session ends, allowing for a faster subsequent subscriber connection without MSAP creation; however, sticky MSAPs require SAP resources. The configuration of this command allows for the removal of sticky MSAPs that are idle for the specified time period. When unconfigured, no timeout interval is applied.
Range	5 to 604800
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-id *boolean*

Synopsis	Send service ID in the Nokia vendor-specific sub-option
Context	**configure** subscriber-mgmt msap-policy *string* vpls-only-sap-parameters dhcp option-82 vendor-specific-option service-id *boolean*
Tree	service-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	String in the sub-option of the DHCP relay packet
Context	**configure** subscriber-mgmt msap-policy *string* vpls-only-sap-parameters dhcp option-82 vendor-specific-option string *string*
Tree	string
Description	This command specifies the string in the Nokia vendor-specific sub-option of the DHCP relay packet.
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

system-id *boolean*

Synopsis	Send system ID in the Nokia vendor-specific sub-option
Context	**configure** subscriber-mgmt msap-policy *string* vpls-only-sap-parameters dhcp option-82 vendor-specific-option system-id *boolean*
Tree	system-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis	Enter the **proxy-server** context
Context	**configure** subscriber-mgmt msap-policy *string* vpls-only-sap-parameters dhcp proxy-server

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	proxy-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	**configure** subscriber-mgmt msap-policy *string* vpls-only-sap-parameters dhcp proxy-server admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

emulated-server *string*

Synopsis	IP address used as DHCP server address in SAP context
Context	**configure** subscriber-mgmt msap-policy *string* vpls-only-sap-parameters dhcp proxy-server emulated-server *string*
Tree	emulated-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-time

Synopsis	Enter the **lease-time** context
Context	**configure** subscriber-mgmt msap-policy *string* vpls-only-sap-parameters dhcp proxy-server lease-time
Tree	lease-time
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt msap-policy *string* vpls-only-sap-parameters dhcp proxy-server lease-time radius-override *boolean*
Tree	radius-override
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	DHCP lease time
Context	**configure** subscriber-mgmt msap-policy *string* vpls-only-sap-parameters dhcp proxy-server lease-time value *number*
Tree	value
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis	Enter the **egress** context
Context	**configure** subscriber-mgmt msap-policy *string* vpls-only-sap-parameters egress
Tree	egress
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** subscriber-mgmt msap-policy *string* vpls-only-sap-parameters egress qos
Tree	qos
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

split-horizon-group *string*

Synopsis	Name of the split horizon group for the MSAP
Context	**configure** subscriber-mgmt msap-policy *string* vpls-only-sap-parameters split-horizon-group *string*
Tree	split-horizon-group
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp

Synopsis	Enter the **pfcp** context
Context	**configure** subscriber-mgmt pfcp
Tree	pfcp
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

association [name] *string*

Synopsis	Enter the **association** list instance
Context	**configure** subscriber-mgmt pfcp association *string*
Tree	association
Description	Commands in this context configure a PFCP association towards a BNG CUPS CPF.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	PFCP association name
Context	**configure** subscriber-mgmt pfcp association *string*
Tree	association

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the PFCP association
Context	**configure** subscriber-mgmt pfcp association *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

association-release-timeout *(keyword | number)*

Synopsis	Time to wait for a response to a release request
Context	**configure** subscriber-mgmt pfcp association *string* association-release-timeout *(keyword | number)*
Tree	association-release-timeout
Description	This command configures the time to wait to clean up the PFCP association after it has been disabled. After administratively disabling a PFCP association, the system requests a shutdown to the BNG CPF. If the BNG CPF does not gracefully remove the association before expiry of the timer, the full association and all related sessions are forcefully removed. The PFCP protocol encoding does not allow the full range of configured values. The system automatically rounds up the configured value to the nearest value allowed by the protocol. For more information about the protocol encoding, see 3GPP TS 29.244 8.2.78.1.
Range	30 to 3600
Units	seconds
Options	none
Default	3600
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bfd-expedited-path-down *boolean*

Synopsis	Track BFD sessions to expedite PFCP path down detection
Context	**configure** subscriber-mgmt pfcp association *string* bfd-expedited-path-down *boolean*
Tree	bfd-expedited-path-down
Description	When configured to **true**, the system tracks BFD sessions to expedite PFCP path down detection on BFD down events. This requires the configuration of **path-restoration-time**.
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt pfcp association *string* description *string*
Tree	description
String Length	1 to 80
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

heartbeat

Synopsis	Enter the **heartbeat** context
Context	**configure** subscriber-mgmt pfcp association *string* heartbeat
Tree	heartbeat
Description	Commands in this context configure the parameters for transmitting PFCP Heartbeat Request messages to a PFCP peer.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Time between two successful heartbeat request messages
Context	**configure** subscriber-mgmt pfcp association *string* heartbeat interval *number*
Tree	interval
Range	5 to 180

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Default	60
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retries *number*

Synopsis	Number of retries after the heartbeat timeout expires
Context	**configure** subscriber-mgmt pfcp association *string* heartbeat retries *number*
Tree	retries
Description	This command configures the number of times the same Heartbeat Request is sent before the PFCP path to the peer is considered down.
Range	0 to 30
Default	4
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Time the system waits for a heartbeat response message
Context	**configure** subscriber-mgmt pfcp association *string* heartbeat timeout *number*
Tree	timeout
Description	This command configures the timeout after which a Heartbeat Request is considered unanswered.
Range	1 to 20
Units	seconds
Default	5
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface

Synopsis	Enter the **interface** context
Context	**configure** subscriber-mgmt pfcp association *string* interface
Tree	interface

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the interface from which PFCP messages will be sent and on which PFCP messages will be received.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface to use for the association
Context	**configure** subscriber-mgmt pfcp association *string* interface name *string*
Tree	name
String Length	1 to 32
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router context for the PFCP association
Context	**configure** subscriber-mgmt pfcp association *string* interface router-instance *string*
Tree	router-instance
Description	This command configures the name of the interface, along with its routing instance, used as binding interface for PFCP.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nat

Synopsis	Enter the **nat** context
Context	**configure** subscriber-mgmt pfcp association *string* nat
Tree	nat

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure NAT or WLAN-GW groups for BNG CUPS PFCP association.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-group *reference*

Synopsis	NAT group used for CUPS NAT functionality
Context	**configure** subscriber-mgmt pfcp association *string* nat nat-group *reference*
Tree	nat-group
Reference	**configure** isa nat-group *number*
Notes	The following elements are part of a choice: **nat-group** or **wlan-gw-group**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group *reference*

Synopsis	WLAN gateway group used for CUPS NAT functionality
Context	**configure** subscriber-mgmt pfcp association *string* nat wlan-gw-group *reference*
Tree	wlan-gw-group
Reference	**configure** isa wlan-gw-group *number*
Notes	The following elements are part of a choice: **nat-group** or **wlan-gw-group**.
Introduced	20.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

node-id

Synopsis	Enter the **node-id** context
Context	**configure** subscriber-mgmt pfcp association *string* node-id
Tree	node-id
Description	Commands in this context configure the UPF Node Identifier as sent in PFCP. It can either be configured to use the linked interface source IP or a preconfigured FQDN.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

fqdn *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN that identifies the local system for PFCP
Context	**configure** subscriber-mgmt pfcp association *string* node-id fqdn *string*
Tree	fqdn
String Length	1 to 255
Notes	The following elements are part of a choice: **fqdn** or **use-ip-address**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-ip-address

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use the IP address of interface for the association
Context	**configure** subscriber-mgmt pfcp association *string* node-id use-ip-address
Tree	use-ip-address
Description	When configured, the binding interface address is used as identification of the local system for PFCP.
Notes	The following elements are part of a choice: **fqdn** or **use-ip-address**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

path-restoration-time *number*

Synopsis	Time to wait before declaring the path down
Context	**configure** subscriber-mgmt pfcp association *string* path-restoration-time *number*
Tree	path-restoration-time
Description	This command configures the time for which sessions are kept after a PFCP path failure is detected. If the path recovers without a restart before this time expires, the sessions are kept. Otherwise, they are removed.

hold-up-multiplier *number*

Synopsis	PPP keepalive multiplier
Context	**configure** subscriber-mgmt ppp-policy *string* keepalive hold-up-multiplier *number*
Tree	hold-up-multiplier
Range	1 to 5
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	PPP keepalive interval
Context	**configure** subscriber-mgmt ppp-policy *string* keepalive interval *number*
Tree	interval
Range	4 to 300
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lcp-ignore-identifier *boolean*

Synopsis	Ignore identifier values in the LCP Echo Reply
Context	**configure** subscriber-mgmt ppp-policy *string* lcp-ignore-identifier *boolean*
Tree	lcp-ignore-identifier
Description	When configured to **true**, BNG ignores the Identifier field of the Echo-Reply message and keeps the PPP session up. When configured to **false**, BNG does not ignore the identifier value, discards any incorrect messages, and the PPP session terminates because of the echo timeout.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lcp-ignore-magic-numbers *boolean*

Synopsis	Ignore LCP peer magic number mismatch
Context	**configure** subscriber-mgmt ppp-policy *string* lcp-ignore-magic-numbers *boolean*
Tree	lcp-ignore-magic-numbers
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-sessions-per-cid

Synopsis	Enable the **max-sessions-per-cid** context
Context	**configure** subscriber-mgmt ppp-policy *string* max-sessions-per-cid
Tree	max-sessions-per-cid
Description	Commands in this context specify the configuration settings for PPPoE sessions based on the Agent Circuit ID. When this context is configured, the limit for PPPoE sessions per Agent Circuit ID must be configured. The limit does not apply to sessions without an Agent Circuit ID; however, sessions without an Agent Circuit ID can only be established when the **allow-sessions-without-cid** command is configured to **true**. When this context is unconfigured, no limit is placed on the number of PPPoE sessions with the same Agent Circuit ID on the same SAP or MSAP and PPPoE sessions with or without an Agent Circuit ID can be established.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-sessions-without-cid *boolean*

Synopsis	Allow PPPoE sessions without an Agent Circuit ID
Context	**configure** subscriber-mgmt ppp-policy *string* max-sessions-per-cid allow-sessions-without-cid *boolean*
Tree	allow-sessions-without-cid
Description	When configured to **true**, PPPoE sessions without an Agent Circuit ID can be established on a SAP. The limit configured for the maximum number of sessions allowed per Agent Circuit ID does not apply to these sessions. When configured to **false**, PPPoE sessions without an Agent Circuit ID are denied. The command is valid only when a limit is configured for the maximum sessions per Agent Circuit ID on a SAP.
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

limit *number*

Synopsis	Maximum sessions per Agent Circuit ID and per SAP
Context	**configure** subscriber-mgmt ppp-policy *string* max-sessions-per-cid limit *number*
Tree	limit
Description	This command configures the maximum number of PPPoE sessions that can be active with the same Agent Circuit ID on the same SAP or MSAP. This limit is enforced in the discovery phase, prior to PAP or CHAP authentication, based on the Agent Circuit ID sub-option present in the vendor-specific PPPoE access loop identification tag added in PADI and PADR messages by a PPPoE intermediate agent. PPPoE sessions without an Agent Circuit ID are not subject to the configured limit; however, sessions without an Agent Circuit ID can only be established when the **allow-sessions-without-cid** command is configured to **true**.
Range	1 to 8190
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-sessions-per-mac *number*

Synopsis	Maximum number of sessions per MAC address
Context	**configure** subscriber-mgmt ppp-policy *string* max-sessions-per-mac *number*
Tree	max-sessions-per-mac
Description	This command sets the maximum PPP sessions that can be opened for a specified MAC address. To enable IPv4 address allocation using the internal DHCPv4 client for multiple PPPoE sessions on a single SAP and having the same MAC address and circuit-ID, the optional CLI parameter **allow-same-circuit-id-for-dhcp** should be added. The SR OS local DHCP server detects the additional vendor-specific options inserted by the internal DHCPv4 client and use an extended unique key for lease allocation.
Range	1 to 8191
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

mac *(mac-address | keyword)*

Synopsis	Endpoint ID as a MAC address
Context	**configure** subscriber-mgmt ppp-policy *string* mlppp endpoint mac *(mac-address | keyword)*
Tree	mac
Options	system
Notes	The following elements are part of a choice: **ip** or **mac**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

short-sequence-numbers *boolean*

Synopsis	Request a peer to send short sequence numbers
Context	**configure** subscriber-mgmt ppp-policy *string* mlppp short-sequence-numbers *boolean*
Tree	short-sequence-numbers
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

ncp-renegotiation *keyword*

Synopsis	Behavior for subsequent NCP renegotiation messages
Context	**configure** subscriber-mgmt ppp-policy *string* ncp-renegotiation *keyword*
Tree	ncp-renegotiation
Options	ignore, terminate-session
Default	terminate-session
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pado-ac-name *string*

Synopsis	Access Concentrator name used in PPPoE PADO message
Context	**configure** subscriber-mgmt ppp-policy *string* pado-ac-name *string*
Tree	pado-ac-name

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String Length	1 to 128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pado-delay *number*

Synopsis	Delay timeout before sending a PADO
Context	**configure** subscriber-mgmt ppp-policy *string* pado-delay *number*
Tree	pado-delay
Range	1 to 30
Units	deciseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-authentication *keyword*

Synopsis	PPP authentication protocol to negotiate
Context	**configure** subscriber-mgmt ppp-policy *string* ppp-authentication *keyword*
Tree	ppp-authentication
Options	pap, chap, pref-chap, pref-pap
Default	pref-chap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-chap-challenge-length

Synopsis	Enter the **ppp-chap-challenge-length** context
Context	**configure** subscriber-mgmt ppp-policy *string* ppp-chap-challenge-length
Tree	ppp-chap-challenge-length
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max *number*

Synopsis	Maximum length for the PPP CHAP challenge

© 2024 Nokia.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-timeout *number*

Synopsis	Session timeout interval
Context	**configure** subscriber-mgmt ppp-policy *string* session-timeout *number*
Tree	session-timeout
Range	1 to 31104000
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sid-allocation *keyword*

Synopsis	PPPoE session ID allocation method
Context	**configure** subscriber-mgmt ppp-policy *string* sid-allocation *keyword*
Tree	sid-allocation
Description	This command determines the allocation of session IDs for a PPPoE session with a given MAC address that is active on a given SAP.
Options	sequential, random
Default	sequential
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

unique-sid *keyword*

Synopsis	Mode in which a unique session ID is allocated
Context	**configure** subscriber-mgmt ppp-policy *string* unique-sid *keyword*
Tree	unique-sid
Description	This command specifies how unique session IDs are assigned to PPPoE sessions that are active on a single SAP. This command is used with the **sid-allocation** command to determine the assignment of session IDs to subsequent PPPoE sessions.
Options	per-sap, per-sap-mac, per-msap
Default	per-sap-mac

[**id**] *number*

Synopsis	Queue ID for which counters are collected in the record
Context	**configure** subscriber-mgmt radius-accounting-policy *string* custom-record queue *number*
Tree	queue
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

e-counters

Synopsis	Enter the **e-counters** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *string* custom-record queue *number* e-counters
Tree	e-counters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

in-profile-octets-discarded-count *boolean*

Synopsis	Include the in-profile octets discarded count
Context	**configure** subscriber-mgmt radius-accounting-policy *string* custom-record queue *number* e-counters in-profile-octets-discarded-count *boolean*
Tree	in-profile-octets-discarded-count
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

in-profile-octets-forwarded-count *boolean*

Synopsis	Include the in-profile octets forwarded count
Context	**configure** subscriber-mgmt radius-accounting-policy *string* custom-record queue *number* e-counters in-profile-octets-forwarded-count *boolean*
Tree	in-profile-octets-forwarded-count
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

in-profile-packets-discarded-count *boolean*

Synopsis	Include the in-profile packets discarded count
Context	**configure** subscriber-mgmt radius-accounting-policy *string* custom-record queue *number* e-counters in-profile-packets-discarded-count *boolean*
Tree	in-profile-packets-discarded-count
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

in-profile-packets-forwarded-count *boolean*

Synopsis	Include the in-profile packets forwarded count
Context	**configure** subscriber-mgmt radius-accounting-policy *string* custom-record queue *number* e-counters in-profile-packets-forwarded-count *boolean*
Tree	in-profile-packets-forwarded-count
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

out-profile-octets-discarded-count *boolean*

Synopsis	Include the out-profile octets discarded count
Context	**configure** subscriber-mgmt radius-accounting-policy *string* custom-record queue *number* e-counters out-profile-octets-discarded-count *boolean*
Tree	out-profile-octets-discarded-count
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

out-profile-octets-forwarded-count *boolean*

Synopsis	Include the out-of-profile octets forwarded count
Context	**configure** subscriber-mgmt radius-accounting-policy *string* custom-record queue *number* e-counters out-profile-octets-forwarded-count *boolean*
Tree	out-profile-octets-forwarded-count
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

out-profile-packets-discarded-count *boolean*

Synopsis	Include the out-profile packets discarded count
Context	**configure** subscriber-mgmt radius-accounting-policy *string* custom-record queue *number* e-counters out-profile-packets-discarded-count *boolean*
Tree	out-profile-packets-discarded-count
Default	false

Context	**configure** subscriber-mgmt radius-accounting-policy *string* custom-record significant-change *number*
Tree	significant-change
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delay-start-time *number*

Synopsis	Accounting start delay
Context	**configure** subscriber-mgmt radius-accounting-policy *string* delay-start-time *number*
Tree	delay-start-time
Range	1 to 10
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt radius-accounting-policy *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-accounting

Synopsis	Enter the **host-accounting** context
Context	**configure** subscriber-mgmt radius-accounting-policy *string* host-accounting
Tree	host-accounting
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of per-host accounting
Context	**configure** subscriber-mgmt radius-accounting-policy *string* host-accounting admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-update *boolean*

Synopsis	Allow interim-update accounting messages to be sent
Context	**configure** subscriber-mgmt radius-accounting-policy *string* host-accounting interim-update *boolean*
Tree	interim-update
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute
Tree	include-radius-attribute
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access-loop-options *boolean*

Synopsis	Include access loop information
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute access-loop-options *boolean*
Tree	access-loop-options
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-authentic *boolean*

Synopsis	Enable/disable include of the acct-authentic attribute.
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute acct-authentic *boolean*
Tree	acct-authentic
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-delay-time *boolean*

Synopsis	Include the acct-delay-time RADIUS attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute acct-delay-time *boolean*
Tree	acct-delay-time
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-triggered-reason *boolean*

Synopsis	Include Alc-Acct-Triggered-Reason attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute acct-triggered-reason *boolean*
Tree	acct-triggered-reason
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all-authorized-session-addresses *boolean*

Synopsis	Include all address/prefix attributes

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute all-authorized-session-addresses *boolean*
Tree	all-authorized-session-addresses
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

apn *boolean*

Synopsis	Enable/disable include of the APN attribute.
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute apn *boolean*
Tree	apn
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

bearer-fteid *boolean*

Synopsis	Include bearer-fteid attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute bearer-fteid *boolean*
Tree	bearer-fteid
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

bonding-active-connections *boolean*

Synopsis	Include the RADIUS Alc-Bonding-Active-Connection VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute bonding-active-connections *boolean*
Tree	bonding-active-connections
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bonding-id *boolean*

Synopsis	Include the Alc-Bonding-Id VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute bonding-id *boolean*
Tree	bonding-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

brg-num-active-sessions *boolean*

Synopsis	Include the RADIUS Alc-BRG-Num-Active-Sessions VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute brg-num-active-sessions *boolean*
Tree	brg-num-active-sessions
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include called-station-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

calling-station-id

Synopsis	Enable the **calling-station-id** context
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute calling-station-id
Tree	calling-station-id

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Format of the Calling-Station-ID attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute calling-station-id type *keyword*
Tree	type
Options	sap-string, mac, sap-id, remote-id, llid
Default	sap-string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Include circuit-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute circuit-id *boolean*
Tree	circuit-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delegated-ipv6-prefix *boolean*

Synopsis	Include delegated-ipv6-prefix attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute delegated-ipv6-prefix *boolean*
Tree	delegated-ipv6-prefix
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

detailed-acct-attributes *boolean*

Synopsis	Include more detailed accounting attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute detailed-acct-attributes *boolean*
Tree	detailed-acct-attributes
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-vendor-class-id *boolean*

Synopsis	Include the RADIUS Alc-DHCP-Vendor-Class-Id VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute dhcp-vendor-class-id *boolean*
Tree	dhcp-vendor-class-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

error-code *boolean*

Synopsis	Include detailed error codes
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute error-code *boolean*
Tree	error-code
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

firewall-info *boolean*

Synopsis	Include the Firewall Information VSA in AAA protocols
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute firewall-info *boolean*
Tree	firewall-info
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-interface-id *boolean*

Synopsis	Include framed-interface-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute framed-interface-id *boolean*
Tree	framed-interface-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-ip-address *boolean*

Synopsis	Include framed-ip-address attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute framed-ip-address *boolean*
Tree	framed-ip-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-ip-netmask *boolean*

Synopsis	Include framed-ip-netmask attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute framed-ip-netmask *boolean*
Tree	framed-ip-netmask
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-ipv6-prefix *boolean*

Synopsis	Include framed-ipv6-prefix attribute

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute framed-ipv6-prefix *boolean*
Tree	framed-ipv6-prefix
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-ipv6-route *boolean*

Synopsis	Include framed-ipv6-route attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute framed-ipv6-route *boolean*
Tree	framed-ipv6-route
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-route *boolean*

Synopsis	Include framed-route attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute framed-route *boolean*
Tree	framed-route
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

imei *boolean*

Synopsis	Enable/disable include of the IMEI attribute.
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute imei *boolean*
Tree	imei
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

imsi *boolean*

Synopsis	Include the IMSI attribute for FWA sessions
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute imsi *boolean*
Tree	imsi
Default	false
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *boolean*

Synopsis	Include the IPv6 address attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute ipv6-address *boolean*
Tree	ipv6-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lanext-bridge-id *boolean*

Synopsis	Include Alc-Bridge-Id in RADIUS accounting packets
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute lanext-bridge-id *boolean*
Tree	lanext-bridge-id
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext-device-type *boolean*

Synopsis	Include Alc-HLE-Device-type in accounting packets
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute lanext-device-type *boolean*
Tree	lanext-device-type

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext-route-distinguisher *boolean*

Synopsis	Include route distinguisher (Alc-RD) in RADIUS packets
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute lanext-route-distinguisher *boolean*
Tree	lanext-route-distinguisher
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext-route-target *boolean*

Synopsis	Include route target (Alc-RT) in RADIUS packets
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute lanext-route-target *boolean*
Tree	lanext-route-target
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext-vni *boolean*

Synopsis	Enable/disable include of the lanext-vni attribute.
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute lanext-vni *boolean*
Tree	lanext-vni
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mac-address *boolean*

Synopsis	Include the client MAC address in the RADIUS message
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute mac-address *boolean*
Tree	mac-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msisdn *boolean*

Synopsis	Enable/disable include of the MSISDN attribute.
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute msisdn *boolean*
Tree	msisdn
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Enable/disable include of the NAS-Identifier attribute.
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port

Synopsis	Enable the **nas-port** context
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute nas-port
Tree	nas-port
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bit-spec *string*

Synopsis	RADIUS NAS-Port attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute nas-port bit-spec *string*
Tree	bit-spec
String Length	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port-id

Synopsis	Enable the **nas-port-id** context
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute nas-port-id
Tree	nas-port-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-string *string*

Synopsis	String to be prefixed to the NAS-Port-Id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute nas-port-id prefix-string *string*
Tree	prefix-string
String Length	1 to 8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix *keyword*

Synopsis	String to be suffixed to the NAS-Port-Id attribute

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute nas-port-id suffix *keyword*
Tree	suffix
Options	circuit-id, remote-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port-type

Synopsis	Enable the **nas-port-type** context
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute nas-port-type
Tree	nas-port-type
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *(keyword | number)*

Synopsis	Value for RADIUS NAS-Port-Type attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute nas-port-type type *(keyword | number)*
Tree	type
Range	0 to 255
Options	rfc-aligned
Default	rfc-aligned
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nat-port-range *boolean*

Synopsis	Include NAT port range attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute nat-port-range *boolean*
Tree	nat-port-range
Default	false
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis	Include remote-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute remote-id *boolean*
Tree	remote-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile *boolean*

Synopsis	Include sla-profile attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute sla-profile *boolean*
Tree	sla-profile
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

spi-sharing-id *boolean*

Synopsis	Include spi-sharing-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute spi-sharing-id *boolean*
Tree	spi-sharing-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

std-acct-attributes *boolean*

Synopsis	Include standard accounting attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute std-acct-attributes *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	std-acct-attributes
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

steering-profile *boolean*

Synopsis	Include the RADIUS Alc-Steering-Profile VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute steering-profile *boolean*
Tree	steering-profile
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *boolean*

Synopsis	Include sub-profile attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute sub-profile *boolean*
Tree	sub-profile
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id *boolean*

Synopsis	Include subscriber-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute subscriber-id *boolean*
Tree	subscriber-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tunnel-client-attrs *boolean*

Synopsis	Enable/disable include of tunnel-client attributes.
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute tunnel-client-attrs *boolean*
Tree	tunnel-client-attrs
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel-server-attrs *boolean*

Synopsis	Enable/disable include of tunnel-server attributes.
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute tunnel-server-attrs *boolean*
Tree	tunnel-server-attrs
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

uli *boolean*

Synopsis	Generate the ULI RADIUS attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute uli *boolean*
Tree	uli
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-name *boolean*

Synopsis	Include the user-name attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute user-name *boolean*
Tree	user-name
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

v6-aggregate-stats *boolean*

Synopsis	Report IPv6 aggregated forwarded octet and packet counters
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute v6-aggregate-stats *boolean*
Tree	v6-aggregate-stats
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wifi-num-attached-ues *boolean*

Synopsis	Include the RADIUS Alc-Num-Attached-UEs VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute wifi-num-attached-ues *boolean*
Tree	wifi-num-attached-ues
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wifi-rssi *boolean*

Synopsis	Include 802.11 received signal strength indicator
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute wifi-rssi *boolean*
Tree	wifi-rssi
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wifi-ssid-vlan *boolean*

Synopsis	Include per-SSID VLAN ID in the Alc-Wlan-SSID-VLAN VSA

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute wifi-ssid-vlan *boolean*
Tree	wifi-ssid-vlan
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-home-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Home-Ipv6 attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *string* include-radius-attribute xconnect-tunnel-home-address *boolean*
Tree	xconnect-tunnel-home-address
Default	false
Introduced	16.0.R3
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mcs-interval

Synopsis	Enter the **mcs-interval** context
Context	**configure** subscriber-mgmt radius-accounting-policy *string* mcs-interval
Tree	mcs-interval
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *(keyword | number)*

Synopsis	MCS synchronization interval of usage counters
Context	**configure** subscriber-mgmt radius-accounting-policy *string* mcs-interval interval *(keyword | number)*
Tree	interval
Description	This command specifies the interval at which the active BNG in a dual-homed deployment synchronizes subscriber accounting data using MCS to the standby BNG. The MCS interval is a statically configured value or equal to the configured RADIUS accounting update-interval.
Range	5 to 60
Units	minutes

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	none, use-update-interval
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

queue-instance-accounting

Synopsis	Enter the **queue-instance-accounting** context
Context	**configure** subscriber-mgmt radius-accounting-policy *string* queue-instance-accounting
Tree	queue-instance-accounting
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of per-queue instance accounting
Context	**configure** subscriber-mgmt radius-accounting-policy *string* queue-instance-accounting admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-update *boolean*

Synopsis	Send accounting messages for the queue instance
Context	**configure** subscriber-mgmt radius-accounting-policy *string* queue-instance-accounting interim-update *boolean*
Tree	interim-update
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *string* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-accounting

Synopsis	Enter the **session-accounting** context
Context	**configure** subscriber-mgmt radius-accounting-policy *string* session-accounting
Tree	session-accounting
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of per-session accounting
Context	**configure** subscriber-mgmt radius-accounting-policy *string* session-accounting admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-update *boolean*

Synopsis	Allow host updates
Context	**configure** subscriber-mgmt radius-accounting-policy *string* session-accounting host-update *boolean*
Tree	host-update
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

interim-update *boolean*

Synopsis	Allow interim-update accounting messages to be sent
Context	**configure** subscriber-mgmt radius-accounting-policy *string* session-accounting interim-update *boolean*
Tree	interim-update
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-id-format *keyword*

Synopsis	Format used in accounting session ID attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *string* session-id-format *keyword*
Tree	session-id-format
Options	description, number
Default	description
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

triggered-updates

Synopsis	Enter the **triggered-updates** context
Context	**configure** subscriber-mgmt radius-accounting-policy *string* triggered-updates
Tree	triggered-updates
Description	Commands in this context configure non-periodic accounting updates that are triggered by specific events.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp-change

Synopsis	Enter the **gtp-change** context
Context	**configure** subscriber-mgmt radius-accounting-policy *string* triggered-updates gtp-change
Tree	gtp-change

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure which GTP-related changes trigger an interim accounting update. This command is mutually exclusive with the legacy **gtp-mobility** command, which triggers interim accounting updates for all changes.
Notes	The following elements are part of a choice: **gtp-change** or **gtp-mobility**.
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

s1-release *boolean*

Synopsis	Send an IU for S1 release (idle) procedure
Context	**configure** subscriber-mgmt radius-accounting-policy *string* triggered-updates gtp-change s1-release *boolean*
Tree	s1-release
Default	false
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

service-request *boolean*

Synopsis	Send an IU for service request (reactivation) procedure
Context	**configure** subscriber-mgmt radius-accounting-policy *string* triggered-updates gtp-change service-request *boolean*
Tree	service-request
Default	false
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

teidc-change *boolean*

Synopsis	Send an IU when GTP-C TEIDs are changed
Context	**configure** subscriber-mgmt radius-accounting-policy *string* triggered-updates gtp-change teidc-change *boolean*
Tree	teidc-change
Description	When configured to **true**, the router sends an interim accounting update when GTP-C TEIDs are changed. Changes to GTP-C TEIDs typically indicate an MME change.
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

teidu-change *boolean*

Synopsis	Send an IU when GTP-U TEIDs are changed
Context	**configure** subscriber-mgmt radius-accounting-policy *string* triggered-updates gtp-change teidu-change *boolean*
Tree	teidu-change
Description	When configured to **true**, the router sends an interim accounting update when GTP-U TEIDs are changed. This update typically happens during mobility, idling, or service request procedures
Default	false
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

uli-change *boolean*

Synopsis	Send an IU when a user location change is detected
Context	**configure** subscriber-mgmt radius-accounting-policy *string* triggered-updates gtp-change uli-change *boolean*
Tree	uli-change
Default	false
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-mobility *boolean*

WARNING:
This element is deprecated and will be removed in a future release.

Synopsis	Send updates for mobility events
Context	**configure** subscriber-mgmt radius-accounting-policy *string* triggered-updates gtp-mobility *boolean*
Tree	gtp-mobility
Default	false
Notes	The following elements are part of a choice: **gtp-change** or **gtp-mobility**.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R5
Deprecated	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

update-interval

Synopsis	Enter the **update-interval** context
Context	**configure** subscriber-mgmt radius-accounting-policy *string* update-interval
Tree	update-interval
Description	Commands in this context configure the attributes of the intermediate update interval.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Intermediate update interval
Context	**configure** subscriber-mgmt radius-accounting-policy *string* update-interval interval *number*
Tree	interval
Description	This command specifies the interval at which accounting data of subscriber hosts is updated in a RADIUS Accounting Interim-Update message. When specifying the accounting mode in the RADIUS accounting policy, the interim-update command for subscriber hosts must be set to true in one of the following context: • **configure subscriber-mgmt radius-accounting-policy host-accounting** • **configure subscriber-mgmt radius-accounting-policy queue-instance-accounting** • **configure subscriber-mgmt radiuis-accounting-policy session-accounting** A RADIUS-specified interim interval (attribute [85] Acct-Interim-Interval) overrides the CLI configured value.
Range	5 to 259200
Units	minutes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

jitter *(keyword | number)*

Synopsis	Maximum random delay for intermediate update interval

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *string* update-interval jitter *(keyword | number)*
Tree	jitter
Description	This command specifies the absolute maximum random delay introduced on the update interval between two accounting interim update messages. The effective maximum random delay value is the minimum of the configured absolute jitter value and 10% of the configured update-interval. A value of zero sends the accounting interim update message without introducing an additional random delay.
Range	0 to 3600
Units	seconds
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-authentication-policy [name] *string*

Synopsis	Enter the **radius-authentication-policy** list instance
Context	**configure** subscriber-mgmt radius-authentication-policy *string*
Tree	radius-authentication-policy
Max. Instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	RADIUS authentication policy name
Context	**configure** subscriber-mgmt radius-authentication-policy *string*
Tree	radius-authentication-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt radius-authentication-policy *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fallback

Synopsis	Enter the **fallback** context
Context	**configure** subscriber-mgmt radius-authentication-policy *string* fallback
Tree	fallback
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the **action** context
Context	**configure** subscriber-mgmt radius-authentication-policy *string* fallback action
Tree	action
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accept

Synopsis	Automatically accept all authentication requests
Context	**configure** subscriber-mgmt radius-authentication-policy *string* fallback action accept
Tree	accept
Notes	The following elements are part of a choice: **accept** or **user-db**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

user-db *string*

Synopsis	Local user database used to authenticate to the server
Context	**configure** subscriber-mgmt radius-authentication-policy *string* fallback action user-db *string*
Tree	user-db
String Length	1 to 32
Notes	The following elements are part of a choice: **accept** or **user-db**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-probing *boolean*

Synopsis	Enable force probing
Context	**configure** subscriber-mgmt radius-authentication-policy *string* fallback force-probing *boolean*
Tree	force-probing
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute
Tree	include-radius-attribute
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access-loop-options *boolean*

Synopsis	Include access loop information
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute access-loop-options *boolean*
Tree	access-loop-options
Default	false
Introduced	16.0.R1

© 2024 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-session-id

Synopsis	Enable the **acct-session-id** context
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute acct-session-id
Tree	acct-session-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Format of the accounting session ID attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute acct-session-id type *keyword*
Tree	type
Options	host, session
Default	host
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

apn *boolean*

Synopsis	Enable/disable include of the APN attribute.
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute apn *boolean*
Tree	apn
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include called-station-id attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute called-station-id *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	called-station-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

calling-station-id

Synopsis	Enable the **calling-station-id** context
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute calling-station-id
Tree	calling-station-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Format of the Calling-Station-ID attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute calling-station-id type *keyword*
Tree	type
Options	sap-string, mac, sap-id, remote-id, llid
Default	sap-string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Include circuit-id attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute circuit-id *boolean*
Tree	circuit-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-options *boolean*

Synopsis	Generate the DHCP options RADIUS attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute dhcp-options *boolean*
Tree	dhcp-options
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-vendor-class-id *boolean*

Synopsis	Include the RADIUS Alc-DHCP-Vendor-Class-Id VSA
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute dhcp-vendor-class-id *boolean*
Tree	dhcp-vendor-class-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp6-options *boolean*

Synopsis	Generate the DHCPv6 options RADIUS attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute dhcp6-options *boolean*
Tree	dhcp6-options
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gprs-negotiated-qos-profile *boolean*

Synopsis	Generate GPRS negotiated QoS profile RADIUS attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute gprs-negotiated-qos-profile *boolean*
Tree	gprs-negotiated-qos-profile
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

imei *boolean*

Synopsis	Enable/disable include of the IMEI attribute.
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute imei *boolean*
Tree	imei
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi *boolean*

Synopsis	Include the IMSI attribute for FWA sessions
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute imsi *boolean*
Tree	imsi
Default	false
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *boolean*

Synopsis	Include the client MAC address in the RADIUS message
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute mac-address *boolean*
Tree	mac-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msisdn *boolean*

Synopsis	Enable/disable include of the MSISDN attribute.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute msisdn *boolean*
Tree	msisdn
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Enable/disable include of the NAS-Identifier attribute.
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port

Synopsis	Enable the **nas-port** context
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute nas-port
Tree	nas-port
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bit-spec *string*

Synopsis	RADIUS NAS-Port attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute nas-port bit-spec *string*
Tree	bit-spec
String Length	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis	Include remote-id attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute remote-id *boolean*
Tree	remote-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-session-index *boolean*

Synopsis	Generate the per-SAP unique session index
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute sap-session-index *boolean*
Tree	sap-session-index
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel-server-attrs *boolean*

Synopsis	Enable/disable include of tunnel-server attributes.
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute tunnel-server-attrs *boolean*
Tree	tunnel-server-attrs
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

uli *boolean*

Synopsis	Generate the ULI RADIUS attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute uli *boolean*
Tree	uli
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wifi-num-attached-ues *boolean*

Synopsis	Include the RADIUS Alc-Num-Attached-UEs VSA
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute wifi-num-attached-ues *boolean*
Tree	wifi-num-attached-ues
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wifi-ssid-vlan *boolean*

Synopsis	Include per-SSID VLAN ID in the Alc-Wlan-SSID-VLAN VSA
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute wifi-ssid-vlan *boolean*
Tree	wifi-ssid-vlan
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-home-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Home-Ipv6 attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *string* include-radius-attribute xconnect-tunnel-home-address *boolean*
Tree	xconnect-tunnel-home-address
Default	false
Introduced	16.0.R5
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis	RADIUS request password

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-authentication-policy *string* password *string*
Tree	password
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-user-name

Synopsis	Enter the **ppp-user-name** context
Context	**configure** subscriber-mgmt radius-authentication-policy *string* ppp-user-name
Tree	ppp-user-name
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-name *string*

Synopsis	Domain name
Context	**configure** subscriber-mgmt radius-authentication-policy *string* ppp-user-name domain-name *string*
Tree	domain-name
String Length	1 to 128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-operation *keyword*

Synopsis	Operation to perform on the PAP or CHAP username
Context	**configure** subscriber-mgmt radius-authentication-policy *string* ppp-user-name domain-operation *keyword*
Tree	domain-operation
Description	This command specifies the operation to perform on the PAP or CHAP username. When unconfigured, there is no operation and the PAP or CHAP username is not changed.
Options	append, strip, replace, default
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

pppoe-access-method *keyword*

Synopsis	PPPoE access method
Context	**configure** subscriber-mgmt radius-authentication-policy *string* pppoe-access-method *keyword*
Tree	pppoe-access-method
Options	none, padi, pap-chap
Default	padi
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** subscriber-mgmt radius-authentication-policy *string* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

re-authentication *boolean*

Synopsis	Enable re-authentication on IPOE renewal
Context	**configure** subscriber-mgmt radius-authentication-policy *string* re-authentication *boolean*
Tree	re-authentication
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

send-acct-stop-on-fail

Synopsis	Enter the **send-acct-stop-on-fail** context
Context	**configure** subscriber-mgmt radius-authentication-policy *string* send-acct-stop-on-fail
Tree	send-acct-stop-on-fail
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-accept-failure *boolean*

Synopsis	Send an accounting stop message when a failure occurs
Context	**configure** subscriber-mgmt radius-authentication-policy *string* send-acct-stop-on-fail on-accept-failure *boolean*
Tree	on-accept-failure
Description	When configured to **true**, the system sends an accounting stop message when a failure occurs after the reception of a RADIUS Access-Accept message (such as a duplicate IP address).
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-reject *boolean*

Synopsis	Send an accounting stop message for Access-Reject
Context	**configure** subscriber-mgmt radius-authentication-policy *string* send-acct-stop-on-fail on-reject *boolean*
Tree	on-reject
Description	When configured to **true**, the system sends an accounting stop message when an Access-Reject message is received.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-request-failure *boolean*

Synopsis	Send an accounting stop message for failures
Context	**configure** subscriber-mgmt radius-authentication-policy *string* send-acct-stop-on-fail on-request-failure *boolean*
Tree	on-request-failure
Description	When configured to **true**, the system sends an accounting stop message when a RADIUS Access-Request message cannot be sent (for example, there is no server configured, or timeout).
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-name

Synopsis	Enter the **user-name** context
Context	**configure** subscriber-mgmt radius-authentication-policy *string* user-name
Tree	user-name
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-name *string*

Synopsis	Domain name
Context	**configure** subscriber-mgmt radius-authentication-policy *string* user-name domain-name *string*
Tree	domain-name
String Length	1 to 128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-operation *keyword*

Synopsis	Operation to perform on the username
Context	**configure** subscriber-mgmt radius-authentication-policy *string* user-name domain-operation *keyword*
Tree	domain-operation
Description	This command specifies the operation to perform on the username. When unconfigured, there is no operation and the username is not changed.
Options	append, strip, replace, default
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

format *keyword*

Synopsis	User name format in the RADIUS message

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-authentication-policy *string* user-name format *keyword*
Tree	format
Options	mac, circuit-id, tuple, ascii-converted-circuit-id, ascii-converted-tuple, dhcp-client-vendor-opts, mac-giaddr, ppp-user-name
Default	mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp-format *keyword*

Synopsis	Username format used for FWA sessions
Context	**configure** subscriber-mgmt radius-authentication-policy *string* user-name gtp-format *keyword*
Tree	gtp-format
Description	This command specifies the username format to use for FWA sessions. If a PAP message is present in the PCO IE of the Create Session request, the system uses that for authentication instead of the format specified for this command. If you specify a format that includes APN, the separator is an @ character; for example, msisdn@apn.
Options	imsi, imsi-apn, msisdn, msisdn-apn
Default	imsi
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-format *string*

Synopsis	MAC address format when contacting a RADIUS server
Context	**configure** subscriber-mgmt radius-authentication-policy *string* user-name mac-format *string*
Tree	mac-format
String Length	2 to 7
Default	aa:
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

rip-policy [name] *string*

Synopsis	Enter the **rip-policy** list instance
Context	**configure** subscriber-mgmt rip-policy *string*
Tree	rip-policy
Max. Instances	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	RIP policy name
Context	**configure** subscriber-mgmt rip-policy *string*
Tree	rip-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-key *string*

Synopsis	Authentication key
Context	**configure** subscriber-mgmt rip-policy *string* authentication-key *string*
Tree	authentication-key
String Length	1 to 51
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-type *keyword*

Synopsis	Authentication type used between RIP neighbors
Context	**configure** subscriber-mgmt rip-policy *string* authentication-type *keyword*
Tree	authentication-type
Options	password, message-digest, message-digest-20
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt rip-policy *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-advertisement-policy [name] *string*

Synopsis	Enter the **router-advertisement-policy** list instance
Context	**configure** subscriber-mgmt router-advertisement-policy *string*
Tree	router-advertisement-policy
Max. Instances	16
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Router advertisement policy name
Context	**configure** subscriber-mgmt router-advertisement-policy *string*
Tree	router-advertisement-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-mcast *keyword*

Synopsis	Protocol with forced multicast
Context	**configure** subscriber-mgmt router-advertisement-policy *string* force-mcast *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	force-mcast
Options	ip, ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-advertisement-interval *number*

Synopsis	Maximum advertisement interval
Context	**configure** subscriber-mgmt router-advertisement-policy *string* max-advertisement-interval *number*
Tree	max-advertisement-interval
Range	900 to 1800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-advertisement-interval *number*

Synopsis	Minimum advertisement interval
Context	**configure** subscriber-mgmt router-advertisement-policy *string* min-advertisement-interval *number*
Tree	min-advertisement-interval
Range	900 to 1350
Units	seconds
Default	900
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

options

Synopsis	Enter the **options** context
Context	**configure** subscriber-mgmt router-advertisement-policy *string* options
Tree	options
Introduced	16.0.R1

© 2024 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

current-hop-limit *number*

Synopsis	Hop limit to be advertised
Context	**configure** subscriber-mgmt router-advertisement-policy *string* options current-hop-limit *number*
Tree	current-hop-limit
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dns

Synopsis	Enter the **dns** context
Context	**configure** subscriber-mgmt router-advertisement-policy *string* options dns
Tree	dns
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-rdnss *boolean*

Synopsis	Include the RDNSS server option 25
Context	**configure** subscriber-mgmt router-advertisement-policy *string* options dns include-rdnss *boolean*
Tree	include-rdnss
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rdnss-lifetime *(number | keyword)*

Synopsis	Maximum time for the RDNSS address to remain valid
Context	**configure** subscriber-mgmt router-advertisement-policy *string* options dns rdnss-lifetime *(number | keyword)*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	rdnss-lifetime
Range	900 to 3600
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-configuration *boolean*

Synopsis	Managed address configuration flag
Context	**configure** subscriber-mgmt router-advertisement-policy *string* options managed-configuration *boolean*
Tree	managed-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mtu *(number | keyword)*

Synopsis	Advertised MTU value
Context	**configure** subscriber-mgmt router-advertisement-policy *string* options mtu *(number | keyword)*
Tree	mtu
Range	1280 to 9212
Units	bytes
Options	not-included
Default	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other-stateful-configuration *boolean*

Synopsis	Other stateful configuration flag
Context	**configure** subscriber-mgmt router-advertisement-policy *string* options other-stateful-configuration *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	other-stateful-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reachable-time *number*

Synopsis	Reachable time for advertisements
Context	**configure** subscriber-mgmt router-advertisement-policy *string* options reachable-time *number*
Tree	reachable-time
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retransmit-timer *number*

Synopsis	Retransmit time in router advertisements from interface
Context	**configure** subscriber-mgmt router-advertisement-policy *string* options retransmit-timer *number*
Tree	retransmit-timer
Range	0 to 1800000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-lifetime *(number | keyword)*

Synopsis	Router lifetime
Context	**configure** subscriber-mgmt router-advertisement-policy *string* options router-lifetime *(number | keyword)*
Tree	router-lifetime
Range	2700 to 9000

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Options	no-default-router
Default	4500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-options

Synopsis	Enter the **prefix-options** context
Context	**configure** subscriber-mgmt router-advertisement-policy *string* prefix-options
Tree	prefix-options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stateful

Synopsis	Enter the **stateful** context
Context	**configure** subscriber-mgmt router-advertisement-policy *string* prefix-options stateful
Tree	stateful
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-lifetimes *boolean*

Synopsis	Use automatic lifetimes for stateful prefixes
Context	**configure** subscriber-mgmt router-advertisement-policy *string* prefix-options stateful auto-lifetimes *boolean*
Tree	auto-lifetimes
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-link *boolean*

Synopsis	Assign the prefix to an interface on the specified link

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt router-advertisement-policy *string* prefix-options stateful on-link *boolean*
Tree	on-link
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *(number | keyword)*

Synopsis	Time for a prefix to remain preferred
Context	**configure** subscriber-mgmt router-advertisement-policy *string* prefix-options stateful preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *(number | keyword)*

Synopsis	Time for a prefix to remain valid
Context	**configure** subscriber-mgmt router-advertisement-policy *string* prefix-options stateful valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stateless

Synopsis	Enter the **stateless** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt router-advertisement-policy *string* prefix-options stateless
Tree	stateless
Introduced	16.0.R1

Context	**configure** subscriber-mgmt sap-template *string* dist-cpu-protection *reference*
Tree	dist-cpu-protection
Reference	**configure** system security dist-cpu-protection policy *string*
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time *(number | keyword)*

Synopsis	Time to hold a SAP after last PFCP session is removed
Context	**configure** subscriber-mgmt sap-template *string* hold-time *(number | keyword)*
Tree	hold-time
Description	This command configures the time for which an SAP will be kept after the last session has been removed. Idle SAPs can be forcefully removed by the command **clear subscriber-mgmt sap-template template-name idle-saps**.
Range	0 | 30 to 2592000
Units	seconds
Options	infinite
Default	30
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv-policy [name] *string*

Synopsis	Enter the **shcv-policy** list instance
Context	**configure** subscriber-mgmt shcv-policy *string*
Tree	shcv-policy
Max. Instances	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	SHCV policy name
Context	**configure** subscriber-mgmt shcv-policy *string*
Tree	shcv-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt shcv-policy *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

layer-3

Synopsis	Enter the **layer-3** context
Context	**configure** subscriber-mgmt shcv-policy *string* layer-3
Tree	layer-3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-ip-origin *keyword*

Synopsis	Source IP address to be used for SHCV messages
Context	**configure** subscriber-mgmt shcv-policy *string* layer-3 source-ip-origin *keyword*
Tree	source-ip-origin
Options	interface – IP address of the interface vrrp – Primary IP address of the VRRP
Default	interface
Introduced	16.0.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

unnumbered-source-ip *string*

Synopsis	Source IPv4 address for unnumbered subscriber hosts
Context	**configure** subscriber-mgmt shcv-policy *string* layer-3 unnumbered-source-ip *string*
Tree	unnumbered-source-ip
Description	This command configures the source IPv4 address (also known as the sender IP address) used in SHCV ARP requests for unnumbered hosts. When unconfigured, 0.0.0.0 is used as the source IPv4 address in SHCV ARP requests.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

periodic

Synopsis	Enter the **periodic** context
Context	**configure** subscriber-mgmt shcv-policy *string* periodic
Tree	periodic
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action when periodic connectivity verification fails
Context	**configure** subscriber-mgmt shcv-policy *string* periodic action *keyword*
Tree	action
Options	alarm, remove
Default	alarm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of periodic connectivity check
Context	**configure** subscriber-mgmt shcv-policy *string* periodic admin-state *keyword*
Tree	admin-state

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Time interval which all known sources are verified
Context	**configure** subscriber-mgmt shcv-policy *string* periodic interval *number*
Tree	interval
Description	This command specifies the time interval which all known sources are verified. The actual rate is dependent on the number of known hosts and intervals.
Range	1 to 6000
Units	minutes
Default	30
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retry-count *number*

Synopsis	Number of retransmissions in connectivity verification
Context	**configure** subscriber-mgmt shcv-policy *string* periodic retry-count *number*
Tree	retry-count
Range	1 to 29
Default	2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Timeout before connectivity verification retransmitted
Context	**configure** subscriber-mgmt shcv-policy *string* periodic timeout *number*
Tree	timeout
Range	1 to 60
Units	seconds

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trigger

Synopsis	Enter the **trigger** context
Context	**configure** subscriber-mgmt shcv-policy *string* trigger
Tree	trigger
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-limit-exceeded

Synopsis	Enter the **host-limit-exceeded** context
Context	**configure** subscriber-mgmt shcv-policy *string* trigger host-limit-exceeded
Tree	host-limit-exceeded
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of trigger for host-limit exceeded
Context	**configure** subscriber-mgmt shcv-policy *string* trigger host-limit-exceeded admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retry-count *number*

Synopsis	Number of retransmissions in periodic connectivity test
Context	**configure** subscriber-mgmt shcv-policy *string* trigger host-limit-exceeded retry-count *number*

Description	This command configures the maximum number of IPv6 PPPoE DHCP WAN hosts per SLA profile instance. The operational maximum value may be smaller due to equipped hardware dependencies.
Range	0 to 131071
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac-overall *number*

Synopsis	Maximum number of L2TP LAC hosts
Context	**configure** subscriber-mgmt sla-profile *string* host-limits lac-overall *number*
Tree	lac-overall
Description	This command configures the maximum number of L2TP LAC hosts per SLA profile instance. The operational maximum value may be smaller due to equipped hardware dependencies.
Range	0 to 131071
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

overall *number*

Synopsis	Maximum number of subscriber hosts
Context	**configure** subscriber-mgmt sla-profile *string* host-limits overall *number*
Tree	overall
Description	This command configures the maximum number of subscriber hosts per SLA profile instance. The operational maximum value may be smaller due to equipped hardware dependencies.

Range	1 to 131071
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remove-oldest *boolean*

Synopsis	Remove oldest
Context	**configure** subscriber-mgmt sla-profile *string* host-limits remove-oldest *boolean*
Tree	remove-oldest
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout

Synopsis	Enable the **idle-timeout** context
Context	**configure** subscriber-mgmt sla-profile *string* idle-timeout
Tree	idle-timeout
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

category [category-name] *reference*

Synopsis	Enter the **category** list instance
Context	**configure** subscriber-mgmt sla-profile *string* idle-timeout category *reference*
Tree	category
Max. Instances	16
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**category-name**] *reference*

Synopsis	Category name
Context	**configure** subscriber-mgmt sla-profile *string* idle-timeout category *reference*
Tree	category

© 2024 Nokia.

Description	This command specifies the category name where the queues and policers are defined for the idle-timeout monitoring for subscriber hosts.
Reference	**configure** subscriber-mgmt category-map *string* category *string*
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action when the idle-timeout is reached
Context	**configure** subscriber-mgmt sla-profile *string* idle-timeout category *reference* action *keyword*
Tree	action
Description	This command specifies the action to be executed when the idle-timeout is reached. The action is performed for all hosts associated with the SLA profile instance.
Options	terminate, shcv
Default	terminate
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Time the category can stay below its activity threshold
Context	**configure** subscriber-mgmt sla-profile *string* idle-timeout category *reference* timeout *number*
Tree	timeout
Range	60 to 15552000
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

category-map-name *reference*

agg-rate

Synopsis	Report the aggregate rate
Context	**configure** subscriber-mgmt sla-profile *string* ingress report-rate agg-rate
Tree	agg-rate
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	Report the rate of the specified policer
Context	**configure** subscriber-mgmt sla-profile *string* ingress report-rate policer *number*
Tree	policer
Range	1 to 63
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe-actual-rate

Synopsis	Report rate from the DSL characteristics PPPoE tags
Context	**configure** subscriber-mgmt sla-profile *string* ingress report-rate pppoe-actual-rate
Tree	pppoe-actual-rate
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rfc5515-actual-rate

Synopsis	Report the rate as specified in RFC 5515
Context	**configure** subscriber-mgmt sla-profile *string* ingress report-rate rfc5515-actual-rate
Tree	rfc5515-actual-rate

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scheduler *string*

Synopsis	Report the rate of the specified scheduler
Context	**configure** subscriber-mgmt sla-profile *string* ingress report-rate scheduler *string*
Tree	scheduler
String Length	1 to 32
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

one-time-http-redirection

Synopsis	Enter the **one-time-http-redirection** context
Context	**configure** subscriber-mgmt sla-profile *string* one-time-http-redirection
Tree	one-time-http-redirection
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-filter *reference*

Synopsis	IPv4 filter policy name
Context	**configure** subscriber-mgmt sla-profile *string* one-time-http-redirection ip-filter *reference*
Tree	ip-filter
Reference	**configure** filter ip-filter *string*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp-mappings

Synopsis	Enter the **pfcp-mappings** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sla-profile *string* pfcp-mappings
Tree	pfcp-mappings
Description	Commands in this context configure the mapping of packet forwarding control protocol (PFCP) QoS IEs (such as QoS enforcement rule (QER) GBR/MBR IEs), to local QoS overrides (such as queue and policer rates).
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-qer

Synopsis	Enter the **session-qer** context
Context	**configure** subscriber-mgmt sla-profile *string* pfcp-mappings session-qer
Tree	session-qer
Description	Commands in this context configure the mapping of the PFCP session QER rate to the local QoS rate. If a signaled PFCP QER rate applies to all data-plane rules, it is interpreted as the session QER rate and is mapped to the QoS overrides in the configuration. Examples of such QER rates are APN-AMBR for 4G FWA sessions and session-AMBR for 5G FWA sessions. A QER that contains a QER correlation ID does not use the QER mapping because it is assumed not to be a per-session construct.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

downlink

Synopsis	Enter the **downlink** context
Context	**configure** subscriber-mgmt sla-profile *string* pfcp-mappings session-qer downlink
Tree	downlink
Description	Commands in this context configure the downlink MBR/GBR to QoS override mapping.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

aggregate-rate

Synopsis	Map MBR/GBR to a rate override for the aggregate rate

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sla-profile *string* pfcp-mappings session-qer downlink aggregate-rate
Tree	aggregate-rate
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *string*

Synopsis	Arbiter target of MBR/GBR override
Context	**configure** subscriber-mgmt sla-profile *string* pfcp-mappings session-qer downlink arbiter *string*
Tree	arbiter
String Length	1 to 32
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	Policer target of MBR/GBR override
Context	**configure** subscriber-mgmt sla-profile *string* pfcp-mappings session-qer downlink policer *number*
Tree	policer
Range	1 to 8
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue *number*

Synopsis	Queue target of MBR/GBR override
Context	**configure** subscriber-mgmt sla-profile *string* pfcp-mappings session-qer downlink queue *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	queue
Range	1 to 8
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler *string*

Synopsis	Scheduler target of MBR/GBR override
Context	**configure** subscriber-mgmt sla-profile *string* pfcp-mappings session-qer downlink scheduler *string*
Tree	scheduler
String Length	1 to 32
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

uplink

Synopsis	Enter the **uplink** context
Context	**configure** subscriber-mgmt sla-profile *string* pfcp-mappings session-qer uplink
Tree	uplink
Description	Commands in this context configure the uplink MBR/GBR to QoS override mapping.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *string*

Synopsis	Arbiter target of MBR/GBR override
Context	**configure** subscriber-mgmt sla-profile *string* pfcp-mappings session-qer uplink arbiter *string*
Tree	arbiter
String Length	1 to 32
Notes	The following elements are part of a choice: **arbiter**, **policer**, **queue**, or **scheduler**.

session-limits

Synopsis	Enter the **session-limits** context
Context	**configure** subscriber-mgmt sla-profile *string* session-limits
Tree	session-limits
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe *number*

Synopsis	Maximum number of IPoE sessions
Context	**configure** subscriber-mgmt sla-profile *string* session-limits ipoe *number*
Tree	ipoe
Description	This command configures the maximum number of IPoE sessions per SLA profile instance.
Range	0 to 131071
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tp

Synopsis	Enter the **l2tp** context
Context	**configure** subscriber-mgmt sla-profile *string* session-limits l2tp
Tree	l2tp
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lns *number*

Synopsis	Maximum number of L2TP LNS sessions
Context	**configure** subscriber-mgmt sla-profile *string* session-limits l2tp lns *number*
Tree	lns
Description	This command configures the maximum number of L2TP LNS sessions per SLA profile instance.
Range	0 to 131071

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lts *number*

Synopsis	Maximum number of L2TP LTS sessions
Context	**configure** subscriber-mgmt sla-profile *string* session-limits l2tp lts *number*
Tree	lts
Description	This command configures the maximum number of L2TP LTS sessions per SLA profile instance.
Range	0 to 131071
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

overall *number*

Synopsis	Maximum number of L2TP sessions
Context	**configure** subscriber-mgmt sla-profile *string* session-limits l2tp overall *number*
Tree	overall
Description	This command configures the maximum number of L2TP sessions per SLA profile instance.
Range	0 to 131071
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

overall *number*

Synopsis	Maximum number of subscriber sessions
Context	**configure** subscriber-mgmt sla-profile *string* session-limits overall *number*
Tree	overall
Range	0 to 131071
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe

Synopsis	Enter the **pppoe** context
Context	**configure** subscriber-mgmt sla-profile *string* session-limits pppoe
Tree	pppoe
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac *number*

Synopsis	Maximum number of PPPoE L2TP LAC sessions
Context	**configure** subscriber-mgmt sla-profile *string* session-limits pppoe lac *number*
Tree	lac
Description	This command configures the maximum number of PPPoE L2TP LAC sessions per SLA profile instance.
Range	0 to 131071
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local *number*

Synopsis	Maximum number of PPPoE local terminated sessions
Context	**configure** subscriber-mgmt sla-profile *string* session-limits pppoe local *number*
Tree	local
Description	This command configures the maximum number of PPPoE local terminated sessions (PTA) per SLA profile instance.
Range	0 to 131071
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

overall *number*

Synopsis	Maximum number of PPPoE sessions
Context	**configure** subscriber-mgmt sla-profile *string* session-limits pppoe overall *number*
Tree	overall

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

class *number*

Synopsis	Class used to select a LAG link
Context	**configure** subscriber-mgmt sub-profile *string* egress lag-per-link-hash class *number*
Tree	class
Range	1 to 3
Default	1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

weight *number*

Synopsis	Weight associated with SAP when selecting a LAG link
Context	**configure** subscriber-mgmt sub-profile *string* egress lag-per-link-hash weight *number*
Tree	weight
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** subscriber-mgmt sub-profile *string* egress qos
Tree	qos
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

agg-rate

Synopsis	Enter the **agg-rate** context
Context	**configure** subscriber-mgmt sub-profile *string* egress qos agg-rate
Tree	agg-rate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

adaptation-rule *keyword*

Synopsis	Adaptation rule for operational PIR value of subscriber
Context	**configure** subscriber-mgmt sub-profile *string* egress qos agg-rate adaptation-rule *keyword*
Tree	adaptation-rule

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the adaptation rule for the PIR value of the subscriber aggregate rate. This rule determines which configured value is adapted to **oper-agg-rate** based on hardware capabilities.
Options	max, min, closest
Default	closest
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

burst-limit *(number | keyword)*

Synopsis	Burst limit of the subscriber aggregate rate
Context	**configure** subscriber-mgmt sub-profile *string* egress qos agg-rate burst-limit *(number | keyword)*
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-s

min-resv-bw *number*

Synopsis	Reserved minimum total rate of all egress queues
Context	**configure** subscriber-mgmt sub-profile *string* egress qos agg-rate min-resv-bw *number*
Tree	min-resv-bw
Range	0 to 800000000
Units	kilobps
Default	1
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

queue-frame-based-accounting *boolean*

Synopsis	Use frame-based accounting to evaluate rate limit

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sub-profile *string* egress qos agg-rate queue-frame-based-accounting *boolean*
Tree	queue-frame-based-accounting
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate *number*

Synopsis	Maximum total rate of all egress queues
Context	**configure** subscriber-mgmt sub-profile *string* egress qos agg-rate rate *number*
Tree	rate
Range	1 to 800000000
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

encap-offset

Synopsis	Enable the **encap-offset** context
Context	**configure** subscriber-mgmt sub-profile *string* egress qos encap-offset
Tree	encap-offset
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Offset type
Context	**configure** subscriber-mgmt sub-profile *string* egress qos encap-offset type *keyword*
Tree	type
Options	pppoa-llc, pppoa-null, pppoeoa-llc, pppoeoa-llc-fcs, pppoeoa-llc-tagged, pppoeoa-llc-tagged-fcs, pppoeoa-null, pppoeoa-null-fcs, pppoeoa-null-tagged, pppoeoa-null-tagged-fcs, ipoa-llc, ipoa-null, ipoeoa-llc, ipoeoa-llc-fcs, ipoeoa-llc-tagged, ipoeoa-llc-tagged-fcs, ipoeoa-null, ipoeoa-null-fcs, ipoeoa-null-tagged, ipoeoa-null-tagged-fcs, pppoe, pppoe-tagged, ipoe, ipoe-tagged
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hs-agg-rate *number*

Synopsis	Maximum rate for single egress HS queues
Context	**configure** subscriber-mgmt sub-profile *string* egress qos hs-agg-rate *number*
Tree	hs-agg-rate
Range	1 to 100000000
Units	kilobps
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-low-burst-max-class *number*

Synopsis	Scheduling classes to map the low burst limit threshold
Context	**configure** subscriber-mgmt sub-profile *string* egress qos hs-low-burst-max-class *number*
Tree	hs-low-burst-max-class
Range	1 to 6
Default	6
Introduced	16.0.R4
Platforms	7750 SR-7/12/12e

hs-min-resv-bw *number*

Synopsis	Reserved minimum total rate of all egress queues
Context	**configure** subscriber-mgmt sub-profile *string* egress qos hs-min-resv-bw *number*
Tree	hs-min-resv-bw
Range	0 to 100000000
Units	kilobps
Default	1
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

policer-control-policy

Synopsis	Enter the **policer-control-policy** context
Context	**configure** subscriber-mgmt sub-profile *string* egress qos policer-control-policy
Tree	policer-control-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overrides

Synopsis	Enter the **overrides** context
Context	**configure** subscriber-mgmt sub-profile *string* egress qos policer-control-policy overrides
Tree	overrides
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

root

Synopsis	Enable the **root** context
Context	**configure** subscriber-mgmt sub-profile *string* egress qos policer-control-policy overrides root
Tree	root
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-rate *(number | keyword)*

Synopsis	Maximum rate
Context	**configure** subscriber-mgmt sub-profile *string* egress qos policer-control-policy overrides root max-rate *(number | keyword)*
Tree	max-rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Tree	path-restoration-state

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures how the BNG-UP manages the state of active FSGs, if the BNG-UP becomes headless (PFCP path is in restoration/headless). The BNG-UP can always move all active FSGs to standby, or decide whether to move them to standby based on a series of heuristic tests. If any test indicates that the BNG-UP cannot forward traffic for the FSG, or if another BNG-UP becomes active, the BNG-UP moves the FSG to standby. This only applies to active FSGs; the BNG-UP never makes a standby FSG active without CPF intervention.
Options	standby – Always change FSG state to standby auto – Change FSG state based on a series of heuristic tests
Default	auto
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redundant-interface

Synopsis	Enter the **redundant-interface** context
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *string* redundant-interface
Tree	redundant-interface
Description	Commands in this context configure downstream traffic shunting from a standby BNG-UP to an active BNG-UP. Downstream traffic that is received for standby sessions is sent over the redundant interface to the active BNG-UP. This requires the configuration of the **multi-chassis-shunt-id** in the service that receives the session traffic.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	Redundant interface name
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *string* redundant-interface name *string*
Tree	name
Description	This command configures the name of the redundant interface. It must exist in the service that contains the redundant interface.
String Length	1 to 32
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

service *string*

Synopsis	Service that contains the redundant interface
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *string* redundant-interface service *string*
Tree	service
Description	This command configures the service that contains the redundant interface. It can be different from the service where the session traffic is terminated.
String Length	1 to 64
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

uplink-forwarding-while-standby *boolean*

Synopsis	Allows a standby BNG-UP to forward packets
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *string* uplink-forwarding-while-standby *boolean*
Tree	uplink-forwarding-while-standby
Description	This command allows a standby BNG-UP to forward uplink traffic. To prevent the possibility of packet replication towards the network, this command should only be enabled if the access network is provisioned not to replicate unicast packets to the BNG-UP.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vrgw

Synopsis	Enter the **vrgw** context
Context	**configure** subscriber-mgmt vrgw
Tree	vrgw
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

brg-profile [brg-profile-name] *string*

Synopsis	Enter the **brg-profile** list instance

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt vrgw brg-profile *string*
Tree	brg-profile
Max. Instances	16
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**brg-profile-name**] *string*

Synopsis	BRG profile name
Context	**configure** subscriber-mgmt vrgw brg-profile *string*
Tree	brg-profile
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connectivity-verification

Synopsis	Enter the **connectivity-verification** context
Context	**configure** subscriber-mgmt vrgw brg-profile *string* connectivity-verification
Tree	connectivity-verification
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of BRG connectivity verification
Context	**configure** subscriber-mgmt vrgw brg-profile *string* connectivity-verification admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

count *number*

Synopsis	Connection attempts before BRG is considered down
Context	**configure** subscriber-mgmt vrgw brg-profile *string* connectivity-verification count *number*
Tree	count
Range	1 to 5
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retry-time *number*

Synopsis	Wait time before a new connectivity verification cycle
Context	**configure** subscriber-mgmt vrgw brg-profile *string* connectivity-verification retry-time *number*
Tree	retry-time
Range	300 to 3600
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Timeout after which a message is considered unanswered
Context	**configure** subscriber-mgmt vrgw brg-profile *string* connectivity-verification timeout *number*
Tree	timeout
Range	5 to 60
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	**configure** subscriber-mgmt vrgw brg-profile *string* description *string*
Tree	description
String Length	1 to 80

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis	The time to hold on to a BRG after it went down
Context	**configure** subscriber-mgmt vrgw brg-profile *string* hold-time *number*
Tree	hold-time
Range	0 | 30 to 2592000
Units	seconds
Default	0
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

home-pool

Synopsis	Enter the **home-pool** context
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool
Tree	home-pool
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-time *number*

Synopsis	Lease time used when allocating addresses from the pool
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool lease-time *number*
Tree	lease-time
Range	300 to 315446399
Units	seconds
Default	21600
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

option [number] *(number | keyword)*

Synopsis	Enter the **option** list instance
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool option *(number | keyword)*
Tree	option
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCP option to send identification strings to client
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool option *(number | keyword)*
Tree	option
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

Synopsis	ASCII string of the DHCP option
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool option *(number | keyword)* ascii-string *string*
Tree	ascii-string
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	DHCP option as time duration.
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool option *(number | keyword)* duration *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Empty DHCP option.
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool option *(number | keyword)* empty
Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *string*

Synopsis	DHCP option as a hexadecimal string
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool option *(number | keyword)* hex-string *string*
Tree	hex-string
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-address *string*

Synopsis	DHCP option as a list of IPv4 addresses
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool option *(number | keyword)* ipv4-address *string*
Tree	ipv4-address

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. Instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**. This element is ordered by the user.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

netbios-node-type *keyword*

Synopsis	DHCP option as NetBIOS node type.
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool option *(number | keyword)* netbios-node-type *keyword*
Tree	netbios-node-type
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

standby-ip-lifetime *number*

Synopsis	The lifetime of the standby IP addresses
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool standby-ip-lifetime *number*
Tree	standby-ip-lifetime
Range	300 to 315446399
Units	seconds
Default	21600
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subnet

Synopsis	Enter the **subnet** context
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool subnet

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	subnet
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end *string*

Synopsis	Upper bound of the IP address range
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool subnet end *string*
Tree	end
Default	192.168.0.254
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix *string*

Synopsis	Prefix and default-gateway to be used inside the home
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool subnet prefix *string*
Tree	prefix
Default	192.168.0.1/24
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start *string*

Synopsis	Lower bound of the IP address range
Context	**configure** subscriber-mgmt vrgw brg-profile *string* home-pool subnet start *string*
Tree	start
Default	192.168.0.2
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

initial-hold-time *number*

Synopsis	Hold time for BRG instances created without any hosts
Context	**configure** subscriber-mgmt vrgw brg-profile *string* initial-hold-time *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	initial-hold-time
Range	0 to 900
Units	seconds
Default	300
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-authentication

Synopsis	Enter the **radius-authentication** context
Context	**configure** subscriber-mgmt vrgw brg-profile *string* radius-authentication
Tree	radius-authentication
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis	Password used for authentication
Context	**configure** subscriber-mgmt vrgw brg-profile *string* radius-authentication password *string*
Tree	password
String Length	1 to 115
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server-policy *reference*

Synopsis	Radius servers to be used for authentication
Context	**configure** subscriber-mgmt vrgw brg-profile *string* radius-authentication server-policy *reference*
Tree	server-policy
Reference	**configure** aaa radius server-policy *string*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

radius-proxy-server [router-instance] *string* name *string*

Synopsis	Add a list entry for **radius-proxy-server**
Context	**configure** subscriber-mgmt vrgw brg-profile *string* radius-proxy-server *string* name *string*
Tree	radius-proxy-server
Max. Instances	4
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**router-instance**] *string*

Synopsis	router-instance
Context	**configure** subscriber-mgmt vrgw brg-profile *string* radius-proxy-server *string* name *string*
Tree	radius-proxy-server
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	RADIUS proxy server name
Context	**configure** subscriber-mgmt vrgw brg-profile *string* radius-proxy-server *string* name *string*
Tree	radius-proxy-server
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile-string *string*

Synopsis	Default for SLA-profile lookup
Context	**configure** subscriber-mgmt vrgw brg-profile *string* sla-profile-string *string*
Tree	sla-profile-string

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String Length	0 to 32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile-string *string*

Synopsis	Default for subscriber-profile lookup
Context	**configure** subscriber-mgmt vrgw brg-profile *string* sub-profile-string *string*
Tree	sub-profile-string
String Length	0 to 32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

uplink-initial-wait *number*

Synopsis	Wait time for non-routed uplink to become operational
Context	**configure** subscriber-mgmt vrgw brg-profile *string* uplink-initial-wait *number*
Tree	uplink-initial-wait
Range	10 to 300
Units	seconds
Default	30
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lanext

Synopsis	Enter the **lanext** context
Context	**configure** subscriber-mgmt vrgw lanext
Tree	lanext
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-target-as-number *number*

Synopsis	AS number to derive RT and RD for the HLE service

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt vrgw lanext router-target-as-number *number*
Tree	router-target-as-number
Range	1 to 65535
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw

Synopsis	Enter the **wlan-gw** context
Context	**configure** subscriber-mgmt wlan-gw
Tree	wlan-gw
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

queries

Synopsis	Enter the **queries** context
Context	**configure** subscriber-mgmt wlan-gw queries
Tree	queries
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel [name] *string*

Synopsis	Enter the **tunnel** list instance
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string*
Tree	tunnel
Max. Instances	1024
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Tunnel query name
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	tunnel
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

access-point-mac-address-learning-status *keyword*

Synopsis	Matching criteria of tunnels based on learning status
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* access-point-mac-address-learning-status *keyword*
Tree	access-point-mac-address-learning-status
Options	failed, succeeded
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

calculate-counts *boolean*

Synopsis	Count the number of tunnels matching the criteria
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* calculate-counts *boolean*
Tree	calculate-counts
Default	false
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

encapsulation

Synopsis	Enable the **encapsulation** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* encapsulation
Tree	encapsulation
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

gre *boolean*

Synopsis	Controls whether the query returns Soft GRE tunnels
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* encapsulation gre *boolean*
Tree	gre
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2 *boolean*

Synopsis	Enable matching on Layer 2 tunnels
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* encapsulation l2 *boolean*
Tree	l2
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2tp *boolean*

Synopsis	Controls whether the query returns Soft L2TPv3 tunnels
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* encapsulation l2tp *boolean*
Tree	l2tp
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vxlan *boolean*

Synopsis	Controls whether the query returns VXLAN tunnels
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* encapsulation vxlan *boolean*
Tree	vxlan
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

l2

Synopsis	Enter the **l2** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* l2
Tree	l2
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

inner-vlan *number*

Synopsis	Value to match the Layer 2 access point of the tunnel
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* l2 inner-vlan *number*
Tree	inner-vlan
Range	0 to 4095
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

outer-vlan *number*

Synopsis	Layer 2 access point matching with a specified S-VLAN
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* l2 outer-vlan *number*
Tree	outer-vlan
Range	0 to 4095
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap *string*

Synopsis	Value to match the L2-AP Access Point of the tunnel
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* l2 sap *string*
Tree	sap
String Length	1 to 45
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

l3

Synopsis	Enter the **l3** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* l3
Tree	l3
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

address-type *keyword*

Synopsis	Address type to match
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* l3 address-type *keyword*
Tree	address-type
Options	ipv4, ipv6
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address as local endpoint to match
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* l3 local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address as remote endpoint to match
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* l3 remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	remote-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

router-instance *string*

Synopsis	Router instance to match
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* l3 router-instance *string*
Tree	router-instance
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ues

Synopsis	Enter the **ues** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* ues
Tree	ues
Description	Commands in this context filter tunnels based on the properties of UEs that are currently active on the tunnel.
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-user-group *string*

Synopsis	Name of the custom user group
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* ues custom-user-group *string*
Tree	custom-user-group
Description	This command specifies a custom user group to use as a filter. A user equipment (UE) can be assigned up to four custom user groups during RADIUS authentication using the Alc-Wlan-Custom-User-Group attribute.
String Length	0 to 32
Introduced	24.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

maximum *number*

Synopsis	Maximum number of UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* ues maximum *number*
Tree	maximum
Max. Range	0 to 4294967295
Introduced	19.5.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

minimum *number*

Synopsis	Minimum number of UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* ues minimum *number*
Tree	minimum
Max. Range	0 to 4294967295
Default	1
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

state

Synopsis	Enable the **state** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* ues state
Tree	state
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

cross-connect *boolean*

Synopsis	Match on tunnels with cross-connect UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* ues state cross-connect *boolean*
Tree	cross-connect
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dsm *boolean*

Synopsis	Match on DSM UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* ues state dsm *boolean*
Tree	dsm
Default	true

© 2024 Nokia.

Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm *boolean*

Synopsis	Match on ESM UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* ues state esm *boolean*
Tree	esm
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2 *boolean*

Synopsis	Match on tunnels with L2W UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* ues state l2 *boolean*
Tree	l2
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

migrant *boolean*

Synopsis	Match on tunnels with migrant UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *string* ues state migrant *boolean*
Tree	migrant
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ue [name] *string*

Synopsis	Enter the **ue** list instance
Context	**configure** subscriber-mgmt wlan-gw queries ue *string*
Tree	ue

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context query for WLAN Gateway UEs where the filter criteria over WLAN-GW UEs are defined. The query can be used to retrieve the state of the UEs matching the configured criteria.
Max. Instances	1024
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	UE query name
Context	**configure** subscriber-mgmt wlan-gw queries ue *string*
Tree	ue
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

address

Synopsis	Enter the **address** context
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* address
Tree	address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp6-na *string*

Synopsis	DHCPv6 IA-NA address to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* address dhcp6-na *string*
Tree	dhcp6-na
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv4 *string*

Synopsis	IPv4 address to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* address ipv4 *string*
Tree	ipv4
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

slaac *string*

Synopsis	SLAAC prefix to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* address slaac *string*
Tree	slaac
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Address type to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* address type *keyword*
Tree	type
Options	ipv4 – Any IPv4 address ipv6 – Any IPv6 address ipv4-only – IPv4 address only ipv6-only – IPv6 address only ipv4v6 – IPv4 and IPv6 address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

bridge-domain *number*

Synopsis	Bridge Domain to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* bridge-domain *number*
Tree	bridge-domain
Range	0 to 4294967294
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

connection-state

Synopsis	Enable the **connection-state** context
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state
Tree	connection-state
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

already-signed-in *boolean*

Synopsis	Enable matching on UEs that are already signed in
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state already-signed-in *boolean*
Tree	already-signed-in
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

authorized-only *boolean*

Synopsis	Enable matching on UEs in an authorized state
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state authorized-only *boolean*
Tree	authorized-only
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

cross-connect *boolean*

Synopsis	Enable matching on cross-connected UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state cross-connect *boolean*
Tree	cross-connect
Default	true
Introduced	19.5.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

data-triggered *boolean*

Synopsis	Enable matching on UEs in a data-triggered state
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state data-triggered *boolean*
Tree	data-triggered
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

delete-pending *boolean*

Synopsis	Enable matching on UEs in a delete-pending state
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state delete-pending *boolean*
Tree	delete-pending
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-triggered *boolean*

Synopsis	Enable matching on UEs in DHCP-triggered state
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state dhcp-triggered *boolean*
Tree	dhcp-triggered
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dsm *boolean*

Synopsis	Controls whether the query returns UEs in DSM state
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state dsm *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	dsm
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm *boolean*

Synopsis	Controls whether the query returns UEs in ESM state
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state esm *boolean*
Tree	esm
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-authorized *boolean*

Synopsis	Enable matching on UEs in GTP-authorized state
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state gtp-authorized *boolean*
Tree	gtp-authorized
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-assigned *boolean*

Synopsis	Match on UEs in an IP-assigned state
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state ip-assigned *boolean*
Tree	ip-assigned
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-assigned-authorized *boolean*

Synopsis	Match on UEs in an IP-assigned and authorized state
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state ip-assigned-authorized *boolean*
Tree	ip-assigned-authorized
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2 *boolean*

Synopsis	Match on Layer-2 wholesale state for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state l2 *boolean*
Tree	l2
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

portal *boolean*

Synopsis	Controls whether the query returns UEs in portal state
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* connection-state portal *boolean*
Tree	portal
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-user-group *string*

Synopsis	Name of the custom user group
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* custom-user-group *string*
Tree	custom-user-group
Description	This command specifies a custom user group to use as a filter. A user equipment (UE) can be assigned up to four custom user groups during RADIUS authentication using the Alc-Wlan-Custom-User-Group attribute.
String Length	0 to 32

Introduced	24.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *string*

Synopsis	MAC address to use for matching on UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* mac-address *string*
Tree	mac-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

soft-quota-exhausted *boolean*

Synopsis	Send interim update message when the quota is reached
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* soft-quota-exhausted *boolean*
Tree	soft-quota-exhausted
Default	false
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel

Synopsis	Enter the **tunnel** context
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* tunnel
Tree	tunnel
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

encapsulation *keyword*

Synopsis	Tunnel type to match for active UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* tunnel encapsulation *keyword*
Tree	encapsulation
Options	gre, l2tp, l2, vxlan
Introduced	19.5.R1

© 2024 Nokia.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address as local tunnel endpoint to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* tunnel local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address as remote tunnel endpoint to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* tunnel remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	remote-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router instance of tunnels to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* tunnel router-instance *string*
Tree	router-instance
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan *number*

Synopsis	VLAN tag within the tunnel to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* vlan *number*
Tree	vlan
Range	0 to 4095
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group

Synopsis	Enable the **wlan-gw-group** context
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* wlan-gw-group
Tree	wlan-gw-group
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

id *number*

Synopsis	WLAN-GW ISA group ID
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* wlan-gw-group id *number*
Tree	id
Range	1 to 4
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

member *number*

Synopsis	The member of the WLAN-GW ISA group
Context	**configure** subscriber-mgmt wlan-gw queries ue *string* wlan-gw-group member *number*
Tree	member
Range	1 to 1024
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

virtual-chassis-identifier *string*

Synopsis	WLAN Gateway virtual chassis ID or dual homing key
Context	**configure** subscriber-mgmt wlan-gw virtual-chassis-identifier *string*
Tree	virtual-chassis-identifier
String Length	1 to 16
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

3.46.1 system command descriptions

system

Synopsis	Enter the **system** context
Context	**configure** system
Tree	system
Description	Commands in this context enable configuring of general system level functions and router management protocols.
Introduced	16.0.R1
Platforms	All

alarm-contact-in-power *boolean*

Synopsis	Power the output pin on the CPM alarm interface port
Context	**configure** system alarm-contact-in-power *boolean*
Tree	alarm-contact-in-power
Default	false
Introduced	16.0.R1
Platforms	7750 SR-a

alarm-contact-input [input-pin-number] *number*

Synopsis	Enter the **alarm-contact-input** list instance
Context	**configure** system alarm-contact-input *number*
Tree	alarm-contact-input
Introduced	16.0.R1
Platforms	7750 SR-a

[**input-pin-number**] *number*

Synopsis	Alarm contact input pin
Context	**configure** system alarm-contact-input *number*
Tree	alarm-contact-input
Range	1 to 4

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-a

admin-state *keyword*

Synopsis	Administrative state of the alarm contact input
Context	**configure** system alarm-contact-input *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR-a

clear-message *string*

Synopsis	Text message sent in the log event when an alarm clears
Context	**configure** system alarm-contact-input *number* clear-message *string*
Tree	clear-message
Description	This command configures a text message to be included in the log event that is sent when the system clears an alarm. The system generates the default "Alarm Input Cleared" message if no message is configured. The **clear-message** string is included in the log event when the pin changes to the normal state.
String Length	1 to 80
Default	Alarm Input Cleared
Introduced	16.0.R1
Platforms	7750 SR-a

description *string*

Synopsis	Text description
Context	**configure** system alarm-contact-input *number* description *string*
Tree	description
String Length	1 to 160
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR-a

normal-state *keyword*

Synopsis	Normal state associated with the alarm contact input
Context	**configure** system alarm-contact-input *number* normal-state *keyword*
Tree	normal-state
Options	open, closed
Default	open
Introduced	16.0.R1
Platforms	7750 SR-a

trigger-message *string*

Synopsis	Text message sent in the log event when input changes
Context	**configure** system alarm-contact-input *number* trigger-message *string*
Tree	trigger-message
Description	This command configures a text message to be included in the log event that is sent when the system generates an alarm. The system generates the default message "Alarm Input Triggered" if no message is configured. This command's message string is included in the log event when the pin changes from the normal state.
String Length	1 to 80
Default	Alarm Input Triggered
Introduced	16.0.R1
Platforms	7750 SR-a

alarms

Synopsis	Enter the **alarms** context
Context	**configure** system alarms
Tree	alarms
Introduced	16.0.R4
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the system alarm
Context	**configure** system alarms admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

max-cleared *number*

Synopsis	Maximum number of cleared alarms
Context	**configure** system alarms max-cleared *number*
Tree	max-cleared
Range	0 to 500
Default	500
Introduced	16.0.R4
Platforms	All

allow-boot-license-violations *boolean*

Synopsis	Allow boot license violations in boot-up configuration
Context	**configure** system allow-boot-license-violations *boolean*
Tree	allow-boot-license-violations
Default	true
Introduced	16.0.R4
Platforms	All

bluetooth

Synopsis	Enter the **bluetooth** context
Context	**configure** system bluetooth
Tree	bluetooth
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the Bluetooth module
Context	**configure** system bluetooth admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.2.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

advertising-timeout *number*

Synopsis	Bluetooth advertising timeout
Context	**configure** system bluetooth advertising-timeout *number*
Tree	advertising-timeout
Range	30 to 3600
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

device [mac-address] *string*

Synopsis	Enter the **device** list instance
Context	**configure** system bluetooth device *string*
Tree	device
Max. Instances	5
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

[**mac-address**] *string*

Synopsis	Bluetooth client device MAC address
Context	**configure** system bluetooth device *string*
Tree	device

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

description *string*

Synopsis	Text description
Context	**configure** system bluetooth device *string* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

module [cpm-slot] *string*

Synopsis	Enter the **module** list instance
Context	**configure** system bluetooth module *string*
Tree	module
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

[**cpm-slot**] *string*

Synopsis	CPM slot on which the module resides
Context	**configure** system bluetooth module *string*
Tree	module
String Length	1
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

provisioned-identifier *string*

Synopsis	Bluetooth module ID
Context	**configure** system bluetooth module *string* provisioned-identifier *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	provisioned-identifier
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

pairing-button *boolean*

Synopsis	Enable the pairing button
Context	**configure** system bluetooth pairing-button *boolean*
Tree	pairing-button
Default	false
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

passkey *string*

Synopsis	Bluetooth passkey
Context	**configure** system bluetooth passkey *string*
Tree	passkey
String Length	6
Default	123456
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

power-mode *keyword*

Synopsis	Bluetooth module power mode
Context	**configure** system bluetooth power-mode *keyword*
Tree	power-mode
Options	manual, automatic
Default	automatic
Introduced	20.2.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

boot-bad-exec *string*

Synopsis	CLI script file to execute following a failed boot-up
Context	**configure** system boot-bad-exec *string*
Tree	boot-bad-exec
Description	This command configures the name of the CLI script file to be run following the failure of a boot-up configuration. **Note**: This command has no effect in model-driven mode.
String Length	1 to 180
Introduced	16.0.R1
Platforms	All

boot-good-exec *string*

Synopsis	CLI script file to execute following successful boot-up
Context	**configure** system boot-good-exec *string*
Tree	boot-good-exec
String Length	1 to 180
Introduced	16.0.R1
Platforms	All

central-frequency-clock

Synopsis	Enter the **central-frequency-clock** context
Context	**configure** system central-frequency-clock
Tree	central-frequency-clock
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bits

Synopsis	Enter the **bits** context
Context	**configure** system central-frequency-clock bits
Tree	bits
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

input

Synopsis	Enter the **input** context
Context	**configure** system central-frequency-clock bits input
Tree	input
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the BITS input timing reference
Context	**configure** system central-frequency-clock bits input admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface-type *keyword*

Synopsis	Interface type of the BITS timing reference
Context	**configure** system central-frequency-clock bits interface-type *keyword*
Tree	interface-type
Options	ds1-esf, ds1-sf, e1-pcm30crc, e1-pcm31crc, g703-2048khz
Default	ds1-esf
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

output

Synopsis	Enter the **output** context
Context	**configure** system central-frequency-clock bits output
Tree	output
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of BITS output timing reference
Context	**configure** system central-frequency-clock bits output admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

line-length *keyword*

Synopsis	Line length for the BITS output timing reference
Context	**configure** system central-frequency-clock bits output line-length *keyword*
Tree	line-length
Options	length-not-applicable, 110, 220, 330, 440, 550, 660
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ql-minimum *keyword*

Synopsis	Minimum signal quality level for BITSout port
Context	**configure** system central-frequency-clock bits output ql-minimum *keyword*
Tree	ql-minimum
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Default	unused
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

source *keyword*

Synopsis	Source of the BITS output timing reference
Context	**configure** system central-frequency-clock bits output source *keyword*
Tree	source
Options	line-ref, internal-clock
Default	line-ref

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch *boolean*

Synopsis	Squelch the signal of the BITS output timing reference
Context	**configure** system central-frequency-clock bits output squelch *boolean*
Tree	squelch
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ql-override *keyword*

Synopsis	Override for the quality level of the timing reference
Context	**configure** system central-frequency-clock bits ql-override *keyword*
Tree	ql-override
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec
Default	unused
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ssm-bit *number*

Synopsis	Sa bit to convey SSM information
Context	**configure** system central-frequency-clock bits ssm-bit *number*
Tree	ssm-bit
Range	4 to 8
Default	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

gnss

Synopsis	Enter the **gnss** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system central-frequency-clock gnss
Tree	gnss
Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

admin-state *keyword*

Synopsis	Administrative state of the gnss timing reference
Context	**configure** system central-frequency-clock gnss admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

ql-override *keyword*

Synopsis	Quality level override for a timing reference
Context	**configure** system central-frequency-clock gnss ql-override *keyword*
Tree	ql-override
Options	unused, prs, stu, st2, tnc, st3e, st3
Default	unused
Introduced	22.10.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se, 7750 SR-2se

ptp

Synopsis	Enter the **ptp** context
Context	**configure** system central-frequency-clock ptp
Tree	ptp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the PTP timing reference
Context	**configure** system central-frequency-clock ptp admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ql-override *keyword*

Synopsis	Quality level of a timing reference that overrides any value provided by the reference's SSM process
Context	**configure** system central-frequency-clock ptp ql-override *keyword*
Tree	ql-override
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec
Default	unused
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ql-minimum *keyword*

Synopsis	Minimum signal quality level for system timing module
Context	**configure** system central-frequency-clock ql-minimum *keyword*
Tree	ql-minimum
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Default	unused
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ql-selection *boolean*

Synopsis	Consider quality level in system and BITS output timing
Context	**configure** system central-frequency-clock ql-selection *boolean*

Tree	ql-selection
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ref-order

Synopsis	Enter the **ref-order** context
Context	**configure** system central-frequency-clock ref-order
Tree	ref-order
Description	Commands in this context specify the priority order of the synchronous equipment timing subsystem**.** If a reference source is disabled, this command defines the next reference source for the clock. If all reference sources are disabled, clocking is derived from a local oscillator. If a timing reference is linked to a source port that is operationally down, the port is no longer a qualified, valid reference.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fifth *keyword*

Synopsis	Fifth preferred timing reference source
Context	**configure** system central-frequency-clock ref-order fifth *keyword*
Tree	fifth
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

first *keyword*

Synopsis	First preferred timing reference source
Context	**configure** system central-frequency-clock ref-order first *keyword*
Tree	first
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.

grace-tx *boolean*

Synopsis	Send Grace TLVs for soft reset graceful recovery events
Context	**configure** system efm-oam grace-tx *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	grace-tx
Description	When configured to **true**, the system sends the Nokia Vendor specific Grace TLV in the information PDU after an ISSU or a soft reset. The Grace TLV informs a remote peer to ignore the negotiated interval and multiplier and instead use the new timeout interval. By default, the command is disabled at the system level and enabled at the port level. Both the system and port level must be enabled to support grace on a specific port. When configured to **true**, the EFM-OAM protocol does not enter a non-operational state when both nodes acknowledge the grace function. This feature minimizes service interruption by giving the restarting router time to become operationally and administratively up within the grace period. The peer receiving the Grace TLV must be able to parse and process the vendor-specific messaging. Do not configure grace if the Nokia Vendor Specific Grace TLV is not supported on the remote peer. When configured to **false**, the Nokia Vendor Specific Grace TLV is not sent.
Default	false
Introduced	16.0.R1
Platforms	All

eth-cfm

Synopsis	Enter the **eth-cfm** context
Context	**configure** system eth-cfm
Tree	eth-cfm
Introduced	16.0.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

type *keyword*

Synopsis	ETH-CFM sender ID to be used in CFM PDUs
Context	**configure** system eth-cfm sender-id type *keyword*
Tree	type
Options	system, local
Default	system
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

slm

Synopsis	Enter the **slm** context
Context	**configure** system eth-cfm slm
Tree	slm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

inactivity-timer *number*

Synopsis	SLR inactivity timer to maintain the stale test data
Context	**configure** system eth-cfm slm inactivity-timer *number*
Tree	inactivity-timer
Range	10 to 100
Units	seconds
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fan-control

Synopsis	Enter the **fan-control** context
Context	**configure** system fan-control

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	fan-control
Description	Commands in this context configure the speed of the router fans. **Caution**: Only use commands in this context with authorized direction from Nokia technical support.
Introduced	23.7.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

cooling-profile *keyword*

Synopsis	Cooling profile used to determine fan speeds
Context	**configure** system fan-control cooling-profile *keyword*
Tree	cooling-profile
Description	This command configures the cooling profile used to determine the fan speed. Nokia recommends that the default setting be used unless aggressive cooling is explicitly required.
Options	default, aggressive
Default	default
Introduced	23.7.R1
Platforms	7750 SR-1-24D, 7750 SR-1-46S, 7750 SR-1-48D, 7750 SR-1-92S, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-1se

grpc

Synopsis	Enter the **grpc** context
Context	**configure** system grpc
Tree	grpc
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the gRPC server
Context	**configure** system grpc admin-state *keyword*
Tree	admin-state
Options	enable, disable

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	disable
Introduced	16.0.R1
Platforms	All

allow-unsecure-connection

Synopsis	Allow connection without secured transport protocol
Context	**configure** system grpc allow-unsecure-connection
Tree	allow-unsecure-connection
Description	When configured, the system allows an unsecured connection to remote managers; TCP connections are not encrypted, including username and password information.
Notes	The following elements are part of a choice: **allow-unsecure-connection** or **tls-server-profile**.
Introduced	16.0.R1
Platforms	All

delay-on-boot *number*

Synopsis	Delay for gRPC connections after system boot
Context	**configure** system grpc delay-on-boot *number*
Tree	delay-on-boot
Description	This command configures the delay timer for gRPC connections. When the timer expires, gRPC becomes operational and connections are accepted. This delay prevents automation from managing the system while it is still converging. When no delay is configured, connections are accepted after the system boots and gRPC becomes operational.
Range	1 to 3600
Units	seconds
Introduced	23.10.R1
Platforms	All

gnmi

Synopsis	Enter the **gnmi** context
Context	**configure** system grpc gnmi
Tree	gnmi

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the gNMI service
Context	**configure** system grpc gnmi admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

auto-config-save *boolean*

Synopsis	Automatically save configuration as part of commit
Context	**configure** system grpc gnmi auto-config-save *boolean*
Tree	auto-config-save
Description	When configured to **true**, the system automatically writes the running configuration to the save configuration file as part of a successful commit operation.
Default	true
Introduced	16.0.R1
Platforms	All

proto-version *keyword*

Synopsis	gnmi.proto version
Context	**configure** system grpc gnmi proto-version *keyword*
Tree	proto-version
Description	This command sets the gnmi.proto version that the GRPC server should use for all gNMI RPCs. Only use options other than **latest** for backward compatibility with legacy collectors.
Options	latest – Latest supported version v070 – gNMI version 0.7.0
Default	latest
Introduced	23.3.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

gnoi

Synopsis	Enter the **gnoi** context
Context	**configure** system grpc gnoi
Tree	gnoi
Introduced	19.10.R1
Platforms	All

cert-mgmt

Synopsis	Enter the **cert-mgmt** context
Context	**configure** system grpc gnoi cert-mgmt
Tree	cert-mgmt
Introduced	19.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of gNOI CertificateManagement
Context	**configure** system grpc gnoi cert-mgmt admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.10.R1
Platforms	All

file

Synopsis	Enter the **file** context
Context	**configure** system grpc gnoi file
Tree	file
Introduced	21.2.R1
Platforms	All

© 2024 Nokia.

Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system grpc rib-api
Tree	rib-api
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the RIB API service
Context	**configure** system grpc rib-api admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

purge-timeout *number*

Synopsis	Time until stale entries are purged
Context	**configure** system grpc rib-api purge-timeout *number*
Tree	purge-timeout
Range	1 to 100000
Units	seconds
Introduced	16.0.R4
Platforms	All

tcp-keepalive

Synopsis	Enter the **tcp-keepalive** context
Context	**configure** system grpc tcp-keepalive
Tree	tcp-keepalive
Introduced	16.0.R4
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the TCP keepalive algorithm
Context	**configure** system grpc tcp-keepalive admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

idle-time *number*

Synopsis	Time until the first TCP keepalive probe is sent
Context	**configure** system grpc tcp-keepalive idle-time *number*
Tree	idle-time
Description	This command configures the amount of time the connection must be idle before TCP keepalives are sent.
Range	1 to 100000
Units	seconds
Default	600
Introduced	16.0.R4
Platforms	All

interval *number*

Synopsis	Time between TCP keep-alive probes
Context	**configure** system grpc tcp-keepalive interval *number*
Tree	interval
Range	1 to 100000
Units	seconds
Default	15
Introduced	16.0.R4
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

retries *number*

Synopsis	Number of probe retries before closing the connection
Context	**configure** system grpc tcp-keepalive retries *number*
Tree	retries
Description	This command configures the number of missed TCP keepalive probes before closing the TCP connection and attempting to reach the other destinations within the same destination group.
Range	3 to 100
Default	4
Introduced	16.0.R4
Platforms	All

tls-server-profile *reference*

Synopsis	Preferred TLS server profile
Context	**configure** system grpc tls-server-profile *reference*
Tree	tls-server-profile
Reference	**configure** system security tls server-tls-profile *string*
Notes	The following elements are part of a choice: **allow-unsecure-connection** or **tls-server-profile**.
Introduced	16.0.R1
Platforms	All

grpc-tunnel

Synopsis	Enter the **grpc-tunnel** context
Context	**configure** system grpc-tunnel
Tree	grpc-tunnel
Introduced	22.2.R1
Platforms	All

delay-on-boot *number*

Synopsis	Delay for gRPC tunnels after system boot
Context	**configure** system grpc-tunnel delay-on-boot *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	delay-on-boot
Description	This command configures the delay timer for gRPC tunnels. When the timer expires, gRPC tunnels become operational and connections are accepted. This delay prevents the system from trying to initiate gRPC tunnels while it is still converging. When no delay is configured, gRPC tunnels are initiated after the system boots and gRPC becomes operational.
Range	1 to 3600
Units	seconds
Introduced	23.10.R1
Platforms	All

destination-group [name] *string*

Synopsis	Enter the **destination-group** list instance
Context	**configure** system grpc-tunnel destination-group *string*
Tree	destination-group
Description	Commands in this context configure parameters for destination groups.
Max. Instances	4
Introduced	22.2.R1
Platforms	All

[**name**] *string*

Synopsis	Destination group name
Context	**configure** system grpc-tunnel destination-group *string*
Tree	destination-group
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	All

allow-unsecure-connection

Synopsis	Allow unsecured operation of gRPC connections
Context	**configure** system grpc-tunnel destination-group *string* allow-unsecure-connection

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	allow-unsecure-connection
Description	This command allows a gRPC tunnel to run without a secured transport protocol. Data is transferred in unencrypted form.
Notes	The following elements are part of a choice: **allow-unsecure-connection** or **tls-client-profile**.
Introduced	22.2.R1
Platforms	All

custom-type *string*

Synopsis	Custom string for target type
Context	**configure** system grpc-tunnel tunnel *string* handler *string* target-type custom-type *string*
Tree	custom-type
Description	This command configures a custom string for the target type. This string can correspond to specific values used by the gRPC tunnel protocol, such as GNMI_GNOI or SSH. If a custom string is defined, the gRPC tunnel client must specify the string to request a session for that handler. The string must be unique within a tunnel.
String Length	1 to 64
Notes	The following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.
Introduced	22.2.R1
Platforms	All

grpc-server

Synopsis	Target type set to GNMI_GNOI
Context	**configure** system grpc-tunnel tunnel *string* handler *string* target-type grpc-server
Tree	grpc-server
Description	When configured, this command assigns the gRPC server as a handler for all tunnels sessions. At the gRPC tunnel protocol level, this corresponds to a value of GNMI_GNOI.
Notes	The following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.
Introduced	22.2.R1
Platforms	All

ssh-server

Synopsis	Target type is SSH
Context	**configure** system grpc-tunnel tunnel *string* handler *string* target-type ssh-server
Tree	ssh-server
Description	When configured, this command assigns the SSH server as a handler for all tunnels sessions. At the gRPC tunnel protocol level, this corresponds to a value of SSH.
Notes	The following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.
Introduced	22.2.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

target-name

Synopsis	Enter the **target-name** context
Context	**configure** system grpc-tunnel tunnel *string* target-name
Tree	target-name
Introduced	22.2.R1
Platforms	All

custom-string *string*

Synopsis	Custom target name
Context	**configure** system grpc-tunnel tunnel *string* target-name custom-string *string*
Tree	custom-string
String Length	1 to 64
Notes	The following elements are part of a choice: **custom-string**, **node-name**, or **user-agent**.
Introduced	22.2.R1
Platforms	All

node-name

Synopsis	Set the node name as target name
Context	**configure** system grpc-tunnel tunnel *string* target-name node-name
Tree	node-name
Description	When configured, this command uses the node name as the target name. The node name is configured by the **configure system name** command.
Notes	The following elements are part of a choice: **custom-string**, **node-name**, or **user-agent**.
Introduced	22.2.R1
Platforms	All

user-agent

Synopsis	Set the user agent as the target name
Context	**configure** system grpc-tunnel tunnel *string* target-name user-agent
Tree	user-agent

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured, this command uses the user agent as the target name. The agent is a string consisting of *node-name*:*vendor*:*model*:*software-version*.
Notes	The following elements are part of a choice: **custom-string**, **node-name**, or **user-agent**.
Introduced	22.2.R1
Platforms	All

icmp-vse *boolean*

Synopsis	Enable vendor-specific extensions to ICMP
Context	**configure** system icmp-vse *boolean*
Tree	icmp-vse
Default	false
Introduced	16.0.R1
Platforms	All

ip

end *number*

Synopsis	Upper bound of the range
Context	**configure** system l2tp non-multi-chassis-tunnel-id-range end *number*
Tree	end
Range	0 to 16383
Default	16383
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	Lower bound of the range
Context	**configure** system l2tp non-multi-chassis-tunnel-id-range start *number*
Tree	start
Range	0 to 16383
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lacp

Synopsis	Enter the **lacp** context
Context	**configure** system lacp
Tree	lacp
Introduced	16.0.R1
Platforms	All

system-priority *number*

Synopsis	LACP system priority on aggregated Ethernet interfaces
Context	**configure** system lacp system-priority *number*
Tree	system-priority
Range	1 to 65535
Default	32768
Introduced	16.0.R1

Platforms	All

lldp

Synopsis	Enter the **lldp** context
Context	**configure** system lldp
Tree	lldp
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of LLDP
Context	**configure** system lldp admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

message-fast-tx *number*

Synopsis	Interval at which LLDP frames are transmitted
Context	**configure** system lldp message-fast-tx *number*
Tree	message-fast-tx
Description	This command configures the interval at which LLDP frames are transmitted on behalf of the LLDP during a fast transmission period.
Range	1 to 3600
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

message-fast-tx-init *number*

Synopsis	PDUs to transmit during the fast transmission period
Context	**configure** system lldp message-fast-tx-init *number*
Tree	message-fast-tx-init
Range	1 to 8
Default	4
Introduced	16.0.R1
Platforms	All

notification-interval *number*

Synopsis	Minimum interval between change notifications
Context	**configure** system lldp notification-interval *number*
Tree	notification-interval
Range	5 to 3600
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	All

reinit-delay *number*

Synopsis	Time required before re-initializing LLDP on a port
Context	**configure** system lldp reinit-delay *number*
Tree	reinit-delay
Range	1 to 10
Units	seconds
Default	2
Introduced	16.0.R1
Platforms	All

tx-credit-max *number*

Synopsis	Maximum consecutive LLDPDUs that can be transmitted
Context	**configure** system lldp tx-credit-max *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	tx-credit-max
Range	1 to 100
Default	5
Introduced	16.0.R1
Platforms	All

tx-hold-multiplier *number*

Synopsis	Transmit interval multiplier
Context	**configure** system lldp tx-hold-multiplier *number*
Tree	tx-hold-multiplier
Range	2 to 10
Default	4
Introduced	16.0.R1
Platforms	All

tx-interval *number*

Synopsis	LLDP transmit interval
Context	**configure** system lldp tx-interval *number*
Tree	tx-interval
Range	5 to 32768
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

load-balancing

Synopsis	Enter the **load-balancing** context
Context	**configure** system load-balancing
Tree	load-balancing
Description	Commands in this context configure the interface per-flow load-balancing options that apply to traffic entering this interface and egressing over a LAG or ECMP on system egress. This setting is per interface.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Load-balancing options configured at the interface level overwrite load-balancing options configured at the system level.

Introduced	16.0.R1
Platforms	All

l2tp-load-balancing *boolean*

Synopsis	Include L2TP header information for load balancing
Context	**configure** system load-balancing l2tp-load-balancing *boolean*
Tree	l2tp-load-balancing
Default	false
Introduced	16.0.R4
Platforms	All

l4-load-balancing *boolean*

Synopsis	Use load balancing based on Layer 4 fields
Context	**configure** system load-balancing l4-load-balancing *boolean*
Tree	l4-load-balancing
Introduced	16.0.R1
Platforms	All

lsr-load-balancing *keyword*

Synopsis	Algorithm for system-wide LSR load balancing
Context	**configure** system load-balancing lsr-load-balancing *keyword*
Tree	lsr-load-balancing
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid, lbl-eth-ip-l4-teid, lbl-ip-or-teid
Introduced	16.0.R1
Platforms	All

mc-enh-load-balancing *boolean*

Synopsis	Enable enhanced egress multicast load balancing
Context	**configure** system load-balancing mc-enh-load-balancing *boolean*
Tree	mc-enh-load-balancing

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	All

service-id-lag-hashing *boolean*

Synopsis	Enable enhanced VLL LAG service ID hashing
Context	**configure** system load-balancing service-id-lag-hashing *boolean*
Tree	service-id-lag-hashing
Default	false
Introduced	16.0.R1
Platforms	All

system-ip-load-balancing *boolean*

Synopsis	Use system IP address for ECMP and LAG load balancing
Context	**configure** system load-balancing system-ip-load-balancing *boolean*
Tree	system-ip-load-balancing
Introduced	16.0.R1
Platforms	All

location *string*

Synopsis	Site location of the system
Context	**configure** system location *string*
Tree	location
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

login-control

Synopsis	Enter the **login-control** context
Context	**configure** system login-control
Tree	login-control

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

exponential-backoff *boolean*

Synopsis	Enable exponential-backoff of the login prompt
Context	**configure** system login-control exponential-backoff *boolean*
Tree	exponential-backoff
Default	false
Introduced	16.0.R1
Platforms	All

ftp

Synopsis	Enter the **ftp** context
Context	**configure** system login-control ftp
Tree	ftp
Introduced	16.0.R1
Platforms	All

inbound-max-sessions *number*

Synopsis	Maximum number of concurrent inbound FTP sessions
Context	**configure** system login-control ftp inbound-max-sessions *number*
Tree	inbound-max-sessions
Range	0 to 5
Default	3
Introduced	16.0.R1
Platforms	All

idle-timeout *(keyword | number)*

Synopsis	Idle timeout for FTP, console, or Telnet sessions
Context	**configure** system login-control idle-timeout *(keyword | number)*
Tree	idle-timeout

Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 1440
Units	minutes
Options	none
Default	30
Introduced	16.0.R1
Platforms	All

login-banner *boolean*

Synopsis	Display login banner
Context	**configure** system login-control login-banner *boolean*
Tree	login-banner
Default	false
Introduced	16.0.R1
Platforms	All

login-scripts

Synopsis	Enter the **login-scripts** context
Context	**configure** system login-control login-scripts
Tree	login-scripts
Introduced	16.0.R1
Platforms	All

global-script *string*

Synopsis	URL of the global CLI login script
Context	**configure** system login-control login-scripts global-script *string*
Tree	global-script
String Length	1 to 180
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

per-user-script

Synopsis	Enter the **per-user-script** context
Context	**configure** system login-control login-scripts per-user-script
Tree	per-user-script
Introduced	16.0.R1
Platforms	All

file-name *string*

Synopsis	File name of the per-user login script
Context	**configure** system login-control login-scripts per-user-script file-name *string*
Tree	file-name
String Length	1 to 180
Introduced	16.0.R1
Platforms	All

user-directory *string*

Synopsis	Directory name of user-defined login script
Context	**configure** system login-control login-scripts per-user-script user-directory *string*
Tree	user-directory
String Length	1 to 180
Introduced	16.0.R1
Platforms	All

motd

Synopsis	Enter the **motd** context
Context	**configure** system login-control motd
Tree	motd
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

text *string*

Synopsis	Message of the day displayed after console login
Context	**configure** system login-control motd text *string*
Tree	text
String Length	1 to 900
Notes	The following elements are part of a choice: **text** or **url**.
Introduced	16.0.R1
Platforms	All

url *string*

Synopsis	URL of the location of message of the day
Context	**configure** system login-control motd url *string*
Tree	url
String Length	1 to 180
Notes	The following elements are part of a choice: **text** or **url**.
Introduced	16.0.R1
Platforms	All

pre-login-message

Synopsis	Enter the **pre-login-message** context
Context	**configure** system login-control pre-login-message
Tree	pre-login-message
Description	Commands in this context configure a message to display before logging in to the router using Telnet, SSH, or the console port. Only one message can be configured. If a new pre-login message is configured, the new message overwrites the previous message. **Note:** The pre-login message is displayed on both active and standby systems.
Introduced	16.0.R1
Platforms	All

message *string*

Synopsis	Message displayed before the login prompt

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system login-control pre-login-message message *string*
Tree	message
Description	This command configures the pre-login message. Any printable, 7-bit ASCII characters can be used. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes. Some special characters can be used to format the message text. Use the newline (\n) character to create multiline messages. A newline (\n) character in the message moves to the beginning of the next line by sending ASCII/UTF-8 characters 0xA (LF) and 0xD (CR) to the client terminal. A carriage return (\r) character in the message sends the ASCII/UTF-8 character 0xD (CR) to the client terminal.
String Length	1 to 900
Introduced	16.0.R1
Platforms	All

name *boolean*

Synopsis	Display the system name before the pre-login message
Context	**configure** system login-control pre-login-message name *boolean*
Tree	name
Default	false
Introduced	16.0.R1
Platforms	All

ssh

Synopsis	Enter the **ssh** context
Context	**configure** system login-control ssh
Tree	ssh
Introduced	16.0.R1
Platforms	All

graceful-shutdown *boolean*

Synopsis	Allow graceful shutdown of SSH sessions
Context	**configure** system login-control ssh graceful-shutdown *boolean*
Tree	graceful-shutdown
Default	true

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

inbound-max-sessions *number*

Synopsis	Maximum number of concurrent inbound sessions
Context	**configure** system login-control ssh inbound-max-sessions *number*
Tree	inbound-max-sessions
Range	0 to 50
Default	5
Introduced	16.0.R1
Platforms	All

outbound-max-sessions *number*

Synopsis	Maximum number of concurrent outbound sessions
Context	**configure** system login-control ssh outbound-max-sessions *number*
Tree	outbound-max-sessions
Range	0 to 15
Default	5
Introduced	16.0.R1
Platforms	All

ttl-security *number*

Synopsis	Minimum TTL value for incoming packets
Context	**configure** system login-control ssh ttl-security *number*
Tree	ttl-security
Range	1 to 255
Introduced	16.0.R1
Platforms	All

telnet

Synopsis	Enter the **telnet** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system login-control telnet
Tree	telnet
Introduced	16.0.R1
Platforms	All

graceful-shutdown *boolean*

Synopsis	Allow graceful shutdown of Telnet sessions
Context	**configure** system login-control telnet graceful-shutdown *boolean*
Tree	graceful-shutdown
Default	false
Introduced	16.0.R1
Platforms	All

inbound-max-sessions *number*

Synopsis	Maximum number of concurrent inbound sessions
Context	**configure** system login-control telnet inbound-max-sessions *number*
Tree	inbound-max-sessions
Range	0 to 50
Default	5
Introduced	16.0.R1
Platforms	All

outbound-max-sessions *number*

Synopsis	Maximum number of concurrent outbound sessions
Context	**configure** system login-control telnet outbound-max-sessions *number*
Tree	outbound-max-sessions
Range	0 to 15
Default	5
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ttl-security *number*

Synopsis	Minimum TTL value for incoming packets
Context	**configure** system login-control telnet ttl-security *number*
Tree	ttl-security
Range	1 to 255
Introduced	16.0.R1
Platforms	All

management-interface

Synopsis	Enter the **management-interface** context
Context	**configure** system management-interface
Tree	management-interface
Description	Commands in this context configure the capabilities of router management interfaces such as CLI and NETCONF.
Introduced	16.0.R1
Platforms	All

cli

Synopsis	Enter the **cli** context
Context	**configure** system management-interface cli
Tree	cli
Description	Commands in this context configure the CLI management interfaces.
Introduced	16.0.R1
Platforms	All

classic-cli

Synopsis	Enter the **classic-cli** context
Context	**configure** system management-interface cli classic-cli
Tree	classic-cli
Description	Commands in this context configure the classic CLI management interface.
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

allow-immediate *boolean*

Synopsis	Allow writable access in classic CLI configure branch
Context	**configure** system management-interface cli classic-cli allow-immediate *boolean*
Tree	allow-immediate
Description	When configured to **true**, this command enables write access in the classic CLI configuration branch without having to use the classic CLI **candidate edit** functionality. When configured to **false**, this command blocks write access and configuration changes in the classic CLI configuration branch, and the classic CLI configuration branch is read-only. This enforces using the classic CLI **candidate edit** functionality, including **candidate commit**, to modify the router configuration, instead of allowing immediate line-by-line configuration changes.
Default	true
Introduced	16.0.R1
Platforms	All

rollback

Synopsis	Enter the **rollback** context
Context	**configure** system management-interface cli classic-cli rollback
Tree	rollback
Description	Commands in this context control classic CLI configuration rollback functionality, such as the maximum number of rollback checkpoints the system maintains. Configuration rollback allows the operator to revert to previous router configuration states while minimizing impacts to services.
Introduced	16.0.R1
Platforms	All

local-checkpoints *number*

Synopsis	Maximum number of rollback files on local storage
Context	**configure** system management-interface cli classic-cli rollback local-checkpoints *number*
Tree	local-checkpoints
Range	1 to 50
Default	10
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

location *string*

Synopsis	Path and filename prefix for rollback checkpoint files
Context	**configure** system management-interface cli classic-cli rollback location *string*
Tree	location
Description	This command configures the local (for example, compact flash) or remote location and name of the classic CLI rollback checkpoint files. The filename must not contain a suffix. The suffixes for rollback checkpoint files are, for example, .rb, .rb.1, .rb.2, and so on. The suffixes are automatically appended to rollback checkpoint files.
String Length	1 to 180
Introduced	16.0.R1
Platforms	All

remote-checkpoints *number*

Synopsis	Maximum rollback files saved at a remote location
Context	**configure** system management-interface cli classic-cli rollback remote-checkpoints *number*
Tree	remote-checkpoints
Range	1 to 200
Default	10
Introduced	16.0.R1
Platforms	All

rescue

Synopsis	Enter the **rescue** context
Context	**configure** system management-interface cli classic-cli rollback rescue
Tree	rescue
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

location *string*

Synopsis	Location of the rescue configuration file
Context	**configure** system management-interface cli classic-cli rollback rescue location *string*
Tree	location
Description	This command configures the local or remote location and filename of the classic CLI rescue configuration file. The suffix (.rc) is automatically appended to the filename when a rescue configuration file is saved. Trivial FTP (TFTP) is not supported for remote locations.
String Length	1 to 180
Introduced	16.0.R1
Platforms	All

cli-engine *keyword*

Synopsis	System-wide CLI engine access
Context	**configure** system management-interface cli cli-engine *keyword*
Tree	cli-engine
Description	This command configures the system-wide CLI engine. The operator can configure one or both engines. For the configuration to take effect, exit the running CLI session and start a new session after committing the new value.
Options	classic-cli, md-cli
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

md-cli

Synopsis	Enter the **md-cli** context
Context	**configure** system management-interface cli md-cli
Tree	md-cli
Description	Commands in this context configure the MD-CLI management interface.
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

auto-config-save *boolean*

Synopsis	Automatically save configuration as part of commit
Context	**configure** system management-interface cli md-cli auto-config-save *boolean*
Tree	auto-config-save
Description	When configured to **true**, the system automatically writes the running configuration to the save configuration file as part of a successful commit operation.
Default	true
Introduced	16.0.R1
Platforms	All

environment

Synopsis	Enter the **environment** context
Context	**configure** system management-interface cli md-cli environment
Tree	environment
Introduced	16.0.R1
Platforms	All

command-alias

Synopsis	Enter the **command-alias** context
Context	**configure** system management-interface cli md-cli environment command-alias
Tree	command-alias
Introduced	21.7.R1
Platforms	All

alias [alias-name] *string*

Synopsis	Enter the **alias** list instance
Context	**configure** system management-interface cli md-cli environment command-alias alias *string*
Tree	alias
Description	Commands in this context create aliases to existing MD-CLI commands or to Python applications.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Aliases may be mounted for use globally or for selected context paths. Arguments and output modifiers may be provided to aliases at configuration or run time.

Introduced	21.7.R1
Platforms	All

[**alias-name**] *string*

Synopsis	Alias name
Context	**configure** system management-interface cli md-cli environment command-alias alias *string*
Tree	alias
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the alias
Context	**configure** system management-interface cli md-cli environment command-alias alias *string* admin-state *keyword*
Tree	admin-state
Description	This command controls the administrative state of the MD-CLI alias. MD-CLI aliases that are administratively disabled cannot be executed, are not displayed in command completion, and do not appear in **?** help.
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	All

cli-command *string*

Synopsis	CLI command to run when executing the alias
Context	**configure** system management-interface cli md-cli environment command-alias alias *string* cli-command *string*
Tree	cli-command

© 2024 Nokia.

context *boolean*

Synopsis	Show the current command context in the prompt
Context	**configure** system management-interface cli md-cli environment prompt context *boolean*
Tree	context
Default	true
Introduced	16.0.R1
Platforms	All

newline *boolean*

Synopsis	Add a new line before every prompt line
Context	**configure** system management-interface cli md-cli environment prompt newline *boolean*
Tree	newline
Default	true
Introduced	16.0.R1
Platforms	All

timestamp *boolean*

Synopsis	Show the timestamp before the first prompt line
Context	**configure** system management-interface cli md-cli environment prompt timestamp *boolean*
Tree	timestamp
Default	false
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

uncommitted-changes-indicator *boolean*

Synopsis	Show an asterisk (*) when uncommitted changes exist
Context	**configure** system management-interface cli md-cli environment prompt uncommitted-changes-indicator *boolean*
Tree	uncommitted-changes-indicator
Default	true
Introduced	16.0.R1
Platforms	All

python

Synopsis	Enter the **python** context
Context	**configure** system management-interface cli md-cli environment python
Tree	python
Description	Commands in this context customize Python settings used with the Python 3 interpreter in MD-CLI applications such as pyexec, command aliases, EHS, and CRON.
Introduced	21.10.R1
Platforms	All

memory-reservation *number*

Synopsis	Memory reserved per Python interpreter
Context	**configure** system management-interface cli md-cli environment python memory-reservation *number*
Tree	memory-reservation
Range	1 to 500
Units	megabytes
Introduced	21.10.R1
Platforms	All

minimum-available-memory *number*

Synopsis	Minimum memory requirement to run a Python interpreter
Context	**configure** system management-interface cli md-cli environment python minimum-available-memory *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	minimum-available-memory
Range	5 to 50
Units	percent
Introduced	21.10.R1
Platforms	All

timeout *number*

Synopsis	Maximum run time before a Python application is stopped
Context	**configure** system management-interface cli md-cli environment python timeout *number*
Tree	timeout
Range	30 to 86400
Units	seconds
Default	3600
Introduced	21.10.R1
Platforms	All

time-display *keyword*

Synopsis	Time zone to display time
Context	**configure** system management-interface cli md-cli environment time-display *keyword*
Tree	time-display
Description	This command configures the time zone for a timestamp displayed in outputs, such as event logs and **show** commands for the current CLI session. In event logs, the selected time is used to control the timestamps in the CLI output of **show log log-id** and in YANG state in the /state/log/log-id branch (for logs such as session, cli, memory, SNMP, and NETCONF). Also see the **configure log log-id time-format** command.
Options	local, utc
Default	local
Introduced	16.0.R1
Platforms	All

time-format *keyword*

Synopsis	Format to display the date and time

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system management-interface cli md-cli environment time-format *keyword*
Tree	time-format
Description	This command specifies the format of the time display in the prompt, configuration, state, and certain **show** command output in the current CLI session.
Options	iso-8601, rfc-1123, rfc-3339
Default	rfc-3339
Introduced	20.5.R1
Platforms	All

commit-history *number*

Synopsis	Number of commit history IDs to store
Context	**configure** system management-interface commit-history *number*
Tree	commit-history
Description	This command sets the number of IDs to store in the commit history. Setting the value to 0 disables the commit history.
Range	0 to 200
Default	50
Introduced	21.10.R1
Platforms	All

configuration-mode *keyword*

Synopsis	Management interfaces allowed to edit the configuration
Context	**configure** system management-interface configuration-mode *keyword*
Tree	configuration-mode
Description	This command controls which of the classic or model-driven management interfaces can modify the configuration of the router. Any management interface can be used in any configuration mode (to gather state information or perform operations, for example), but only specific management interfaces (CLI, NETCONF, and so on) are allowed to edit the configuration of the router in different modes. For example, only classic CLI and SNMP can be used to edit the configuration when in classic mode.
Options	classic, model-driven, mixed
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

configuration-save

Synopsis	Enter the **configuration-save** context
Context	**configure** system management-interface configuration-save
Tree	configuration-save
Description	Commands in this context configure the attributes for saved configuration files.
Introduced	16.0.R1
Platforms	All

configuration-backups *number*

Synopsis	Maximum number of configuration versions maintained
Context	**configure** system management-interface configuration-save configuration-backups *number*
Tree	configuration-backups
Description	This command configures the maximum number of saved configuration file versions the router maintains. When the configuration is saved, configuration file names are appended with a numeric extension. Each subsequent configuration save creates a new configuration file version with an incremented numeric extension until the maximum count is reached, after which the next configuration save overwrites the oldest file version. Each persistent index file is updated at the same time as the associated configuration file. The system synchronizes the active and standby CPM for all configurations and their associated persistent index files.
Range	1 to 200
Default	50
Introduced	16.0.R1
Platforms	All

incremental-saves *boolean*

Synopsis	Use incremental saved configuration files
Context	**configure** system management-interface configuration-save incremental-saves *boolean*
Tree	incremental-saves
Description	When configured to **true**, the system saves each commit to the **configure** configuration region in a separate incremental saved configuration file, which allows for faster commits, instead of saving a complete saved configuration file each time.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	true
Introduced	22.7.R1
Platforms	All

netconf

Synopsis	Enter the **netconf** context
Context	**configure** system management-interface netconf
Tree	netconf
Introduced	16.0.R1
Platforms	All

auto-config-save *boolean*

Synopsis	Automatically save configuration as part of commit
Context	**configure** system management-interface netconf auto-config-save *boolean*
Tree	auto-config-save
Description	When configured to **true**, the system automatically writes the running configuration to the save configuration file as part of a successful commit operation.
Default	true
Introduced	16.0.R1
Platforms	All

capabilities

Synopsis	Enter the **capabilities** context
Context	**configure** system management-interface netconf capabilities
Tree	capabilities
Description	Commands in this context configure explicit capabilities for the NETCONF server.
Introduced	16.0.R1
Platforms	All

candidate *boolean*

Synopsis	Allow the NETCONF server to access candidate datastore

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system management-interface netconf capabilities candidate *boolean*
Tree	candidate
Description	When configured to **true**, this command allows the SR OS NETCONF server to access the candidate configuration datastore. Configuring this command to **true** also enables using **commit** and **discard-changes**. When **configure system management-interface configuration-mode** is set to **classic**, the candidate capability is disabled, even if this command is configured to **true**. When configured to **false**, this command disables the SR OS NETCONF server from accessing the candidate datastore. If the candidate is disabled, requests that reference the candidate datastore return an error, and when a NETCONF client establishes a new session, the candidate capability is not advertised in the SR OS NETCONF Hello message.
Default	true
Introduced	16.0.R1
Platforms	All

listen

Synopsis	Enter the **listen** context
Context	**configure** system management-interface netconf listen
Tree	listen
Introduced	24.3.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of NETCONF server in listen mode
Context	**configure** system management-interface netconf listen admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	24.3.R1
Platforms	All

delay-on-boot *number*

Synopsis	Delay for NETCONF connections after system boot

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system management-interface netconf listen delay-on-boot *number*
Tree	delay-on-boot
Description	This command configures the delay timer for NETCONF connections. When the timer expires, NETCONF becomes operational and connections are accepted. This delay prevents automation from managing the system while it is still converging. When no delay is configured, connections are accepted after the system boots and NETCONF becomes operational.
Range	1 to 3600
Units	seconds
Introduced	24.3.R1
Platforms	All

port *number*

Synopsis	Port on which NETCONF server listens for connections
Context	**configure** system management-interface netconf listen port *number*
Tree	port
Description	This command specifies the port on which the SR OS NETCONF server listens for new connections. One port can be configured for NETCONF management. The configured port applies to both non-VPRN and VPRN management. New NETCONF connections are able to use the configured port. For NETCONF connections not using VPRN management, active NETCONF connections are not disconnected if the connection port changes. For NETCONF connections using VPRN management, active NETCONF connections are disconnected if the connection port changes.
Range	22 | 830
Default	830
Introduced	24.3.R1
Platforms	All

operations

Synopsis	Enter the **operations** context
Context	**configure** system management-interface operations
Tree	operations
Description	Commands in this context configure parameters associated with operational commands in model-driven interfaces.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.5.R1
Platforms	All

global-timeouts

Synopsis	Enter the **global-timeouts** context
Context	**configure** system management-interface operations global-timeouts
Tree	global-timeouts
Description	Commands in this context configure system timeout parameters for operational commands. Timeout parameters provide default system-level control for various types of operational commands in model-driven interfaces. The timeout values are used when specific execution and retention timeouts are not requested for a specific operation.
Introduced	21.5.R1
Platforms	All

asynchronous-execution *(number | keyword)*

Synopsis	Timeout for asynchronous operation execution
Context	**configure** system management-interface operations global-timeouts asynchronous-execution *(number | keyword)*
Tree	asynchronous-execution
Description	This command configures the period of time that operations launched as “asynchronous” are allowed to execute before being automatically stopped by the SR OS. An asynchronous operation is not deleted from the system when it is stopped. See the **asynchronous-retention** command. If a specific execution timeout is not included in the request for a particular asynchronous operation, this system-level timeout applies. **Note**: This execution timeout is part of the general global operations infrastructure and is separate and independent from any operation-specific timeouts (for example, the **ping** operation also has its own timeout parameter).
Range	1 to 604800
Units	seconds
Options	never
Default	3600
Introduced	21.5.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

asynchronous-retention *(number | keyword)*

Synopsis	Timeout for asynchronous operation data retention
Context	**configure** system management-interface operations global-timeouts asynchronous-retention *(number | keyword)*
Tree	asynchronous-retention
Description	This command configures the period of time that data related to operations launched as “asynchronous” is retained in the system. After the retention timeout expires, all information related to the operation is deleted, including any status information and result data. If a specific retention timeout is not included in the request for a particular asynchronous operation, this system-level timeout applies.
Range	1 to 604800
Units	seconds
Options	never
Default	86400
Introduced	21.5.R1
Platforms	All

synchronous-execution *(number | keyword)*

Synopsis	Timeout for synchronous operation execution
Context	**configure** system management-interface operations global-timeouts synchronous-execution *(number | keyword)*
Tree	synchronous-execution
Description	This command configures the period of time that operations launched as “'synchronous” (the default method for all operations) are allowed to execute before they are automatically stopped, and their associated data is deleted. If a specific execution timeout is not included in the request for a particular synchronous operation, this system-level timeout applies. **Note**: This execution timeout is part of the general global operations infrastructure and is separate and independent from any operation-specific timeouts (for example, the **ping** operation also has its own timeout parameter). **Caution**: If this command is set with a specific time value, MD-CLI operations are subject to the timeout and are interrupted if they execute longer than the time value. This situation can arise because the timeout also applies to operations requested in the MD-CLI interface (for example, **ping**, **file dir**, and so on).
Range	1 to 604800
Units	seconds

Use subject to Terms available at: www.nokia.com/terms.

Options	never
Default	never
Introduced	21.5.R1
Platforms	All

remote-management

Synopsis	Enter the **remote-management** context
Context	**configure** system management-interface remote-management
Tree	remote-management
Description	Commands in this context configure the SR OS node to use the remote management service. Configuring remote management enables the SR OS node to report itself to a remote manager service running on a remote server, so that it is included in the dynamic list of available nodes. The manager service streamlines the management of multiple SR OS nodes running different SR OS versions using the same client application providing a similar shell to the MD-CLI.
Introduced	20.5.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of remote management registration
Context	**configure** system management-interface remote-management admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.5.R1
Platforms	All

allow-unsecure-connection

Synopsis	Allow connection without secured transport protocol
Context	**configure** system management-interface remote-management allow-unsecure-connection
Tree	allow-unsecure-connection
Description	When configured, this command allows an unsecured connection to remote managers; TCP connections are not encrypted, including username and password information.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **allow-unsecure-connection** or **client-tls-profile**.
Introduced	20.5.R1
Platforms	All

client-tls-profile *reference*

Synopsis	TLS client profile name
Context	**configure** system management-interface remote-management client-tls-profile *reference*
Tree	client-tls-profile
Description	This command specifies the client TLS profile to all remote managers.
Reference	**configure** system security tls client-tls-profile *string*
Notes	The following elements are part of a choice: **allow-unsecure-connection** or **client-tls-profile**.
Introduced	20.5.R1

schema-path *string*

Synopsis	Schema path URL
Context	**configure** system management-interface schema-path *string*
Tree	schema-path
Description	This command specifies the schema path where the SR OS YANG modules can be placed by the user before using a <get-schema> request. Nokia recommends that the URL string not exceed 135 characters for the <get-schema> request to work correctly with all schema files. If this command is not configured, the software upgrade process manages the YANG schema files to ensure the schema files are synchronized with the software image on both the primary and standby CPM.
String Length	1 to 180
Introduced	16.0.R4
Platforms	All

snmp

Synopsis	Enter the **snmp** context
Context	**configure** system management-interface snmp
Tree	snmp

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the SNMP agent
Context	**configure** system management-interface snmp admin-state *keyword*
Tree	admin-state
Description	This command administratively enables or disables SNMP agent operations. Disabling SNMP does not prevent the agent from sending SNMP notifications to configured SNMP trap destinations. In classic and mixed configuration mode, the agent is administratively disabled in the event of a reboot when the processing of the configuration file fails to complete or when an SNMP persistent index file fails while the **bof system persistent-indices** command is set to **true**. This prevents an SNMP-based management system from accessing and possibly synchronizing with a partially booted or incomplete network element. This auto-disable behavior is not applicable to model-driven configuration mode.
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

engine-id *string*

Synopsis	SNMP engine ID that identifies the SNMPv3 node
Context	**configure** system management-interface snmp engine-id *string*
Tree	engine-id
Description	This command sets the SNMP engine ID that uniquely identifies the SNMPv3 node. If unconfigured, the system uses an engine ID based on the information from the system backplane. If the SNMP engine ID is changed, the current configuration must be saved and a reboot must be executed. Otherwise, the previously configured SNMP communities and logger trap-target notify communities will not be valid for the new engine ID. **Note:** Changing the SNMP engine ID invalidates all SNMPv3 MD5 and SHA security digest keys, which may render the node unmanageable. When replacing a chassis, configure the new router to use the same engine ID as the previous router. This preserves SNMPv3 security keys and allows management stations to use their existing authentication keys for the new router.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Ensure that the engine ID of each router is unique. A management domain can only maintain one instance of a specific engine ID.

String Length	10 to 64
Introduced	16.0.R1
Platforms	All

general-port *number*

Synopsis	Port number used to send general SNMP messages
Context	**configure** system management-interface snmp general-port *number*
Tree	general-port
Description	This command configures the port number used to receive SNMP request messages and send replies. For the port used for SNMP notifications, configure the **configure log snmp-trap-group trap-target port** command.
Range	0 | 1 to 65535
Default	161
Introduced	16.0.R1
Platforms	All

max-bulk-duration *number*

Synopsis	Maximum process duration before responses are returned
Context	**configure** system management-interface snmp max-bulk-duration *number*
Tree	max-bulk-duration
Description	This command sets the maximum duration to process an SNMP request before bulk responses are returned to avoid a timeout on the management system when a lot of information is returned in the response.
Range	100 to 5000
Units	milliseconds
Introduced	23.3.R1
Platforms	All

packet-size *number*

Synopsis	Maximum SNMP packet size generated by the node

© 2024 Nokia.

Platforms	All

streaming

Synopsis	Enter the **streaming** context
Context	**configure** system management-interface snmp streaming
Tree	streaming
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of SNMP streaming
Context	**configure** system management-interface snmp streaming admin-state *keyword*
Tree	admin-state
Description	This command enables or disables the proprietary SNMP request and response bundling as well as the TCP-based transport mechanism for optimizing network management of the router nodes. In higher latency networks, synchronizing router MIBs from network management using streaming takes less time than synchronizing using classic SNMP UDP requests. Streaming operates on TCP port 1491 and runs over IPv4 or IPv6.
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

yang-modules

Synopsis	Enter the **yang-modules** context
Context	**configure** system management-interface yang-modules
Tree	yang-modules

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context determine the system support of the Nokia YANG models. The settings affect the data sent in a NETCONF <hello>, data populated in the RFC 6022 /netconf-state/schemas list, data returned in a <get-schema> request, and data populated in the RFC 8525 /yang-library. See "NETCONF monitoring" and "YANG library" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
Introduced	16.0.R1

Synopsis	Advertise NMDA support over NETCONF
Context	**configure** system management-interface yang-modules nmda nmda-support *boolean*
Tree	nmda-support
Description	When configured to **true**, this command enables the advertisement of NMDA support over NETCONF through the use of YANG library 1.1. When configured to **false**, this command disables NMDA advertisement over NETCONF and YANG library 1.0 is used.
Default	false
Introduced	21.7.R1
Platforms	All

nokia-combined-modules *boolean*

Synopsis	Support access to combined Nokia YANG models
Context	**configure** system management-interface yang-modules nokia-combined-modules *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	nokia-combined-modules
Description	When configured to **true**, the system supports the combined Nokia YANG files for both configuration and state data in the NETCONF server. When the system is operating in classic configuration mode, attempts to access (read or write) the configuration using the Nokia configuration modules or namespace via NETCONF result in errors, even if this command is set to **true**. When configured to **false**, access to the combined Nokia YANG files is not supported. This command and the **nokia-submodules** command cannot both be set to **true** at the same time.
Introduced	16.0.R4
Platforms	All

nokia-submodules *boolean*

Synopsis	Support submodule-based packaging of Nokia YANG models
Context	**configure** system management-interface yang-modules nokia-submodules *boolean*
Tree	nokia-submodules
Description	When configured to **true**, the system supports the alternative submodule-based packaging of the Nokia YANG files for both configuration and state data in the NETCONF server. When the system is operating in classic configuration mode, attempts to access (read or write) the configuration using the Nokia configuration modules or namespace via NETCONF result in errors, even if this command is set to **true**. When configured to **false**, access to the submodule-based packaging of the Nokia YANG files is not supported. This command and the **nokia-combined-module**s command cannot both be set to **true** at the same time.
Introduced	21.2.R1
Platforms	All

openconfig-modules *boolean*

Synopsis	Support access to OpenConfig YANG models
Context	**configure** system management-interface yang-modules openconfig-modules *boolean*
Tree	openconfig-modules
Description	When configured to **true**, this command allows access to OpenConfig YANG models in all model-driven interfaces.
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

shared-model-management *boolean*

Synopsis	Allow multiple models to configure the same elements
Context	**configure** system management-interface yang-modules shared-model-management *boolean*
Tree	shared-model-management
Description	When configured to **true**, the router allows Nokia and third-party models to configure the same elements in model-driven interfaces. When configured to **false**, only one model can be used to configure the same element.
Default	true
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Synopsis	PTP domain
Context	**configure** system ptp domain *number*
Tree	domain
Description	This command configures the PTP domain. The default and valid range of the domain depend on the configured PTP profile. • IEEE 1588-2008 - domain range of 0 to 255 (default 0) • G.8265.1 - domain range of 0 to 255 (default 4) • G.8275.1 - domain range of 24 to 43 (default 24) • G.8275.2 - domain range of 0 to 255 (default 44)
Range	0 to 255
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

local-priority *number*

Synopsis	PTP clock local priority
Context	**configure** system ptp local-priority *number*
Tree	local-priority
Description	This command configures the local priority used to choose between PTP time Transmitters in the best timeTransmitter clock algorithm (BTCA). This setting applies when the PTP profile is either configured for G.8275.1 or G.8275.2 and is ignored for any other profile. For G.8275.1 or G.8275.2, this command configures the localPriority parameter associated with the local clock (**ptp** context). See G.8275.1 or G.8275.2 for detailed information.
Range	1 to 255
Default	128
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

log-announce-interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Announce message interval in log form
Context	**configure** system ptp log-announce-interval *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	log-announce-interval
Description	This command configures the Announce message interval used for both unicast and multicast messages. For unicast messages, the Announce message interval is requested during unicast negotiation to any peer. This controls the Announce message rate sent from remote peers to the local node. It does not affect the announce message rate that may be sent from the local node to remote peers. Remote peers may request an Announce message rate within the acceptable grant range. For multicast messages used on PTP Ethernet ports, this command specifies the message interval used for Announce messages transmitted by the local node. This value also defines the interval between executions of the BTCA within the node. To minimize BTCA driven reconfigurations, IEEE recommends that the announce interval should be consistent across the entire 1588 network.
Range	-3 to 4
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

network-type *keyword*

Synopsis	PTP network type
Context	**configure** system ptp network-type *keyword*
Tree	network-type
Description	This command configures the codeset to be used for the encoding of QL values into PTP clockClass values and vice versa when the profile is configured for G.8265.1 or G.8275.2. This setting only applies to the range of values observed in the clockClass values transmitted out of the node in Announce messages. The router supports the reception of any valid value in Table 1/G.8265.1 and Table2/G.8275.2.
Options	sonet, sdh
Default	sdh
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port [port-id] *reference*

Synopsis	Enter the **port** list instance
Context	**configure** system ptp port *reference*
Tree	port

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description Commands in this context configure PTP over Ethernet on the physical port. The PTP process transmits and receives PTP messages through the port using Ethernet encapsulation (as opposed to UDP/IPv4 encapsulation).

Frames are transmitted with no VLAN tags, even if the port is configured for dot1q or qinq modes for encap-type. The received frames from the external PTP clock must also be untagged.

Two reserved multicast addresses are allocated for PTP messages (see Annex F IEEE Std 1588-2008). Either address can be configured for the PTP messages sent through the port.

A PTP port cannot be created if the PTP profile is configured for G.8265.1.

If the port supports 1588 port-based timestamping, Synchronous Ethernet must be enabled on the MDA when PTP over Ethernet is enabled.

De-provisioning of the card or MDA containing the specified port is not permitted while the port is configured within PTP.

Changing the encapsulation or the port type of the Ethernet port is not permitted when PTP Ethernet Multicast operation is configured on the port.

To allocate an Ethernet satellite client port as a PTP port, the Ethernet satellite must first be enabled for the transparent clock function. For more information, see the **configure satellite ethernet-satellite ptp-tc** command.

The SyncE/1588 ports of the CPM and CCMs can be specified as PTP ports. These use the ‘A/3’ and ‘B/3’ designation and both must be specified as two PTP ports if both are used. The active CPM sends and receives messages on both ports if they are specified and enabled.

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *string*

Synopsis Destination MAC address of the transmitted PTP messages

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system ptp port *reference* address *string*
Tree	address
Description	This command specifies the destination MAC address of the transmitted PTP messages. IEEE Std 1588-2008 Annex F defines two reserved addresses for 1588 messages, which include: • **01-1B-19-00-00-00** — all except the peer delay mechanism messages • **01-80-C2-00-00-0E** — peer delay mechanism messages Both addresses are supported for reception, independent of the address configured by this command.
Default	01:1B:19:00:00:00
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the PTP port
Context	**configure** system ptp port *reference* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alternate-profile *reference*

Synopsis	Alternate profile for the PTP port
Context	**configure** system ptp port *reference* alternate-profile *reference*
Tree	alternate-profile
Description	This command creates the alternate profile that is used in communications with the port or peer. If no alternate profile is specified, the primary profile is used.
Reference	**configure** system ptp alternate-profile *string*
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

local-priority *number*

Synopsis	PTP port local priority
Context	**configure** system ptp port *reference* local-priority *number*
Tree	local-priority
Description	This command configures the local priority used to choose between PTP time Transmitters in the best timeTransmitter clock algorithm (BTCA). This setting applies when the PTP profile is either configured for G.8275.1 or G.8275.2 and is ignored for any other profile. For G.8275.1 or G.8275.2, this command configures the localPriority parameter associated with the Announce messages received from the external clocks (**ptp port** context). See G.8275.1 or G.8275.2 for detailed information.
Range	1 to 255
Default	128
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

log-delay-interval *number*

Synopsis	Minimum interval for Delay_Req messages in log form
Context	**configure** system ptp port *reference* log-delay-interval *number*
Tree	log-delay-interval
Description	This command configures the minimum interval used for multicast Delay_Req messages for the port. For ports in a slave state, the interval is used, unless the parent port indicates a longer interval. For a port in master state, the interval is advertised to external slave ports as the minimum acceptable interval for Delay_Req messages from the slave ports. The router supports the 1588 standard requirement for a port in slave state to check the logMessageInterval field of received multicast Delay_Resp messages. If the value of the logMessageInterval field of the messages is greater than the value configured locally for the generation of Delay_Req messages, the slave must use the longer interval for the generation of Delay_Req messages. The interval value is specified as the logarithm to the base 2.
Range	-6 to 0
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

log-sync-interval *number*

Synopsis	Interval for transmission of Sync messages in log form

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system ptp port *reference* log-sync-interval *number*
Tree	log-sync-interval
Description	This command configures the interval used for Sync messages transmitted by the local node when the port is in master state. The interval value is specified as the logarithm to the base 2.
Range	-6 to 0
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

master-only *boolean*

Synopsis	Restrict the local port to master state
Context	**configure** system ptp port *reference* master-only *boolean*
Tree	master-only
Description	When configured to **true**, the local port is restricted to master state only, ensuring that the system does not obtain synchronization from attached external devices. This command is supported only when the PTP profile is set for G.8275.1 or G.8275.2.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority1 *number*

Synopsis	Priority1 of the local clock
Context	**configure** system ptp priority1 *number*
Tree	priority1
Description	This command configures the priority1 parameter of the local clock. The setting is used when the profile is configured for IEEE 1588-2008. This value is used by the Best Master Clock Algorithm to determine which clock should provide timing for the network and is advertised in Announce messages.
Range	0 to 255
Default	128
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.

priority2 *number*

Synopsis	Priority2 of the local clock
Context	**configure** system ptp priority2 *number*
Tree	priority2
Description	This command configures the priority2 parameter of the local clock. The setting is used when the profile is configured for IEEE 1588-2008, G.8275.1, or G.8275.2. This value is used by the Best Master Clock algorithm to determine which clock should provide timing for the network and is advertised in Announce messages.
Range	0 to 255
Default	128
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

profile *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PTP profile
Context	**configure** system ptp profile *keyword*
Tree	profile
Description	This command configures the profile to be used for the internal PTP clock. It defines the Best timeTransmitter Clock Algorithm (BTCA) behavior. Profile changes may affect the settings of other configuration elements, such as the clock type and default settings for the delay interval, announce interval, and the Sync interval. The following clock types are supported for the indicated profiles: • G.8265.1: slave only, master only • IEEE 1588 2008: slave only, master only, boundary • G.8275.1: slave only, boundary, master only (master only, only if the platform includes an embedded GNSS receiver) • G.8275.2: slave only, boundary, master only (master only, only if the platform includes an embedded GNSS receiver)

Options	g8265dot1-2010, ieee1588-2008, g8275dot1-2014, g8275dot2-2016
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ptsf

Synopsis	Enter the **ptsf** context
Context	**configure** system ptp ptsf
Tree	ptsf
Description	Commands in this context configure the attributes of Packet Timing Signal Fail (PTSF).
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

monitor-ptsf-unusable

Synopsis	Enter the **monitor-ptsf-unusable** context
Context	**configure** system ptp ptsf monitor-ptsf-unusable
Tree	monitor-ptsf-unusable
Description	Commands in this context configure monitoring of neighbor clocks for the PTSF-unusable state (condition) when the profile is set to g8275dot1-2014. When administratively enabled, the local clock monitors the noise level of PTP event messages between external neighbor PTP ports and the local clock. If it detects a high variation in the network path between the external neighbor port and the local port, it considers the neighbor port unusable. Announce messages from the neighbor are discarded and excluded from the BTCA and the port cannot be selected as the parent clock. The unusable condition must be manually cleared. When administratively disabled, the monitor PTSF function of the PTP clock clears PTSF-unusable states from all neighbor PTP ports. If no PTP messages are received from a neighbor for 15 minutes, the neighbor information is purged and the PTSF-unusable state is cleared.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

local-priority *number*

Synopsis	PTP peer local priority
Context	**configure** system ptp router *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)* local-priority *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	local-priority
Description	This command configures the local priority for the peer, which is used to choose between PTP timeTransmitters in the best timeTransmitter clock algorithm (BTCA). This setting applies when the PTP profile is configured for G.8265.1, G.8275.1, or G.8275.2 and is ignored for any other profile. For G.8265.1, this command configures the priority used to choose between time Transmitter clocks with the same quality (see G.8265.1 for more details). For G.8275.1 or G.8275.2, this command configures the localPriority parameter associated with the Announce messages received from the external clocks (**ptp router peer** context). See G.8275.1 or G.8275.2 for detailed information.
Range	1 to 255
Default	128
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

log-sync-interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PTP peer interval for Sync messages in log form
Context	**configure** system ptp router *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)* log-sync-interval *number*
Tree	log-sync-interval
Description	This command configures the message interval used for Sync and Delay_Resp messages that are requested during unicast negotiation to the peer. The setting controls messages sent from remote peers to the local node but the packet rate from the local node to remote peers is not affected. Remote peers may request a packet rate within the acceptable range. The interval value is specified as the logarithm to the base 2.
Range	-6 to 0
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

peer-limit *number*

Synopsis	Number of discovered peers allowed for routing instance
Context	**configure** system ptp router *string* peer-limit *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	peer-limit
Description	This command specifies the maximum number of discovered peers permitted within the routing instance. This ensures that a routing instance does not consume all the possible discovered peers and prevents the routing instance from blocking discovered peers in other routing instances. The sum of all peer limit values for all routing instances cannot exceed the maximum number of discovered peers supported by the system.
Range	0 to 512
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-while-sync-uncertain *boolean*

Synopsis	Send Announce messages while clock is unsynchronized
Context	**configure** system ptp tx-while-sync-uncertain *boolean*
Tree	tx-while-sync-uncertain
Description	When configured to **true**, the local PTP clock transmits Announce messages to downstream clocks to indicate it has not yet stabilized on the recovered synchronization source (upstream clocks or GM clock). While the PTP clock is unsynchronized, the Sync Uncertain state is true. When configured to **false**, the local PTP clock does not send Announce messages to downstream clocks to indicate it is not synchronized to a valid timing source. If the Sync Uncertain state of the clock is true while this command is configured to **false**, unicast negotiation grant requests are not granted and current grants are canceled.
Default	true
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

create-subscription *boolean*

Synopsis	Allow NETCONF create-subscription operation
Context	**configure** system security aaa local-profiles profile *string* netconf base-op-authorization create-subscription *boolean*
Tree	create-subscription
Description	When configured to **true**, this command enables the NETCONF create-subscription operation in the default profile. The **base-op-authorization create-subscription** configuration is not pre-emptive, which means that it is checked only at the time of the initial subscription. Configuration changes to **base-op-authorization** do not cancel any in-progress subscriptions and operators who successfully subscribed continue to receive messages. When configured to **false**, this command disables the NETCONF create-subscription operation in the default profile. The operation is enabled by default in the built-in system-generated administrative profile.
Default	false
Introduced	21.7.R1

output-authorization

Synopsis	Enter the **output-authorization** context
Context	**configure** system security aaa management-interface output-authorization
Tree	output-authorization
Description	Commands in this context configure output authorization for model-driven interfaces and telemetry. When output authorization is performed, commands that display configuration or state output must authorize every element in the output. If a remote AAA server is configured, there may be delays in displaying output while the output is authorized. The remote AAA server may receive a large volume of authorization requests when substantial output displays are needed, such as for system configuration details. Input to edit the configuration is always authorized, and is not affected by commands in this context.
Introduced	20.10.R1
Platforms	All

md-interfaces *boolean*

Synopsis	Authorize output in model-driven interfaces
Context	**configure** system security aaa management-interface output-authorization md-interfaces *boolean*
Tree	md-interfaces
Description	When configured to **true**, output is authorized for the following: • MD-CLI **info** and **compare** commands • MD-CLI command completion of list key values • NETCONF <get> and <get-config> RPC • gRPC/gNMI Get RPCs
Default	true
Introduced	20.10.R1
Platforms	All

Description	Commands in this context configure access operations that are sent to the TACACS+ server during authorization.
Introduced	21.10.R3
Platforms	All

access-operation-cmd *keyword*

Synopsis	Access operations sent in authorization requests
Context	**configure** system security aaa remote-servers tacplus authorization request-format access-operation-cmd *keyword*
Tree	access-operation-cmd
Description	This command sends an operation argument in authorization requests. In model-driven interfaces, this command configures the system to send the operation in the cmd argument, and the path in the cmd-args argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces.
Options	delete
Max. Instances	1
Introduced	21.10.R3
Platforms	All

use-priv-lvl *boolean*

Synopsis	Allow privilege level mapping
Context	**configure** system security aaa remote-servers tacplus authorization use-priv-lvl *boolean*
Tree	use-priv-lvl
Description	When configured to **true**, this command automatically performs a single authorization request to the TACACS+ server for cmd* (all commands) immediately after login, and then uses the local profile associated (via the **priv-lvl-map**) with the priv-lvl returned by the TACACS+ server for all subsequent authorization (except **enable-admin**). After the initial authorization for cmd*, no further authorization requests are sent to the TACACS+ server (except **enable-admin**). When configured to **false**, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the **tacplus use-default-template** setting is enabled).
Default	false
Introduced	16.0.R1
Platforms	All

restricted-to-home *boolean*

Synopsis	Restrict file access to the home directory of the user
Context	**configure** system security aaa user-template *keyword* restricted-to-home *boolean*
Tree	restricted-to-home
Description	When configured to **true**, the router denies the user from accessing files outside of their home directory. Files can be accessed locally by CLI file commands and output modifiers such as **>** (file redirect), or remotely via FTP and SCP. The system denies all configuration save operations (such as **admin save**) via any management interface (such as CLI and NETCONF) unless **save-when-restricted** is enabled. File access is denied unless a home directory is configured and the directory is created by an administrator. When configured to **false**, the router permits the user to access all files on the system.
Default	true
Introduced	16.0.R1
Platforms	All

save-when-restricted *boolean*

Synopsis	Save configurations when the user is restricted to home
Context	**configure** system security aaa user-template *keyword* save-when-restricted *boolean*
Tree	save-when-restricted
Description	When configured to **true**, the system permits configuration save operations for all configuration regions (such as bof and configure) via any management interface (such as CLI and NETCONF) even if **restricted-to-home** is enabled. The configuration for each region can be saved with **admin save** CLI commands or when committed over NETCONF and gRPC. When configured to **false**, the system denies saving the configuration when **restricted-to-home** is enabled, unless the home directory of the user includes the location of the saved configuration file.
Default	true
Introduced	22.10.R1
Platforms	All

cli-script

Synopsis	Enter the **cli-script** context
Context	**configure** system security cli-script

dscp *keyword*

Synopsis DSCP used as the match criterion on the packet

Context **configure** system security cpm-filter ip-filter entry *number* match dscp *keyword*

Tree dscp

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dst-ip

Synopsis Enter the **dst-ip** context

Context **configure** system security cpm-filter ip-filter entry *number* match dst-ip

Tree dst-ip

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *(ipv4-prefix-with-host-bits | ipv4-address)*

Synopsis IPv4 address used as the match criterion

Context **configure** system security cpm-filter ip-filter entry *number* match dst-ip address *(ipv4-prefix-with-host-bits | ipv4-address)*

Tree address

Notes The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip-prefix-list *reference*

Synopsis	IPv4 address prefix list used as match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** filter match-list ip-prefix-list *string*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *string*

Synopsis	IPv4 address mask used as the match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-ip mask *string*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port
Tree	dst-port
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eq *number*

Synopsis	Port number as the match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.

© 2024 Nokia.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Port mask as the match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-list *reference*

Synopsis	Port list as the match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *string*
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enable the **range** context
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

end *number*

Synopsis	Upper bound of the port number to match
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port range end *number*
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

start *number*

Synopsis	Lower bound of the port number to match
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port range start *number*
Tree	start
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fragment *keyword*

Synopsis	Match criterion based on presence of fragmented packets
Context	**configure** system security cpm-filter ip-filter entry *number* match fragment *keyword*
Tree	fragment
Description	This command specifies the match criterion based on the existence or absence of fragmented IP packets. Matching on fragmented IPv4 packets occurs when all packets have either the MF (more fragment) bit set or have the Fragment Offset field of the IP header set to a non-zero value. For IPv6, the existence of the IPv6 Fragmentation Extension Header results in a fragmented packet match. Matching on non-fragmented IPv4 packets occurs when all packets have the MF bit set to zero and the Fragment Offset field is also set to zero. For IPv6, the absence of an IPv6 Fragmentation Extension Header results in a non-fragmented packet match.
Options	false, true
Introduced	16.0.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

icmp

Synopsis	Enter the **icmp** context
Context	**configure** system security cpm-filter ip-filter entry *number* match icmp
Tree	icmp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

code *number*

Synopsis	ICMP code to match
Context	**configure** system security cpm-filter ip-filter entry *number* match icmp code *number*
Tree	code
Range	0 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

type *number*

Synopsis	ICMP type to match
Context	**configure** system security cpm-filter ip-filter entry *number* match icmp type *number*
Tree	type
Range	0 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip-option

Synopsis	Enable the **ip-option** context
Context	**configure** system security cpm-filter ip-filter entry *number* match ip-option
Tree	ip-option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.

mask *number*

Synopsis	Range of option numbers for the mask match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match ip-option mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

type *number*

Synopsis	Specific IP option to match
Context	**configure** system security cpm-filter ip-filter entry *number* match ip-option type *number*
Tree	type
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiple-option *boolean*

Synopsis	Match on packets containing multiple option fields
Context	**configure** system security cpm-filter ip-filter entry *number* match multiple-option *boolean*
Tree	multiple-option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

option-present *boolean*

Synopsis	Match on packets with option field present
Context	**configure** system security cpm-filter ip-filter entry *number* match option-present *boolean*
Tree	option-present
Introduced	16.0.R1

Tree	log
Reference	**configure** filter log *number*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

match

Synopsis	Enter the **match** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match
Tree	match
Description	Commands in this context specify match criteria for the entry. When the match criteria have been satisfied, the action associated with the entry is executed. If more than one match criterion is configured, all criteria must be met before the action associated with the entry is executed.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dscp *keyword*

Synopsis	DSCP used as the match criterion on the packet
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-ip
Tree	dst-ip
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *(ipv6-prefix-with-host-bits | ipv6-address)*

Synopsis	IPv6 address used as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-ip address *(ipv6-prefix-with-host-bits | ipv6-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-ip ipv6-prefix-list *reference*
Tree	ipv6-prefix-list
Reference	**configure** filter match-list ipv6-prefix-list *string*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *string*

Synopsis	IPv6 address mask used as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-ip mask *string*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port
Tree	dst-port
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eq *number*

Synopsis	Port number as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Port mask as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.

port-list *reference*

Synopsis	Port list as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *string*
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enable the **range** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

end *number*

Synopsis	Upper bound of the port number to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port range end *number*
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

start *number*

Synopsis	Lower bound of the port number to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port range start *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	start
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

extension-header

Synopsis	Enter the **extension-header** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match extension-header
Tree	extension-header
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hop-by-hop *boolean*

Synopsis	Match on existence of Hop-By-Hop Options Header
Context	**configure** system security cpm-filter ipv6-filter entry *number* match extension-header hop-by-hop *boolean*
Tree	hop-by-hop
Description	When configured to **true**, a match occurs when the Hop-by-Hop Options Extension Header is present. When configured to **false**, a match occurs when the Hop-by-Hop Options Extension Header is not present.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

flow-label *number*

Synopsis	Flow label in the IPv6 header as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match flow-label *number*
Tree	flow-label
Range	0 to 1048575
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fragment *keyword*

Synopsis	Match criterion based on presence of fragmented packets
Context	**configure** system security cpm-filter ipv6-filter entry *number* match fragment *keyword*
Tree	fragment
Description	This command specifies the match criterion based on the existence or absence of fragmented IP packets. Matching on fragmented IPv4 packets occurs when all packets have either the MF (more fragment) bit set or have the Fragment Offset field of the IP header set to a non-zero value. For IPv6, the existence of the IPv6 Fragmentation Extension Header results in a fragmented packet match. Matching on non-fragmented IPv4 packets occurs when all packets have the MF bit set to zero and the Fragment Offset field is also set to zero. For IPv6, the absence of an IPv6 Fragmentation Extension Header results in a non-fragmented packet match.
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

icmp

Synopsis	Enter the **icmp** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match icmp
Tree	icmp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

code *number*

Synopsis	ICMP code as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match icmp code *number*
Tree	code
Range	0 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

type *number*

Synopsis	ICMP type as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match icmp type *number*
Tree	type
Range	0 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

next-header *(number | keyword)*

Synopsis	IP protocol to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match next-header *(number | keyword)*
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port

Synopsis	Enter the **port** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match port
Tree	port
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eq *number*

Synopsis	Port number as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match port eq *number*
Tree	eq
Range	0 to 65535

© 2024 Nokia.

Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

log *reference*

Synopsis	Log ID where matching packets are entered
Context	**configure** system security cpm-filter mac-filter entry *number* log *reference*
Tree	log
Reference	**configure** filter log *number*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

match

Synopsis	Enter the **match** context
Context	**configure** system security cpm-filter mac-filter entry *number* match
Tree	match
Description	Commands in this context specify match criteria for the entry. When the match criteria have been satisfied, the action associated with the entry is executed. If more than one match criterion is configured, all criteria must be met before the action associated with the entry is executed.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-opcode

Synopsis	Enter the **cfm-opcode** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode
Tree	cfm-opcode
Description	Commands in this context specify match criteria based on the CFM opcode.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eq *number*

Synopsis	Equal to comparison operator for the CFM opcode
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode eq *number*
Tree	eq
Range	0 to 255
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

gt *number*

Synopsis	Greater than comparison operator for the CFM opcode
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode gt *number*
Tree	gt
Range	0 to 254
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lt *number*

Synopsis	Less than comparison operator for the CFM opcode
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode lt *number*
Tree	lt
Range	1 to 255

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enable the **range** context
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

end *number*

Synopsis	Upper bound of the Opcode range to match
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode range end *number*
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

start *number*

Synopsis	Lower bound of the OpCode range to match
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dst-mac

Synopsis	Enable the **dst-mac** context
Context	**configure** system security cpm-filter mac-filter entry *number* match dst-mac
Tree	dst-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *string*

Synopsis	MAC address used as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match dst-mac address *string*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *string*

Synopsis	MAC address mask as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match dst-mac mask *string*
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

etype *string*

Synopsis	Ethernet type as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match etype *string*
Tree	etype
Description	This command specifies an Ethernet type II Ethertype value to be used as a MAC filter match criterion. The Ethernet type field is used by the Ethernet version-II frames and does not apply to IEEE 802.3 Ethernet frames.
String Length	5 to 6

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

frame-type *keyword*

Synopsis	MAC frame type as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match frame-type *keyword*
Tree	frame-type
Options	802dot2-llc, ethernet-ii
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

llc-dsap

Synopsis	Enable the **llc-dsap** context
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-dsap
Tree	llc-dsap
Description	Commands in this context specify match criteria based on the Destination Service Access Point (DSAP).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dsap *number*

Synopsis	8-bit DSAP as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-dsap dsap *number*
Tree	dsap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Mask for DSAP value as the match criterion

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpm-filter mac-filter entry *number* match llc-dsap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

llc-ssap

Synopsis	Enable the **llc-ssap** context
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-ssap
Tree	llc-ssap
Description	Commands in this context specify match criteria based on the Source Service Access Point (SSAP).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Mask for SSAP value as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-ssap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ssap *number*

Synopsis	8-bit SSAP as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-ssap ssap *number*
Tree	ssap
Range	0 to 255

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

service *reference*

Synopsis	Service ID used as the match condition
Context	**configure** system security cpm-filter mac-filter entry *number* match service *reference*
Tree	service
Reference	**configure** service vpls *string*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

src-mac

Synopsis	Enable the **src-mac** context
Context	**configure** system security cpm-filter mac-filter entry *number* match src-mac
Tree	src-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *string*

Synopsis	MAC address used as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match src-mac address *string*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *string*

Synopsis	MAC address mask as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match src-mac mask *string*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cpm-queue

Synopsis	Enter the **cpm-queue** context
Context	**configure** system security cpm-queue
Tree	cpm-queue
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

queue [queue-id] *number*

Synopsis	Enter the **queue** list instance
Context	**configure** system security cpm-queue queue *number*
Tree	queue
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**queue-id**] *number*

Synopsis	CPM queue ID
Context	**configure** system security cpm-queue queue *number*
Tree	queue
Range	33 to 2000
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cbs *number*

Synopsis	Buffer size that can be drawn from queue buffer pool
Context	**configure** system security cpm-queue queue *number* cbs *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	cbs
Description	This command specifies the amount of buffer that can be drawn from the reserved buffer portion of the buffer pool of the queue.
Range	0 to 131072
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mbs *number*

Synopsis	Maximum queue depth to which the queue can grow
Context	**configure** system security cpm-queue queue *number* mbs *number*
Tree	mbs
Range	0 to 131072
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rate

Synopsis	Enter the **rate** context
Context	**configure** system security cpm-queue queue *number* rate
Tree	rate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir *(number | keyword)*

Synopsis	Amount of bandwidth committed to the queue
Context	**configure** system security cpm-queue queue *number* rate cir *(number | keyword)*
Tree	cir
Range	0 to 100000000
Units	kilobps
Options	max
Default	max

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pir *(number | keyword)*

Synopsis	Peak Information Rate for the queue
Context	**configure** system security cpm-queue queue *number* rate pir *(number | keyword)*
Tree	pir
Range	1 to 100000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cpu-protection

Synopsis	Enter the **cpu-protection** context
Context	**configure** system security cpu-protection
Tree	cpu-protection
Description	Commands in this context configure CPU protection policies.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

ip-src-monitoring

Synopsis	Enter the **ip-src-monitoring** context
Context	**configure** system security cpu-protection ip-src-monitoring
Tree	ip-src-monitoring
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

included-protocols

Synopsis	Enter the **included-protocols** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpu-protection ip-src-monitoring included-protocols
Tree	included-protocols
Description	Commands in this context specify the protocols included in IP source monitoring. The protocol packets will be subject to the per-source-rate of CPU protection policies. This configuration applies system wide and applies to CPU protection globally.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

dhcp *boolean*

Synopsis	Include extracted DHCP packets for IP source monitoring
Context	**configure** system security cpu-protection ip-src-monitoring included-protocols dhcp *boolean*
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

gtp *boolean*

Synopsis	Include extracted GTP packets for IP source monitoring
Context	**configure** system security cpu-protection ip-src-monitoring included-protocols gtp *boolean*
Tree	gtp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

icmp *boolean*

Synopsis	Include extracted ICMP packets for IP source monitoring
Context	**configure** system security cpu-protection ip-src-monitoring included-protocols icmp *boolean*
Tree	icmp
Default	false
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

igmp *boolean*

Synopsis	Include extracted IGMP packets for IP source monitoring
Context	**configure** system security cpu-protection ip-src-monitoring included-protocols igmp *boolean*
Tree	igmp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

link-specific-rate *(number | keyword)*

Synopsis	Packet arrival rate limit for link level protocols
Context	**configure** system security cpu-protection link-specific-rate *(number | keyword)*
Tree	link-specific-rate
Description	This command configures a link-specific rate for CPU protection. The limit is applied to all ports within the system. The CPU receives no more than the configured packet rate for all link level protocols, such as LACP, from any one port. The measurement is cleared each second and is based on the ingress port.
Range	1 to 65535
Units	packets per second
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

policy [policy-id] *number*

Synopsis	Enter the **policy** list instance
Context	**configure** system security cpu-protection policy *number*
Tree	policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**policy-id**] *number*

Synopsis	Policy ID
Context	**configure** system security cpu-protection policy *number*
Tree	policy
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

alarm *boolean*

Synopsis	Generate an event when the rate is exceeded
Context	**configure** system security cpu-protection policy *number* alarm *boolean*
Tree	alarm
Description	When configured to **true**, an event is generated when the rate is exceeded. The event includes information about the offending source. Only one event is generated per monitor period. When configured to **false**, notifications are disabled.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

description *string*

Synopsis	Text description
Context	**configure** system security cpu-protection policy *number* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

eth-cfm

Synopsis	Enter the **eth-cfm** context
Context	**configure** system security cpu-protection policy *number* eth-cfm

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	eth-cfm
Description	Commands in this context configure CPU policy entries that determine match criteria and overall arrival rate of the Ethernet Connectivity and Fault Management (ETH-CFM) packets at the CPU.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

entry [id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security cpu-protection policy *number* eth-cfm entry *number*
Tree	entry
Max. Instances	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

[**id**] *number*

Synopsis	Entry ID
Context	**configure** system security cpu-protection policy *number* eth-cfm entry *number*
Tree	entry
Range	1 to 100
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

level start *number* end *number*

Synopsis	Add a list entry for **level**
Context	**configure** system security cpu-protection policy *number* eth-cfm entry *number* level start *number* end *number*
Tree	level
Description	Commands in this context specify the range of domain levels for the match criterion.
Min. Instances	1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

start *number*

Synopsis	Lower bound of the level range
Context	**configure** system security cpu-protection policy *number* eth-cfm entry *number* level start *number* end *number*
Tree	level
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

end *number*

Synopsis	Upper bound of the level range
Context	**configure** system security cpu-protection policy *number* eth-cfm entry *number* level start *number* end *number*
Tree	level
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

opcode start *number* end *number*

Synopsis	Add a list entry for **opcode**
Context	**configure** system security cpu-protection policy *number* eth-cfm entry *number* opcode start *number* end *number*
Tree	opcode
Description	Commands in this context specify the range of operational codes (that identify the application) for the match criterion.
Min. Instances	1
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

start *number*

Synopsis	Lower bound of the OpCode range
Context	**configure** system security cpu-protection policy *number* eth-cfm entry *number* opcode start *number* end *number*

Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

limit-dhcp-ci-addr-zero *boolean*

Synopsis	Apply rate limiting to packets with client IP address 0
Context	**configure** system security cpu-protection policy *number* per-source-parameters ip-src-monitoring limit-dhcp-ci-addr-zero *boolean*
Tree	limit-dhcp-ci-addr-zero
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

per-source-rate *(number | keyword)*

Synopsis	Per-source packet arrival rate limit

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpu-protection policy *number* per-source-rate *(number | keyword)*
Tree	per-source-rate
Description	This command configures the per-source packet arrival rate limit. A source is defined as a unique combination of SAP and MAC source address or SAP and source IP address. The CPU receives no more than the specified packet rate from each source. The measurement is cleared every second. This configuration is applicable only if the policy is assigned to an interface (such as SAPs, subscriber interfaces, and spoke SDPs), and MAC monitoring or IP source monitoring is specified in the CPU protection configuration of the interface.
Range	1 to 65534
Units	packets per second
Options	max
Default	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

port-overall-rate

Synopsis	Enter the **port-overall-rate** context
Context	**configure** system security cpu-protection port-overall-rate
Tree	port-overall-rate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

action-low-priority *boolean*

Synopsis	Mark packets that exceed the rate as low-priority
Context	**configure** system security cpu-protection port-overall-rate action-low-priority *boolean*
Tree	action-low-priority
Description	When configured to **true**, packets that exceed the per-port packet arrival rate limit are marked as low priority for preferential discard later (if there is congestion in the control plane) rather than discarded immediately.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

© 2024 Nokia.

pir *(number | keyword)*

Synopsis	Per-port packet arrival rate limit
Context	**configure** system security cpu-protection port-overall-rate pir *(number | keyword)*
Tree	pir
Range	1 to 65535
Units	packets per second
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

protocol-protection

Synopsis	Enable the **protocol-protection** context
Context	**configure** system security cpu-protection protocol-protection
Tree	protocol-protection
Description	When enabled, the network processor on the CPM discards all packets received for protocols that are not configured on the interface. This action helps to mitigate DoS attacks by filtering invalid control traffic before it ingresses the CPU. For example, if IS-IS is not configured on an interface, protocol protection discards any IS-IS packets received on the interface. Commands in this context further define the action when the context is enabled.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

allow-sham-links *boolean*

Synopsis	Allow OSPF sham link traffic
Context	**configure** system security cpu-protection protocol-protection allow-sham-links *boolean*
Tree	allow-sham-links
Description	When configured to **true**, tunneled OSPF packets received over the backbone network must be explicitly allowed when OSPF sham links form an adjacency over the MPLS-VPRN backbone network.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

© 2024 Nokia.

read-algorithm *keyword*

Synopsis	Input encryption algorithm for configuration secrets
Context	**configure** system security hash-control management-interface classic-cli read-algorithm *keyword*
Tree	read-algorithm
Description	This command specifies how encrypted configuration secrets are interpreted and which encryption types are accepted when secrets are input into the system or read from a configuration file (for example, at system bootup time).
Options	all-hash, hash, hash2, custom
Default	all-hash
Introduced	16.0.R4
Platforms	All

write-algorithm *keyword*

Synopsis	Output encryption algorithm for configuration secrets
Context	**configure** system security hash-control management-interface classic-cli write-algorithm *keyword*
Tree	write-algorithm
Description	This command specifies the format of the output for encrypted configuration secrets (for example, in the saved configuration file, or in the output of the **info** or **show** commands).
Options	cleartext, hash, hash2, custom
Default	hash2
Introduced	16.0.R4
Platforms	All

grpc

Synopsis	Enter the **grpc** context
Context	**configure** system security hash-control management-interface grpc
Tree	grpc
Introduced	16.0.R4
Platforms	All

© 2024 Nokia.

hash-algorithm *keyword*

Synopsis	Encryption algorithm for configuration secrets
Context	**configure** system security hash-control management-interface grpc hash-algorithm *keyword*
Tree	hash-algorithm
Description	This command specifies the format of the input and output for encrypted configuration secrets.
Options	cleartext, hash, hash2, custom
Default	hash2
Introduced	16.0.R4
Platforms	All

md-cli

Synopsis	Enter the **md-cli** context
Context	**configure** system security hash-control management-interface md-cli
Tree	md-cli
Introduced	16.0.R4
Platforms	All

hash-algorithm *keyword*

Synopsis	Encryption algorithm for configuration secrets
Context	**configure** system security hash-control management-interface md-cli hash-algorithm *keyword*
Tree	hash-algorithm
Description	This command specifies the format of the input and output for encrypted configuration secrets.
Options	cleartext, hash, hash2, custom
Default	hash2
Introduced	16.0.R4
Platforms	All

netconf

Synopsis	Enter the **netconf** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security hash-control management-interface netconf
Tree	netconf
Introduced	16.0.R4
Platforms	All

hash-algorithm *keyword*

Synopsis	Encryption algorithm for configuration secrets
Context	**configure** system security hash-control management-interface netconf hash-algorithm *keyword*
Tree	hash-algorithm
Description	This command specifies the format of the input and output for encrypted configuration secrets.
Options	cleartext, hash, hash2, custom
Default	hash2
Introduced	16.0.R4
Platforms	All

keychains

Synopsis	Enter the **keychains** context
Context	**configure** system security keychains
Tree	keychains
Introduced	16.0.R1
Platforms	All

keychain [keychain-name] *string*

Synopsis	Enter the **keychain** list instance
Context	**configure** system security keychains keychain *string*
Tree	keychain
Max. Instances	256
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**keychain-name**] *string*

Synopsis	Keychain name
Context	**configure** system security keychains keychain *string*
Tree	keychain
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the keychain
Context	**configure** system security keychains keychain *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

bidirectional

Synopsis	Enter the **bidirectional** context
Context	**configure** system security keychains keychain *string* bidirectional
Tree	bidirectional
Introduced	16.0.R1
Platforms	All

entry [keychain-entry-index] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security keychains keychain *string* bidirectional entry *number*
Tree	entry
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.

management

Synopsis	Enter the **management** context
Context	**configure** system security management
Tree	management
Description	Commands in this context control which management protocols can be used to access the SR OS router via the 'Base' and 'management' router instances.
Introduced	16.0.R5
Platforms	All

allow-ftp *boolean*

Synopsis	Allow access to the FTP server
Context	**configure** system security management allow-ftp *boolean*
Tree	allow-ftp
Description	When configured to **true**, this command allows FTP access to the SR OS router via the 'Base' and 'management' router instances. When configured to **false**, this command disallows access to the SR OS FTP server.
Default	true
Introduced	16.0.R6
Platforms	All

allow-grpc *boolean*

Synopsis	Allow access to the gRPC server
Context	**configure** system security management allow-grpc *boolean*
Tree	allow-grpc
Description	When configured to **true**, the system allows access to the gRPC server via the 'Base' and 'management' router instances.
Default	true
Introduced	19.5.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

allow-netconf *boolean*

Synopsis	Allow access to the NETCONF server
Context	**configure** system security management allow-netconf *boolean*
Tree	allow-netconf
Description	When configured to **true**, the system allows NETCONF server access to the SR OS router via the 'Base' and 'management' router instances.
Default	true
Introduced	19.5.R1
Platforms	All

allow-ssh *boolean*

Synopsis	Allow access to the SSH server
Context	**configure** system security management allow-ssh *boolean*
Tree	allow-ssh
Description	When configured to **true**, this command allows SSH server access to the SR OS router via the 'Base' and 'management' router instances. When configured to **false**, this command disallows SSH server access.
Default	true
Introduced	16.0.R5
Platforms	All

allow-telnet *boolean*

Synopsis	Allow access to the IPv4 Telnet server
Context	**configure** system security management allow-telnet *boolean*
Tree	allow-telnet
Description	When configured to **true**, the system allows IPv4 Telnet server access to the SR OS router via the 'Base' and 'management' router instances. When configured to **false**, access to the IPv4 Telnet server is not allowed.
Default	true
Introduced	16.0.R5
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

allow-telnet6 *boolean*

Synopsis	Allow access to the Telnet IPv6 server
Context	**configure** system security management allow-telnet6 *boolean*
Tree	allow-telnet6
Description	When configured to **true**, the system allows IPv6 Telnet server access to the SR OS router via the 'Base' and 'management' router instances. When configured to **false**, the system prevents access to the IPv6 Telnet server.
Default	true
Introduced	16.0.R5
Platforms	All

management-access-filter

Synopsis	Enter the **management-access-filter** context
Context	**configure** system security management-access-filter
Tree	management-access-filter
Description	Commands in this context configure the attributes for management access filters. Management access filters control all traffic in and out of the CPM. The filters can be used to restrict management of the router by other nodes outside of specific networks (or sub-networks) or through designated ports. Management filters are enforced by the system software.
Introduced	16.0.R4
Platforms	All

ip-filter

Synopsis	Enter the **ip-filter** context
Context	**configure** system security management-access-filter ip-filter
Tree	ip-filter
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of management-access filters
Context	**configure** system security management-access-filter ip-filter admin-state *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

default-action *keyword*

Synopsis	Default action for the management access filter
Context	**configure** system security management-access-filter ip-filter default-action *keyword*
Tree	default-action
Description	This command specifies the default action for management access in the absence of a specific management access filter match.
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	16.0.R4
Platforms	All

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security management-access-filter ip-filter entry *number*
Tree	entry
Introduced	16.0.R4
Platforms	All

[**entry-id**] *number*

Synopsis	Entry ID to identify the match criteria and the action
Context	**configure** system security management-access-filter ip-filter entry *number*
Tree	entry
Description	This command specifies the entry ID to identify the match criteria and the corresponding action. It is recommended that entries are numbered in staggered increments. This allows users to insert a new entry in an existing policy without having to renumber the existing entries.
Range	1 to 9999

© 2024 Nokia.

Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

action *keyword*

Synopsis	Action associated with the management access filter
Context	**configure** system security management-access-filter ip-filter entry *number* action *keyword*
Tree	action
Description	This command specifies the action associated with the management access filter match criteria entry. If the packet does not meet any of the match criteria, the configured default action is applied.
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	16.0.R4
Platforms	All

description *string*

Synopsis	Text description
Context	**configure** system security management-access-filter ip-filter entry *number* description *string*
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

log-events *boolean*

Synopsis	Enable match logging
Context	**configure** system security management-access-filter ip-filter entry *number* log-events *boolean*
Tree	log-events
Description	When configured to **true**, this command enables match logging. When enabled, matches on the entry cause the Security event mafEntryMatch to be raised.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	When configured to **false**, match logging is disabled.
Default	false
Introduced	16.0.R4
Platforms	All

match

Synopsis	Enter the **match** context
Context	**configure** system security management-access-filter ip-filter entry *number* match
Tree	match
Description	Commands in this context specify match criteria for the entry.
Introduced	16.0.R4
Platforms	All

dst-port

Synopsis	Enable the **dst-port** context
Context	**configure** system security management-access-filter ip-filter entry *number* match dst-port
Tree	dst-port
Introduced	16.0.R4
Platforms	All

mask *number*

Synopsis	IP address mask as the match criterion
Context	**configure** system security management-access-filter ip-filter entry *number* match dst-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Introduced	16.0.R4
Platforms	All

src-ip

Synopsis	Enter the **src-ip** context
Context	**configure** system security management-access-filter ip-filter entry *number* match src-ip
Tree	src-ip
Description	Commands in this context specify match criteria based on the source IP address.
Introduced	16.0.R4
Platforms	All

address *(ipv4-prefix | ipv4-address)*

Synopsis	IP address or IP prefix as the match criterion
Context	**configure** system security management-access-filter ip-filter entry *number* match src-ip address *(ipv4-prefix | ipv4-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R4
Platforms	All

ip-prefix-list *reference*

Synopsis	IP prefix list as the match criterion
Context	**configure** system security management-access-filter ip-filter entry *number* match src-ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** filter match-list ip-prefix-list *string*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	20.7.R1
Platforms	All

mask *string*

Synopsis	IP address mask as the match criterion
Context	**configure** system security management-access-filter ip-filter entry *number* match src-ip mask *string*
Tree	mask

ipv6-filter

Synopsis	Enter the **ipv6-filter** context
Context	**configure** system security management-access-filter ipv6-filter
Tree	ipv6-filter
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of management-access filters
Context	**configure** system security management-access-filter ipv6-filter admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

default-action *keyword*

Synopsis	Default action for the management access filter
Context	**configure** system security management-access-filter ipv6-filter default-action *keyword*
Tree	default-action
Description	This command specifies the default action for management access in the absence of a specific management access filter match.
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	16.0.R4
Platforms	All

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security management-access-filter ipv6-filter entry *number*
Tree	entry
Introduced	16.0.R4

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

[**entry-id**] *number*

Synopsis	Entry ID to identify the match criteria and the action
Context	**configure** system security management-access-filter ipv6-filter entry *number*
Tree	entry
Description	This command specifies the entry ID to identify the match criteria and the corresponding action. It is recommended that entries are numbered in staggered increments. This allows users to insert a new entry in an existing policy without having to renumber the existing entries.
Range	1 to 9999
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

action *keyword*

Synopsis	Action associated with the management access filter
Context	**configure** system security management-access-filter ipv6-filter entry *number* action *keyword*
Tree	action
Description	This command specifies the action associated with the management access filter match criteria entry. If the packet does not meet any of the match criteria, the configured default action is applied.
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	16.0.R4
Platforms	All

description *string*

Synopsis	Text description
Context	**configure** system security management-access-filter ipv6-filter entry *number* description *string*
Tree	description

© 2024 Nokia.

String Length	1 to 80
Introduced	16.0.R4
Platforms	All

log-events *boolean*

Synopsis	Enable match logging
Context	**configure** system security management-access-filter ipv6-filter entry *number* log-events *boolean*
Tree	log-events
Description	When configured to **true**, this command enables match logging. When enabled, matches on the entry cause the Security event mafEntryMatch to be raised. When configured to **false**, match logging is disabled.
Default	false
Introduced	16.0.R4
Platforms	All

match

Synopsis	Enter the **match** context
Context	**configure** system security management-access-filter ipv6-filter entry *number* match
Tree	match
Description	Commands in this context specify match criteria for the entry.
Introduced	16.0.R4
Platforms	All

dst-port

Synopsis	Enable the **dst-port** context
Context	**configure** system security management-access-filter ipv6-filter entry *number* match dst-port
Tree	dst-port
Description	Commands in this context specify match criteria based on the destination port.
Introduced	16.0.R4
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mask *number*

Synopsis	IP address mask as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match dst-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Introduced	16.0.R4
Platforms	All

port *number*

Synopsis	TCP or UDP port number as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match dst-port port *number*
Tree	port
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

flow-label *number*

Synopsis	Flow identifier used to discriminate traffic flows
Context	**configure** system security management-access-filter ipv6-filter entry *number* match flow-label *number*
Tree	flow-label
Range	0 to 1048575
Introduced	16.0.R4
Platforms	All

mgmt-port

Synopsis	Enter the **mgmt-port** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security management-access-filter ipv6-filter entry *number* match mgmt-port
Tree	mgmt-port
Description	Commands in this context specify match criteria based on the Ethernet port.
Introduced	16.0.R4
Platforms	All

cpm

Synopsis	Match any traffic received on any Ethernet port
Context	**configure** system security management-access-filter ipv6-filter entry *number* match mgmt-port cpm
Tree	cpm
Notes	The following elements are part of a choice: **cpm**, (**lag** and **lag-id**), or **port-id**.
Introduced	16.0.R4
Platforms	All

lag *string*

Synopsis	LAG ID as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match mgmt-port lag *string*
Tree	lag
String Length	1 to 27
Notes	The following elements are part of a choice: **cpm**, (**lag** and **lag-id**), or **port-id**.
Introduced	21.2.R1
Platforms	All

port-id *string*

Synopsis	Port ID as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match mgmt-port port-id *string*
Tree	port-id
Notes	The following elements are part of a choice: **cpm**, (**lag** and **lag-id**), or **port-id**.
Introduced	16.0.R4

Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R4
Platforms	All

etype *string*

Synopsis	Ethernet type II Ethertype value as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match etype *string*
Tree	etype
Description	This command specifies an Ethernet type II Ethertype value to be used as a MAC filter match criterion. The Ethernet type field is used by the Ethernet version-II frames and does not apply to IEEE 802.3 Ethernet frames.
String Length	5 to 6
Introduced	16.0.R4
Platforms	All

frame-type *keyword*

Synopsis	MAC frame type as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match frame-type *keyword*
Tree	frame-type
Options	802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii, 802dot1-ag
Default	802dot3
Introduced	16.0.R4
Platforms	All

llc-dsap

Synopsis	Enable the **llc-dsap** context
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-dsap

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	llc-dsap
Description	Commands in this context specify match criteria based on the Destination Service Access Point (DSAP).
Introduced	16.0.R4
Platforms	All

dsap *number*

Synopsis	8-bit DSAP as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-dsap dsap *number*
Tree	dsap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

mask *number*

Synopsis	Mask for DSAP value as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-dsap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R4
Platforms	All

llc-ssap

Synopsis	Enable the **llc-ssap** context
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-ssap
Tree	llc-ssap
Description	Commands in this context specify match criteria based on the Source Service Access Point (SSAP).

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	All

mask *number*

Synopsis	Mask for SSAP value as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-ssap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R4
Platforms	All

ssap *number*

Synopsis	8-bit SSAP as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-ssap ssap *number*
Tree	ssap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

service *string*

Synopsis	Service ID used as the match condition
Context	**configure** system security management-access-filter mac-filter entry *number* match service *string*
Tree	service
String Length	1 to 64
Introduced	16.0.R4
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

snap-oui *keyword*

Synopsis	IEEE 802.3 LLC SNAP Ethernet Frame OUI value for match
Context	**configure** system security management-access-filter mac-filter entry *number* match snap-oui *keyword*
Tree	snap-oui
Description	This command specifies the IEEE 802.3 LLC SNAP Ethernet Frame OUI value as the MAC filter match criterion.
Options	zero, non-zero
Introduced	16.0.R4
Platforms	All

snap-pid *number*

Synopsis	IEEE 802.3 LLC SNAP Ethernet Frame PID as the match
Context	**configure** system security management-access-filter mac-filter entry *number* match snap-pid *number*
Tree	snap-pid
Description	This command specifies an IEEE 802.3 LLC SNAP Ethernet Frame PID value used as the MAC filter match criterion. The SNAP PID match criterion is independent of the OUI field within the SNAP header. Two packets with different 3-byte OUI fields but the same PID field match the same filter entry based on a SNAP PID match criterion.
Range	0 to 65535
Introduced	16.0.R4
Platforms	All

src-mac

Synopsis	Enable the **src-mac** context
Context	**configure** system security management-access-filter mac-filter entry *number* match src-mac
Tree	src-mac
Description	Commands in this context specify match criteria based on the source MAC.
Introduced	16.0.R4
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

address *string*

Synopsis	MAC address used as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match src-mac address *string*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

mask *string*

Synopsis	MAC address mask as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match src-mac mask *string*
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R4
Platforms	All

per-peer-queuing *boolean*

Synopsis	Allow CPM hardware queuing per peer
Context	**configure** system security per-peer-queuing *boolean*
Tree	per-peer-queuing
Description	When configured to **true**, the router automatically allocates a separate CPM hardware queue for the peer when a peering session is established. When configured to **false**, a separate CPM hardware queue is not allowed.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pki

Synopsis	Enter the **pki** context
Context	**configure** system security pki
Tree	pki
Introduced	16.0.R1

Use subject to Terms available at: www.nokia.com/terms.

Max. Instances	128
Introduced	21.10.R1
Platforms	All

[**name**] *string*

Synopsis	Enrollment over Secured Transport profile name
Context	**configure** system security pki est-profile *string*
Tree	est-profile
Description	This command configures the EST profile name.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

check-id-kp-cmcra-only *boolean*

Synopsis	Check id-kp-cmcra in the EST certificate
Context	**configure** system security pki est-profile *string* check-id-kp-cmcra-only *boolean*
Tree	check-id-kp-cmcra-only
Default	false
Introduced	21.10.R1
Platforms	All

client-tls-profile *string*

Synopsis	TLS client profile assigned to applications
Context	**configure** system security pki est-profile *string* client-tls-profile *string*
Tree	client-tls-profile
Description	This command specifies the TLS client profile to be assigned to applications for encryption. The profile creates the TLS connection to the EST server.
String Length	1 to 32
Introduced	21.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

http-authentication

Synopsis	Enter the **http-authentication** context
Context	**configure** system security pki est-profile *string* http-authentication
Tree	http-authentication
Introduced	21.10.R1
Platforms	All

password *string*

Synopsis	Password for EST authentication
Context	**configure** system security pki est-profile *string* http-authentication password *string*
Tree	password
String Length	1 to 115
Introduced	21.10.R1
Platforms	All

username *string*

Synopsis	Username for the EST authentication
Context	**configure** system security pki est-profile *string* http-authentication username *string*
Tree	username
String Length	1 to 32
Introduced	21.10.R1
Platforms	All

server

Synopsis	Enter the **server** context
Context	**configure** system security pki est-profile *string* server
Tree	server
Description	Commands in this context configure EST server parameters.
Introduced	21.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fqdn *string*

Synopsis	Fully Qualified Domain Name (FQDN) of the EST server
Context	**configure** system security pki est-profile *string* server fqdn *string*
Tree	fqdn
Description	This command specifies to use the FQDN of the EST server.
String Length	1 to 255
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	All

ipv4 *string*

Synopsis	IPv4 address of the EST server
Context	**configure** system security pki est-profile *string* server ipv4 *string*
Tree	ipv4
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	All

ipv6 *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IPv6 address of the EST server
Context	**configure** system security pki est-profile *string* server ipv6 *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ipv6
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	All

port *number*

Synopsis	Port number of the EST server
Context	**configure** system security pki est-profile *string* server port *number*
Tree	port

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 65535
Default	443
Introduced	21.10.R1
Platforms	All

transmission-profile *string*

Synopsis	Transmission profile name for EST
Context	**configure** system security pki est-profile *string* transmission-profile *string*
Tree	transmission-profile
Description	This command associates a file transmission profile to the EST profile. The transmission profile defines transport parameters for protocol such as HTTP, include routing instance, source address, timeout value, and so on.
String Length	1 to 32
Introduced	21.10.R1
Platforms	All

imported-format *keyword*

Synopsis	The supported encrypted file formats
Context	**configure** system security pki imported-format *keyword*
Tree	imported-format
Options	any, secure
Default	any
Introduced	16.0.R6
Platforms	All

maximum-cert-chain-depth *number*

Synopsis	Maximum depth of certificate chain verification
Context	**configure** system security pki maximum-cert-chain-depth *number*
Tree	maximum-cert-chain-depth
Range	1 to 7
Default	7
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

python-script

Synopsis	Enter the **python-script** context
Context	**configure** system security python-script
Tree	python-script
Introduced	21.10.R1
Platforms	All

authorization

Synopsis	Enter the **authorization** context
Context	**configure** system security python-script authorization
Tree	authorization
Introduced	21.10.R1
Platforms	All

cron

Synopsis	Enter the **cron** context
Context	**configure** system security python-script authorization cron
Tree	cron
Introduced	21.10.R1
Platforms	All

cli-user *reference*

Synopsis	User profile name when executing a Python application
Context	**configure** system security python-script authorization cron cli-user *reference*
Tree	cli-user
Reference	**configure** system security user-params local-user user *string*
Introduced	21.10.R1
Platforms	All

event-handler

Synopsis	Enter the **event-handler** context
Context	**configure** system security python-script authorization event-handler
Tree	event-handler
Introduced	21.10.R1
Platforms	All

cli-user *reference*

Synopsis	User profile name when executing a Python application
Context	**configure** system security python-script authorization event-handler cli-user *reference*
Tree	cli-user
Reference	**configure** system security user-params local-user user *string*
Introduced	21.10.R1
Platforms	All

snmp

Synopsis	Enter the **snmp** context
Context	**configure** system security snmp
Tree	snmp
Introduced	16.0.R1
Platforms	All

access [group] *string* context *string* security-model *keyword* security-level *keyword*

Synopsis	Enter the **access** list instance
Context	**configure** system security snmp access *string* context *string* security-model *keyword* security-level *keyword*
Tree	access
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**group**] *string*

Synopsis	Group name
Context	**configure** system security snmp access *string* context *string* security-model *keyword* security-level *keyword*
Tree	access
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

context *string*

Synopsis	String to match context name for access rights
Context	**configure** system security snmp access *string* context *string* security-model *keyword* security-level *keyword*
Tree	access
String Length	0 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

security-model *keyword*

Synopsis	Security model
Context	**configure** system security snmp access *string* context *string* security-model *keyword* security-level *keyword*
Tree	access
Options	snmpv1, snmpv2c, usm
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

security-level *keyword*

Synopsis	Minimum security level required to gain access rights

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security snmp access *string* context *string* security-model *keyword* security-level *keyword*
Tree	access
Options	no-auth-no-privacy, auth-no-privacy, privacy
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

notify *string*

Synopsis	SNMP view for notification access
Context	**configure** system security snmp access *string* context *string* security-model *keyword* security-level *keyword* notify *string*
Tree	notify
Description	This command specifies the SNMP view used to control which MIB objects can be accessed for notifications.
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

prefix-match *keyword*

Synopsis	Match type for the context
Context	**configure** system security snmp access *string* context *string* security-model *keyword* security-level *keyword* prefix-match *keyword*
Tree	prefix-match
Options	exact, prefix
Introduced	16.0.R1
Platforms	All

read *string*

Synopsis	SNMP view for read access
Context	**configure** system security snmp access *string* context *string* security-model *keyword* security-level *keyword* read *string*
Tree	read

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the SNMP view used to control which MIB objects can be accessed using a read (get) operation.
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

write *string*

Synopsis	SNMP view for write access
Context	**configure** system security snmp access *string* context *string* security-model *keyword* security-level *keyword* write *string*
Tree	write
Description	This command specifies the SNMP view used to control which MIB objects can be accessed using a write (set) operation.
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

attempts

Synopsis	Enter the **attempts** context
Context	**configure** system security snmp attempts
Tree	attempts
Description	Commands in this context configure settings for SNMPv2 or SNMPv3 connection attempts. The command settings are used to counter Denial of Service (DOS) attacks through SNMP. If the threshold is exceeded, the host is locked out for the lockout time period.
Introduced	16.0.R1
Platforms	All

count *number*

Synopsis	Unsuccessful attempts allowed within time period
Context	**configure** system security snmp attempts count *number*
Tree	count
Range	1 to 64

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	20
Introduced	16.0.R1
Platforms	All

lockout *number*

Synopsis	Lockout period during which the host cannot log in
Context	**configure** system security snmp attempts lockout *number*
Tree	lockout
Description	This command configures the time period during which the host cannot log in. When the host exceeds the attempted counts setting, the host is locked out from further login attempts for the configured time period.
Range	0 to 1440
Units	minutes
Default	10
Introduced	16.0.R1
Platforms	All

time *number*

Synopsis	Time before host lockout after unsuccessful attempts
Context	**configure** system security snmp attempts time *number*
Tree	time
Range	0 to 60
Units	minutes
Default	5
Introduced	16.0.R1
Platforms	All

community [community-string] *string*

Synopsis	Enter the **community** list instance
Context	**configure** system security snmp community *string*
Tree	community
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

[**community-string**] *string*

Synopsis	SNMPv1 or SNMPv2c community string
Context	**configure** system security snmp community *string*
Tree	community
String Length	1 to 114
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

access-permissions *keyword*

Synopsis	Access permissions for objects in the MIB
Context	**configure** system security snmp community *string* access-permissions *keyword*
Tree	access-permissions
Options	r, rw, rwa, mgmt, vpls-mgmt
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

source-access-list *reference*

Synopsis	Source access list to validate received SNMP requests
Context	**configure** system security snmp community *string* source-access-list *reference*
Tree	source-access-list
Reference	**configure** system security snmp source-access-list *string*
Introduced	16.0.R1
Platforms	All

version *keyword*

Synopsis	SNMP version
Context	**configure** system security snmp community *string* version *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	version
Options	v1, v2c, both
Default	both
Introduced	16.0.R1
Platforms	All

source-access-list [list-name] *string*

Synopsis	Enter the **source-access-list** list instance
Context	**configure** system security snmp source-access-list *string*
Tree	source-access-list
Description	Commands in this context configure SNMP source access lists. SNMP source access lists are used to validate the source IP address of received SNMP requests. Multiple community (VPRN or Base router) and USM community instances can reference the same SNMP source access list.
Max. Instances	16
Introduced	16.0.R1
Platforms	All

[**list-name**] *string*

Synopsis	Source access list name
Context	**configure** system security snmp source-access-list *string*
Tree	source-access-list
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

source-host [host-name] *string*

Synopsis	Enter the **source-host** list instance
Context	**configure** system security snmp source-access-list *string* source-host *string*
Tree	source-host

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. Instances	16
Introduced	16.0.R1
Platforms	All

[**host-name**] *string*

Synopsis	Source host entry name
Context	**configure** system security snmp source-access-list *string* source-host *string*
Tree	source-host
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source IP address entry used to validate SNMP requests
Context	**configure** system security snmp source-access-list *string* source-host *string* address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

usm-community [community-string] *string*

Synopsis	Enter the **usm-community** list instance
Context	**configure** system security snmp usm-community *string*
Tree	usm-community
Introduced	16.0.R1
Platforms	All

[**community-string**] *string*

Synopsis	Community string associated with SNMPv3 access group

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security snmp usm-community *string*
Tree	usm-community
String Length	1 to 114
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

group *string*

Synopsis	Group to manage access rights of the community string
Context	**configure** system security snmp usm-community *string* group *string*
Tree	group
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

source-access-list *reference*

Synopsis	Source access list to validate received SNMP requests
Context	**configure** system security snmp usm-community *string* source-access-list *reference*

Platforms	All

source-address

Synopsis	Enter the **source-address** context
Context	**configure** system security source-address
Tree	source-address
Description	Commands in this context configure the IP source address that is used in all unsolicited packets sent by the specified applications. This configuration applies to packets transmitted in-band (for example, a network port on an IOM) and does not apply to packets transmitted out-of-band on the management interface on the CPM Ethernet port. Packets transmitted using the CPM Ethernet port use the address of the CPM Ethernet port as the IP source address in the packet. When a source address is specified for the PTP application, the port-based 1588 hardware timestamping assist function is applied to PTP packets matching the IPv4 address of the router interface used to ingress the SR/ESS or IP address specified in this command. If the IP address is removed, the port-based 1588 hardware timestamping assist function is only applied to PTP packets matching the IPv4 address of the router interface.
Introduced	16.0.R1
Platforms	All

ipv4 [application] *keyword*

Synopsis	Enter the **ipv4** list instance
Context	**configure** system security source-address ipv4 *keyword*
Tree	ipv4
Introduced	16.0.R1
Platforms	All

[**application**] *keyword*

Synopsis	Application that uses the source IP address
Context	**configure** system security source-address ipv4 *keyword*
Tree	ipv4
Options	telnet, ftp, ssh, radius, tacplus, snmptrap, syslog, ping, traceroute, dns, sntp, ntp, cflowd, ptp, mcreporter, sflow, icmp-error, ldap
Notes	This element is part of a list key.

system-passwords

Synopsis	Enter the **system-passwords** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security system-passwords
Tree	system-passwords
Description	This command enters the context to configure system passwords.
Introduced	16.0.R1
Platforms	All

admin-password *string*

Synopsis	Context to configure system passwords
Context	**configure** system security system-passwords admin-password *string*
Tree	admin-password
Description	This command allows a user with administrative permissions to configure a password that enables a user to become an administrator. This password is valid only for one session. When enabled, no authorization to TACACS + or RADIUS is performed and the user is locally regarded as an administrative user. If the **admin-password** is configured in the **configure system security system-passwords admin-password** context, any user can enter the special mode by entering the **enable** command. **enable** is in the default profile. By default, all users are given access to this command. After the **enable** command is entered, the user is prompted for a password. If the password matches, user is given unrestricted access to all commands. The minimum length of the password is determined by the **minimum-length** command. The complexity requirements for the password are determined by the **complexity** command. **Note:** This command applies to a local user, in addition to users on RADIUS, TACACS, and LDAP.
String Length	3 to 136
Introduced	16.0.R1
Platforms	All

tech-support

Synopsis	Enter the **tech-support** context
Context	**configure** system security tech-support

Introduced	23.7.R1
Platforms	All

default-result *keyword*

Synopsis	Default result of certificate status verification
Context	**configure** system security tls client-tls-profile *string* status-verify default-result *keyword*
Tree	default-result
Description	This command configures the default result of the entity certificate verification in the TLS client profile. This command overwrites the EE certificate revocation verification for the TLS client profile.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

By default the router checks the certification revocation status, but if this command is set to **good**, the end-entity certificate revocation status is overwritten and a good revocation status is returned for the EE certificate.

If this command is set to **revoked**, the router returns the actual revocation status of the end-entity certificate.

Options	revoked, good
Default	revoked
Introduced	23.7.R1

status-verify

Synopsis	Enter the **status-verify** context
Context	**configure** system security tls server-tls-profile *string* status-verify
Tree	status-verify
Description	Commands in this context configure certificate revocation status verification options for the end-entity certificate in a TLS server.
Introduced	23.7.R1
Platforms	All

default-result *keyword*

Synopsis	Default result of certificate status verification
Context	**configure** system security tls server-tls-profile *string* status-verify default-result *keyword*
Tree	default-result
Description	This command configures the default result of the entity certificate verification in the TLS server profile. This command overwrites the EE certificate revocation verification for the TLS server profile. By default the router checks the certification revocation status, but if this command is set to **good**, the end-entity certificate revocation status is overwritten and a good revocation status is returned for the EE certificate. If this command is set to **revoked**, the router returns the actual revocation status of the end-entity certificate.
Options	revoked, good
Default	revoked
Introduced	23.7.R1
Platforms	All

tls-re-negotiate-timer *number*

Introduced	16.0.R1
Platforms	All

authentication-order

Synopsis	Enter the **authentication-order** context
Context	**configure** system security user-params authentication-order
Tree	authentication-order
Description	Commands in this context configure the sequence in which the system attempts authentication and authorization among the local user database, RADIUS servers, TACACS+ servers, and LDAP servers. Configure the order from the most preferred method to the least preferred. The presence of all methods in the command line does not guarantee they are all operational. Specifying options that are not available delays user authentication. If all operational methods are attempted and no authentication for a particular login has been granted, an entry in the security log records the failed attempt. Both the attempted login identification and originating IP address are logged with a timestamp. The order is not applicable to SNMPv3. SNMPv3 messages ignore the configured order and are authorized using the locally configured users only. TACACS+, RADIUS, and LDAP are not supported for SNMPv3 authentication. **Note:** This command applies to a local user, in addition to users on RADIUS, TACACS+, and LDAP.

Introduced	16.0.R1
Platforms	All

exit-on-reject *boolean*

Synopsis	Stop authentication and authorization attempts after a reject
Context	**configure** system security user-params authentication-order exit-on-reject *boolean*
Tree	exit-on-reject
Description	When configured to **true**, the router stops authentication and authorization if one of the AAA methods configured in the order sends a rejection. When configured to **false**, the router attempts the next AAA method if a AAA method sends a rejection. If all AAA methods are exhausted, authentication and authorization is rejected. If the order specifies **local** as the first method, the following actions apply: • If this command is set to **true** and the user does not exist, the user is not authenticated. • If the user can be authenticated locally, other methods, if configured, are used for authorization and accounting. • If the user is configured locally but without console access, login is denied.
Default	false
Introduced	16.0.R1
Platforms	All

order *keyword*

Synopsis	Authentication and authorization order
Context	**configure** system security user-params authentication-order order *keyword*
Tree	order
Description	This command specifies the order of authentication and authorization. The default order is [**radius tacplus ldap local]**.
Options	local, radius, tacplus, ldap
Max. Instances	4
Notes	This element is ordered by the user.

key-value *string*

Synopsis	ECDSA public key value
Context	**configure** system security user-params local-user user *string* public-keys ecdsa ecdsa-key *number* key-value *string*
Tree	key-value
Description	This command configures a value for the ECDSA public key. The public key must be enclosed in quotation marks. For ECDSA, the key is between 1 and 1024 bits.
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

rsa

Synopsis	Enter the **rsa** context
Context	**configure** system security user-params local-user user *string* public-keys rsa
Tree	rsa
Description	Commands in this context configure RSA public keys.
Introduced	16.0.R1
Platforms	All

rsa-key [rsa-public-key-id] *number*

Synopsis	Enter the **rsa-key** list instance
Context	**configure** system security user-params local-user user *string* public-keys rsa rsa-key *number*
Tree	rsa-key
Description	Commands in this context configure an RSA public key and associate the key with a username. A user can associate multiple public keys with a username. The key ID identifies these keys for the user.

restricted-to-home *boolean*

Synopsis	Restrict file access to the home directory of the user
Context	**configure** system security user-params local-user user *string* restricted-to-home *boolean*
Tree	restricted-to-home
Description	When configured to **true**, the router denies the user from accessing files outside of their home directory. Files can be accessed locally by CLI file commands and output modifiers such as **>** (file redirect), or remotely via FTP and SCP. The system denies all configuration save operations (such as **admin save**) via any management interface (such as CLI and NETCONF) unless **save-when-restricted** is enabled. File access is denied unless a home directory is configured and the directory is created by an administrator. When configured to **false**, the router permits the user to access all files on the system.
Default	true
Introduced	16.0.R1
Platforms	All

save-when-restricted *boolean*

Synopsis	Save configurations when the user is restricted to home
Context	**configure** system security user-params local-user user *string* save-when-restricted *boolean*
Tree	save-when-restricted
Description	When configured to **true**, the system permits configuration save operations for all configuration regions (such as bof and configure) via any management interface (such as CLI and NETCONF) even if **restricted-to-home** is enabled. The configuration for each region can be saved with **admin save** CLI commands or when committed over NETCONF and gRPC. When configured to **false**, the system denies saving the configuration when **restricted-to-home** is enabled, unless the home directory of the user includes the location of the saved configuration file.
Default	true
Introduced	22.10.R1
Platforms	All

snmp

Synopsis	Enter the **snmp** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security user-params local-user user *string* snmp
Tree	snmp
Introduced	16.0.R1
Platforms	All

authentication

Synopsis	Enable the **authentication** context
Context	**configure** system security user-params local-user user *string* snmp authentication
Tree	authentication
Description	Commands in this context configure the SNMPv3 authentication and privacy protocols for the user to communicate with the router. The keys are stored in an encrypted format in the configuration. The keys configured with these commands must be localized keys, which are a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the **tools perform system management-interface snmp generate-key** command to generate localized authentication and privacy keys. If authentication is not configured, only the username is required to allow and authenticate SNMPv3 operations.
Introduced	16.0.R1
Platforms	All

authentication-key *string*

Synopsis	Localized authentication key
Context	**configure** system security user-params local-user user *string* snmp authentication authentication-key *string*
Tree	authentication-key
Description	This command specifies the authentication key for the authentication protocol. The key must be a localized key, which is a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the **tools perform system management-interface snmp generate-key** command to generate a localized authentication key.
String Length	1 to 115
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

authentication-protocol *keyword*

Synopsis	Authentication protocol
Context	**configure** system security user-params local-user user *string* snmp authentication authentication-protocol *keyword*
Tree	authentication-protocol
Options	hmac-md5-96, hmac-sha1-96, hmac-sha2-224, hmac-sha2-256, hmac-sha2-384, hmac-sha2-512

public-key-only *keyword*

Synopsis	Public key only SSH authentication for this user
Context	**configure** system security user-params local-user user *string* ssh-authentication-method client public-key-only *keyword*
Tree	public-key-only
Description	This command configures the authentication method accepted for the SSH session for the specified user. This user-level configuration overrides the system-level configuration defined in the **configure system security ssh authentication-method public-key-only** command. When unconfigured, the command inherits the setting from the system level command. The command options are: • **true** — accept only public key client authentication for the SSH server • **false** — accept public key or password client authentication for the SSH server. If **interactive-authentication** is configured to **true** in the **configure system security aaa remote-servers radius** or **configure system security aaa remote-servers tacplus** context, the system also accepts interactive keyboard authentication.
Options	false, true
Introduced	23.10.R3
Platforms	All

server

Synopsis	Enter the **server** context
Context	**configure** system security user-params local-user user *string* ssh-authentication-method server
Tree	server
Introduced	23.7.R1
Platforms	All

public-key-only *keyword*

Synopsis	Public key only SSH authentication for this user
Context	**configure** system security user-params local-user user *string* ssh-authentication-method server public-key-only *keyword*
Tree	public-key-only
Description	This command configures the authentication method accepted for the SSH session for the specified user. This user-level configuration overrides the system-level configuration defined in the **configure system security ssh authentication-method public-key-only** command.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When unconfigured, the command inherits the setting from the system level command.

The command options are:

- **true** — accept only public key client authentication for the SSH server
- **false** — accept public key or password client authentication for the SSH server. If **interactive-authentication** is configured to **true** in the **configure system security aaa remote-servers radius** or **configure system security aaa remote-servers tacplus** context, the system also accepts interactive keyboard authentication.

Options false, true

Introduced 23.7.R1

Platforms All

vprn-network-exceptions

Synopsis Enable the **vprn-network-exceptions** context

Context **configure** system security vprn-network-exceptions

Tree vprn-network-exceptions

Description Commands in this context configure the rate limiting attributes for processing packets with label TTL expiry received within an LSP shortcut or VPRN instances in the system and from all network IP interfaces. This includes labeled user and control plan packets, ping, and traceroute packets within GRT and VPRN, and ICMP replies.

These commands do not rate limit MPLS or service OAM packets.

Introduced 16.0.R1

Platforms All

count *number*

Synopsis Limit of exception messages received

Context **configure** system security vprn-network-exceptions count *number*

Tree count

Description This command specifies the threshold limit of exception messages. If the threshold value is exceeded within the configured time interval, packets are dropped.

Range 10 to 1000

Default 100

Introduced 16.0.R1

Platforms All

© 2024 Nokia.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

switch-fabric

Synopsis	Enter the **switch-fabric** context
Context	**configure** system switch-fabric
Tree	switch-fabric
Description	Commands in this context configure system level attributes related to the switch fabric.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR-7, 7750 SR-12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

failure-recovery

Synopsis	Enter the **failure-recovery** context
Context	**configure** system switch-fabric failure-recovery
Tree	failure-recovery
Description	Commands in this context configure the attributes related to the automatic switch fabric recovery process. This process is triggered when there are two resets of an IOM/XCM due to ICC failures within a small time frame. The recovery process involves the sequential resetting of SFM in case the issues are due to one of the SFM in the ICC communication path. As the final step in the recovery process, a CPM switchover is triggered to reset the active CPM.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR-7, 7750 SR-12e, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the failure recovery process
Context	**configure** system switch-fabric failure-recovery admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable

Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR-7, 7750 SR-12e, 7950 XRS

sfm-loss-threshold *number*

Synopsis	Number of SFMs that can fail before SFM overload state
Context	**configure** system switch-fabric sfm-loss-threshold *number*
Tree	sfm-loss-threshold
Description	This command specifies the number of SFMs that are permitted to fail before the system goes into SFM overload state. The default value for the 7750 SR-7s is 1 and the default value for the 7750 SR-14s is 2. Users can select the SFM limit based on the number possible for the system minus one. For the 7750 SR-7s, the limit is 3 and the limit for the 7750 SR-14s is 7.
Range	1 to 7
Introduced	20.5.R1
Platforms	7750 SR-7s, 7750 SR-14s

telemetry

Synopsis	Enter the **telemetry** context
Context	**configure** system telemetry
Tree	telemetry
Description	Commands in this context configure the parameters for the dial-out telemetry functionality.
Introduced	20.2.R1
Platforms	All

destination-group [name] *string*

Synopsis	Enter the **destination-group** list instance
Context	**configure** system telemetry destination-group *string*
Tree	destination-group
Description	Commands in this context configure parameters for destination groups.
Max. Instances	225
Introduced	20.5.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system telemetry notification-bundling max-time-granularity *number*
Tree	max-time-granularity
Description	This command sets the maximum time interval during which telemetry notifications are bundled. All bundled notifications have the same timestamp, which is the timestamp of the bundle.
Range	1 to 1000
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	All

persistent-subscriptions

Synopsis	Enter the **persistent-subscriptions** context
Context	**configure** system telemetry persistent-subscriptions
Tree	persistent-subscriptions
Introduced	20.5.R1
Platforms	All

delay-on-boot *number*

Synopsis	Delay for persistent subscriptions after system boot
Context	**configure** system telemetry persistent-subscriptions delay-on-boot *number*
Tree	delay-on-boot
Description	This command configures the delay timer for gRPC telemetry persistent subscriptions. When the timer expires, gRPC telemetry persistent subscriptions become operational and connections are initiated. This delay prevents the system from trying to establish gRPC persistent subscriptions while it is still converging. When no delay is configured, gRPC telemetry persistent subscriptions are initiated after the system boots and gRPC becomes operational.
Range	1 to 3600
Units	seconds
Introduced	23.10.R1
Platforms	All

sensor-group *reference*

Synopsis	Sensor group used in the persistent subscription
Context	**configure** system telemetry persistent-subscriptions subscription *string* sensor-group *reference*
Tree	sensor-group
Description	This command specifies the sensor group to be used in the persistent subscription. If no valid paths exist in the sensor group, the configuration is accepted, however, no gRPC connection is established when persistent subscription is activated.
Reference	**configure** system telemetry sensor-groups sensor-group *string*

Synopsis	Falling threshold for the sampled statistic
Context	**configure** system thresholds cflash-cap-alarm-percent *string* falling-threshold *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	falling-threshold
Description	This command specifies a falling threshold for the sampled statistic. When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single threshold-crossing event is generated. A single threshold-crossing event is also generated if the first sample taken is less than or equal to this threshold and the associated **startup-alarm** command is equal to the **falling** or **either** values. After a falling threshold-crossing event is generated, another such event is not generated until the sampled value rises above this threshold and reaches greater than or equal to the **rising-threshold** command.
Range	0 to 100
Units	percent
Introduced	16.0.R4
Platforms	All

interval *number*

Synopsis	Polling period over which data is sampled and compared
Context	**configure** system thresholds cflash-cap-alarm-percent *string* interval *number*
Tree	interval
Description	This command specifies the polling interval over which the data is sampled and compared with the rising and falling thresholds.
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

rising-threshold *number*

Synopsis	Rising threshold for the sampled statistic
Context	**configure** system thresholds cflash-cap-alarm-percent *string* rising-threshold *number*
Tree	rising-threshold
Description	This command specifies a rising threshold for the sampled statistic. When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single threshold-crossing event is generated. A single threshold crossing event is also generated if the first sample taken is greater than or equal to this threshold and the associated **startup-alarm** command is equal to the **rising** or **either** values.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

After a rising threshold-crossing event is generated, another such event is not generated until the sampled value falls below this threshold and reaches less than or equal the **falling-threshold** command.

Range	0 to 100
Units	percent
Notes	This element is mandatory.

authentication-keychain *reference*

Synopsis	Keychain used to authenticate broadcast messages
Context	**configure** system time ntp broadcast *reference* interface-name *string* authentication-keychain *reference*
Tree	authentication-keychain
Description	This command configures the keychain used to authenticate messages sent by this node. The keychain infrastructure is queried using this keychain name to get the youngest key used for generating the authentication value for the message. When an NTP packet is received by this node, the keychain infrastructure is queried using the keychain name and the key ID extracted from the received message to get the key used to perform the authentication check. If authentication does not pass, the packet is rejected. Keychain entries also have a direction. The key ID and authentication keychain are mutually exclusive. When neither one is set, for example, the key ID has a value of '0' and the value of this command is empty, no authentication is performed.

prefer-local-time *boolean*

Synopsis	Use local time over UTC time in the system
Context	**configure** system time prefer-local-time *boolean*
Tree	prefer-local-time
Description	When configured to **true**, the system uses local time. This preference is applied to objects such as log file names, created and completed times reported in log files, NETCONF and gRPC date-and-time leafs, and rollback times displayed in **show** command outputs. When configured to **false**, the system uses UTC time. **Note**: The timezone used for **show** command outputs during a CLI session can be controlled using the **environment time-display** command. **Note**: The format used for the date-time strings may change, depending on the command setting. For example, when this command is set to **true**, all date-time strings include a suffix of three to five characters that indicates the timezone used. **Note**: The time format for timestamps on log events is controlled on a per-log basis, using the **configure log log-id time-format** command.
Default	false
Introduced	16.0.R1
Platforms	All

3.47.1 test-oam command descriptions

test-oam

Synopsis	Enter the **test-oam** context
Context	**configure** test-oam
Tree	test-oam
Introduced	16.0.R4
Platforms	All

icmp

Synopsis	Enter the **icmp** context
Context	**configure** test-oam icmp
Tree	icmp
Introduced	20.10.R1
Platforms	All

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** test-oam icmp ipv6
Tree	ipv6
Introduced	22.7.R1
Platforms	All

length-field *boolean*

Synopsis	Use length field in ICMPv6 responses
Context	**configure** test-oam icmp ipv6 length-field *boolean*
Tree	length-field
Default	false
Introduced	22.7.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

maximum-original-datagram *boolean*

Synopsis	ICMPv6 traceroute responses with largest datagram
Context	**configure** test-oam icmp ipv6 maximum-original-datagram *boolean*
Tree	maximum-original-datagram
Description	When configured to **true**, this command enables the original datagram field of the ICMPv6 error message to be a maximum of 1232 bytes. When configured to **false**, the original datagram field of the ICMPv6 error message smaller than 1232 bytes be built smaller.
Default	false
Introduced	22.7.R1
Platforms	All

ping-template [name] *string*

Synopsis	Enter the **ping-template** list instance
Context	**configure** test-oam icmp ping-template *string*
Tree	ping-template
Description	Commands in this context define ping timers and thresholds that verify connectivity and the the operational state of the IP interface.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**name**] *string*

Synopsis	Ping template name
Context	**configure** test-oam icmp ping-template *string*
Tree	ping-template
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam icmp ping-template *string* description *string*
Tree	description
String Length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dot1p *number*

Synopsis	Dot1p in Ethernet header of outgoing ping packets
Context	**configure** test-oam icmp ping-template *string* dot1p *number*
Tree	dot1p
Range	0 to 7
Default	7
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dscp *keyword*

Synopsis	DSCP value used in the outgoing ping packet
Context	**configure** test-oam icmp ping-template *string* dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Default	nc1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

failure-threshold *number*

Synopsis	Failure threshold to declare inter-connectivity down
Context	**configure** test-oam icmp ping-template *string* failure-threshold *number*
Tree	failure-threshold
Range	2 to 10

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

Synopsis	Packet transmit interval
Context	**configure** test-oam icmp ping-template *string* interval *number*
Tree	interval
Range	1 to 60
Units	seconds
Default	60
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reactivation-failure-threshold *number*

Synopsis	Threshold of consecutive failures at reactivation
Context	**configure** test-oam icmp ping-template *string* reactivation-failure-threshold *number*
Tree	reactivation-failure-threshold
Description	This command configures the number of consecutive failures that must occur when transmitting at the reactivation interval without success before the transmission interval is changed to the standard interval.
Range	1 to 10
Default	4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reactivation-interval *number*

Synopsis	Ping reactivation interval
Context	**configure** test-oam icmp ping-template *string* reactivation-interval *number*
Tree	reactivation-interval
Description	This command configures the packet transmit interval used when the IP interface becomes operationally down because of a ping template failure after receiving a successful response to the previous ICMP echo request.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 60
Units	seconds
Default	1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reactivation-threshold *number*

Synopsis	Success threshold to declare inter-connectivity up
Context	**configure** test-oam icmp ping-template *string* reactivation-threshold *number*
Tree	reactivation-threshold
Description	This command configures the minimum number of consecutive successful responses of ICMP replies that must occur before the IP interface transitions from operationally down (due to ping validation failure) to operationally up. This value is a stability metric intended to prevent flapping.
Range	1 to 10
Default	3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reactivation-timeout *number*

Synopsis	Reactivation wait time before packet is declared lost
Context	**configure** test-oam icmp ping-template *string* reactivation-timeout *number*
Tree	reactivation-timeout
Range	1 to 60
Units	seconds
Default	1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

size *number*

Synopsis	Data field size of the outgoing ICMP echo packet
Context	**configure** test-oam icmp ping-template *string* size *number*
Tree	size

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	12 to 9786
Units	octets
Default	56
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

timeout *number*

Synopsis	Wait time before ICMP echo request is declared lost
Context	**configure** test-oam icmp ping-template *string* timeout *number*
Tree	timeout
Range	1 to 60
Units	seconds
Default	5
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ttl *number*

Synopsis	TTL value for the outgoing ping packet
Context	**configure** test-oam icmp ping-template *string* ttl *number*
Tree	ttl
Description	This command configures the TTL value used in the outgoing ping packet. The tested interface must be directly connected on the same subnet.
Range	1 to 255
Default	1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

link-measurement

Synopsis	Enter the **link-measurement** context
Context	**configure** test-oam link-measurement
Tree	link-measurement

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the link measurement template attributes that are inherited on associated IP interfaces for delay reporting to the routing engine.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

measurement-template [template-name] *string*

Synopsis	Enter the **measurement-template** list instance
Context	**configure** test-oam link-measurement measurement-template *string*
Tree	measurement-template
Description	Commands in this context configure the attributes of the measurement template that can be assigned to an IP interface. Changes can be made without disabling the template, although some modifications cause the test on associated IP interfaces to terminate and restart. A measurement template can be removed if no interfaces reference it.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**template-name**] *string*

Synopsis	Measurement template name
Context	**configure** test-oam link-measurement measurement-template *string*
Tree	measurement-template
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the measurement template
Context	**configure** test-oam link-measurement measurement-template *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

aggregate-sample-window

Synopsis	Enter the **aggregate-sample-window** context
Context	**configure** test-oam link-measurement measurement-template *string* aggregate-sample-window
Tree	aggregate-sample-window
Description	Commands in this context configure the attributes of the aggregate sample window used with the measurement template assigned to an IP interface. The aggregate sample window is the collection of sample windows.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *number*

Synopsis	Number of sample windows in the aggregate sample window
Context	**configure** test-oam link-measurement measurement-template *string* aggregate-sample-window multiplier *number*
Tree	multiplier
Range	1 to 12
Default	12
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold

Synopsis	Enter the **threshold** context
Context	**configure** test-oam link-measurement measurement-template *string* aggregate-sample-window threshold
Tree	threshold
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

absolute *number*

Synopsis	Absolute delta for delay measurement reporting
Context	**configure** test-oam link-measurement measurement-template *string* aggregate-sample-window threshold absolute *number*
Tree	absolute
Description	This command configures the absolute minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine. If an absolute value is not configured the threshold is disabled.
Range	1 to 100000
Units	microseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

relative *number*

Synopsis	Relative delta for measurement reporting
Context	**configure** test-oam link-measurement measurement-template *string* aggregate-sample-window threshold relative *number*
Tree	relative
Description	This command configures the relative minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine. If a relative value is not configured, the threshold is disabled.
Range	1 to 100
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

window-integrity *number*

Synopsis	Sample percentage required for window integrity report
Context	**configure** test-oam link-measurement measurement-template *string* aggregate-sample-window window-integrity *number*
Tree	window-integrity
Description	This command configures the percentage value that is used to determine whether the aggregate sample window is integral, by comparing the number of samples received from the sample window to the percentage configured.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The configured percentage translates to a required sample window count that must be included in the aggregate sample window. The number of samples is computed as follows:

(window-integrity (%)) x (((aggregate-sample-window length (s)) / (sample-window length (s)))

If the number of samples in the aggregate sample window is equal to or greater than the computed number of required samples, the sample window has integrity and the aggregate sample window result is compared to the configured sample window thresholds.

If the count is less than the computed number of required samples, the aggregate sample window does not have integrity and the value is not considered as representative. In this case the aggregate sample window results are not compared to the configured sample window thresholds.

If this parameter is not configured, integrity checking is disabled and all results are compared to the configured thresholds.

Range	1 to 100
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delay *keyword*

Synopsis	Delay measurement statistic type
Context	**configure** test-oam link-measurement measurement-template *string* delay *keyword*
Tree	delay
Description	This command configures the type of delay measurement statistic used in the sample window and aggregate sample window.
Options	min, max, avg
Default	min
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	**configure** test-oam link-measurement measurement-template *string* description *string*
Tree	description
String Length	1 to 80

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

Synopsis	Interval between test packet transmissions
Context	**configure** test-oam link-measurement measurement-template *string* interval *number*
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

last-reported-delay-hold *number*

Synopsis	Time to wait to flush the last reported delay
Context	**configure** test-oam link-measurement measurement-template *string* last-reported-delay-hold *number*
Tree	last-reported-delay-hold
Description	This command configures the timer that specifies the wait time before the last reported delay measurement is flushed after a link measurement test enters the operationally down state. The aging timer delays the flushing of the last reported delay metric to the routing engine. This timer starts a countdown to zero when an administrative function causes the operational state of the test on that specific interface to transition from up to down. If the timer expires before the operational state transitions to up, the previously reported value is flushed. The Delay Measurement Last Reported indicates “Cleared”. The timestamp indicates the time of the clear event. The Triggered By indicates “Expired”. If the administrative state recovers to operationally up before the expiration of the timer, the previous reported value is not flushed. The aging timer does not apply to failure conditions that do not affect the administrative state of the interface, for example interface failure or routing changes.
Range	0 | 1 to 86400
Units	seconds
Default	86400
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

reporting *boolean*

Synopsis	Report behavior for values for the configured threshold
Context	**configure** test-oam link-measurement measurement-template *string* reporting *boolean*
Tree	reporting
Description	When configured to **true**, the system reports a reached threshold to the routing engine.Reaching a configured **sample-window** or **aggregate-sample-window** indicates a value of interest. When configured to **false**, values reaching thresholds are not reported to the routing engine. In both enabled and disabled cases, the sample-window and aggregate-sample-window information and computed values are stored on the node until overwriting occurs.
Default	true
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sample-window

Synopsis	Enter the **sample-window** context
Context	**configure** test-oam link-measurement measurement-template *string* sample-window
Tree	sample-window
Description	Commands in this context configure sample window attributes used when the measurement template is assigned to an IP interface. The sample window is the collection of individual probe results over a defined period.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *number*

Synopsis	Multiplier of interval used for sample window length
Context	**configure** test-oam link-measurement measurement-template *string* sample-window multiplier *number*
Tree	multiplier
Description	This command configures the number of probe results that should be in the sample window. For example, a multiplier of 10 and an interval of 5 equals 50 probes being transmitted from an individual sample window. Consequently, 50 probe results are expected within the 50 second duration that the sample window is “In-progress”.
Range	1 to 900

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	10
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold

Synopsis	Enter the **threshold** context
Context	**configure** test-oam link-measurement measurement-template *string* sample-window threshold
Tree	threshold
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

absolute *number*

Synopsis	Absolute delta for delay measurement reporting
Context	**configure** test-oam link-measurement measurement-template *string* sample-window threshold absolute *number*
Tree	absolute
Description	This command configures the absolute minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine. If an absolute value is not configured the threshold is disabled.
Range	1 to 100000
Units	microseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

relative *number*

Synopsis	Relative delta for delay measurement reporting
Context	**configure** test-oam link-measurement measurement-template *string* sample-window threshold relative *number*
Tree	relative
Description	This command configures the relative minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If a relative value is not configured, the threshold is disabled.

Range	1 to 500
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

window-integrity *number*

Synopsis	Sample percentage required for window integrity report
Context	**configure** test-oam link-measurement measurement-template *string* sample-window window-integrity *number*
Tree	window-integrity
Description	This command configures the percentage value that is used to determine whether the sample window has enough samples to be considered representative for that window (integrity), by comparing the number of samples received from the sample window to the percentage configured. The configured percentage considers the interval of probes and the length of the sample window to determine the number of packets required in the sample: (window-integrity (%)) x ((sample-window length (s)) / pps per test (interval)) If the count is less than the computed number of required samples, the sample window does not have integrity and the sample window results are not compared to configured sample window thresholds. If the count is equal to or greater than the computed number of required samples, the sample window has integrity and the aggregate sample window result is compared to the configured sample window thresholds. If the count is less than the computed number of required samples, the sample window does not have integrity and the value is not considered as representative. In this case the sample window results are not compared to the configured sample window thresholds. If this parameter is not configured, integrity checking is disabled and all results are compared to the configured thresholds.
Range	1 to 100
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

twamp-light

Synopsis	Enter the **twamp-light** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam link-measurement measurement-template *string* twamp-light
Tree	twamp-light
Description	Commands in this context configure TWAMP Light attributes that are used with the measurement template when assigned to IP interfaces.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-egress-remark-dscp *boolean*

Synopsis	Allow overwrite of DSCP value by the egress QoS policy
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light allow-egress-remark-dscp *boolean*
Tree	allow-egress-remark-dscp
Description	When configured to **true**, the egress QoS process is able to modify the DSCP based on the egress QoS configuration and expose the DSCP to egress DSCP processing rules. When configured to **false**, the egress QoS process uses the DSCP as configured and bypasses egress QoS DSCP marking. If the **configure qos network egress remark-trusted force-egress-marking** command is configured for the network egress QoS profile, the egress QoS process is applied and the DSCP can be overwritten regardless of the **allow-egress-remark-dscp** configuration.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-ipv6-udp-checksum-zero *boolean*

Synopsis	Process IPv6 packets with UDP check sum zero
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light allow-ipv6-udp-checksum-zero *boolean*
Tree	allow-ipv6-udp-checksum-zero
Description	When configured to **true**, processing of IPv6 packets that arrive with a UDP checksum of zero is allowed. The destination UDP ports that are registered as TWAMP Test packets in the template allow this behavior. When configured to **false**, IPv6 packets that arrive with a UDP checksum of zero are discarded.
Default	false
Introduced	21.7.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dest-udp-port *number*

Synopsis	Destination UDP port used by link measurement tests
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light dest-udp-port *number*
Tree	dest-udp-port
Description	This command configures the destination UDP port on outbound TWAMP Light measurement packets sent from the session controller. The destination UDP port must match the UDP port value configured on the TWAMP Light reflector that responds to this specific TWAMP Light test.
Range	1 to 65535
Default	862
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dscp *keyword*

Synopsis	DSCP copied to TWAMP Light echo request packet header
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light dscp *keyword*
Tree	dscp
Description	This command configures the DSCP to be copied into the IP header of each TWAMP Light echo request packet launched for the test.
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Default	nc1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc *keyword*

Synopsis	Forwarding class name for the TWAMP Light packets

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam link-measurement measurement-template *string* twamp-light fc *keyword*
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Default	h1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6-destination-discovery

Synopsis	Enter the **ipv6-destination-discovery** context
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light ipv6-destination-discovery
Tree	ipv6-destination-discovery
Description	Commands in this context configure IPv6 discovery of a directly-connected IPv6 peer address.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of IPv6 auto destination discovery
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light ipv6-destination-discovery admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

discovery-interval *number*

Synopsis	Transmission frequency for discovery packets
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light ipv6-destination-discovery discovery-interval *number*
Tree	discovery-interval

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures transmission frequency of the discovery packet to the all-routers multicast group (ff02::2) to discover the link-local address of the peer. This frequency is used during the **discover-timer** interval.
Range	1 to 10
Units	seconds
Default	10
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

discovery-timer *number*

Synopsis	Maximum time to remain in the discovery phase
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light ipv6-destination-discovery discovery-timer *number*
Tree	discovery-timer
Description	This command configures the amount of time to transmit peer discovery packets at the **discovery-interval**. The timer starts when the IPv6 protocols is enabled under the **configure router interface if-attribute delay dynamic twamp-light ipv6** context. At the expiration of the **discovery-interval** or when a peer is discovered, whichever comes first, the probe interval changes to the value configured for the **update-interval**.
Range	1 to 1800
Units	seconds
Default	60
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

update-interval *number*

Synopsis	Transmission frequency to maintain the peer address
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light ipv6-destination-discovery update-interval *number*
Tree	update-interval
Range	0 | 1 to 3600
Units	seconds
Default	600
Introduced	22.7.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pad-tlv-size *number*

Synopsis	Optional PAD TLV size
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light pad-tlv-size *number*
Tree	pad-tlv-size
Description	This command enables a STAMP PDU to include the PAD TLV. This increases the size of the STAMP PDU by the size of the added TLV. The PAD TLV includes an all zeros pattern.
Range	4 to 9714
Units	bytes
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

profile *keyword*

Synopsis	QoS profile for packet treatment in local node
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light profile *keyword*
Tree	profile
Description	This command specifies if the packets should be treated as in or out of profile as they move through the local node.
Options	in, out
Default	in
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

return-path

Synopsis	Enter the **return-path** context
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light return-path
Tree	return-path
Description	Commands in this context configure the return-path TLV carried in the STAMP PDU.
Introduced	22.7.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

link *boolean*

Synopsis The Return Path sub-TLV specifying link

Context **configure** test-oam link-measurement measurement-template *string* twamp-light return-path link *boolean*

Tree link

Description When configured to **true**, the system includes the **return-path** TLV link. The link sub-tlv instructs a Session-Reflector configured for type **stamp** to use the receiving logical IP interface for the transmission of the response packet from the reflector to the **session-sender**. The destination of the reflected packet must be installed in the forwarding table and reachable out the IP interface or the packet is dropped by the Session-Reflector. When there are parallel non-equal cost return paths between the Session-Reflector and the Session-Sender the response packet can only be returned on the lowest cost path.

When configured to **false**, the Return Path TLV carried in the STAMP PDU is not included with the test packet.

Default false

Introduced 22.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

src-udp-port *number*

Synopsis Fixed source UDP port for link measurement tests

Context **configure** test-oam link-measurement measurement-template *string* twamp-light src-udp-port *number*

Tree src-udp-port

Description This command specifies a source UDP port for link measurement tests.

Unless required, Nokia suggests that the link measurement dynamically select an available source UDP port from the dynamic range. Before a UDP port in the configurable range can be configured as a source it must be owned by the application. Use the **configure test-oam twamp twamp-light source-udp-port-pools port pool-type** command to map the port range to the application.

By default a source UDP port allocates from the dynamic range. The configuration of the source port should only be configured when required for interoperability. When the source IP, destination IP, and destination UPD port are the same for a test, the source UDP port must be different in order to uniquely identify the session.

Range 64374 to 64383

Introduced 22.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.

timestamp-format *keyword*

Synopsis	Format of the timestamp used in TWAMP Light PDU
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light timestamp-format *keyword*
Tree	timestamp-format
Description	This command configures the format of the timestamp used in the TWAMP Light PDU and places the requested timestamp format in the packet using the appropriate epoch. This is unrelated to any time distribution protocol used to synchronize time between clocks.
Options	ntp – Network Time Protocol ptp – Precision Time Protocol
Default	ntp
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ttl *number*

Synopsis	Time to live value used in the TWAMP Light test packet
Context	**configure** test-oam link-measurement measurement-template *string* twamp-light ttl *number*
Tree	ttl
Range	1 to 255
Default	1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

unidirectional-measurement *keyword*

Synopsis	Method used to compute the unidirectional delay value
Context	**configure** test-oam link-measurement measurement-template *string* unidirectional-measurement *keyword*
Tree	unidirectional-measurement
Description	This command specifies the unidirectional delay computation method as the actual forward delay (calculated using T2-T1 timestamps) or as derived using the round-trip delay divided by two (required if nodal clocks are not synchronized using an accurate time-synchronization method or protocol such as PTP).
Options	derived, actual

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	derived
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mpls

Synopsis	Enter the **mpls** context
Context	**configure** test-oam mpls
Tree	mpls
Introduced	23.7.R1
Platforms	All

echo-request-downstream-map *keyword*

Synopsis	Format of the downstream mapping TLV
Context	**configure** test-oam mpls echo-request-downstream-map *keyword*
Tree	echo-request-downstream-map
Description	This command specifies the format of the downstream mapping TLV to use in all LSP trace packets and LDP tree trace packets originated on this node. The following downstream mapping TLVs are supported: the original Downstream Mapping (DSMAP) TLV, defined in RFC 4379 (obsoleted by RFC 8029) and the Downstream Detailed Mapping (DDMAP) TLV, defined in RFC 6424. See the "DDMAP TLV" section in the *7450 ESS, 7750 SR, 7950 XRS, and VSR OAM and Diagnostics Guide* for more information.
Options	dsmap – Downstream Mapping TLV ddmap – Downstream Detailed Mapping TLV
Default	dsmap
Introduced	23.7.R1
Platforms	All

timestamp-format *keyword*

Synopsis	Timestamp format for MPLS ping request and reply PDUs
Context	**configure** test-oam mpls timestamp-format *keyword*
Tree	timestamp-format
Options	rfc4379 – 1900-based timestamp (standard) unix – 1970-based timestamp

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	unix
Introduced	23.7.R1
Platforms	All

mpls-dm

Synopsis	Enter the **mpls-dm** context
Context	**configure** test-oam mpls-dm
Tree	mpls-dm
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of MPLS DM packet processing
Context	**configure** test-oam mpls-dm admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

service-activation-testhead

Synopsis	Enter the **service-activation-testhead** context
Context	**configure** test-oam service-activation-testhead
Tree	service-activation-testhead
Description	Commands in this context configure service activation launch parameters for the testhead function. This functionality is supported on FP4 and later platforms.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

acceptance-criteria-template [ac-template-name] *string*

Synopsis	Enter the **acceptance-criteria-template** list instance
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *string*
Tree	acceptance-criteria-template
Description	Commands in this context configure the test acceptance criteria policy that the service test testhead OAM tool uses to determine the test result after test completion. The “default” value of this command is attached to every **service-stream** created under the **service-test** context for which no explicit acceptance criteria template policy is configured by the user. The default acceptance criteria template is not user-configurable. The default template does not set thresholds and only reports the end-of-run values.
Max. Instances	100
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

[**ac-template-name**] *string*

Synopsis	Acceptance criteria template name
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *string*
Tree	acceptance-criteria-template
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

cir-threshold *number*

Synopsis	CIR threshold
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *string* cir-threshold *number*
Tree	cir-threshold
Description	This command configures a CIR value that is compared to the measured results for the CIR test types. If the measured value is equal to or greater than the configured value, the test passes; otherwise, it fails. For more information, see the **m-factor** command.
Range	1 to 400000000
Units	kilobps

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

delay-threshold *number*

Synopsis	Delay threshold configuration for acceptance criteria template
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *string* delay-threshold *number*
Tree	delay-threshold
Description	This command configures a delay value that is compared to the measured delay at the end of the test to declare the test result. If the measured value is greater than the configured value, the test fails; otherwise, it passes. A measured delay value of zero also causes the test to fail.
Range	1 to 100000000
Units	microseconds
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

delay-var-threshold *number*

Synopsis	Delay variation threshold configuration for acceptance criteria template
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *string* delay-var-threshold *number*
Tree	delay-var-threshold
Description	This command configures a delay variation value that is compared to the measured delay variation at the end of the test to declare the test result. If the measured value is greater than the configured value, the test fails; otherwise, it passes.
Range	1 to 100000000
Units	microseconds
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

description *string*

Tree	description
String Length	1 to 80
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

loss-threshold *decimal-number*

Synopsis	Loss threshold for acceptance criteria template
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *string* loss-threshold *decimal-number*
Tree	loss-threshold
Description	This command configures a frame loss ratio (FLR) value that is compared to the measured FLR at the end of the test to determine the test result. If the measured value is greater than the configured value, the test fails; otherwise, it passes. Thresholds must be explicitly configured to use them for the comparison. The FLR is computed as a ratio of the difference of the number of received frames to the number of injected or sent frames divided by the number of sent frames.
Range	0.0000 to 100.0000
Units	percent
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

loss-threshold-policing *decimal-number*

Synopsis	Frame loss ratio for a policing test
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *string* loss-threshold-policing *decimal-number*
Tree	loss-threshold-policing
Description	This command configures a frame loss ratio (FLR) value for a policing test. The value is compared to the measured FLR at the end of the test to determine the test result. If the measured value is greater than the configured value, the test fails; otherwise, it passes. Thresholds must be explicitly configured before they can be used for comparison. The FLR is computed as a ratio of the difference of the number of received frames to the number of injected or sent frames divided by the number of sent frames.
Range	0.0000 to 100.0000
Units	percent
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

m-factor *number*

Synopsis	Throughput margin configuration
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *string* m-factor *number*
Tree	m-factor
Description	This command configures the margin by which the observed throughput is off from the configured throughput to determine whether a service test passes or fails. The M-factor is used with the CIR threshold and PIR threshold values for different test types to determine whether a test passes or fails. type **cir** • If the measured throughput is less than the difference of the configured CIR threshold and the M-factor, the test fails. type **cir-pir** • If the measured throughput is less than the difference of the configured PIR threshold and the M-factor, the test fails. type **policing** • If the measured throughput is less than the difference of the configured PIR threshold and the M-factor, the test fails. • If the measured throughput is greater than the sum of the configured PIR threshold and the M-factor, the test fails. type **performance** • If the measured throughput is less than the difference of the configured PIR threshold and the M-factor, the test fails.
Range	1 to 400000000
Units	kilobps
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

pir-threshold *number*

Synopsis	PIR threshold
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *string* pir-threshold *number*
Tree	pir-threshold
Description	This command configures a PIR value that is compared to the measured results for the **cir-pir**, **policing**, and **performance** test types. If the measured value is equal to or greater than the configured value, the test passes; otherwise, it fails. For more information, see the **m-factor** command.

rate-cir *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	CIR packet transmit rate for the service stream
Context	**configure** test-oam service-activation-testhead service-test *string* service-stream *number* rate-cir *number*
Tree	rate-cir
Description	This command configures the CIR that must be validated for a specific stream. If configured, the PIR value must be equal to or greater than the CIR value. When specified, the CIR rate overrides the default CIR value. The configured value must be a positive integer; fractional values are not allowed. If this command is not executed, or the CIR parameter is not explicitly specified, the default CIR value applies. The service activation testhead generates traffic up to the specified rate based on the test-types command, as follows. • For **type cir**, traffic is generated at a rate up to the configured CIR. • For **type cir-pir**, traffic is generated at a rate up to the configured PIR. • For **type policing**, traffic is generated at a rate up to 125% of the configured PIR. • For **type performance**, traffic is generated at a rate up to the configured PIR.
Range	0 to 400000000
Units	kilobps
Default	0
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

rate-pir *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PIR packet transmit rate for the service stream
Context	**configure** test-oam service-activation-testhead service-test *string* service-stream *number* rate-pir *number*
Tree	rate-pir
Description	This command specifies the PIR rate, which overrides the default administrative PIR value. The configured value must be a positive integer; fractional values are not allowed.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If this command is not executed or the PIR parameter is not explicitly specified, the default PIR value applies.

The service activation testhead generates traffic up to the specified rate based on the test-types command, as follows.

- For **type cir**, traffic is generated at a rate up to the configured CIR.
- For **type cir-pir**, traffic is generated at a rate up to the configured PIR.
- For **type policing**, traffic is generated at a rate up to 125% of the configured PIR.
- For **type performance**, traffic is generated at a rate up to the configured PIR.

Range	0 to 400000000
Units	kilobps
Default	0
Introduced	23.10.R1

Introduced	16.0.R4
Platforms	All

server

Synopsis	Enter the **server** context
Context	**configure** test-oam twamp server
Tree	server
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the TWAMP server
Context	**configure** test-oam twamp server admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-ipv6-udp-checksum-zero *boolean*

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	**configure** test-oam twamp server allow-ipv6-udp-checksum-zero *boolean*
Tree	allow-ipv6-udp-checksum-zero
Description	When configured to **true**, this command configures the acceptance of IPv6 packets with UDP checksums of 0. This optional configuration allows the router to process arriving IPv6 TWAMP Test packets that contain IPv6 UDP checksum of 0x0000. The UDP port specific to this TWAMP Light test bypasses the default discard IPv6 UDP checksum 0x0000. If this optional command is not configured, IPv6 UDP checksum 0x000 arriving packets are discarded. When configured to **false**, packets that arrive with an IPv6 UDP checksum of 0x0000 are discarded.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

enforce-test-session-start-time *boolean*

Synopsis	Discard TWAMP packets before test-session start time
Context	**configure** test-oam twamp server enforce-test-session-start-time *boolean*
Tree	enforce-test-session-start-time
Description	When configured to **true**, the router checks the signalled test-session start time against the server time and discards TWAMP test packets that arrive before the negotiated test-session start time. When configured to **false**, the router processes all TWAMP test packets without checking the test-session start time against the server time.
Default	true
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

inactivity-timeout *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Inactivity timeout for TWAMP control connections
Context	**configure** test-oam twamp server inactivity-timeout *number*
Tree	inactivity-timeout
Range	60 to 3600
Units	seconds
Default	900
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-connections *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Limit of concurrent TWAMP server control connections
Context	**configure** test-oam twamp server max-connections *number*

© 2024 Nokia.

source-udp-port-pools

Synopsis	Enter the **source-udp-port-pools** context
Context	**configure** test-oam twamp twamp-light source-udp-port-pools
Tree	source-udp-port-pools
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port [port-number] *number*

Synopsis	Enter the **port** list instance
Context	**configure** test-oam twamp twamp-light source-udp-port-pools port *number*
Tree	port
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**port-number**] *number*

Synopsis	Source UDP port pools port number

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam twamp twamp-light source-udp-port-pools port *number*
Tree	port
Range	64374 to 64383
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pool-type *keyword*

Synopsis	Pool type of an application pool
Context	**configure** test-oam twamp twamp-light source-udp-port-pools port *number* pool-type *keyword*
Tree	pool-type
Description	This command maps the specified source UDP port to the TWAMP Light application allowed to configure the source UDP port. OAM-PM IP tests can only configure the source UDP port when the port pool UDP source port is configured with a **pool-type oam-pm**. The **test-oam link-measurement measurement-template** can only configure the **src-udp-port** when the port pool UDP source port is configured with **pool-type link-measurement**. A pool type cannot be changed if its current application is a test (either an oam-pm session or link-measurement template) and is configured to use the specified port, regardless of the administrative or operational state. The configuration reference linking to the source UDP prevents the change.
Options	oam-pm, link-measurement
Default	oam-pm
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance
Context	**configure** vrrp policy *number* priority-event lag-port-down *string* hold-clear *number*
Tree	hold-clear
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	All

hold-set *number*

Synopsis	Hold time before transitioning to cleared state
Context	**configure** vrrp policy *number* priority-event lag-port-down *string* hold-set *number*
Tree	hold-set
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	All

number-down [number-of-lag-ports-down] *number*

Synopsis	Enter the **number-down** list instance
Context	**configure** vrrp policy *number* priority-event lag-port-down *string* number-down *number*
Tree	number-down
Introduced	16.0.R1
Platforms	All

[**number-of-lag-ports-down**] *number*

Synopsis	Threshold of down LAG ports that create a set event
Context	**configure** vrrp policy *number* priority-event lag-port-down *string* number-down *number*
Tree	number-down
Range	1 to 64
Notes	This element is part of a list key.

Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	All

less-specific

Synopsis	Enable the **less-specific** context
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* less-specific
Tree	less-specific
Introduced	16.0.R1
Platforms	All

allow-default *boolean*

Synopsis	Match on default route
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* less-specific allow-default *boolean*
Tree	allow-default
Default	false
Introduced	16.0.R1
Platforms	All

next-hop [ip-address] *(ipv4-address-with-zone | ipv6-address-with-zone)*

Synopsis	Add a list entry for **next-hop**
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* next-hop *(ipv4-address-with-zone | ipv6-address-with-zone)*
Tree	next-hop
Introduced	19.5.R1
Platforms	All

[ip-address] *(ipv4-address-with-zone | ipv6-address-with-zone)*

Synopsis	Next-hop IP address for a returned route prefix

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* next-hop *(ipv4-address-with-zone | ipv6-address-with-zone)*
Tree	next-hop
Description	This command configures the next-hop IP address used to match the route prefix being monitored by the priority control event with the results of a route table lookup.
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

priority

Synopsis	Enter the **priority** context
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* priority
Tree	priority
Introduced	16.0.R1
Platforms	All

event-type *keyword*

Synopsis	Effect of priority-level value on base priority value
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* priority event-type *keyword*
Tree	event-type
Options	delta, explicit
Default	delta
Introduced	16.0.R1
Platforms	All

priority-level *number*

Synopsis	Priority level associated with this event
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* priority priority-level *number*
Tree	priority-level
Range	1 to 254

4 Deprecated and obsolete commands

This section lists the deprecated and obsolete commands in this major release.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

4.1 Deprecated commands

This chapter provides a list of commands that are marked as “status deprecated” in the Nokia YANG models and the MD-CLI and should no longer be used. Only releases in which commands are initially deprecated are included in this section. If applicable, the equivalent configuration groups command is also deprecated (but not explicitly listed).

See the SR OS Software Release Notes for more information.

(No entries for this section.)

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

4.2 Obsolete commands

This chapter provides a list of commands that are marked as “status obsolete” in the Nokia YANG models and the MD-CLI. These commands can no longer be used and are considered invalid. Only releases in which commands are initially obsoleted are included in this section. If applicable, the equivalent configuration groups command is also obsoleted (but not explicitly listed).

See the SR OS Software Release Notes for more information.

4.2.1 24.3.R1

application-assurance commands:

- configure application-assurance group cflowd rtp-performance
- configure application-assurance group cflowd rtp-performance apply-groups
- configure application-assurance group cflowd rtp-performance apply-groups-exclude
- configure application-assurance group cflowd rtp-performance audio-template
- configure application-assurance group cflowd rtp-performance audio-template apply-groups
- configure application-assurance group cflowd rtp-performance audio-template apply-groups-exclude
- configure application-assurance group cflowd rtp-performance audio-template dynamic-fields
- configure application-assurance group cflowd rtp-performance audio-template dynamic-fields admin-state
- configure application-assurance group cflowd rtp-performance audio-template dynamic-fields field
- configure application-assurance group cflowd rtp-performance audio-template dynamic-fields field field-name
- configure application-assurance group cflowd rtp-performance audio-template field-selection
- configure application-assurance group cflowd rtp-performance flow-rate
- configure application-assurance group cflowd rtp-performance flow-rate-2
- configure application-assurance group cflowd rtp-performance video-template
- configure application-assurance group cflowd rtp-performance video-template apply-groups
- configure application-assurance group cflowd rtp-performance video-template apply-groups-exclude
- configure application-assurance group cflowd rtp-performance video-template dynamic-fields
- configure application-assurance group cflowd rtp-performance video-template dynamic-fields admin-state
- configure application-assurance group cflowd rtp-performance video-template dynamic-fields field
- configure application-assurance group cflowd rtp-performance video-template dynamic-fields field field-name
- configure application-assurance group cflowd rtp-performance video-template field-selection
- configure application-assurance group cflowd rtp-performance voice-template
- configure application-assurance group cflowd rtp-performance voice-template apply-groups

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- configure application-assurance group cflowd rtp-performance voice-template apply-groups-exclude
- configure application-assurance group cflowd rtp-performance voice-template dynamic-fields
- configure application-assurance group cflowd rtp-performance voice-template dynamic-fields admin-state
- configure application-assurance group cflowd rtp-performance voice-template dynamic-fields field
- configure application-assurance group cflowd rtp-performance voice-template dynamic-fields field field-name
- configure application-assurance group cflowd rtp-performance voice-template field-selection

card commands:

- configure card mda clock-mode
- configure card mda clock-mode mode
- configure card mda clock-mode timestamp-freq

filter commands:

- configure filter ip-filter entry action forward next-hop interface-name

openflow commands:

- configure openflow of-controller
- configure openflow of-controller address
- configure openflow of-controller admin-state
- configure openflow of-controller apply-groups
- configure openflow of-controller apply-groups-exclude
- configure openflow of-controller controller-id
- configure openflow of-controller description
- configure openflow of-controller echo-interval
- configure openflow of-controller echo-multiple
- configure openflow of-controller ipv6-address
- configure openflow of-controller role
- configure openflow of-controller tls-server-profile
- configure openflow of-controller version

router commands:

- configure router p2mp-sr-tree replication-segment downstream-nodes
- configure router p2mp-sr-tree replication-segment downstream-nodes admin-state
- configure router p2mp-sr-tree replication-segment downstream-nodes apply-groups
- configure router p2mp-sr-tree replication-segment downstream-nodes apply-groups-exclude
- configure router p2mp-sr-tree replication-segment downstream-nodes downstream-index
- configure router p2mp-sr-tree replication-segment downstream-nodes label
- configure router p2mp-sr-tree replication-segment downstream-nodes label sid-list
- configure router p2mp-sr-tree replication-segment downstream-nodes label sid-list apply-groups

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- configure router p2mp-sr-tree replication-segment downstream-nodes label sid-list apply-groups-exclude
- configure router p2mp-sr-tree replication-segment downstream-nodes label sid-list index
- configure router p2mp-sr-tree replication-segment downstream-nodes label sid-list replication-sid
- configure router p2mp-sr-tree replication-segment downstream-nodes next-hop-address
- configure router p2mp-sr-tree replication-segment downstream-nodes next-hop-interface-name
- configure router p2mp-sr-tree replication-segment downstream-nodes protect-nexthop-id
- configure router p2mp-sr-tree replication-segment replication-sid
- configure router p2mp-sr-tree replication-segment sid-action

service commands:

- configure service system bgp evpn ip-prefix-routes d-path-length-ignore
- configure service system bgp evpn ip-prefix-routes iff-attribute-uniform-propagation
- configure service system bgp evpn ip-prefix-routes iff-bgp-path-selection
- configure service vprn mvpn provider-tunnel inclusive p2mp-sr p2mp-policy
- configure service vprn mvpn provider-tunnel inclusive p2mp-sr static-policy
- configure service vprn mvpn provider-tunnel selective multistream-spmsi p2mp-sr p2mp-policy
- configure service vprn mvpn provider-tunnel selective multistream-spmsi p2mp-sr static-policy
- configure service vprn mvpn provider-tunnel selective p2mp-sr p2mp-policy
- configure service vprn mvpn provider-tunnel selective p2mp-sr static-policy

system commands:

- configure system management-interface netconf admin-state
- configure system management-interface netconf delay-on-boot
- configure system management-interface netconf port
- configure system resource
- configure system resource ecmp-profile
- configure system resource ecmp-profile apply-groups
- configure system resource ecmp-profile groups
- configure system resource ecmp-profile links
- configure system resource ecmp-profile profile-id
- configure system resource ecmp-profile type
- configure system time dst-zone
- configure system time dst-zone apply-groups
- configure system time dst-zone apply-groups-exclude
- configure system time dst-zone end
- configure system time dst-zone end day
- configure system time dst-zone end hours-minutes
- configure system time dst-zone end month

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- configure system time dst-zone end week
- configure system time dst-zone offset
- configure system time dst-zone start
- configure system time dst-zone start day
- configure system time dst-zone start hours-minutes
- configure system time dst-zone start month
- configure system time dst-zone start week
- configure system time dst-zone summer-time-zone
