allow-override *boolean*

Synopsis	Override the HTTP redirect URL by a RADIUS VSA
Context	**configure** filter ip-filter *filter-name* entry *number* action http-redirect allow-override *boolean*
Tree	allow-override
Description	This command specifies whether the RADIUS VSA can override the configured HTTP redirect URL for this filter entry. When configured to **true**, the RADIUS VSA can override the HTTP redirect URL. When configured to **false**, the HTTP redirect URL is not overriden. This does not apply if the CPF option is specified for the URL.
Default	false
Introduced	16.0.R1
Platforms	All

url *(keyword | http-redirect-url)*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	URL used for HTTP redirect action
Context	**configure** filter ip-filter *filter-name* entry *number* action http-redirect url *(keyword | http-redirect-url)*
Tree	url
Description	This command specifies the URL to use for HTTP redirection for this filter entry. A URL can be specified or the CPF option can be used for BNG CUPS ESM sessions only. The following macro substitutions may be used: $URL — request-URI in the HTTP GET request received $MAC — a string that represents the MAC address of the subscriber host $IP — a string that represents the IP address of the subscriber host $SUB — a string that represents the subscriber ID $SAP — a string that represents a SAP ID $SAPDESC — description string configured on the SAP $CID — a string that represents the circuit ID or interface ID of the

	subscriber host (hexadecimal format) $RID — a string that represents the remote ID of the subscriber host (hexadecimal format)
String length	1 to 255
Options	from-cpf
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

ignore-match

Synopsis	Ignore match criteria for the entry
Context	**configure** filter ip-filter *filter-name* entry *number* action ignore-match
Tree	ignore-match
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

l2-aware-nat-bypass *boolean*

Synopsis	Divert traffic from an L2-Aware NAT subscriber
Context	**configure** filter ip-filter *filter-name* entry *number* action l2-aware-nat-bypass *boolean*
Tree	l2-aware-nat-bypass
Description	When configured to **true**, the filter action selectively diverts traffic from a L2-Aware NAT subscriber away from NAT. This action is only applicable to L2-Aware NAT subscribers and must be configured together with action **accept**. Traffic identified in the match condition bypasses L2-Aware NAT. An example is to bypass NAT for on-net destinations (within the customer network). For selective NAT bypass to take effect, in addition to IP filter configuration, the L2-Aware NAT subscriber must be specifically enabled for selective bypass via the allow-bypass configuration option in the **configure subscriber-mgmt sub-profile nat allow-bypass** context. When configured to **false**, traffic that is not classified for bypass automatically diverts to L2-Aware NAT, unless it is explicitly configured in the IP filter action to be dropped.
Default	false
Introduced	20.5.R1

Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** filter match-list ip-prefix-list *named-item*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	All

mask *ipv4-address*

Synopsis	IPv4 address mask used as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip mask *ipv4-address*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	All

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port
Tree	dst-port
Description	Commands in this context configure match criteria for the destination port.
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

gt *number*

Synopsis	Greater than value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port lt *number*
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the **range** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the port range
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port range end *number*
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start *number*

Synopsis	Lower bound of the port range
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.

icmp

Synopsis	Enter the **icmp** context
Context	**configure** filter ip-filter *filter-name* entry *number* match icmp
Tree	icmp
Description	Commands in this context configure ICMP values to use as IP filter match criteria.
Introduced	16.0.R1
Platforms	All

code *number*

Synopsis	ICMP code value to match
Context	**configure** filter ip-filter *filter-name* entry *number* match icmp code *number*
Tree	code
Description	This command specifies the ICMP code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

type *number*

Synopsis	ICMP type value to match
Context	**configure** filter ip-filter *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMP type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255

src-route-option *boolean*

Synopsis	Match based on presence of source route option
Context	**configure** filter ip-filter *filter-name* entry *number* match src-route-option *boolean*
Tree	src-route-option
Introduced	16.0.R1
Platforms	All

tcp-established

Synopsis	Use ACK or RST status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-established
Tree	tcp-established
Description	When configured to **true**, a match occurs when the ACK or the RST TCP flag bit is set in the TCP header of an IP packet.
Notes	The following elements are part of a choice: **tcp-established** or **tcp-flags**.
Introduced	22.10.R1
Platforms	All

tcp-flags

Synopsis	Enter the **tcp-flags** context
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags
Tree	tcp-flags
Description	Commands in this context configure the use of TCP flags as the IP filter match.
Notes	The following elements are part of a choice: **tcp-established** or **tcp-flags**.
Introduced	16.0.R1
Platforms	All

ack *boolean*

Synopsis	Use ACK TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags ack *boolean*
Tree	ack

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, a match occurs when the ACK TCP flag bit, defined in RFC 793, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ACK TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

cwr *boolean*

Synopsis	Use CWR TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags cwr *boolean*
Tree	cwr
Description	When configured to **true**, a match occurs when the Congestion Window Reduced (CWR) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the CWR TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

ece *boolean*

Synopsis	Use ECE TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags ece *boolean*
Tree	ece
Description	When configured to **true**, a match occurs when the ECN-Echo (ECE) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ECE TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

fin *boolean*

Synopsis	Use FIN TCP bit status in TCP header as match criterion

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags fin *boolean*
Tree	fin
Description	When configured to **true**, a match occurs when the FIN TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the FIN TCP flag bit, defined in RFC 793, is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

ns *boolean*

Synopsis	Use NS TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags ns *boolean*
Tree	ns
Description	When configured to **true**, a match occurs when the Nonce Sum (NS) TCP flag bit, defined in RFC 3540, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the NS TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

psh *boolean*

Synopsis	Use PSH TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags psh *boolean*
Tree	psh
Description	When configured to **true**, a match occurs when the Push (PSH) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the Push (PSH) TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.

rst *boolean*

Synopsis	Use RST TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags rst *boolean*
Tree	rst
Description	When configured to **true**, a match occurs when the RST TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the RST TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

syn *boolean*

Synopsis	Use SYN TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags syn *boolean*
Tree	syn
Description	When configured to **true**, a match occurs when the Synchronize (SYN) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the SYN TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

urg *boolean*

Synopsis	Use URG TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags urg *boolean*
Tree	urg
Description	When configured to **true**, a match occurs when the Urgent (URG) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the URG TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1

Platforms	All

pbr-down-action-override *keyword*

Synopsis	Action when PBR or PBF target for this entry is not available
Context	**configure** filter ip-filter *filter-name* entry *number* pbr-down-action-override *keyword*
Tree	pbr-down-action-override
Options	drop, forward, filter-default-action
Introduced	16.0.R1
Platforms	All

sample-profile *reference*

Synopsis	Cflowd sample profile ID to match packets
Context	**configure** filter ip-filter *filter-name* entry *number* sample-profile *reference*
Tree	sample-profile
Description	This command allows traffic matching an IPv4 or IPv6 filter to be sampled for cflowd processing using a specific sample profile ID. This option is only compatible if the associated interface is configured for interface-based sampling and is only supported for ingress sampling. An IP filter can only specify a single alternate sample profile ID for cflowd sampling, but the ID can be used in multiple entries.
Reference	**configure** cflowd sample-profile *number*
Introduced	20.10.R1
Platforms	All

sticky-dest *(number | keyword)*

Synopsis	Time before action with available PBR or PBF destination and highest priority
Context	**configure** filter ip-filter *filter-name* entry *number* sticky-dest *(number | keyword)*
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	16.0.R1
Platforms	All

filter-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP filter ID
Context	**configure** filter ip-filter *filter-name* filter-id *number*
Tree	filter-id
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

scope *keyword*

Synopsis	Scope of the filter definition
Context	**configure** filter ip-filter *filter-name* scope *keyword*
Tree	scope
Description	This command configures the filter policy scope. If the scope of the policy is **template** and is applied to one or more services or network interfaces, the scope cannot be changed.
Options	exclusive, template, embedded, system, cpm
Default	template
Introduced	16.0.R1
Platforms	All

shared-policer *boolean*

Synopsis	Share policer among active ports in the LAG
Context	**configure** filter ip-filter *filter-name* shared-policer *boolean*
Tree	shared-policer
Description	When configured to **true**, and when the filter policy is configured on a LAG endpoint, the system programs the policer rates in the filter policy per line card FP of the LAG based on the number of active ports in the LAG for each FP. When configured to **false**, and when the filter policy is configured on a LAG endpoint, the system programs the same policer rate on each line card FP of the LAG.
Default	false

icmp

Synopsis	Enter the **icmp** context
Context	**configure** filter ipv6-exception *filter-name* entry *number* match icmp
Tree	icmp
Introduced	20.10.R1
Platforms	VSR

code *number*

Synopsis	ICMPv6 code value to match
Context	**configure** filter ipv6-exception *filter-name* entry *number* match icmp code *number*
Tree	code
Description	This command specifies the ICMPv6 code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	20.10.R1
Platforms	VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

type *number*

Synopsis	ICMPv6 type value to match
Context	**configure** filter ipv6-exception *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMPv6 type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	20.10.R1

expression *hex-string*

Synopsis	Pattern expression to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* action accept-when pattern expression *hex-string*
Tree	expression
String length	3 to 18
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

mask *hex-string*

Synopsis	Mask for the pattern expression
Context	**configure** filter ipv6-filter *filter-name* entry *number* action accept-when pattern mask *hex-string*
Tree	mask
String length	3 to 18
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

offset-type *keyword*

Synopsis	Starting point reference for offset value of pattern
Context	**configure** filter ipv6-filter *filter-name* entry *number* action accept-when pattern offset-type *keyword*
Tree	offset-type
Options	layer-3, layer-4, data, dns-qtype
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

offset-value *number*

Synopsis	Offset value for the pattern expression

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* action accept-when pattern offset-value *number*
Tree	offset-value
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	All

drop

Synopsis	Drop a packet matching this entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, **ignore-match**, **nat**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

drop-when

Synopsis	Enable the **drop-when** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when
Tree	drop-when
Introduced	16.0.R1
Platforms	All

extracted-traffic

Synopsis	Drop traffic extracted to CPM
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when extracted-traffic
Tree	extracted-traffic
Introduced	16.0.R1
Platforms	All

http-redirect

Synopsis	Enable the **http-redirect** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action http-redirect
Tree	http-redirect
Description	Commands in this context configure the filter entry action for HTTP redirection.
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, **ignore-match**, **nat**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

allow-override *boolean*

Synopsis	Override the HTTP redirect URL by a RADIUS VSA
Context	**configure** filter ipv6-filter *filter-name* entry *number* action http-redirect allow-override *boolean*
Tree	allow-override
Description	This command specifies whether the RADIUS VSA can override the configured HTTP redirect URL for this filter entry. When configured to **true**, the RADIUS VSA can override the HTTP redirect URL. When configured to **false**, the HTTP redirect URL is not overriden. This does not apply if the CPF option is specified for the URL.
Default	false
Introduced	16.0.R1
Platforms	All

url *(keyword | http-redirect-url)*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	URL used for HTTP redirect action
Context	**configure** filter ipv6-filter *filter-name* entry *number* action http-redirect url *(keyword | http-redirect-url)*
Tree	url
Description	This command specifies the URL to use for HTTP redirection for this filter entry.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

A URL can be specified or the CPF option can be used for BNG CUPS ESM sessions only.

The following macro substitutions may be used:

$URL — request-URI in the HTTP GET request received

$MAC — a string that represents the MAC address of the subscriber host

$IP — a string that represents the IP address of the subscriber host

$SUB — a string that represents the subscriber ID

$SAP — a string that represents a SAP ID

$SAPDESC — description string configured on the SAP

$CID — a string that represents the circuit ID or interface ID of the subscriber host (hexadecimal format)

$RID — a string that represents the remote ID of the subscriber host (hexadecimal format)

String length	1 to 255
Options	from-cpf
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

ignore-match

Synopsis	Ignore match criteria for the entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* action ignore-match
Tree	ignore-match
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, **ignore-match**, **nat**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

nat

Synopsis	Enable the **nat** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action nat
Tree	nat

Context	**configure** filter ipv6-filter *filter-name* entry *number* log *reference*
Tree	log
Reference	**configure** filter log *number*
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enter the **match** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match
Tree	match
Description	Commands in this context provide match criteria for the filter entry. When the match criteria are satisfied, the action associated with the match criteria is executed.
Introduced	16.0.R1
Platforms	All

destination-class *number*

Synopsis	Destination class as a match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match destination-class *number*
Tree	destination-class
Description	This command configures the BGP destination class value as a match criterion. Filtering egress traffic on the destination class requires the **destination-class-lookup** command (under the **ingress** context for the service interface) to be enabled (set to **true**).
Range	1 to 255
Introduced	20.7.R1
Platforms	All

dscp *keyword*

Synopsis	DSCP used as an IP filter match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-ip
Tree	dst-ip
Description	Commands in this context configure a destination address range that is used by filter policy match criteria.
Notes	The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).
Introduced	16.0.R1
Platforms	All

address *(ipv6-prefix-with-host-bits | ipv6-address)*

Synopsis	IPv6 address used as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-ip address *(ipv6-prefix-with-host-bits | ipv6-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	All

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-ip ipv6-prefix-list *reference*
Tree	ipv6-prefix-list
Reference	**configure** filter match-list ipv6-prefix-list *named-item*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	All

mask *ipv6-address*

Synopsis	IPv6 address mask used as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-ip mask *ipv6-address*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	All

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port
Tree	dst-port
Description	Commands in this context configure match criteria for the destination port.
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact value as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

gt *number*

Synopsis	Greater than value as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than value as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port lt *number*
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the **range** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the port range
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port range end *number*
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start *number*

Synopsis	Lower bound of the port range
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

extension-header

Synopsis	Enter the **extension-header** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header
Tree	extension-header
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ah *boolean*

Synopsis	Match a packet as per the existence of an AH Extension Header
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header ah *boolean*
Tree	ah
Introduced	16.0.R1
Platforms	All

esp *boolean*

Synopsis	Match a packet as per the existence of an Encapsulation security payload extension header
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header esp *boolean*
Tree	esp
Introduced	16.0.R1
Platforms	All

hop-by-hop *boolean*

Synopsis	Match on Hop-by-Hop Options Extension Header existence
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header hop-by-hop *boolean*
Tree	hop-by-hop
Introduced	16.0.R2
Platforms	All

routing-type0 *boolean*

Synopsis	Match a packet as per the existence of a routing Extension Header
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header routing-type0 *boolean*
Tree	routing-type0
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

flow-label

Synopsis	Enable the **flow-label** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match flow-label
Tree	flow-label
Description	Commands in this context configure the flow label and optional mask match condition.
Introduced	16.0.R1
Platforms	All

mask *number*

Synopsis	Flow label mask for the IPv6 filter entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* match flow-label mask *number*
Tree	mask
Description	This command specifies the IPv6 address mask for the flow label filter entry. This value can be expressed in decimal, hexadecimal, or binary format.
Range	1 to 1048575
Default	1048575
Introduced	16.0.R1
Platforms	All

value *number*

Synopsis	Flow label as a match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match flow-label value *number*
Tree	value
Description	This command specifies the flow label to use as a match criterion. This value can be expressed in decimal, hexadecimal, or binary format.
Range	0 to 1048575
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fragment *keyword*

Synopsis	Match criterion for fragmented packages
Context	**configure** filter ipv6-filter *filter-name* entry *number* match fragment *keyword*
Tree	fragment
Options	false, true, first-only, non-first-only
Introduced	16.0.R1
Platforms	All

hop-limit

Synopsis	Enable the **hop-limit** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match hop-limit
Tree	hop-limit
Introduced	21.10.R1
Platforms	All

eq *number*

Synopsis	Equal to condition match value
Context	**configure** filter ipv6-filter *filter-name* entry *number* match hop-limit eq *number*
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	21.10.R1
Platforms	All

gt *number*

Synopsis	Greater than condition match value
Context	**configure** filter ipv6-filter *filter-name* entry *number* match hop-limit gt *number*
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	21.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

lt *number*

Synopsis	Less than condition match value
Context	**configure** filter ipv6-filter *filter-name* entry *number* match hop-limit lt *number*
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	21.10.R1
Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match hop-limit range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	21.10.R1
Platforms	All

end *number*

Synopsis	Upper bound of the range
Context	**configure** filter ipv6-filter *filter-name* entry *number* match hop-limit range end *number*
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

start *number*

Synopsis	Lower bound of the range
Context	**configure** filter ipv6-filter *filter-name* entry *number* match hop-limit range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	All

icmp

Synopsis	Enter the **icmp** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match icmp
Tree	icmp
Description	Commands in this context configure ICMP values to use as IPv6 filter match criteria.
Introduced	16.0.R1
Platforms	All

code *number*

Synopsis	ICMPv6 code value to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* match icmp code *number*
Tree	code
Description	This command specifies the ICMPv6 code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

type *number*

Synopsis	ICMPv6 type value to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMPv6 type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

ip

Synopsis	Enter the **ip** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match ip
Tree	ip
Notes	The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).
Introduced	21.10.R1
Platforms	All

address *(ipv6-prefix-with-host-bits | ipv6-address)*

Synopsis	IPv6 address used as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match ip address *(ipv6-prefix-with-host-bits | ipv6-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	21.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match ip ipv6-prefix-list *reference*
Tree	ipv6-prefix-list
Reference	**configure** filter match-list ipv6-prefix-list *named-item*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	21.10.R1
Platforms	All

mask *ipv6-address*

Synopsis	IPv6 address mask used as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match ip mask *ipv6-address*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	21.10.R1
Platforms	All

next-header *(number | keyword)*

Synopsis	IP protocol to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* match next-header *(number | keyword)*
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: **next-header** or **next-header-list**.
Introduced	16.0.R1
Platforms	All

next-header-list *reference*

Synopsis	Name of the protocol list as a match criterion

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* match next-header-list *reference*
Tree	next-header-list
Reference	**configure** filter match-list protocol-list *named-item*
Notes	The following elements are part of a choice: **next-header** or **next-header-list**.
Introduced	20.7.R1
Platforms	All

packet-length

Synopsis	Enable the **packet-length** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match packet-length
Tree	packet-length
Description	Commands in this context specify the match criterion for the IPv6 packet length. The IPv6 packet length represents the total packet length which includes the IPv6 header and the payload.
Introduced	19.5.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* match packet-length eq *number*
Tree	eq
Range	40 to 65575
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **ipv6-packet-length-list**, **lt**, or **range**.
Introduced	19.5.R1
Platforms	All

gt *number*

Synopsis	Greater than match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* match packet-length gt *number*
Tree	gt
Range	40 to 65574

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **ipv6-packet-length-list**, **lt**, or **range**.
Introduced	19.5.R1
Platforms	All

ipv6-packet-length-list *reference*

Synopsis	IPv6 packet length list to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* match packet-length ipv6-packet-length-list *reference*
Tree	ipv6-packet-length-list
Reference	**configure** filter match-list ipv6-packet-length-list *named-item*
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **ipv6-packet-length-list**, **lt**, or **range**.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lt *number*

Synopsis	Less than match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* match packet-length lt *number*
Tree	lt
Range	41 to 65575
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **ipv6-packet-length-list**, **lt**, or **range**.
Introduced	19.5.R1
Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match packet-length range
Tree	range
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **ipv6-packet-length-list**, **lt**, or **range**.
Introduced	19.5.R1

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

tcp-established

Synopsis	Use ACK or RST status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-established
Tree	tcp-established
Description	When configured to **true**, a match occurs when the ACK or the RST TCP flag bit is set in the TCP header of an IP packet.
Notes	The following elements are part of a choice: **tcp-established** or **tcp-flags**.
Introduced	22.10.R1
Platforms	All

tcp-flags

Synopsis	Enter the **tcp-flags** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags
Tree	tcp-flags
Description	Commands in this context configure the use of TCP flags as the IP filter match.
Notes	The following elements are part of a choice: **tcp-established** or **tcp-flags**.
Introduced	16.0.R1
Platforms	All

ack *boolean*

Synopsis	Use ACK TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags ack *boolean*
Tree	ack
Description	When configured to **true**, a match occurs when the ACK TCP flag bit, defined in RFC 793, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ACK TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.

Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

cwr *boolean*

Synopsis	Use CWR TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags cwr *boolean*
Tree	cwr
Description	When configured to **true**, a match occurs when the Congestion Window Reduced (CWR) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the CWR TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

ece *boolean*

Synopsis	Use ECE TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags ece *boolean*
Tree	ece
Description	When configured to **true**, a match occurs when the ECN-Echo (ECE) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ECE TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

fin *boolean*

Synopsis	Use FIN TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags fin *boolean*
Tree	fin
Description	When configured to **true**, a match occurs when the FIN TCP flag bit is set in the TCP header of an IP packet.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, a match occurs when the FIN TCP flag bit, defined in RFC 793, is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 16.0.R1

Platforms All

ns *boolean*

Synopsis Use NS TCP bit status in TCP header as match criterion

Context **configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags ns *boolean*

Tree ns

Description When configured to **true**, a match occurs when the Nonce Sum (NS) TCP flag bit, defined in RFC 3540, is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the NS TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 16.0.R1

Platforms All

psh *boolean*

Synopsis Use PSH TCP bit status in TCP header as match criterion

Context **configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags psh *boolean*

Tree psh

Description When configured to **true**, a match occurs when the Push (PSH) TCP flag bit is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the Push (PSH) TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 16.0.R1

Platforms All

rst *boolean*

Synopsis Use RST TCP bit status in TCP header as match criterion

Context **configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags rst *boolean*

Tree rst

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, a match occurs when the RST TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the RST TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

syn *boolean*

Synopsis	Use SYN TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags syn *boolean*
Tree	syn
Description	When configured to **true**, a match occurs when the Synchronize (SYN) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the SYN TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

urg *boolean*

Synopsis	Use URG TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags urg *boolean*
Tree	urg
Description	When configured to **true**, a match occurs when the Urgent (URG) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the URG TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

pbr-down-action-override *keyword*

Synopsis	Action when PBR or PBF target for this entry is not available

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* pbr-down-action-override *keyword*
Tree	pbr-down-action-override
Options	drop, forward, filter-default-action
Introduced	16.0.R1
Platforms	All

sample-profile *reference*

Synopsis	Cflowd sample profile ID to match packets
Context	**configure** filter ipv6-filter *filter-name* entry *number* sample-profile *reference*
Tree	sample-profile
Description	This command allows traffic matching an IPv4 or IPv6 filter to be sampled for cflowd processing using a specific sample profile ID. This option is only compatible if the associated interface is configured for interface-based sampling and is only supported for ingress sampling. An IP filter can only specify a single alternate sample profile ID for cflowd sampling, but the ID can be used in multiple entries.
Reference	**configure** cflowd sample-profile *number*
Introduced	20.10.R1
Platforms	All

sticky-dest *(number | keyword)*

Synopsis	Time before action with available PBR or PBF destination and highest priority
Context	**configure** filter ipv6-filter *filter-name* entry *number* sticky-dest *(number | keyword)*
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	16.0.R1
Platforms	All

filter-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv6 filter identifier
Context	**configure** filter ipv6-filter *filter-name* filter-id *number*
Tree	filter-id
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

scope *keyword*

Synopsis	Scope of the filter definition
Context	**configure** filter ipv6-filter *filter-name* scope *keyword*
Tree	scope
Description	This command configures the filter policy scope. If the scope of the policy is **template** and is applied to one or more services or network interfaces, the scope cannot be changed.
Options	exclusive, template, embedded, system, cpm
Default	template
Introduced	16.0.R1
Platforms	All

shared-policer *boolean*

Synopsis	Share policer among active ports in the LAG
Context	**configure** filter ipv6-filter *filter-name* shared-policer *boolean*
Tree	shared-policer
Description	When configured to **true**, and when the filter policy is configured on a LAG endpoint, the system programs the policer rates in the filter policy per line card FP of the LAG based on the number of active ports in the LAG for each FP. When configured to **false**, and when the filter policy is configured on a LAG endpoint, the system programs the same policer rate on each line card FP of the LAG.
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

subscriber-mgmt

4.18.1 fwd-path-ext command descriptions

fwd-path-ext

Synopsis	Enter the **fwd-path-ext** context
Context	**configure** fwd-path-ext
Tree	fwd-path-ext
Description	Commands in this context configure a Forwarding Path Extension (FPE). Some applications that rely on PXC functionality utilize FPE to simplify the configuration of these applications.
Introduced	16.0.R1
Platforms	All

fpe [fpe-id] *number*

Synopsis	Enter the **fpe** list instance
Context	**configure** fwd-path-ext fpe *number*
Tree	fpe
Description	Commands in this context configure the Forwarding Path Extension (FPE), which associates an application with a PXC (a paired set of PXC sub-ports or a paired set of PXC-based LAGs).
Introduced	16.0.R1
Platforms	All

[**fpe-id**] *number*

Synopsis	FPE ID
Context	**configure** fwd-path-ext fpe *number*
Tree	fpe
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

application

Synopsis	Enter the **application** context
Context	**configure** fwd-path-ext fpe *number* application
Tree	application
Description	Commands in this context configure the attributes of the FPE application.
Introduced	16.0.R1
Platforms	All

mvpn-umh-rate-monitoring *boolean*

Synopsis	MVPN UMH Rate Monitoring
Context	**configure** fwd-path-ext fpe *number* application mvpn-umh-rate-monitoring *boolean*
Tree	mvpn-umh-rate-monitoring
Default	false
Introduced	24.7.R1
Platforms	All

pw-port-extension

Synopsis	Enable the **pw-port-extension** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension
Tree	pw-port-extension
Description	Commands in this context configure the type of the cross-connect required to terminate an external tunnel to an anchored PW port. The system automatically builds the internal infrastructure required to perform the tunnel termination on a PW port. PW ports support the following types of tunnels: • GRE/MPLS PW with SDP of type MPLS or GRE • L2oGRE bridged Ethernet over GRE, where GRE protocol number is 0x6558
Introduced	22.2.R1
Platforms	All

interface-a

Synopsis	Enter the **interface-a** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-a

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	interface-a
Description	Commands in this context configure the command options for network interface-a of the PW port extension FPE.
Introduced	22.10.R1
Platforms	All

qos

Synopsis	Enter the **qos** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-a qos
Tree	qos
Introduced	22.10.R1
Platforms	All

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-a qos network-policy *reference*
Tree	network-policy
Reference	**configure** qos network *network-policy-name*
Introduced	22.10.R1
Platforms	All

interface-b

Synopsis	Enter the **interface-b** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-b
Tree	interface-b
Description	Commands in this context configure command options for network interface-b of the PW port extension FPE.
Introduced	22.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

qos

Synopsis	Enter the **qos** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-b qos
Tree	qos
Introduced	22.10.R1
Platforms	All

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-b qos network-policy *reference*
Tree	network-policy

Introduced	22.10.R1
Platforms	All

srv6

Synopsis	Enable the **srv6** context
Context	**configure** fwd-path-ext fpe *number* application srv6
Tree	srv6
Description	Commands in this context configure the SRv6 FPE application used for origination or termination of SRv6 tunnels.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

interface-a

Synopsis	Enter the **interface-a** context
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-a
Tree	interface-a
Description	Commands in this context configure the parameters of network interface-a of the SRv6 FPE.
Introduced	21.5.R2

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-a qos
Tree	qos
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-a qos network-policy *reference*
Tree	network-policy
Reference	**configure** qos network *network-policy-name*
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

interface-b

Synopsis	Enter the **interface-b** context
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-b
Tree	interface-b
Description	Commands in this context configure the parameters of network interface-b of the SRv6 FPE.
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

mtu *number*

Synopsis	MTU size of SRv6 origination FPE interface-b
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-b mtu *number*
Tree	mtu

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the Maximum Transfer Unit (MTU) of interface-b of the SRv6 origination FPE. The MTU is used to check if an IPv4 service packet should be fragmented and if an IPv6 service packet should be dropped when tunneled over SRv6. The minimum value is the IPv6 minimum MTU value. The maximum value is set to the maximum Ethernet port MTU (9800) minus 14 bytes for Null Ethernet encapsulation.
Range	0 | 1280 to 9786
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-b qos
Tree	qos
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-b qos network-policy *reference*
Tree	network-policy
Reference	**configure** qos network *network-policy-name*
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

type *keyword*

Synopsis	SRv6 FPE application type
Context	**configure** fwd-path-ext fpe *number* application srv6 type *keyword*
Tree	type
Description	This command specifies if the SRv6 FPE application is used for origination or termination of SRv6 tunnels. A dedicated SRv6 FPE is required for origination and termination of SRv6 tunnels on services and they cannot share the same FPE.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

A single FPE can be configured for SRv6 origination. One or more FPEs can be configured for SRv6 termination, where a termination SRv6 FPE is assigned one or more configured locators.

Transit SRv6 routers do not require SRv6 FPEs.

Options	origination, termination
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

sub-mgmt-extension *boolean*

Synopsis	Enable FPE for subscrber management extensions
Context	**configure** fwd-path-ext fpe *number* application sub-mgmt-extension *boolean*
Tree	sub-mgmt-extension
Description	When configured to **true**, the FPE is used for subscriber management extensions. The FPE can be used for multiple subscriber management applications, but it cannot be used for other applications. When configured to **false**, the FPE is not used for subscriber management extensions.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vxlan

Synopsis	Enable the **vxlan** context
Context	**configure** fwd-path-ext fpe *number* application vxlan
Tree	vxlan
Introduced	22.2.R1
Platforms	All

router-instance *string*

Synopsis	Router instance for VXLAN termination
Context	**configure** fwd-path-ext fpe *number* application vxlan router-instance *string*
Tree	router-instance
Default	Base
Introduced	22.2.R1

© 2024 Nokia.

multi-path

Synopsis	Enable the **multi-path** context
Context	**configure** fwd-path-ext fpe *number* multi-path
Tree	multi-path
Description	Commands in this context configure a multipath FPE that can contain multiple PXC ports or LAGs of PXC ports.
Notes	The following elements are part of a choice: **multi-path** or **path**.
Introduced	21.10.R1
Platforms	All

path [path-id] *number*

Synopsis	Enter the **path** list instance
Context	**configure** fwd-path-ext fpe *number* multi-path path *number*
Tree	path
Description	Commands in this context configure a multipath FPE forwarding path. A single path in a multipath FPE can contain a single PXC port or a LAG of PXC ports.
Introduced	21.10.R1
Platforms	All

[**path-id**] *number*

Synopsis	Multipath FPE forwarding path ID
Context	**configure** fwd-path-ext fpe *number* multi-path path *number*

© 2024 Nokia.

subports.b. The system does not enforce a match between **xc-lag-a** and the LAG ID containing subports.a.

Reference **configure** lag *lag-interface*

Notes The following elements are part of a choice: **pxc** or (**xc-lag-a** and **xc-lag-b**).

Introduced 16.0.R4

Platforms All

xc-lag-b *reference*

Synopsis PXC LAG identifier dedicated to the FPE path

Context **configure** fwd-path-ext fpe *number* path xc-lag-b *reference*

Tree xc-lag-b

Description This command specifies the LAG identifier associated with one side of the PXC. The operator can associate **xc-lag-b** with the LAG containing either subports.a or subports.b. The system does not enforce a match between **xc-lag-b** and the LAG ID containing subports.b.

Reference **configure** lag *lag-interface*

Notes The following elements are part of a choice: **pxc** or (**xc-lag-a** and **xc-lag-b**).

Introduced 16.0.R4

Platforms All

sdp-id-range

Synopsis Enable the **sdp-id-range** context

Context **configure** fwd-path-ext sdp-id-range

Tree sdp-id-range

Description Commands in this context configure the SDP ID range used by the FPE based PW port and VXLAN termination applications.

Each configured FPE-based PW port is associated with two internal SDPs (one in each direction) whose IDs are allocated from the configured SDP ID range. When the FPE is associated with VXLAN termination, an internal SDP is allocated from the configured SDP ID range and is used for R-VPLS services that terminate VXLAN IPv6. A spoke SDP per VXLAN IPv6 R-VPLS service is created on that SDP for egress processing of the packets. The SDP ID range cannot be modified if any of its IDs are currently in use.

Introduced 16.0.R1

Platforms All

4.20.1 ipsec command descriptions

ipsec

Synopsis	Enter the **ipsec** context
Context	**configure** ipsec
Tree	ipsec
Description	Commands in this context configure Internet Protocol Security (IPsec) commands.
Introduced	16.0.R4
Platforms	All

cert-profile [name] *named-item*

Synopsis	Enter the **cert-profile** list instance
Context	**configure** ipsec cert-profile *named-item*
Tree	cert-profile
Description	Commands in this context configure the certificate profile.
Max. instances	10200
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Certificate profile name
Context	**configure** ipsec cert-profile *named-item*
Tree	cert-profile
String length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the certificate profile

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec cert-profile *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** ipsec cert-profile *named-item* entry *number*
Tree	entry
Description	Commands in this context configure the certificate profile entry.
Max. instances	8
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Certificate profile entry ID
Context	**configure** ipsec cert-profile *named-item* entry *number*
Tree	entry
Range	1 to 8
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert *pki-file-name*

Synopsis	File name of the imported certificate for the entry
Context	**configure** ipsec cert-profile *named-item* entry *number* cert *pki-file-name*
Tree	cert
String length	1 to 95
Introduced	19.7.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

compare-chain-include *reference*

Synopsis	CA profile to include in the compare-chain
Context	**configure** ipsec cert-profile *named-item* entry *number* compare-chain-include *reference*
Tree	compare-chain-include
Description	This command specifies the Certificate Authority (CA) that needs to be included in the compare-chain for the entry. This configuration is required in instances where the configured root CA is cross-signed by another CA.
Reference	**configure** system security pki ca-profile *named-item*
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key *pki-file-name*

Synopsis	File name of the imported key used for authentication
Context	**configure** ipsec cert-profile *named-item* entry *number* key *pki-file-name*
Tree	key
String length	1 to 95
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rsa-signature *keyword*

Synopsis	Signature scheme for the RSA key
Context	**configure** ipsec cert-profile *named-item* entry *number* rsa-signature *keyword*
Tree	rsa-signature
Options	pkcs1, pss
Default	pkcs1
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

send-chain

Synopsis	Enter the **send-chain** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec cert-profile *named-item* entry *number* send-chain
Tree	send-chain
Description	Commands in this context allow the system to send additional CA certificates to the peer. These additional CA certificates must be in the certificate chain of the certificate specified by the **cert** command in the same entry.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ca-profile *reference*

Synopsis	CA certificate to send to the peer
Context	**configure** ipsec cert-profile *named-item* entry *number* send-chain ca-profile *reference*
Tree	ca-profile
Reference	**configure** system security pki ca-profile *named-item*
Max. instances	7
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-db [name] *named-item*

Synopsis	Enter the **client-db** list instance
Context	**configure** ipsec client-db *named-item*
Tree	client-db
Max. instances	1000
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	IPsec client database name
Context	**configure** ipsec client-db *named-item*
Tree	client-db
String length	1 to 32
Notes	This element is part of a list key.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the client database
Context	**configure** ipsec client-db *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client [id] *number*

Synopsis	Enter the **client** list instance
Context	**configure** ipsec client-db *named-item* client *number*
Tree	client
Description	Commands in this context configure the IPsec client entry in the client database.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Client ID
Context	**configure** ipsec client-db *named-item* client *number*
Tree	client
Range	1 to 8000
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the database client

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec client-db *named-item* client *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-name *named-item*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client name
Context	**configure** ipsec client-db *named-item* client *number* client-name *named-item*
Tree	client-name
String length	1 to 32
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

credential

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **credential** context
Context	**configure** ipsec client-db *named-item* client *number* credential
Tree	credential
Description	Commands in this context authenticate peers.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	DPD interval
Context	**configure** ipsec ike-policy *number* dpd interval *number*
Tree	interval
Description	This command specifies the DPD interval. Because more time is necessary to determine if there is incoming traffic, the actual time needed to bring down the tunnel is larger than the DPD interval multiplied by the value configured for maximum retry attempts.
Range	10 to 300
Units	seconds
Default	30
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-retries *number*

Synopsis	Maximum number of retries before the tunnel is removed
Context	**configure** ipsec ike-policy *number* dpd max-retries *number*
Tree	max-retries
Range	2 to 5
Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reply-only *boolean*

Synopsis	Initiate DPD request for incoming ESP or IKE packets
Context	**configure** ipsec ike-policy *number* dpd reply-only *boolean*
Tree	reply-only
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ike-transform *reference*

Synopsis	IKE transform instance associated with the IKE policy
Context	**configure** ipsec ike-policy *number* ike-transform *reference*
Tree	ike-transform
Description	This command specifies the IKE transform instance associated with the IKE policy. If multiple IDs are specified, the system selects an IKE transform based on the proposal of the peer. If the system is a tunnel initiator, it uses the configured IKE transform to generate the SA payload.
Reference	**configure** ipsec ike-transform *number*
Max. instances	4
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-version-1

Synopsis	Enter the **ike-version-1** context
Context	**configure** ipsec ike-policy *number* ike-version-1
Tree	ike-version-1
Description	Commands in this context configure the IKE version 1 mode of operation that the IKE policy uses.
Notes	The following elements are part of a choice: **ike-version-1** or **ike-version-2**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auth-method *keyword*

Synopsis	Authentication method used with the IKE policy
Context	**configure** ipsec ike-policy *number* ike-version-1 auth-method *keyword*
Tree	auth-method
Options	psk, plain-psk-xauth
Default	psk
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ike-mode *keyword*

Synopsis	Mode of operation
Context	**configure** ipsec ike-policy *number* ike-version-1 ike-mode *keyword*
Tree	ike-mode
Options	main, aggressive
Default	main
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

own-auth-method *keyword*

Synopsis	Authentication method used with policy on its own side
Context	**configure** ipsec ike-policy *number* ike-version-1 own-auth-method *keyword*
Tree	own-auth-method
Options	symmetric
Default	symmetric
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ph1-responder-delete-notify *boolean*

Synopsis	Send delete notification for IKEv1 phase 1 removal
Context	**configure** ipsec ike-policy *number* ike-version-1 ph1-responder-delete-notify *boolean*
Tree	ph1-responder-delete-notify
Description	When configured to **true**, a delete notification is sent to the peer when deleting an IKEv1 phase 1 SA for which it was the responder. When configured to **false**, no notification is sent.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-version-2

Synopsis	Enable the **ike-version-2** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ike-policy *number* ike-version-2
Tree	ike-version-2
Description	Commands in this context configure the IKE version 2 mode of operation that the IKE policy uses.
Notes	The following elements are part of a choice: **ike-version-1** or **ike-version-2**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auth-method *keyword*

Synopsis	Authentication method used with the IKE policy
Context	**configure** ipsec ike-policy *number* ike-version-2 auth-method *keyword*
Tree	auth-method
Options	psk, cert, psk-radius, cert-radius, eap, auto-eap-radius, auto-eap
Default	psk
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auto-eap-method *keyword*

Synopsis	Authentication method used for the remote peer
Context	**configure** ipsec ike-policy *number* ike-version-2 auto-eap-method *keyword*
Tree	auto-eap-method
Description	This command specifies the behavior for the IKEv2 remote-access tunnel when the authentication method uses EAP or potentially another method to authenticate the remote peer.
Options	psk, cert, psk-or-cert
Default	cert
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ikev2-fragment

Synopsis	Enable the **ikev2-fragment** context
Context	**configure** ipsec ike-policy *number* ike-version-2 ikev2-fragment
Tree	ikev2-fragment

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure IKEv2 protocol level fragmentation (RFC 7383).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu *number*

Synopsis	Maximum size of the IKEv2 packet
Context	**configure** ipsec ike-policy *number* ike-version-2 ikev2-fragment mtu *number*
Tree	mtu
Range	512 to 9000
Units	octets
Default	1500
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reassembly-timeout *number*

Synopsis	Timeout for reassembly of IKEv2 message fragments
Context	**configure** ipsec ike-policy *number* ike-version-2 ikev2-fragment reassembly-timeout *number*
Tree	reassembly-timeout
Range	1 to 5
Units	seconds
Default	2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

own-auth-method *keyword*

Synopsis	Authentication method used with IKE policy on own side
Context	**configure** ipsec ike-policy *number* ike-version-2 own-auth-method *keyword*
Tree	own-auth-method
Options	symmetric, psk, cert, eap-only
Default	symmetric
Introduced	16.0.R4

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

own-auto-eap-method *keyword*

Synopsis	Authentication method used on its own side
Context	**configure** ipsec ike-policy *number* ike-version-2 own-auto-eap-method *keyword*
Tree	own-auto-eap-method
Description	This command specifies the behavior for the IKEv2 remote-access tunnel when the authentication method uses EAP or potentially another method to authenticate the peer.
Options	psk, cert
Default	cert
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

send-idr-after-eap-success *boolean*

Synopsis	Send IDr payload in last IKE authentication response
Context	**configure** ipsec ike-policy *number* ike-version-2 send-idr-after-eap-success *boolean*
Tree	send-idr-after-eap-success
Description	When configured to **true**, the Identification Responder (IDr) payload is added in the last IKE authentication response after an Extensible Authentication Protocol (EAP) Success packet is received. When configured to **false**, the IDr payload is not included in the last IKE.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-lifetime *number*

Synopsis	Lifetime of the Phase 2 IKE key
Context	**configure** ipsec ike-policy *number* ipsec-lifetime *number*
Tree	ipsec-lifetime
Range	1200 to 31536000
Units	seconds
Default	3600
Introduced	16.0.R4

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

limit-init-exchange

Synopsis	Enter the **limit-init-exchange** context
Context	**configure** ipsec ike-policy *number* limit-init-exchange
Tree	limit-init-exchange
Description	Commands in this context limit the number of ongoing IKEv2 initial exchanges per tunnel.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of limiting initial IKE exchanges
Context	**configure** ipsec ike-policy *number* limit-init-exchange admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reduced-max-exchange-timeout *(number | keyword)*

Synopsis	Maximum timeout for in-progress initial IKE exchange
Context	**configure** ipsec ike-policy *number* limit-init-exchange reduced-max-exchange-timeout *(number | keyword)*
Tree	reduced-max-exchange-timeout
Description	This command configures the maximum timeout for the in-progress initial IKE exchange. If a new IKEv2 IKE_SA_INIT request is received when there is an ongoing IKEv2 initial exchange from the same peer, the timeout value of the existing exchange is set to this specified value. If the **none** option is configured for this command, the timeout value remains unchanged.
Range	2 to 60
Units	seconds
Options	none
Default	2

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lockout

Synopsis	Enable the **lockout** context
Context	**configure** ipsec ike-policy *number* lockout
Tree	lockout
Description	Commands in this context specify the lockout mechanism for the IPsec tunnel. These commands apply only when the system acts as a tunnel responder.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block *(number | keyword)*

Synopsis	Time a client is blocked for failed authentications
Context	**configure** ipsec ike-policy *number* lockout block *(number | keyword)*
Tree	block
Description	This command configures the time the client is blocked if the number of failed authentications exceeds the configured value within the specified duration.
Range	1 to 1440
Units	minutes
Options	infinite
Default	10
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	Time interval for failed attempts threshold
Context	**configure** ipsec ike-policy *number* lockout duration *number*
Tree	duration
Description	This command specifies the time interval in which the configured failed authentication count must be exceeded to trigger a lockout.
Range	1 to 60
Units	minutes

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	5
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

failed-attempts *number*

Synopsis	Maximum failed authentications allowed in the duration
Context	**configure** ipsec ike-policy *number* lockout failed-attempts *number*
Tree	failed-attempts
Range	1 to 64
Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-port-per-ip *number*

Synopsis	Maximum number of ports allowed under same IP address
Context	**configure** ipsec ike-policy *number* lockout max-port-per-ip *number*
Tree	max-port-per-ip
Description	This command configures the maximum number of ports allowed under the same IP address. When the threshold is exceeded and the client is locked out, all ports behind the IP address are blocked.
Range	1 to 32000
Default	16
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match-peer-id-to-cert *boolean*

Synopsis	Check IKE peer ID during certificate authentication
Context	**configure** ipsec ike-policy *number* match-peer-id-to-cert *boolean*
Tree	match-peer-id-to-cert
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

nat-traversal

Synopsis	Enable the **nat-traversal** context
Context	**configure** ipsec ike-policy *number* nat-traversal
Tree	nat-traversal
Description	Commands in this context configure the Network Address Translation Traversal (NAT-T) functionality.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

force *boolean*

Synopsis	Enable NAT-T in forced mode
Context	**configure** ipsec ike-policy *number* nat-traversal force *boolean*
Tree	force
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

force-keep-alive *boolean*

Synopsis	Continue sending keepalive packets (no expiry)
Context	**configure** ipsec ike-policy *number* nat-traversal force-keep-alive *boolean*
Tree	force-keep-alive
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

keep-alive-interval *number*

Synopsis	Keepalive interval for NAT-T
Context	**configure** ipsec ike-policy *number* nat-traversal keep-alive-interval *number*
Tree	keep-alive-interval
Range	120 to 600
Units	seconds

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pfs

Synopsis	Enable the **pfs** context
Context	**configure** ipsec ike-policy *number* pfs
Tree	pfs
Description	Commands in this context configure perfect forward secrecy on the IPsec tunnel using the policy. PFS provides for a new Diffie-Hellman (DH) key exchange each time the Security Association (SA) key is renegotiated. When the SA key expires, another key is generated (if the SA remains up).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dh-group *keyword*

Synopsis	Diffie-Helman group used to calculate session keys
Context	**configure** ipsec ike-policy *number* pfs dh-group *keyword*
Tree	dh-group
Description	This command specifies which DH group to use for calculating session keys. More bits provide a higher level of security, but require more processing.
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Default	group-2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

relay-unsolicited-cfg-attribute

Synopsis	Enter the **relay-unsolicited-cfg-attribute** context
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute
Tree	relay-unsolicited-cfg-attribute
Description	Commands in this context configure attributes returned from the source (such as a RADIUS server) that are returned to the IKEv2 remote-access tunnel client regardless if the client has requested the attribute in the CFG_REQUEST payload.
Introduced	16.0.R4

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip4-address *boolean*

Synopsis	Return the IPv4 address from the source to the client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip4-address *boolean*
Tree	internal-ip4-address
Description	When configured to **true**, the system returns the IPv4 address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip4-dns *boolean*

Synopsis	Return IPv4 DNS server address from source to client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip4-dns *boolean*
Tree	internal-ip4-dns
Description	When configured to **true**, the system returns the IPv4 DNS server address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip4-netmask *boolean*

Synopsis	Return the IPv4 netmask from the source to the client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip4-netmask *boolean*
Tree	internal-ip4-netmask
Description	When configured to **true**, the system returns the IPv4 netmask from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the netmask in the CFG_REQUEST payload.
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip6-address *boolean*

Synopsis	Return the IPv6 address from the source to the client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip6-address *boolean*
Tree	internal-ip6-address
Description	When configured to **true**, the system returns the IPv6 address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip6-dns *boolean*

Synopsis	Return IPv6 DNS server address from source to client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip6-dns *boolean*
Tree	internal-ip6-dns
Description	When configured to **true**, the system returns the IPv6 DNS server address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-transform [id] *number*

Synopsis	Enter the **ike-transform** list instance
Context	**configure** ipsec ike-transform *number*
Tree	ike-transform
Max. instances	4096
Introduced	16.0.R4

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	IKE transform instance ID
Context	**configure** ipsec ike-transform *number*
Tree	ike-transform
Range	1 to 4096
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dh-group *keyword*

Synopsis	Diffie-Helman group used to calculate session keys
Context	**configure** ipsec ike-transform *number* dh-group *keyword*
Tree	dh-group
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Default	group-2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-auth-algorithm *keyword*

Synopsis	IKE authentication algorithm for IKE transform instance
Context	**configure** ipsec ike-transform *number* ike-auth-algorithm *keyword*
Tree	ike-auth-algorithm
Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Default	sha-1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-encryption-algorithm *keyword*

Synopsis	IKE encryption algorith for the IKE transform instance

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ike-transform *number* ike-encryption-algorithm *keyword*
Tree	ike-encryption-algorithm
Options	des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm16, aes256-gcm8, aes256-gcm16
Default	aes-128
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-prf-algorithm *keyword*

Synopsis	PRF algorithm for the IKE transform instance
Context	**configure** ipsec ike-transform *number* ike-prf-algorithm *keyword*
Tree	ike-prf-algorithm
Description	This command specifies the pseudo-random function algorithm used for IKE security association. If an encrypted algorithm such as AES-GCM is used for the IKE encryption algorithm, **same-as-auth** cannot be used for the IKE PRF algorithm.
Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, same-as-auth
Default	same-as-auth
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isakmp-lifetime *number*

Synopsis	Phase 1 lifetime for the IKE transform instance
Context	**configure** ipsec ike-transform *number* isakmp-lifetime *number*
Tree	isakmp-lifetime
Range	1200 to 31536000
Units	seconds
Default	86400
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transform [id] *number*

Synopsis	Enter the **ipsec-transform** list instance

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ipsec-transform *number*
Tree	ipsec-transform
Description	Commands in this context create an IPsec transform policy. IPsec transform policies can be shared. A change to the IPsec transform is allowed at any time. The change does not impact tunnels that have been established until they are renegotiated. If the change is required immediately, the tunnel must be cleared (reset) for force renegotiation.
Max. instances	2048
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	IPsec transform policy ID
Context	**configure** ipsec ipsec-transform *number*
Tree	ipsec-transform
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esp-auth-algorithm *keyword*

Synopsis	Encapsulating Security Payload (ESP) authentication
Context	**configure** ipsec ipsec-transform *number* esp-auth-algorithm *keyword*
Tree	esp-auth-algorithm
Description	This command specifies the hashing algorithm used for the authentication function. Both ends of a manually configured tunnel must share the same configuration for the IPsec tunnel to enter the operational state.
Options	null, md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Default	sha-1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esp-encryption-algorithm *keyword*

Synopsis	Encryption algorithm for the IPsec transform session

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ipsec-transform *number* esp-encryption-algorithm *keyword*
Tree	esp-encryption-algorithm
Description	This command specifies the encryption algorithm used for the IPsec session. Encryption applies only to ESP configurations. If encryption is not defined, ESP is not used. Both ends of a manually configured tunnel must share the same encryption algorithm for the IPsec tunnel to enter the operational state. When AES-GCM or AES-GMAC is configured: • the authentication encryption must be set to **auth-encryption** • the system does not include the authentication algorithm in the ESP proposal of the SA payload • IPsec transform cannot be used for manual keying
Options	null, des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm12, aes128-gcm16, aes192-gcm8, aes192-gcm12, aes192-gcm16, aes256-gcm8, aes256-gcm12, aes256-gcm16, null-aes128-gmac, null-aes192-gmac, null-aes256-gmac
Default	aes-128
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

extended-sequence-number *boolean*

Synopsis	Enable extended sequence numbering support
Context	**configure** ipsec ipsec-transform *number* extended-sequence-number *boolean*
Tree	extended-sequence-number
Description	When configured to **true**, this command enables 64-bit extended sequence numbering support. This numbering is used for high throughput CHILD_SA to avoid frequent re-keying caused by sequence numbering wrap around. When configured to **false**, only 32-bit sequence numbering is supported.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-lifetime *number*

Synopsis	Phase 2 lifetime for the IPsec transform session
Context	**configure** ipsec ipsec-transform *number* ipsec-lifetime *number*
Tree	ipsec-lifetime

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the lifetime of the Phase 2 IKE key. When unconfigured, the value is inherited from the IPsec lifetime configured in the corresponding IKE policy configured for the same IPsec gateway or IPsec tunnel.
Range	1200 to 31536000
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pfs-dh-group *keyword*

Synopsis	Diffie-Hellman group used for PFS compilation
Context	**configure** ipsec ipsec-transform *number* pfs-dh-group *keyword*
Tree	pfs-dh-group
Description	This command specifies the DH group used for Perfect Forward Secrecy (PFS) compilation during CHILD_SA rekeying. When unconfigured, the value is inherited from the DH group value from the IPsec gateway or IPsec tunnel.
Options	none, group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transport-mode-profile [name] *named-item*

Synopsis	Enter the **ipsec-transport-mode-profile** list instance
Context	**configure** ipsec ipsec-transport-mode-profile *named-item*
Tree	ipsec-transport-mode-profile
Description	Commands in this context configure IPsec-specific attributes that allow an IP tunnel (for example, GRE) to be protected by using IPsec transport mode.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	IPsec transport mode profile name string
Context	**configure** ipsec ipsec-transport-mode-profile *named-item*
Tree	ipsec-transport-mode-profile

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the name of the IPsec transport mode profile.
String length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key-exchange

Synopsis	Enter the **key-exchange** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange
Tree	key-exchange
Description	Commands in this context configure the key exchange used each time the Security Association (SA) key is renegotiated.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dynamic

Synopsis	Enter the **dynamic** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic
Tree	dynamic
Description	Commands in this context configure dynamic keying for the transport mode profile.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

auto-establish *boolean*

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic auto-establish *boolean*
Tree	auto-establish
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert

Synopsis	Enter the **cert** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert
Tree	cert
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert-profile *reference*

Synopsis	Certificate profile name
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert cert-profile *reference*
Tree	cert-profile
Reference	**configure** ipsec cert-profile *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

status-verify

Synopsis	Enter the **status-verify** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify
Tree	status-verify
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-result *keyword*

Synopsis	Default result for Certificate Status Verification
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify default-result *keyword*
Tree	default-result
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify primary *keyword*
Tree	primary
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsp
Default	crl
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify secondary *keyword*
Tree	secondary
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	none, crl, ocsp
Default	none
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert trust-anchor-profile *reference*
Tree	trust-anchor-profile
Reference	**configure** ipsec trust-anchor-profile *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id

Synopsis	Enter the **id** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: • Psk: local tunnel IP address • Cert-auth: subject of the local certificate
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fqdn *fully-qualified-domain-name*

Synopsis	FQDN used as the local ID IKE type
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id fqdn *fully-qualified-domain-name*
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4 *ipv4-unicast-address*

Synopsis	IPv4 as the local ID type
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id ipv4 *ipv4-unicast-address*
Tree	ipv4
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6 *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IPv6 used as the local IKE ID type
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id ipv6 *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ipv6
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-policy *reference*

Synopsis	IKE policy ID
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ike-policy *reference*
Tree	ike-policy
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The **ipsec-transport-mode-profile** configuration only supports IKEv2.
Reference	**configure** ipsec ike-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipsec-transform *reference*

Synopsis	IPsec transform IDs used by the dynamic key
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ipsec-transform *reference*
Tree	ipsec-transform
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	**configure** ipsec ipsec-transform *number*
Max. instances	4
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pre-shared-key *encrypted-leaf*

Synopsis	Pre-shared key for IKE authentication
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic pre-shared-key *encrypted-leaf*
Tree	pre-shared-key
String length	1 to 115
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-history-key-records

Synopsis	Enter the **max-history-key-records** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* max-history-key-records
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esp *number*

Synopsis	Maximum number of recent records

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ipsec-transport-mode-profile *named-item* max-history-key-records esp *number*
Tree	esp
Range	1 to 48
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike *number*

Synopsis	Maximum number of historical IKE key records
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* max-history-key-records ike *number*
Tree	ike
Range	1 to 3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

replay-window *number*

Synopsis	Anti-replay window size
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* replay-window *number*
Tree	replay-window
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 | 64 | 128 | 256 | 512
Units	packets
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius

Synopsis	Enter the **radius** context
Context	**configure** ipsec radius
Tree	radius
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

accounting-policy [name] *named-item*

Synopsis	Enter the **accounting-policy** list instance
Context	**configure** ipsec radius accounting-policy *named-item*
Tree	accounting-policy
Description	Commands in this context configure RADIUS accounting policies to collect accounting statistics.
Max. instances	100
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RADIUS accounting policy name
Context	**configure** ipsec radius accounting-policy *named-item*
Tree	accounting-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute
Tree	include-radius-attribute
Description	Commands in this context specify the RADIUS attributes that are to be included in the RADIUS Authentication-Request messages.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

acct-stats *boolean*

Synopsis	Include accounting attributes in RADIUS packets

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute acct-stats *boolean*
Tree	acct-stats
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute calling-station-id *boolean*
Tree	calling-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ip-addr *boolean*

Synopsis	Include the Framed-IP-Address attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute framed-ip-addr *boolean*
Tree	framed-ip-addr
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

framed-ipv6-prefix *boolean*

Synopsis	Include the Framed-IPv6-Prefix attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute framed-ipv6-prefix *boolean*
Tree	framed-ipv6-prefix
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-addr *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute nas-ip-addr *boolean*
Tree	nas-ip-addr
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute nas-port-id *boolean*
Tree	nas-port-id

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** ipsec radius accounting-policy *named-item* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *named-item*
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

update-interval

Synopsis	Enter the **update-interval** context
Context	**configure** ipsec radius accounting-policy *named-item* update-interval
Tree	update-interval
Description	Commands in this context determine how RADIUS interim-update packets are sent for IKEv2 remote-access tunnels.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

jitter *number*

Synopsis	Jitter interval for sending each interim-update packet
Context	**configure** ipsec radius accounting-policy *named-item* update-interval jitter *number*
Tree	jitter
Description	This command specifies the jitter interval for the RADIUS interim-update packets. When unconfigured, the system uses 10% of the update interval value.
Range	0 to 3600
Units	seconds
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

value *number*

Synopsis	Update interval of the RADIUS accounting data
Context	**configure** ipsec radius accounting-policy *named-item* update-interval value *number*
Tree	value
Description	This command configures the update interval of the RADIUS accounting data. If a value of 0 is configured, no intermediate updates are sent.
Range	0 | 5 to 259200
Units	minutes
Default	10
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication-policy [name] *named-item*

Synopsis	Enter the **authentication-policy** list instance
Context	**configure** ipsec radius authentication-policy *named-item*
Tree	authentication-policy
Description	Commands in this context configure the RADIUS authentication policy associated with the IPsec gateway.
Max. instances	100
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RADIUS authentication policy name
Context	**configure** ipsec radius authentication-policy *named-item*
Tree	authentication-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute
Tree	include-radius-attribute
Description	Commands in this context specify the RADIUS attributes to be included in the RADIUS Authentication-Request messages.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute calling-station-id *boolean*
Tree	calling-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-cert-subject-key-id *boolean*

Synopsis	Include the Subject Key Identifier
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute client-cert-subject-key-id *boolean*
Tree	client-cert-subject-key-id

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the Subject Key Identifier of the certificate of the peer is included in the RADIUS Access-Request packet as VSA: Alc-Subject-Key-Identifier. See the *7450 ESS, 7750 SR, 7950 XRS, and VSR RADIUS Attributes Reference Guide* for more information.
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-addr *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute nas-ip-addr *boolean*
Tree	nas-ip-addr
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute nas-port-id *boolean*
Tree	nas-port-id
Default	false
Introduced	19.7.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

password *encrypted-leaf*

Synopsis	Password used in RADIUS access requests
Context	**configure** ipsec radius authentication-policy *named-item* password *encrypted-leaf*
Tree	password
String length	1 to 115
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** ipsec radius authentication-policy *named-item* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *named-item*
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

show-ipsec-keys *boolean*

Synopsis	Show IPsec IKE and ESP keys in the output
Context	**configure** ipsec show-ipsec-keys *boolean*
Tree	show-ipsec-keys
Description	When configured to **true**, this command allows IPsec keys to be (optionally) included in the display output of certain **debug** and **admin** commands. When configured to **false**, the key display is disabled.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

static-sa [name] *named-item*

Synopsis	Enter the **static-sa** list instance

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec static-sa *named-item*
Tree	static-sa
Max. instances	1000
Introduced	16.0.R6
Platforms	All

[**name**] *named-item*

Synopsis	Static SA name
Context	**configure** ipsec static-sa *named-item*
Tree	static-sa
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R6
Platforms	All

authentication

Synopsis	Enable the **authentication** context
Context	**configure** ipsec static-sa *named-item* authentication
Tree	authentication
Introduced	16.0.R6
Platforms	All

algorithm *keyword*

Synopsis	Authentication algorithm used for an IPsec manual SA
Context	**configure** ipsec static-sa *named-item* authentication algorithm *keyword*
Tree	algorithm
Options	md5, sha1
Notes	This element is mandatory.
Introduced	16.0.R6
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

key *encrypted-leaf*

Synopsis	Key used for the authentication algorithm
Context	**configure** ipsec static-sa *named-item* authentication key *encrypted-leaf*
Tree	key
String length	1 to 54
Notes	This element is mandatory.
Introduced	16.0.R6
Platforms	All

description *named-item*

Synopsis	Text description
Context	**configure** ipsec static-sa *named-item* description *named-item*
Tree	description
String length	1 to 32
Introduced	16.0.R6
Platforms	All

direction *keyword*

Synopsis	Direction to which the static SA entry can be applied
Context	**configure** ipsec static-sa *named-item* direction *keyword*
Tree	direction
Options	inbound, outbound, bidirectional
Default	bidirectional
Introduced	16.0.R6
Platforms	All

protocol *keyword*

Synopsis	IPsec protocol used with the static SA
Context	**configure** ipsec static-sa *named-item* protocol *keyword*
Tree	protocol
Options	ah, esp

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	esp
Introduced	16.0.R6
Platforms	All

spi *number*

Synopsis	Security Parameter Index (SPI) for the static SA
Context	**configure** ipsec static-sa *named-item* spi *number*
Tree	spi
Description	This command specifies the SPI for the static SA. When the **direction** command is set to **inbound**, the SPI is used to look up the instruction to verify and decrypt the incoming IPsec packets. When the **direction** command is set to **outbound**, the SPI is used in the encoding of the outgoing packets. The remote node can use the SPI to look up the instruction to verify and decrypt the packet. When unconfigured, the static SA cannot be used.
Range	256 to 16383
Introduced	16.0.R6
Platforms	All

trust-anchor-profile [name] *named-item*

Synopsis	Enter the **trust-anchor-profile** list instance
Context	**configure** ipsec trust-anchor-profile *named-item*
Tree	trust-anchor-profile
Max. instances	10128
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Trust anchor profile name for IPsec tunnel or gateway
Context	**configure** ipsec trust-anchor-profile *named-item*
Tree	trust-anchor-profile
String length	1 to 32

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trust-anchor [ca-profile] *reference*

Synopsis	Add a list entry for **trust-anchor**
Context	**configure** ipsec trust-anchor-profile *named-item* trust-anchor *reference*
Tree	trust-anchor
Description	Commands in this context configure a CA profile as a trust anchor CA.
Max. instances	8
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**ca-profile**] *reference*

Synopsis	Name of the CA profile as a trust anchor profile
Context	**configure** ipsec trust-anchor-profile *named-item* trust-anchor *reference*
Tree	trust-anchor
Reference	**configure** system security pki ca-profile *named-item*
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ts-list [name] *named-item*

Synopsis	Enter the **ts-list** list instance
Context	**configure** ipsec ts-list *named-item*
Tree	ts-list
Description	Commands in this context configure Traffic Selector (TS) settings.
Max. instances	32768
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**name**] *named-item*

Synopsis	Traffic Selector (TS) list name
Context	**configure** ipsec ts-list *named-item*
Tree	ts-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local

Synopsis	Enter the **local** context
Context	**configure** ipsec ts-list *named-item* local
Tree	local
Description	Commands in this context configure a local TS list, a traffic selector, such as TSr, when the system acts as an IKEv2 responder.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** ipsec ts-list *named-item* local entry *number*
Tree	entry
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	TS list entry ID
Context	**configure** ipsec ts-list *named-item* local entry *number*
Tree	entry
Range	1 to 32
Notes	This element is part of a list key.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address

Synopsis	Enable the **address** context
Context	**configure** ipsec ts-list *named-item* local entry *number* address
Tree	address
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix for address range in IKEv2 traffic selector
Context	**configure** ipsec ts-list *named-item* local entry *number* address prefix *(ipv4-prefix | ipv6-prefix)*
Tree	prefix
Notes	The following elements are part of a mandatory choice: **prefix** or **range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the **range** context
Context	**configure** ipsec ts-list *named-item* local entry *number* address range
Tree	range
Notes	The following elements are part of a mandatory choice: **prefix** or **range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Lower bound of the IP address range for the entry
Context	**configure** ipsec ts-list *named-item* local entry *number* address range begin *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	begin

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Upper bound of the IP address range
Context	**configure** ipsec ts-list *named-item* local entry *number* address range end *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	end
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol

Synopsis	Enable the **protocol** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol
Tree	protocol
Description	Commands in this context specify the protocol settings for the IKEv2 traffic selector.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

any

Synopsis	Match any protocol ID
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol any
Tree	any
Notes	The following elements are part of a mandatory choice: **any** or **id**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id

Synopsis	Enable the **id** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id
Tree	id
Notes	The following elements are part of a mandatory choice: **any** or **id**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis	Enter the **icmp** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp
Tree	icmp
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range begin-icmp-code *number*
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range begin-icmp-type *number*
Tree	begin-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range end-icmp-code *number*
Tree	end-icmp-code
Range	0 to 255
Notes	This element is mandatory.

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range end-icmp-type *number*
Tree	end-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp6

Synopsis	Enter the **icmp6** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6
Tree	icmp6
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6 opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6 port-range

Use subject to Terms available at: www.nokia.com/terms.

Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6 port-range begin-icmp-code *number*
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6 port-range begin-icmp-type *number*
Tree	begin-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6 port-range end-icmp-code *number*
Tree	end-icmp-code
Range	0 to 255

Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6 port-range end-icmp-type *number*
Tree	end-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mipv6

Synopsis	Enter the **mipv6** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id mipv6
Tree	mipv6
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id mipv6 opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id mipv6 port-range
Tree	port-range
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *number*

Synopsis	Lower bound of the port range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id mipv6 port-range begin *number*
Tree	begin
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of the port range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id mipv6 port-range end *number*
Tree	end
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol-id-with-any-port *(keyword | number)*

Synopsis	Protocol ID that accepts any port value
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id protocol-id-with-any-port *(keyword | number)*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	protocol-id-with-any-port
Range	1 to 255
Options	icmp, tcp, udp, icmp6, sctp, mipv6
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sctp

Synopsis	Enter the **sctp** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id sctp
Tree	sctp
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id sctp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id sctp port-range
Tree	port-range
Notes	The following elements are part of a choice: **opaque** or **port-range**.

Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol-id-with-any-port *(keyword | number)*

Synopsis	Protocol ID that accepts any port value
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id protocol-id-with-any-port *(keyword | number)*
Tree	protocol-id-with-any-port
Range	1 to 255
Options	icmp, tcp, udp, icmp6, sctp, mipv6
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sctp

Synopsis	Enter the **sctp** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id sctp
Tree	sctp
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id sctp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.

Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id udp port-range end *number*
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-template [id] *number*

Synopsis	Enter the **tunnel-template** list instance

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec tunnel-template *number*
Tree	tunnel-template
Max. instances	2048
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Tunnel template ID
Context	**configure** ipsec tunnel-template *number*
Tree	tunnel-template
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

clear-df-bit *boolean*

Synopsis	Clear the Do-not-Fragment (DF) bit
Context	**configure** ipsec tunnel-template *number* clear-df-bit *boolean*
Tree	clear-df-bit
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

copy-traffic-class-upon-decapsulation *boolean*

Synopsis	Enable traffic class copy upon decapsulation
Context	**configure** ipsec tunnel-template *number* copy-traffic-class-upon-decapsulation *boolean*
Tree	copy-traffic-class-upon-decapsulation
Description	When configured to **true**, the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private). When configured to **false**, the system does not copy the traffic class from the outer IP packet to the payload IP packet header upon decapsulation.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** ipsec tunnel-template *number* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encapsulated-ip-mtu *number*

Synopsis	Maximum size of the encapsulated tunnel packet
Context	**configure** ipsec tunnel-template *number* encapsulated-ip-mtu *number*
Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	octets
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp-generation

Synopsis	Enter the **icmp-generation** context
Context	**configure** ipsec tunnel-template *number* icmp-generation
Tree	icmp-generation
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

frag-required

Synopsis	Enter the **frag-required** context
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required
Tree	frag-required
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending ICMP messages
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required admin-state *keyword*
Tree	admin-state
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval for sending ICMP messages
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required interval *number*
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-count *number*

Synopsis	Maximum number of ICMP messages that can be sent
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required message-count *number*
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp6-generation

Synopsis	Enter the **icmp6-generation** context
Context	**configure** ipsec tunnel-template *number* icmp6-generation
Tree	icmp6-generation
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pkt-too-big

Synopsis	Enter the **pkt-too-big** context
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big
Tree	pkt-too-big
Description	Commands in this context configure values for the ICMPv6 Packet Too Big (PTB) messages. The system sends PTB messages if an IPv6 packet is received on the private side that is larger than 1280 bytes and also exceeds the private MTU of the tunnel.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of Packet Too Big message sends
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Maximum interval during which PTB messages can be sent
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big interval *number*
Tree	interval
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-count *number*

Synopsis	Max ICMPv6 messages that can be sent during interval
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big message-count *number*
Tree	message-count
Range	10 to 1000
Default	100
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ignore-default-route *boolean*

Synopsis	Ignore any full range traffic selector in TSi

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec tunnel-template *number* ignore-default-route *boolean*
Tree	ignore-default-route
Description	When configured to **true**, any full range traffic selector is ignored when creating a reverse route. When configured to **false**, no CHILD_SA is created if any full range traffic selector is included in TSi.
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	Maximum size of the IP MTU for the payload packets
Context	**configure** ipsec tunnel-template *number* ip-mtu *number*
Tree	ip-mtu
Range	512 to 9000
Units	octets
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transform *reference*

Synopsis	IPsec transform ID for the tunnel template
Context	**configure** ipsec tunnel-template *number* ipsec-transform *reference*
Tree	ipsec-transform
Reference	**configure** ipsec ipsec-transform *number*
Max. instances	4
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pmtu-discovery-aging *number*

Synopsis	Aging out time of the learned path MTU
Context	**configure** ipsec tunnel-template *number* pmtu-discovery-aging *number*
Tree	pmtu-discovery-aging

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

private-tcp-mss-adjust *number*

Synopsis	New TCP MSS value on the private side
Context	**configure** ipsec tunnel-template *number* private-tcp-mss-adjust *number*
Tree	private-tcp-mss-adjust
Description	This command specifies the new (adjusted) TCP MSS value of TCP SYN packets on the private side. When unconfigured, the MSS value is derived from the received TCP SYN packet on the private side.
Range	512 to 9000
Units	octets
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

propagate-pmtu-v4 *boolean*

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	**configure** ipsec tunnel-template *number* propagate-pmtu-v4 *boolean*
Tree	propagate-pmtu-v4
Description	When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

propagate-pmtu-v6 *boolean*

Synopsis	Enable propagation of the path MTU to IPv6 hosts

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec tunnel-template *number* propagate-pmtu-v6 *boolean*
Tree	propagate-pmtu-v6
Description	When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

public-tcp-mss-adjust *(number | keyword)*

Synopsis	New TCP MSS value on the public side
Context	**configure** ipsec tunnel-template *number* public-tcp-mss-adjust *(number | keyword)*
Tree	public-tcp-mss-adjust
Description	This command specifies the new (adjusted) TCP MSS value for the TCP traffic in an IPsec tunnel which is sent from the public network to the private network. The system can use this value to adjust or insert the MSS option in the TCP SYN packet. When unconfigured, the MSS value is derived from the public MTU and IPsec overhead.
Range	512 to 9000
Units	octets
Options	auto
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

replay-window *number*

Synopsis	Anti-replay window size for the tunnel template
Context	**configure** ipsec tunnel-template *number* replay-window *number*
Tree	replay-window
Range	32 | 64 | 128 | 256 | 512
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sp-reverse-route *keyword*

Synopsis	Reverse route creation method in private service
Context	**configure** ipsec tunnel-template *number* sp-reverse-route *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	sp-reverse-route
Description	This command allows the system to automatically create a reverse route based on dynamic LAN-to-LAN tunnel's TSi in private service.
Options	none, use-security-policy
Default	none
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

4.21.1 isa command descriptions

isa

Synopsis	Enter the **isa** context
Context	**configure** isa
Tree	isa
Description	Commands in this context configure the Integrated Services Adapter (ISA).
Introduced	16.0.R1
Platforms	All

application-assurance-group [aa-group-id] *number*

Synopsis	Enter the **application-assurance-group** list instance
Context	**configure** isa application-assurance-group *number*
Tree	application-assurance-group
Description	Commands in this context configure the application assurance (AA) group.
Max. instances	7
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[aa-group-id] *number*

Synopsis	AA group identifier
Context	**configure** isa application-assurance-group *number*
Tree	application-assurance-group
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-distribute-traffic-by-ip *boolean*

Synopsis	Allow application assurance to divert traffic

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** isa application-assurance-group *number* aa-sub-distribute-traffic-by-ip *boolean*
Tree	aa-sub-distribute-traffic-by-ip
Description	When configured to **true**, the system diverts traffic on the parent SAP or spoke-SDP to multiple ISAs or ESAs based on the source IP address. This is useful when the bandwidth of a single SAP is larger than the capacity of a single ISA or ESA. This is only supported for the auto-created transit IP subscribers. The traffic is diverted when the hashing is enabled at the AA group level and in the parent SAP application profile.
Default	false
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

aa-sub-scale *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	AA group sub-scale
Context	**configure** isa application-assurance-group *number* aa-sub-scale *keyword*
Tree	aa-sub-scale
Options	residential, vpn, mobile-gateway, lightweight-internet, residential-8k, residential-16k, residential-32k, residential-64k, vpn-1k, vpn-2k, vpn-4k, vpn-8k, mobile-gateway-1m, mobile-gateway-2m, lightweight-internet-512k, firewall-32
Default	residential
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of this AA group
Context	**configure** isa application-assurance-group *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

backup

Synopsis	Enter the **backup** context
Context	**configure** isa application-assurance-group *number* backup
Tree	backup
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esa [esa-id] *number* vm *number*

Synopsis	Add a list entry for **esa**
Context	**configure** isa application-assurance-group *number* backup esa *number* vm *number*
Tree	esa
Max. instances	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**esa-id**] *number*

Synopsis	ESA ID
Context	**configure** isa application-assurance-group *number* backup esa *number* vm *number*
Tree	esa
Range	1 to 16
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vm *number*

Synopsis	VM ID within the ESA
Context	**configure** isa application-assurance-group *number* backup esa *number* vm *number*
Tree	esa
Range	1 to 4
Notes	This element is part of a list key.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa [mda-id] *slot-mda*

Synopsis	Add a list entry for **isa**
Context	**configure** isa application-assurance-group *number* backup isa *slot-mda*
Tree	isa
Max. instances	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**mda-id**] *slot-mda*

Synopsis	MDA/ISA ID
Context	**configure** isa application-assurance-group *number* backup isa *slot-mda*
Tree	isa
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** isa application-assurance-group *number* description *description*
Tree	description
String length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

divert-fc *keyword*

Synopsis	Diverted traffic forwarding class
Context	**configure** isa application-assurance-group *number* divert-fc *keyword*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	divert-fc
Options	be, l2, af, l1, h2, ef, h1, nc
Max. instances	8
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

failure-mode *keyword*

Synopsis	Mode of operation when no ISA-AA cards are available
Context	**configure** isa application-assurance-group *number* failure-mode *keyword*
Tree	failure-mode
Options	fail-to-open
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-attribute [flow-attribute-name] *named-item*

Synopsis	Add a list entry for **flow-attribute**
Context	**configure** isa application-assurance-group *number* flow-attribute *named-item*
Tree	flow-attribute
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**flow-attribute-name**] *named-item*

Synopsis	Flow attribute name
Context	**configure** isa application-assurance-group *number* flow-attribute *named-item*
Tree	flow-attribute
String length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Range	1 to 2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overload-cut-through *boolean*

Synopsis	Enable cut-through of traffic if ISA is in overload
Context	**configure** isa application-assurance-group *number* overload-cut-through *boolean*
Tree	overload-cut-through
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overload-sub-quarantine

Synopsis	Enter the **overload-sub-quarantine** context
Context	**configure** isa application-assurance-group *number* overload-sub-quarantine
Tree	overload-sub-quarantine
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of overload subscriber quarantine
Context	**configure** isa application-assurance-group *number* overload-sub-quarantine admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary

Synopsis	Enter the **primary** context
Context	**configure** isa application-assurance-group *number* primary

© 2024 Nokia.

active-mda-limit *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Number of active ESA-VM or ISA members in the NAT group
Context	**configure** isa nat-group *number* redundancy active-mda-limit *number*
Tree	active-mda-limit
Description	This command configures the number of active ESA-VM or ISA members in a NAT group. The system automatically selects which ESA-VMs or ISAs are active. In active/standby (A/S) redundancy mode, the correlation between ESA-VM or ISA members is direct, meaning each ESA-VM or ISA equates to one member. In active/active (A/A) redundancy mode, an individual ESA-VM or ISA may be associated with multiple members. For A/S redundancy, any surplus ESA-VMs or ISAs beyond the configured active threshold automatically transition to standby. These standby units remain idle until an active unit fails, at which point a standby unit takes over, handling traffic from only one failed active unit. This setup allows for the configuration of multiple standby units to provide resilience against several concurrent failures. In A/A redundancy, the combination of this command and the **failed-mda-limit** command guides the distribution of resources among ESA-VMs or ISAs, essentially defining how the members are structured. In both A/S and A/A modes, the system strives to maintain the configured number of active members as outlined by the active MDA limit, drawing from the pool of available spare resources to compensate for any failures. If the actual number of active members

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

drops below this limit because of a lack of available spares, the NAT group status changes to degraded. In this state, traffic intended for the missing ESA-VM or ISA members (up to the active MDA limit) is blackholed. In Layer 2-aware NAT this condition can be circumvented where traffic can bypass NAT altogether and be directly routed within the internal network that may have an alternate path to a backup NAT system.

For additional details, see "L2-Aware bypass" in the *7450 ESS, 7750 SR, and VSR Multiservice Integrated Service Adapter and Extended Services Appliance Guide.*

Range	1 to 28
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inter-chassis

Synopsis	Enable the **inter-chassis** context
Context	**configure** isa nat-group *number* redundancy inter-chassis
Tree	inter-chassis
Notes	The following elements are part of a choice: **inter-chassis** or **intra-chassis**.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-timeout-on-switchover *number*

Synopsis	Flow timeout immediately following a switchover
Context	**configure** isa nat-group *number* redundancy inter-chassis flow-timeout-on-switchover *number*
Tree	flow-timeout-on-switchover
Description	This command configures the initial flow timeout on the newly active node for the NAT group after a switchover. The timeout is in effect only if there is no traffic present over the flow; otherwise, the first packet over the flow resets the flow timeout to the originally configured value (under the NAT policy configuration). This command configuration restricts the flow timeout to a portion of the originally configured value.
Range	1 to 50
Units	percent
Default	50
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-mtu *number*

Synopsis	IP MTU for ISA-to-ISA communication
Context	**configure** isa nat-group *number* redundancy inter-chassis ip-mtu *number*
Tree	ip-mtu
Description	This command configures the IP MTU size used to transport flow synchronization records between the ISAs. Multiple flow synchronization events can be packed into a single frame up to the IP MTU size.
Range	512 to 9000
Default	1500
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

keepalive

Synopsis	Enter the **keepalive** context
Context	**configure** isa nat-group *number* redundancy inter-chassis keepalive
Tree	keepalive
Description	Commands in this context configure keepalive messages between the CPMs residing on different chassis and are used to detect the presence of the peering node. If the redundant peer connectivity is lost beyond the limit defined by the keepalive messages, each node in the redundant pair transitions to standalone mode. Keepalive messages use UDP transport.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dropcount *number*

Synopsis	Threshold for lost consecutive keepalive messages
Context	**configure** isa nat-group *number* redundancy inter-chassis keepalive dropcount *number*
Tree	dropcount
Description	This command configures the threshold for the number of consecutive keepalive messages that are lost between the redundant nodes before the connection is declared down. When the peer is considered unreachable, each node transitions to standalone mode.
Range	2 to 20
Default	2

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval between two consecutive keepalive messages
Context	**configure** isa nat-group *number* redundancy inter-chassis keepalive interval *number*
Tree	interval
Description	This command configures the interval at which the keepalive messages are periodically sent between the redundant nodes (CPMs) to verify the presence of the peer. If peer connectivity is lost, each node transitions to standalone mode.
Range	2 to 250
Units	deciseconds
Default	30
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-ip-range-start *ipv4-unicast-address*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Starting IP address for ISAs in the NAT group
Context	**configure** isa nat-group *number* redundancy inter-chassis local-ip-range-start *ipv4-unicast-address*
Tree	local-ip-range-start
Description	This command configures the initial IP address for the ISAs in the NAT group. Consecutive IP addresses are automatically assigned for the remaining ISAs. The IP addresses are used to communicate between the ISAs on redundant nodes for the purpose of flow synchronization. Traffic from the member ISA with the initial IP address is sent to the initial IP address from the remote IP range.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

monitor-oper-group [oper-group] *reference*

Synopsis	Enter the **monitor-oper-group** list instance
Context	**configure** isa nat-group *number* redundancy inter-chassis monitor-oper-group *reference*
Tree	monitor-oper-group
Description	Commands in this context specify monitoring settings for objects in an operational group, such as SAPs, BFD sessions, or VRRP sessions, in order to adjust the overall health of the node in a redundant inter-chassis NAT system. A state change of the objects in the operational group influences the health of a NAT node in a redundant configuration.
Max. instances	4
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

preferred *boolean*

Synopsis	Set the preferred activity status for the node
Context	**configure** isa nat-group *number* redundancy inter-chassis preferred *boolean*
Tree	preferred
Description	When configured to **true**, the system designates the node in a redundant NAT system with the preferred activity status. The preferred status comes into consideration only when both redundant nodes have equal health values. If the peer traffic-serving node has an equal health value but does not have the preferred designation, a switch of activity occurs to route traffic to the preferred node. The switchover could cause a brief interruption in traffic flow. When configured to **false**, the preferred designation is not set for the node.
Default	false
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-ip-range-start *ipv4-unicast-address*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Starting IP address for ISAs on the remote node
Context	**configure** isa nat-group *number* redundancy inter-chassis remote-ip-range-start *ipv4-unicast-address*
Tree	remote-ip-range-start
Description	This command configures the initial IP address for the ISAs in the NAT group on the remote node. Consecutive IP addresses are automatically assigned for the remaining ISAs. The IP addresses are used to communicate between the ISAs on redundant nodes for the purpose of flow synchronization. Traffic from the member ISA with the initial local IP address is sent to the initial IP address from the remote IP range.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

replication-threshold *number*

Synopsis	Minimum time to wait before a NAT flow is synchronized
Context	**configure** isa nat-group *number* redundancy inter-chassis replication-threshold *number*
Tree	replication-threshold
Description	This command configures the minimum time to wait before a NAT flow is replicated (synchronized) to the standby node.
Range	0 to 300
Units	seconds
Default	20
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Router instance for the ISA-to-ISA communication
Context	**configure** isa nat-group *number* redundancy inter-chassis router-instance *string*
Tree	router-instance
Description	This command specifies the routing instance through which ISAs on redundant nodes communicate with each other and synchronize their flow state.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sync *boolean*

Synopsis	Synchronize NAT flows between nodes
Context	**configure** isa nat-group *number* redundancy inter-chassis sync *boolean*
Tree	sync
Default	true
Introduced	22.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

intra-chassis

Synopsis	Enter the **intra-chassis** context
Context	**configure** isa nat-group *number* redundancy intra-chassis
Tree	intra-chassis
Notes	The following elements are part of a choice: **inter-chassis** or **intra-chassis**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-active

Synopsis	Enter the **active-active** context
Context	**configure** isa nat-group *number* redundancy intra-chassis active-active
Tree	active-active
Notes	The following elements are part of a choice: **active-active**, **active-standby**, or **l2aware-bypass**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

failed-mda-limit *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum failed MDAs allowed in ICR for the NAT group
Context	**configure** isa nat-group *number* redundancy intra-chassis active-active failed-mda-limit *number*
Tree	failed-mda-limit
Description	This command configures the maximum number of supported simultaneous failures in active-active intra-chassis NAT redundancy model. Traffic from the failed ESA-VMs or ISAs is distributed over the remaining ESA-VM or ISA in the system. Memory resources are reserved in every ESA-VM or ISA to accommodate new mappings from the failed

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ESA-VM or ISA. However, bandwidth is not reserved and each ESA-VM or ISA operates at maximum speed in all conditions (with failure or without the failure).

NAT translations are not preserved across switchovers and consequently they must be reinitiated by the clients.

For this command to take effect, the intra-chassis redundancy must be set to **active-active** mode by using the **configure isa nat-group redundancy intra-chassis active-active** command.

Range	1 to 2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-standby

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Active-standby intra-chassis NAT redundancy model
Context	**configure** isa nat-group *number* redundancy intra-chassis active-standby
Tree	active-standby
Notes	The following elements are part of a choice: **active-active**, **active-standby**, or **l2aware-bypass**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2aware-bypass

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Context	**configure** isa nat-group *number* redundancy intra-chassis l2aware-bypass

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	l2aware-bypass
Notes	The following elements are part of a choice: **active-active**, **active-standby**, or **l2aware-bypass**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

scaling-profile *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Scaling profile for the NAT group
Context	**configure** isa nat-group *number* scaling-profile *keyword*
Tree	scaling-profile
Description	This command determines profiles for NAT scaling. Lower profile numbers allocate less resources, thus supporting lower scaling. Contact your Nokia representative for more information about NAT scaling figures in each profile.
Options	profile1, profile2, profile3
Default	profile1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-limits

Synopsis	Enter the **session-limits** context
Context	**configure** isa nat-group *number* session-limits
Tree	session-limits
Introduced	16.0.R1

high *number*

Synopsis	Session limit high watermark for each MDA in the group
Context	**configure** isa nat-group *number* session-limits watermarks high *number*
Tree	high
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low *number*

Synopsis	Session limit low watermark for each MDA in the group
Context	**configure** isa nat-group *number* session-limits watermarks low *number*
Tree	low
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-group [id] *number*

Synopsis	Enter the **tunnel-group** list instance
Context	**configure** isa tunnel-group *number*
Tree	tunnel-group
Description	Commands in this context create or edit a tunnel group. A tunnel group is a set of one or more MS-ISAs that support the origination and termination of IPsec and IP/GRE tunnels. On a VSR, the **isa-scale-mode** command must be specified, which defines the maximum number of tunnels on each ISA.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**id**] *number*

[**mda-id**] *slot-mda*

Synopsis	MDA identifier
Context	**configure** isa video-group *number* mda *slot-mda*
Tree	mda
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

resv-ret *number*

Synopsis	Egress bandwidth reserved for retransmission
Context	**configure** isa video-group *number* resv-ret *number*
Tree	resv-ret
Range	0 to 10500
Units	megabps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

stream-selection *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Allow stream selection for the group
Context	**configure** isa video-group *number* stream-selection *boolean*
Tree	stream-selection
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

vapp [esa-id] *reference* vapp-id *reference*

Synopsis	Add a list entry for **vapp**
Context	**configure** isa video-group *number* vapp *reference* vapp-id *reference*
Tree	vapp
Description	This command adds a list entry for the ESA and VM ID to the list of video group member ESA virtual applications.
Max. instances	6
Introduced	21.5.R1
Platforms	7750 SR, 7750 SR-s

[**esa-id**] *reference*

Synopsis	ESA ID
Context	**configure** isa video-group *number* vapp *reference* vapp-id *reference*
Tree	vapp
Reference	**configure** esa *number*
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7750 SR, 7750 SR-s

vapp-id *reference*

Synopsis	Virtual application ID

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** isa video-group *number* vapp *reference* vapp-id *reference*
Tree	vapp
Reference	**configure** esa *number* vm *number*
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7750 SR, 7750 SR-s

watermark

Synopsis	Enter the **watermark** context
Context	**configure** isa video-group *number* watermark
Tree	watermark
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

bandwidth

Synopsis	Enter the **bandwidth** context
Context	**configure** isa video-group *number* watermark bandwidth
Tree	bandwidth
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc *number*

Synopsis	FCC watermark parameters based on the bandwidth
Context	**configure** isa video-group *number* watermark bandwidth fcc *number*
Tree	fcc
Range	1 to 99
Units	percent
Default	90
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

© 2024 Nokia.

ret *number*

Synopsis	RET watermark parameters based on the bandwidth
Context	**configure** isa video-group *number* watermark bandwidth ret *number*
Tree	ret
Range	1 to 99
Units	percent
Default	90
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

total *number*

Synopsis	Total watermark parameters based on the bandwidth
Context	**configure** isa video-group *number* watermark bandwidth total *number*
Tree	total
Range	1 to 99
Units	percent
Default	90
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

session

Synopsis	Enter the **session** context
Context	**configure** isa video-group *number* watermark session
Tree	session
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc *number*

Synopsis	FCC watermark parameters based on the session
Context	**configure** isa video-group *number* watermark session fcc *number*
Tree	fcc

Range	1 to 99
Units	percent
Default	90
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

ret *number*

Synopsis	RET watermark parameters based on the session
Context	**configure** isa video-group *number* watermark session ret *number*
Tree	ret
Range	1 to 99
Units	percent
Default	90
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

total *number*

Synopsis	Total watermark parameters based on the session
Context	**configure** isa video-group *number* watermark session total *number*
Tree	total
Range	1 to 99
Units	percent
Default	90
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

wlan-gw-group [id] *number*

Synopsis	Enter the **wlan-gw-group** list instance
Context	**configure** isa wlan-gw-group *number*
Tree	wlan-gw-group
Description	Commands in this context configure a WLAN-gateway group that contains a set of ISAs used in WLAN-gateway functionality. A WLAN-gateway group can also be used where

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	a NAT group is expected. The WLAN-gateway group ID shares the same number space with the NAT group.
Max. instances	1
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	WLAN-GW ISA group ID
Context	**configure** isa wlan-gw-group *number*
Tree	wlan-gw-group
Range	1 to 4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-iom-limit *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Number of WLAN-GW IOMs used as active IOMs
Context	**configure** isa wlan-gw-group *number* active-iom-limit *number*
Tree	active-iom-limit
Range	1 to 7
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

active-mda-limit *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum number of ISA MDAs in active use by the group
Context	**configure** isa wlan-gw-group *number* active-mda-limit *number*
Tree	active-mda-limit
Range	1 to 14
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of the WLAN Gateway group
Context	**configure** isa wlan-gw-group *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** isa wlan-gw-group *number* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

esa [esa-id] *reference* vm *reference*

Synopsis	Add a list entry for **esa**
Context	**configure** isa wlan-gw-group *number* esa *reference* vm *reference*
Tree	esa
Introduced	20.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

[**esa-id**] *reference*

Synopsis	ESA ID
Context	**configure** isa wlan-gw-group *number* esa *reference* vm *reference*
Tree	esa
Reference	**configure** esa *number*
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

vm *reference*

Synopsis	VM ID
Context	**configure** isa wlan-gw-group *number* esa *reference* vm *reference*
Tree	esa
Reference	**configure** esa *number* vm *number*
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

iom [slot-number] *reference*

Synopsis	Add a list entry for **iom**
Context	**configure** isa wlan-gw-group *number* iom *reference*
Tree	iom
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**slot-number**] *reference*

Synopsis	IOM slot to use in the WLAN-GW group
Context	**configure** isa wlan-gw-group *number* iom *reference*
Tree	iom
Reference	**configure** card *number*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mda [mda-id] *slot-mda*

Synopsis	Add a list entry for **mda**
Context	**configure** isa wlan-gw-group *number* mda *slot-mda*
Tree	mda
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

[**mda-id**] *slot-mda*

Synopsis	MDA slot value
Context	**configure** isa wlan-gw-group *number* mda *slot-mda*
Tree	mda
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

nat

Synopsis	Enter the **nat** context
Context	**configure** isa wlan-gw-group *number* nat
Tree	nat
Introduced	16.0.R1

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

log

Synopsis	Enter the **log** context
Context	**configure** isa wlan-gw-group *number* nat log
Tree	log
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

suppress-lsn-events *boolean*

Synopsis	Suppress LSN events when RADIUS accounting is enabled
Context	**configure** isa wlan-gw-group *number* nat log suppress-lsn-events *boolean*
Tree	suppress-lsn-events
Default	true
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

suppress-lsn-sub-blocks-free *boolean*

Synopsis	Suppress LSN Free block and NAT pool block notification
Context	**configure** isa wlan-gw-group *number* nat log suppress-lsn-sub-blocks-free *boolean*
Tree	suppress-lsn-sub-blocks-free
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lsn *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use Large Scale NAT
Context	**configure** isa wlan-gw-group *number* nat lsn *boolean*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	lsn
Default	true
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis	RADIUS accounting policy for ISA group
Context	**configure** isa wlan-gw-group *number* nat radius-accounting-policy *reference*
Tree	radius-accounting-policy
Reference	**configure** aaa radius isa-policy *named-item*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-limits

Synopsis	Enter the **session-limits** context
Context	**configure** isa wlan-gw-group *number* nat session-limits
Tree	session-limits
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

reserved *number*

Synopsis	Number of sessions reserved for prioritized sessions
Context	**configure** isa wlan-gw-group *number* nat session-limits reserved *number*
Tree	reserved
Range	1 to 6291456
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

upnp-mappings *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum number of UPnP mappings per member
Context	**configure** isa wlan-gw-group *number* nat session-limits upnp-mappings *number*
Tree	upnp-mappings
Description	This command specifies the maximum number of Universal Plug and Play (UPnP) mappings per member.
Range	1 to 524288
Default	524288
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enable the **watermarks** context
Context	**configure** isa wlan-gw-group *number* nat session-limits watermarks
Tree	watermarks
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis	Session limit high watermark for each MDA in the group
Context	**configure** isa wlan-gw-group *number* nat session-limits watermarks high *number*
Tree	high
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1

© 2024 Nokia.

4.22.1 lag command descriptions

lag [lag-name] *lag-interface*

Synopsis	Enter the **lag** list instance
Context	**configure** lag *lag-interface*
Tree	lag
Introduced	16.0.R1
Platforms	All

[**lag-name**] *lag-interface*

Synopsis	LAG name
Context	**configure** lag *lag-interface*
Tree	lag
String length	1 to 27
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

access

Synopsis	Enter the **access** context
Context	**configure** lag *lag-interface* access
Tree	access
Introduced	16.0.R1
Platforms	All

adapt-qos

Synopsis	Enter the **adapt-qos** context
Context	**configure** lag *lag-interface* access adapt-qos
Tree	adapt-qos
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

include-egr-hash-cfg *boolean*

Synopsis	Factor egress hashing into buffer and rate distribution
Context	**configure** lag *lag-interface* access adapt-qos include-egr-hash-cfg *boolean*
Tree	include-egr-hash-cfg
Default	false
Introduced	16.0.R1
Platforms	All

mode *keyword*

Synopsis	QoS adaptation mode
Context	**configure** lag *lag-interface* access adapt-qos mode *keyword*
Tree	mode
Options	link, distribute, port-fair
Introduced	16.0.R1
Platforms	All

bandwidth *number*

Synopsis	Administrative bandwidth applied to this LAG
Context	**configure** lag *lag-interface* access bandwidth *number*
Tree	bandwidth
Range	1 to 6400000000
Units	bps
Introduced	16.0.R1
Platforms	All

booking-factor *number*

Synopsis	Booking factor against the administrative bandwidth
Context	**configure** lag *lag-interface* access booking-factor *number*
Tree	booking-factor

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

per-fp-egr-queuing *boolean*

Synopsis	Per FP egress queuing
Context	**configure** lag *lag-interface* access per-fp-egr-queuing *boolean*
Tree	per-fp-egr-queuing
Default	false
Introduced	16.0.R1
Platforms	All

per-fp-ing-queuing *boolean*

Synopsis	Enable ingress queuing per forwarding port
Context	**configure** lag *lag-interface* access per-fp-ing-queuing *boolean*
Tree	per-fp-ing-queuing
Default	false
Introduced	16.0.R1
Platforms	All

per-fp-sap-instance *boolean*

Synopsis	SAP instance allocation on a LAG
Context	**configure** lag *lag-interface* access per-fp-sap-instance *boolean*
Tree	per-fp-sap-instance
Default	false
Introduced	16.0.R1
Platforms	All

adaptive-load-balancing

Synopsis	Enable the **adaptive-load-balancing** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** lag *lag-interface* adaptive-load-balancing
Tree	adaptive-load-balancing
Description	Commands in this context configure adaptive load balancing between LAG links.
Introduced	20.10.R1
Platforms	All

bandwidth-threshold *number*

Synopsis	Minimum bandwidth for adaptive load balancing
Context	**configure** lag *lag-interface* adaptive-load-balancing bandwidth-threshold *number*
Tree	bandwidth-threshold
Range	0 to 100
Units	percent
Introduced	22.10.R1
Platforms	All

interval *number*

Synopsis	The statistics pooling interval for the LAG ports
Context	**configure** lag *lag-interface* adaptive-load-balancing interval *number*
Tree	interval
Range	15 | 30 | 60 | 120
Units	seconds
Default	30
Introduced	21.5.R1
Platforms	All

tolerance *number*

Synopsis	Threshold that triggers link utilization optimization
Context	**configure** lag *lag-interface* adaptive-load-balancing tolerance *number*
Tree	tolerance
Description	This command configures the threshold value that is based on the difference between the most-loaded and least-loaded links in a LAG. When the threshold value is exceeded, the adaptive load balancing operation attempts to optimize traffic distribution between LAG links.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 100
Units	percent
Default	20
Introduced	20.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the LAG
Context	**configure** lag *lag-interface* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

bfd-liveness

Synopsis	Enter the **bfd-liveness** context
Context	**configure** lag *lag-interface* bfd-liveness
Tree	bfd-liveness
Introduced	16.0.R1
Platforms	All

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** lag *lag-interface* bfd-liveness ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of micro-BFD session for IP family

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** lag *lag-interface* bfd-liveness ipv4 admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

bfd-on-distributing-only *boolean*

Synopsis	Restrict micro-BFD sessions to LACP state distributing
Context	**configure** lag *lag-interface* bfd-liveness ipv4 bfd-on-distributing-only *boolean*
Tree	bfd-on-distributing-only
Default	false
Introduced	16.0.R1
Platforms	All

local-ip-address *ipv4-unicast-address*

Synopsis	BFD source address
Context	**configure** lag *lag-interface* bfd-liveness ipv4 local-ip-address *ipv4-unicast-address*
Tree	local-ip-address
Introduced	16.0.R1
Platforms	All

max-admin-down-time *(number | keyword)*

Synopsis	Maximum time to forward traffic after micro-BFD is down
Context	**configure** lag *lag-interface* bfd-liveness ipv4 max-admin-down-time *(number | keyword)*
Tree	max-admin-down-time
Range	0 to 3600
Units	seconds
Options	infinite
Default	0
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-setup-time *(number | keyword)*

Synopsis	Maximum time to forward traffic during micro-BFD setup
Context	**configure** lag *lag-interface* bfd-liveness ipv4 max-setup-time *(number* | *keyword)*
Tree	max-setup-time
Range	0 to 60000
Units	milliseconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Interval multiplier to detect BFD packets not received
Context	**configure** lag *lag-interface* bfd-liveness ipv4 multiplier *number*
Tree	multiplier
Range	3 to 20
Default	3
Introduced	16.0.R1
Platforms	All

receive-interval *number*

Synopsis	Receive timer for micro-BFD session over the LAG links
Context	**configure** lag *lag-interface* bfd-liveness ipv4 receive-interval *number*
Tree	receive-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.

Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context provision the maintenance endpoint (MEP). Port-based MEPs and LAG-based MEPs are mutually exclusive. If a LAG member port includes a MEP, the configuration of a MEP on the LAG fails. If a LAG includes the configuration of a MEP, the configuration of MEPs on the LAG member ports fails.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

md-admin-name *reference*

Synopsis	Maintenance Domain (MD) name
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*

alarm-notification

Synopsis	Enter the **alarm-notification** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification
Tree	alarm-notification
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm. Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-alarm-time *number*
Tree	fng-alarm-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-reset-time *number*
Tree	fng-reset-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm *boolean*

Synopsis	Generate CCM messages
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm *boolean*
Tree	ccm
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-ltm-priority *number*
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-padding-size *number*
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval)** is less than 1 second.

Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-tlv-ignore *keyword*

Synopsis	TLV to ignore on reception
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-tlv-ignore *keyword*
Tree	ccm-tlv-ignore
Description	This command configures the receiving MEP to ignore the specified TLVs in the CCM PDU. The ignored TLVs are reported as absent and have no impact on the MEP state machine. When unconfigured, the MEP processes all the recognized TLVs.
Options	interface-status, port-status
Max. instances	2
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* collect-lmm-stats *boolean*
Tree	collect-lmm-stats
Description	When configured to **true**, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings. The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters. When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.
Default	false
Introduced	16.0.R1

eth-vsm-grace

Synopsis	Enter the **eth-vsm-grace** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace rx-eth-vsm-grace *boolean*
Tree	rx-eth-vsm-grace
Description	When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to **false**, the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace tx-eth-vsm-grace *boolean*
Tree	tx-eth-vsm-grace
Description	When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* low-priority-defect *keyword*

port-id-subtype *keyword*

Synopsis	Encoding of the Port ID TLV transmitted to the peer
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* port-id-subtype *keyword*
Tree	port-id-subtype
Description	This command configures how to encode the Port ID TLV transmitted to the peer. The default setting **tx-local** (ifindex value) is required by some versions of the NSP NSM-P to properly build the Layer 2 topology map using LLDP. Changing this value to transmit the ifName (**tx-if-name**) or ifAlias (**tx-if-alias**) in place of the ifIndex (**tx-local**) may affect the ability of the NSP NFM-P to build the Layer 2 topology map using LLDP.
Options	tx-if-alias – Transmit the ifAlias String (subtype 1) tx-if-name – Transmit the ifName string (subtype 5) tx-local – Transmit the interface ifIndex value (subtype 7)
Default	tx-local
Introduced	24.7.R1
Platforms	All

tx-tlvs

Synopsis Enter the **tx-tlvs** context

Context **configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-tlvs

Tree tx-tlvs

Description Commands in this context configure which LLDP TLVs to transmit. The TX TLVs, defined as a bitmap, include the basic set of LLDP TLVs whose transmission is allowed on the local LLDP agent by network management. Each bit in the bitmap corresponds to a TLV type associated with a specific optional TLV. Organizationally-specific TLVs are excluded from this bitmap.

There is no bit reserved for the management address TLV type because transmission of management address TLVs are controlled by another object.

Introduced	24.7.R1
Platforms	All

mac-address *mac-address*

Synopsis	MAC address of the LAG
Context	**configure** lag *lag-interface* mac-address *mac-address*
Tree	mac-address
Default	00:00:00:00:00:00
Introduced	16.0.R1
Platforms	All

max-ports *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ports allowed in the LAG
Context	**configure** lag *lag-interface* max-ports *number*
Tree	max-ports
Description	This command configures the maximum number of ports allowed in the LAG. This command must be configured to 64 when the LAG name is a numeric identifier in the range of 1 to 64. If the LAG name is a numeric identifier in the range of 65 to 800, this command must be configured to 32.
Range	32 | 64
Introduced	21.2.R1
Platforms	All

mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

auto-rebalance *boolean*

Synopsis	Auto-rebalance SAPs, users, or interfaces for new links
Context	**configure** lag *lag-interface* per-link-hash weighted auto-rebalance *boolean*
Tree	auto-rebalance
Default	false
Introduced	16.0.R1
Platforms	All

sap-hash-mode *keyword*

Synopsis	SAP traffic load balance over LAG member links
Context	**configure** lag *lag-interface* per-link-hash weighted sap-hash-mode *keyword*
Tree	sap-hash-mode
Options	sap, vport
Default	sap
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-hash-mode *keyword*

Synopsis	Subscriber traffic load balance over LAG member links
Context	**configure** lag *lag-interface* per-link-hash weighted subscriber-hash-mode *keyword*
Tree	subscriber-hash-mode
Description	This command configures weighted subscriber traffic to be load balanced over LAG member links. Traffic hashing can be performed based on SAPs or Vports. SAP-based hashing supports weights configured at the subscriber level in the subscriber profile. The SAP hashing mode supports only SAP to subscriber (1:1) deployment models. Vport-based load balancing supports SAP to subscriber (1:1) and SAP to service (N:1) deployment models.
Options	sap, vport
Default	sap
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cost *number*

Synopsis	Static cost of the LAG
Context	**configure** lag *lag-interface* port-threshold cost *number*
Tree	cost
Range	1 to 16777215
Introduced	16.0.R3
Platforms	All

value *number*

Synopsis	Active link threshold at which action is taken
Context	**configure** lag *lag-interface* port-threshold value *number*
Tree	value
Range	0 to 63
Introduced	16.0.R1
Platforms	All

port-type *keyword*

Synopsis	Port type of the LAG
Context	**configure** lag *lag-interface* port-type *keyword*
Tree	port-type
Options	standard, hs
Default	standard
Introduced	16.0.R1
Platforms	All

ptp-timestamping

Synopsis	Enable the **ptp-timestamping** context
Context	**configure** lag *lag-interface* ptp-timestamping
Tree	ptp-timestamping
Description	Commands in this context configure LAG filtering for the 1588 timestamping of PTP messages to match multiple PTP flows.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of PTP timestamping
Context	**configure** lag *lag-interface* ptp-timestamping admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

ipv4-address *ipv4-address*

Synopsis	IPv4 destination address for PTP messages into port
Context	**configure** lag *lag-interface* ptp-timestamping ipv4-address *ipv4-address*
Tree	ipv4-address
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

ipv6-address *ipv6-address*

Synopsis	IPv6 destination address for PTP messages into port
Context	**configure** lag *lag-interface* ptp-timestamping ipv6-address *ipv6-address*
Tree	ipv6-address
Description	(No long description needed.)
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

selection-criteria

Synopsis	Enter the **selection-criteria** context
Context	**configure** lag *lag-interface* selection-criteria
Tree	selection-criteria

li-ip-filter [li-filter-name] *named-item*

Synopsis	Enter the **li-ip-filter** list instance
Context	li li-filter li-ip-filter *named-item*
Tree	li-ip-filter
Description	Commands in this context create LI IPv4 filter lists, which can be used to create confidential IPv4 filter based LI source entries. The LI IPv4 filter entries are merged into normal IPv4 filters configured with the **li li-filter associations** and **li li-filter reserved-block** commands. The LI IPv4 filter entries are visible only to users with LI permissions.
Introduced	19.10.R1
Platforms	All

[**li-filter-name**] *named-item*

Synopsis	LI filter name
Context	li li-filter li-ip-filter *named-item*
Tree	li-ip-filter
Description	This command specifies the LI filter name. Filter names cannot start with an underscore character (for example, “_my-filter”) and cannot use the name “default”.
String length	1 to 32
Notes	This element is part of a list key.
Introduced	19.10.R1

entry [li-entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	li li-filter li-ip-filter *named-item* entry *number*
Tree	entry
Description	Commands in this context configure an entry for the LI filter. Multiple entries can be created using unique entry ID numbers within the filter. An entry in an LI filter always has an implicit action of “forward”. LI filter entries can be used as LI source entries. The entry numbers for LI filters serve only as keys for managing the entries (deleting entries, and so on). The order of the LI filter entries is not guaranteed to match the entry numbers and the software may reorder entries. Operators must therefore use LI entries in such a way that their relative order is not important. Entries removed from the filter are immediately removed from all services or network ports where the associated filter is applied.
Introduced	19.10.R1
Platforms	All

Synopsis	Frame type for MAC filter match
Context	li li-filter li-mac-filter *named-item* entry *number* match frame-type *keyword*
Tree	frame-type
Description	This command specifies the frame type for MAC filter entry matching. A filter can be edited even if an LI source references an entry in the filter.
Options	802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii
Default	802dot3
Introduced	19.10.R1
Platforms	All

outer-tag *number*

Synopsis	Outer tag for the QinQ SAP for filter match
Context	li li-filter li-mac-filter *named-item* entry *number* match outer-tag *number*
Tree	outer-tag
Description	This command configures the outer-tag to match on and must be used in conjunction with match criteria SAP in order for the entry match to activate. The match criteria SAP must be an exact match with the QinQ configured on the Epipe or VPLS service (for example 1/1/1:1.*, where the outer tag (C-tag) must be "*"). This feature mandates the provisioning of an associated **outer-tag** (example, 1), to be able to match on the QinQ packet. This example would perform LI on 1/1/1:1.1 on a 1/1/1:1.* SAP.
Range	1 to 4094

sap *sap*

Synopsis	QinQ SAP for filter match
Context	li li-filter li-mac-filter *named-item* entry *number* match sap *sap*
Tree	sap
Description	This command specifies the QinQ SAP to match from the Epipe or VPLS service, where the S-tag must be a value and the outer tag (C-tag) must be of type *. This filter match is used in conjunction with match criteria **outer-tag**, where the **outer-tag** must also be provisioned for the entry match on the QinQ packet to activate. The match criteria SAP must be an exact match with the QinQ configured on the Epipe or VPLS service (for example 1/1/1:1.*, where the outer tag (C-tag) must be "*"). An associated **outer-tag** (example, 1) must be provisioned to match on the QinQ packet. This example would perform LI on 1/1/1:1.1 on a 1/1/1:1.* SAP.

intercept-id *number*

Synopsis	Intercept ID of the traffic flow
Context	li li-source *service-name* li-ip-filter *reference* entry *reference* intercept-id *number*
Tree	intercept-id
Description	This command configures the intercept ID that is inserted into the packet header for all mirrrored packets of the associated LI source entry. This intercept ID can be used (for example by a downstream LI gateway) to identify the particular LI session to which the packet belongs. For LI source entries, when the **configure mirror mirror-dest encap layer-3-encap header-type** command is configured with **ip-udp-shim** routable encap, an intercept-id field (as part of the routable encap) is always present in the mirrored packets. If there is no intercept ID configured for an LI source entry, the default value is inserted.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When the mirror service is configured with **ip-gre** routable encap under the **header-type** command, no intercept ID is inserted and none should be specified against the LI source entries.

egress *boolean*

Synopsis	Perform lawful intercept on egress traffic
Context	li li-source *service-name* port *mirror-source-port-lag-key* egress *boolean*
Tree	egress
Description	When configured to **true**, the router allows lawful intercept on egress traffic. This command configures packets that egress the SAP to be mirrored. Egress packets are mirrored to the mirror destination after egress packet modification.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ingress *boolean*

Synopsis	Perform lawful intercept on ingress traffic
Context	li li-source *service-name* port *mirror-source-port-lag-key* ingress *boolean*
Tree	ingress

© 2024 Nokia.

Description	When configured to **true**, the router allows lawful intercept on ingress traffic. This command configures packets that ingress the SAP to be mirrored. Ingress packets are mirrored to the mirror destination before ingress packet modification.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sap [sap-id] *sap*

Synopsis	Enter the **sap** list instance
Context	li li-source *service-name* sap *sap*
Tree	sap
Description	Commands in this context create a service access point (SAP) within an LI configuration. The specified SAP must define a FastE, GigE, or XGigE, or XGigE access port with a dot1q, null, or q-in-q encapsulation type.
Introduced	19.10.R1
Platforms	All

[**sap-id**] *sap*

Synopsis	SAP ID
Context	li li-source *service-name* sap *sap*
Tree	sap
Description	This command specifies the physical port identifier portion of the SAP definition.
String length	1 to 45
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

egress *boolean*

Synopsis	Perform lawful intercept on egress traffic
Context	li li-source *service-name* sap *sap* egress *boolean*
Tree	egress

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router allows lawful intercept on egress traffic. This command configures packets that egress the SAP to be mirrored. Egress packets are mirrored to the mirror destination after egress packet modification.
Default	false
Introduced	19.10.R1
Platforms	All

ingress *boolean*

Synopsis	Perform lawful intercept on ingress traffic
Context	li li-source *service-name* sap *sap* ingress *boolean*
Tree	ingress
Description	When configured to **true**, the router allows lawful intercept on ingress traffic. This command configures packets that ingress the SAP to be mirrored. Ingress packets are mirrored to the mirror destination before ingress packet modification.
Default	false
Introduced	19.10.R1
Platforms	All

intercept-id *number*

Synopsis	Intercept ID of the traffic flow
Context	li li-source *service-name* sap *sap* intercept-id *number*
Tree	intercept-id
Description	This command configures the intercept ID that is inserted into the packet header for all mirrrored packets of the associated LI source entry. This intercept ID can be used (for example by a downstream LI gateway) to identify the particular LI session to which the packet belongs. For LI source entries, when the **configure mirror mirror-dest encap layer-3-encap header-type** command is configured with **ip-udp-shim** routable encap, an intercept-id field (as part of the routable encap) is always present in the mirrored packets. If there is no intercept ID configured for an LI source entry, the default value is inserted. When the mirror service is configured with **ip-gre** routable encap under the **header-type** command, no intercept ID is inserted and none should be specified against the LI source entries.
Range	1 to 1073741823
Introduced	19.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

session-id *number*

Synopsis	Session ID of the traffic flow
Context	li li-source *service-name* sap *sap* session-id *number*
Tree	session-id
Description	This command configures the session ID that is inserted into the packet header for all mirrored packets of the associated LI source entry. This session ID can be used (for example by a downstream LI gateway) to identify the particular LI session to which the packet belongs. The session ID is only valid and used for mirror services that are configured with **ip-udp-shim** routable encap under the **configure mirror mirror-dest encap layer-3-encap header-type** command. For all types of LI source entries, when the mirror service is configured with **ip-udp-shim** routable encap, a session ID field (as part of the routable encap) is always present in the mirrored packets. If no session ID is configured for an LI source entry, the default value is inserted. When a mirror service is configured with **ip-gre** routable encap under the header-type command, no session ID is inserted and none is specified against the LI source entries.
Range	1 to 4294967295
Introduced	19.10.R1
Platforms	All

subscriber [subscriber-id] *subscriber-id*

Synopsis	Enter the **subscriber** list instance
Context	li li-source *service-name* subscriber *subscriber-id*
Tree	subscriber
Description	Commands in this context add hosts of a subscriber to a mirroring service.
Introduced	19.10.R1
Platforms	All

[**subscriber-id**] *subscriber-id*

Synopsis	Subscriber ID
Context	li li-source *service-name* subscriber *subscriber-id*
Tree	subscriber
String length	1 to 64
Notes	This element is part of a list key.

Introduced	19.10.R1
Platforms	All

egress *boolean*

Synopsis	Perform lawful intercept on egress traffic
Context	li li-source *service-name* subscriber *subscriber-id* egress *boolean*
Tree	egress
Description	When configured to **true**, the router allows lawful intercept on egress traffic. This command configures packets that egress the SAP to be mirrored. Egress packets are mirrored to the mirror destination after egress packet modification.
Default	false
Introduced	19.10.R1
Platforms	All

fc *keyword*

Synopsis	Forwarding classes to be mirrored
Context	li li-source *service-name* subscriber *subscriber-id* fc *keyword*
Tree	fc
Description	This command specifies the name of the forwarding class with which to associate LI traffic. The forwarding class name must already be defined within the system. If the FC name is not already defined, an error is returned and this command has no effect. If the FC name is defined, the forwarding class associated with the FC name overrides the default forwarding class.
Options	be, l2, af, l1, h2, ef, h1, nc
Max. instances	8
Introduced	19.10.R1
Platforms	All

host-type *keyword*

Synopsis	Subscriber host type to be monitored
Context	li li-source *service-name* subscriber *subscriber-id* host-type *keyword*
Tree	host-type
Description	This command specifies the host type for LI.

send-using-vprn *service-name*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPRN to use to send SNMP notifications
Context	li log log-id *li-log-name* destination snmp send-using-vprn *service-name*
Tree	send-using-vprn
Description	This command configures lawful intercept (LI) SNMP notifications to transmit in a VPRN. This configuration is useful when doing management of LI via a VPRN. The specified VPRN service must exist. After an LI log is configured using this command, the VPRN service cannot be deleted without removing the LI log ID. When this command is configured, an LI log ID uses the snmp-trap-group configured for the VPRN. When unconfigured, the outgoing routing instance of LI SNMP notifications is determined by the **configure log route-preference** command, and the LI log ID uses the snmp-trap-group configured in the main system log configuration.
String length	1 to 64
Introduced	23.10.R1
Platforms	All

correlation-id

Synopsis	Enter the **correlation-id** context
Context	li x-interfaces correlation-id
Tree	correlation-id
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipoe *keyword*

Synopsis	RADIUS accounting ID type for subscriber correlation
Context	li x-interfaces correlation-id ipoe *keyword*
Tree	ipoe
Options	radius-host-acct-id, radius-queue-acct-id, radius-session-acct-id
Default	radius-host-acct-id
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

pppoe *keyword*

Synopsis	RADIUS accounting ID type for subscriber correlation
Context	li x-interfaces correlation-id pppoe *keyword*
Tree	pppoe
Options	radius-host-acct-id, radius-queue-acct-id, radius-session-acct-id
Default	radius-host-acct-id
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ine-identifier *named-item*

Synopsis	Intercepting Network Element (INE) ID
Context	li x-interfaces ine-identifier *named-item*
Tree	ine-identifier
String length	1 to 32
Introduced	21.5.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR-1, 7750 SR-7/12/12e

lic [name] *named-item*

Synopsis	Enter the **lic** list instance
Context	li x-interfaces lic *named-item*
Tree	lic
Max. instances	18
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

[**name**] *named-item*

Synopsis	LIC name
Context	li x-interfaces lic *named-item*
Tree	lic
String length	1 to 32
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

authentication

Synopsis	Enter the **authentication** context
Context	li x-interfaces lic *named-item* authentication
Tree	authentication
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

password *li-static-encrypted-leaf-hex*

Synopsis	Password for the X1 and X2 interfaces
Context	li x-interfaces lic *named-item* authentication password *li-static-encrypted-leaf-hex*
Tree	password

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 50
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

private-ki *li-static-encrypted-leaf*

Synopsis	Private Ki string for the X1 and X2 interfaces
Context	li x-interfaces lic *named-item* authentication private-ki *li-static-encrypted-leaf*
Tree	private-ki
String length	1 to 50
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

sequence-group *li-static-encrypted-leaf*

Synopsis	Sequence group for the X1 and X2 interfaces
Context	li x-interfaces lic *named-item* authentication sequence-group *li-static-encrypted-leaf*
Tree	sequence-group
String length	1 to 42
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

description *description*

Synopsis	Text description
Context	li x-interfaces lic *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

identifier *named-item*

Synopsis	LIC ID
Context	li x-interfaces lic *named-item* identifier *named-item*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	identifier
String length	1 to 32
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipv4

Synopsis	Enter the **ipv4** context
Context	li x-interfaces lic *named-item* ipv4
Tree	ipv4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the LIC
Context	li x-interfaces lic *named-item* ipv4 ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ip-address
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

port *number*

Synopsis	TCP port associated with the LIC
Context	li x-interfaces lic *named-item* port *number*
Tree	port
Range	0 to 65535
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

router-instance *named-item-64-or-empty*

Synopsis	Virtual router instance used by the X-interfaces
Context	li x-interfaces lic *named-item* router-instance *named-item-64-or-empty*
Tree	router-instance

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	0 to 64
Default	
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

user-db *named-item*

Synopsis	Location of the data-trigger host for the LIC
Context	li x-interfaces user-db *named-item*
Tree	user-db
String length	1 to 32
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

x1

Synopsis	Enter the **x1** context
Context	li x-interfaces x1
Tree	x1
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipv4

Synopsis	Enter the **ipv4** context
Context	li x-interfaces x1 ipv4
Tree	ipv4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	X1 interface IP address
Context	li x-interfaces x1 ipv4 local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

lic-peer *reference*

Synopsis	Peer LIC for the X1 interface
Context	li x-interfaces x1 lic-peer *reference*
Tree	lic-peer
Reference	li x-interfaces lic *named-item*
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

local-tcp-port *number*

Synopsis	Local TCP port used for the X1 interface
Context	li x-interfaces x1 local-tcp-port *number*
Tree	local-tcp-port
Range	1 to 65535
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

timeouts

Synopsis	Enter the **timeouts** context
Context	li x-interfaces x1 timeouts
Tree	timeouts
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

message-timeout *number*

Synopsis	Maximum time for the LIC to reply to an X1 message
Context	li x-interfaces x1 timeouts message-timeout *number*
Tree	message-timeout
Range	180 to 300

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Default	180
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

x2

Synopsis	Enter the **x2** context
Context	li x-interfaces x2
Tree	x2
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipv4

Synopsis	Enter the **ipv4** context
Context	li x-interfaces x2 ipv4
Tree	ipv4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	X2 interface IP address
Context	li x-interfaces x2 ipv4 local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

lic-peer *reference*

Synopsis	Peer LIC for the X2 interface
Context	li x-interfaces x2 lic-peer *reference*
Tree	lic-peer
Reference	li x-interfaces lic *named-item*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

timeouts

Synopsis	Enter the **timeouts** context
Context	li x-interfaces x2 timeouts
Tree	timeouts
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

keep-alive *number*

Synopsis	Keep-alive timeout
Context	li x-interfaces x2 timeouts keep-alive *number*
Tree	keep-alive
Range	300 to 600
Units	seconds
Default	300
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

request *number*

Synopsis	Tx2-normal timeout
Context	li x-interfaces x2 timeouts request *number*
Tree	request
Range	5 to 30
Units	seconds
Default	5
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

x3

Synopsis	Enter the **x3** context
Context	li x-interfaces x3
Tree	x3
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

alarms

Synopsis	Enter the **alarms** context
Context	li x-interfaces x3 alarms
Tree	alarms
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

cpu-alarm

Synopsis	Enter the **cpu-alarm** context
Context	li x-interfaces x3 alarms cpu-alarm
Tree	cpu-alarm
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

high-threshold *number*

Synopsis	High threshold value of the CPU usage alarm
Context	li x-interfaces x3 alarms cpu-alarm high-threshold *number*
Tree	high-threshold
Range	1 to 100
Units	percent
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

low-threshold *number*

Synopsis	Low threshold value of the CPU usage alarm
Context	li x-interfaces x3 alarms cpu-alarm low-threshold *number*
Tree	low-threshold
Range	0 to 99
Units	percent
Default	0
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

memory-alarm

Synopsis	Enter the **memory-alarm** context
Context	li x-interfaces x3 alarms memory-alarm
Tree	memory-alarm
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

high-threshold *number*

Synopsis	High threshold of the packet buffer memory usage alarm
Context	li x-interfaces x3 alarms memory-alarm high-threshold *number*
Tree	high-threshold
Range	1 to 100
Units	percent
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

low-threshold *number*

Synopsis	Low threshold of the packet buffer memory usage alarm
Context	li x-interfaces x3 alarms memory-alarm low-threshold *number*
Tree	low-threshold
Range	0 to 99

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	percent
Default	0
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

throughput-alarm

Synopsis	Enter the **throughput-alarm** context
Context	li x-interfaces x3 alarms throughput-alarm
Tree	throughput-alarm
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

high-threshold *number*

Synopsis	High threshold value of the throughput alarm
Context	li x-interfaces x3 alarms throughput-alarm high-threshold *number*
Tree	high-threshold
Range	1 to 4294967295
Units	megabps
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

low-threshold *number*

Synopsis	Low threshold value of the throughput alarm
Context	li x-interfaces x3 alarms throughput-alarm low-threshold *number*
Tree	low-threshold
Range	1 to 4294967295
Units	megabps
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv4

Synopsis	Enter the **ipv4** context
Context	li x-interfaces x3 ipv4
Tree	ipv4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

local-address-range

Synopsis	Enter the **local-address-range** context
Context	li x-interfaces x3 ipv4 local-address-range
Tree	local-address-range
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

end *ipv4-unicast-address*

Synopsis	Upper bound of the range
Context	li x-interfaces x3 ipv4 local-address-range end *ipv4-unicast-address*
Tree	end
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

start *ipv4-unicast-address*

Synopsis	Lower bound of the range
Context	li x-interfaces x3 ipv4 local-address-range start *ipv4-unicast-address*
Tree	start
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

li-group *number*

Synopsis	ISA group of the X3 interface

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	li x-interfaces x3 li-group *number*
Tree	li-group
Range	1 to 4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

lic-peers [name] *reference*

Synopsis	Add a list entry for **lic-peers**
Context	li x-interfaces x3 lic-peers *reference*
Tree	lic-peers
Max. instances	16
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

[**name**] *reference*

Synopsis	Peer LIC for the X3 interface
Context	li x-interfaces x3 lic-peers *reference*
Tree	lic-peers
Reference	li x-interfaces lic *named-item*
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

session-limit *number*

Synopsis	Maximum number of X3 sessions initiated to the LIC
Context	li x-interfaces x3 session-limit *number*
Tree	session-limit
Range	1 to 32
Default	32
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

timeouts

Synopsis	Enter the **timeouts** context
Context	li x-interfaces x3 timeouts
Tree	timeouts
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

keep-alive *number*

Synopsis	Keep-alive timeout
Context	li x-interfaces x3 timeouts keep-alive *number*
Tree	keep-alive
Range	300 to 600
Units	seconds
Default	300
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

request *number*

Synopsis	Tx3-normal timeout
Context	li x-interfaces x3 timeouts request *number*
Tree	request
Range	5 to 30
Units	seconds
Default	5
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

target-retry-wait *number*

Synopsis	Retry interval for target tunnel setup
Context	li x-interfaces x3 timeouts target-retry-wait *number*
Tree	target-retry-wait

4.24.1 log command descriptions

log

Synopsis	Enter the **log** context
Context	**configure** log
Tree	log
Introduced	16.0.R1
Platforms	All

accounting-policy [policy-id] *number*

Synopsis	Enter the **accounting-policy** list instance
Context	**configure** log accounting-policy *number*
Tree	accounting-policy
Introduced	16.0.R1
Platforms	All

[**policy-id**] *number*

Synopsis	Accounting policy unique ID
Context	**configure** log accounting-policy *number*
Tree	accounting-policy
Range	1 to 99
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the accounting policy
Context	**configure** log accounting-policy *number* admin-state *keyword*
Tree	admin-state
Description	This command controls the administrative state of the accounting policy.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When an accounting policy is disabled, no accounting data is written to the destination log ID. Counters in the billing data reflect totals, and not increments. When the policy is re-enabled, the counters include the data collected during the period the policy was administratively disabled.

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

align *boolean*

Synopsis	Align statistics collection interval to absolute time
Context	**configure** log accounting-policy *number* align *boolean*
Tree	align
Description	When the **align** command is configured to **true**, statistics collection is aligned to the nearest interval within an hour. Statistics are generated when the absolute time can be divided by the collection-interval value, after which the collection interval continues. For example, if the interval is set to 15 minutes and the current time is 15:03, the statistics are collected at 15:15, 15:30, 15:45, 16:00, 16:15, and so on. This supports synchronized statistics intervals and collection across multiple nodes in the network. When the **align** command is configured to **false**, statistics collection occurs immediately after the configuration has been committed. For example, if the interval is set to 15 minutes and the current time is 15:03, the statistics are collected at 15:03, 15:18, 15:33, 15:48, 16:03, and so on.
Default	false
Introduced	19.10.R1
Platforms	All

collection-interval *number*

Synopsis	Accounting collection interval
Context	**configure** log accounting-policy *number* collection-interval *number*
Tree	collection-interval
Range	1 to 120
Units	minutes
Introduced	16.0.R1
Platforms	All

custom-record

Synopsis	Enter the **custom-record** context
Context	**configure** log accounting-policy *number* custom-record
Tree	custom-record
Introduced	16.0.R1
Platforms	All

aa-specific

Synopsis	Enter the **aa-specific** context
Context	**configure** log accounting-policy *number* custom-record aa-specific
Tree	aa-specific
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-attributes

Synopsis	Enter the **aa-sub-attributes** context
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-attributes
Tree	aa-sub-attributes
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-profile *boolean*

Synopsis	Include application profile to be exported
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-attributes app-profile *boolean*
Tree	app-profile
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

app-service-options *boolean*

Synopsis	Include application service options
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-attributes app-service-options *boolean*
Tree	app-service-options
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-counters

Synopsis	Enter the **aa-sub-counters** context
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters
Tree	aa-sub-counters
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

long-duration-flow-count *boolean*

Synopsis	Include the long duration flow count
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters long-duration-flow-count *boolean*
Tree	long-duration-flow-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

medium-duration-flow-count *boolean*

Synopsis	Include the medium duration flow
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters medium-duration-flow-count *boolean*
Tree	medium-duration-flow-count
Default	false
Introduced	21.10.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

short-duration-flow-count *boolean*

Synopsis	Include the short duration flow count
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters short-duration-flow-count *boolean*
Tree	short-duration-flow-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

total-flow-duration *boolean*

Synopsis	Include the total flow duration count
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters total-flow-duration *boolean*
Tree	total-flow-duration
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

total-flows-completed-count *boolean*

Synopsis	Include the total of completed flows count
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters total-flows-completed-count *boolean*
Tree	total-flows-completed-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

from-aa-sub-counters

Synopsis	Enter the **from-aa-sub-counters** context
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	from-aa-sub-counters
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-active-count *boolean*

Synopsis	Include the active flows
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters flows-active-count *boolean*
Tree	flows-active-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-admitted-count *boolean*

Synopsis	Include the admitted flows
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters flows-admitted-count *boolean*
Tree	flows-admitted-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-denied-count *boolean*

Synopsis	Include the denied flows
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters flows-denied-count *boolean*
Tree	flows-denied-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

forwarding-class *boolean*

Synopsis	Include forwarding class
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters forwarding-class *boolean*
Tree	forwarding-class
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-octet-count *boolean*

Synopsis	Include maximum throughput as measured in octet count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters max-throughput-octet-count *boolean*
Tree	max-throughput-octet-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-packet-count *boolean*

Synopsis	Include maximum throughput as measured in packet count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters max-throughput-packet-count *boolean*
Tree	max-throughput-packet-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-timestamp *boolean*

Synopsis	Include timestamp of the maximum throughput
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters max-throughput-timestamp *boolean*
Tree	max-throughput-timestamp

Synopsis	Accounting policy record type
Context	**configure** log accounting-policy *number* record *keyword*
Tree	record
Description	This command adds the accounting record type to the accounting policy that is forwarded to the configured accounting file. A record name can only be used in one accounting policy. To obtain a list of all record types that can be configured, use the **show log accounting-records** command. To configure an accounting policy for access ports, select a service record (for example, service-ingress-octets). To change the record name to another service record, configure the new record name with this command. When configuring an accounting policy for network ports, select a network record. To change the record name to another network record, configure the new record name with this command. **Note:** AA, video, and subscriber records are not applicable to the 7950 XRS.
Options	service-ingress-octets, service-egress-octets, service-ingress-packets, service-egress-packets, network-ingress-octets, network-egress-octets, network-ingress-packets, network-egress-packets, compact-service-ingress-octets, combined-service-ingress, combined-network-ing-egr-octets, combined-service-ing-egr-octets, complete-service-ingress-egress, combined-sdp-ingress-egress, complete-sdp-ingress-egress, complete-subscriber-ingress-egress, aa-protocol, aa-application, aa-app-group, aa-subscriber-protocol, aa-subscriber-application, custom-record-subscriber, custom-record-service, custom-record-aa-sub, queue-group-octets, queue-group-packets, combined-queue-group, combined-mpls-lsp-ingress, combined-mpls-lsp-egress, combined-ldp-lsp-egress, saa, video, aa-performance, complete-ethernet-port, extended-service-ingress-egress, complete-network-ing-egr, aa-partition, complete-pm, aa-admit-deny, network-interface-ingress-octets, network-interface-egress-octets, network-interface-ingress-packets, network-interface-egress-packets, combined-network-interface-ingress, combined-network-interface-egress, complete-network-interface-ing-egr, access-egress-octets, access-egress-packets, combined-access-egress, combined-network-egress, complete-service-activation-test, combined-mpls-srte-egress, combined-sr-policy-egress
Introduced	16.0.R1
Platforms	All

app-route-notifications

Synopsis	Enter the **app-route-notifications** context

accounting-files-total-size *number*

Synopsis	Per CF total accounting file storage limit
Context	**configure** log file-storage-control accounting-files-total-size *number*
Tree	accounting-files-total-size
Description	This command configures the limit for the total space that all accounting files can occupy on each storage device on the active CPM. When this threshold is reached, new accounting files are no longer created in the \act-collect directory of the storage device until SR OS removes older accounting files from the \act directory and the occupancy is below the limit. Currently open, in-progress accounting files in the \act-collect directory are not affected by this limit and are completed. When unconfigured, there is no specific limit for the total size of all accounting files. Only accounting files in the \act directory with system generated names (including no file extension) are applicable toward the total size limit. If a user manually adds or deletes accounting files from the \act directory, the size of the files is not taken into account for up to 1 hour. The configured total size limit is not validated against the actual size of the installed storage devices. If the configured limit is larger than the installed compact flash (CF) device, the limit is never reached.
Range	50 to 4194304
Units	megabytes
Introduced	23.3.R1
Platforms	All

log-files-total-size *number*

Synopsis	Per CF total log file storage limit
Context	**configure** log file-storage-control log-files-total-size *number*
Tree	log-files-total-size
Description	This command configures the limit for the total space that all log files can occupy on each storage device on the active CPM. When this threshold is reached, log events are no longer written to the files in the \log directory until SR OS removes older log files and the occupancy is below the limit. When unconfigured, there is no specific limit for the total size of all log files.

destination

Synopsis	Enter the **destination** context
Context	**configure** log log-id *log-name* destination
Tree	destination
Description	Commands in this context specify where log event data is to be sent.
Introduced	16.0.R1
Platforms	All

cli

Synopsis	Enable the **cli** context
Context	**configure** log log-id *log-name* destination cli
Tree	cli
Description	Commands in this context configure log events directed to any subscribed CLI session. Subscribe to a CLI log from within a CLI session using the **tools perform log subscribe-to log-id** command. Events are sent to the CLI session for the duration of the CLI session or until a **tools perform log unsubscribe-from** command is issued. A local circular memory log is maintained for CLI logs.
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	16.0.R1

Range	50 to 3000
Default	100
Introduced	16.0.R1
Platforms	All

console

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Send log events to the system console port
Context	**configure** log log-id *log-name* destination console
Tree	console
Description	When specified, the system directs log events to the console port. If the console is not connected, the system drops all entries.
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	16.0.R1
Platforms	All

file *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	File to send log events
Context	**configure** log log-id *log-name* destination file *reference*
Tree	file
Description	This command specifies the file where the system directs log events. When the command is modified, log files are not written to the new location until a rollover occurs or the log is manually cleared. Use the **clear log** command to force a rollover. Subsequent log entries are then written to the new location. If a rollover does not occur or the log is not cleared, the system continues to use the old location.
Reference	**configure** log file *file-policy-name*
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	16.0.R1
Platforms	All

memory

Synopsis	Enable the **memory** context
Context	**configure** log log-id *log-name* destination memory
Tree	memory
Description	Commands in this context configure log events directed to a memory file. A memory file is a circular buffer. When the file is full, each new entry replaces the oldest entry in the log.
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	16.0.R1
Platforms	All

max-entries *number*

WARNING:

Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

version *keyword*

Synopsis	SNMP version to format notification messages sent to this SNMP notification collector
Context	**configure** log snmp-trap-group *snmp-trap-group-name* trap-target *string* version *keyword*
Tree	version
Options	snmpv1, snmpv2c, snmpv3
Default	snmpv3
Introduced	16.0.R1
Platforms	All

syslog [syslog-name] *log-syslog-name*

Synopsis	Enter the **syslog** list instance
Context	**configure** log syslog *log-syslog-name*
Tree	syslog
Max. instances	10
Introduced	16.0.R1
Platforms	All

[**syslog-name**] *log-syslog-name*

Synopsis	Syslog name
Context	**configure** log syslog *log-syslog-name*
Tree	syslog
String length	1 to 64
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the Syslog target host

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** log syslog *log-syslog-name* address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Introduced	16.0.R1
Platforms	All

description *description*

Synopsis	Text description
Context	**configure** log syslog *log-syslog-name* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	All

facility *keyword*

Synopsis	Facility code for messages
Context	**configure** log syslog *log-syslog-name* facility *keyword*
Tree	facility
Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Default	local7
Introduced	16.0.R1
Platforms	All

hostname

Synopsis	Enter the **hostname** context
Context	**configure** log syslog *log-syslog-name* hostname
Tree	hostname
Description	Commands in this context control how the HOSTNAME field of syslog messages is populated.
Introduced	23.7.R1
Platforms	All

© 2024 Nokia.

use-system-name

Synopsis	Enable the **use-system-name** context
Context	**configure** log syslog *log-syslog-name* hostname use-system-name
Tree	use-system-name
Description	This command configures the system to use the system name configured with the **configure system name** command as the HOSTNAME field of syslog messages. Do not use any spaces in the system name if it is being used for the syslog HOSTNAME.
Notes	The following elements are part of a choice: **use-system-name** or **value**.
Introduced	23.7.R1
Platforms	All

value *named-item-255*

Synopsis	Syslog HOSTNAME field value
Context	**configure** log syslog *log-syslog-name* hostname value *named-item-255*
Tree	value
Description	This command configures the system to use a specified string as the HOSTNAME field of syslog messages. Do not use any spaces in the string used for the syslog HOSTNAME.
String length	1 to 255
Notes	The following elements are part of a choice: **use-system-name** or **value**.
Introduced	23.7.R1
Platforms	All

log-prefix *(keyword | string)*

Synopsis	String that is prepended to every log message sent to this target syslog host
Context	**configure** log syslog *log-syslog-name* log-prefix *(keyword | string)*
Tree	log-prefix
String length	1 to 32
Options	no-prefix
Default	TMNX
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

port *number*

Synopsis	Destination port when sending syslog over UDP
Context	**configure** log syslog *log-syslog-name* port *number*
Tree	port
Range	0 | 1 to 65535
Default	514
Introduced	16.0.R1
Platforms	All

severity *keyword*

Synopsis	Severity level threshold for the syslog message
Context	**configure** log syslog *log-syslog-name* severity *keyword*
Tree	severity
Options	emergency, alert, critical, error, warning, notice, info, debug
Default	info
Introduced	16.0.R1
Platforms	All

timestamp-format *keyword*

Synopsis	Syslog timestamp format
Context	**configure** log syslog *log-syslog-name* timestamp-format *keyword*
Tree	timestamp-format
Options	millisecond – Set timestamp format to milliseconds
Introduced	24.7.R1
Platforms	All

tls-client-profile *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	TLS client profile used to encrypt syslog communication
Context	**configure** log syslog *log-syslog-name* tls-client-profile *reference*
Tree	tls-client-profile
Description	This command specifies the Transport Layer Security (TLS) client profile used to encrypt syslog communications. When configured, syslog messages are sent using TLS. Any change to this command results in a brief interruption of the event log, which may cause the loss of a few syslog messages. When this command is unconfigured, the syslog messages are sent over UDP.
Reference	**configure** system security tls client-tls-profile *named-item*
Introduced	21.10.R1
Platforms	All

throttle-rate

Synopsis	Enter the **throttle-rate** context
Context	**configure** log throttle-rate
Tree	throttle-rate
Introduced	16.0.R1
Platforms	All

interval *number*

Synopsis	Duration of an event throttling interval
Context	**configure** log throttle-rate interval *number*
Tree	interval
Range	1 to 1200
Default	1
Introduced	16.0.R1
Platforms	All

4.25.1 macsec command descriptions

macsec

Synopsis	Enter the **macsec** context
Context	**configure** macsec
Tree	macsec
Introduced	16.0.R1
Platforms	All

connectivity-association [ca-name] *string*

Synopsis	Enter the **connectivity-association** list instance
Context	**configure** macsec connectivity-association *string*
Tree	connectivity-association
Introduced	16.0.R1
Platforms	All

[**ca-name**] *string*

Synopsis	Connectivity association name
Context	**configure** macsec connectivity-association *string*
Tree	connectivity-association
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the connectivity association
Context	**configure** macsec connectivity-association *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

anysec *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Mark the CA for use by ANYsec encryption only
Context	**configure** macsec connectivity-association *string* anysec *boolean*
Tree	anysec
Description	When configured to **true**, the system configures the Connectivity Association (CA) for exclusive use with ANYsec encyrption. The following MACsec commands cannot be configured while ANYsec is configured. • **configure macsec connectivity-association clear-tag-mode** • **configure macsec connectivity-association delay-protection** • **configure macsec connectivity-association encryption-offset** • **configure macsec connectivity-association macsec-encrypt** • **configure macsec connectivity-association replay-window-size** • **configure macsec mac-policy** When configured to **false**, the system removes the CA.
Default	false
Introduced	23.3.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se

cipher-suite *keyword*

Synopsis	Data path encryption algorithm
Context	**configure** macsec connectivity-association *string* cipher-suite *keyword*
Tree	cipher-suite
Options	gcm-aes-128, gcm-aes-256, gcm-aes-xpn-128, gcm-aes-xpn-256
Default	gcm-aes-128
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

clear-tag-mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clear tag mode for clear text before the SecTAG
Context	**configure** macsec connectivity-association *string* clear-tag-mode *keyword*
Tree	clear-tag-mode
Options	none, single-tag, dual-tag
Default	none
Introduced	16.0.R1
Platforms	All

delay-protection *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable delay protection
Context	**configure** macsec connectivity-association *string* delay-protection *boolean*
Tree	delay-protection
Default	false
Introduced	20.10.R1
Platforms	All

description *string*

Synopsis	Text description
Context	**configure** macsec connectivity-association *string* description *string*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

encryption-offset *number*

Synopsis	Confidentiality (encryption) offset
Context	**configure** macsec connectivity-association *string* encryption-offset *number*
Tree	encryption-offset
Range	0 | 30 | 50
Default	0
Introduced	16.0.R1
Platforms	All

macsec-encrypt *boolean*

Synopsis	Encrypt and authenticate all PDUs
Context	**configure** macsec connectivity-association *string* macsec-encrypt *boolean*
Tree	macsec-encrypt
Description	When configured to **true**, all PDUs are encrypted and authenticated. When configured to **false**, all PDUs are transmitted in clear text, however, they are still authenticated and have the trailing ICV.
Default	true
Introduced	16.0.R1
Platforms	All

replay-protection *boolean*

Synopsis	Discard packet when not within the replay window size
Context	**configure** macsec connectivity-association *string* replay-protection *boolean*
Tree	replay-protection
Description	When configured to **true**, replay protection is enabled and packets are discarded when they are not within the replay window size. With replay protection, the sequence of the ID number of received packets is checked. If a packet arrives out of sequence and the difference between the packet IDs exceeds the replay protection window size, the packet is counted by the receiving port and discarded. For example if the replay protection window size is configured to five and a packet with an ID of 1006 arrives on the receiving link immediately following the packet assigned an ID of 1000, the packet with ID 1006 is counted and discarded because it is outside the parameter of the window size. Replay protection is particularly useful for addressing man-in-the-middle attacks. A packet that is replayed by a man-in-the-middle attacker on the Ethernet link that arrives

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

on the receiving link out of sequence will be detected and dropped instead of forwarded through the network.

Replay protection should not be enabled in cases where packets are expected to arrive out of order.

When configured to **false**, replay protection is not enabled.

Default	false
Introduced	16.0.R1
Platforms	All

replay-window-size *number*

Synopsis	Replay protection window size
Context	**configure** macsec connectivity-association *string* replay-window-size *number*
Tree	replay-window-size
Range	0 to 4294967294
Default	0
Introduced	16.0.R1
Platforms	All

static-cak

Synopsis	Enter the **static-cak** context
Context	**configure** macsec connectivity-association *string* static-cak
Tree	static-cak
Description	Commands in this context configure the Connectivity Association Key (CAK) to manage the MACsec Key Agreement (MKA).
Introduced	16.0.R1
Platforms	All

active-psk *number*

Synopsis	Active pre-shared-key (PSK)
Context	**configure** macsec connectivity-association *string* static-cak active-psk *number*
Tree	active-psk
Description	This command specifies the active transmitting PSK. If two PSKs are configured, the arriving MACsec MKA can be decrypted via CAKs using either PSK; however, only the active PSK is used for TX encryption of MKA PDUs.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 2
Default	1
Introduced	16.0.R1
Platforms	All

mka-hello-interval *keyword*

Synopsis	MKA hello interval
Context	**configure** macsec connectivity-association *string* static-cak mka-hello-interval *keyword*
Tree	mka-hello-interval
Description	This command configures the interval at which MKA hello packets are sent or received for the connectivity association.
Options	1, 2, 3, 4, 5, 6, 500ms
Default	2
Introduced	19.5.R1
Platforms	All

mka-key-server-priority *number*

Synopsis	Key server priority used by the MKA protocol
Context	**configure** macsec connectivity-association *string* static-cak mka-key-server-priority *number*
Tree	mka-key-server-priority
Description	This command specifies the key server priority used by the MACsec Key Agreement (MKA) protocol to select the key server when MACsec is enabled using static connectivity association key (CAK) security mode.
Range	0 to 255
Default	16
Introduced	16.0.R1
Platforms	All

pre-shared-key [psk-id] *number*

Synopsis	Enter the **pre-shared-key** list instance
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number*
Tree	pre-shared-key

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure pre-shared key attributes to enable MACsec using static connectivity association key (CAK) security mode. A pre-shared key includes a connectivity association key name (CKN) and a connectivity association key (CAK). The pre-shared key, the CKN and the CAK, must match on both ends of a link. A pre-shared key is configured on both devices at each end of a point-to-point link to enable MACsec via static CAK security mode. The MACsec Key Agreement (MKA) protocol is enabled after the successful MKA liveliness negotiation. The encryption type is used to encrypt the SAK and authenticate the MKA packet. The symmetric encryption key SAK (Security Association Key) must be encrypted (wrapped) via the MKA protocols. The AES key is derived from the pre-shared-key.
Max. instances	2
Introduced	16.0.R1
Platforms	All

[**psk-id**] *number*

Synopsis	Pre-shared-key (PSK) ID
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number*
Tree	pre-shared-key
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

cak *encrypted-leaf-hex-without-prefix*

Synopsis	Connectivity association key (CAK) for the PSK
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number* cak *encrypted-leaf-hex-without-prefix*
Tree	cak
Description	This command specifies the connectivity association key (CAK) for the pre-shared key. Two values are derived from the CAK: • Key Encryption Key (KEK), used to encrypt the MKA and SAK (symmetric key used for data path PDUs) distributed between all members • Integrity Check Value (ICV), used to authenticate the MKA and SAK PDUs distributed between all members
String length	1 to 71

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

cak-name *cak-name*

Synopsis	Connectivity association key name (CKN) for the PSK
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number* cak-name *cak-name*
Tree	cak-name
Description	This command specifies the connectivity association key name (CKN) for the pre-shared key. The CKN is appended to the MKA for identification of the appropriate CAK by the peer.
String length	1 to 64
Introduced	16.0.R1
Platforms	All

encryption-type *keyword*

Synopsis	Encryption for authentication of the MKA packet
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number* encryption-type *keyword*
Tree	encryption-type
Options	aes-128-cmac, aes-256-cmac
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

Tree	use-lag-port-weight

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.
Default	false
Introduced	16.0.R1
Platforms	All

source-specific-accounting *keyword*

Synopsis	MCAC accounting setting
Context	**configure** mcac policy *string* bundle *string* source-specific-accounting *keyword*
Tree	source-specific-accounting
Description	This command configures the MCAC policy accounting behavior. **true** - Both multicast group and multicast source are used for MCAC accounting. For example, if multiple, multicast joins are for the same multicast group but each has a different multicast source, the MCAC accounts for each combination of group and source. **false** - Only the multicast group is used for MCAC accounting. The multicast source address is not used for MCAC accounting. For example, if multiple, multicast joins are for the same multicast group but each have a different multicast source, the MCAC only accounts for the mutlicast group once. **policy** - The bundle uses the source-specific accounting setting in the MCAC policy level.
Options	true – Use source-specific accounting at policy level false – Use multicast group and source MCAC accounting policy – Use multicast group for MCAC accounting
Default	policy
Introduced	24.7.R1
Platforms	All

default-action *keyword*

source-specific-accounting *boolean*

Synopsis	Enable multicast group and source for MCAC accounting
Context	**configure** mcac policy *string* source-specific-accounting *boolean*
Tree	source-specific-accounting
Description	When configured to **true**, the router uses both multicast group and multicast source for MCAC accounting. For example, if multiple, multicast joins are for the same multicast group but each has a different multicast source, the MCAC accounts for each combination of group and source. If the multicast source is configured as a subnet instead of an address, the MCAC automatically accounts for every source address within the subnet. If the multicast source is not configured, the MCAC assumes only one source when calculating the mandatory bandwidth. However, when joins are coming in, each group and source combination is taken into account. When configured to **false**, the router only uses the multicast group for MCAC accounting. The multicast source address is not used for MCAC accounting. For example, if multiple, multicast joins are for the same multicast group but each has a different multicast source, the MCAC only accounts for the multicast group once.
Default	false
Introduced	24.7.R1
Platforms	All

4.27.1 mirror command descriptions

mirror

Synopsis	Enter the **mirror** context
Context	**configure** mirror
Tree	mirror
Introduced	16.0.R1
Platforms	All

global-sampling-rate *number*

Synopsis	System wide global sampling rate
Context	**configure** mirror global-sampling-rate *number*
Tree	global-sampling-rate
Description	This command configures the global sampling rate. The global sampling rate provides a higher sampling rate than the sampling rate specified on the mirror destination. When set, this command applies to all mirror destination services that have the **use-global-sampling-rate** command configured. The global sampling rate takes precedence over the rate specified on the mirror destination. This means that when this command and the **configure mirror mirror-dest sampling-rate** are configured under the same mirror destination, the system automatically samples using the higher rate configured with this command and ignores the lower rate configured with the **sampling-rate** command. When unconfigured, no mirror destinations are associated to a global sampling rate and all mirror destinations mirror at the full rate, which means every packet is mirrored unless a mirror destination rate is specified.
Range	0 | 2 to 255
Default	0
Introduced	22.10.R1
Platforms	All

mirror-dest [service-name] *service-name*

Synopsis	Enter the **mirror-dest** list instance
Context	**configure** mirror mirror-dest *service-name*
Tree	mirror-dest

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context set up a packet mirroring service to allow mirrored packets to be directed locally (within the same router) or remotely (over the core of the network and with a far-end decode mirror encapsulation). The mirror destination service is composed of destination options that define where the mirrored packets are sent. It also specifies whether the defined service will receive mirrored packets from a far-end router over the network core. The mirror destination services are persistent between boots of the router and are included in the configuration saves.
Max. instances	255
Introduced	16.0.R1

String length	1 to 180
Introduced	16.0.R1
Platforms	All

per-lag-hashing *boolean*

Synopsis	Enable per-LAG hashing on the mirror destination
Context	**configure** mirror mirror-dest *service-name* per-lag-hashing *boolean*
Tree	per-lag-hashing
Description	When configured to **true**, the router enables the use of all link members of the mirror destination SAP or SDP of type LAG. The hashing to link members are based on IP flows. When configured to **false**, the router disables per-LAG hashing. All mirrored packets sent to a SAP or SDP of type LAG, are sent to only one of the LAG link members. If the link member to which the mirrored packets are being sent fails, another link member takes over and provides mirrored packet forwarding. Although no hashing is performed, resiliency is still provided by this next link member.
Default	false
Introduced	23.10.R1

Platforms	All

host-type *keyword*

Synopsis	Host type for mirroring
Context	**configure** mirror mirror-source *service-name* subscriber *subscriber-id* host-type *keyword*
Tree	host-type
Options	ipoe, ppp
Introduced	19.10.R1
Platforms	All

ingress *boolean*

Synopsis	Mirror ingress packets
Context	**configure** mirror mirror-source *service-name* subscriber *subscriber-id* ingress *boolean*
Tree	ingress
Description	When configured to **true**, ingressing packets are mirrored. Ingress packets are mirrored to the mirror destination before ingress packet modification.
Default	false

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.10.R1
Platforms	All

ip-address *ipv4-address*

Synopsis	Service IP address of remote device sending LI traffic
Context	**configure** mirror mirror-source *service-name* subscriber *subscriber-id* ip-address *ipv4-address*
Tree	ip-address
Notes	The following elements are part of a choice: (**ip-address**, **mac-address**, and **sap-id**) or **sla-profile**.
Introduced	19.10.R1
Platforms	All

ip-family *keyword*

Synopsis	IP family for mirroring
Context	**configure** mirror mirror-source *service-name* subscriber *subscriber-id* ip-family *keyword*
Tree	ip-family
Options	ipv4, ipv6
Introduced	19.10.R1
Platforms	All

mac-address *mac-address*

Synopsis	MAC address for the subscriber
Context	**configure** mirror mirror-source *service-name* subscriber *subscriber-id* mac-address *mac-address*
Tree	mac-address
Notes	The following elements are part of a choice: (**ip-address**, **mac-address**, and **sap-id**) or **sla-profile**.
Introduced	19.10.R1
Platforms	All

Use subject to Terms available at: www.nokia.com/terms.

sap-id *sap*

Synopsis	Subscriber SAP ID
Context	**configure** mirror mirror-source *service-name* subscriber *subscriber-id* sap-id *sap*
Tree	sap-id
String length	1 to 45
Notes	The following elements are part of a choice: (**ip-address**, **mac-address**, and **sap-id**) or **sla-profile**.
Introduced	19.10.R1
Platforms	All

sla-profile *named-item*

Synopsis	SLA profile name
Context	**configure** mirror mirror-source *service-name* subscriber *subscriber-id* sla-profile *named-item*
Tree	sla-profile
String length	1 to 32
Notes	The following elements are part of a choice: (**ip-address**, **mac-address**, and **sap-id**) or **sla-profile**.
Introduced	19.10.R1
Platforms	All

4.28 multicast-management commands

```
configure
   –  multicast-management
      –  apply-groups reference
      –  apply-groups-exclude reference
      –  bandwidth-policy named-item
         –  admin-bw-threshold number
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  description description
         –  falling-percent-reset number
         –  impm-paths
            –  primary-path
               –  apply-groups reference
               –  apply-groups-exclude reference
               –  queue-parameters
                  –  cbs decimal-number
                  –  drop-tail
                     –  low
                        –  percent-reduction-from-mbs number
                  –  mbs decimal-number
            –  secondary-path
               –  apply-groups reference
               –  apply-groups-exclude reference
               –  number-paths
                  –  number-of-paths number
                  –  redundant-sfm number
               –  queue-parameters
                  –  cbs decimal-number
                  –  drop-tail
                     –  low
                        –  percent-reduction-from-mbs number
                  –  mbs decimal-number
         –  mcast-pool
            –  percent-of-total number
            –  resv-cbs number
            –  slope-policy reference
      –  chassis-level
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  mmrp-impm-override boolean
         –  per-mcast-plane-capacity
            –  mcast-capacity
               –  primary-percentage decimal-number
               –  secondary-percentage decimal-number
            –  redundant-mcast-capacity
               –  primary-percentage decimal-number
               –  secondary-percentage decimal-number
            –  total-capacity keyword
         –  round-robin-inactive-records boolean
      –  multicast-info-policy named-item
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  bundle named-item
            –  admin-bw number
            –  apply-groups reference
            –  apply-groups-exclude reference

4.28.1 multicast-management command descriptions

multicast-management

Synopsis	Enter the **multicast-management** context
Context	**configure** multicast-management
Tree	multicast-management
Introduced	16.0.R1
Platforms	All

bandwidth-policy [policy-name] *named-item*

Synopsis	Enter the **bandwidth-policy** list instance
Context	**configure** multicast-management bandwidth-policy *named-item*
Tree	bandwidth-policy
Max. instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

[**policy-name**] *named-item*

Synopsis	Bandwidth policy name
Context	**configure** multicast-management bandwidth-policy *named-item*
Tree	bandwidth-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

admin-bw-threshold *number*

Synopsis	Administrative bandwidth threshold

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** multicast-management bandwidth-policy *named-item* admin-bw-threshold *number*
Tree	admin-bw-threshold
Range	1 to 40000000
Units	kilobps
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

description *description*

Synopsis	Text description
Context	**configure** multicast-management bandwidth-policy *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

falling-percent-reset *number*

Synopsis	Percent of bandwidth that decreases before resetting
Context	**configure** multicast-management bandwidth-policy *named-item* falling-percent-reset *number*
Tree	falling-percent-reset
Range	1 to 100
Units	percent
Default	50
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

impm-paths

Synopsis	Enter the **impm-paths** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths

© 2024 Nokia.

Tree	impm-paths
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

primary-path

Synopsis	Enter the **primary-path** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path
Tree	primary-path
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

queue-parameters

Synopsis	Enter the **queue-parameters** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path queue-parameters
Tree	queue-parameters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

cbs *decimal-number*

Synopsis	Override for default CBS for single queue for each path
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path queue-parameters cbs *decimal-number*
Tree	cbs
Range	0.00 to 100.00
Units	percent
Default	5.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

drop-tail

Synopsis	Enter the **drop-tail** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path queue-parameters drop-tail
Tree	drop-tail
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

low

Synopsis	Enter the **low** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path queue-parameters drop-tail low
Tree	low
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

percent-reduction-from-mbs *number*

Synopsis	Low drop-tail percent from MBS that is reduced
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path queue-parameters drop-tail low percent-reduction-from-mbs *number*
Tree	percent-reduction-from-mbs
Range	0 to 100
Units	percent
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

mbs *decimal-number*

Synopsis	Override for default MBS for single queue for each path

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path queue-parameters mbs *decimal-number*
Tree	mbs
Range	0.00 to 100.00
Units	percent
Default	7.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

secondary-path

Synopsis	Enter the **secondary-path** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path
Tree	secondary-path
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

number-paths

Synopsis	Enter the **number-paths** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path number-paths
Tree	number-paths
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

number-of-paths *number*

Synopsis	Number of secondary paths
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path number-paths number-of-paths *number*
Tree	number-of-paths
Range	1 to 15

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

redundant-sfm *number*

Synopsis	Number of secondary paths in redundant SFM mode
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path number-paths redundant-sfm *number*
Tree	redundant-sfm
Range	1 to 15
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

queue-parameters

Synopsis	Enter the **queue-parameters** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path queue-parameters
Tree	queue-parameters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

cbs *decimal-number*

Synopsis	Override for default CBS for single queue for each path
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path queue-parameters cbs *decimal-number*
Tree	cbs
Range	0.00 to 100.00
Units	percent
Default	30.00
Introduced	16.0.R1

Synopsis	Minimum duration of the FCC burst
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video fcc-min-duration *number*
Tree	fcc-min-duration
Range	300 to 8000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-server *keyword*

Synopsis	Value to override the parent value of the FCC server
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video fcc-server *keyword*
Tree	fcc-server
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

local-rt-server *keyword*

Synopsis	Value to override the parent value of local RT server
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video local-rt-server *keyword*
Tree	local-rt-server
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

reorder-audio *number*

Synopsis	Time the audio packets are reordered in the ad stream

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video reorder-audio *number*
Tree	reorder-audio
Range	100 to 1000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

rt-buffer-size *number*

Synopsis	Buffer size to store channel packets
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video rt-buffer-size *number*
Tree	rt-buffer-size
Range	300 to 8000
Units	milliseconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

rt-server

Synopsis	Enter the **rt-server** context
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video rt-server
Tree	rt-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

ip-address *ipv4-unicast-address*

Synopsis	IP address of the upstream retransmission server
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video rt-server ip-address *ipv4-unicast-address*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ip-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

port *number*

Synopsis	UDP port to send RET requests to the upstream RET sever
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video rt-server port *number*
Tree	port
Range	1024 to 5999 | 6251 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

rt-state *keyword*

Synopsis	Retransmission server state
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video rt-server rt-state *keyword*
Tree	rt-state
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

stream-selection

Synopsis	Enter the **stream-selection** context
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video stream-selection
Tree	stream-selection
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

intf1 *named-item*

Synopsis	Primary interface
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video stream-selection intf1 *named-item*
Tree	intf1
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

intf2 *named-item*

Synopsis	Secondary interface
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video stream-selection intf2 *named-item*
Tree	intf2
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source1 *ipv4-address*

Synopsis	Primary source IP address
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video stream-selection source1 *ipv4-address*
Tree	source1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source2 *ipv4-address*

Synopsis	Secondary source IP address
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video stream-selection source2 *ipv4-address*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	source2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

video-group *(number | keyword)*

Synopsis	Video group ID
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video video-group *(number | keyword)*
Tree	video-group
Range	1 to 4
Options	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

cong-priority-threshold *number*

Synopsis	Preference level threshold from low to high priority
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* cong-priority-threshold *number*
Tree	cong-priority-threshold
Range	0 to 7
Default	4
Introduced	16.0.R1
Platforms	All

description *description*

Synopsis	Text description
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ecmp-opt-threshold *number*

Synopsis	ECMP threshold
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* ecmp-opt-threshold *number*
Tree	ecmp-opt-threshold
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	All

explicit-sf-path *keyword*

Synopsis	Explicit ingress switch fabric multicast path
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* explicit-sf-path *keyword*
Tree	explicit-sf-path
Options	primary, secondary
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

keepalive-override *number*

Synopsis	Keepalive timer override
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* keepalive-override *number*
Tree	keepalive-override
Range	10 to 86000
Units	seconds
Introduced	16.0.R1
Platforms	All

preference *number*

Synopsis	Relative preference level for multicast channels

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* preference *number*
Tree	preference
Range	1 to 7
Introduced	16.0.R1
Platforms	All

primary-tunnel-interface

Synopsis	Enter the **primary-tunnel-interface** context
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* primary-tunnel-interface
Tree	primary-tunnel-interface
Introduced	16.0.R1
Platforms	All

ldp-p2mp *number*

Synopsis	ID for signaling MLDP P2MP LSP
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* primary-tunnel-interface ldp-p2mp *number*
Tree	ldp-p2mp
Range	1 to 4294967295
Notes	The following elements are part of a choice: **ldp-p2mp** or **rsvp-p2mp**.
Introduced	16.0.R1
Platforms	All

rsvp-p2mp *named-item*

Synopsis	P2MP name for the LDP P2MP
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* primary-tunnel-interface rsvp-p2mp *named-item*
Tree	rsvp-p2mp
String length	1 to 32
Notes	The following elements are part of a choice: **ldp-p2mp** or **rsvp-p2mp**.
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

sender *ipv4-address*

Synopsis	Bundle set to receive from the primary tunnel interface
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* primary-tunnel-interface sender *ipv4-address*
Tree	sender
Introduced	16.0.R1
Platforms	All

video

Synopsis	Enter the **video** context
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video
Tree	video
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

analyzer

Synopsis	Enable the **analyzer** context
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer
Tree	analyzer
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

alarms

Synopsis	Enter the **alarms** context
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer alarms
Tree	alarms
Introduced	16.0.R1

© 2024 Nokia.

source1 *ipv4-address*

Synopsis	Primary source IP address
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video stream-selection source1 *ipv4-address*
Tree	source1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source2 *ipv4-address*

Synopsis	Secondary source IP address
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video stream-selection source2 *ipv4-address*
Tree	source2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

video-group *number*

Synopsis	Video group for the bundle
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video video-group *number*
Tree	video-group
Range	1 to 4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

description *description*

Synopsis	Text description
Context	**configure** multicast-management multicast-info-policy *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1

Platforms	All

video-policy

Synopsis	Enter the **video-policy** context
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy
Tree	video-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

video-interface [ip-address] *ipv4-unicast-address*

Synopsis	Enter the **video-interface** list instance
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address*
Tree	video-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

[ip-address] *ipv4-unicast-address*

Synopsis	IP address of the video interface
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address*
Tree	video-interface
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

extended-unicast *boolean*

Synopsis	Extend video unicast session
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* extended-unicast *boolean*
Tree	extended-unicast
Description	When configured to **true**, video unicast is delayed from switching over to multicast for 5 minutes. The unicast session can be extended further by sending an RTCP

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

extension request, which resets the 5-minute timer. This is ideal for services that require unicast video and end devices that require extended time to switch over from unicast to multicast.

When configured to **false**, the unicast session switches over to multicast 1.5 seconds after the IGMP request is sent. Most Fast Channel Change deployments do not require a time extension.

Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-session-timeout *number*

Synopsis	FCC session timeout
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* fcc-session-timeout *number*
Tree	fcc-session-timeout
Range	5 to 300
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

hd

Synopsis	Enter the **hd** context
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* hd
Tree	hd
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

dent-threshold *number*

Synopsis	Threshold below which the FCC server dents unicast data
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* hd dent-threshold *number*
Tree	dent-threshold

© 2024 Nokia.

Range	1 to 31
Default	16
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-burst *number*

Synopsis	Burst rate FCC server sends unicast data to FCC client
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* hd fcc-burst *number*
Tree	fcc-burst
Range	0 to 600
Units	percent
Default	25
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-server

Synopsis	Enter the **fcc-server** context
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* hd fcc-server
Tree	fcc-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

mode *keyword*

Synopsis	Mode the FCC server sends information to the client
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* hd fcc-server mode *keyword*
Tree	mode
Options	burst, dent, hybrid
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

local-rt-server *boolean*

Synopsis	Enable local retransmission server capability
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* hd local-rt-server *boolean*
Tree	local-rt-server
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

mc-handover *number*

Synopsis	Rate the FCC server sends data during the handover
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* hd mc-handover *number*
Tree	mc-handover
Range	0 to 100
Units	percent
Default	25
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

rt-rate *number*

Synopsis	Rate the RET packets are sent to client
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* hd rt-rate *number*
Tree	rt-rate
Range	1 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

Use subject to Terms available at: www.nokia.com/terms.

max-igmp-latency *number*

Synopsis	Maximum IGMP latency per client
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* max-igmp-latency *number*
Tree	max-igmp-latency
Range	10 to 1000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

max-sessions *number*

Synopsis	Maximum number of sessions per client
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* max-sessions *number*
Tree	max-sessions
Range	1 to 65536
Default	256
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

pip

Synopsis	Enter the **pip** context
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* pip
Tree	pip
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

dent-threshold *number*

Synopsis	Threshold below which the FCC server dents unicast data

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* pip dent-threshold *number*
Tree	dent-threshold
Range	1 to 31
Default	16
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-burst *number*

Synopsis	Burst rate FCC server sends unicast data to FCC client
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* pip fcc-burst *number*

4.29.1 oam-pm command descriptions

oam-pm

Synopsis	Enter the **oam-pm** context
Context	**configure** oam-pm
Tree	oam-pm
Introduced	16.0.R1
Platforms	All

bin-group [bin-group-id] *number*

Synopsis	Enter the **bin-group** list instance
Context	**configure** oam-pm bin-group *number*
Tree	bin-group
Introduced	16.0.R5
Platforms	All

[**bin-group-id**] *number*

Synopsis	Bin group ID
Context	**configure** oam-pm bin-group *number*
Tree	bin-group
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the bin group
Context	**configure** oam-pm bin-group *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	16.0.R5

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

bin-type [bin-metric] *keyword*

Synopsis	Enter the **bin-type** list instance
Context	**configure** oam-pm bin-group *number* bin-type *keyword*
Tree	bin-type
Introduced	16.0.R5
Platforms	All

[**bin-metric**] *keyword*

Synopsis	Delay metric bin structure
Context	**configure** oam-pm bin-group *number* bin-type *keyword*
Tree	bin-type
Options	fd – Frame Delay fdr – Frame Delay Range ifdv – Inter-Frame Delay Variation
Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

bin [bin-number] *number*

Synopsis	Enter the **bin** list instance
Context	**configure** oam-pm bin-group *number* bin-type *keyword* bin *number*
Tree	bin
Introduced	16.0.R5
Platforms	All

[**bin-number**] *number*

Synopsis	Bin number
Context	**configure** oam-pm bin-group *number* bin-type *keyword* bin *number*
Tree	bin
Range	0 to 9

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

lower-bound *number*

Synopsis	Lower bound for the bin
Context	**configure** oam-pm bin-group *number* bin-type *keyword* bin *number* lower-bound *number*
Tree	lower-bound
Range	0 | 1 to 4294967295
Units	microseconds
Introduced	16.0.R5
Platforms	All

delay-event [direction] *keyword*

Synopsis	Enter the **delay-event** list instance
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword*
Tree	delay-event
Introduced	16.0.R5
Platforms	All

[**direction**] *keyword*

Synopsis	Traffic flow direction of the OAM-PM test or metric
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword*
Tree	delay-event
Options	forward, backward, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

clear-threshold *number*

Synopsis	OAM-PM clear threshold for an excessive delay
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword* clear-threshold *number*
Tree	clear-threshold
Range	0 to 863999
Introduced	16.0.R5
Platforms	All

exclude-lowest-bin *number*

Synopsis	Lowest bin excluded from the TCA count
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword* exclude-lowest-bin *number*
Tree	exclude-lowest-bin
Range	1 to 9
Introduced	16.0.R5
Platforms	All

lowest-bin *number*

Synopsis	Lowest delay bin used when applying a delay threshold
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword* lowest-bin *number*
Tree	lowest-bin
Range	0 to 9
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	All

raise-threshold *number*

Synopsis	Raise threshold for excessive delay
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword* raise-threshold *number*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	raise-threshold
Range	1 to 864000
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	All

exclude-from-avg [direction] *keyword*

Synopsis	Enter the **exclude-from-avg** list instance
Context	**configure** oam-pm bin-group *number* bin-type *keyword* exclude-from-avg *keyword*
Tree	exclude-from-avg
Introduced	16.0.R5
Platforms	All

[**direction**] *keyword*

Synopsis	Traffic flow direction of the OAM-PM test or metric
Context	**configure** oam-pm bin-group *number* bin-type *keyword* exclude-from-avg *keyword*
Tree	exclude-from-avg
Options	forward, backward, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

bins *string*

Synopsis	Bin numbers excluded from the average calculation
Context	**configure** oam-pm bin-group *number* bin-type *keyword* exclude-from-avg *keyword* bins *string*
Tree	bins
String length	1 to 39
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *description*

Synopsis	Text description
Context	**configure** oam-pm bin-group *number* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R5
Platforms	All

session [session-name] *named-item*

Synopsis	Enter the **session** list instance
Context	**configure** oam-pm session *named-item*
Tree	session
Introduced	16.0.R5
Platforms	All

[**session-name**] *named-item*

Synopsis	OAM-PM session name
Context	**configure** oam-pm session *named-item*
Tree	session
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

bin-group *reference*

Synopsis	Bin group for the session
Context	**configure** oam-pm session *named-item* bin-group *reference*
Tree	bin-group
Reference	**configure** oam-pm bin-group *number*
Introduced	16.0.R5
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *description*

Synopsis	Text description
Context	**configure** oam-pm session *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R5
Platforms	All

ethernet

Synopsis	Enable the **ethernet** context
Context	**configure** oam-pm session *named-item* ethernet
Tree	ethernet
Notes	The following elements are part of a mandatory choice: **ethernet**, **ip**, or **mpls**.
Introduced	16.0.R5
Platforms	All

dest-mac *mac-unicast-address*

Synopsis	Destination MAC address for the session
Context	**configure** oam-pm session *named-item* ethernet dest-mac *mac-unicast-address*
Tree	dest-mac
Introduced	16.0.R5
Platforms	All

dmm

Synopsis	Enable the **dmm** context
Context	**configure** oam-pm session *named-item* ethernet dmm
Tree	dmm
Introduced	16.0.R5
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the test
Context	**configure** oam-pm session *named-item* ethernet dmm admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R5
Platforms	All

data-tlv-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Size of the pad TLV in the frames sent for the test
Context	**configure** oam-pm session *named-item* ethernet dmm data-tlv-size *number*
Tree	data-tlv-size
Range	0 | 3 to 2000
Units	octets
Default	0
Introduced	16.0.R5
Platforms	All

delay-template *named-item-64*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reference to a streaming delay template for the test
Context	**configure** oam-pm session *named-item* ethernet dmm delay-template *named-item-64*
Tree	delay-template
String length	1 to 64
Introduced	19.7.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between transmission PDUs for the session test
Context	**configure** oam-pm session *named-item* ethernet dmm interval *number*
Tree	interval
Description	This command configures the message period or probe spacing for the transmission of a frame.
Range	50 | 100 | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 | 1000 | 10000
Units	milliseconds
Introduced	16.0.R5
Platforms	All

test-duration *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Duration of an on-demand test
Context	**configure** oam-pm session *named-item* ethernet dmm test-duration *number*
Tree	test-duration
Range	1 to 86400
Units	seconds
Introduced	16.0.R5
Platforms	All

test-id *(number | keyword)*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	Test ID
Context	**configure** oam-pm session *named-item* ethernet dmm test-id *(number | keyword)*
Tree	test-id
Range	0 to 2147483647
Options	auto – Automatically assigns a test-id
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	All

lmm

Synopsis	Enable the **lmm** context
Context	**configure** oam-pm session *named-item* ethernet lmm
Tree	lmm
Introduced	16.0.R5
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the test
Context	**configure** oam-pm session *named-item* ethernet lmm admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R5
Platforms	All

availability

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **availability** context
Context	**configure** oam-pm session *named-item* ethernet lmm availability
Tree	availability

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R5
Platforms	All

admin-state *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of availability statistics
Context	**configure** oam-pm session *named-item* ethernet lmm availability admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R5
Platforms	All

flr-threshold *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FLR threshold for the test
Context	**configure** oam-pm session *named-item* ethernet lmm availability flr-threshold *number*
Tree	flr-threshold
Range	0 to 100
Units	percent
Default	50
Introduced	16.0.R5
Platforms	All

hli-force-count *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	Increment HLI/CHLI counters regardless of availability
Context	**configure** oam-pm session *named-item* ethernet lmm availability hli-force-count *boolean*
Tree	hli-force-count
Default	false
Introduced	16.0.R5
Platforms	All

timing

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **timing** context
Context	**configure** oam-pm session *named-item* ethernet lmm availability timing
Tree	timing
Introduced	16.0.R5
Platforms	All

chli-threshold *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	CHLI threshold
Context	**configure** oam-pm session *named-item* ethernet lmm availability timing chli-threshold *number*
Tree	chli-threshold
Range	1 to 9
Default	5
Introduced	16.0.R5
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

consec-delta-t *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of consecutive delta-t intervals
Context	**configure** oam-pm session *named-item* ethernet lmm availability timing consec-delta-t *number*
Tree	consec-delta-t
Range	2 to 10
Default	10
Introduced	16.0.R5
Platforms	All

frames-per-delta-t *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of frames sent in one delta-t
Context	**configure** oam-pm session *named-item* ethernet lmm availability timing frames-per-delta-t *number*
Tree	frames-per-delta-t
Range	1 to 50
Introduced	16.0.R5
Platforms	All

fc-collection *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable collection of per-forwarding class counters
Context	**configure** oam-pm session *named-item* ethernet lmm fc-collection *boolean*
Tree	fc-collection

Synopsis	Do not allow packet fragmentation in the IPv4 header
Context	**configure** oam-pm session *named-item* ip do-not-fragment *boolean*
Tree	do-not-fragment
Default	false
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dscp *(keyword | keyword)*

Synopsis	DSCP value configured to the DSCP name
Context	**configure** oam-pm session *named-item* ip dscp *(keyword | keyword)*
Tree	dscp

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command allows for the explicit setting of the DSCP rather than deriving the DSCP value from the egress network QoS policy 1 using the **fc** and **profile** values. Although disconnected from the **fc** and **profile** settings unless required, the three parameters should be aligned to ensure proper treatment within the node and along the path.
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Options	resolve
Default	resolve
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc *keyword*

Synopsis	Forwarding class for the session
Context	**configure** oam-pm session *named-item* ip fc *keyword*
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Default	be
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

forwarding

Synopsis	Enable the **forwarding** context
Context	**configure** oam-pm session *named-item* ip forwarding
Tree	forwarding
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bypass-routing

Synopsis	Bypass the routing table when sending test packets
Context	**configure** oam-pm session *named-item* ip forwarding bypass-routing

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	bypass-routing
Notes	The following elements are part of a mandatory choice: **bypass-routing**, **interface**, or **next-hop**.
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface *interface-name*

Synopsis	Interface name
Context	**configure** oam-pm session *named-item* ip forwarding interface *interface-name*
Tree	interface
String length	1 to 32
Notes	The following elements are part of a mandatory choice: **bypass-routing**, **interface**, or **next-hop**.
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

next-hop *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address for forwarding
Context	**configure** oam-pm session *named-item* ip forwarding next-hop *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	next-hop
Notes	The following elements are part of a mandatory choice: **bypass-routing**, **interface**, or **next-hop**.
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *(keyword | number)*

Synopsis	Pattern used to fill the packet padding field
Context	**configure** oam-pm session *named-item* ip pattern *(keyword | number)*
Tree	pattern
Range	0 to 65535
Options	sequential
Default	0

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

profile *keyword*

Synopsis	Profile type for the session
Context	**configure** oam-pm session *named-item* ip profile *keyword*
Tree	profile
Options	in, out
Default	out
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

router-instance *string*

Synopsis	Router instance for the session
Context	**configure** oam-pm session *named-item* ip router-instance *string*
Tree	router-instance
Default	Base
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

source *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source IP address for the session
Context	**configure** oam-pm session *named-item* ip source *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	source
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

source-udp-port *number*

Synopsis	Source UDP port for the session
Context	**configure** oam-pm session *named-item* ip source-udp-port *number*
Tree	source-udp-port

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	64374 to 64383
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ttl *number*

Synopsis	TTL value for the session
Context	**configure** oam-pm session *named-item* ip ttl *number*
Tree	ttl
Range	1 to 255
Default	255
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tunnel

Synopsis	Enter the **tunnel** context
Context	**configure** oam-pm session *named-item* ip tunnel
Tree	tunnel
Description	Commands in this context configure packet tunneling options for the session. This command and the **oam-pm session ip forwarding** command are mutually exclusive.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mpls

Synopsis	Enable the **mpls** context
Context	**configure** oam-pm session *named-item* ip tunnel mpls
Tree	mpls
Description	Commands in this context configure the MPLS packet tunneling options for the session. Configure the **oam-pm session ip router-instance** to Base to configure commands in the tunnel MPLS context. When entering a context under MPLS, the system removes any previous configuration of any sibling context. You can only configure one of the contexts for each OAM-PM session.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rsvp-te

Synopsis	Enable the **rsvp-te** context
Context	**configure** oam-pm session *named-item* ip tunnel mpls rsvp-te
Tree	rsvp-te
Description	Commands in this context allow for the specification of RSVP-TE specific tunnel information used to transport the test packets. Entering this context removes all other tunnel-type options configured under the **configure oam-pm session ip tunnel mpls** context. Only a single MPLS type can be configured for an OAM-PM session.
Notes	The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, or **sr-te**.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp *named-item-64*

Synopsis	Name of LSP that carries the test packets
Context	**configure** oam-pm session *named-item* ip tunnel mpls rsvp-te lsp *named-item-64*
Tree	lsp
String length	1 to 64
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rsvp-te-auto

Synopsis	Enable the **rsvp-te-auto** context
Context	**configure** oam-pm session *named-item* ip tunnel mpls rsvp-te-auto
Tree	rsvp-te-auto
Description	Commands in this context configure the RSVP-TE-Auto feature and **rsvp-te-auto** (RSVP TE with dynamically-created LSPs) packet tunneling options for the session. If you enter a context within the MPLS context, the system removes any previous configuration of any sibling context. You can only configure one of the contexts for each OAM-PM session.
Notes	The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, or **sr-te**.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

from *ipv4-unicast-address*

Synopsis	IPv4 address used to identify the LSP to be tested
Context	**configure** oam-pm session *named-item* ip tunnel mpls rsvp-te-auto from *ipv4-unicast-address*
Tree	from
Description	This command configures the headend of the RSV LSP. Configure the following three commands to identify an RSVP-TE Auto LSP: **from**, **to**, and **lsp-template**. When all three of these values are configured, the specific RSVP LSP can be identified and the test packets can be carried across the tunnel.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp-template *named-item*

Synopsis	LSP template used to identify the LSP to be tested
Context	**configure** oam-pm session *named-item* ip tunnel mpls rsvp-te-auto lsp-template *named-item*
Tree	lsp-template
Description	This command configures the name of the LSP template used to identify the unique LSP. Configure the following three commands to identify an RSVP-TE Auto LSP: **from**, **to**, and **lsp-template**. When all three of these values are configured, the specific RSVP LSP can be identified and the test packets can be carried across the tunnel.
String length	1 to 32
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

to *ipv4-unicast-address*

Synopsis	IPv4 unicast address to identify the LSP to be tested
Context	**configure** oam-pm session *named-item* ip tunnel mpls rsvp-te-auto to *ipv4-unicast-address*
Tree	to
Description	This command configures the termination point of the RSVP LSP. Configure the following three commands to identify an RSVP-TE Auto LSP: **from**, **to**, and **lsp-template**. When all three of these values are configured, the specific RSVP LSP can be identified and the test packets can be carried across the tunnel.
Introduced	23.3.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sr-isis

Synopsis	Enable the **sr-isis** context
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-isis
Tree	sr-isis
Description	Commands in this context allow for the specification of SR-ISIS specific tunnel information used to transport the test packets. Entering this context removes all the other tunnel type commands configured in the **configure oam-pm session ip tunnel mpls** context. Only a single MPLS type can be configured for an OAM-PM session.
Notes	The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, or **sr-te**.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

igp-instance *number*

Synopsis	IGP instance used to tunnel IP packets
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-isis igp-instance *number*
Tree	igp-instance
Description	This command configures the IGP instance to tunnel IP packets for the session test.
Range	0 to 127
Default	0
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix to tunnel IP packets for the session tests
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-isis prefix *(ipv4-prefix | ipv6-prefix)*
Tree	prefix
Description	This command configures the IP prefix used with the IGP instance to tunnel IP packets for the session tests.
Introduced	23.3.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sr-ospf

Synopsis	Enable the **sr-ospf** context
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-ospf
Tree	sr-ospf
Description	Commands in this context allow for the specification of SR-OSPF specific tunnel information used to transport the test packets. Entering this context removes all other tunnel type options configured under the **configure oam-pm session ip tunnel mpls** context. Only a single MPLS type can be configured for an OAM-PM session.
Notes	The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, or **sr-te**.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

igp-instance *number*

Synopsis	IGP instance used to tunnel IP packets
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-ospf igp-instance *number*
Tree	igp-instance
Range	0 to 31
Default	0
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

prefix *ipv4-unicast-prefix*

Synopsis	IP prefix to tunnel IP packets for the session tests
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-ospf prefix *ipv4-unicast-prefix*
Tree	prefix
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sr-ospf3

Synopsis	Enable the **sr-ospf3** context
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-ospf3
Tree	sr-ospf3
Description	Commands in this context allow for the specification of SR-OSPFv3 specific tunnel information used to transport the test packets. Entering this context removes all other tunnel type options configured under the **configure oam-pm session ip tunnel mpls** context. Only a single MPLS type can be configured for an OAM-PM session.
Notes	The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, or **sr-te**.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

igp-instance *number*

Synopsis	IGP instance used to tunnel IP packets
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-ospf3 igp-instance *number*
Tree	igp-instance
Range	0 to 31 | 64 to 95
Default	0
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix to tunnel IP packets for the session tests
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-ospf3 prefix *(ipv4-prefix | ipv6-prefix)*
Tree	prefix
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sr-te

Synopsis	Enable the **sr-te** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-te
Tree	sr-te
Description	Commands in this context allow for the specification of SR-TE specific tunnel information used to transport the test packets. Entering this context removes all other tunnel type options configured under the **configure oam-pm session ip tunnel mpls** context. Only a single MPLS type can be configured for an OAM-PM session.
Notes	The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, or **sr-te**.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp *named-item-64*

Synopsis	Name of LSP that carries the test packets
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-te lsp *named-item-64*
Tree	lsp
String length	1 to 64
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

twamp-light

Synopsis	Enable the **twamp-light** context
Context	**configure** oam-pm session *named-item* ip twamp-light
Tree	twamp-light
Description	Commands in this context configure the TWAMP-Light (Two Way Active Measurement Protocol, Light) or STAMP (Simple Two Way Active Measurement Protocol) test for the session.
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the test
Context	**configure** oam-pm session *named-item* ip twamp-light admin-state *keyword*
Tree	admin-state
Options	enable, disable

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	disable
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-ipv6-udp-checksum-zero *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	**configure** oam-pm session *named-item* ip twamp-light allow-ipv6-udp-checksum-zero *boolean*
Tree	allow-ipv6-udp-checksum-zero
Description	When configured to **true**, this command configures the acceptance of IPv6 packets with UDP checksums of 0. This optional configuration allows the router to process arriving IPv6 TWAMP Test packets that contain IPv6 UDP checksum of 0x0000. The UDP port specific to this TWAMP Light test bypasses the default discard IPv6 UDP checksum 0x0000. If this optional command is not configured, IPv6 UDP checksum 0x000 arriving packets are discarded. When configured to **false**, packets that arrive with an IPv6 UDP checksum of 0x0000 are discarded.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delay-template *named-item-64*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reference to a streaming delay template for the test
Context	**configure** oam-pm session *named-item* ip twamp-light delay-template *named-item-64*
Tree	delay-template
String length	1 to 64
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between transmission PDUs for the session test
Context	**configure** oam-pm session *named-item* ip twamp-light interval *number*
Tree	interval
Description	This command configures the message period or probe spacing for the transmission of a frame.
Range	50 | 100 | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 | 1000 | 10000
Units	milliseconds
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

loss

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **loss** context
Context	**configure** oam-pm session *named-item* ip twamp-light loss
Tree	loss
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

flr-threshold *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FLR threshold for the test
Context	**configure** oam-pm session *named-item* ip twamp-light loss flr-threshold *number*
Tree	flr-threshold
Range	0 to 100

pad-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Amount of packet padding sent for the TWAMP-Light test
Context	**configure** oam-pm session *named-item* ip twamp-light pad-size *number*
Tree	pad-size
Range	0 to 2000
Units	octets
Default	0
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pad-tlv-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pad TLV size in each sent STAMP packet
Context	**configure** oam-pm session *named-item* ip twamp-light pad-tlv-size *number*
Tree	pad-tlv-size
Description	This command configures the PAD TLV included in the STAMP test packet with a total byte count specified by this command. TWAMP Light test packets do not allow TLVs. To pad the size of the TWAMP Light test packet the user must configure the **pad-size** command. STAMP test packets (the standard form of TWAMP Light) introduces TLVs for padding. Therefore, STAMP test packets must use the **pad-tlv-size** value.

Context	**configure** oam-pm session *named-item* ip twamp-light record-stats *keyword*
Tree	record-stats
Options	delay, loss, delay-and-loss
Default	delay
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

session-sender-type *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Packet type sent by the test
Context	**configure** oam-pm session *named-item* ip twamp-light session-sender-type *keyword*
Tree	session-sender-type
Description	This command configures the type of test packet format to transmit. When the **stamp** option is configured, STAMP transmission, packet formatting, and packet processing is allowed and STAMP test packets support TLVs. When the **twamp-light** option is configured, TWAMP Light transmission, packet formatting, and packet processing is allowed, but TWAMP Light test packets do not allow TLVs.
Options	twamp-light – Two-Way Active Measurement Protocol, Light stamp – Simple Two-Way Active Measurement Protocol
Default	twamp-light
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.

lsp

Synopsis	Enter the **lsp** context
Context	**configure** oam-pm session *named-item* mpls lsp
Tree	lsp
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mpls-tp-static

Synopsis	Enable the **mpls-tp-static** context
Context	**configure** oam-pm session *named-item* mpls lsp mpls-tp-static
Tree	mpls-tp-static
Notes	The following elements are part of a choice: **mpls-tp-static**, **rsvp**, or **rsvp-auto**.
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp *named-item-64*

Synopsis	LSP to be tested
Context	**configure** oam-pm session *named-item* mpls lsp mpls-tp-static lsp *named-item-64*
Tree	lsp
String length	1 to 64
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rsvp

Synopsis	Enable the **rsvp** context
Context	**configure** oam-pm session *named-item* mpls lsp rsvp
Tree	rsvp
Notes	The following elements are part of a choice: **mpls-tp-static**, **rsvp**, or **rsvp-auto**.
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.

lsp *named-item-64*

Synopsis	LSP to be tested
Context	**configure** oam-pm session *named-item* mpls lsp rsvp lsp *named-item-64*
Tree	lsp
String length	1 to 64
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

udp-return-object *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address used by far end of the test to send response
Context	**configure** oam-pm session *named-item* mpls lsp rsvp udp-return-object *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	udp-return-object
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rsvp-auto

Synopsis	Enable the **rsvp-auto** context
Context	**configure** oam-pm session *named-item* mpls lsp rsvp-auto
Tree	rsvp-auto
Notes	The following elements are part of a choice: **mpls-tp-static**, **rsvp**, or **rsvp-auto**.
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

from *ipv4-unicast-address*

Synopsis	IPv4 address used to identify the LSP to be tested
Context	**configure** oam-pm session *named-item* mpls lsp rsvp-auto from *ipv4-unicast-address*
Tree	from
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp-template *named-item*

Synopsis	LSP template used to identify the LSP to be tested
Context	**configure** oam-pm session *named-item* mpls lsp rsvp-auto lsp-template *named-item*
Tree	lsp-template
String length	1 to 32
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

to *ipv4-unicast-address*

Synopsis	IPv4 address used to identify the LSP to be tested
Context	**configure** oam-pm session *named-item* mpls lsp rsvp-auto to *ipv4-unicast-address*
Tree	to
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

udp-return-object *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address used by far end of the test to send response
Context	**configure** oam-pm session *named-item* mpls lsp rsvp-auto udp-return-object *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	udp-return-object
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *(keyword | number)*

Synopsis	Pattern value repeated to fill padding field of packet
Context	**configure** oam-pm session *named-item* mpls pattern *(keyword | number)*
Tree	pattern
Range	0 to 65535
Options	sequential
Default	0
Introduced	16.0.R6

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

profile *keyword*

Synopsis	QoS profile for the session
Context	**configure** oam-pm session *named-item* mpls profile *keyword*
Tree	profile
Options	in, out
Default	out
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ttl *number*

Synopsis	MPLS TTL value for the session
Context	**configure** oam-pm session *named-item* mpls ttl *number*
Tree	ttl
Range	1 to 255
Default	255
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

session-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Session type
Context	**configure** oam-pm session *named-item* session-type *keyword*
Tree	session-type
Options	proactive, on-demand
Default	proactive
Introduced	16.0.R5
Platforms	All

streaming

Synopsis	Enter the **streaming** context
Context	**configure** oam-pm streaming
Tree	streaming
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delay-template [delay-template-name] *named-item-64*

Synopsis	Enter the **delay-template** list instance
Context	**configure** oam-pm streaming delay-template *named-item-64*
Tree	delay-template
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**delay-template-name**] *named-item-64*

Synopsis	Streaming delay template name
Context	**configure** oam-pm streaming delay-template *named-item-64*
Tree	delay-template
String length	1 to 64
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the delay template
Context	**configure** oam-pm streaming delay-template *named-item-64* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.

description *description*

Synopsis	Text description
Context	**configure** oam-pm streaming delay-template *named-item-64* description *description*
Tree	description
String length	1 to 80
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fd-avg [direction] *keyword*

Synopsis	Add a list entry for **fd-avg**
Context	**configure** oam-pm streaming delay-template *named-item-64* fd-avg *keyword*
Tree	fd-avg
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**direction**] *keyword*

Synopsis	Traffic flow direction of the OAM-PM test or metric
Context	**configure** oam-pm streaming delay-template *named-item-64* fd-avg *keyword*
Tree	fd-avg
Options	forward, backward, round-trip
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ifdv-avg [direction] *keyword*

Synopsis	Add a list entry for **ifdv-avg**
Context	**configure** oam-pm streaming delay-template *named-item-64* ifdv-avg *keyword*
Tree	ifdv-avg
Introduced	19.7.R1

4.30.1 openflow command descriptions

openflow

Synopsis	Enter the **openflow** context
Context	**configure** openflow
Tree	openflow
Introduced	16.0.R4
Platforms	VSR

of-switch [name] *named-item*

Synopsis	Enter the **of-switch** list instance
Context	**configure** openflow of-switch *named-item*
Tree	of-switch
Max. instances	8
Introduced	16.0.R4
Platforms	VSR

[**name**] *named-item*

Synopsis	OpenFlow switch name
Context	**configure** openflow of-switch *named-item*
Tree	of-switch
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

admin-state *keyword*

Synopsis	Administrative state of the OpenFlow switch instance
Context	**configure** openflow of-switch *named-item* admin-state *keyword*
Tree	admin-state

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	VSR

aux-channel *boolean*

Synopsis	Enable the auxiliary connection for the H-OFS instance
Context	**configure** openflow of-switch *named-item* aux-channel *boolean*
Tree	aux-channel
Default	false
Introduced	16.0.R4
Platforms	VSR

controller [address] *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*

Synopsis	Enter the **controller** list instance
Context	**configure** openflow of-switch *named-item* controller *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	controller
Max. instances	2
Introduced	16.0.R4
Platforms	VSR

[**address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the OpenFlow channel to the controller
Context	**configure** openflow of-switch *named-item* controller *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	controller
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

port *number*

Synopsis	Controller port ID
Context	**configure** openflow of-switch *named-item* controller *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	controller
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

ofc-loopback *(ipv4-address-no-zone \| ipv6-address-no-zone)*

Synopsis	Loopback IP address in the VPRN
Context	**configure** openflow of-switch *named-item* controller *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* ofc-loopback *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ofc-loopback
Introduced	16.0.R4
Platforms	VSR

service-name *service-name*

Synopsis	Administrative service name
Context	**configure** openflow of-switch *named-item* controller *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* service-name *service-name*
Tree	service-name
String length	1 to 64
Introduced	16.0.R4
Platforms	VSR

tls-client-profile *reference*

Synopsis	TLS profile name for use on the control channel
Context	**configure** openflow of-switch *named-item* controller *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* tls-client-profile *reference*
Tree	tls-client-profile

Reference	**configure** system security tls client-tls-profile *named-item*
Introduced	16.0.R4
Platforms	VSR

description *very-long-description*

Synopsis	Text description
Context	**configure** openflow of-switch *named-item* description *very-long-description*
Tree	description
String length	1 to 255
Introduced	16.0.R4
Platforms	VSR

echo-interval *number*

Synopsis	Interval for monitoring OpenFlow control channels
Context	**configure** openflow of-switch *named-item* echo-interval *number*
Tree	echo-interval
Range	1 to 3600
Units	seconds
Default	10
Introduced	16.0.R4
Platforms	VSR

echo-multiple *number*

Synopsis	Consecutive lost messages before channel declared down
Context	**configure** openflow of-switch *named-item* echo-multiple *number*
Tree	echo-multiple
Range	3 to 100
Default	3
Introduced	16.0.R4
Platforms	VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

flowtable [table-id] *number*

Synopsis	Enter the **flowtable** list instance
Context	**configure** openflow of-switch *named-item* flowtable *number*
Tree	flowtable
Max. instances	1
Introduced	16.0.R4
Platforms	VSR

[**table-id**] *number*

Synopsis	OpenFlow table ID
Context	**configure** openflow of-switch *named-item* flowtable *number*
Tree	flowtable
Max. range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

max-size *number*

Synopsis	Maximum size of the flow table
Context	**configure** openflow of-switch *named-item* flowtable *number* max-size *number*
Tree	max-size
Range	1 to 524288
Default	1000
Introduced	16.0.R4
Platforms	VSR

mismatch-action *keyword*

Synopsis	Action taken when no match entries found in flow table
Context	**configure** openflow of-switch *named-item* flowtable *number* mismatch-action *keyword*
Tree	mismatch-action

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	drop, fall-through, packet-in
Default	fall-through
Introduced	16.0.R4
Platforms	VSR

switch-defined-cookie *boolean*

Synopsis	Enable switch-defined cookie encoding
Context	**configure** openflow of-switch *named-item* flowtable *number* switch-defined-cookie *boolean*
Tree	switch-defined-cookie
Default	false
Introduced	16.0.R4
Platforms	VSR

logical-port-status *keyword*

Synopsis	Logical port type for status change reporting
Context	**configure** openflow of-switch *named-item* logical-port-status *keyword*
Tree	logical-port-status
Options	rsvp-te, mpls-tp, sr-te
Max. instances	3
Introduced	16.0.R4
Platforms	VSR

ofs-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	OFS switch ID
Context	**configure** openflow of-switch *named-item* ofs-id *number*
Tree	ofs-id
Range	1 to 8

4.31.1 policy-options command descriptions

policy-options

Synopsis	Enter the **policy-options** context
Context	**configure** policy-options
Tree	policy-options
Introduced	16.0.R1
Platforms	All

as-path [name] *named-item*

Synopsis	Enter the **as-path** list instance
Context	**configure** policy-options as-path *named-item*
Tree	as-path
Introduced	16.0.R1
Platforms	All

[**name**] *named-item*

Synopsis	AS path name
Context	**configure** policy-options as-path *named-item*
Tree	as-path
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

expression *policy-as-path-regexp*

Synopsis	Regular expression string
Context	**configure** policy-options as-path *named-item* expression *policy-as-path-regexp*
Tree	expression
Description	This command configures a route policy AS path regular expression statement to use in route policy entries.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

An AS path in a BGP route matches an AS path regular expression, if the path matches the pattern of the regular expression. A regular expression incorporates terms and operators that use the terms. An individual AS number is an elementary term in the AS path regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS:

- .
- *
- ?
- {n}
- {m,n}
- {m, }

To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.

String length	1 to 255
Introduced	16.0.R1
Platforms	All

as-path-group [name] *named-item*

Synopsis	Enter the **as-path-group** list instance
Context	**configure** policy-options as-path-group *named-item*
Tree	as-path-group
Introduced	16.0.R1
Platforms	All

[**name**] *named-item*

Synopsis	AS path group name
Context	**configure** policy-options as-path-group *named-item*
Tree	as-path-group
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

entry [entry] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** policy-options as-path-group *named-item* entry *number*
Tree	entry
Introduced	16.0.R1
Platforms	All

[**entry**] *number*

Synopsis	AS path entry ID
Context	**configure** policy-options as-path-group *named-item* entry *number*
Tree	entry
Range	1 to 128
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

expression *policy-as-path-regexp*

Synopsis	Regular expression string
Context	**configure** policy-options as-path-group *named-item* entry *number* expression *policy-as-path-regexp*
Tree	expression
Description	This command configures an AS path group regular expression.

An AS path in a BGP route matches an AS path group, if the pattern of the path matches the concatenation of all regular expressions in the group. A regular expression incorporates terms and operators that use the terms. An individual AS number is an elementary term in the AS path regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS:

- .
- *
- ?
- {n}
- {m,n}
- {m, }

	To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.
String length	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

community [name] *policy-community-name*

Synopsis	Enter the **community** list instance
Context	**configure** policy-options community *policy-community-name*
Tree	community
Introduced	16.0.R1
Platforms	All

[**name**] *policy-community-name*

Synopsis	Community name
Context	**configure** policy-options community *policy-community-name*
Tree	community
Description	This command configures a route policy community name. String values must be composed of printable, 7-bit ASCII characters. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.
String length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

expression

Synopsis	Enable the **expression** context
Context	**configure** policy-options community *policy-community-name* expression
Tree	expression
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

exact *boolean*

Synopsis	Match exactly for the specified expression
Context	**configure** policy-options community *policy-community-name* expression exact *boolean*
Tree	exact
Default	false
Introduced	16.0.R1
Platforms	All

expr *expression-community*

Synopsis	Community expression value
Context	**configure** policy-options community *policy-community-name* expression expr *expression-community*
Tree	expr
String length	1 to 900
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

member [member] *member-community*

Synopsis	Add a list entry for **member**
Context	**configure** policy-options community *policy-community-name* member *member-community*
Tree	member
Introduced	16.0.R1
Platforms	All

[**member**] *member-community*

Synopsis	Community member value
Context	**configure** policy-options community *policy-community-name* member *member-community*

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	member
Description	This command configures a BGP community value. Each member of a community list is a standard, extended, or large community value or a regular expression that potentially matches many community values. A regular expression incorporates terms and operators that use the terms. An individual numerical digit is an elementary term in the community regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS: • . • * • ? • {n} • {m,n} • {m, } To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.
String length	1 to 72
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

damping [name] *named-item*

Synopsis	Enter the **damping** list instance
Context	**configure** policy-options damping *named-item*
Tree	damping
Introduced	16.0.R1
Platforms	All

[**name**] *named-item*

Synopsis	Damping profile name
Context	**configure** policy-options damping *named-item*
Tree	damping
String length	1 to 32
Notes	This element is part of a list key.

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the policy variable
Context	**configure** policy-options global-variables name *policy-var-name* address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Notes	The following elements are part of a mandatory choice: **address**, **decimal**, **number**, **prefix**, or **value**.
Introduced	16.0.R4
Platforms	All

decimal *decimal-number*

Synopsis	Attribute decimal to which variable name is resolved
Context	**configure** policy-options global-variables name *policy-var-name* decimal *decimal-number*
Tree	decimal
Range	0.000 to 4294967295.000
Notes	The following elements are part of a mandatory choice: **address**, **decimal**, **number**, **prefix**, or **value**.
Introduced	19.7.R1
Platforms	All

number *number*

Synopsis	Numerical value of the policy variable
Context	**configure** policy-options global-variables name *policy-var-name* number *number*
Tree	number
Range	0 to 4294967295
Notes	The following elements are part of a mandatory choice: **address**, **decimal**, **number**, **prefix**, or **value**.
Introduced	16.0.R4
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	Prefix value associated with the variable name
Context	**configure** policy-options global-variables name *policy-var-name* prefix *(ipv4-prefix | ipv6-prefix)*
Tree	prefix
Notes	The following elements are part of a mandatory choice: **address**, **decimal**, **number**, **prefix**, or **value**.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

value *named-item*

Synopsis	Policy variable value
Context	**configure** policy-options global-variables name *policy-var-name* value *named-item*
Tree	value
String length	1 to 32
Notes	The following elements are part of a mandatory choice: **address**, **decimal**, **number**, **prefix**, or **value**.
Introduced	16.0.R4
Platforms	All

policy-statement [name] *named-item-64*

Synopsis	Enter the **policy-statement** list instance
Context	**configure** policy-options policy-statement *named-item-64*
Tree	policy-statement
Max. instances	65535
Introduced	16.0.R1
Platforms	All

[**name**] *named-item-64*

Tree	policy-statement
String length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

default-action

Synopsis	Enable the **default-action** context
Context	**configure** policy-options policy-statement *named-item-64* default-action
Tree	default-action
Introduced	16.0.R1
Platforms	All

action-type *keyword*

Synopsis	Action type for routes matching the route policy entry
Context	**configure** policy-options policy-statement *named-item-64* default-action action-type *keyword*
Tree	action-type
Options	accept, reject, next-entry, next-policy
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

add-paths-send-limit *(number | keyword)*

Synopsis	BGP Add-Paths send limit applied for routes
Context	**configure** policy-options policy-statement *named-item-64* default-action add-paths-send-limit *(number | keyword)*
Tree	add-paths-send-limit
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-tag-policy *(param-midstring-64 | string)*

Synopsis	Administrative tag policy name
Context	**configure** policy-options policy-statement *named-item-64* default-action admin-tag-policy *(param-midstring-64 | string)*
Tree	admin-tag-policy
String length	1 to 64
Introduced	16.0.R1
Platforms	All

advertise-label *keyword*

Synopsis	Label allocation for matched BGP routes
Context	**configure** policy-options policy-statement *named-item-64* default-action advertise-label *keyword*
Tree	advertise-label
Description	This command configures the label allocation method for advertised routes. The effect of this command depends on the context where the associated policy is applied.
Options	per-prefix, pop, pop-and-forward
Introduced	16.0.R1
Platforms	All

aigp-metric

repeat *(number | string)*

Synopsis	Number of times to prepend the specified AS number
Context	**configure** policy-options policy-statement *named-item-64* default-action as-path-prepend repeat *(number | string)*
Tree	repeat
String length	1 to 32
Range	1 to 50
Default	1
Introduced	16.0.R1
Platforms	All

bgp-high-priority *boolean*

Synopsis	Tag routes as high priority for fast table updates
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-high-priority *boolean*
Tree	bgp-high-priority
Description	When configured to **true**, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates. This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types: • IPv4 • label-IPv4 • IPv6 • label-IPv6 This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB. When configured to **false**, no routes are tagged for faster route table updates.
Default	false
Introduced	20.5.R1
Platforms	All

bgp-leak *boolean*

Synopsis	Allow leaking for BGP routes

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-leak *boolean*
Tree	bgp-leak
Default	false
Introduced	16.0.R1
Platforms	All

bgp-med

Synopsis	Enter the **bgp-med** context
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-med
Tree	bgp-med
Introduced	19.7.R1
Platforms	All

adjust *string*

Synopsis	BGP-MED adjustment
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-med adjust *string*
Tree	adjust
String length	1 to 64
Notes	The following elements are part of a choice: **adjust** or **set**.

Introduced	19.7.R1
Platforms	All

bgp-tunnel-metric

Synopsis	Enter the **bgp-tunnel-metric** context
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-tunnel-metric
Tree	bgp-tunnel-metric
Description	Commands in this context configure the tunnel-table metrics associated with BGP label unicast routes that pass through to the default action of the policy.
Introduced	20.5.R1
Platforms	All

prefer-aigp *boolean*

Synopsis	Use AIGP attribute as tunnel metric when present
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-tunnel-metric prefer-aigp *boolean*
Tree	prefer-aigp
Description	When configured to **true**, and a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy. The TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the IGP cost to reach the BGP next-hop if it has the AIGP path attribute, otherwise it is set to the value implied by the value leaf. When configured to **false**, the AIGP attribute is removed from the advertised routes and is ignored if present in the received routes.
Default	false
Introduced	20.5.R1
Platforms	All

prefer-med *boolean*

Synopsis	Use MED attribute as tunnel metric when present
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-tunnel-metric prefer-med *boolean*
Tree	prefer-med
Description	When configured to **true**, if a BGP-LU route is selected for installation in the TTM and is matched by this action in a BGP import policy, the TTM metric of the tunnel is set to

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

the MED metric value of the BGP-LU route with the IGP cost to reach the BGP next hop added to it.

When configured to **false**, the BGP tunnel metric associated with the BGP-LU route accepted by this policy action is not determined using the MED attribute.

Default	false
Introduced	23.3.R1
Platforms	All

value *(string | number)*

Synopsis	BGP tunnel table metric value
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-tunnel-metric value *(string | number)*
Tree	value
Description	This command configures a BGP tunnel metric is assigned to routes that do not match any entry. If a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy, the TTM metric of the associated tunnel is set to this value (or the value associated with the parameter name) if either: • the prefer-aigp option is set to false • the prefer-aigp option is set to true but the BGP-LU route does not have an AIGP attribute
String length	1 to 32
Range	0 to 4294967295

damping *(keyword | param-midstring | string)*

Synopsis	Damping profile used for routes
Context	**configure** policy-options policy-statement *named-item-64* default-action damping *(keyword | param-midstring | string)*
Tree	damping
String length	1 to 32
Options	none
Introduced	16.0.R1
Platforms	All

dest-class *number*

Synopsis	Default destination class for the policy statement
Context	**configure** policy-options policy-statement *named-item-64* default-action dest-class *number*
Tree	dest-class
Description	This command specifies the policy accounting destination class index to associate with matched routes.
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

egress-statistics *boolean*

Synopsis	Enable egress statistics for BGP-LU routes
Context	**configure** policy-options policy-statement *named-item-64* default-action egress-statistics *boolean*
Tree	egress-statistics
Description	When configured to **true**, this command enables the allocation of statistical indexes to BGP labeled unicast route entries that are programmed on egress data paths. When configured to **false**, this command disables the allocation of statistical indexes to BGP-LU route entries.
Default	false
Introduced	20.10.R1
Platforms	All

flex-algo *(string | number)*

Synopsis	Flexible algorithm for BGP next-hop autobind operation
Context	**configure** policy-options policy-statement *named-item-64* default-action flex-algo *(string | number)*
Tree	flex-algo
Description	This command configures the Flex-Algorithm for use in the BGP next-hop automatic bind operation in a BGP import policy. A Flex-Algorithm aware autobind of the BGP next-hop is enabled when the route is matched by the policy statement entry. Flex-Algorithm aware next-hop lookup is supported for unicast BGP, VPRN, and BGP-LU. This command is not supported for multicast address families.
String length	1 to 32
Range	128 to 255
Introduced	20.10.R1
Platforms	All

ingress-statistics *boolean*

Synopsis	Enable ingress statistics for BGP-LU routes
Context	**configure** policy-options policy-statement *named-item-64* default-action ingress-statistics *boolean*
Tree	ingress-statistics
Description	When configured to **true**, this command enables the allocation of statistical indexes to BGP labeled unicast route entries that are programmed on ingress data paths. For effective operation, a prefix must be advertised with a label per prefix for ILM statistics. When configured to **false**, this command disables the allocation of statistical indexes to BGP-LU route entries.
Default	false
Introduced	20.10.R1
Platforms	All

install-backup-path *boolean*

Synopsis	Install a preprogrammed backup path for the prefix
Context	**configure** policy-options policy-statement *named-item-64* default-action install-backup-path *boolean*
Tree	install-backup-path

Default	Base
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-int-name *interface-name*

Synopsis	Alternate interface where IGMP messages are redirected
Context	**configure** policy-options policy-statement *named-item-64* default-action multicast-redirection ip-int-name *interface-name*
Tree	ip-int-name
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nat-policy *(param-midstring | string)*

Synopsis	BGP-VPN imported route and a NAT policy association
Context	**configure** policy-options policy-statement *named-item-64* default-action nat-policy *(param-midstring | string)*
Tree	nat-policy
Description	This command assigns a NAT policy to the matched routes that do not have a more specific NAT policy configured under action. A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route must be associated with a NAT policy that maps traffic into a NAT pool and outside routing context. If the NAT policy is not specified within the route policy entry, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context. All BGP-VPN routes that are destined to be imported into the NAT inside routing context must have action-type **accept** regardless of whether the NAT policy is configured in the action.
String length	1 to 32
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2024 Nokia.

Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

sr-label-index

Synopsis	Enter the **sr-label-index** context
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-label-index
Tree	sr-label-index
Description	Commands in this context configure the policy action to associate a BGP segment-routing label index value with all /32 BGP labeled IPv4 routes. The use of this action in a policy entry that matches more than one /32 labeled IPv4 route may create SID conflicts. This action only takes effect in BGP peer import policies (and only on received /32 labeled IPv4 routes) and in route table import policies associated with the labeled IPv4 RIB. When this action occurs in a policy applied as a peer import policy, a prefix SID attribute can be added to a received /32 labeled IPv4 route that was not sent with this attribute, or the received prefix SID attribute can be replaced with a new one.
Introduced	19.10.R1
Platforms	All

prefer-igp *boolean*

Synopsis	Use the SR label index from the IGP route when present
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-label-index prefer-igp *boolean*
Tree	prefer-igp
Description	When configured to **true**, BGP obtains the SID index from the IGP route (if a SID index is present) and the **configure router bgp segment-routing prefix-sid-range global** command is set to **true**. This command applies only to route table import policies. When configured to **false**, or the SID index is not present in the IGP route, or the **configure router bgp segment-routing prefix-sid-range global** command is not set to **true**, BGP obtains the label index value from the **value** command.
Default	false
Introduced	19.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

value *(string | number)*

Synopsis	BGP SR label index associated with routes
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-label-index value *(string | number)*
Tree	value
Description	This command specifies the BGP SR label index value to be associated with a route or routes. If this command specifies an index value that causes a SID conflict with another BGP route, all conflicting BGP routes are re-advertised with label values based on dynamic allocation rather than SID-based allocation. If this command specifies an index value that causes a SID conflict with an IGP route, the BGP route is re-advertised with a label value based on dynamic allocation rather than SID-based allocation.
String length	1 to 32
Range	0 to 1048575
Introduced	19.10.R1
Platforms	All

sr-maintenance-policy *(param-midstring | string)*

Synopsis	SR maintenance policy as an action
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-maintenance-policy *(param-midstring | string)*
Tree	sr-maintenance-policy
Description	This command applies a named segment routing maintenance policy as an action for route policies. It is only used for SR policy routes.
String length	1 to 32
Introduced	20.10.R1
Platforms	All

sr-return-path-bfd-label *(policy-var-name | number)*

Synopsis	S-BFD return path label
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-return-path-bfd-label *(policy-var-name | number)*
Tree	sr-return-path-bfd-label

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description This command configures an additional MPLS label to add to the bottom of the label stack for the S-BFD packet and sets the S-BFD session to echo mode.

This command applies to the initiator of the S-BFD sessions. The label value can either be a binding SID for an SR policy or another MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through the MPLS return path. This value takes precedence over the return path label value in a maintenance policy (configured using the **configure router segment-routing maintenance-policy return-path-label** command) that is also applied as the policy-statement action. This command can only be configured if the **sr-maintenance-policy** is also configured.

If this command is unconfigured, and there is no **return-path-label** command configuration in the maintenance policy that is also applied as an action, and the policy statement is reevaluated, S-BFD returns to asynchronous mode and no return path label is pushed by the initiator node. S-BFD packets for this LSP or path received by the reflector are routed through the IGP path.

String length 1 to 32

Range 32 to 1048575

Introduced 23.10.R1

Platforms All

srv6-locator *(param-midstring-64 | string)*

Synopsis Locator for SRv6 TLV to use

Context **configure** policy-options policy-statement *named-item-64* default-action srv6-locator *(param-midstring-64 | string)*

Tree srv6-locator

Description This command configures either a string encoding a midstring parameter delimited by at signs (@), or a reference to a named locator for the SRv6 TLV to use.

For a VRF export policy, the referenced locator must already be configured using the commands in the **configure service vprn segment-routing-v6 locator** context.

For a BGP export policy, the referenced locator must already be configured using the commands in the **configure router segment-routing segment-routing-v6 base-routing-instance locator** context.

String length 1 to 64

Introduced 23.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

bgp-high-priority *boolean*

Synopsis	Tag routes as high priority for fast table updates
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action bgp-high-priority *boolean*
Tree	bgp-high-priority
Description	When configured to **true**, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates. This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types: • IPv4 • label-IPv4 • IPv6 • label-IPv6 This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB. When configured to **false**, no routes are tagged for faster route table updates.

Synopsis	Use AIGP attribute as tunnel metric when present
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action bgp-tunnel-metric prefer-aigp *boolean*
Tree	prefer-aigp
Description	When configured to **true**, and a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy. The TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the IGP cost to reach the BGP next-hop if it has the AIGP path attribute, otherwise it is set to the value implied by the value leaf. When configured to **false**, the AIGP attribute is removed from the advertised routes and is ignored if present in the received routes.
Default	false
Introduced	20.5.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

prefer-med *boolean*

Synopsis	Use MED attribute as tunnel metric when present
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action bgp-tunnel-metric prefer-med *boolean*
Tree	prefer-med
Description	When configured to **true**, if a BGP-LU route is selected for installation in the TTM and is matched by this action in a BGP import policy, the TTM metric of the tunnel is set to the MED metric value of the BGP-LU route with the IGP cost to reach the BGP next hop added to it. When configured to **false**, the BGP tunnel metric associated with the BGP-LU route accepted by this policy action is not determined using the MED attribute.
Default	false
Introduced	23.3.R1
Platforms	All

value *(string | number)*

Synopsis	BGP tunnel table metric value
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action bgp-tunnel-metric value *(string | number)*
Tree	value
Description	This command configures a BGP tunnel metric is assigned to routes that do not match any entry. If a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy, the TTM metric of the associated tunnel is set to this value (or the value associated with the parameter name) if either: • the prefer-aigp option is set to false • the prefer-aigp option is set to true but the BGP-LU route does not have an AIGP attribute

nat-policy *(param-midstring | string)*

Synopsis	BGP-VPN imported route and a NAT policy association
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action nat-policy *(param-midstring | string)*
Tree	nat-policy
Description	This command assigns a NAT policy to the matched routes that do not have a more specific NAT policy configured under action. A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route must be associated with a NAT policy that maps traffic into a NAT pool and outside routing context. If the NAT policy is not specified within the route policy entry, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context. All BGP-VPN routes that are destined to be imported into the NAT inside routing context must have action-type **accept** regardless of whether the NAT policy is configured in the action.
String length	1 to 32
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sr-label-index

Synopsis	Enter the **sr-label-index** context
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action sr-label-index
Tree	sr-label-index
Description	Commands in this context configure the policy action to associate a BGP segment-routing label index value with all /32 BGP labeled IPv4 routes. The use of this action in a policy entry that matches more than one /32 labeled IPv4 route may create SID conflicts. This action only takes effect in BGP peer import policies (and only on received /32 labeled IPv4 routes) and in route table import policies associated with the labeled IPv4 RIB. When this action occurs in a policy applied as a peer import policy, a prefix SID attribute can be added to a received /32 labeled IPv4 route that was not sent with this attribute, or the received prefix SID attribute can be replaced with a new one.
Introduced	19.10.R1
Platforms	All

prefer-igp *boolean*

Synopsis	Use the SR label index from the IGP route when present
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action sr-label-index prefer-igp *boolean*
Tree	prefer-igp
Description	When configured to **true**, BGP obtains the SID index from the IGP route (if a SID index is present) and the **configure router bgp segment-routing prefix-sid-range global** command is set to **true**. This command applies only to route table import policies. When configured to **false**, or the SID index is not present in the IGP route, or the **configure router bgp segment-routing prefix-sid-range global** command is not set to **true**, BGP obtains the label index value from the **value** command.
Default	false
Introduced	19.10.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

value *(string | number)*

Synopsis	BGP SR label index associated with routes
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action sr-label-index value *(string | number)*
Tree	value
Description	This command specifies the BGP SR label index value to be associated with a route or routes. If this command specifies an index value that causes a SID conflict with another BGP route, all conflicting BGP routes are re-advertised with label values based on dynamic allocation rather than SID-based allocation. If this command specifies an index value that causes a SID conflict with an IGP route, the BGP route is re-advertised with a label value based on dynamic allocation rather than SID-based allocation.
String length	1 to 32
Range	0 to 1048575
Introduced	19.10.R1
Platforms	All

sr-maintenance-policy *(param-midstring | string)*

Synopsis	SR maintenance policy as an action
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action sr-maintenance-policy *(param-midstring | string)*
Tree	sr-maintenance-policy
Description	This command applies a named segment routing maintenance policy as an action for route policies. It is only used for SR policy routes.
String length	1 to 32
Introduced	20.10.R1
Platforms	All

sr-return-path-bfd-label *(policy-var-name | number)*

Synopsis	S-BFD return path label
Context	**configure** policy-options policy-statement *named-item-64* entry *number* action sr-return-path-bfd-label *(policy-var-name | number)*
Tree	sr-return-path-bfd-label

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description This command configures an additional MPLS label to add to the bottom of the label stack for the S-BFD packet and sets the S-BFD session to echo mode.

This command applies to the initiator of the S-BFD sessions. The label value can either be a binding SID for an SR policy or another MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through the MPLS return path. This value takes precedence over the return path label value in a maintenance policy (configured using the **configure router segment-routing maintenance-policy return-path-label** command) that is also applied as the policy-statement action. This command can only be configured if the **sr-maintenance-policy** is also configured.

If this command is unconfigured, and there is no **return-path-label** command configuration in the maintenance policy that is also applied as an action, and the policy statement is reevaluated, S-BFD returns to asynchronous mode and no return path label is pushed by the initiator node. S-BFD packets for this LSP or path received by the reflector are routed through the IGP path.

expression *string*

Synopsis	Community expression statement as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from community expression *string*
Tree	expression
Description	This command configures a community expression statement as a match criterion for the policy statement. This statement is a logical expression string composed of logical operators (keywords AND, OR, NOT), community names delimited by square brackets [], and parentheses ( ) to group subexpressions. If the expression contains special characters (for example, #, $, spaces), the entire string must be enclosed in double quotes. The expression specified must already be defined using the **configure policy-options community expression expr** command. The following are examples of valid logical expressions: "[community_list_A] OR ([community_list_B] AND [community_list_C])" "NOT [community_list_A]" "[community_list_A] AND [community_list_B] OR [community_list_C]" "NOT ([community_list_A] OR [community_list_B] OR [community_list_C])"
String length	1 to 900
Notes	The following elements are part of a choice: **expression** or **name**.
Introduced	16.0.R1
Platforms	All

Use subject to Terms available at: www.nokia.com/terms.

dest *(param-midstring | string)*

Synopsis	Destination IP prefix list to match BGP FlowSpec routes
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from flowspec dest *(param-midstring | string)*
Tree	dest
Description	This command specifies a prefix list used by the router to match BGP FlowSpec routes based on the destination IP prefix in the flow specification. An IPv4 FlowSpec route is matched if its NLRI contains a type 1 subcomponent encoding a prefix and prefix length that is covered by an entry in the referenced prefix list. An IPv6 FlowSpec route is matched if its NLRI contains a type 1 component encoding prefix-offset = 0 and a prefix and prefix length that is covered by an entry in the referenced prefix list. This command has no effect when the policy is not applied as a BGP import or export policy.
String length	1 to 32
Introduced	16.0.R4
Platforms	All

source *(param-midstring | string)*

Synopsis	Source IP prefix list to match BGP FlowSpec routes
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from flowspec source *(param-midstring | string)*
Tree	source
Description	This command specifies a prefix list used by the router to match BGP FlowSpec routes based on the source IP prefix in the flow specification. An IPv4 FlowSpec route is matched if its NLRI contains a type 2 subcomponent encoding a prefix and prefix length that is covered by an entry in the referenced prefix list. An IPv6 FlowSpec route is matched if its NLRI contains a type 2 component encoding prefix-offset = 0 and a prefix and prefix length that is covered by an entry in the referenced prefix list. This command has no effect when the policy is not applied as a BGP import or export policy.

interface-subnets

Synopsis	Enter the **interface-subnets** context

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** policy-options policy-statement *named-item-64* entry *number* from interface-subnets
Tree	interface-subnets
Description	Commands in this context configure the applied router instance and interfaces that are used as the matching condition within each policy statement entry when exporting the IP address of the associated interface to a routing protocol. The interface subnet policy statement match criterion is applied to the following unicast use case contexts: • **export**, when used with OSPFv2, OSPFv3, IS-IS, RIP, RIPng, and BGP • **route-table-import**, when used with BGP • **vrf-export**, when used with MP-BGP
Introduced	21.2.R1
Platforms	All

ip-int-name *interface-name*

Synopsis	Interface name as the match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from interface-subnets ip-int-name *interface-name*
Tree	ip-int-name
Description	This command specifies the interface name to match when exporting the IP address of the associated interface to a routing protocol.
String length	1 to 32
Max. instances	10
Notes	This element is ordered by the user.
Introduced	21.2.R1

origin *keyword*

Synopsis	Route origin match criteria
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from origin *keyword*
Tree	origin
Description	This command configures a match criteria for the origin attribute of the route. The origin attribute is applicable to BGP routes and to the following subscriber-management routes: Host routes (for example, IPv4 /32 address, or IPv6 SLAAC prefix) carry the origin attribute with AAA, dynamic, or static values, depending on the address assignment method. For CUPS hosts, the origin attribute is always PFCP. Host routes can also be distinguished using the **sub-mgmt** option for the **protocol** command. Dynamically provisioned prefixes or loopback addresses use AAA or PFCP origin values, depending on the protocol that provides the prefix and address. Dynamic routes can also be distinguished using the **direct** option for the **protocol** command. Statically configured prefixes under the subscriber interface do not have an origin attribute. These routes can be distinguished using the **direct** option for the **protocol** command. Framed routes for non-CUPS hosts do not have an origin attribute. Framed routes for CUPS hosts use PFCP for the origin attribute. Alternatively, framed routes can be distinguished using the **managed** option for the **protocol** command. The values that are specific to subscriber-management routes are never carried in BGP updates as part of the BGP origin attribute and are not visible within the BGP process.
Options	igp, egp, incomplete, any, aaa, dynamic, static, bonding, pfcp
Introduced	16.0.R1
Platforms	All

origin-validation-state *keyword*

Synopsis	Origin validation state used for match criteria

Context	**configure** policy-options policy-statement *named-item-64* entry *number* from protocol instance *(keyword | number)*
Tree	instance
Description	This command specifies the OSPF, OSPFv3, or IS-IS instance to be used as the match criterion. When this command is explicitly configured, the **name** command must be configured to identify the protocol (OSPF, OSPFv3, or IS-IS).
Range	0 to 127
Options	all
Default	0
Introduced	16.0.R1
Platforms	All

name *keyword*

Synopsis	List of protocol names as the match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from protocol name *keyword*
Tree	name
Description	This command specifies a protocol list for the match criterion. If multiple protocols are specified, the protocol names must belong to the following protocol set: • direct • static • isis • aggregate • bgp • bgp-label • direct-interface If multiple protocols are specified, the **instance** command cannot be explicitly configured. The protocol **direct-interface** route type matches the specific direct interface host IPv4 / 32 and IPv6 /128 routes.
Options	direct, static, bgp, isis, ospf, rip, aggregate, bgp-vpn, igmp, pim, ospf3, ldp, sub-mgmt, mld, managed, vpn-leak, nat, periodic, ipsec, dhcpv6-pd, dhcpv6-na, dhcpv6-ta,

	dhcpv6-pd-excl, ripng, bgp-label, direct-interface, arp-nd, rib-api, dhcp-client, evpn-ifl, srv6, video
Max. instances	5
Introduced	16.0.R1
Platforms	All

route-distinguisher-list *(param-midstring-64 | string)*

Synopsis	Route distinguisher list as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from route-distinguisher-list *(param-midstring-64 | string)*
Tree	route-distinguisher-list
Description	This command specifies the (possibly parameterized) name of a route distinguisher (RD) list. This match condition is supported by policies applied as VRF-import or BGP peer import policies. A BGP route can match a policy entry with this match criterion if the NLRI field contains an RD that is matched by at least one of the entries in the RD list. BGP routes belonging to address families other than VPN-IPv4, VPN-IPv6, MCAST-VPN-IPv4, MCAST-VPN-IPv6, EVPN, FlowSpec-VPN IPv4, FlowSpec-VPN IPv6, MVPN-IPv4, or MVPN-IPv6 route do not match policy entries with this match criterion.
String length	1 to 64
Introduced	23.3.R1
Platforms	All

source-address

Tree	ip-address
Notes	The following elements are part of a choice: **ip-address** or **prefix-list**.
Introduced	16.0.R1
Platforms	All

prefix-list *(param-midstring | string)*

Synopsis	Name of a source address prefix list to match
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from source-address prefix-list *(param-midstring | string)*
Tree	prefix-list
String length	1 to 32
Notes	The following elements are part of a choice: **ip-address** or **prefix-list**.
Introduced	16.0.R1
Platforms	All

srv6-sid-prefix *(policy-var-name | ipv6-unicast-prefix)*

Synopsis	SRv6 SID or uSID as match criterion for the BGP route
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from srv6-sid-prefix *(policy-var-name | ipv6-unicast-prefix)*
Tree	srv6-sid-prefix
Description	This command configures either the name of a prefix policy variable or an IPv6 prefix and prefix length, as a match criterion for a BGP route. **Note**: If the name of a prefix policy variable is the match criterion, the name must start and end with an at sign (@). A BGP route matches this condition if it has an SRv6 TLV, and the SID or micro-segment (uSID) value in that TLV is matched by the bits of the IPv6 prefix (up to the specified prefix length). This match condition is supported in BGP import policies, BGP export policies, and VRF or VSI import policies.
String length	1 to 32
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

srv6-tlv *keyword*

Synopsis	SRv6 TLV presence as match criterion for BGP route
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from srv6-tlv *keyword*
Tree	srv6-tlv
Description	This command configures whether the entry matches a BGP route with a prefix SID attribute containing an SRv6 TLV. If this command is not configured, a BGP route can match the entry, regardless of whether it has a prefix SID attribute or whether that prefix SID attribute has SRv6 TLVs. This match condition is supported in BGP import policies, BGP export policies, and VRF or VSI import policies. If the **present** option is configured, a BGP route only matches this entry if it has a prefix SID attribute containing an SRv6 TLV. If the **not-present** option is configured, a BGP route only matches this entry if it does not have a prefix SID attribute containing an SRv6 TLV.
Options	present, not-present
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

state *keyword*

Synopsis	State used as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* entry *number* from state *keyword*
Tree	state
Description	This command configures a criterion that identifies in resilient gateways which routes are associated with an active context and which routes are associated with a standby context.
Options	srrp-master, srrp-non-master, ipsec-master-with-peer, ipsec-master-without-peer, ipsec-non-master, fsg-active, fsg-standby, fsg-active-path-restoration
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bgp-high-priority *boolean*

Synopsis	Tag routes as high priority for fast table updates
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action bgp-high-priority *boolean*
Tree	bgp-high-priority
Description	When configured to **true**, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates. This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types: • IPv4 • label-IPv4 • IPv6 • label-IPv6 This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB. When configured to **false**, no routes are tagged for faster route table updates.
Default	false
Introduced	20.5.R1
Platforms	All

bgp-leak *boolean*

Synopsis	Allow leaking for BGP routes

ingress-statistics *boolean*

Synopsis	Enable ingress statistics for BGP-LU routes
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action ingress-statistics *boolean*
Tree	ingress-statistics
Description	When configured to **true**, this command enables the allocation of statistical indexes to BGP labeled unicast route entries that are programmed on ingress data paths. For effective operation, a prefix must be advertised with a label per prefix for ILM statistics. When configured to **false**, this command disables the allocation of statistical indexes to BGP-LU route entries.
Default	false
Introduced	20.10.R1
Platforms	All

install-backup-path *boolean*

Synopsis	Install a preprogrammed backup path for the prefix
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action install-backup-path *boolean*
Tree	install-backup-path
Default	false
Introduced	19.10.R1
Platforms	All

nat-policy *(param-midstring | string)*

Synopsis BGP-VPN imported route and a NAT policy association

Context **configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action nat-policy *(param-midstring | string)*

Tree nat-policy

Description This command assigns a NAT policy to the matched routes that do not have a more specific NAT policy configured under action.

A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route must be associated with a NAT policy that maps traffic into a NAT pool and outside routing context. If the NAT policy is not specified within the route policy entry, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context.

All BGP-VPN routes that are destined to be imported into the NAT inside routing context must have action-type **accept** regardless of whether the NAT policy is configured in the action.

String length 1 to 32

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

sr-label-index

Synopsis	Enter the **sr-label-index** context
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action sr-label-index
Tree	sr-label-index
Description	Commands in this context configure the policy action to associate a BGP segment-routing label index value with all /32 BGP labeled IPv4 routes. The use of this action in a policy entry that matches more than one /32 labeled IPv4 route may create SID conflicts. This action only takes effect in BGP peer import policies (and only on received /32 labeled IPv4 routes) and in route table import policies associated with the labeled IPv4 RIB.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When this action occurs in a policy applied as a peer import policy, a prefix SID attribute can be added to a received /32 labeled IPv4 route that was not sent with this attribute, or the received prefix SID attribute can be replaced with a new one.

Introduced 19.10.R1

Platforms All

prefer-igp *boolean*

Synopsis Use the SR label index from the IGP route when present

Context **configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action sr-label-index prefer-igp *boolean*

Tree prefer-igp

Description When configured to **true**, BGP obtains the SID index from the IGP route (if a SID index is present) and the **configure router bgp segment-routing prefix-sid-range global** command is set to **true**.

This command applies only to route table import policies.

When configured to **false**, or the SID index is not present in the IGP route, or the **configure router bgp segment-routing prefix-sid-range global** command is not set to **true**, BGP obtains the label index value from the **value** command.

Default false

Introduced 19.10.R1

Platforms All

value *(string | number)*

Synopsis BGP SR label index associated with routes

Context **configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action sr-label-index value *(string | number)*

Tree value

Description This command specifies the BGP SR label index value to be associated with a route or routes.

If this command specifies an index value that causes a SID conflict with another BGP route, all conflicting BGP routes are re-advertised with label values based on dynamic allocation rather than SID-based allocation.

If this command specifies an index value that causes a SID conflict with an IGP route, the BGP route is re-advertised with a label value based on dynamic allocation rather than SID-based allocation.

String length 1 to 32

sr-maintenance-policy *(param-midstring | string)*

Synopsis	SR maintenance policy as an action
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action sr-maintenance-policy *(param-midstring | string)*
Tree	sr-maintenance-policy
Description	This command applies a named segment routing maintenance policy as an action for route policies. It is only used for SR policy routes.
String length	1 to 32
Introduced	20.10.R1
Platforms	All

sr-return-path-bfd-label *(policy-var-name | number)*

Synopsis	S-BFD return path label
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* action sr-return-path-bfd-label *(policy-var-name | number)*
Tree	sr-return-path-bfd-label
Description	This command configures an additional MPLS label to add to the bottom of the label stack for the S-BFD packet and sets the S-BFD session to echo mode. This command applies to the initiator of the S-BFD sessions. The label value can either be a binding SID for an SR policy or another MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through the MPLS return path. This value takes precedence over the return path label value in a maintenance policy (configured using the **configure router segment-routing maintenance-policy return-path-label** command) that is also applied as the policy-statement action. This command can only be configured if the **sr-maintenance-policy** is also configured. If this command is unconfigured, and there is no **return-path-label** command configuration in the maintenance policy that is also applied as an action, and the policy statement is reevaluated, S-BFD returns to asynchronous mode and no return path label is pushed by the initiator node. S-BFD packets for this LSP or path received by the reflector are routed through the IGP path.
String length	1 to 32
Range	32 to 1048575
Introduced	23.10.R1

aggregate-contributor *boolean*

Synopsis	Enable aggregate route match criterion
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from aggregate-contributor *boolean*
Tree	aggregate-contributor
Description	When configured to **true**, matches all routes (BGP and non-BGP) that have contributed to an active aggregate route. If the prefix tree above a particular route includes no active aggregate routes or the most specific active aggregate route in the prefix tree above this route has a policy that rejects the route, then it is not considered as an aggregate-contributor. This match condition is only supported when used in a BGP export policy. If it is used in an entry of a BGP import policy, **vrf-export** policy or **vrf-import** policy, no routes are matched by that entry. When configured to **false**, no routes (BGP and non-BGP) that have contributed to an active aggregate route are matched.
Default	false
Introduced	20.10.R1
Platforms	All

endpoint *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	SR policy endpoint address as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from endpoint *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	endpoint
Description	This command configures an SR Policy endpoint address as a route policy match criterion. This match criterion is only used in import policies.
Introduced	20.10.R1
Platforms	All

evpn-type *keyword*

Synopsis	EVPN type as a match criterion for the entry
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from evpn-type *keyword*
Tree	evpn-type
Options	ethernet-auto-discovery, mac-ip-advertisement, inclusive-multicast, ethernet-segment, ip-prefix, selective-multicast, multicast-join-sync, multicast-leave-sync, selective-pmsi-auto-discovery
Introduced	19.10.R1
Platforms	All

external *boolean*

Synopsis	Specify the external IS-IS route as a match criterion
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from external *boolean*
Tree	external
Default	false
Introduced	19.10.R1
Platforms	All

family *keyword*

Synopsis	Address family as the match condition

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from family *keyword*
Tree	family
Description	This command specifies address families as matching conditions.
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Max. instances	20
Introduced	19.10.R1
Platforms	All

flowspec

Synopsis	Enter the **flowspec** context
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from flowspec
Tree	flowspec
Description	Commands in this context configure the route-matching rules for BGP FlowSpec routes.
Introduced	19.10.R1
Platforms	All

dest *(param-midstring | string)*

Synopsis	Destination IP prefix list to match BGP FlowSpec routes
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from flowspec dest *(param-midstring | string)*
Tree	dest
Description	This command specifies a prefix list used by the router to match BGP FlowSpec routes based on the destination IP prefix in the flow specification. An IPv4 FlowSpec route is matched if its NLRI contains a type 1 subcomponent encoding a prefix and prefix length that is covered by an entry in the referenced prefix list. An IPv6 FlowSpec route is matched if its NLRI contains a type 1 component encoding prefix-offset = 0 and a prefix and prefix length that is covered by an entry in the referenced prefix list. This command has no effect when the policy is not applied as a BGP import or export policy.
String length	1 to 32

Introduced	19.10.R1
Platforms	All

source *(param-midstring | string)*

Synopsis	Source IP prefix list to match BGP FlowSpec routes
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from flowspec source *(param-midstring | string)*
Tree	source
Description	This command specifies a prefix list used by the router to match BGP FlowSpec routes based on the source IP prefix in the flow specification. An IPv4 FlowSpec route is matched if its NLRI contains a type 2 subcomponent encoding a prefix and prefix length that is covered by an entry in the referenced prefix list. An IPv6 FlowSpec route is matched if its NLRI contains a type 2 component encoding prefix-offset = 0 and a prefix and prefix length that is covered by an entry in the referenced prefix list. This command has no effect when the policy is not applied as a BGP import or export policy.
String length	1 to 32
Introduced	19.10.R1
Platforms	All

group-address *(param-midstring | string)*

Synopsis	Prefix list of multicast group addresses for mathcing
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from group-address *(param-midstring | string)*
Tree	group-address
String length	1 to 32
Introduced	19.10.R1
Platforms	All

host-ip *(param-midstring | string)*

Synopsis	Prefix list of IGMP host IP addresses for matching
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from host-ip *(param-midstring | string)*
Tree	host-ip

origin *keyword*

Synopsis	Route origin match criteria
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from origin *keyword*
Tree	origin
Description	This command configures a match criteria for the origin attribute of the route. The origin attribute is applicable to BGP routes and to the following subscriber-management routes: Host routes (for example, IPv4 /32 address, or IPv6 SLAAC prefix) carry the origin attribute with AAA, dynamic, or static values, depending on the address assignment method. For CUPS hosts, the origin attribute is always PFCP. Host routes can also be distinguished using the **sub-mgmt** option for the **protocol** command.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Dynamically provisioned prefixes or loopback addresses use AAA or PFCP origin values, depending on the protocol that provides the prefix and address. Dynamic routes can also be distinguished using the **direct** option for the **protocol** command.

Statically configured prefixes under the subscriber interface do not have an origin attribute. These routes can be distinguished using the **direct** option for the **protocol** command.

Framed routes for non-CUPS hosts do not have an origin attribute. Framed routes for CUPS hosts use PFCP for the origin attribute. Alternatively, framed routes can be distinguished using the **managed** option for the **protocol** command.

The values that are specific to subscriber-management routes are never carried in BGP updates as part of the BGP origin attribute and are not visible within the BGP process.

Options	igp, egp, incomplete, any, aaa, dynamic, static, bonding, pfcp
Introduced	19.10.R1
Platforms	All

route-distinguisher-list *(param-midstring-64 | string)*

Synopsis	Route distinguisher list as a match criterion

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from route-distinguisher-list *(param-midstring-64 | string)*
Tree	route-distinguisher-list
Description	This command specifies the (possibly parameterized) name of a route distinguisher (RD) list. This match condition is supported by policies applied as VRF-import or BGP peer import policies. A BGP route can match a policy entry with this match criterion if the NLRI field contains an RD that is matched by at least one of the entries in the RD list. BGP routes belonging to address families other than VPN-IPv4, VPN-IPv6, MCAST-VPN-IPv4, MCAST-VPN-IPv6, EVPN, FlowSpec-VPN IPv4, FlowSpec-VPN IPv6, MVPN-IPv4, or MVPN-IPv6 route do not match policy entries with this match criterion.
String length	1 to 64
Introduced	23.3.R1
Platforms	All

srv6-sid-prefix *(policy-var-name | ipv6-unicast-prefix)*

Synopsis	SRv6 SID or uSID as match criterion for the BGP route
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from srv6-sid-prefix *(policy-var-name | ipv6-unicast-prefix)*
Tree	srv6-sid-prefix
Description	This command configures either the name of a prefix policy variable or an IPv6 prefix and prefix length, as a match criterion for a BGP route. **Note**: If the name of a prefix policy variable is the match criterion, the name must start and end with an at sign (@). A BGP route matches this condition if it has an SRv6 TLV, and the SID or micro-segment (uSID) value in that TLV is matched by the bits of the IPv6 prefix (up to the specified prefix length). This match condition is supported in BGP import policies, BGP export policies, and VRF or VSI import policies.
String length	1 to 32
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

srv6-tlv *keyword*

Synopsis	SRv6 TLV presence as match criterion for BGP route
Context	**configure** policy-options policy-statement *named-item-64* named-entry *named-item-255* from srv6-tlv *keyword*
Tree	srv6-tlv
Description	This command configures whether the entry matches a BGP route with a prefix SID attribute containing an SRv6 TLV. If this command is not configured, a BGP route can match the entry, regardless of whether it has a prefix SID attribute or whether that prefix SID attribute has SRv6 TLVs. This match condition is supported in BGP import policies, BGP export policies, and VRF or VSI import policies.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If the **present** option is configured, a BGP route only matches this entry if it has a prefix SID attribute containing an SRv6 TLV.

If the **not-present** option is configured, a BGP route only matches this entry if it does not have a prefix SID attribute containing an SRv6 TLV.

Options	present, not-present
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

state *keyword*

Synopsis	State used as a match criterion

[**address**] *(ipv4-address-no-zone* \| *ipv6-address-no-zone)*

Synopsis	Address mask for matching routes to the prefix entry
Context	**configure** policy-options prefix-list *named-item-64* prefix *(ipv4-prefix* | *ipv6-prefix)* type *keyword* mask-pattern *(ipv4-address-no-zone* | *ipv6-address-no-zone)*
Tree	mask-pattern
Description	This command specifies the address mask to compare against the prefix entry to determine whether the route is considered a match. A route matches the prefix entry if the following conditions are met. • The bitwise logical AND of the prefix address and its mask matches the bitwise logical AND of the route address and its mask. • The prefix length of the prefix entry matches the prefix length of the route. For example, for a prefix entry of 17.1.0.0/32, routes with an address 17.1.x.0 (where x can be 0 through 255) and a prefix length of 32 match the entry.

[**ip-prefix**] *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix for "to" match type
Context	**configure** policy-options prefix-list *named-item-64* prefix *(ipv4-prefix | ipv6-prefix)* type *keyword* to-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	to-prefix
Description	This command configures an IP prefix to use in a route policy prefix list for the to match type. If the prefix entry is in the format *prefix1*/*length1*, and this command is configured in the format *prefix2*/*length2*, a route matches the prefix entry if the following conditions are met. • The route shares the same most-significant bits (specified by *length1*) with the prefix entry • The route shares the same most-significant bits (specified by *length2*) with this IP prefix value • The prefix length of the route is in the range of *length1* to *length2* (inclusive) For example, for a prefix entry of 10.0.0.8 with a to IP prefix value of 10.0.0.0/32, routes 10.0.0.0/8, 10.0.0.0/9, 10.0.0.0.0/10, and so on, to 10.0.0.0/32 are considered matches for the prefix entry.
Notes	This element is part of a list key.

4.32.1 port command descriptions

port [port-id] *port*

Synopsis	Enter the **port** list instance
Context	**configure** port *port*
Tree	port
Introduced	16.0.R1
Platforms	All

[**port-id**] *port*

Synopsis	Port ID
Context	**configure** port *port*
Tree	port
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

access

Synopsis	Enter the **access** context
Context	**configure** port *port* access
Tree	access
Description	Commands in this context configure egress and ingress pool policy commands.
Introduced	16.0.R1
Platforms	All

egress

Synopsis	Enter the **egress** context
Context	**configure** port *port* access egress
Tree	egress

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context specify the configuration of access egress buffer pools to determine how a CBS-reserved space is handled and the strategy for utilizing the shared buffer space.
Introduced	16.0.R1
Platforms	All

pool [name] *named-item*

Synopsis	Enter the **pool** list instance
Context	**configure** port *port* access egress pool *named-item*
Tree	pool
Description	Commands in this context configure pool policies for the pool instance.
Introduced	16.0.R1
Platforms	All

[**name**] *named-item*

Synopsis	Pool name for the access port
Context	**configure** port *port* access egress pool *named-item*
Tree	pool
String length	1 to 32
MD-CLI default	default
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

amber-alarm-threshold *number*

Synopsis	Threshold for the amber alarm on oversubscription
Context	**configure** port *port* access egress pool *named-item* amber-alarm-threshold *number*
Tree	amber-alarm-threshold
Range	1 to 1000
Units	percent
Introduced	16.0.R1

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

monitor-pool-depth

Synopsis	Enter the **monitor-pool-depth** context
Context	**configure** port *port* access egress pool *named-item* monitor-pool-depth
Tree	monitor-pool-depth
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of pool-depth monitoring
Context	**configure** port *port* access egress pool *named-item* monitor-pool-depth admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alarm-thresholds

Synopsis	Enter the **alarm-thresholds** context
Context	**configure** port *port* access egress pool *named-item* monitor-pool-depth alarm-thresholds
Tree	alarm-thresholds
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reserved-pool-in-use *decimal-number*

Synopsis	Alarm threshold for reserved buffer pool usage
Context	**configure** port *port* access egress pool *named-item* monitor-pool-depth alarm-thresholds reserved-pool-in-use *decimal-number*
Tree	reserved-pool-in-use

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the reserved pool in-use threshold. A tmnxResvPoolUse ThreshExcd trap is generated when the reserved pool usage exceeds this threshold percentage. When the usage returns below the threshold percentage, the tmnxResvPool UseThreshNotExcd trap is generated.
Range	0.00 to 100.00
Units	centipercent
Default	0.00
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

shared-pool-in-use *decimal-number*

Synopsis	Alarm threshold for shared of buffer pool usage
Context	**configure** port *port* access egress pool *named-item* monitor-pool-depth alarm-thresholds shared-pool-in-use *decimal-number*
Tree	shared-pool-in-use
Description	This command configures the shared pool in-use threshold. A tmnxSharedPoolUse ThreshExcd trap is generated when the shared pool usage exceeds this threshold percentage. When the usage returns below the threshold percentage, the tmnxShared PoolUseThreshNotExcd trap is generated.
Range	0.00 to 100.00
Units	centipercent
Default	0.00
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

total-pool-in-use *decimal-number*

Synopsis	Alarm threshold for usage of total buffer pool
Context	**configure** port *port* access egress pool *named-item* monitor-pool-depth alarm-thresholds total-pool-in-use *decimal-number*
Tree	total-pool-in-use
Description	This command configures the total pool in-use threshold. A tmnxTotalPoolUseThresh Excd trap is generated when the total pool usage exceeds this threshold percentage. When the usage returns below the threshold percentage, the tmnxTotalPoolUseThresh NotExcd trap is generated.
Range	0.00 to 100.00
Units	centipercent

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	0.00
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

red-alarm-threshold *number*

Synopsis	Threshold for the red alarm on oversubscription
Context	**configure** port *port* access egress pool *named-item* red-alarm-threshold *number*
Tree	red-alarm-threshold
Range	1 to 1000
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

resv-cbs

Synopsis	Enter the **resv-cbs** context
Context	**configure** port *port* access egress pool *named-item* resv-cbs
Tree	resv-cbs
Introduced	16.0.R1
Platforms	All

amber-alarm-action

Synopsis	Enter the **amber-alarm-action** context
Context	**configure** port *port* access egress pool *named-item* resv-cbs amber-alarm-action
Tree	amber-alarm-action
Introduced	16.0.R1
Platforms	All

max *number*

Synopsis	Maximum percentage for reserved CBS of the pool
Context	**configure** port *port* access egress pool *named-item* resv-cbs amber-alarm-action max *number*
Tree	max

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the maximum percentage for the reserved CBS of the pool. The maximum reserved CBS must not be less than the value of the reserved CBS. To enable adaptive CBS sizing the **max**, **step**, and **cbs** commands must be configured. The **cbs** command must also be configured to a percentage other than the default value. When unconfigured, CBS adaptive sizing is not enabled.
Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

step *number*

Synopsis	Step-size percentage for reserved CBS of the pool
Context	**configure** port *port* access egress pool *named-item* resv-cbs amber-alarm-action step *number*
Tree	step
Description	This command specifies the step-size percentage for the reserved CBS of the pool. To enable adaptive CBS sizing the **max**, **step**, and **cbs** commands must be configured. The **cbs** command must also be configured to a percentage other than the default value. When unconfigured, CBS adaptive sizing is not enabled.
Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

cbs *(number | keyword)*

Synopsis	Percentage of the pool buffer space reserved for CBS
Context	**configure** port *port* access egress pool *named-item* resv-cbs cbs *(number | keyword)*
Tree	cbs
Range	0 to 100
Units	percent
Options	auto
Default	auto
Introduced	16.0.R1

connector

Synopsis	Enter the **connector** context
Context	**configure** port *port* connector
Tree	connector
Description	Commands in this context configure connector ports and modes.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

breakout *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Port breakout of the transceiver used in the connector
Context	**configure** port *port* connector breakout *keyword*
Tree	breakout
Description	This command defines the port breakout of the transceiver used in the connector. Specifying the type triggers the creation of the ports that will be accessible under the connector. When a QSFP28 connector uses an SFP+ optical module with the QSFP28-to-SFP+/SFP28 adapter, set this command to **c1-10g**. This value indicates the presence of the adapter. For some connectors (for example, QSFPDD), there can be overlap in the breakout for different host interfaces. The same port breakout can be supported on an optical modules that uses a host interface of CAUI-4 as another optical module that uses 100GAUI-2. To distinguish from the CAUI-4 host interface, the "-aui2" suffix is used on some breakout options. This is only necessary where there is overlap. In other situations, SR OS sets the host interface correctly without requiring the distinction in the breakout option.
Options	c1-40g, c4-10g, c1-100g, c4-25g, c10-10g, c1-400g, c2-100g, c4-100g, c1-10g, c1-25g, c1-50g, c8-50g, c1-800g, c3-100g, c8-100g, c2-400g, c1-1g, c2-1g, c1-100g-aui2, c2-100g-aui2, c1-400g-aui4, c4-100g-aui1, c8-10g
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2024 Nokia.

Tree	compatibility
Options	long-haul, metro, access, interop, interop2, interop3, long-haul-non-differential, oif-400g-zr, open-zrp-ofec1, open-zrp-ofec2
Default	long-haul
Introduced	16.0.R1
Platforms	All

cpr-window-size *number*

Synopsis	Window size for the carrier phase recovery
Context	**configure** port *port* dwdm coherent cpr-window-size *number*
Tree	cpr-window-size
Description	This command configures the window size for the carrier phase recovery. When this command is changed, the link bounces because the receiver needs to be reconfigured.
Range	2 | 4 | 8 | 16 | 32 | 64
Units	symbols
Default	32
Introduced	16.0.R1
Platforms	All

dispersion *number*

Synopsis	Residual chromatic dispersion compensation
Context	**configure** port *port* dwdm coherent dispersion *number*
Tree	dispersion
Description	This command specifies the residual chromatic dispersion compensation when the coherent receiver is operating in manual dispersion control mode.
Range	-50000 to 50000
Units	picoseconds per nanometer
Introduced	16.0.R1
Platforms	All

mode *keyword*

Synopsis	Mode used to compensate for chromatic dispersion

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** port *port* dwdm coherent mode *keyword*
Tree	mode
Options	automatic, manual
Default	automatic
Introduced	16.0.R1
Platforms	All

report-alarm

Synopsis	Enter the **report-alarm** context
Context	**configure** port *port* dwdm coherent report-alarm
Tree	report-alarm
Description	Commands in this context configure the alarms reported for the coherent module.
Introduced	16.0.R1
Platforms	All

hosttx *boolean*

Synopsis	Report the host (electrical side) transmit alarm
Context	**configure** port *port* dwdm coherent report-alarm hosttx *boolean*
Tree	hosttx
Default	true
Introduced	16.0.R1
Platforms	All

mod *boolean*

Synopsis	Report the module alarm
Context	**configure** port *port* dwdm coherent report-alarm mod *boolean*
Tree	mod
Default	true
Introduced	16.0.R1
Platforms	All

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

modflt *boolean*

Synopsis	Report the module fault alarm
Context	**configure** port *port* dwdm coherent report-alarm modflt *boolean*
Tree	modflt
Default	true
Introduced	16.0.R1
Platforms	All

netrx *boolean*

Synopsis	Report the network (optical side) receive alarm
Context	**configure** port *port* dwdm coherent report-alarm netrx *boolean*
Tree	netrx
Default	true
Introduced	16.0.R1
Platforms	All

nettx *boolean*

Synopsis	Report the network (optical side) transmit alarm
Context	**configure** port *port* dwdm coherent report-alarm nettx *boolean*
Tree	nettx
Default	true
Introduced	16.0.R1
Platforms	All

rx-los-reaction *keyword*

Synopsis	Reaction to an RX LOS
Context	**configure** port *port* dwdm coherent rx-los-reaction *keyword*
Tree	rx-los-reaction
Description	This command configures the reaction to an RX LOS. **Note:** If this command is disabled for some coherent DWDM transceivers, the transceiver only reports local fault alarms when an RX LOS condition occurs; however, the port returns to service faster after the LOS condition is cleared. For these

	transceivers, if this command is enabled, there is better visibility of individual alarms (for example, signal-fail, local fault, no-am-lock), but the port takes longer to service after the LOS condition is cleared.
Options	none, squelch
Default	squelch
Introduced	16.0.R1
Platforms	All

rx-los-thresh *decimal-number*

Synopsis	Average input power LOS threshold
Context	**configure** port *port* dwdm coherent rx-los-thresh *decimal-number*
Tree	rx-los-thresh
Range	-30 to -13
Units	decibel-milliwatts
Default	-23
Introduced	16.0.R1
Platforms	All

sweep

Synopsis	Enter the **sweep** context
Context	**configure** port *port* dwdm coherent sweep
Tree	sweep
Description	Commands in this context allow users to configure the dispersion sweep **start** and **end** values for the automatic mode of coherent control. If the user knows the approximate or theoretical residual dispersion of the link, these commands can be used to limit the range of sweeping for the automatic control mode and therefore achieve a faster link up.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the dispersion compensation range
Context	**configure** port *port* dwdm coherent sweep end *number*
Tree	end
Range	-50000 to 50000

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	picoseconds per nanometer
Default	2000
Introduced	16.0.R1
Platforms	All

start *number*

Synopsis	Lower bound of the dispersion compensation range
Context	**configure** port *port* dwdm coherent sweep start *number*
Tree	start
Range	-50000 to 50000
Units	picoseconds per nanometer
Default	-25500
Introduced	16.0.R1
Platforms	All

target-power *decimal-number*

Synopsis	Average output power target for the port
Context	**configure** port *port* dwdm coherent target-power *decimal-number*
Tree	target-power
Range	-20 to 3
Units	decibel-milliwatts
Default	1
Introduced	16.0.R1
Platforms	All

frequency *number*

Synopsis	Center frequency for tunable DWDM optical interface
Context	**configure** port *port* dwdm frequency *number*
Tree	frequency
Description	This command configures the center frequency to use for a tunable DWDM optical interface. This command can be used to specify any frequency in the C band.

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

To set the DWDM frequency, the port must be a physical port and the provisioned MDA type must have DWDM tunable optics (for example, p1-100g-tun-b), or the MDA must support the option of tunable DWDM optic modules.

This command replaces the **configure port dwdm channel** command.

Range	191100000 to 196150000
Units	megahertz
Introduced	21.10.R3
Platforms	All

ethernet

Synopsis	Enter the **ethernet** context
Context	**configure** port *port* ethernet
Tree	ethernet
Description	Commands in this context configure Ethernet port attributes. This context can only be used when configuring Fast Ethernet, Gigabit, or 10-Gb Ethernet LAN ports on an appropriate MDA.
Introduced	16.0.R1
Platforms	All

access

Synopsis	Enter the **access** context
Context	**configure** port *port* ethernet access
Tree	access
Description	Commands in this context configure Ethernet access port commands.
Introduced	16.0.R1
Platforms	All

bandwidth *number*

Synopsis	Administrative bandwidth assigned to Ethernet ports
Context	**configure** port *port* ethernet access bandwidth *number*
Tree	bandwidth
Range	1 to 6400000000
Units	kilobps

© 2024 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

booking-factor *number*

Synopsis	Booking factor applied to the Ethernet port
Context	**configure** port *port* ethernet access booking-factor *number*
Tree	booking-factor
Range	1 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

egress
