Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discovery

Synopsis	Enter the **discovery** context
Context	debug service vprn *service-name* ppp packets discovery
Tree	discovery
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all discovery packets
Context	debug service vprn *service-name* ppp packets discovery all
Tree	all
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padi *boolean*

Synopsis	Enable PPP debugging for PADI discovery packets

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug service vprn *service-name* ppp packets discovery padi *boolean*
Tree	padi
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pado *boolean*

Synopsis	Enable PPP debugging for PADO discovery packets
Context	debug service vprn *service-name* ppp packets discovery pado *boolean*
Tree	pado
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padr *boolean*

Synopsis	Enable PPP debugging for PADR discovery packets
Context	debug service vprn *service-name* ppp packets discovery padr *boolean*
Tree	padr
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pads *boolean*

Synopsis	Enable PPP debugging for PADS discovery packets
Context	debug service vprn *service-name* ppp packets discovery pads *boolean*
Tree	pads
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).

Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padt *boolean*

Synopsis	Enable PPP debugging for PADT discovery packets
Context	debug service vprn *service-name* ppp packets discovery padt *boolean*
Tree	padt
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	PPP packets present in the debug output
Context	debug service vprn *service-name* ppp packets mode *keyword*
Tree	mode
Options	dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets egress-ingress-and-dropped – Display egress, ingress, and dropped packets
Default	dropped-only
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-session

Synopsis	Enter the **ppp-session** context
Context	debug service vprn *service-name* ppp packets ppp-session
Tree	ppp-session
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

all

Synopsis	Enable PPP debugging for all PPP session packets
Context	debug service vprn *service-name* ppp packets ppp-session all
Tree	all
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

chap *boolean*

Synopsis	Enable PPP debugging for CHAP authentication packets
Context	debug service vprn *service-name* ppp packets ppp-session chap *boolean*
Tree	chap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipcp *boolean*

Synopsis	Enable PPP debugging for IPCP NCP packets
Context	debug service vprn *service-name* ppp packets ppp-session ipcp *boolean*
Tree	ipcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6cp *boolean*

Synopsis	Enable PPP debugging for IPv6CP NCP packets
Context	debug service vprn *service-name* ppp packets ppp-session ipv6cp *boolean*
Tree	ipv6cp
Default	false

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lcp *boolean*

Synopsis	Enable PPP debugging for LCP link establishment packets
Context	debug service vprn *service-name* ppp packets ppp-session lcp *boolean*
Tree	lcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pap *boolean*

Synopsis	Enable PPP debugging for PAP authentication packets
Context	debug service vprn *service-name* ppp packets ppp-session pap *boolean*
Tree	pap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id [id] *string*

Synopsis	Add a list entry for **remote-id**
Context	debug service vprn *service-name* ppp remote-id *string*
Tree	remote-id
Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**id**] *string*

Synopsis	Remote ID of the PPPoE session to debug
Context	debug service vprn *service-name* ppp remote-id *string*
Tree	remote-id
String length	1 to 255
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	debug service vprn *service-name* ppp sap *sap*
Tree	sap
Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID of the PPPoE session to debug
Context	debug service vprn *service-name* ppp sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-name [name] *string*

Synopsis	Add a list entry for **user-name**
Context	debug service vprn *service-name* ppp user-name *string*
Tree	user-name

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Username of the PPPoE session to debug
Context	debug service vprn *service-name* ppp user-name *string*
Tree	user-name
Description	This command configures the username of the PPPoE sesssion to debug. Only packets after the PAP or CHAP authentication are logged. If the purpose is to include PPPoE discovery packets in the debug log, configure a MAC filter instead.
String length	1 to 255
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

video-interface [interface-name] *interface-name*

Synopsis	Enter the **video-interface** list instance
Context	debug service vprn *service-name* video-interface *interface-name*
Tree	video-interface
Description	Commands in this context configure debugging for video interfaces.
Max. instances	9
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

[**interface-name**] *interface-name*

Synopsis	Video interface name to debug
Context	debug service vprn *service-name* video-interface *interface-name*
Tree	video-interface
String length	1 to 29
Notes	This element is part of a list key.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-server

Synopsis	Enable the **fcc-server** context
Context	debug service vprn *service-name* video-interface *interface-name* fcc-server
Tree	fcc-server
Description	Commands in this context configure debugging for the video interface Fast Channel Change (FCC) server.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

client *ipv4-unicast-address*

Synopsis	Client IP address
Context	debug service vprn *service-name* video-interface *interface-name* fcc-server client *ipv4-unicast-address*
Tree	client
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

detail-or-error *keyword*

Synopsis	Debug information for the FCC server
Context	debug service vprn *service-name* video-interface *interface-name* fcc-server detail-or-error *keyword*
Tree	detail-or-error
Options	detail – Provide details about the FCC packet received error – Capture only error cases
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source-port *number*

Synopsis	Client source port

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug service vprn *service-name* video-interface *interface-name* fcc-server source-port *number*
Tree	source-port
Range	0 to 65535
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

packet-rx

Synopsis	Enable the **packet-rx** context
Context	debug service vprn *service-name* video-interface *interface-name* packet-rx
Tree	packet-rx
Description	Commands in this context configure the debugging of received Real-time Transport Control Protocol (RTCP) messages.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

client *ipv4-unicast-address*

Synopsis	Client IP address
Context	debug service vprn *service-name* video-interface *interface-name* packet-rx client *ipv4-unicast-address*
Tree	client
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-join *boolean*

Synopsis	Enable debugging for FCC joins
Context	debug service vprn *service-name* video-interface *interface-name* packet-rx fcc-join *boolean*
Tree	fcc-join
Default	true
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fcc-leave *boolean*

Synopsis	Enable debugging for FCC leaves
Context	debug service vprn *service-name* video-interface *interface-name* packet-rx fcc-leave *boolean*
Tree	fcc-leave
Default	true
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

ret-nack *boolean*

Synopsis	Enable debugging for retransmission NACK packets
Context	debug service vprn *service-name* video-interface *interface-name* packet-rx ret-nack *boolean*
Tree	ret-nack
Default	true
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source-port *number*

Synopsis	Client source port
Context	debug service vprn *service-name* video-interface *interface-name* packet-rx source-port *number*
Tree	source-port
Range	0 to 65535
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

perfect-stream

Synopsis	Enable the **perfect-stream** context
Context	debug service vprn *service-name* video-interface *interface-name* perfect-stream
Tree	perfect-stream
Introduced	24.7.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-s

zone-channel-name *named-item*

Synopsis	Zone channel name
Context	debug service vprn *service-name* video-interface *interface-name* perfect-stream zone-channel-name *named-item*
Tree	zone-channel-name
String length	1 to 32
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

rt-server

Synopsis	Enable the **rt-server** context
Context	debug service vprn *service-name* video-interface *interface-name* rt-server
Tree	rt-server
Description	Commands in this context configure debugging for the Retransmission (RET) server.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

client *ipv4-unicast-address*

Synopsis	Client IP address
Context	debug service vprn *service-name* video-interface *interface-name* rt-server client *ipv4-unicast-address*
Tree	client
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

detail-or-error *keyword*

Synopsis	Debug information for the RT server
Context	debug service vprn *service-name* video-interface *interface-name* rt-server detail-or-error *keyword*
Tree	detail-or-error

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	detail, error
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source-port *number*

Synopsis	Client source port
Context	debug service vprn *service-name* video-interface *interface-name* rt-server source-port *number*
Tree	source-port
Range	0 to 65535
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

sg

Synopsis	Enable the **sg** context
Context	debug service vprn *service-name* video-interface *interface-name* sg
Tree	sg
Description	Commands in this context configure channel debugging.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

group *ipv4-multicast-address*

Synopsis	Multicast channel address
Context	debug service vprn *service-name* video-interface *interface-name* sg group *ipv4-multicast-address*
Tree	group
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source *ipv4-unicast-address*

Synopsis	Unicast source address

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug service vprn *service-name* video-interface *interface-name* sg source *ipv4-unicast-address*
Tree	source
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

subscriber-mgmt

Synopsis	Enter the **subscriber-mgmt** context
Context	debug subscriber-mgmt
Tree	subscriber-mgmt
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp

Synopsis	Enter the **gtp** context
Context	debug subscriber-mgmt gtp
Tree	gtp
Description	This command enables the context to configure box-wide GTP parameters and profiles.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

events *boolean*

Synopsis	Enable GTP event debugging
Context	debug subscriber-mgmt gtp events *boolean*
Tree	events
Default	false
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi [imsi-instance] *string*

Synopsis	Add a list entry for **imsi**

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug subscriber-mgmt gtp imsi *string*
Tree	imsi
Max. instances	8
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**imsi-instance**] *string*

Synopsis	IMSI of GTP sessions to debug
Context	debug subscriber-mgmt gtp imsi *string*
Tree	imsi
String length	0 to 15
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enable the **packets** context
Context	debug subscriber-mgmt gtp packets
Tree	packets
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the GTP packet debug output
Context	debug subscriber-mgmt gtp packets detail-level *keyword*
Tree	detail-level
Options	high – High detail level output for debugging low – Low detail level output for debugging
Default	low
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mode *keyword*

Synopsis	GTP packets to include in the debug output
Context	debug subscriber-mgmt gtp packets mode *keyword*
Tree	mode
Options	all – Display all packets dropped – Display dropped packets only
Default	dropped
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer [address] *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string*

Synopsis	Enter the **peer** list instance
Context	debug subscriber-mgmt gtp peer *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string*
Tree	peer
Max. instances	8
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Remote IP address of the GTP peer
Context	debug subscriber-mgmt gtp peer *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string*
Tree	peer
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

router *string*

Synopsis	Router instance where GTP peer packets are expected
Context	debug subscriber-mgmt gtp peer *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	peer
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp-port *number*

Synopsis	UDP source (Rx packets) / destination (Tx packets) port
Context	debug subscriber-mgmt gtp peer *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string* udp-port *number*
Tree	udp-port
Description	This command configures the UDP source port of received packets or the UDP destination port of transmitted packets.
Range	0 | 1 to 65535
Default	2123
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-user-db [name] *named-item*

Synopsis	Enter the **local-user-db** list instance
Context	debug subscriber-mgmt local-user-db *named-item*
Tree	local-user-db
Max. instances	127
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Local user database name
Context	debug subscriber-mgmt local-user-db *named-item*
Tree	local-user-db
String length	1 to 32
Notes	This element is part of a list key.
Introduced	24.10.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	Level of the local user database debug output
Context	debug subscriber-mgmt local-user-db *named-item* mode *keyword*
Tree	mode
Options	all – Display all lookup events failed – Display failed lookup events
Default	failed
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp

Synopsis	Enter the **pfcp** context
Context	debug subscriber-mgmt pfcp
Tree	pfcp
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enable the **packets** context
Context	debug subscriber-mgmt pfcp packets
Tree	packets
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the PFCP packet debug output
Context	debug subscriber-mgmt pfcp packets detail-level *keyword*
Tree	detail-level
Options	high – High detail level output for debugging low – Low detail level output for debugging

Platforms	All

tunnel

Synopsis	Enter the **tunnel** context
Context	debug system grpc-tunnel tunnel
Tree	tunnel
Introduced	22.10.R1
Platforms	All

all

Synopsis	Set debug output for all tunnels
Context	debug system grpc-tunnel tunnel all
Tree	all
Notes	The following elements are part of a choice: **all** or **name**.
Introduced	22.10.R1
Platforms	All

name *named-item*

Synopsis	Name of the tunnel to restrict the debug output
Context	debug system grpc-tunnel tunnel name *named-item*
Tree	name
String length	1 to 32
Notes	The following elements are part of a choice: **all** or **name**.
Introduced	22.10.R1
Platforms	All

http-connections

Synopsis	Enable the **http-connections** context
Context	debug system http-connections
Tree	http-connections
Introduced	22.10.R1
Platforms	All

client-ip-prefix *(ipv4-prefix | ipv6-prefix | keyword)*

Synopsis	HTTP client IP prefix
Context	debug system http-connections client-ip-prefix *(ipv4-prefix | ipv6-prefix | keyword)*
Tree	client-ip-prefix
Options	any
Default	any
Introduced	22.10.R1
Platforms	All

management-interface

Synopsis	Enter the **management-interface** context
Context	debug system management-interface
Tree	management-interface
Introduced	21.5.R1
Platforms	All

netconf *keyword*

Synopsis	Debugging verbosity for NETCONF
Context	debug system management-interface netconf *keyword*
Tree	netconf
Options	error – Error messages warning – Warning and error messages info – All messages
Introduced	21.5.R1
Platforms	All

remote-management

Synopsis	Enter the **remote-management** context
Context	debug system management-interface remote-management
Tree	remote-management
Description	Commands in this context configure the SR OS node to use the remote management service. Configuring remote management enables the SR OS node to report itself to a remote manager service running on a remote server, so that it is included in the dynamic list of available nodes. The manager service streamlines the management of multiple SR OS nodes running different SR OS versions using the same client application providing a similar shell to the MD-CLI.
Introduced	21.7.R1
Platforms	All

manager

Synopsis	Enter the **manager** context
Context	debug system management-interface remote-management manager
Tree	manager
Description	Commands in this context configure specific manager-related commands. Commands configured in this context take precedence over command values specified directly in the **configure management-interface remote-management** context. If a command is not configured in this context, the command setting is inherited from the higher level context.
Introduced	21.7.R1
Platforms	All

all

Synopsis	Enable debug of all managers
Context	debug system management-interface remote-management manager all
Tree	all
Notes	The following elements are part of a choice: **all** or **manager-name**.
Introduced	21.7.R1
Platforms	All

© 2025 Nokia.

4.14.1 esa command descriptions

esa [esa-id] *number*

Synopsis	Enter the **esa** list instance
Context	**configure** esa *number*
Tree	esa
Description	Commands in this context configure the Extended Services Appliance (ESA) instance.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[**esa-id**] *number*

Synopsis	ESA ID
Context	**configure** esa *number*
Tree	esa
Range	1 to 16
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of the ESA
Context	**configure** esa *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

description *description*

Synopsis	Text description

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** esa *number* description *description*
Tree	description
String length	1 to 80
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

host-port [host-port] *port*

Synopsis	Enter the **host-port** list instance
Context	**configure** esa *number* host-port *port*
Tree	host-port
Max. instances	4
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[**host-port**] *port*

Synopsis	Ethernet port associated with the ESA
Context	**configure** esa *number* host-port *port*
Tree	host-port
Description	This command configures an Ethernet port associated with the ESA-VM instance. The port ID must be the same as the port ID associated with the ESA context on which the ESA-VM is configured.
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

crc-monitor

Synopsis	Enter the **crc-monitor** context
Context	**configure** esa *number* host-port *port* crc-monitor
Tree	crc-monitor
Description	Commands in this context configure ESA cyclic redundancy check (CRC) monitoring.
Introduced	24.10.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

signal-degrade

Synopsis	Enter the **signal-degrade** context
Context	**configure** esa *number* host-port *port* crc-monitor signal-degrade
Tree	signal-degrade
Description	Commands in this context configure the error rate at which to declare the signal degrade (SD) condition on an Ethernet interface. The value represents M*10E-N, a ratio of errored frames over total frames received over W seconds of the sliding window. The CRC errors on the interface are sampled once per second. A default of 10 seconds is used when no additional **window-size** is configured. If you omit the **multiplier** value, the multiplier returns to the default value of 1. **Note**: Crossing the configured SD threshold raises a log event.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

multiplier *number*

Synopsis	SD multiplier
Context	**configure** esa *number* host-port *port* crc-monitor signal-degrade multiplier *number*
Tree	multiplier
Max. range	0 to 4294967295
Default	1
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

threshold *number*

Synopsis	SD threshold
Context	**configure** esa *number* host-port *port* crc-monitor signal-degrade threshold *number*
Tree	threshold
Range	1 to 9
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

signal-failure

Synopsis	Enter the **signal-failure** context
Context	**configure** esa *number* host-port *port* crc-monitor signal-failure
Tree	signal-failure
Description	Commands in this context configure the error rate at which to declare the signal failure (SF) condition on an Ethernet interface. The value represents M*10E-N, errored frames over total frames received over W seconds of the sliding window. The CRC errors on the interface are sampled once per second. A default of 10 seconds is used when no additional **window-size** is configured. If you omit the **multiplier** value, the multiplier returns to the default value of 1. **Note**: Crossing the configured signal failure (SF) threshold causes the router ESA port to enter an operational state of down when the router side detects the SF, or the port is shut down when the ESA detects the SF, which triggers redundancy for all configured ISA groups.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

multiplier *number*

Synopsis	SF multiplier
Context	**configure** esa *number* host-port *port* crc-monitor signal-failure multiplier *number*
Tree	multiplier
Max. range	0 to 4294967295
Default	1
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

threshold *number*

Synopsis	SF threshold
Context	**configure** esa *number* host-port *port* crc-monitor signal-failure threshold *number*
Tree	threshold
Range	1 to 9
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

window-size *number*

Synopsis	Window size of the monitor
Context	**configure** esa *number* host-port *port* crc-monitor window-size *number*
Tree	window-size
Range	10 to 60
Units	seconds
Default	10
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

vm [vm-id] *number*

Synopsis	Enter the **vm** list instance
Context	**configure** esa *number* vm *number*
Tree	vm
Description	Commands in this context configure the ESA-VM instance.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[**vm-id**] *number*

Synopsis	VM ID
Context	**configure** esa *number* vm *number*
Tree	vm
Range	1 to 4
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of the ESA-VM instance
Context	**configure** esa *number* vm *number* admin-state *keyword*
Tree	admin-state

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the administrative state of the ESA-VM instance. The state affects the operational state of the instance and all entities contained within the instance; however, configuration settings or statistics are not changed, reset, or removed.
Options	enable, disable
Default	disable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

cores *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of CPU physical cores allocated to the ESA-VM
Context	**configure** esa *number* vm *number* cores *number*
Tree	cores
Description	This command specifies the number of CPU physical cores allocated to the ESA-VM instance. If an invalid value is configured for the number of cores, the VM remains in a failed state.
Range	0 to 128
Default	0
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

description *description*

Synopsis	Text description
Context	**configure** esa *number* vm *number* description *description*
Tree	description

4.15.1 eth-cfm command descriptions

eth-cfm

Synopsis	Enter the **eth-cfm** context
Context	**configure** eth-cfm
Tree	eth-cfm
Description	Commands in this context configure ETH-CFM parameters.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

default-domain

Synopsis	Enter the **default-domain** context
Context	**configure** eth-cfm default-domain
Tree	default-domain
Description	Commands in this context configure MIP creation parameters per index (**bridge-identifier** *bridge-id* **vlan** *vlan-id*) if the MIP creation statement exists as part of the service connection. The MIP creation statement must be present on the connection before any configuration can occur for a MIP under this context. Whether a MIP uses the **default-domain** creation method is determined by the MIP authoritative nature of the **eth-cfm domain association**. The **eth-cfm default-domain** MIP creation is considered only if the **eth-cfm domain association** is not authoritative.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bridge-identifier [bridge-name] *service-name* vlan *(number | keyword)*

Synopsis	Enter the **bridge-identifier** list instance
Context	**configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)*
Tree	bridge-identifier
Description	Commands in this context configure the references required to link the CFM function with the service context, allowing the entry of MIP-specific parameters for the index in the default domain table.

Use subject to Terms available at: www.nokia.com/terms.

The **info** and **info detail** commands do not display any entries for the instance unless they have previously been accessed. The possible candidates for the instance can be located using the **show eth-cfm default-domain** command.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**bridge-name**] *service-name*

Synopsis Bridge name in the default domain table

Context **configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)*

Tree bridge-identifier

Description This command specifies the bridge name to enter in the default domain associated with the MIP.

String length 1 to 64

Notes This element is part of a list key.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan *(number | keyword)*

Synopsis VLAN ID for the default domain

Context **configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)*

Tree bridge-identifier

Description This command configures a VLAN ID for the default domain.

Range 1 to 4094

Options none

Notes This element is part of a list key.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

id-permission *keyword*

Synopsis Strategy for the inclusion of Sender ID TLV information

Context **configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)* id-permission *keyword*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	id-permission
Description	This command specifies how the Sender ID TLV information is included for installed MEPs and MIPs. The Sender ID TLV is supported for ETH-CCM, ETH-LB, and ETH-LB PDUs.
Options	none, chassis, defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mhf-creation

Synopsis	Enter the **mhf-creation** context
Context	**configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)* mhf-creation
Tree	mhf-creation
Description	Commands in this context configure the MIP method of creation. MIP creation mode and other factors are part of the MIP creation authority (**association** or **default-domain**) logic. The MIP creation algorithm may result in multiple potential MIPs. Only the lowest-level valid MIP is instantiated.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

level *(number | keyword)*

Synopsis	Requested level of the MIP
Context	**configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)* mhf-creation level *(number | keyword)*
Tree	level
Description	This command configures the requested level of the MIP. This is used by the MIP creation algorithm to determine its validity in comparison to other ETH-CFM MIPs and MEPs. If the level is configured as **defer**, the level value is inherited from the global read-only system values.
Range	0 to 7
Options	defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mhf-type *keyword*

Synopsis	MIP creation mode
Context	**configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)* mhf-creation mhf-type *keyword*
Tree	mhf-type
Options	none, default, explicit, defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip-ltr-priority *(number | keyword)*

Synopsis	Priority of the Linktrace Response
Context	**configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)* mip-ltr-priority *(number | keyword)*
Tree	mip-ltr-priority
Description	This command allows the operator to set the priority of the Linktrace Response Message (ETH-LTR) from a MIP for this association.
Range	0 to 7
Options	defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

domain [md-admin-name] *admin-name*

Synopsis	Enter the **domain** list instance
Context	**configure** eth-cfm domain *admin-name*
Tree	domain
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**md-admin-name**] *admin-name*

Synopsis	Unique domain name

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-cfm domain *admin-name*
Tree	domain
String length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

association [ma-admin-name] *admin-name*

Synopsis	Enter the **association** list instance
Context	**configure** eth-cfm domain *admin-name* association *admin-name*
Tree	association
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**ma-admin-name**] *admin-name*

Synopsis	Domain association name
Context	**configure** eth-cfm domain *admin-name* association *admin-name*
Tree	association
String length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

auto-mep-discovery *boolean*

Synopsis	Allow remote MEP automatic discovery
Context	**configure** eth-cfm domain *admin-name* association *admin-name* auto-mep-discovery *boolean*
Tree	auto-mep-discovery
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bridge-identifier [bridge-name] *service-name*

Synopsis	Enter the **bridge-identifier** list instance
Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name*
Tree	bridge-identifier
Max. instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**bridge-name**] *service-name*

Synopsis	Bridge name that links to the service
Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name*
Tree	bridge-identifier
String length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

id-permission *keyword*

Synopsis	Strategy for the inclusion of Sender ID TLV information
Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name* id-permission *keyword*
Tree	id-permission
Description	This command specifies how the Sender ID TLV information is included for installed MEPs and MIPs. The Sender ID TLV is supported for ETH-CCM, ETH-LB, and ETH-LB PDUs.
Options	none, chassis
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mhf-creation *keyword*

Synopsis	MIP method of creation
Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name* mhf-creation *keyword*
Tree	mhf-creation
Options	none, default, explicit, static
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip-ltr-priority *number*

Synopsis	Priority of the Linktrace Response Message (ETH-LTR) from a MIP
Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name* mip-ltr-priority *number*
Tree	mip-ltr-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan *number*

Synopsis	VLAN ID for the default domain index
Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name* vlan *number*
Tree	vlan
Range	1 to 4094
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-hold-time

Synopsis	Enter the **ccm-hold-time** context
Context	**configure** eth-cfm domain *admin-name* association *admin-name* ccm-hold-time

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ccm-hold-time
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

down *number*

Synopsis	Additional time before a MEP declares a fault, in CCM timeout conditions
Context	**configure** eth-cfm domain *admin-name* association *admin-name* ccm-hold-time down *number*
Tree	down
Range	1 to 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-interval *keyword*

Synopsis	CCM transmission interval for all MEPs in association
Context	**configure** eth-cfm domain *admin-name* association *admin-name* ccm-interval *keyword*
Tree	ccm-interval
Options	300hz, 10ms, 100ms, 1s, 10s, 60s, 600s
Default	10s
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

facility-id-permission *keyword*

Synopsis	Sender ID TLV information for facility base MEPs
Context	**configure** eth-cfm domain *admin-name* association *admin-name* facility-id-permission *keyword*
Tree	facility-id-permission
Options	none, chassis
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

icc-based *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in ICC-based format
Context	**configure** eth-cfm domain *admin-name* association *admin-name* icc-based *string*
Tree	icc-based
String length	8 to 13
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

integer *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in integer format
Context	**configure** eth-cfm domain *admin-name* association *admin-name* integer *number*
Tree	integer
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ma-index *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association (MA) table index
Context	**configure** eth-cfm domain *admin-name* association *admin-name* ma-index *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ma-index
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-mep [mep-id] *number*

Synopsis	Enter the **remote-mep** list instance
Context	**configure** eth-cfm domain *admin-name* association *admin-name* remote-mep *number*
Tree	remote-mep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**mep-id**] *number*

Synopsis	Remote MEP ID
Context	**configure** eth-cfm domain *admin-name* association *admin-name* remote-mep *number*
Tree	remote-mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-mac *mac-unicast-address-no-zero*

Synopsis	Remote MAC Address for transmitting CFM packets to remote MEPs
Context	**configure** eth-cfm domain *admin-name* association *admin-name* remote-mep *number* remote-mac *mac-unicast-address-no-zero*
Tree	remote-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

4.16.1 eth-ring command descriptions

eth-ring [ring-index] *number*

Synopsis	Enter the **eth-ring** list instance
Context	**configure** eth-ring *number*
Tree	eth-ring
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**ring-index**] *number*

Synopsis	Ring ID
Context	**configure** eth-ring *number*
Tree	eth-ring
Range	1 to 128
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the Ethernet ring
Context	**configure** eth-ring *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-hold-time

Synopsis	Enter the **ccm-hold-time** context
Context	**configure** eth-ring *number* ccm-hold-time
Tree	ccm-hold-time

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

down *number*

Synopsis	Hold timer for down event dampening
Context	**configure** eth-ring *number* ccm-hold-time down *number*
Tree	down
Range	1 to 5000
Units	centiseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

up *number*

Synopsis	Hold timer for recovery reporting
Context	**configure** eth-ring *number* ccm-hold-time up *number*
Tree	up
Range	0 to 5000
Units	deciseconds
Default	20
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

compatible-version *number*

Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-alarm-time *number*
Tree	fng-alarm-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-reset-time *number*
Tree	fng-reset-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm *boolean*

Synopsis	Generate CCM messages
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm *boolean*
Tree	ccm
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-ltm-priority *number*
Tree	ccm-ltm-priority
Range	0 to 7

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	7
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-padding-size *number*
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval)** is less than 1 second.
Range	3 to 1500
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

control-mep *boolean*

Synopsis	Enable Ethernet ring control on the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* control-mep *boolean*
Tree	control-mep
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *description*

Synopsis	Text description
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* description *description*
Tree	description
String length	1 to 80

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-test

Synopsis	Enable the **eth-test** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the **oam eth-cfm eth-test** command.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test bit-error-threshold *number*
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the **test-pattern** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern crc-tlv *boolean*
Tree	crc-tlv
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern pattern *keyword*
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the **grace** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

eth-ed

Synopsis	Enter the **eth-ed** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed max-rx-defect-window *number*
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed priority *number*
Tree	priority
Range	0 to 7
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed rx-eth-ed *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed tx-eth-ed *boolean*
Tree	tx-eth-ed
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the **eth-vsm-grace** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace rx-eth-vsm-grace *boolean*
Tree	rx-eth-vsm-grace
Description	When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to **false**, the router disables the Nokia Grace function.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace tx-eth-vsm-grace *boolean*
Tree	tx-eth-vsm-grace
Description	When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* low-priority-defect *keyword*
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	all-def
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* mac-address *mac-unicast-address-no-zero*
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* one-way-delay-threshold *number*
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-and-raps-tag *port-and-encap*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

4.17 filter commands

```
configure
   –  filter
      –  apply-groups reference
      –  apply-groups-exclude reference
      –  dhcp-filter number
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  default-action
            –  bypass-host-creation
            –  drop
         –  description description
         –  entry number
            –  action
               –  bypass-host-creation
               –  drop
            –  apply-groups reference
            –  apply-groups-exclude reference
            –  option
               –  absent
               –  match
                  –  exact boolean
                  –  hex string
                  –  invert boolean
                  –  string string
               –  number number
               –  present
      –  dhcp6-filter number
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  default-action
            –  bypass-host-creation
               –  na boolean
               –  pd boolean
            –  drop
         –  description description
         –  entry number
            –  action
               –  bypass-host-creation
                  –  na boolean
                  –  pd boolean
               –  drop
            –  apply-groups reference
            –  apply-groups-exclude reference
            –  option
               –  absent
               –  match
                  –  exact boolean
                  –  hex string
                  –  invert boolean
                  –  string string
               –  number number
               –  present

4.17.1 filter command descriptions

filter

Synopsis	Enter the **filter** context
Context	**configure** filter
Tree	filter
Introduced	16.0.R1
Platforms	All

dhcp-filter [filter-id] *number*

Synopsis	Enter the **dhcp-filter** list instance
Context	**configure** filter dhcp-filter *number*
Tree	dhcp-filter
Introduced	16.0.R1
Platforms	All

[**filter-id**] *number*

Synopsis	Unique DHCP filter policy ID
Context	**configure** filter dhcp-filter *number*
Tree	dhcp-filter
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

default-action

Synopsis	Enable the **default-action** context
Context	**configure** filter dhcp-filter *number* default-action
Tree	default-action
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

bypass-host-creation

Synopsis	Host creation options to bypass
Context	**configure** filter dhcp-filter *number* default-action bypass-host-creation
Tree	bypass-host-creation
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis	DHCP host creation when the filter entry is matched
Context	**configure** filter dhcp-filter *number* default-action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	All

description *description*

Synopsis	Text description
Context	**configure** filter dhcp-filter *number* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	All

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** filter dhcp-filter *number* entry *number*
Tree	entry

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	10
Introduced	16.0.R1
Platforms	All

[**entry-id**] *number*

Synopsis	DHCP filter entry ID
Context	**configure** filter dhcp-filter *number* entry *number*
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

action

Synopsis	Enable the **action** context
Context	**configure** filter dhcp-filter *number* entry *number* action
Tree	action
Introduced	16.0.R1
Platforms	All

bypass-host-creation

Synopsis	Host creation options to bypass
Context	**configure** filter dhcp-filter *number* entry *number* action bypass-host-creation
Tree	bypass-host-creation
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis	DHCP host creation when the filter entry is matched

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter dhcp-filter *number* entry *number* action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	All

option

Synopsis	Enable the **option** context
Context	**configure** filter dhcp-filter *number* entry *number* option
Tree	option
Introduced	16.0.R1
Platforms	All

absent

Synopsis	Require the absence of related option
Context	**configure** filter dhcp-filter *number* entry *number* option absent
Tree	absent
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enable the **match** context
Context	**configure** filter dhcp-filter *number* entry *number* option match
Tree	match
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	16.0.R1
Platforms	All

exact *boolean*

Synopsis	Use an exact match pattern (not partial)

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter dhcp-filter *number* entry *number* option match exact *boolean*
Tree	exact
Default	false
Introduced	16.0.R1
Platforms	All

hex *string*

Synopsis	Matching pattern for the filtered option
Context	**configure** filter dhcp-filter *number* entry *number* option match hex *string*
Tree	hex
String length	1 to 256
Notes	The following elements are part of a mandatory choice: **hex** or **string**.
Introduced	16.0.R1
Platforms	All

invert *boolean*

Synopsis	Invert (partial) matching criteria
Context	**configure** filter dhcp-filter *number* entry *number* option match invert *boolean*
Tree	invert
Default	false
Introduced	16.0.R1
Platforms	All

string *string*

Synopsis	Matching pattern for the filtered option
Context	**configure** filter dhcp-filter *number* entry *number* option match string *string*
Tree	string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **hex** or **string**.
Introduced	16.0.R1
Platforms	All

number *number*

Synopsis	Number for DHCP or DHCPv6 option to filter on
Context	**configure** filter dhcp-filter *number* entry *number* option number *number*
Tree	number
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

present

Synopsis	Require the presence of related option
Context	**configure** filter dhcp-filter *number* entry *number* option present
Tree	present
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	16.0.R1
Platforms	All

dhcp6-filter [filter-id] *number*

Synopsis	Enter the **dhcp6-filter** list instance
Context	**configure** filter dhcp6-filter *number*
Tree	dhcp6-filter
Introduced	16.0.R1
Platforms	All

[**filter-id**] *number*

Synopsis	Unique DHCP filter policy ID
Context	**configure** filter dhcp6-filter *number*
Tree	dhcp6-filter
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1

destination-address [address] *ipv4-address*

Synopsis	Add a list entry for **destination-address**
Context	**configure** filter gre-tunnel-template *named-item* ipv4 destination-address *ipv4-address*
Tree	destination-address
Description	This command defines a destination for the GRE IP header used to encapsulate the matching IPv4/IPv6 packet. A single destination address can be specified for an IPv6 **gre-tunnel-template**. Traffic matching the associated IPv4 or IPv6 filter is hashed across any available ECMP or UCMP route next hop available to the destination address. If no destination address is available, then matching traffic follows the configured **pbr-down-action-override** action, if configured. If no **pbr-down-action-override** is configured traffic is discarded.
Max. instances	32
Introduced	16.0.R1
Platforms	All

[**address**] *ipv4-address*

Synopsis	Destination IPv4 address
Context	**configure** filter gre-tunnel-template *named-item* ipv4 destination-address *ipv4-address*
Tree	destination-address
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

gre-key *(keyword | number)*

Synopsis	GRE key
Context	**configure** filter gre-tunnel-template *named-item* ipv4 gre-key *(keyword | number)*
Tree	gre-key
Max. range	0 to 4294967295
Options	if-index
Introduced	16.0.R1
Platforms	All

skip-ttl-decrement *boolean*

Synopsis	Decrement TTL
Context	**configure** filter gre-tunnel-template *named-item* ipv4 skip-ttl-decrement *boolean*
Tree	skip-ttl-decrement
Default	false
Introduced	16.0.R1
Platforms	All

source-address *ipv4-address*

Synopsis	Source IP address of the GRE encapsulated
Context	**configure** filter gre-tunnel-template *named-item* ipv4 source-address *ipv4-address*
Tree	source-address
Introduced	16.0.R1
Platforms	All

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** filter gre-tunnel-template *named-item* ipv6
Tree	ipv6
Notes	The following elements are part of a choice: **ipv4** or **ipv6**.
Introduced	22.7.R1
Platforms	All

destination-address [address] *ipv6-unicast-address*

Synopsis	Add a list entry for **destination-address**
Context	**configure** filter gre-tunnel-template *named-item* ipv6 destination-address *ipv6-unicast-address*
Tree	destination-address
Max. instances	1
Introduced	22.7.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

[**address**] *ipv6-unicast-address*

Synopsis	IPv6 destination address
Context	**configure** filter gre-tunnel-template *named-item* ipv6 destination-address *ipv6-unicast-address*
Tree	destination-address
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	All

gre-key *keyword*

Synopsis	Include a key value in GRE header
Context	**configure** filter gre-tunnel-template *named-item* ipv6 gre-key *keyword*
Tree	gre-key
Description	This command includes a key value in the GRE header of ifIndex of the ingress interface.
Options	if-index
Introduced	22.7.R1
Platforms	All

skip-hop-decrement *boolean*

Synopsis	Decrement TTL of the received packet
Context	**configure** filter gre-tunnel-template *named-item* ipv6 skip-hop-decrement *boolean*
Tree	skip-hop-decrement
Description	When configured to **true**, the system decrements the TTL of the IP packet matching the IPv4 or IPv6 filter when it is encapsulated into the GRE tunnel header. When configured to **false**, the system increases the TTL of the received packet.
Default	false
Introduced	22.7.R1
Platforms	All

Tree	icmp
Introduced	20.10.R1
Platforms	VSR

code *number*

Synopsis	ICMP code value to match
Context	**configure** filter ip-exception *filter-name* entry *number* match icmp code *number*
Tree	code

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the ICMP code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	20.10.R1
Platforms	VSR

type *number*

Synopsis	ICMP type value to match
Context	**configure** filter ip-exception *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMP type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	20.10.R1
Platforms	VSR

protocol *(number | keyword)*

drop-when

Synopsis	Enable the **drop-when** context
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when
Tree	drop-when
Introduced	16.0.R1
Platforms	All

extracted-traffic

Synopsis	Drop traffic extracted to CPM
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when extracted-traffic
Tree	extracted-traffic
Introduced	16.0.R1
Platforms	All

packet-length

Synopsis	Enable the **packet-length** context
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when packet-length
Tree	packet-length
Notes	The following elements are part of a choice: **packet-length** or **ttl**.
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the length
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when packet-length eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

gt *number*

Synopsis	Greater than match criterion for the length
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when packet-length gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than match criterion for the length
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when packet-length lt *number*
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when packet-length range
Tree	range
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the length range
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when packet-length range end *number*

mask *hex-string*

Synopsis	Mask for the pattern expression
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when pattern mask *hex-string*
Tree	mask
String length	3 to 18
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

offset-type *keyword*

Synopsis	Starting point reference for offset value of pattern
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when pattern offset-type *keyword*
Tree	offset-type
Options	layer-3, layer-4, data, dns-qtype
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

offset-value *number*

Synopsis	Offset value for the pattern expression
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when pattern offset-value *number*
Tree	offset-value
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

ttl

Synopsis	Enable the **ttl** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when ttl
Tree	ttl
Notes	The following elements are part of a choice: **packet-length** or **ttl**.
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Equal to condition match value
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when ttl eq *number*
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

gt *number*

Synopsis	Greater than condition match value
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when ttl gt *number*
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than condition match value
Context	**configure** filter ip-filter *filter-name* entry *number* action drop-when ttl lt *number*
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1

fc *keyword*

Synopsis	Class name to be forwarded for matching packets
Context	**configure** filter ip-filter *filter-name* entry *number* action fc *keyword*
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Introduced	16.0.R1
Platforms	All

forward

Synopsis	Enter the **forward** context
Context	**configure** filter ip-filter *filter-name* entry *number* action forward
Tree	forward
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

bonding-connection *number*

Synopsis	Connection ID over which packet is forwarded
Context	**configure** filter ip-filter *filter-name* entry *number* action forward bonding-connection *number*
Tree	bonding-connection
Range	1 to 2
Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

esi-l2

Synopsis	Enable the **esi-l2** context
Context	**configure** filter ip-filter *filter-name* entry *number* action forward esi-l2
Tree	esi-l2
Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	16.0.R1
Platforms	All

esi-value *ethernet-segment-id*

Synopsis	ESI of the first ESI-identified appliance
Context	**configure** filter ip-filter *filter-name* entry *number* action forward esi-l2 esi-value *ethernet-segment-id*
Tree	esi-value
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls *reference*

Synopsis	VPLS service name
Context	**configure** filter ip-filter *filter-name* entry *number* action forward esi-l2 vpls *reference*
Tree	vpls
Reference	**configure** service vpls *service-name*
Notes	This element is mandatory.
Introduced	16.0.R3
Platforms	All

esi-l3

Synopsis	Enable the **esi-l3** context
Context	**configure** filter ip-filter *filter-name* entry *number* action forward esi-l3
Tree	esi-l3

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	16.0.R1
Platforms	All

esi-value *ethernet-segment-id*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	ESI of the first ESI-identified appliance
Context	**configure** filter ip-filter *filter-name* entry *number* action forward esi-l3 esi-value *ethernet-segment-id*
Tree	esi-value
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

sf-ip *ipv4-address*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the service function to forward traffic
Context	**configure** filter ip-filter *filter-name* entry *number* action forward esi-l3 sf-ip *ipv4-address*
Tree	sf-ip
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

http-redirect

Synopsis	Enable the **http-redirect** context
Context	**configure** filter ip-filter *filter-name* entry *number* action http-redirect
Tree	http-redirect
Description	Commands in this context configure the filter entry action for HTTP redirection.
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

allow-override *boolean*

Synopsis	Override the HTTP redirect URL by a RADIUS VSA
Context	**configure** filter ip-filter *filter-name* entry *number* action http-redirect allow-override *boolean*
Tree	allow-override
Description	This command specifies whether the RADIUS VSA can override the configured HTTP redirect URL for this filter entry. When configured to **true**, the RADIUS VSA can override the HTTP redirect URL. When configured to **false**, the HTTP redirect URL is not overriden. This does not apply if the CPF option is specified for the URL.
Default	false
Introduced	16.0.R1
Platforms	All

url *(keyword | http-redirect-url)*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	URL used for HTTP redirect action
Context	**configure** filter ip-filter *filter-name* entry *number* action http-redirect url *(keyword | http-redirect-url)*
Tree	url
Description	This command specifies the URL to use for HTTP redirection for this filter entry.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

A URL can be specified or the CPF option can be used for BNG CUPS ESM sessions only.

The following macro substitutions may be used:

$URL — request-URI in the HTTP GET request received

$MAC — a string that represents the MAC address of the subscriber host

$IP — a string that represents the IP address of the subscriber host

$SUB — a string that represents the subscriber ID

$SAP — a string that represents a SAP ID

$SAPDESC — description string configured on the SAP

$CID — a string that represents the circuit ID or interface ID of the subscriber host (hexadecimal format)

$RID — a string that represents the remote ID of the subscriber host (hexadecimal format)

String length	1 to 255
Options	from-cpf
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

ignore-match

Synopsis	Ignore match criteria for the entry
Context	**configure** filter ip-filter *filter-name* entry *number* action ignore-match
Tree	ignore-match
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

l2-aware-nat-bypass *boolean*

Synopsis	Divert traffic from an L2-Aware NAT subscriber
Context	**configure** filter ip-filter *filter-name* entry *number* action l2-aware-nat-bypass *boolean*
Tree	l2-aware-nat-bypass

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the filter action selectively diverts traffic from a L2-Aware NAT subscriber away from NAT. This action is only applicable to L2-Aware NAT subscribers and must be configured together with action **accept**. Traffic identified in the match condition bypasses L2-Aware NAT. An example is to bypass NAT for on-net destinations (within the customer network). For selective NAT bypass to take effect, in addition to IP filter configuration, the L2-Aware NAT subscriber must be specifically enabled for selective bypass via the allow-bypass configuration option in the **configure subscriber-mgmt sub-profile nat allow-bypass** context. When configured to **false**, traffic that is not classified for bypass automatically diverts to L2-Aware NAT, unless it is explicitly configured in the IP filter action to be dropped.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat

Synopsis	Enable the **nat** context
Context	**configure** filter ip-filter *filter-name* entry *number* action nat
Tree	nat
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-policy *reference*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT policy name when action is NAT
Context	**configure** filter ip-filter *filter-name* entry *number* action nat nat-policy *reference*
Tree	nat-policy
Reference	**configure** service nat nat-policy *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Context	**configure** filter ip-filter *filter-name* entry *number* match dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip
Tree	dst-ip

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure a destination address range that is used by filter policy match criteria.
Notes	The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).
Introduced	16.0.R1
Platforms	All

address *(ipv4-prefix-with-host-bits | ipv4-address)*

Synopsis	IPv4 address used as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip address *(ipv4-prefix-with-host-bits | ipv4-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	All

ip-prefix-list *reference*

Synopsis	IPv4 address prefix list used as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** filter match-list ip-prefix-list *named-item*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	All

mask *ipv4-address*

Synopsis	IPv4 address mask used as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip mask *ipv4-address*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port
Tree	dst-port
Description	Commands in this context configure match criteria for the destination port.
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

gt *number*

Synopsis	Greater than value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port lt *number*
Tree	lt

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the port range
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port range end *number*
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

start *number*

Synopsis	Lower bound of the port range
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

fragment *keyword*

Synopsis	Match criterion for fragmented packets
Context	**configure** filter ip-filter *filter-name* entry *number* match fragment *keyword*
Tree	fragment
Options	false, true, first-only, non-first-only
Introduced	16.0.R1
Platforms	All

icmp

Synopsis	Enter the **icmp** context
Context	**configure** filter ip-filter *filter-name* entry *number* match icmp
Tree	icmp
Description	Commands in this context configure ICMP values to use as IP filter match criteria.
Introduced	16.0.R1
Platforms	All

code *number*

Synopsis	ICMP code value to match
Context	**configure** filter ip-filter *filter-name* entry *number* match icmp code *number*
Tree	code
Description	This command specifies the ICMP code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.

Range	0 to 255
Introduced	16.0.R1
Platforms	All

type *number*

Synopsis	ICMP type value to match
Context	**configure** filter ip-filter *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMP type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

ip

Synopsis	Enter the **ip** context
Context	**configure** filter ip-filter *filter-name* entry *number* match ip
Tree	ip
Notes	The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).
Introduced	21.10.R1
Platforms	All

address *(ipv4-prefix-with-host-bits | ipv4-address)*

Synopsis	IPv4 address used as the match criterion

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* match ip address *(ipv4-prefix-with-host-bits | ipv4-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	All

ip-prefix-list *reference*

Synopsis	IPv4 address prefix list used as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** filter match-list ip-prefix-list *named-item*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	All

mask *ipv4-address*

Synopsis	IPv4 address mask used as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match ip mask *ipv4-address*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	All

ip-option

Synopsis	Enable the **ip-option** context
Context	**configure** filter ip-filter *filter-name* entry *number* match ip-option
Tree	ip-option
Description	Commands in this context configure matching packets with a specific IP option, or a range of IP options, in the first option of the IP header as an IP filter match criterion.
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mask *number*

Synopsis	Mask used with the IP option value in the packet header
Context	**configure** filter ip-filter *filter-name* entry *number* match ip-option mask *number*
Tree	mask
Description	This command specifies an optional value that can be used when specifying a range of option numbers to use as the match criteria.
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

type *number*

Synopsis	IP option to match
Context	**configure** filter ip-filter *filter-name* entry *number* match ip-option type *number*
Tree	type
Description	This command specifies the 8-bit option type in decimal integer, binary, or hexadecimal format. The mask is applied as an AND to the option byte, and the result is compared with the option value. The decimal value entered for the match should be a combined value of the 8-bit option type field and not only the option number. For example, to match IP packets that contain the Router Alert option (option number = 20), enter the option type of 148 (10010100).
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

multiple-option *boolean*

Synopsis	Match based on presence of multiple options in header
Context	**configure** filter ip-filter *filter-name* entry *number* match multiple-option *boolean*
Tree	multiple-option
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

option-present *boolean*

Synopsis	Match on any IP option present in the packet
Context	**configure** filter ip-filter *filter-name* entry *number* match option-present *boolean*
Tree	option-present
Description	When configured to **true**, the router matches on IP packets that contain any IP option in the IP header. An option field of zero is considered as no option present. When configured to **false**, the router matches on IP packets that do not have an IP option present in the IP header.
Introduced	16.0.R1
Platforms	All

packet-length

Synopsis	Enable the **packet-length** context
Context	**configure** filter ip-filter *filter-name* entry *number* match packet-length
Tree	packet-length
Description	Commands in this context specify the match criterion for the IPv4 packet length. The IPv4 packet length represents the total packet length which includes the IPv4 header and the payload.
Introduced	19.5.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the length
Context	**configure** filter ip-filter *filter-name* entry *number* match packet-length eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **ip-packet-length-list**, **lt**, or **range**.
Introduced	19.5.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

gt *number*

Synopsis	Greater than match criterion for the length
Context	**configure** filter ip-filter *filter-name* entry *number* match packet-length gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **ip-packet-length-list**, **lt**, or **range**.
Introduced	19.5.R1
Platforms	All

ip-packet-length-list *reference*

Synopsis	Packet length list to match
Context	**configure** filter ip-filter *filter-name* entry *number* match packet-length ip-packet-length-list *reference*
Tree	ip-packet-length-list
Reference	**configure** filter match-list ip-packet-length-list *named-item*
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **ip-packet-length-list**, **lt**, or **range**.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lt *number*

Synopsis	Less than match criterion for the length
Context	**configure** filter ip-filter *filter-name* entry *number* match packet-length lt *number*
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **ip-packet-length-list**, **lt**, or **range**.
Introduced	19.5.R1
Platforms	All

src-route-option *boolean*

Synopsis	Match based on presence of source route option
Context	**configure** filter ip-filter *filter-name* entry *number* match src-route-option *boolean*
Tree	src-route-option
Introduced	16.0.R1
Platforms	All

tcp-established

Synopsis	Use ACK or RST status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-established
Tree	tcp-established
Description	When configured to **true**, a match occurs when the ACK or the RST TCP flag bit is set in the TCP header of an IP packet.
Notes	The following elements are part of a choice: **tcp-established** or **tcp-flags**.
Introduced	22.10.R1
Platforms	All

tcp-flags

Synopsis	Enter the **tcp-flags** context
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags
Tree	tcp-flags
Description	Commands in this context configure the use of TCP flags as the IP filter match.
Notes	The following elements are part of a choice: **tcp-established** or **tcp-flags**.
Introduced	16.0.R1
Platforms	All

ack *boolean*

Synopsis	Use ACK TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags ack *boolean*
Tree	ack

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, a match occurs when the ACK TCP flag bit, defined in RFC 793, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ACK TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

cwr *boolean*

Synopsis	Use CWR TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags cwr *boolean*
Tree	cwr
Description	When configured to **true**, a match occurs when the Congestion Window Reduced (CWR) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the CWR TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

ece *boolean*

Synopsis	Use ECE TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags ece *boolean*
Tree	ece
Description	When configured to **true**, a match occurs when the ECN-Echo (ECE) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ECE TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

fin *boolean*

Synopsis	Use FIN TCP bit status in TCP header as match criterion

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags fin *boolean*
Tree	fin
Description	When configured to **true**, a match occurs when the FIN TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the FIN TCP flag bit, defined in RFC 793, is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

ns *boolean*

Synopsis	Use NS TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags ns *boolean*
Tree	ns
Description	When configured to **true**, a match occurs when the Nonce Sum (NS) TCP flag bit, defined in RFC 3540, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the NS TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

psh *boolean*

Synopsis	Use PSH TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags psh *boolean*
Tree	psh
Description	When configured to **true**, a match occurs when the Push (PSH) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the Push (PSH) TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

rst *boolean*

Synopsis	Use RST TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags rst *boolean*
Tree	rst
Description	When configured to **true**, a match occurs when the RST TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the RST TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

syn *boolean*

Synopsis	Use SYN TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags syn *boolean*
Tree	syn
Description	When configured to **true**, a match occurs when the Synchronize (SYN) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the SYN TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

urg *boolean*

Synopsis	Use URG TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags urg *boolean*
Tree	urg
Description	When configured to **true**, a match occurs when the Urgent (URG) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the URG TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1

Platforms	All

pbr-down-action-override *keyword*

Synopsis	Action when PBR or PBF target for this entry is not available
Context	**configure** filter ip-filter *filter-name* entry *number* pbr-down-action-override *keyword*
Tree	pbr-down-action-override
Options	drop, forward, filter-default-action
Introduced	16.0.R1
Platforms	All

sample-profile *reference*

Synopsis	Cflowd sample profile ID to match packets
Context	**configure** filter ip-filter *filter-name* entry *number* sample-profile *reference*
Tree	sample-profile
Description	This command allows traffic matching an IPv4 or IPv6 filter to be sampled for cflowd processing using a specific sample profile ID. This option is only compatible if the associated interface is configured for interface-based sampling and is only supported for ingress sampling. An IP filter can only specify a single alternate sample profile ID for cflowd sampling, but the ID can be used in multiple entries.
Reference	**configure** cflowd sample-profile *number*
Introduced	20.10.R1
Platforms	All

sticky-dest *(number | keyword)*

Synopsis	Time before action with available PBR or PBF destination and highest priority
Context	**configure** filter ip-filter *filter-name* entry *number* sticky-dest *(number | keyword)*
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	16.0.R1
Platforms	All

filter-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP filter ID
Context	**configure** filter ip-filter *filter-name* filter-id *number*
Tree	filter-id
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

scope *keyword*

Synopsis	Scope of the filter definition
Context	**configure** filter ip-filter *filter-name* scope *keyword*
Tree	scope
Description	This command configures the filter policy scope. If the scope of the policy is **template** and is applied to one or more services or network interfaces, the scope cannot be changed.
Options	exclusive, template, embedded, system, cpm
Default	template
Introduced	16.0.R1
Platforms	All

shared-policer *boolean*

Synopsis	Share policer among active ports in the LAG
Context	**configure** filter ip-filter *filter-name* shared-policer *boolean*
Tree	shared-policer
Description	When configured to **true**, and when the filter policy is configured on a LAG endpoint, the system programs the policer rates in the filter policy per line card FP of the LAG based on the number of active ports in the LAG for each FP. When configured to **false**, and when the filter policy is configured on a LAG endpoint, the system programs the same policer rate on each line card FP of the LAG.
Default	false

code *number*

Synopsis	ICMPv6 code value to match
Context	**configure** filter ipv6-exception *filter-name* entry *number* match icmp code *number*
Tree	code
Description	This command specifies the ICMPv6 code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	20.10.R1
Platforms	VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

type *number*

Synopsis	Text description
Context	**configure** filter ipv6-filter *filter-name* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	All

embed

Synopsis	Enter the **embed** context
Context	**configure** filter ipv6-filter *filter-name* embed
Tree	embed
Description	Commands in this context configure filter policy embedding. A previously defined IPv6 embedded filter policy or Hybrid OpenFlow switch instance can be embedded into an exclusive, template, or system filter policy at the specified offset value. Rules derived from BGP FlowSpec can also be embedded into template filter policies only.
Introduced	16.0.R1
Platforms	All

filter [name] *reference* offset *number*

Synopsis	Enter the **filter** list instance
Context	**configure** filter ipv6-filter *filter-name* embed filter *reference* offset *number*
Tree	filter
Description	Commands in this context embed a previously defined IPv6 filter policy into the filter policy at the specified offset value.
Introduced	16.0.R1
Platforms	All

[**name**] *reference*

Synopsis	IPv6 policy to be embedded in the filter

String length	1 to 64
Introduced	16.0.R1
Platforms	All

vprn *reference*

Synopsis	Routing context used for route lookup
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward vprn-target vprn *reference*
Tree	vprn
Reference	**configure** service vprn *service-name*
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

http-redirect

Synopsis	Enable the **http-redirect** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action http-redirect
Tree	http-redirect
Description	Commands in this context configure the filter entry action for HTTP redirection.
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, **ignore-match**, **nat**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

allow-override *boolean*

Synopsis	Override the HTTP redirect URL by a RADIUS VSA
Context	**configure** filter ipv6-filter *filter-name* entry *number* action http-redirect allow-override *boolean*
Tree	allow-override
Description	This command specifies whether the RADIUS VSA can override the configured HTTP redirect URL for this filter entry. When configured to **true**, the RADIUS VSA can override the HTTP redirect URL. When configured to **false**, the HTTP redirect URL is not overriden.

mbs *(number | keyword)*

Synopsis	Maximum burst size
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit mbs *(number | keyword)*
Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pattern

Synopsis	Enable the **pattern** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pattern
Tree	pattern
Introduced	16.0.R4
Platforms	All

expression *hex-string*

Synopsis	Pattern expression to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pattern expression *hex-string*
Tree	expression
String length	3 to 18
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

mask *hex-string*

Synopsis	Mask for the pattern expression

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pattern mask *hex-string*
Tree	mask
String length	3 to 18
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

offset-type *keyword*

Synopsis	Starting point reference for offset value of pattern
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pattern offset-type *keyword*
Tree	offset-type
Options	layer-3, layer-4, data, dns-qtype
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

offset-value *number*

Synopsis	Offset value for the pattern expression
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pattern offset-value *number*
Tree	offset-value
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

payload-length

Synopsis	Enable the **payload-length** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length
Tree	payload-length

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **hop-limit** or **payload-length**.
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

gt *number*

Synopsis	Greater than match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length lt *number*
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length range
Tree	range
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the length range
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length range end *number*
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start *number*

Synopsis	Lower bound of the length range
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

pir *(number | keyword)*

Synopsis	Peak information rate

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pir *(number | keyword)*
Tree	pir
Range	0 to 2000000000
Units	kilobps
Options	max
Notes	The following elements are part of a mandatory choice: **pir**, **policer**, or **pps-pir**.
Introduced	16.0.R1
Platforms	All

policer *named-item*

Synopsis	Policer name to use for rate limiting traffic
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit policer *named-item*
Tree	policer
String length	1 to 32
Notes	The following elements are part of a mandatory choice: **pir**, **policer**, or **pps-pir**.
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pps-pir *(number | keyword)*

Synopsis	Peak information rate
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pps-pir *(number | keyword)*
Tree	pps-pir
Range	0 to 100000000
Units	packets per second
Options	max
Notes	The following elements are part of a mandatory choice: **pir**, **policer**, or **pps-pir**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

remark

Synopsis	Enable the **remark** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action remark
Tree	remark
Introduced	16.0.R1
Platforms	All

dscp *keyword*

Synopsis	Destination SAP
Context	**configure** filter ipv6-filter *filter-name* entry *number* action remark dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

secondary

Synopsis	Enable the **secondary** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary
Tree	secondary
Introduced	16.0.R1
Platforms	All

forward

Synopsis	Enter the **forward** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward
Tree	forward
Notes	This element is mandatory.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

next-hop

Synopsis	Enable the **next-hop** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward next-hop
Tree	next-hop
Notes	The following elements are part of a choice: **next-hop**, **sap**, **sdp**, or **vprn-target**.
Introduced	16.0.R1
Platforms	All

nh-ip-vrf

Synopsis	Enable the **nh-ip-vrf** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward next-hop nh-ip-vrf
Tree	nh-ip-vrf
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

address *ipv6-address*

Synopsis	IPv6 address of next hop to forward matching packets
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward next-hop nh-ip-vrf address *ipv6-address*
Tree	address
Description	This command specifies the IPv6 address of a direct or indirect next hop to which matching packets are forwarded.
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

indirect *boolean*

Synopsis	Allow next hop to be indirectly reachable
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward next-hop nh-ip-vrf indirect *boolean*
Tree	indirect
Default	false
Introduced	16.0.R1
Platforms	All

router-instance *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context for route lookup for forwarding packets
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward next-hop nh-ip-vrf router-instance *string*
Tree	router-instance
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

sap

Synopsis	Enable the **sap** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward sap
Tree	sap
Notes	The following elements are part of a choice: **next-hop**, **sap**, **sdp**, or **vprn-target**.
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sap-id *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SAP ID used to forward packets matching the entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward sap sap-id *reference*
Tree	sap-id
Reference	**configure** service vpls *service-name* sap *sap*
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls *reference*

Synopsis	VPLS the sdp-bind-id belongs to
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward sap vpls *reference*
Tree	vpls
Reference	**configure** service vpls *service-name*
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

sdp

Synopsis	Enable the **sdp** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward sdp
Tree	sdp
Notes	The following elements are part of a choice: **next-hop**, **sap**, **sdp**, or **vprn-target**.
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sdp-bind-id *sdp-bind-id*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPLS SDP bind ID used to forward matching packets
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward sdp sdp-bind-id *sdp-bind-id*
Tree	sdp-bind-id
String length	3 to 16
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls *reference*

Synopsis	VPLS associated with the SDP
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward sdp vpls *reference*
Tree	vpls
Reference	**configure** service vpls *service-name*
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vprn-target

Synopsis	Enable the **vprn-target** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward vprn-target
Tree	vprn-target
Notes	The following elements are part of a choice: **next-hop**, **sap**, **sdp**, or **vprn-target**.
Introduced	21.7.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

adv-prefix *ipv6-prefix*

Synopsis	Advertised IP prefix for the target destination
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward vprn-target adv-prefix *ipv6-prefix*
Tree	adv-prefix
Introduced	21.7.R1
Platforms	All

bgp-nh *ipv4-address*

Synopsis	Target BGP next hop IP address
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward vprn-target bgp-nh *ipv4-address*
Tree	bgp-nh
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	All

lsp *named-item-64*

Synopsis	LSP that is specified to forward a packet matching this entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward vprn-target lsp *named-item-64*
Tree	lsp
String length	1 to 64
Introduced	21.7.R1
Platforms	All

vprn *reference*

Synopsis	Routing context used for route lookup
Context	**configure** filter ipv6-filter *filter-name* entry *number* action secondary forward vprn-target vprn *reference*
Tree	vprn
Reference	**configure** service vprn *service-name*

Default	true
Introduced	16.0.R1
Platforms	All

log *reference*

Synopsis	Log that is used for packets matching this entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* log *reference*
Tree	log
Reference	**configure** filter log *number*
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enter the **match** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match
Tree	match
Description	Commands in this context provide match criteria for the filter entry. When the match criteria are satisfied, the action associated with the match criteria is executed.
Introduced	16.0.R1
Platforms	All

destination-class *number*

Synopsis	Destination class as a match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match destination-class *number*
Tree	destination-class
Description	This command configures the BGP destination class value as a match criterion. Filtering egress traffic on the destination class requires the **destination-class-lookup** command (under the **ingress** context for the service interface) to be enabled (set to **true**).
Range	1 to 255
Introduced	20.7.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dscp *keyword*

Synopsis	DSCP used as an IP filter match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-ip
Tree	dst-ip
Description	Commands in this context configure a destination address range that is used by filter policy match criteria.
Notes	The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).
Introduced	16.0.R1
Platforms	All

address *(ipv6-prefix-with-host-bits | ipv6-address)*

Synopsis	IPv6 address used as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-ip address *(ipv6-prefix-with-host-bits | ipv6-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	All

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-ip ipv6-prefix-list *reference*
Tree	ipv6-prefix-list
Reference	**configure** filter match-list ipv6-prefix-list *named-item*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	All

mask *ipv6-address*

Synopsis	IPv6 address mask used as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-ip mask *ipv6-address*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	All

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port
Tree	dst-port
Description	Commands in this context configure match criteria for the destination port.
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact value as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

gt *number*

Synopsis	Greater than value as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than value as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port lt *number*
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the **range** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the port range
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port range end *number*
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start *number*

Synopsis	Lower bound of the port range
Context	**configure** filter ipv6-filter *filter-name* entry *number* match dst-port range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

extension-header

Synopsis	Enter the **extension-header** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header
Tree	extension-header
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ah *boolean*

Synopsis	Match a packet as per the existence of an AH Extension Header
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header ah *boolean*
Tree	ah
Introduced	16.0.R1
Platforms	All

esp *boolean*

Synopsis	Match a packet as per the existence of an Encapsulation security payload extension header
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header esp *boolean*
Tree	esp
Introduced	16.0.R1
Platforms	All

hop-by-hop *boolean*

Synopsis	Match on Hop-by-Hop Options Extension Header existence
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header hop-by-hop *boolean*
Tree	hop-by-hop
Introduced	16.0.R2
Platforms	All

routing-type0 *boolean*

Synopsis	Match a packet as per the existence of a routing Extension Header
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header routing-type0 *boolean*
Tree	routing-type0
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

routing-type4 *boolean*

Synopsis	Match on routing extension header type 4 existence
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header routing-type4 *boolean*
Tree	routing-type4
Description	When configured to **true**, the router filters IPv6 packets that contain a routing extension header type 4 (SRH). When configured to **false**, the router filters IPv6 packets that do not contain a routing extension header type 4 (SRH).
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

flow-label

Synopsis	Enable the **flow-label** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match flow-label
Tree	flow-label
Description	Commands in this context configure the flow label and optional mask match condition.
Introduced	16.0.R1
Platforms	All

mask *number*

Synopsis	Flow label mask for the IPv6 filter entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* match flow-label mask *number*
Tree	mask
Description	This command specifies the IPv6 address mask for the flow label filter entry. This value can be expressed in decimal, hexadecimal, or binary format.
Range	1 to 1048575
Default	1048575
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

value *number*

Synopsis	Flow label as a match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match flow-label value *number*
Tree	value
Description	This command specifies the flow label to use as a match criterion. This value can be expressed in decimal, hexadecimal, or binary format.
Range	0 to 1048575
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

fragment *keyword*

Synopsis	Match criterion for fragmented packages
Context	**configure** filter ipv6-filter *filter-name* entry *number* match fragment *keyword*
Tree	fragment
Options	false, true, first-only, non-first-only
Introduced	16.0.R1
Platforms	All

hop-limit

Synopsis	Enable the **hop-limit** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match hop-limit
Tree	hop-limit
Introduced	21.10.R1
Platforms	All

Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	All

icmp

Synopsis	Enter the **icmp** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match icmp
Tree	icmp
Description	Commands in this context configure ICMP values to use as IPv6 filter match criteria.
Introduced	16.0.R1
Platforms	All

code *number*

Synopsis	ICMPv6 code value to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* match icmp code *number*
Tree	code

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the ICMPv6 code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

type *number*

Synopsis	ICMPv6 type value to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMPv6 type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

ip

Synopsis	Scope of the filter definition
Context	**configure** filter ipv6-filter *filter-name* scope *keyword*
Tree	scope
Description	This command configures the filter policy scope. If the scope of the policy is **template** and is applied to one or more services or network interfaces, the scope cannot be changed.
Options	exclusive, template, embedded, system, cpm
Default	template
Introduced	16.0.R1
Platforms	All

shared-policer *boolean*

Synopsis	Share policer among active ports in the LAG
Context	**configure** filter ipv6-filter *filter-name* shared-policer *boolean*
Tree	shared-policer

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, and when the filter policy is configured on a LAG endpoint, the system programs the policer rates in the filter policy per line card FP of the LAG based on the number of active ports in the LAG for each FP. When configured to **false**, and when the filter policy is configured on a LAG endpoint, the system programs the same policer rate on each line card FP of the LAG.
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

subscriber-mgmt

Synopsis	Enter the **subscriber-mgmt** context
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt
Tree	subscriber-mgmt
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-specific-entry

Synopsis	Enter the **host-specific-entry** context
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt host-specific-entry
Tree	host-specific-entry
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

credit-control

Synopsis	Enter the **credit-control** context
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt host-specific-entry credit-control
Tree	credit-control
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the **range** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt host-specific-entry credit-control range
Tree	range
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of range for credit control filter entries
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt host-specific-entry credit-control range end *number*
Tree	end
Range	1 to 2097151
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	Lower bound of range for credit control filter entries
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt host-specific-entry credit-control range start *number*
Tree	start
Range	1 to 2097151
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

filter-rule

Synopsis	Enter the **filter-rule** context
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt host-specific-entry filter-rule
Tree	filter-rule
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt host-specific-entry filter-rule range
Tree	range
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of range for inserting filter rule entries
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt host-specific-entry filter-rule range end *number*
Tree	end
Range	1 to 2097151
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	Lower bound of range for inserting filter rule entries
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt host-specific-entry filter-rule range start *number*
Tree	start
Range	1 to 2097151
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

watermark

Synopsis	Enter the **watermark** context
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt host-specific-entry watermark
Tree	watermark

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis	High watermark for host-specific entries, to raise a table full alarm
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt host-specific-entry watermark high *number*
Tree	high
Range	0 to 100
Default	95
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

low *number*

Synopsis	Low watermark for host-specific entries, to clear a table full alarm
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt host-specific-entry watermark low *number*
Tree	low
Range	0 to 100
Default	90
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shared-entry

Synopsis	Enter the **shared-entry** context
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt shared-entry
Tree	shared-entry
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

filter-rule

Synopsis	Enter the **filter-rule** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt shared-entry filter-rule
Tree	filter-rule
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt shared-entry filter-rule range
Tree	range
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of range for inserting shared host rules
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt shared-entry filter-rule range end *number*
Tree	end
Range	1 to 2097151
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	Lower bound of range for inserting shared host rules
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt shared-entry filter-rule range start *number*
Tree	start
Range	1 to 2097151
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pcc-rule

Synopsis	Enter the **pcc-rule** context
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt shared-entry pcc-rule
Tree	pcc-rule
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt shared-entry pcc-rule range
Tree	range
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of the range for PCC rule filter entries
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt shared-entry pcc-rule range end *number*
Tree	end
Range	1 to 2097151
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	Lower bound of the range for PCC rule filter entries
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt shared-entry pcc-rule range start *number*
Tree	start
Range	1 to 2097151
Notes	This element is mandatory.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

watermark

Synopsis	Enable the **watermark** context
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt shared-entry watermark
Tree	watermark
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis	Limit of RADIUS shared filters before generating high watermark notification
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt shared-entry watermark high *number*
Tree	high
Range	1 to 8000
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

low *number*

Synopsis	Limit of RADIUS or Diameter shared filters before clearing high watermark notification
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt shared-entry watermark low *number*
Tree	low
Range	0 to 7999
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Set of match criteria for the filter policy

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* type *keyword*
Tree	type
Description	This command configures the filter policy type that defines the list of match criteria supported in a filter policy.
Options	normal, src-mac, packet-length, destination-class
Default	normal
Introduced	19.5.R1
Platforms	All

log [log-id] *number*

Synopsis	Enter the **log** list instance
Context	**configure** filter log *number*
Tree	log
Introduced	16.0.R1
Platforms	All

[**log-id**] *number*

Synopsis	Filter log identifier
Context	**configure** filter log *number*
Tree	log
Range	101 to 199
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of filter logging
Context	**configure** filter log *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

description *description-or-empty*

Synopsis	Text description
Context	**configure** filter log *number* description *description-or-empty*
Tree	description
String length	0 to 80
Introduced	16.0.R1
Platforms	All

destination

Synopsis	Enter the **destination** context
Context	**configure** filter log *number* destination
Tree	destination
Introduced	16.0.R1
Platforms	All

memory

Synopsis	Enter the **memory** context
Context	**configure** filter log *number* destination memory
Tree	memory
Notes	The following elements are part of a choice: **memory** or **syslog**.
Introduced	16.0.R1
Platforms	All

max-entries *number*

Synopsis	Maximum number of memory entries that the log can store
Context	**configure** filter log *number* destination memory max-entries *number*
Tree	max-entries
Range	1 to 50000
Default	1000

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

stop-on-full *boolean*

Synopsis	Stop logging when maximum number of memory entries is reached or wrap-around is used
Context	**configure** filter log *number* destination memory stop-on-full *boolean*
Tree	stop-on-full
Default	false
Introduced	16.0.R1
Platforms	All

syslog

Synopsis	Enter the **syslog** context
Context	**configure** filter log *number* destination syslog
Tree	syslog
Notes	The following elements are part of a choice: **memory** or **syslog**.
Introduced	16.0.R1
Platforms	All

name *reference*

Synopsis	Syslog server definition ID
Context	**configure** filter log *number* destination syslog name *reference*
Tree	name
Reference	**configure** log syslog *log-syslog-name*
Introduced	21.2.R1
Platforms	All

summary

Synopsis	Enter the **summary** context
Context	**configure** filter log *number* destination syslog summary

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	summary
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of filter log summarization
Context	**configure** filter log *number* destination syslog summary admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

summary-crit *keyword*

Synopsis	Summary for filter log entries
Context	**configure** filter log *number* destination syslog summary summary-crit *keyword*
Tree	summary-crit
Options	src-addr, dst-addr
Default	src-addr
Introduced	16.0.R1
Platforms	All

mac-filter [filter-name] *filter-name*

Synopsis	Enter the **mac-filter** list instance
Context	**configure** filter mac-filter *filter-name*
Tree	mac-filter
Introduced	16.0.R1
Platforms	All

[**filter-name**] *filter-name*

Synopsis	Filter name

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter mac-filter *filter-name*
Tree	mac-filter
String length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

default-action *keyword*

Synopsis	Action for packets that do not match any entry
Context	**configure** filter mac-filter *filter-name* default-action *keyword*
Tree	default-action
Options	drop, accept
Default	drop
Introduced	16.0.R1
Platforms	All

description *description*

Synopsis	Text description
Context	**configure** filter mac-filter *filter-name* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	All

embed

Synopsis	Enter the **embed** context
Context	**configure** filter mac-filter *filter-name* embed
Tree	embed
Description	Commands in this context embed a previously defined MAC embedded filter policy or Hybrid OpenFlow switch instance into an exclusive, template, or system filter policy at the specified offset value. Rules derived from the BGP FlowSpec can also be embedded into template filter policies only.
Introduced	16.0.R1

© 2025 Nokia.

Platforms	All

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** filter mac-filter *filter-name* entry *number*
Tree	entry
Introduced	16.0.R1
Platforms	All

[**entry-id**] *number*

Synopsis	ID for a match criteria and the corresponding action
Context	**configure** filter mac-filter *filter-name* entry *number*
Tree	entry
Range	1 to 2097151
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

action

Synopsis	Enable the **action** context
Context	**configure** filter mac-filter *filter-name* entry *number* action
Tree	action
Introduced	16.0.R1
Platforms	All

accept

Synopsis	Accept regular routing to forward a matching packet
Context	**configure** filter mac-filter *filter-name* entry *number* action accept
Tree	accept
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, or **ignore-match**.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

drop

Synopsis	Drop a packet matching this entry
Context	**configure** filter mac-filter *filter-name* entry *number* action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, or **ignore-match**.
Introduced	16.0.R1
Platforms	All

forward

Synopsis	Enter the **forward** context
Context	**configure** filter mac-filter *filter-name* entry *number* action forward
Tree	forward
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, or **ignore-match**.
Introduced	16.0.R1
Platforms	All

esi-l2

Synopsis	Enable the **esi-l2** context
Context	**configure** filter mac-filter *filter-name* entry *number* action forward esi-l2
Tree	esi-l2
Notes	The following elements are part of a choice: **esi-l2**, **sap**, or **sdp**.
Introduced	16.0.R1
Platforms	All

esi-value *ethernet-segment-id*

Synopsis	ESI of the first ESI-identified appliance

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter mac-filter *filter-name* entry *number* action forward esi-l2 esi-value *ethernet-segment-id*
Tree	esi-value
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

vpls *reference*

Synopsis	VPLS service name
Context	**configure** filter mac-filter *filter-name* entry *number* action forward esi-l2 vpls *reference*
Tree	vpls
Reference	**configure** service vpls *service-name*
Notes	This element is mandatory.
Introduced	16.0.R3
Platforms	All

sap

Synopsis	Enable the **sap** context
Context	**configure** filter mac-filter *filter-name* entry *number* action forward sap
Tree	sap
Notes	The following elements are part of a choice: **esi-l2**, **sap**, or **sdp**.
Introduced	16.0.R1
Platforms	All

sap-id *reference*

Synopsis	VPLS Ethernet SAP ID used to forward matching packets
Context	**configure** filter mac-filter *filter-name* entry *number* action forward sap sap-id *reference*
Tree	sap-id
Reference	**configure** service vpls *service-name* sap *sap*
Notes	This element is mandatory.

mask *mac-address*

Synopsis	MAC address mask as the match criterion
Context	**configure** filter mac-filter *filter-name* entry *number* match dst-mac mask *mac-address*
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1
Platforms	All

etype *etype-value*

Synopsis	Ethernet type
Context	**configure** filter mac-filter *filter-name* entry *number* match etype *etype-value*
Tree	etype
String length	5 to 6
Introduced	16.0.R1
Platforms	All

frame-type *keyword*

Synopsis	MAC frame as match criteria
Context	**configure** filter mac-filter *filter-name* entry *number* match frame-type *keyword*
Tree	frame-type
Options	802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii
Introduced	16.0.R1
Platforms	All

inner-tag

Synopsis	Enable the **inner-tag** context
Context	**configure** filter mac-filter *filter-name* entry *number* match inner-tag
Tree	inner-tag
Introduced	16.0.R1
Platforms	All

mask *number*

Synopsis	Mask to VID of the inner VLAN tag before comparing it with the inner-tag or outer-tag value
Context	**configure** filter mac-filter *filter-name* entry *number* match inner-tag mask *number*
Tree	mask
Range	1 to 4095
Default	4095
Introduced	16.0.R1
Platforms	All

tag *number*

Synopsis	Matching value against VID of the second or first VLAN tag in the packet carried transparently
Context	**configure** filter mac-filter *filter-name* entry *number* match inner-tag tag *number*
Tree	tag
Range	0 to 4095
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

isid

Synopsis	Enter the **isid** context
Context	**configure** filter mac-filter *filter-name* entry *number* match isid
Tree	isid
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** filter mac-filter *filter-name* entry *number* match isid range
Tree	range
Notes	The following elements are part of a choice: **range** or **value**.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the ISID range
Context	**configure** filter mac-filter *filter-name* entry *number* match isid range end *number*
Tree	end
Range	0 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start *number*

Synopsis	Lower bound of the ISID range
Context	**configure** filter mac-filter *filter-name* entry *number* match isid range start *number*
Tree	start
Range	0 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

value *number*

Synopsis	Lowest value of 24-bit service instance identifier for the service matching this entry
Context	**configure** filter mac-filter *filter-name* entry *number* match isid value *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	value
Range	0 to 16777215
Notes	The following elements are part of a choice: **range** or **value**.
Introduced	16.0.R1
Platforms	All

llc-dsap

Synopsis	Enable the **llc-dsap** context
Context	**configure** filter mac-filter *filter-name* entry *number* match llc-dsap
Tree	llc-dsap
Introduced	16.0.R1
Platforms	All

dsap *number*

Synopsis	DSAP value
Context	**configure** filter mac-filter *filter-name* entry *number* match llc-dsap dsap *number*
Tree	dsap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

mask *number*

Synopsis	Destination SAP mask
Context	**configure** filter mac-filter *filter-name* entry *number* match llc-dsap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.

llc-ssap

Synopsis	Enable the **llc-ssap** context
Context	**configure** filter mac-filter *filter-name* entry *number* match llc-ssap
Tree	llc-ssap
Introduced	16.0.R1
Platforms	All

mask *number*

Synopsis	Source SAP mask
Context	**configure** filter mac-filter *filter-name* entry *number* match llc-ssap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

ssap *number*

Synopsis	Source or destination SAP value
Context	**configure** filter mac-filter *filter-name* entry *number* match llc-ssap ssap *number*
Tree	ssap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

outer-tag

Synopsis	Enable the **outer-tag** context
Context	**configure** filter mac-filter *filter-name* entry *number* match outer-tag
Tree	outer-tag
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mask *number*

Synopsis	Mask to VID of the inner VLAN tag before comparing it with the inner-tag or outer-tag value
Context	**configure** filter mac-filter *filter-name* entry *number* match outer-tag mask *number*
Tree	mask
Range	1 to 4095
Default	4095
Introduced	16.0.R1
Platforms	All

tag *number*

Synopsis	Matching value against VID of the second or first VLAN tag in the packet carried transparently
Context	**configure** filter mac-filter *filter-name* entry *number* match outer-tag tag *number*
Tree	tag
Range	0 to 4095
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

snap-oui *keyword*

Synopsis	Parameter snap-oui as a MAC filter match criteria
Context	**configure** filter mac-filter *filter-name* entry *number* match snap-oui *keyword*
Tree	snap-oui
Options	zero, non-zero
Introduced	16.0.R1
Platforms	All

snap-pid *number*

Synopsis	Parameter snap-pid as a MAC filter match criteria
Context	**configure** filter mac-filter *filter-name* entry *number* match snap-pid *number*
Tree	snap-pid

© 2025 Nokia.

Range	0 to 65535
Introduced	16.0.R1
Platforms	All

src-mac

Synopsis	Enable the **src-mac** context
Context	**configure** filter mac-filter *filter-name* entry *number* match src-mac
Tree	src-mac
Introduced	16.0.R1
Platforms	All

address *mac-address*

Synopsis	MAC address used as the match criterion
Context	**configure** filter mac-filter *filter-name* entry *number* match src-mac address *mac-address*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

mask *mac-address*

Synopsis	MAC address mask as the match criterion
Context	**configure** filter mac-filter *filter-name* entry *number* match src-mac mask *mac-address*
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1
Platforms	All

pbr-down-action-override *keyword*

Synopsis	Action when PBR or PBF target for this entry is not available
Context	**configure** filter mac-filter *filter-name* entry *number* pbr-down-action-override *keyword*
Tree	pbr-down-action-override

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	drop, forward, filter-default-action
Introduced	16.0.R1
Platforms	All

sticky-dest *(number | keyword)*

Synopsis	Time before action with available PBR or PBF destination and highest priority
Context	**configure** filter mac-filter *filter-name* entry *number* sticky-dest *(number | keyword)*
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	16.0.R1
Platforms	All

filter-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MAC filter ID
Context	**configure** filter mac-filter *filter-name* filter-id *number*
Tree	filter-id
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

scope *keyword*

Synopsis	Filter policy scope
Context	**configure** filter mac-filter *filter-name* scope *keyword*
Tree	scope
Options	exclusive, template, embedded, system, cpm
Default	template
Introduced	16.0.R1

Platforms	All

type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MAC filter policy
Context	**configure** filter mac-filter *filter-name* type *keyword*
Tree	type
Options	normal, isid, vid
Default	normal
Introduced	16.0.R1
Platforms	All

match-list

Synopsis	Enter the **match-list** context
Context	**configure** filter match-list
Tree	match-list
Description	Commands in this context configure match lists to be used in filter policies (IOM/FP and CPM).
Introduced	16.0.R1
Platforms	All

ip-packet-length-list [packet-length-list-name] *named-item*

Synopsis	Enter the **ip-packet-length-list** list instance
Context	**configure** filter match-list ip-packet-length-list *named-item*
Tree	ip-packet-length-list
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**packet-length-list-name**] *named-item*

Synopsis	Name of the packet length list
Context	**configure** filter match-list ip-packet-length-list *named-item*
Tree	ip-packet-length-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *description*

Synopsis	Text description
Context	**configure** filter match-list ip-packet-length-list *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

packet-length [value] *number*

Synopsis	Add a list entry for **packet-length**
Context	**configure** filter match-list ip-packet-length-list *named-item* packet-length *number*
Tree	packet-length
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**value**] *number*

Synopsis	Packet length
Context	**configure** filter match-list ip-packet-length-list *named-item* packet-length *number*
Tree	packet-length
Range	0 to 65535
Notes	This element is part of a list key.
Introduced	24.3.R1

pir *number*

Synopsis	Peak information rate
Context	**configure** filter policer *named-item* pir *number*
Tree	pir
Range	0 to 2000000000
Units	kilobps
Notes	The following elements are part of a choice: (**mbs** and **pir**) or **pps-pir**.
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pps-pir *number*

Synopsis	Peak information rate
Context	**configure** filter policer *named-item* pps-pir *number*
Tree	pps-pir
Range	0 to 100000000
Units	packets per second
Notes	The following elements are part of a choice: (**mbs** and **pir**) or **pps-pir**.
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

scope *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Policer scope
Context	**configure** filter policer *named-item* scope *keyword*
Tree	scope
Description	This command configures the scope for the policer object. When the **system** scope is configured, it creates an instance of the policer for each direction immediately after the policer is configured and shares the instance with all filter entries that reference that policer name applied in the same direction.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	When the **filter** scope is configured, it configures the policer instance to be shared by rate-limit entries that are part of the same filter policy and are applied in the same direction.
Options	filter – Policer shared by entries in same filter policer system – Single policer shared by the system
Default	filter
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

redirect-policy [redirect-policy-name] *named-item*

Synopsis	Enter the **redirect-policy** list instance
Context	**configure** filter redirect-policy *named-item*
Tree	redirect-policy
Introduced	16.0.R1
Platforms	All

[**redirect-policy-name**] *named-item*

Synopsis	Redirect policy name
Context	**configure** filter redirect-policy *named-item*
Tree	redirect-policy
Description	This command specifies the redirect policy name. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes.
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the redirect policy
Context	**configure** filter redirect-policy *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	disable
Introduced	16.0.R1
Platforms	All

timeout *number*

Synopsis	Time required to receive a response from the far end host
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* ping-test timeout *number*
Tree	timeout
Range	1 to 60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

priority *number*

Synopsis	Priority for this destination
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* priority *number*
Tree	priority
Range	1 to 255
Default	100
Introduced	16.0.R1
Platforms	All

unicast-rt-test

Synopsis	Enable the **unicast-rt-test** context
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* unicast-rt-test
Tree	unicast-rt-test
Introduced	16.0.R1
Platforms	All

notify-dest-change *boolean*

Synopsis	Send notifications when the active destination changes
Context	**configure** filter redirect-policy *named-item* notify-dest-change *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	notify-dest-change
Description	When configured to **true**, notifications (such as Log and SNMP) are sent when the active destination of a redirect policy changes. No notification is sent when there are no more active destinations (as this scenario is covered by another notification). When configured to **false**, the notification generation is disabled.
Default	false
Introduced	16.0.R4
Platforms	All

router-instance *string*

Synopsis	Routing context to use for route lookup
Context	**configure** filter redirect-policy *named-item* router-instance *string*
Tree	router-instance
Introduced	16.0.R1
Platforms	All

sticky-dest *(number | keyword)*

Synopsis	Time required by system before applying the current best destination as active destination
Context	**configure** filter redirect-policy *named-item* sticky-dest *(number | keyword)*
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	16.0.R1
Platforms	All

redirect-policy-binding [binding-name] *named-item*

Synopsis	Enter the **redirect-policy-binding** list instance
Context	**configure** filter redirect-policy-binding *named-item*
Tree	redirect-policy-binding
Max. instances	16

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	All

[**binding-name**] *named-item*

Synopsis	Binding name
Context	**configure** filter redirect-policy-binding *named-item*
Tree	redirect-policy-binding
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

binding-operator *keyword*

Synopsis	Logical operator used to obtain the master test result
Context	**configure** filter redirect-policy-binding *named-item* binding-operator *keyword*
Tree	binding-operator
Description	This command configures the logical operator to use with the destinations' test results to obtain the master test result (the redirect policy binding test result).
Options	and, or
Default	and
Introduced	16.0.R4
Platforms	All

redirect-policy [redirect-policy-name] *reference*

4.18.1 fwd-path-ext command descriptions

fwd-path-ext

Synopsis	Enter the **fwd-path-ext** context
Context	**configure** fwd-path-ext
Tree	fwd-path-ext
Description	Commands in this context configure a Forwarding Path Extension (FPE). Some applications that rely on PXC functionality utilize FPE to simplify the configuration of these applications.
Introduced	16.0.R1
Platforms	All

fpe [fpe-id] *number*

Synopsis	Enter the **fpe** list instance
Context	**configure** fwd-path-ext fpe *number*
Tree	fpe
Description	Commands in this context configure the Forwarding Path Extension (FPE), which associates an application with a PXC (a paired set of PXC sub-ports or a paired set of PXC-based LAGs).
Introduced	16.0.R1
Platforms	All

[**fpe-id**] *number*

Synopsis	FPE ID
Context	**configure** fwd-path-ext fpe *number*
Tree	fpe
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

application

Synopsis	Enter the **application** context
Context	**configure** fwd-path-ext fpe *number* application
Tree	application
Description	Commands in this context configure the attributes of the FPE application.
Introduced	16.0.R1
Platforms	All

map-t *boolean*

Synopsis	Associates the MAP-T application with the FPE
Context	**configure** fwd-path-ext fpe *number* application map-t *boolean*
Tree	map-t
Description	When configured to **true**, the system associates the MAP-T application with the Forwarding Path Extension (FPE).
Default	false
Introduced	24.10.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

mvpn-umh-rate-monitoring *boolean*

Synopsis	MVPN UMH Rate Monitoring
Context	**configure** fwd-path-ext fpe *number* application mvpn-umh-rate-monitoring *boolean*
Tree	mvpn-umh-rate-monitoring
Default	false
Introduced	24.7.R1
Platforms	All

pw-port-extension

Synopsis	Enable the **pw-port-extension** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension
Tree	pw-port-extension

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the type of the cross-connect required to terminate an external tunnel to an anchored PW port. The system automatically builds the internal infrastructure required to perform the tunnel termination on a PW port. PW ports support the following types of tunnels: • GRE/MPLS PW with SDP of type MPLS or GRE • L2oGRE bridged Ethernet over GRE, where GRE protocol number is 0x6558
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface-a

Synopsis	Enter the **interface-a** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-a
Tree	interface-a
Description	Commands in this context configure the command options for network interface-a of the PW port extension FPE.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

qos

Synopsis	Enter the **qos** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-a qos
Tree	qos
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-a qos network-policy *reference*
Tree	network-policy
Reference	**configure** qos network *network-policy-name*
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

interface-b

Synopsis	Enter the **interface-b** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-b
Tree	interface-b
Description	Commands in this context configure command options for network interface-b of the PW port extension FPE.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

qos

Synopsis	Enter the **qos** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-b qos
Tree	qos
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-b qos network-policy *reference*
Tree	network-policy
Reference	**configure** qos network *network-policy-name*
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

srv6

Synopsis	Enable the **srv6** context
Context	**configure** fwd-path-ext fpe *number* application srv6
Tree	srv6
Description	Commands in this context configure the SRv6 FPE application used for origination or termination of SRv6 tunnels.
Introduced	21.5.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

interface-a

Synopsis	Enter the **interface-a** context
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-a
Tree	interface-a
Description	Commands in this context configure the parameters of network interface-a of the SRv6 FPE.
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-a qos
Tree	qos
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-a qos network-policy *reference*
Tree	network-policy
Reference	**configure** qos network *network-policy-name*
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

interface-b

Synopsis	Enter the **interface-b** context
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-b
Tree	interface-b

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the parameters of network interface-b of the SRv6 FPE.
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

mtu *number*

Synopsis	MTU size of SRv6 origination FPE interface-b
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-b mtu *number*
Tree	mtu
Description	This command configures the Maximum Transfer Unit (MTU) of interface-b of the SRv6 origination FPE. The MTU is used to check if an IPv4 service packet should be fragmented and if an IPv6 service packet should be dropped when tunneled over SRv6. The minimum value is the IPv6 minimum MTU value. The maximum value is set to the maximum Ethernet port MTU (9800) minus 14 bytes for Null Ethernet encapsulation.
Range	0 | 1280 to 9786
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-b qos
Tree	qos
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-b qos network-policy *reference*
Tree	network-policy
Reference	**configure** qos network *network-policy-name*
Introduced	21.5.R2

Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

routed-vpls *boolean*

Synopsis	Enable support for R-VPLS on SRv6 origination FPEs
Context	**configure** fwd-path-ext fpe *number* application srv6 routed-vpls *boolean*
Tree	routed-vpls
Description	When configured to **true**, the router enables the creation of internal SDPs for handling R-VPLS traffic when SRv6 origination is configured for the specified FPE.
Default	false
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

type *keyword*

Synopsis	SRv6 FPE application type
Context	**configure** fwd-path-ext fpe *number* application srv6 type *keyword*
Tree	type
Description	This command specifies if the SRv6 FPE application is used for origination or termination of SRv6 tunnels. A dedicated SRv6 FPE is required for origination and termination of SRv6 tunnels on services and they cannot share the same FPE. A single FPE can be configured for SRv6 origination. One or more FPEs can be configured for SRv6 termination, where a termination SRv6 FPE is assigned one or more configured locators. Transit SRv6 routers do not require SRv6 FPEs.
Options	origination, termination
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

sub-mgmt-extension *boolean*

Synopsis	Enable FPE for subscrber management extensions
Context	**configure** fwd-path-ext fpe *number* application sub-mgmt-extension *boolean*
Tree	sub-mgmt-extension

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the FPE is used for subscriber management extensions. The FPE can be used for multiple subscriber management applications, but it cannot be used for other applications. When configured to **false**, the FPE is not used for subscriber management extensions.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vxlan

Synopsis	Enable the **vxlan** context
Context	**configure** fwd-path-ext fpe *number* application vxlan
Tree	vxlan
Introduced	22.2.R1
Platforms	All

router-instance *string*

Synopsis	Router instance for VXLAN termination
Context	**configure** fwd-path-ext fpe *number* application vxlan router-instance *string*
Tree	router-instance
Default	Base
Introduced	22.2.R1
Platforms	All

description *description*

multi-path

Synopsis	Enable the **multi-path** context
Context	**configure** fwd-path-ext fpe *number* multi-path
Tree	multi-path
Description	Commands in this context configure a multipath FPE that can contain multiple PXC ports or LAGs of PXC ports.
Notes	The following elements are part of a choice: **multi-path** or **path**.
Introduced	21.10.R1
Platforms	All

path [path-id] *number*

Synopsis	Enter the **path** list instance
Context	**configure** fwd-path-ext fpe *number* multi-path path *number*
Tree	path
Description	Commands in this context configure a multipath FPE forwarding path. A single path in a multipath FPE can contain a single PXC port or a LAG of PXC ports.
Introduced	21.10.R1
Platforms	All

[**path-id**] *number*

Synopsis	Multipath FPE forwarding path ID
Context	**configure** fwd-path-ext fpe *number* multi-path path *number*
Tree	path
Range	1 to 64
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

pxc *reference*

Synopsis	Dedicated PXC ID used by the FPE path
Context	**configure** fwd-path-ext fpe *number* multi-path path *number* pxc *reference*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	pxc
Reference	**configure** port-xc pxc *number*
Notes	The following elements are part of a choice: **pxc** or (**xc-lag-a** and **xc-lag-b**).
Introduced	21.10.R1
Platforms	All

xc-lag-a *reference*

Synopsis	PXC LAG identifier dedicated to the FPE path
Context	**configure** fwd-path-ext fpe *number* multi-path path *number* xc-lag-a *reference*
Tree	xc-lag-a
Description	This command specifies the LAG identifier associated with one side of the PXC. The operator can associate **xc-lag-a** with the LAG containing either subports.a or subports.b. The system does not enforce a match between **xc-lag-a** and the LAG ID containing subports.a.
Reference	**configure** lag *lag-interface*
Notes	The following elements are part of a choice: **pxc** or (**xc-lag-a** and **xc-lag-b**).
Introduced	21.10.R1
Platforms	All

xc-lag-b *reference*

Synopsis	PXC LAG identifier dedicated to the FPE path
Context	**configure** fwd-path-ext fpe *number* multi-path path *number* xc-lag-b *reference*
Tree	xc-lag-b
Description	This command specifies the LAG identifier associated with one side of the PXC. The operator can associate **xc-lag-b** with the LAG containing either subports.a or subports.b. The system does not enforce a match between **xc-lag-b** and the LAG ID containing subports.b.
Reference	**configure** lag *lag-interface*
Notes	The following elements are part of a choice: **pxc** or (**xc-lag-a** and **xc-lag-b**).
Introduced	21.10.R1
Platforms	All

xc-lag-b *reference*

Synopsis	PXC LAG identifier dedicated to the FPE path
Context	**configure** fwd-path-ext fpe *number* path xc-lag-b *reference*
Tree	xc-lag-b
Description	This command specifies the LAG identifier associated with one side of the PXC. The operator can associate **xc-lag-b** with the LAG containing either subports.a or subports.b. The system does not enforce a match between **xc-lag-b** and the LAG ID containing subports.b.
Reference	**configure** lag *lag-interface*
Notes	The following elements are part of a choice: **pxc** or (**xc-lag-a** and **xc-lag-b**).
Introduced	16.0.R4
Platforms	All

sdp-id-range

Synopsis	Enable the **sdp-id-range** context
Context	**configure** fwd-path-ext sdp-id-range
Tree	sdp-id-range
Description	Commands in this context configure the SDP ID range used by the FPE based PW port and VXLAN termination applications. Each configured FPE-based PW port is associated with two internal SDPs (one in each direction) whose IDs are allocated from the configured SDP ID range. When the FPE is associated with VXLAN termination, an internal SDP is allocated from the configured SDP ID range and is used for R-VPLS services that terminate VXLAN IPv6. A spoke SDP per VXLAN IPv6 R-VPLS service is created on that SDP for egress processing of the packets. The SDP ID range cannot be modified if any of its IDs are currently in use.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the SDP ID range
Context	**configure** fwd-path-ext sdp-id-range end *number*
Tree	end
Range	1 to 32767
Notes	This element is mandatory.

4.20.1 ipsec command descriptions

ipsec

Synopsis	Enter the **ipsec** context
Context	**configure** ipsec
Tree	ipsec
Description	Commands in this context configure Internet Protocol Security (IPsec) commands.
Introduced	16.0.R4
Platforms	All

cert-profile [name] *named-item*

Synopsis	Enter the **cert-profile** list instance
Context	**configure** ipsec cert-profile *named-item*
Tree	cert-profile
Description	Commands in this context configure the certificate profile.
Max. instances	10200
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Certificate profile name
Context	**configure** ipsec cert-profile *named-item*
Tree	cert-profile
String length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the certificate profile

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec cert-profile *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** ipsec cert-profile *named-item* entry *number*
Tree	entry
Description	Commands in this context configure the certificate profile entry.
Max. instances	8
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Certificate profile entry ID
Context	**configure** ipsec cert-profile *named-item* entry *number*
Tree	entry
Range	1 to 8
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert *pki-file-name*

Synopsis	File name of the imported certificate for the entry
Context	**configure** ipsec cert-profile *named-item* entry *number* cert *pki-file-name*
Tree	cert
String length	1 to 95
Introduced	19.7.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

compare-chain-include *reference*

Synopsis	CA profile to include in the compare-chain
Context	**configure** ipsec cert-profile *named-item* entry *number* compare-chain-include *reference*
Tree	compare-chain-include
Description	This command specifies the Certificate Authority (CA) that needs to be included in the compare-chain for the entry. This configuration is required in instances where the configured root CA is cross-signed by another CA.
Reference	**configure** system security pki ca-profile *named-item*
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key *pki-file-name*

Synopsis	File name of the imported key used for authentication
Context	**configure** ipsec cert-profile *named-item* entry *number* key *pki-file-name*
Tree	key
String length	1 to 95
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rsa-signature *keyword*

Synopsis	Signature scheme for the RSA key
Context	**configure** ipsec cert-profile *named-item* entry *number* rsa-signature *keyword*
Tree	rsa-signature
Options	pkcs1, pss
Default	pkcs1
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

send-chain

Synopsis	Enter the **send-chain** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec cert-profile *named-item* entry *number* send-chain
Tree	send-chain
Description	Commands in this context allow the system to send additional CA certificates to the peer. These additional CA certificates must be in the certificate chain of the certificate specified by the **cert** command in the same entry.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ca-profile *reference*

Synopsis	CA certificate to send to the peer
Context	**configure** ipsec cert-profile *named-item* entry *number* send-chain ca-profile *reference*
Tree	ca-profile
Reference	**configure** system security pki ca-profile *named-item*
Max. instances	7
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-db [name] *named-item*

Synopsis	Enter the **client-db** list instance
Context	**configure** ipsec client-db *named-item*
Tree	client-db
Max. instances	1000
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	IPsec client database name
Context	**configure** ipsec client-db *named-item*
Tree	client-db
String length	1 to 32
Notes	This element is part of a list key.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the client database
Context	**configure** ipsec client-db *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client [id] *number*

Synopsis	Enter the **client** list instance
Context	**configure** ipsec client-db *named-item* client *number*
Tree	client
Description	Commands in this context configure the IPsec client entry in the client database.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Client ID
Context	**configure** ipsec client-db *named-item* client *number*
Tree	client
Range	1 to 8000
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

action *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec client action
Context	**configure** ipsec client-db *named-item* client *number* action *keyword*
Tree	action
Options	accept – Accept the IPsec client reject – Reject the IPsec client
Default	accept
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the database client
Context	**configure** ipsec client-db *named-item* client *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-name *named-item*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client name
Context	**configure** ipsec client-db *named-item* client *number* client-name *named-item*
Tree	client-name
String length	1 to 32

[**id**] *number*

Synopsis	IKE policy ID
Context	**configure** ipsec ike-policy *number*
Tree	ike-policy
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** ipsec ike-policy *number* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dpd

Synopsis	Enable the **dpd** context
Context	**configure** ipsec ike-policy *number* dpd
Tree	dpd
Description	Commands in this context configure the dead peer detection mechanism.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	DPD interval
Context	**configure** ipsec ike-policy *number* dpd interval *number*
Tree	interval
Description	This command specifies the DPD interval.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Because more time is necessary to determine if there is incoming traffic, the actual time needed to bring down the tunnel is larger than the DPD interval multiplied by the value configured for maximum retry attempts.

Range	10 to 300
Units	seconds
Default	30
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-retries *number*

Synopsis	Maximum number of retries before the tunnel is removed
Context	**configure** ipsec ike-policy *number* dpd max-retries *number*
Tree	max-retries
Range	2 to 5
Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reply-only *boolean*

Synopsis	Initiate DPD request for incoming ESP or IKE packets
Context	**configure** ipsec ike-policy *number* dpd reply-only *boolean*
Tree	reply-only
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-transform *reference*

Synopsis	IKE transform instance associated with the IKE policy
Context	**configure** ipsec ike-policy *number* ike-transform *reference*
Tree	ike-transform
Description	This command specifies the IKE transform instance associated with the IKE policy. If multiple IDs are specified, the system selects an IKE transform based on the proposal of the peer. If the system is a tunnel initiator, it uses the configured IKE transform to generate the SA payload.

© 2025 Nokia.

Context	**configure** ipsec ike-policy *number* ike-version-1 own-auth-method *keyword*
Tree	own-auth-method
Options	symmetric
Default	symmetric
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ph1-responder-delete-notify *boolean*

Synopsis	Send delete notification for IKEv1 phase 1 removal
Context	**configure** ipsec ike-policy *number* ike-version-1 ph1-responder-delete-notify *boolean*
Tree	ph1-responder-delete-notify
Description	When configured to **true**, a delete notification is sent to the peer when deleting an IKEv1 phase 1 SA for which it was the responder. When configured to **false**, no notification is sent.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-version-2

Synopsis	Enable the **ike-version-2** context
Context	**configure** ipsec ike-policy *number* ike-version-2
Tree	ike-version-2
Description	Commands in this context configure the IKE version 2 mode of operation that the IKE policy uses.
Notes	The following elements are part of a choice: **ike-version-1** or **ike-version-2**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

auth-method *keyword*

Synopsis	Authentication method used with the IKE policy
Context	**configure** ipsec ike-policy *number* ike-version-2 auth-method *keyword*
Tree	auth-method
Options	psk, cert, psk-radius, cert-radius, eap, auto-eap-radius, auto-eap
Default	psk
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auto-eap-method *keyword*

Synopsis	Authentication method used for the remote peer
Context	**configure** ipsec ike-policy *number* ike-version-2 auto-eap-method *keyword*
Tree	auto-eap-method
Description	This command specifies the behavior for the IKEv2 remote-access tunnel when the authentication method uses EAP or potentially another method to authenticate the remote peer.
Options	psk, cert, psk-or-cert
Default	cert
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ikev2-fragment

Synopsis	Enable the **ikev2-fragment** context
Context	**configure** ipsec ike-policy *number* ike-version-2 ikev2-fragment
Tree	ikev2-fragment
Description	Commands in this context configure IKEv2 protocol level fragmentation (RFC 7383).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu *number*

Synopsis	Maximum size of the IKEv2 packet

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ike-policy *number* ike-version-2 ikev2-fragment mtu *number*
Tree	mtu
Range	512 to 9000
Units	octets
Default	1500
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reassembly-timeout *number*

Synopsis	Timeout for reassembly of IKEv2 message fragments
Context	**configure** ipsec ike-policy *number* ike-version-2 ikev2-fragment reassembly-timeout *number*
Tree	reassembly-timeout
Range	1 to 5
Units	seconds
Default	2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

own-auth-method *keyword*

Synopsis	Authentication method used with IKE policy on own side
Context	**configure** ipsec ike-policy *number* ike-version-2 own-auth-method *keyword*
Tree	own-auth-method
Options	symmetric, psk, cert, eap-only
Default	symmetric
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

own-auto-eap-method *keyword*

Synopsis	Authentication method used on its own side
Context	**configure** ipsec ike-policy *number* ike-version-2 own-auto-eap-method *keyword*
Tree	own-auto-eap-method

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the behavior for the IKEv2 remote-access tunnel when the authentication method uses EAP or potentially another method to authenticate the peer.
Options	psk, cert
Default	cert
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppk-required *boolean*

Synopsis	Force the use of PPK
Context	**configure** ipsec ike-policy *number* ike-version-2 ppk-required *boolean*
Tree	ppk-required
Description	When configured to **true**, the router is forced to use PPKs for the IKEv2 key derivation process. When configured to **false**, PPK use is optional, and the router can fall back to derive keys without PPK.
Default	false
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

send-idr-after-eap-success *boolean*

Synopsis	Send IDr payload in last IKE authentication response
Context	**configure** ipsec ike-policy *number* ike-version-2 send-idr-after-eap-success *boolean*
Tree	send-idr-after-eap-success
Description	When configured to **true**, the Identification Responder (IDr) payload is added in the last IKE authentication response after an Extensible Authentication Protocol (EAP) Success packet is received. When configured to **false**, the IDr payload is not included in the last IKE.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-lifetime *number*

Synopsis	Lifetime of the Phase 2 IKE key
Context	**configure** ipsec ike-policy *number* ipsec-lifetime *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ipsec-lifetime
Range	1200 to 31536000
Units	seconds
Default	3600
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

limit-init-exchange

Synopsis	Enter the **limit-init-exchange** context
Context	**configure** ipsec ike-policy *number* limit-init-exchange
Tree	limit-init-exchange
Description	Commands in this context limit the number of ongoing IKEv2 initial exchanges per tunnel.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of limiting initial IKE exchanges
Context	**configure** ipsec ike-policy *number* limit-init-exchange admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reduced-max-exchange-timeout *(number | keyword)*

Synopsis	Maximum timeout for in-progress initial IKE exchange
Context	**configure** ipsec ike-policy *number* limit-init-exchange reduced-max-exchange-timeout *(number | keyword)*
Tree	reduced-max-exchange-timeout
Description	This command configures the maximum timeout for the in-progress initial IKE exchange. If a new IKEv2 IKE_SA_INIT request is received when there is an ongoing IKEv2 initial exchange from the same peer, the timeout value of the existing exchange is set to this

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	specified value. If the **none** option is configured for this command, the timeout value remains unchanged.
Range	2 to 60
Units	seconds
Options	none
Default	2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lockout

Synopsis	Enable the **lockout** context
Context	**configure** ipsec ike-policy *number* lockout
Tree	lockout
Description	Commands in this context specify the lockout mechanism for the IPsec tunnel. These commands apply only when the system acts as a tunnel responder.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block *(number | keyword)*

Synopsis	Time a client is blocked for failed authentications
Context	**configure** ipsec ike-policy *number* lockout block *(number | keyword)*
Tree	block
Description	This command configures the time the client is blocked if the number of failed authentications exceeds the configured value within the specified duration.
Range	1 to 1440
Units	minutes
Options	infinite
Default	10
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	Time interval for failed attempts threshold

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ike-policy *number* lockout duration *number*
Tree	duration
Description	This command specifies the time interval in which the configured failed authentication count must be exceeded to trigger a lockout.
Range	1 to 60
Units	minutes
Default	5
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

failed-attempts *number*

Synopsis	Maximum failed authentications allowed in the duration
Context	**configure** ipsec ike-policy *number* lockout failed-attempts *number*
Tree	failed-attempts
Range	1 to 64
Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-port-per-ip *number*

Synopsis	Maximum number of ports allowed under same IP address
Context	**configure** ipsec ike-policy *number* lockout max-port-per-ip *number*
Tree	max-port-per-ip
Description	This command configures the maximum number of ports allowed under the same IP address. When the threshold is exceeded and the client is locked out, all ports behind the IP address are blocked.
Range	1 to 32000
Default	16
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match-peer-id-to-cert *boolean*

Synopsis	Check IKE peer ID during certificate authentication

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ike-policy *number* match-peer-id-to-cert *boolean*
Tree	match-peer-id-to-cert
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-traversal

Synopsis	Enable the **nat-traversal** context
Context	**configure** ipsec ike-policy *number* nat-traversal
Tree	nat-traversal
Description	Commands in this context configure the Network Address Translation Traversal (NAT-T) functionality.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

force *boolean*

Synopsis	Enable NAT-T in forced mode
Context	**configure** ipsec ike-policy *number* nat-traversal force *boolean*
Tree	force
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

force-keep-alive *boolean*

Synopsis	Continue sending keepalive packets (no expiry)
Context	**configure** ipsec ike-policy *number* nat-traversal force-keep-alive *boolean*
Tree	force-keep-alive
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

keep-alive-interval *number*

Synopsis	Keepalive interval for NAT-T
Context	**configure** ipsec ike-policy *number* nat-traversal keep-alive-interval *number*
Tree	keep-alive-interval
Range	120 to 600
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pfs

Synopsis	Enable the **pfs** context
Context	**configure** ipsec ike-policy *number* pfs
Tree	pfs
Description	Commands in this context configure perfect forward secrecy on the IPsec tunnel using the policy. PFS provides for a new Diffie-Hellman (DH) key exchange each time the Security Association (SA) key is renegotiated. When the SA key expires, another key is generated (if the SA remains up).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dh-group *keyword*

Synopsis	Diffie-Helman group used to calculate session keys
Context	**configure** ipsec ike-policy *number* pfs dh-group *keyword*
Tree	dh-group
Description	This command specifies which DH group to use for calculating session keys. More bits provide a higher level of security, but require more processing.
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Default	group-2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

relay-unsolicited-cfg-attribute

Synopsis	Enter the **relay-unsolicited-cfg-attribute** context
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute
Tree	relay-unsolicited-cfg-attribute
Description	Commands in this context configure attributes returned from the source (such as a RADIUS server) that are returned to the IKEv2 remote-access tunnel client regardless if the client has requested the attribute in the CFG_REQUEST payload.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip4-address *boolean*

Synopsis	Return the IPv4 address from the source to the client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip4-address *boolean*
Tree	internal-ip4-address
Description	When configured to **true**, the system returns the IPv4 address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip4-dns *boolean*

Synopsis	Return IPv4 DNS server address from source to client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip4-dns *boolean*
Tree	internal-ip4-dns
Description	When configured to **true**, the system returns the IPv4 DNS server address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

internal-ip4-netmask *boolean*

Synopsis	Return the IPv4 netmask from the source to the client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip4-netmask *boolean*
Tree	internal-ip4-netmask
Description	When configured to **true**, the system returns the IPv4 netmask from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the netmask in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip6-address *boolean*

Synopsis	Return the IPv6 address from the source to the client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip6-address *boolean*
Tree	internal-ip6-address
Description	When configured to **true**, the system returns the IPv6 address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip6-dns *boolean*

Synopsis	Return IPv6 DNS server address from source to client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip6-dns *boolean*
Tree	internal-ip6-dns
Description	When configured to **true**, the system returns the IPv6 DNS server address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-transform [id] *number*

Synopsis	Enter the **ike-transform** list instance
Context	**configure** ipsec ike-transform *number*
Tree	ike-transform
Max. instances	4096
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	IKE transform instance ID
Context	**configure** ipsec ike-transform *number*
Tree	ike-transform
Range	1 to 4096
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dh-group *keyword*

Synopsis	Diffie-Helman group used to calculate session keys
Context	**configure** ipsec ike-transform *number* dh-group *keyword*
Tree	dh-group
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Default	group-2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-auth-algorithm *keyword*

Synopsis	IKE authentication algorithm for IKE transform instance

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ike-transform *number* ike-auth-algorithm *keyword*
Tree	ike-auth-algorithm
Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Default	sha-1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-encryption-algorithm *keyword*

Synopsis	IKE encryption algorith for the IKE transform instance
Context	**configure** ipsec ike-transform *number* ike-encryption-algorithm *keyword*
Tree	ike-encryption-algorithm
Options	des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm16, aes256-gcm8, aes256-gcm16
Default	aes-128
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-prf-algorithm *keyword*

Synopsis	PRF algorithm for the IKE transform instance
Context	**configure** ipsec ike-transform *number* ike-prf-algorithm *keyword*
Tree	ike-prf-algorithm
Description	This command specifies the pseudo-random function algorithm used for IKE security association. If an encrypted algorithm such as AES-GCM is used for the IKE encryption algorithm, **same-as-auth** cannot be used for the IKE PRF algorithm.
Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, same-as-auth
Default	same-as-auth
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isakmp-lifetime *number*

Synopsis	Phase 1 lifetime for the IKE transform instance
Context	**configure** ipsec ike-transform *number* isakmp-lifetime *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	isakmp-lifetime
Range	1200 to 31536000
Units	seconds
Default	86400
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transform [id] *number*

Synopsis	Enter the **ipsec-transform** list instance
Context	**configure** ipsec ipsec-transform *number*
Tree	ipsec-transform
Description	Commands in this context create an IPsec transform policy. IPsec transform policies can be shared. A change to the IPsec transform is allowed at any time. The change does not impact tunnels that have been established until they are renegotiated. If the change is required immediately, the tunnel must be cleared (reset) for force renegotiation.
Max. instances	2048
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	IPsec transform policy ID
Context	**configure** ipsec ipsec-transform *number*
Tree	ipsec-transform
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esp-auth-algorithm *keyword*

Synopsis	Encapsulating Security Payload (ESP) authentication
Context	**configure** ipsec ipsec-transform *number* esp-auth-algorithm *keyword*
Tree	esp-auth-algorithm

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the hashing algorithm used for the authentication function. Both ends of a manually configured tunnel must share the same configuration for the IPsec tunnel to enter the operational state.
Options	null, md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Default	sha-1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esp-encryption-algorithm *keyword*

Synopsis	Encryption algorithm for the IPsec transform session
Context	**configure** ipsec ipsec-transform *number* esp-encryption-algorithm *keyword*
Tree	esp-encryption-algorithm
Description	This command specifies the encryption algorithm used for the IPsec session. Encryption applies only to ESP configurations. If encryption is not defined, ESP is not used. Both ends of a manually configured tunnel must share the same encryption algorithm for the IPsec tunnel to enter the operational state. When AES-GCM or AES-GMAC is configured: • the authentication encryption must be set to **auth-encryption** • the system does not include the authentication algorithm in the ESP proposal of the SA payload • IPsec transform cannot be used for manual keying
Options	null, des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm12, aes128-gcm16, aes192-gcm8, aes192-gcm12, aes192-gcm16, aes256-gcm8, aes256-gcm12, aes256-gcm16, null-aes128-gmac, null-aes192-gmac, null-aes256-gmac
Default	aes-128
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

extended-sequence-number *boolean*

Synopsis	Enable extended sequence numbering support
Context	**configure** ipsec ipsec-transform *number* extended-sequence-number *boolean*
Tree	extended-sequence-number
Description	When configured to **true**, this command enables 64-bit extended sequence numbering support. This numbering is used for high throughput CHILD_SA to avoid frequent re-keying caused by sequence numbering wrap around.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, only 32-bit sequence numbering is supported.

Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-lifetime *number*

Synopsis	Phase 2 lifetime for the IPsec transform session
Context	**configure** ipsec ipsec-transform *number* ipsec-lifetime *number*
Tree	ipsec-lifetime
Description	This command configures the lifetime of the Phase 2 IKE key. When unconfigured, the value is inherited from the IPsec lifetime configured in the corresponding IKE policy configured for the same IPsec gateway or IPsec tunnel.
Range	1200 to 31536000
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pfs-dh-group *keyword*

Synopsis	Diffie-Hellman group used for PFS compilation
Context	**configure** ipsec ipsec-transform *number* pfs-dh-group *keyword*
Tree	pfs-dh-group
Description	This command specifies the DH group used for Perfect Forward Secrecy (PFS) compilation during CHILD_SA rekeying. When unconfigured, the value is inherited from the DH group value from the IPsec gateway or IPsec tunnel.
Options	none, group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transport-mode-profile [name] *named-item*

Synopsis	Enter the **ipsec-transport-mode-profile** list instance
Context	**configure** ipsec ipsec-transport-mode-profile *named-item*
Tree	ipsec-transport-mode-profile

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure IPsec-specific attributes that allow an IP tunnel (for example, GRE) to be protected by using IPsec transport mode.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	IPsec transport mode profile name string
Context	**configure** ipsec ipsec-transport-mode-profile *named-item*
Tree	ipsec-transport-mode-profile
Description	This command specifies the name of the IPsec transport mode profile.
String length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key-exchange

Synopsis	Enter the **key-exchange** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange
Tree	key-exchange
Description	Commands in this context configure the key exchange used each time the Security Association (SA) key is renegotiated.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dynamic

Synopsis	Enter the **dynamic** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic
Tree	dynamic
Description	Commands in this context configure dynamic keying for the transport mode profile.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auto-establish *boolean*

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic auto-establish *boolean*
Tree	auto-establish
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert

Synopsis	Enter the **cert** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert
Tree	cert
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert-profile *reference*

Synopsis	Certificate profile name
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert cert-profile *reference*
Tree	cert-profile
Reference	**configure** ipsec cert-profile *named-item*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

status-verify

Synopsis	Enter the **status-verify** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify
Tree	status-verify
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-result *keyword*

Synopsis	Default result for Certificate Status Verification
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify default-result *keyword*
Tree	default-result
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify primary *keyword*
Tree	primary
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsp
Default	crl

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify secondary *keyword*
Tree	secondary
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ocsp
Default	none
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert trust-anchor-profile *reference*
Tree	trust-anchor-profile
Reference	**configure** ipsec trust-anchor-profile *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id

Synopsis	Enter the **id** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: • Psk: local tunnel IP address • Cert-auth: subject of the local certificate
Introduced	21.10.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fqdn *fully-qualified-domain-name*

Synopsis	FQDN used as the local ID IKE type
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id fqdn *fully-qualified-domain-name*
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4 *ipv4-unicast-address*

Synopsis	IPv4 as the local ID type
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id ipv4 *ipv4-unicast-address*
Tree	ipv4
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6 *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IPv6 used as the local IKE ID type
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id ipv6 *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ipv6
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-policy *reference*

Synopsis	IKE policy ID

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ike-policy *reference*
Tree	ike-policy
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The **ipsec-transport-mode-profile** configuration only supports IKEv2.
Reference	**configure** ipsec ike-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transform *reference*

Synopsis	IPsec transform IDs used by the dynamic key
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ipsec-transform *reference*
Tree	ipsec-transform
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	**configure** ipsec ipsec-transform *number*
Max. instances	4
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppk

Synopsis	Enter the **ppk** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ppk
Tree	ppk
Description	Commands in this context configure the PPKs to use for dynamic keying of the IPsec tunnel.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id *reference*

Synopsis	PPK ID

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ppk id *reference*
Tree	id
Reference	**configure** ipsec ppk-list *named-item* ppk *named-item-64*
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

list *reference*

Synopsis	PPK list instance name
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ppk list *reference*
Tree	list
Reference	**configure** ipsec ppk-list *named-item*
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pre-shared-key *encrypted-leaf*

Synopsis	Pre-shared key for IKE authentication
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic pre-shared-key *encrypted-leaf*
Tree	pre-shared-key
String length	1 to 115
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-history-key-records

Synopsis	Enter the **max-history-key-records** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* max-history-key-records
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

esp *number*

Synopsis	Maximum number of recent records
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* max-history-key-records esp *number*
Tree	esp
Range	1 to 48
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike *number*

Synopsis	Maximum number of historical IKE key records
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* max-history-key-records ike *number*
Tree	ike
Range	1 to 3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

replay-window *number*

Synopsis	Anti-replay window size
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* replay-window *number*
Tree	replay-window
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 | 64 | 128 | 256 | 512
Units	packets
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppk-list [name] *named-item*

Synopsis	Enter the **ppk-list** list instance
Context	**configure** ipsec ppk-list *named-item*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ppk-list
Description	Commands in this context configure the list of Post-quantum Preshared Keys (PPKs) to use for IKEv2 key derivation, as described in RFC 8784.
Max. instances	128
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	PPK list instance name
Context	**configure** ipsec ppk-list *named-item*
Tree	ppk-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppk [ppk-id] *named-item-64*

Synopsis	Enter the **ppk** list instance
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64*
Tree	ppk
Description	Commands in this context configure the attributes for a PPK within the list.
Max. instances	128
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**ppk-id**] *named-item-64*

Synopsis	PPK ID
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64*
Tree	ppk
String length	1 to 64

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value

Synopsis	Enable the **value** context
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64* value
Tree	value
Description	Commands in this context configure the values for the specified PPK.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ascii *encrypted-leaf*

Synopsis	PPK value as an ASCII string
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64* value ascii *encrypted-leaf*
Tree	ascii
String length	1 to 115
Notes	The following elements are part of a mandatory choice: **ascii** or **hex**.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

hex *encrypted-leaf-hex*

Synopsis	PPK value as a hexadecimal string with prefix 0x
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64* value hex *encrypted-leaf-hex*
Tree	hex
String length	1 to 115
Notes	The following elements are part of a mandatory choice: **ascii** or **hex**.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

radius

Synopsis	Enter the **radius** context
Context	**configure** ipsec radius
Tree	radius
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy [name] *named-item*

Synopsis	Enter the **accounting-policy** list instance
Context	**configure** ipsec radius accounting-policy *named-item*
Tree	accounting-policy
Description	Commands in this context configure RADIUS accounting policies to collect accounting statistics.
Max. instances	100
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RADIUS accounting policy name
Context	**configure** ipsec radius accounting-policy *named-item*
Tree	accounting-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute
Tree	include-radius-attribute

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context specify the RADIUS attributes that are to be included in the RADIUS Authentication-Request messages.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

acct-stats *boolean*

Synopsis	Include accounting attributes in RADIUS packets
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute acct-stats *boolean*
Tree	acct-stats
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute calling-station-id *boolean*
Tree	calling-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

framed-ip-addr *boolean*

Synopsis	Include the Framed-IP-Address attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute framed-ip-addr *boolean*
Tree	framed-ip-addr
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ipv6-prefix *boolean*

Synopsis	Include the Framed-IPv6-Prefix attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute framed-ipv6-prefix *boolean*
Tree	framed-ipv6-prefix
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-addr *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute nas-ip-addr *boolean*
Tree	nas-ip-addr

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute nas-port-id *boolean*
Tree	nas-port-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** ipsec radius accounting-policy *named-item* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *named-item*
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

update-interval

Synopsis	Enter the **update-interval** context
Context	**configure** ipsec radius accounting-policy *named-item* update-interval
Tree	update-interval
Description	Commands in this context determine how RADIUS interim-update packets are sent for IKEv2 remote-access tunnels.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

jitter *number*

Synopsis	Jitter interval for sending each interim-update packet

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec radius accounting-policy *named-item* update-interval jitter *number*
Tree	jitter
Description	This command specifies the jitter interval for the RADIUS interim-update packets. When unconfigured, the system uses 10% of the update interval value.
Range	0 to 3600
Units	seconds
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Update interval of the RADIUS accounting data
Context	**configure** ipsec radius accounting-policy *named-item* update-interval value *number*
Tree	value
Description	This command configures the update interval of the RADIUS accounting data. If a value of 0 is configured, no intermediate updates are sent.
Range	0 | 5 to 259200
Units	minutes
Default	10
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication-policy [name] *named-item*

Synopsis	Enter the **authentication-policy** list instance
Context	**configure** ipsec radius authentication-policy *named-item*
Tree	authentication-policy
Description	Commands in this context configure the RADIUS authentication policy associated with the IPsec gateway.
Max. instances	100
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**name**] *named-item*

Synopsis	RADIUS authentication policy name
Context	**configure** ipsec radius authentication-policy *named-item*
Tree	authentication-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute
Tree	include-radius-attribute
Description	Commands in this context specify the RADIUS attributes to be included in the RADIUS Authentication-Request messages.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute calling-station-id *boolean*
Tree	calling-station-id

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-cert-subject-key-id *boolean*

Synopsis	Include the Subject Key Identifier
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute client-cert-subject-key-id *boolean*
Tree	client-cert-subject-key-id
Description	When configured to **true**, the Subject Key Identifier of the certificate of the peer is included in the RADIUS Access-Request packet as VSA: Alc-Subject-Key-Identifier. See the *7450 ESS, 7750 SR, 7950 XRS, and VSR RADIUS Attributes Reference Guide* for more information.
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-addr *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute nas-ip-addr *boolean*
Tree	nas-ip-addr
Default	false
Introduced	19.7.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute nas-port-id *boolean*
Tree	nas-port-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

password *encrypted-leaf*

Synopsis	Password used in RADIUS access requests
Context	**configure** ipsec radius authentication-policy *named-item* password *encrypted-leaf*
Tree	password
String length	1 to 115
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** ipsec radius authentication-policy *named-item* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *named-item*
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

show-ipsec-keys *boolean*

Synopsis	Show IPsec IKE and ESP keys in the output
Context	**configure** ipsec show-ipsec-keys *boolean*
Tree	show-ipsec-keys

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command allows IPsec keys to be (optionally) included in the display output of certain **debug** and **admin** commands. When configured to **false**, the key display is disabled.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

static-sa [name] *named-item*

Synopsis	Enter the **static-sa** list instance
Context	**configure** ipsec static-sa *named-item*
Tree	static-sa
Max. instances	1000
Introduced	16.0.R6
Platforms	All

[**name**] *named-item*

Synopsis	Static SA name
Context	**configure** ipsec static-sa *named-item*
Tree	static-sa
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R6
Platforms	All

authentication

Synopsis	Enable the **authentication** context
Context	**configure** ipsec static-sa *named-item* authentication
Tree	authentication
Introduced	16.0.R6
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

algorithm *keyword*

Synopsis	Authentication algorithm used for an IPsec manual SA
Context	**configure** ipsec static-sa *named-item* authentication algorithm *keyword*
Tree	algorithm
Options	md5, sha1
Notes	This element is mandatory.
Introduced	16.0.R6
Platforms	All

key *encrypted-leaf*

Synopsis	Key used for the authentication algorithm
Context	**configure** ipsec static-sa *named-item* authentication key *encrypted-leaf*
Tree	key
String length	1 to 54
Notes	This element is mandatory.
Introduced	16.0.R6
Platforms	All

description *named-item*

Synopsis	Text description
Context	**configure** ipsec static-sa *named-item* description *named-item*
Tree	description
String length	1 to 32
Introduced	16.0.R6
Platforms	All

direction *keyword*

Synopsis	Direction to which the static SA entry can be applied
Context	**configure** ipsec static-sa *named-item* direction *keyword*
Tree	direction
Options	inbound, outbound, bidirectional

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	bidirectional
Introduced	16.0.R6
Platforms	All

protocol *keyword*

Synopsis	IPsec protocol used with the static SA
Context	**configure** ipsec static-sa *named-item* protocol *keyword*
Tree	protocol
Options	ah, esp
Default	esp
Introduced	16.0.R6
Platforms	All

spi *number*

Synopsis	Security Parameter Index (SPI) for the static SA
Context	**configure** ipsec static-sa *named-item* spi *number*
Tree	spi
Description	This command specifies the SPI for the static SA. When the **direction** command is set to **inbound**, the SPI is used to look up the instruction to verify and decrypt the incoming IPsec packets. When the **direction** command is set to **outbound**, the SPI is used in the encoding of the outgoing packets. The remote node can use the SPI to look up the instruction to verify and decrypt the packet. When unconfigured, the static SA cannot be used.
Range	256 to 16383
Introduced	16.0.R6
Platforms	All

trust-anchor-profile [name] *named-item*

Synopsis	Enter the **trust-anchor-profile** list instance
Context	**configure** ipsec trust-anchor-profile *named-item*
Tree	trust-anchor-profile
Max. instances	10128

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Trust anchor profile name for IPsec tunnel or gateway
Context	**configure** ipsec trust-anchor-profile *named-item*
Tree	trust-anchor-profile
String length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trust-anchor [ca-profile] *reference*

Synopsis	Add a list entry for **trust-anchor**
Context	**configure** ipsec trust-anchor-profile *named-item* trust-anchor *reference*
Tree	trust-anchor
Description	Commands in this context configure a CA profile as a trust anchor CA.
Max. instances	8
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**ca-profile**] *reference*

Synopsis	Name of the CA profile as a trust anchor profile
Context	**configure** ipsec trust-anchor-profile *named-item* trust-anchor *reference*
Tree	trust-anchor
Reference	**configure** system security pki ca-profile *named-item*
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ts-list [name] *named-item*

Synopsis	Enter the **ts-list** list instance
Context	**configure** ipsec ts-list *named-item*
Tree	ts-list
Description	Commands in this context configure Traffic Selector (TS) settings.
Max. instances	32768
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Traffic Selector (TS) list name
Context	**configure** ipsec ts-list *named-item*
Tree	ts-list
String length	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local

Synopsis	Enter the **local** context
Context	**configure** ipsec ts-list *named-item* local
Tree	local
Description	Commands in this context configure a local TS list, a traffic selector, such as TSr, when the system acts as an IKEv2 responder.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** ipsec ts-list *named-item* local entry *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	entry
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	TS list entry ID
Context	**configure** ipsec ts-list *named-item* local entry *number*
Tree	entry
Range	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address

Synopsis	Enable the **address** context
Context	**configure** ipsec ts-list *named-item* local entry *number* address
Tree	address
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix for address range in IKEv2 traffic selector
Context	**configure** ipsec ts-list *named-item* local entry *number* address prefix *(ipv4-prefix | ipv6-prefix)*
Tree	prefix
Notes	The following elements are part of a mandatory choice: **prefix** or **range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the **range** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ts-list *named-item* local entry *number* address range
Tree	range
Notes	The following elements are part of a mandatory choice: **prefix** or **range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Lower bound of the IP address range for the entry
Context	**configure** ipsec ts-list *named-item* local entry *number* address range begin *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	begin
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Upper bound of the IP address range
Context	**configure** ipsec ts-list *named-item* local entry *number* address range end *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	end
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol

Synopsis	Enable the **protocol** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol
Tree	protocol
Description	Commands in this context specify the protocol settings for the IKEv2 traffic selector.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

any

Synopsis	Match any protocol ID
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol any
Tree	any
Notes	The following elements are part of a mandatory choice: **any** or **id**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id

Synopsis	Enable the **id** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id
Tree	id
Notes	The following elements are part of a mandatory choice: **any** or **id**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis	Enter the **icmp** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp
Tree	icmp
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range begin-icmp-code *number*
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range begin-icmp-type *number*
Tree	begin-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range end-icmp-code *number*
Tree	end-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range end-icmp-type *number*
Tree	end-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp6

Synopsis	Enter the **icmp6** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6
Tree	icmp6
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6 opaque

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp6 port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range

address

Synopsis	Enable the **address** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* address
Tree	address
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix for address range in IKEv2 traffic selector
Context	**configure** ipsec ts-list *named-item* remote entry *number* address prefix *(ipv4-prefix | ipv6-prefix)*
Tree	prefix
Notes	The following elements are part of a mandatory choice: **prefix** or **range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the **range** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* address range
Tree	range
Notes	The following elements are part of a mandatory choice: **prefix** or **range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Lower bound of the IP address range for the entry
Context	**configure** ipsec ts-list *named-item* remote entry *number* address range begin *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	begin
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Upper bound of the IP address range
Context	**configure** ipsec ts-list *named-item* remote entry *number* address range end *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	end
Notes	This element is mandatory.

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol

Synopsis	Enable the **protocol** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol
Tree	protocol
Description	Commands in this context specify the protocol settings for the IKEv2 traffic selector.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

any

Synopsis	Match any protocol ID
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol any
Tree	any
Notes	The following elements are part of a mandatory choice: **any** or **id**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id

Synopsis	Enable the **id** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id
Tree	id
Notes	The following elements are part of a mandatory choice: **any** or **id**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis	Enter the **icmp** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp
Tree	icmp

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp port-range begin-icmp-code *number*
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp port-range begin-icmp-type *number*
Tree	begin-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp port-range end-icmp-code *number*
Tree	end-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp port-range end-icmp-type *number*
Tree	end-icmp-type
Range	0 to 255
Notes	This element is mandatory.

icmp6

Synopsis	Enter the **icmp6** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp6
Tree	icmp6
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp6 opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp6 port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range

© 2025 Nokia.

clear-df-bit *boolean*

Synopsis	Clear the Do-not-Fragment (DF) bit
Context	**configure** ipsec tunnel-template *number* clear-df-bit *boolean*
Tree	clear-df-bit
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

copy-traffic-class-upon-decapsulation *boolean*

Synopsis	Enable traffic class copy upon decapsulation
Context	**configure** ipsec tunnel-template *number* copy-traffic-class-upon-decapsulation *boolean*
Tree	copy-traffic-class-upon-decapsulation
Description	When configured to **true**, the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private). When configured to **false**, the system does not copy the traffic class from the outer IP packet to the payload IP packet header upon decapsulation.
Default	false
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** ipsec tunnel-template *number* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encapsulated-ip-mtu *number*

Synopsis	Maximum size of the encapsulated tunnel packet
Context	**configure** ipsec tunnel-template *number* encapsulated-ip-mtu *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	octets
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp-generation

Synopsis	Enter the **icmp-generation** context
Context	**configure** ipsec tunnel-template *number* icmp-generation
Tree	icmp-generation
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

frag-required

Synopsis	Enter the **frag-required** context
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required
Tree	frag-required
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending ICMP messages
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required admin-state *keyword*
Tree	admin-state

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval for sending ICMP messages
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required interval *number*
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-count *number*

Synopsis	Maximum number of ICMP messages that can be sent
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required message-count *number*
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

icmp6-generation

Synopsis	Enter the **icmp6-generation** context
Context	**configure** ipsec tunnel-template *number* icmp6-generation
Tree	icmp6-generation
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pkt-too-big

Synopsis	Enter the **pkt-too-big** context
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big
Tree	pkt-too-big
Description	Commands in this context configure values for the ICMPv6 Packet Too Big (PTB) messages. The system sends PTB messages if an IPv6 packet is received on the private side that is larger than 1280 bytes and also exceeds the private MTU of the tunnel.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of Packet Too Big message sends
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Maximum interval during which PTB messages can be sent
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big interval *number*
Tree	interval

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-count *number*

Synopsis	Max ICMPv6 messages that can be sent during interval
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big message-count *number*
Tree	message-count
Range	10 to 1000
Default	100
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ignore-default-route *boolean*

Synopsis	Ignore any full range traffic selector in TSi
Context	**configure** ipsec tunnel-template *number* ignore-default-route *boolean*
Tree	ignore-default-route
Description	When configured to **true**, any full range traffic selector is ignored when creating a reverse route. When configured to **false**, no CHILD_SA is created if any full range traffic selector is included in TSi.
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	Maximum size of the IP MTU for the payload packets
Context	**configure** ipsec tunnel-template *number* ip-mtu *number*
Tree	ip-mtu
Range	512 to 9000

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	octets
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transform *reference*

Synopsis	IPsec transform ID for the tunnel template
Context	**configure** ipsec tunnel-template *number* ipsec-transform *reference*
Tree	ipsec-transform
Reference	**configure** ipsec ipsec-transform *number*
Max. instances	4
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pmtu-discovery-aging *number*

Synopsis	Aging out time of the learned path MTU
Context	**configure** ipsec tunnel-template *number* pmtu-discovery-aging *number*
Tree	pmtu-discovery-aging
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppk-list *reference*

Synopsis	PPK list to use in the tunnel template
Context	**configure** ipsec tunnel-template *number* ppk-list *reference*
Tree	ppk-list
Description	This command specifies the PPK list to use in the tunnel template, which represents a list of PPKs available for the IPsec gateway. The actual PPK to use depends on the tunnel initiator.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Reference	**configure** ipsec ppk-list *named-item*
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

private-tcp-mss-adjust *number*

Synopsis	New TCP MSS value on the private side
Context	**configure** ipsec tunnel-template *number* private-tcp-mss-adjust *number*
Tree	private-tcp-mss-adjust
Description	This command specifies the new (adjusted) TCP MSS value of TCP SYN packets on the private side. When unconfigured, the MSS value is derived from the received TCP SYN packet on the private side.
Range	512 to 9000
Units	octets
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

propagate-pmtu-v4 *boolean*

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	**configure** ipsec tunnel-template *number* propagate-pmtu-v4 *boolean*
Tree	propagate-pmtu-v4
Description	When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

propagate-pmtu-v6 *boolean*

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	**configure** ipsec tunnel-template *number* propagate-pmtu-v6 *boolean*
Tree	propagate-pmtu-v6
Description	When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

public-tcp-mss-adjust *(number | keyword)*

Synopsis	New TCP MSS value on the public side
Context	**configure** ipsec tunnel-template *number* public-tcp-mss-adjust *(number | keyword)*
Tree	public-tcp-mss-adjust
Description	This command specifies the new (adjusted) TCP MSS value for the TCP traffic in an IPsec tunnel which is sent from the public network to the private network. The system can use this value to adjust or insert the MSS option in the TCP SYN packet. When unconfigured, the MSS value is derived from the public MTU and IPsec overhead.
Range	512 to 9000
Units	octets
Options	auto
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

replay-window *number*

Synopsis	Anti-replay window size for the tunnel template
Context	**configure** ipsec tunnel-template *number* replay-window *number*
Tree	replay-window
Range	32 | 64 | 128 | 256 | 512
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reverse-route

Synopsis	Enter the **reverse-route** context
Context	**configure** ipsec tunnel-template *number* reverse-route
Tree	reverse-route
Description	Commands in this context configure the dynamic LAN-to-LAN (DL2L) tunnel reverse-route options for the tunnel template.
Introduced	24.10.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

metric *number*

Synopsis	Metric used for DL2L tunnel reverse routes
Context	**configure** ipsec tunnel-template *number* reverse-route metric *number*
Tree	metric
Description	This command configures the metric for reverse routes. The system uses the metric when selecting a route to install in the route table.
Range	0 to 65535
Default	0
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis	Preference used for DL2L tunnel reverse routes
Context	**configure** ipsec tunnel-template *number* reverse-route preference *number*
Tree	preference
Description	This command specifies the route preference assigned to the DL2L tunnel reverse route. The system uses the preference when selecting a route to install in the route table.
Range	0 to 255
Default	0
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sp-reverse-route *keyword*

Synopsis	Reverse route creation method in private service
Context	**configure** ipsec tunnel-template *number* sp-reverse-route *keyword*
Tree	sp-reverse-route
Description	This command allows the system to automatically create a reverse route based on dynamic LAN-to-LAN tunnel's TSi in private service.
Options	none, use-security-policy
Default	none

4.21.1 isa command descriptions

isa

Synopsis	Enter the **isa** context
Context	**configure** isa
Tree	isa
Description	Commands in this context configure the Integrated Services Adapter (ISA).
Introduced	16.0.R1
Platforms	All

application-assurance-group [aa-group-id] *number*

Synopsis	Enter the **application-assurance-group** list instance
Context	**configure** isa application-assurance-group *number*
Tree	application-assurance-group
Description	Commands in this context configure the application assurance (AA) group.
Max. instances	7
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[aa-group-id] *number*

Synopsis	AA group identifier
Context	**configure** isa application-assurance-group *number*
Tree	application-assurance-group
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-distribute-traffic-by-ip *boolean*

Synopsis	Allow application assurance to divert traffic

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** isa application-assurance-group *number* aa-sub-distribute-traffic-by-ip *boolean*
Tree	aa-sub-distribute-traffic-by-ip
Description	When configured to **true**, the system diverts traffic on the parent SAP or spoke-SDP to multiple ISAs or ESAs based on the source IP address. This is useful when the bandwidth of a single SAP is larger than the capacity of a single ISA or ESA. This is only supported for the auto-created transit IP subscribers. The traffic is diverted when the hashing is enabled at the AA group level and in the parent SAP application profile.
Default	false
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

aa-sub-scale *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	AA group sub-scale
Context	**configure** isa application-assurance-group *number* aa-sub-scale *keyword*
Tree	aa-sub-scale
Options	residential, vpn, mobile-gateway, lightweight-internet, residential-8k, residential-16k, residential-32k, residential-64k, vpn-1k, vpn-2k, vpn-4k, vpn-8k, mobile-gateway-1m, mobile-gateway-2m, lightweight-internet-512k, firewall-32
Default	residential
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of this AA group
Context	**configure** isa application-assurance-group *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

backup

Synopsis	Enter the **backup** context
Context	**configure** isa application-assurance-group *number* backup
Tree	backup
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esa [esa-id] *number* vm *number*

Synopsis	Add a list entry for **esa**
Context	**configure** isa application-assurance-group *number* backup esa *number* vm *number*
Tree	esa
Max. instances	4
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**esa-id**] *number*

Synopsis	ESA ID
Context	**configure** isa application-assurance-group *number* backup esa *number* vm *number*
Tree	esa
Range	1 to 16
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vm *number*

Synopsis	VM ID within the ESA
Context	**configure** isa application-assurance-group *number* backup esa *number* vm *number*
Tree	esa
Range	1 to 4
Notes	This element is part of a list key.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa [mda-id] *slot-mda*

Synopsis	Add a list entry for **isa**
Context	**configure** isa application-assurance-group *number* backup isa *slot-mda*
Tree	isa
Max. instances	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**mda-id**] *slot-mda*

Synopsis	MDA/ISA ID
Context	**configure** isa application-assurance-group *number* backup isa *slot-mda*
Tree	isa
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** isa application-assurance-group *number* description *description*
Tree	description
String length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

divert-fc *keyword*

Synopsis	Diverted traffic forwarding class
Context	**configure** isa application-assurance-group *number* divert-fc *keyword*

periodic-update

Synopsis	Enter the **periodic-update** context
Context	**configure** isa nat-group *number* log periodic-update
Tree	periodic-update
Description	Commands in this context configure periodic updates for NAT logs that include IP address and port block mappings. These logs can be recorded in system memory, local files, SNMP, or syslog. Periodic logging configured under this hierarchy does not impact other forms of NAT logging, such as RADIUS logging or flow logging (for example, IPFIX or syslog).
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

interval *number*

Synopsis	Interval of periodic logs
Context	**configure** isa nat-group *number* log periodic-update interval *number*
Tree	interval
Description	This command configures the interval at which periodic NAT logs are generated. These logs can be recorded in system memory, local files, SNMP, or syslog. The logs document the mapping between the IP address on the inside and the IP address and port blocks on the outside. This command does not affect other types of NAT logging, such as RADIUS logging or flow logging (for example, IPFIX or syslog).
Range	10 to 1440
Units	minutes
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit *number*

Synopsis	Maximum rate that aggregate logs from ESA-VM are sent
Context	**configure** isa nat-group *number* log periodic-update rate-limit *number*
Tree	rate-limit
Description	This command sets the maximum rate at which the ESA-VM sends NAT log messages to the CPM. This rate is applied per ISA group, ensuring that each ESA-VM receives a proportionate share of the rate based on the total number of ESA-VMs in the group. This rate applies to logs that can be stored in system memory, local files, SNMP, or syslog. The logs capture the mapping between internal IP addresses and external IP addresses, including port blocks. This command applies only to NAT log messages configured using this context. It does not affect other types of NAT logging, such as RADIUS logging or flow-based logging (for example, IPFIX or syslog).
Range	1 to 100000
Units	packets per second
Default	10000
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Number of active ESA-VM or ISA members in the NAT group
Context	**configure** isa nat-group *number* redundancy active-mda-limit *number*
Tree	active-mda-limit
Description	This command configures the number of active ESA-VM or ISA members in a NAT group. The system automatically selects which ESA-VMs or ISAs are active. In active/standby (A/S) redundancy mode, the correlation between ESA-VM or ISA members is direct, meaning each ESA-VM or ISA equates to one member. In active/active (A/A) redundancy mode, an individual ESA-VM or ISA may be associated with multiple members.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

For A/S redundancy, any surplus ESA-VMs or ISAs beyond the configured active threshold automatically transition to standby. These standby units remain idle until an active unit fails, at which point a standby unit takes over, handling traffic from only one failed active unit. This setup allows for the configuration of multiple standby units to provide resilience against several concurrent failures.

In A/A redundancy, the combination of this command and the **failed-mda-limit** command guides the distribution of resources among ESA-VMs or ISAs, essentially defining how the members are structured.

In both A/S and A/A modes, the system strives to maintain the configured number of active members as outlined by the active MDA limit, drawing from the pool of available spare resources to compensate for any failures. If the actual number of active members drops below this limit because of a lack of available spares, the NAT group status changes to degraded. In this state, traffic intended for the missing ESA-VM or ISA members (up to the active MDA limit) is blackholed. In Layer 2-aware NAT this condition can be circumvented where traffic can bypass NAT altogether and be directly routed within the internal network that may have an alternate path to a backup NAT system.

For additional details, see "L2-Aware bypass" in the *7450 ESS, 7750 SR, and VSR Multiservice Integrated Service Adapter and Extended Services Appliance Guide.*

Range	1 to 28
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inter-chassis

Synopsis	Enable the **inter-chassis** context
Context	**configure** isa nat-group *number* redundancy inter-chassis
Tree	inter-chassis
Notes	The following elements are part of a choice: **inter-chassis** or **intra-chassis**.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-timeout-on-switchover *number*

Synopsis	Flow timeout immediately following a switchover
Context	**configure** isa nat-group *number* redundancy inter-chassis flow-timeout-on-switchover *number*
Tree	flow-timeout-on-switchover
Description	This command configures the initial flow timeout on the newly active node for the NAT group after a switchover. The timeout is in effect only if there is no traffic present over the flow; otherwise, the first packet over the flow resets the flow timeout to the originally configured value (under the NAT policy configuration).

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	This command configuration restricts the flow timeout to a portion of the originally configured value.
Range	1 to 50
Units	percent
Default	50
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	IP MTU for ISA-to-ISA communication
Context	**configure** isa nat-group *number* redundancy inter-chassis ip-mtu *number*
Tree	ip-mtu
Description	This command configures the IP MTU size used to transport flow synchronization records between the ISAs. Multiple flow synchronization events can be packed into a single frame up to the IP MTU size.
Range	512 to 9000
Default	1500
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

keepalive

Synopsis	Enter the **keepalive** context
Context	**configure** isa nat-group *number* redundancy inter-chassis keepalive
Tree	keepalive
Description	Commands in this context configure keepalive messages between the CPMs residing on different chassis and are used to detect the presence of the peering node. If the redundant peer connectivity is lost beyond the limit defined by the keepalive messages, each node in the redundant pair transitions to standalone mode. Keepalive messages use UDP transport.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dropcount *number*

Synopsis	Threshold for lost consecutive keepalive messages

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** isa nat-group *number* redundancy inter-chassis keepalive dropcount *number*
Tree	dropcount
Description	This command configures the threshold for the number of consecutive keepalive messages that are lost between the redundant nodes before the connection is declared down. When the peer is considered unreachable, each node transitions to standalone mode.
Range	2 to 20
Default	2
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval between two consecutive keepalive messages
Context	**configure** isa nat-group *number* redundancy inter-chassis keepalive interval *number*
Tree	interval
Description	This command configures the interval at which the keepalive messages are periodically sent between the redundant nodes (CPMs) to verify the presence of the peer. If peer connectivity is lost, each node transitions to standalone mode.
Range	2 to 250
Units	deciseconds
Default	30
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-ip-range-start *ipv4-unicast-address*

WARNING:

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Starting IP address for ISAs in the NAT group
Context	**configure** isa nat-group *number* redundancy inter-chassis local-ip-range-start *ipv4-unicast-address*
Tree	local-ip-range-start

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the initial IP address for the ISAs in the NAT group. The system automatically assigns consecutive IP addresses for the remaining ISAs. The IP addresses are used to communicate between the ISAs on redundant nodes for the purpose of flow synchronization. The system sends traffic from the member ISA with the initial IP address to the initial IP address from the remote IP range. **Note**: These IP addresses are added to the routing table under the protocol "NAT" within the routing context where they are configured. The user can then export the IP addresses into the network using routing policies to ensure reachability. These IP addresses effectively become routes with no relation to any local interface on the router.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

monitor-oper-group [oper-group] *reference*

Synopsis	Enter the **monitor-oper-group** list instance
Context	**configure** isa nat-group *number* redundancy inter-chassis monitor-oper-group *reference*
Tree	monitor-oper-group
Description	Commands in this context specify monitoring settings for objects in an operational group, such as SAPs, BFD sessions, or VRRP sessions, in order to adjust the overall health of the node in a redundant inter-chassis NAT system. A state change of the objects in the operational group influences the health of a NAT node in a redundant configuration.
Max. instances	4
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Context	**configure** isa nat-group *number* redundancy inter-chassis monitor-port *port-named* health-drop *number*
Tree	health-drop
Range	1 to 255
Default	1
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

preferred *boolean*

Synopsis	Set the preferred activity status for the node
Context	**configure** isa nat-group *number* redundancy inter-chassis preferred *boolean*
Tree	preferred
Description	When configured to **true**, the system designates the node in a redundant NAT system with the preferred activity status. The preferred status comes into consideration only when both redundant nodes have equal health values. If the peer traffic-serving node has an equal health value but does not have the preferred designation, a switch of activity occurs to route traffic to the preferred node. The switchover could cause a brief interruption in traffic flow. When configured to **false**, the preferred designation is not set for the node.
Default	false
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

failed-mda-limit *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum failed MDAs allowed in ICR for the NAT group
Context	**configure** isa nat-group *number* redundancy intra-chassis active-active failed-mda-limit *number*
Tree	failed-mda-limit
Description	This command configures the maximum number of supported simultaneous failures in active-active intra-chassis NAT redundancy model. Traffic from the failed ESA-VMs or ISAs is distributed over the remaining ESA-VM or ISA in the system. Memory resources are reserved in every ESA-VM or ISA to accommodate new mappings from the failed ESA-VM or ISA. However, bandwidth is not reserved and each ESA-VM or ISA operates at maximum speed in all conditions (with failure or without the failure). NAT translations are not preserved across switchovers and consequently they must be reinitiated by the clients. For this command to take effect, the intra-chassis redundancy must be set to **active-active** mode by using the **configure isa nat-group redundancy intra-chassis active-active** command.
Range	1 to 2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-standby

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Active-standby intra-chassis NAT redundancy model
Context	**configure** isa nat-group *number* redundancy intra-chassis active-standby
Tree	active-standby

Notes	The following elements are part of a choice: **active-active**, **active-standby**, or **l2aware-bypass**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2aware-bypass

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	L2-aware-bypass NAT redundancy model
Context	**configure** isa nat-group *number* redundancy intra-chassis l2aware-bypass
Tree	l2aware-bypass
Notes	The following elements are part of a choice: **active-active**, **active-standby**, or **l2aware-bypass**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

scaling-profile *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Scaling profile for the NAT group
Context	**configure** isa nat-group *number* scaling-profile *keyword*
Tree	scaling-profile
Description	This command determines profiles for NAT scaling. Lower profile numbers allocate less resources, thus supporting lower scaling. Contact your Nokia representative for more information about NAT scaling figures in each profile.
Options	profile1, profile2, profile3

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	profile1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-limits

Synopsis	Enter the **session-limits** context
Context	**configure** isa nat-group *number* session-limits
Tree	session-limits
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reserved *number*

Synopsis	Number of sessions reserved for prioritized sessions
Context	**configure** isa nat-group *number* session-limits reserved *number*
Tree	reserved
Range	1 to 6291456
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

upnp-mappings *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum number of UPnP mappings per member
Context	**configure** isa nat-group *number* session-limits upnp-mappings *number*
Tree	upnp-mappings
Description	This command specifies the maximum number of Universal Plug and Play (UPnP) mappings per member.
Range	1 to 524288
Default	524288

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enable the **watermarks** context
Context	**configure** isa nat-group *number* session-limits watermarks
Tree	watermarks
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis	Session limit high watermark for each MDA in the group
Context	**configure** isa nat-group *number* session-limits watermarks high *number*
Tree	high
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low *number*

Synopsis	Session limit low watermark for each MDA in the group
Context	**configure** isa nat-group *number* session-limits watermarks low *number*
Tree	low
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

tunnel-group [id] *number*

Synopsis	Enter the **tunnel-group** list instance
Context	**configure** isa tunnel-group *number*
Tree	tunnel-group
Description	Commands in this context create or edit a tunnel group. A tunnel group is a set of one or more MS-ISAs that support the origination and termination of IPsec and IP/GRE tunnels. On a VSR, the **isa-scale-mode** command must be specified, which defines the maximum number of tunnels on each ISA.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Tunnel group ID
Context	**configure** isa tunnel-group *number*
Tree	tunnel-group
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the ISA tunnel group
Context	**configure** isa tunnel-group *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

backup *slot-mda*

Synopsis	IPsec module configured in the slot to the IPsec group
Context	**configure** isa tunnel-group *number* backup *slot-mda*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	backup
Notes	The following elements are part of a choice: **multi-active** or (**backup** and **primary**).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** isa tunnel-group *number* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-responder-only *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Act as an IKE responder except upon MC-IPsec switchover
Context	**configure** isa tunnel-group *number* ipsec-responder-only *boolean*
Tree	ipsec-responder-only
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa-scale-mode *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tunnel limit on each ISA for the tunnel group
Context	**configure** isa tunnel-group *number* isa-scale-mode *keyword*
Tree	isa-scale-mode

© 2025 Nokia.

Range	1 to 1000
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

isa [isa-id] *slot-mda*

Synopsis	Add a list entry for **isa**
Context	**configure** isa tunnel-group *number* multi-active isa *slot-mda*
Tree	isa
Notes	The following elements are part of a choice: **esa**, **isa**, or **member-pool**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**isa-id**] *slot-mda*

Synopsis	ISA ID associated with the tunnel member pool
Context	**configure** isa tunnel-group *number* multi-active isa *slot-mda*
Tree	isa
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

member-pool *reference*

Synopsis	Tunnel-member pool name
Context	**configure** isa tunnel-group *number* multi-active member-pool *reference*
Tree	member-pool
Reference	**configure** isa tunnel-member-pool *named-item*
Notes	The following elements are part of a choice: **esa**, **isa**, or **member-pool**.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary *slot-mda*

Synopsis	Primary ISA IPsec module assigned for the tunnel group

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** isa tunnel-group *number* primary *slot-mda*
Tree	primary
Notes	The following elements are part of a choice: **multi-active** or (**backup** and **primary**).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reassembly

Synopsis	Enter the **reassembly** context
Context	**configure** isa tunnel-group *number* reassembly
Tree	reassembly
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-wait-time *number*

Synopsis	Maximum time to receive fragments for packet reassembly
Context	**configure** isa tunnel-group *number* reassembly max-wait-time *number*
Tree	max-wait-time
Range	1 to 5000
Units	milliseconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

spi-range-index *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SPI range index to use for the tunnel group
Context	**configure** isa tunnel-group *number* spi-range-index *number*
Tree	spi-range-index
Description	This command configures the SPI range index value for the tunnel group. Each index value corresponds to a subrange of SPI values from the entire SPI space to allocate to the tunnel group.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This command must be configured with a unique value across all multichassis peering systems in following cases:

- A multichassis-enabled tunnel group contains ESA-VMs with weight.
- The **active-isa-number** configurations of a tunnel group are different on different peering systems.

See the *7450 ESS, 7750 SR, and VSR Multiservice ISA and ESA Guide* for more information.

Range	1 to 4
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

stats-collection

Synopsis	Enter the **stats-collection** context
Context	**configure** isa tunnel-group *number* stats-collection
Tree	stats-collection
Description	Commands in this context configure the ISA statistics collection.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa-dp-cpu-usage *boolean*

Synopsis	Collect statistics used to derive ISA DP CPU usage
Context	**configure** isa tunnel-group *number* stats-collection isa-dp-cpu-usage *boolean*
Tree	isa-dp-cpu-usage
Description	When configured to **true**, this command collects statistics used to derive ISA CPU DP usage and impacts the ISA performance. When configured to **false**, statistics are not collected.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

Range	1 to 99
Units	percent
Default	90
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

wlan-gw-group [id] *number*

Synopsis	Enter the **wlan-gw-group** list instance
Context	**configure** isa wlan-gw-group *number*
Tree	wlan-gw-group
Description	Commands in this context configure a WLAN-gateway group that contains a set of ISAs used in WLAN-gateway functionality. A WLAN-gateway group can also be used where a NAT group is expected. The WLAN-gateway group ID shares the same number space with the NAT group.
Max. instances	1
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	WLAN-GW ISA group ID
Context	**configure** isa wlan-gw-group *number*
Tree	wlan-gw-group
Range	1 to 4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-iom-limit *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Number of WLAN-GW IOMs used as active IOMs
Context	**configure** isa wlan-gw-group *number* active-iom-limit *number*
Tree	active-iom-limit
Range	1 to 7
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-mda-limit *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum number of ISA MDAs in active use by the group
Context	**configure** isa wlan-gw-group *number* active-mda-limit *number*
Tree	active-mda-limit
Range	1 to 14
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of the WLAN Gateway group
Context	**configure** isa wlan-gw-group *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

Use subject to Terms available at: www.nokia.com/terms.

fwa-checksum-assist *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Calculate checksum for GRE-encapsulated L2 traffic
Context	**configure** isa wlan-gw-group *number* fwa-checksum-assist *boolean*
Tree	fwa-checksum-assist
Description	When configured to **true**, this command calculates the checksum for downstream GRE-encapsulated Layer 2 traffic that is transmitted from ESA.
Default	false
Introduced	24.10.R3
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

iom [slot-number] *reference*

Synopsis	Add a list entry for **iom**
Context	**configure** isa wlan-gw-group *number* iom *reference*
Tree	iom
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**slot-number**] *reference*

Synopsis	IOM slot to use in the WLAN-GW group
Context	**configure** isa wlan-gw-group *number* iom *reference*
Tree	iom
Reference	**configure** card *number*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mda [mda-id] *slot-mda*

Synopsis	Add a list entry for **mda**

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** isa wlan-gw-group *number* mda *slot-mda*
Tree	mda
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

[**mda-id**] *slot-mda*

Synopsis	MDA slot value
Context	**configure** isa wlan-gw-group *number* mda *slot-mda*
Tree	mda
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

nat

Synopsis	Enter the **nat** context
Context	**configure** isa wlan-gw-group *number* nat
Tree	nat
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

log

Synopsis	Enter the **log** context
Context	**configure** isa wlan-gw-group *number* nat log
Tree	log
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

periodic-update

Synopsis	Enter the **periodic-update** context
Context	**configure** isa wlan-gw-group *number* nat log periodic-update
Tree	periodic-update

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure periodic updates for NAT logs that include IP address and port block mappings. These logs can be recorded in system memory, local files, SNMP, or syslog. Periodic logging configured under this hierarchy does not impact other forms of NAT logging, such as RADIUS logging or flow logging (for example, IPFIX or syslog).
Introduced	25.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval of periodic logs
Context	**configure** isa wlan-gw-group *number* nat log periodic-update interval *number*
Tree	interval
Description	This command configures the interval at which periodic NAT logs are generated. These logs can be recorded in system memory, local files, SNMP, or syslog. The logs document the mapping between the IP address on the inside and the IP address and port blocks on the outside. This command does not affect other types of NAT logging, such as RADIUS logging or flow logging (for example, IPFIX or syslog).
Range	10 to 1440
Units	minutes
Introduced	25.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit *number*

Synopsis	Maximum rate that aggregate logs from ESA-VM are sent
Context	**configure** isa wlan-gw-group *number* nat log periodic-update rate-limit *number*
Tree	rate-limit
Description	This command sets the maximum rate at which the ESA-VM sends NAT log messages to the CPM. This rate is applied per ISA group, ensuring that each ESA-VM receives a proportionate share of the rate based on the total number of ESA-VMs in the group. This rate applies to logs that can be stored in system memory, local files, SNMP, or syslog. The logs capture the mapping between internal IP addresses and external IP addresses, including port blocks. This command applies only to NAT log messages configured using this context. It does not affect other types of NAT logging, such as RADIUS logging or flow-based logging (for example, IPFIX or syslog).
Range	1 to 100000

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	packets per second
Default	10000
Introduced	25.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

suppress-lsn-events *boolean*

Synopsis	Suppress LSN events when RADIUS accounting is enabled
Context	**configure** isa wlan-gw-group *number* nat log suppress-lsn-events *boolean*
Tree	suppress-lsn-events
Default	true
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

suppress-lsn-sub-blocks-free *boolean*

Synopsis	Suppress LSN Free block and NAT pool block notification
Context	**configure** isa wlan-gw-group *number* nat log suppress-lsn-sub-blocks-free *boolean*
Tree	suppress-lsn-sub-blocks-free
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lsn *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use Large Scale NAT
Context	**configure** isa wlan-gw-group *number* nat lsn *boolean*
Tree	lsn
Default	true
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis	RADIUS accounting policy for ISA group
Context	**configure** isa wlan-gw-group *number* nat radius-accounting-policy *reference*
Tree	radius-accounting-policy
Reference	**configure** aaa radius isa-policy *named-item*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-limits

Synopsis	Enter the **session-limits** context
Context	**configure** isa wlan-gw-group *number* nat session-limits
Tree	session-limits
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

reserved *number*

Synopsis	Number of sessions reserved for prioritized sessions
Context	**configure** isa wlan-gw-group *number* nat session-limits reserved *number*
Tree	reserved
Range	1 to 6291456
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

upnp-mappings *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum number of UPnP mappings per member

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** isa wlan-gw-group *number* nat session-limits upnp-mappings *number*
Tree	upnp-mappings
Description	This command specifies the maximum number of Universal Plug and Play (UPnP) mappings per member.
Range	1 to 524288
Default	524288
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enable the **watermarks** context
Context	**configure** isa wlan-gw-group *number* nat session-limits watermarks

4.22.1 lag command descriptions

lag [lag-name] *lag-interface*

Synopsis	Enter the **lag** list instance
Context	**configure** lag *lag-interface*
Tree	lag
Description	Commands in this context configure the Link Aggregation Group (LAG) attributes.
Introduced	16.0.R1
Platforms	All

[**lag-name**] *lag-interface*

Synopsis	LAG name
Context	**configure** lag *lag-interface*
Tree	lag
Description	This command configures a LAG name or ID. The LAG name or ID must start with "lag-" followed by the lag name or ID, for example, lag-*newyork-to-boston* or lag-*700*.
String length	1 to 27
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

access

Synopsis	Enter the **access** context
Context	**configure** lag *lag-interface* access
Tree	access
Introduced	16.0.R1
Platforms	All

adapt-qos

Synopsis	Enter the **adapt-qos** context
Context	**configure** lag *lag-interface* access adapt-qos

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	adapt-qos
Introduced	16.0.R1
Platforms	All

include-egr-hash-cfg *boolean*

Synopsis	Factor egress hashing into buffer and rate distribution
Context	**configure** lag *lag-interface* access adapt-qos include-egr-hash-cfg *boolean*
Tree	include-egr-hash-cfg
Default	false
Introduced	16.0.R1
Platforms	All

mode *keyword*

Synopsis	QoS adaptation mode
Context	**configure** lag *lag-interface* access adapt-qos mode *keyword*
Tree	mode
Options	link, distribute, port-fair
Introduced	16.0.R1
Platforms	All

bandwidth *number*

Synopsis	Administrative bandwidth applied to this LAG
Context	**configure** lag *lag-interface* access bandwidth *number*
Tree	bandwidth
Range	1 to 6400000000
Units	bps
Introduced	16.0.R1
Platforms	All

booking-factor *number*

Synopsis	Booking factor against the administrative bandwidth

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** lag *lag-interface* access booking-factor *number*
Tree	booking-factor
Range	1 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

per-fp-egr-queuing *boolean*

Synopsis	Per FP egress queuing
Context	**configure** lag *lag-interface* access per-fp-egr-queuing *boolean*
Tree	per-fp-egr-queuing
Default	false
Introduced	16.0.R1
Platforms	All

per-fp-ing-queuing *boolean*

Synopsis	Enable ingress queuing per forwarding port
Context	**configure** lag *lag-interface* access per-fp-ing-queuing *boolean*
Tree	per-fp-ing-queuing
Default	false
Introduced	16.0.R1
Platforms	All

per-fp-sap-instance *boolean*

Synopsis	SAP instance allocation on a LAG
Context	**configure** lag *lag-interface* access per-fp-sap-instance *boolean*
Tree	per-fp-sap-instance
Default	false
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

adaptive-load-balancing

Synopsis	Enable the **adaptive-load-balancing** context
Context	**configure** lag *lag-interface* adaptive-load-balancing
Tree	adaptive-load-balancing
Description	Commands in this context configure adaptive load balancing (ALB) between LAG links.
Introduced	20.10.R1
Platforms	All

bandwidth-threshold *number*

Synopsis	Minimum bandwidth for ALB
Context	**configure** lag *lag-interface* adaptive-load-balancing bandwidth-threshold *number*
Tree	bandwidth-threshold
Description	This command defines the minimum bandwidth percentage of the most-loaded LAG port egress. If the bandwidth threshold exceeds the configured minimum, the system performs ALB optimization.
Range	0 to 100
Units	percent
Introduced	22.10.R1
Platforms	All

interval *number*

Synopsis	Statistics polling interval for LAG ports
Context	**configure** lag *lag-interface* adaptive-load-balancing interval *number*
Tree	interval
Range	15 | 30 | 60 | 120
Units	seconds
Default	30
Introduced	21.5.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tolerance *number*

Synopsis	Threshold that triggers link utilization optimization
Context	**configure** lag *lag-interface* adaptive-load-balancing tolerance *number*
Tree	tolerance
Description	This command configures the threshold value that is based on the difference between the most-loaded and least-loaded links in a LAG. When the threshold value is exceeded, the adaptive load balancing operation attempts to optimize traffic distribution between LAG links.
Range	1 to 100
Units	percent
Default	20
Introduced	20.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the LAG
Context	**configure** lag *lag-interface* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

bfd-liveness

Synopsis	Enter the **bfd-liveness** context
Context	**configure** lag *lag-interface* bfd-liveness
Tree	bfd-liveness
Description	Commands in this context enable BFD over the associated LAG links.
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** lag *lag-interface* bfd-liveness ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of micro-BFD session for IP family
Context	**configure** lag *lag-interface* bfd-liveness ipv4 admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

bfd-on-distributing-only *boolean*

Synopsis	Restrict micro-BFD sessions to LACP state distributing
Context	**configure** lag *lag-interface* bfd-liveness ipv4 bfd-on-distributing-only *boolean*
Tree	bfd-on-distributing-only
Default	false
Introduced	16.0.R1
Platforms	All

local-ip-address *ipv4-unicast-address*

Synopsis	BFD IPv4 source address
Context	**configure** lag *lag-interface* bfd-liveness ipv4 local-ip-address *ipv4-unicast-address*
Tree	local-ip-address
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-admin-down-time *(number | keyword)*

Synopsis	Maximum time to forward traffic after micro-BFD is down
Context	**configure** lag *lag-interface* bfd-liveness ipv4 max-admin-down-time *(number | keyword)*
Tree	max-admin-down-time
Range	0 to 3600
Units	seconds
Options	infinite
Default	0
Introduced	16.0.R1
Platforms	All

max-setup-time *(number | keyword)*

Synopsis	Maximum time to forward traffic during micro-BFD setup
Context	**configure** lag *lag-interface* bfd-liveness ipv4 max-setup-time *(number | keyword)*
Tree	max-setup-time
Range	0 to 60000
Units	milliseconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Interval multiplier to detect BFD packets not received
Context	**configure** lag *lag-interface* bfd-liveness ipv4 multiplier *number*
Tree	multiplier
Range	3 to 20
Default	3
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

receive-interval *number*

Synopsis	Receive timer for micro-BFD session over the LAG links
Context	**configure** lag *lag-interface* bfd-liveness ipv4 receive-interval *number*
Tree	receive-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

remote-ip-address *ipv4-unicast-address*

Synopsis	BFD IPv4 destination address
Context	**configure** lag *lag-interface* bfd-liveness ipv4 remote-ip-address *ipv4-unicast-address*
Tree	remote-ip-address
Introduced	16.0.R1
Platforms	All

transmit-interval *number*

Synopsis	Transmit timer for micro-BFD session over the LAG links
Context	**configure** lag *lag-interface* bfd-liveness ipv4 transmit-interval *number*
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** lag *lag-interface* bfd-liveness ipv6
Tree	ipv6

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the IPv6 encapsulation to use for the micro-BFD (uBFD) session.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of micro-BFD session for IP family
Context	**configure** lag *lag-interface* bfd-liveness ipv6 admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

bfd-on-distributing-only *boolean*

Synopsis	Restrict micro-BFD sessions to LACP state distributing
Context	**configure** lag *lag-interface* bfd-liveness ipv6 bfd-on-distributing-only *boolean*
Tree	bfd-on-distributing-only
Default	false
Introduced	16.0.R1
Platforms	All

local-ip-address *ipv6-unicast-or-linklocal-address*

Synopsis	BFD IPv6 source address
Context	**configure** lag *lag-interface* bfd-liveness ipv6 local-ip-address *ipv6-unicast-or-linklocal-address*
Tree	local-ip-address
Introduced	16.0.R1
Platforms	All

max-admin-down-time *(number | keyword)*

Synopsis	Maximum time to forward traffic after micro-BFD is down

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** lag *lag-interface* bfd-liveness ipv6 max-admin-down-time *(number* | *keyword)*
Tree	max-admin-down-time
Range	0 to 3600
Units	seconds
Options	infinite
Default	0
Introduced	16.0.R1
Platforms	All

max-setup-time *(number* | *keyword)*

Synopsis	Maximum time to forward traffic during micro-BFD setup
Context	**configure** lag *lag-interface* bfd-liveness ipv6 max-setup-time *(number* | *keyword)*
Tree	max-setup-time
Range	0 to 60000
Units	milliseconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Interval multiplier to detect BFD packets not received
Context	**configure** lag *lag-interface* bfd-liveness ipv6 multiplier *number*
Tree	multiplier
Range	3 to 20
Default	3
Introduced	16.0.R1
Platforms	All

receive-interval *number*

Synopsis	Receive timer for micro-BFD session over the LAG links
Context	**configure** lag *lag-interface* bfd-liveness ipv6 receive-interval *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	receive-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

remote-ip-address *ipv6-unicast-or-linklocal-address*

Synopsis	BFD IPv6 destination address
Context	**configure** lag *lag-interface* bfd-liveness ipv6 remote-ip-address *ipv6-unicast-or-linklocal-address*
Tree	remote-ip-address
Introduced	16.0.R1
Platforms	All

transmit-interval *number*

Synopsis	Transmit timer for micro-BFD session over the LAG links
Context	**configure** lag *lag-interface* bfd-liveness ipv6 transmit-interval *number*
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

soft-reset-extension *boolean*

Synopsis	Extend BFD timers during soft reset
Context	**configure** lag *lag-interface* bfd-liveness soft-reset-extension *boolean*
Tree	soft-reset-extension
Default	true
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *very-long-description*

Synopsis	Text description
Context	**configure** lag *lag-interface* description *very-long-description*
Tree	description
String length	1 to 255
Introduced	16.0.R1
Platforms	All

dynamic-cost *boolean*

Synopsis	Allow LAG costing using operational aggregate bandwidth
Context	**configure** lag *lag-interface* dynamic-cost *boolean*
Tree	dynamic-cost
Default	false
Introduced	16.0.R1
Platforms	All

encap-type *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Encapsulation type
Context	**configure** lag *lag-interface* encap-type *keyword*
Tree	encap-type
Options	null, dot1q, qinq
Introduced	16.0.R1
Platforms	All

eth-cfm

Synopsis	Enter the **eth-cfm** context
Context	**configure** lag *lag-interface* eth-cfm
Tree	eth-cfm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*

Synopsis	Enter the **mep** list instance
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Description	Commands in this context provision the maintenance endpoint (MEP). Port-based MEPs and LAG-based MEPs are mutually exclusive. If a LAG member port includes a MEP, the configuration of a MEP on the LAG fails. If a LAG includes the configuration of a MEP, the configuration of MEPs on the LAG member ports fails.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

md-admin-name *reference*

Synopsis	Maintenance Domain (MD) name
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Reference	**configure** eth-cfm domain *admin-name*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ma-admin-name *reference*

Synopsis	Maintenance Association (MA) name

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Reference	**configure** eth-cfm domain *admin-name* association *admin-name*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep-id *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ais

Synopsis	Enable the **ais** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais
Tree	ais

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

client-meg-level *number*

Synopsis	Client MEG level for AIS message generation
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais client-meg-level *number*
Tree	client-meg-level
Range	1 to 7
Max. instances	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais interface-support *boolean*
Tree	interface-support
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

Synopsis	Transmission interval for AIS messages
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais interval *number*
Tree	interval
Range	1 | 60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais low-priority-defect *keyword*
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Priority of the AIS messages generated by the node
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais priority *number*
Tree	priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alarm-notification

Synopsis	Enter the **alarm-notification** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification
Tree	alarm-notification
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm. Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-alarm-time *number*
Tree	fng-alarm-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-reset-time *number*
Tree	fng-reset-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm *boolean*

Synopsis	Generate CCM messages
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm *boolean*
Tree	ccm
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-ltm-priority *number*
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-padding-size *number*
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval)** is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-tlv-ignore *keyword*

Synopsis	TLV to ignore on reception
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-tlv-ignore *keyword*
Tree	ccm-tlv-ignore
Description	This command configures the receiving MEP to ignore the specified TLVs in the CCM PDU. The ignored TLVs are reported as absent and have no impact on the MEP state machine. When unconfigured, the MEP processes all the recognized TLVs.
Options	interface-status, port-status
Max. instances	2

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* collect-lmm-stats *boolean*
Tree	collect-lmm-stats
Description	When configured to **true**, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings. The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters. When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

csf

Synopsis	Enable the **csf** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* csf
Tree	csf
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* csf multiplier *decimal-number*
Tree	multiplier
Range	0.0 | 2.0 to 30.0
Default	3.5
Introduced	16.0.R1

eth-test

Synopsis	Enable the **eth-test** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the **oam eth-cfm eth-test** command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test bit-error-threshold *number*
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.

test-pattern

Synopsis	Enter the **test-pattern** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern crc-tlv *boolean*
Tree	crc-tlv
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern pattern *keyword*
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

facility-fault *boolean*

Synopsis	Allow the facility MEP to generate a network action
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* facility-fault *boolean*
Tree	facility-fault
Description	When configured to **true**, the system facility MEP responds to a fault with a network-actionable function instead of just reporting the defect condition. When configured to **false**, the system monitors transmissions and reports fault conditions.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the **grace** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the **eth-ed** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed max-rx-defect-window *number*
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed priority *number*
Tree	priority
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed rx-eth-ed *boolean*
Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP

© 2025 Nokia.

Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed tx-eth-ed *boolean*
Tree	tx-eth-ed
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the **eth-vsm-grace** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace rx-eth-vsm-grace *boolean*
Tree	rx-eth-vsm-grace
Description	When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to **false**, the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace tx-eth-vsm-grace *boolean*
Tree	tx-eth-vsm-grace

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* low-priority-defect *keyword*
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* mac-address *mac-unicast-address-no-zero*
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* one-way-delay-threshold *number*
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan *(number | keyword)*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Outer VLAN ID of the tunnel
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* vlan *(number | keyword)*
Tree	vlan
Range	1 to 4094
Options	none
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hash-weight-threshold

Synopsis	Enter the **hash-weight-threshold** context
Context	**configure** lag *lag-interface* hash-weight-threshold
Tree	hash-weight-threshold
Introduced	19.10.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

action *keyword*

Synopsis	Action when the sum of the hash weight is not exceeded
Context	**configure** lag *lag-interface* hash-weight-threshold action *keyword*
Tree	action
Options	down, dynamic-cost, static-cost
Default	down
Introduced	19.10.R1
Platforms	All

cost *number*

Synopsis	Static cost of the LAG
Context	**configure** lag *lag-interface* hash-weight-threshold cost *number*
Tree	cost
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

value *number*

Synopsis	Sum of the hash weight values of all active LAG ports
Context	**configure** lag *lag-interface* hash-weight-threshold value *number*
Tree	value
Range	1 to 6400000
Introduced	19.10.R1
Platforms	All

hold-time-down *number*

Synopsis	Delay time for reporting the LAG is down
Context	**configure** lag *lag-interface* hold-time-down *number*
Tree	hold-time-down
Range	1 to 2000
Units	deciseconds

Platforms	All

lacp

Synopsis	Enable the **lacp** context
Context	**configure** lag *lag-interface* lacp
Tree	lacp
Introduced	16.0.R1
Platforms	All

administrative-key *number*

Synopsis	Key to identify the channel group on each LACP port
Context	**configure** lag *lag-interface* lacp administrative-key *number*
Tree	administrative-key
Description	This command configures the administrative key that identifies the channel group on each port configured to use LACP. In an MC-LAG configuration, both redundant nodes must be configured with the same key values. In any other case, the key is only locally significant.
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

fallback

Synopsis	Enable the **fallback** context
Context	**configure** lag *lag-interface* lacp fallback
Tree	fallback
Description	Commands in this context enable LACP fallback. LACP fallback allows one or more designated links of an LACP-controlled LAG to go into forwarding mode if LACP is not yet operational after a configured timeout period. Links capable of forwarding traffic assume the Ethernet and IP characteristics configured for the LAG.
Introduced	24.10.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mode *keyword*

Synopsis	LACP fallback mode
Context	**configure** lag *lag-interface* lacp fallback mode *keyword*
Tree	mode
Description	This command configures the LACP fallback mode. The **static** mode enables a single member to forward traffic during fallback.
Options	static
Notes	This element is mandatory.
Introduced	24.10.R1
Platforms	All

timeout *number*

Synopsis	LACP fallback timeout interval
Context	**configure** lag *lag-interface* lacp fallback timeout *number*
Tree	timeout
Description	This command configures the duration after which a link becomes active if no LACP PDUs are received within this timeout period. **Note:** The user must first configure this command to a timeout interval of 90 before the **configure lag lacp-xmit-interval** command can change from **fast** to **slow**.
Range	4 to 3600
Units	seconds
Default	4
Introduced	24.10.R1
Platforms	All

mode *keyword*

Synopsis	Mode in which LACP operates
Context	**configure** lag *lag-interface* lacp mode *keyword*
Tree	mode
Options	passive, active
Default	passive

port-id-subtype *keyword*

Synopsis	Encoding of the Port ID TLV transmitted to the peer
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* port-id-subtype *keyword*
Tree	port-id-subtype
Description	This command configures how to encode the Port ID TLV transmitted to the peer. The default setting **tx-local** (ifindex value) is required by some versions of the NSP NSM-P to properly build the Layer 2 topology map using LLDP. Changing this value to transmit the ifName (**tx-if-name**) or ifAlias (**tx-if-alias**) in place of the ifIndex (**tx-local**) may affect the ability of the NSP NFM-P to build the Layer 2 topology map using LLDP.
Options	tx-if-alias – Transmit the ifAlias String (subtype 1) tx-if-name – Transmit the ifName string (subtype 5) tx-local – Transmit the interface ifIndex value (subtype 7)
Default	tx-local
Introduced	24.7.R1

Tree	tx-tlvs
Description	Commands in this context configure which LLDP TLVs to transmit. The TX TLVs, defined as a bitmap, include the basic set of LLDP TLVs whose transmission is allowed on the local LLDP agent by network management. Each bit in the bitmap corresponds to a TLV type associated with a specific optional TLV. Organizationally-specific TLVs are excluded from this bitmap. There is no bit reserved for the management address TLV type because transmission of management address TLVs are controlled by another object.
Introduced	24.7.R1
Platforms	All

port-desc *boolean*

Synopsis	Transmit port description TLVs
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-tlvs port-desc *boolean*

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-hash-mode *keyword*

Synopsis	Subscriber traffic load balance over LAG member links
Context	**configure** lag *lag-interface* per-link-hash weighted subscriber-hash-mode *keyword*
Tree	subscriber-hash-mode
Description	This command configures weighted subscriber traffic to be load balanced over LAG member links. Traffic hashing can be performed based on SAPs or Vports.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

SAP-based hashing supports weights configured at the subscriber level in the subscriber profile. The SAP hashing mode supports only SAP to subscriber (1:1) deployment models.

Vport-based load balancing supports SAP to subscriber (1:1) and SAP to service (N:1) deployment models.

Options	sap, vport
Default	sap
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Introduced	19.10.R1
Platforms	All

entry [li-entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	li li-filter li-ip-filter *named-item* entry *number*
Tree	entry
Description	Commands in this context configure an entry for the LI filter. Multiple entries can be created using unique entry ID numbers within the filter. An entry in an LI filter always has an implicit action of “forward”. LI filter entries can be used as LI source entries. The entry numbers for LI filters serve only as keys for managing the entries (deleting entries, and so on). The order of the LI filter entries is not guaranteed to match the entry numbers and the software may reorder entries. Operators must therefore use LI entries in such a way that their relative order is not important. Entries removed from the filter are immediately removed from all services or network ports where the associated filter is applied.
Introduced	19.10.R1
Platforms	All

[**li-entry-id**] *number*

outer-tag *number*

Synopsis	Outer tag for the QinQ SAP for filter match
Context	li li-filter li-mac-filter *named-item* entry *number* match outer-tag *number*
Tree	outer-tag
Description	This command configures the outer-tag to match on and must be used in conjunction with match criteria SAP in order for the entry match to activate. The match criteria SAP must be an exact match with the QinQ configured on the Epipe or VPLS service (for example 1/1/1:1.*, where the outer tag (C-tag) must be "*"). This feature mandates the provisioning of an associated **outer-tag** (example, 1), to be able to match on the QinQ packet. This example would perform LI on 1/1/1:1.1 on a 1/1/1:1.* SAP.
Range	1 to 4094

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sap *sap*

Synopsis	QinQ SAP for filter match
Context	li li-filter li-mac-filter *named-item* entry *number* match sap *sap*
Tree	sap
Description	This command specifies the QinQ SAP to match from the Epipe or VPLS service, where the S-tag must be a value and the outer tag (C-tag) must be of type *. This filter match is used in conjunction with match criteria **outer-tag**, where the **outer-tag** must also be provisioned for the entry match on the QinQ packet to activate. The match criteria SAP must be an exact match with the QinQ configured on the Epipe or VPLS service (for example 1/1/1:1.*, where the outer tag (C-tag) must be "*"). An associated **outer-tag** (example, 1) must be provisioned to match on the QinQ packet. This example would perform LI on 1/1/1:1.1 on a 1/1/1:1.* SAP.

intercept-id *number*

Synopsis	Intercept ID of the traffic flow
Context	li li-source *service-name* li-ip-filter *reference* entry *reference* intercept-id *number*
Tree	intercept-id
Description	This command configures the intercept ID that is inserted into the packet header for all mirrrored packets of the associated LI source entry. This intercept ID can be used (for example by a downstream LI gateway) to identify the particular LI session to which the packet belongs. For LI source entries, when the **configure mirror mirror-dest encap layer-3-encap header-type** command is configured with **ip-udp-shim** routable encap, an intercept-id field (as part of the routable encap) is always present in the mirrored packets. If there is no intercept ID configured for an LI source entry, the default value is inserted.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When the mirror service is configured with **ip-gre** routable encap under the **header-type** command, no intercept ID is inserted and none should be specified against the LI source entries.

port [port-id] *mirror-source-port-lag-key*

Synopsis	Enter the **port** list instance
Context	li li-source *service-name* port *mirror-source-port-lag-key*
Tree	port
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**port-id**] *mirror-source-port-lag-key*

Synopsis	Port ID
Context	li li-source *service-name* port *mirror-source-port-lag-key*
Tree	port
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

egress *boolean*

Synopsis	Perform lawful intercept on egress traffic
Context	li li-source *service-name* port *mirror-source-port-lag-key* egress *boolean*
Tree	egress
Description	When configured to **true**, the router allows lawful intercept on egress traffic. This command configures packets that egress the SAP to be mirrored. Egress packets are mirrored to the mirror destination after egress packet modification.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ingress *boolean*

Synopsis	Perform lawful intercept on ingress traffic
Context	li li-source *service-name* port *mirror-source-port-lag-key* ingress *boolean*
Tree	ingress

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router allows lawful intercept on ingress traffic. This command configures packets that ingress the SAP to be mirrored. Ingress packets are mirrored to the mirror destination before ingress packet modification.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sap [sap-id] *sap*

Synopsis	Enter the **sap** list instance
Context	li li-source *service-name* sap *sap*
Tree	sap
Description	Commands in this context create a service access point (SAP) within an LI configuration. The specified SAP must define a FastE, GigE, or XGigE, or XGigE access port with a dot1q, null, or q-in-q encapsulation type.
Introduced	19.10.R1
Platforms	All

[**sap-id**] *sap*

Synopsis	SAP ID
Context	li li-source *service-name* sap *sap*
Tree	sap
Description	This command specifies the physical port identifier portion of the SAP definition.
String length	1 to 45
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

egress *boolean*

Synopsis	Perform lawful intercept on egress traffic
Context	li li-source *service-name* sap *sap* egress *boolean*
Tree	egress

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router allows lawful intercept on egress traffic. This command configures packets that egress the SAP to be mirrored. Egress packets are mirrored to the mirror destination after egress packet modification.
Default	false
Introduced	19.10.R1
Platforms	All

ingress *boolean*

Synopsis	Perform lawful intercept on ingress traffic
Context	li li-source *service-name* sap *sap* ingress *boolean*
Tree	ingress
Description	When configured to **true**, the router allows lawful intercept on ingress traffic. This command configures packets that ingress the SAP to be mirrored. Ingress packets are mirrored to the mirror destination before ingress packet modification.
Default	false
Introduced	19.10.R1
Platforms	All

intercept-id *number*

Synopsis	Intercept ID of the traffic flow
Context	li li-source *service-name* sap *sap* intercept-id *number*
Tree	intercept-id
Description	This command configures the intercept ID that is inserted into the packet header for all mirrrored packets of the associated LI source entry. This intercept ID can be used (for example by a downstream LI gateway) to identify the particular LI session to which the packet belongs. For LI source entries, when the **configure mirror mirror-dest encap layer-3-encap header-type** command is configured with **ip-udp-shim** routable encap, an intercept-id field (as part of the routable encap) is always present in the mirrored packets. If there is no intercept ID configured for an LI source entry, the default value is inserted. When the mirror service is configured with **ip-gre** routable encap under the **header-type** command, no intercept ID is inserted and none should be specified against the LI source entries.
Range	1 to 1073741823
Introduced	19.10.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

session-id *number*

Synopsis	Session ID of the traffic flow
Context	li li-source *service-name* sap *sap* session-id *number*
Tree	session-id
Description	This command configures the session ID that is inserted into the packet header for all mirrored packets of the associated LI source entry. This session ID can be used (for example by a downstream LI gateway) to identify the particular LI session to which the packet belongs. The session ID is only valid and used for mirror services that are configured with **ip-udp-shim** routable encap under the **configure mirror mirror-dest encap layer-3-encap header-type** command. For all types of LI source entries, when the mirror service is configured with **ip-udp-shim** routable encap, a session ID field (as part of the routable encap) is always present in the mirrored packets. If no session ID is configured for an LI source entry, the default value is inserted. When a mirror service is configured with **ip-gre** routable encap under the header-type command, no session ID is inserted and none is specified against the LI source entries.
Range	1 to 4294967295
Introduced	19.10.R1
Platforms	All

subscriber [subscriber-id] *subscriber-id*

Synopsis	Enter the **subscriber** list instance
Context	li li-source *service-name* subscriber *subscriber-id*
Tree	subscriber
Description	Commands in this context add hosts of a subscriber to a mirroring service.
Introduced	19.10.R1
Platforms	All

[**subscriber-id**] *subscriber-id*

Synopsis	Subscriber ID
Context	li li-source *service-name* subscriber *subscriber-id*
Tree	subscriber
String length	1 to 64
Notes	This element is part of a list key.

Introduced	19.10.R1
Platforms	All

egress *boolean*

Synopsis	Perform lawful intercept on egress traffic
Context	li li-source *service-name* subscriber *subscriber-id* egress *boolean*
Tree	egress
Description	When configured to **true**, the router allows lawful intercept on egress traffic. This command configures packets that egress the SAP to be mirrored. Egress packets are mirrored to the mirror destination after egress packet modification.
Default	false
Introduced	19.10.R1
Platforms	All

fc *keyword*

Synopsis	Forwarding classes to be mirrored
Context	li li-source *service-name* subscriber *subscriber-id* fc *keyword*
Tree	fc
Description	This command specifies the name of the forwarding class with which to associate LI traffic. The forwarding class name must already be defined within the system. If the FC name is not already defined, an error is returned and this command has no effect. If the FC name is defined, the forwarding class associated with the FC name overrides the default forwarding class.
Options	be, l2, af, l1, h2, ef, h1, nc
Max. instances	8
Introduced	19.10.R1
Platforms	All

host-type *keyword*

Synopsis	Subscriber host type to be monitored
Context	li li-source *service-name* subscriber *subscriber-id* host-type *keyword*
Tree	host-type
Description	This command specifies the host type for LI.

Platforms	All

sla-profile *external-named-item*

Synopsis	SLA profile
Context	li li-source *service-name* subscriber *subscriber-id* sla-profile *external-named-item*
Tree	sla-profile
Description	This command specifies an SLA profile name.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Each host of a subscriber can use a different SLA profile. This option allows interception of only the hosts using the specified SLA profile. In some deployments, SLA profiles are assigned per type of traffic. There can be, for example, a specific SLA profile for voice traffic (which could be used for all SIP hosts).

String length	1 to 32
Notes	The following elements are part of a choice: (**ip-address**, **mac-address**, and **sap-id**) or **sla-profile**.

send-using-vprn *service-name*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPRN to use to send SNMP notifications
Context	li log log-id *li-log-name* destination snmp send-using-vprn *service-name*
Tree	send-using-vprn
Description	This command configures lawful intercept (LI) SNMP notifications to transmit in a VPRN. This configuration is useful when doing management of LI via a VPRN. The specified VPRN service must exist. After an LI log is configured using this command, the VPRN service cannot be deleted without removing the LI log ID. When this command is configured, an LI log ID uses the snmp-trap-group configured for the VPRN. When unconfigured, the outgoing routing instance of LI SNMP notifications is determined by the **configure log route-preference** command, and the LI log ID uses the snmp-trap-group configured in the main system log configuration.
String length	1 to 64
Introduced	23.10.R1
Platforms	All

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp-li-shared-key *encrypted-leaf*

Synopsis	Key used to encrypt and decrypt exchanged LI PFCP IEs
Context	li sci pfcp-li-shared-key *encrypted-leaf*
Tree	pfcp-li-shared-key
Description	This command configures the shared secret key that the SR OS uses in its role as a user plane (UP) to the MAG-c. The UP uses the shared secret key to encrypt and decrypt the LI PFCP IEs it exchanges with the MAG-c. The SR OS UP and the MAG-c must use matching secret keys. The system only accepts a secret key configured as a printable string.
String length	1 to 199
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

x-interfaces

Synopsis	Enter the **x-interfaces** context
Context	li x-interfaces
Tree	x-interfaces
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

admin-state *keyword*

Synopsis	Administrative state of the x-interfaces
Context	li x-interfaces admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

correlation-id

Synopsis	Enter the **correlation-id** context
Context	li x-interfaces correlation-id
Tree	correlation-id
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipoe *keyword*

Synopsis	RADIUS accounting ID type for subscriber correlation
Context	li x-interfaces correlation-id ipoe *keyword*
Tree	ipoe
Options	radius-host-acct-id, radius-queue-acct-id, radius-session-acct-id
Default	radius-host-acct-id
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

pppoe *keyword*

Synopsis	RADIUS accounting ID type for subscriber correlation
Context	li x-interfaces correlation-id pppoe *keyword*
Tree	pppoe
Options	radius-host-acct-id, radius-queue-acct-id, radius-session-acct-id
Default	radius-host-acct-id
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ine-identifier *named-item*

Synopsis	Intercepting Network Element (INE) ID
Context	li x-interfaces ine-identifier *named-item*
Tree	ine-identifier
String length	1 to 32
Introduced	21.5.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR-1, 7750 SR-7/12/12e

lic [name] *named-item*

Synopsis	Enter the **lic** list instance
Context	li x-interfaces lic *named-item*
Tree	lic
Max. instances	18
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

[**name**] *named-item*

Synopsis	LIC name
Context	li x-interfaces lic *named-item*
Tree	lic
String length	1 to 32
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

authentication

Synopsis	Enter the **authentication** context
Context	li x-interfaces lic *named-item* authentication
Tree	authentication
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

password *li-static-encrypted-leaf-hex*

Synopsis	Password for the X1 and X2 interfaces
Context	li x-interfaces lic *named-item* authentication password *li-static-encrypted-leaf-hex*
Tree	password

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 50
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

private-ki *li-static-encrypted-leaf*

Synopsis	Private Ki string for the X1 and X2 interfaces
Context	li x-interfaces lic *named-item* authentication private-ki *li-static-encrypted-leaf*
Tree	private-ki
String length	1 to 50
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

sequence-group *li-static-encrypted-leaf*

Synopsis	Sequence group for the X1 and X2 interfaces
Context	li x-interfaces lic *named-item* authentication sequence-group *li-static-encrypted-leaf*
Tree	sequence-group
String length	1 to 42
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

description *description*

Synopsis	Text description
Context	li x-interfaces lic *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

identifier *named-item*

Synopsis	LIC ID
Context	li x-interfaces lic *named-item* identifier *named-item*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	identifier
String length	1 to 32
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipv4

Synopsis	Enter the **ipv4** context
Context	li x-interfaces lic *named-item* ipv4
Tree	ipv4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the LIC
Context	li x-interfaces lic *named-item* ipv4 ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ip-address
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

port *number*

Synopsis	TCP port associated with the LIC
Context	li x-interfaces lic *named-item* port *number*
Tree	port
Range	0 to 65535
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

router-instance *named-item-64-or-empty*

Synopsis	Virtual router instance used by the X-interfaces
Context	li x-interfaces lic *named-item* router-instance *named-item-64-or-empty*
Tree	router-instance

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	0 to 64
Default	
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

user-db *named-item*

Synopsis	Location of the data-trigger host for the LIC
Context	li x-interfaces user-db *named-item*
Tree	user-db
String length	1 to 32
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

x1

Synopsis	Enter the **x1** context
Context	li x-interfaces x1
Tree	x1
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipv4

Synopsis	Enter the **ipv4** context
Context	li x-interfaces x1 ipv4
Tree	ipv4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	X1 interface IP address
Context	li x-interfaces x1 ipv4 local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

lic-peer *reference*

Synopsis	Peer LIC for the X1 interface
Context	li x-interfaces x1 lic-peer *reference*
Tree	lic-peer
Reference	li x-interfaces lic *named-item*
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

local-tcp-port *number*

Synopsis	Local TCP port used for the X1 interface
Context	li x-interfaces x1 local-tcp-port *number*
Tree	local-tcp-port
Range	1 to 65535
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

timeouts

Synopsis	Enter the **timeouts** context
Context	li x-interfaces x1 timeouts
Tree	timeouts
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

message-timeout *number*

Synopsis	Maximum time for the LIC to reply to an X1 message
Context	li x-interfaces x1 timeouts message-timeout *number*
Tree	message-timeout
Range	180 to 300

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Default	180
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

x2

Synopsis	Enter the **x2** context
Context	li x-interfaces x2
Tree	x2
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipv4

Synopsis	Enter the **ipv4** context
Context	li x-interfaces x2 ipv4
Tree	ipv4
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	X2 interface IP address
Context	li x-interfaces x2 ipv4 local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

lic-peer *reference*

Synopsis	Peer LIC for the X2 interface
Context	li x-interfaces x2 lic-peer *reference*
Tree	lic-peer
Reference	li x-interfaces lic *named-item*

Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

timeouts

Synopsis	Enter the **timeouts** context
Context	li x-interfaces x2 timeouts
Tree	timeouts
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

keep-alive *number*

Synopsis	Keep-alive timeout
Context	li x-interfaces x2 timeouts keep-alive *number*
Tree	keep-alive
Range	300 to 600
Units	seconds
Default	300
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

request *number*

Synopsis	Tx2-normal timeout
Context	li x-interfaces x2 timeouts request *number*
Tree	request
Range	5 to 30
Units	seconds
Default	5
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

timeouts

Synopsis	Enter the **timeouts** context
Context	li x-interfaces x3 timeouts
Tree	timeouts
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

keep-alive *number*

Synopsis	Keep-alive timeout
Context	li x-interfaces x3 timeouts keep-alive *number*
Tree	keep-alive
Range	300 to 600
Units	seconds
Default	300
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

request *number*

Synopsis	Tx3-normal timeout
Context	li x-interfaces x3 timeouts request *number*
Tree	request
Range	5 to 30
Units	seconds
Default	5
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

target-retry-wait *number*

Synopsis	Retry interval for target tunnel setup
Context	li x-interfaces x3 timeouts target-retry-wait *number*
Tree	target-retry-wait

4.24.1 log command descriptions

log

Synopsis	Enter the **log** context
Context	**configure** log
Tree	log
Introduced	16.0.R1
Platforms	All

accounting-policy [policy-id] *number*

Synopsis	Enter the **accounting-policy** list instance
Context	**configure** log accounting-policy *number*
Tree	accounting-policy
Introduced	16.0.R1
Platforms	All

[**policy-id**] *number*

Synopsis	Accounting policy unique ID
Context	**configure** log accounting-policy *number*
Tree	accounting-policy
Range	1 to 99
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the accounting policy
Context	**configure** log accounting-policy *number* admin-state *keyword*
Tree	admin-state
Description	This command controls the administrative state of the accounting policy.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When an accounting policy is disabled, no accounting data is written to the destination log ID. Counters in the billing data reflect totals, and not increments. When the policy is re-enabled, the counters include the data collected during the period the policy was administratively disabled.

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

align *boolean*

Synopsis	Align statistics collection interval to absolute time
Context	**configure** log accounting-policy *number* align *boolean*
Tree	align
Description	When the **align** command is configured to **true**, statistics collection is aligned to the nearest interval within an hour. Statistics are generated when the absolute time can be divided by the collection-interval value, after which the collection interval continues. For example, if the interval is set to 15 minutes and the current time is 15:03, the statistics are collected at 15:15, 15:30, 15:45, 16:00, 16:15, and so on. This supports synchronized statistics intervals and collection across multiple nodes in the network. When the **align** command is configured to **false**, statistics collection occurs immediately after the configuration has been committed. For example, if the interval is set to 15 minutes and the current time is 15:03, the statistics are collected at 15:03, 15:18, 15:33, 15:48, 16:03, and so on.
Default	false
Introduced	19.10.R1
Platforms	All

collection-interval *number*

Synopsis	Accounting collection interval
Context	**configure** log accounting-policy *number* collection-interval *number*
Tree	collection-interval
Range	1 to 120
Units	minutes
Introduced	16.0.R1
Platforms	All

Use subject to Terms available at: www.nokia.com/terms.

custom-record

Synopsis	Enter the **custom-record** context
Context	**configure** log accounting-policy *number* custom-record
Tree	custom-record
Introduced	16.0.R1
Platforms	All

aa-specific

Synopsis	Enter the **aa-specific** context
Context	**configure** log accounting-policy *number* custom-record aa-specific
Tree	aa-specific
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-attributes

Synopsis	Enter the **aa-sub-attributes** context
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-attributes
Tree	aa-sub-attributes
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-profile *boolean*

Synopsis	Include application profile to be exported
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-attributes app-profile *boolean*
Tree	app-profile
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

app-service-options *boolean*

Synopsis	Include application service options
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-attributes app-service-options *boolean*
Tree	app-service-options
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-counters

Synopsis	Enter the **aa-sub-counters** context
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters
Tree	aa-sub-counters
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

long-duration-flow-count *boolean*

Synopsis	Include the long duration flow count
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters long-duration-flow-count *boolean*
Tree	long-duration-flow-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

medium-duration-flow-count *boolean*

Synopsis	Include the medium duration flow
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters medium-duration-flow-count *boolean*
Tree	medium-duration-flow-count
Default	false
Introduced	21.10.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

short-duration-flow-count *boolean*

Synopsis	Include the short duration flow count
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters short-duration-flow-count *boolean*
Tree	short-duration-flow-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

total-flow-duration *boolean*

Synopsis	Include the total flow duration count
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters total-flow-duration *boolean*
Tree	total-flow-duration
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

total-flows-completed-count *boolean*

Synopsis	Include the total of completed flows count
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters total-flows-completed-count *boolean*
Tree	total-flows-completed-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

from-aa-sub-counters

Synopsis	Enter the **from-aa-sub-counters** context
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	from-aa-sub-counters
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-active-count *boolean*

Synopsis	Include the active flows
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters flows-active-count *boolean*
Tree	flows-active-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-admitted-count *boolean*

Synopsis	Include the admitted flows
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters flows-admitted-count *boolean*
Tree	flows-admitted-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-denied-count *boolean*

Synopsis	Include the denied flows
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters flows-denied-count *boolean*
Tree	flows-denied-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Use subject to Terms available at: www.nokia.com/terms.

forwarding-class *boolean*

Synopsis	Include forwarding class
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters forwarding-class *boolean*
Tree	forwarding-class
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-octet-count *boolean*

Synopsis	Include maximum throughput as measured in octet count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters max-throughput-octet-count *boolean*
Tree	max-throughput-octet-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-packet-count *boolean*

Synopsis	Include maximum throughput as measured in packet count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters max-throughput-packet-count *boolean*
Tree	max-throughput-packet-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-timestamp *boolean*

Synopsis	Include timestamp of the maximum throughput
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters max-throughput-timestamp *boolean*
Tree	max-throughput-timestamp

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

octets-admitted-count *boolean*

Synopsis	Include the admitted octets count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters octets-admitted-count *boolean*
Tree	octets-admitted-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

octets-denied-count *boolean*

Synopsis	Include the denied octets count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters octets-denied-count *boolean*
Tree	octets-denied-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets-admitted-count *boolean*

Synopsis	Include the admitted packets count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters packets-admitted-count *boolean*
Tree	packets-admitted-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Synopsis	Accounting policy record type
Context	**configure** log accounting-policy *number* record *keyword*
Tree	record
Description	This command adds the accounting record type to the accounting policy that is forwarded to the configured accounting file. A record name can only be used in one accounting policy. To obtain a list of all record types that can be configured, use the **show log accounting-records** command. To configure an accounting policy for access ports, select a service record (for example, service-ingress-octets). To change the record name to another service record, configure the new record name with this command. When configuring an accounting policy for network ports, select a network record. To change the record name to another network record, configure the new record name with this command. **Note:** AA, video, and subscriber records are not applicable to the 7950 XRS.
Options	service-ingress-octets, service-egress-octets, service-ingress-packets, service-egress-packets, network-ingress-octets, network-egress-octets, network-ingress-packets, network-egress-packets, compact-service-ingress-octets, combined-service-ingress, combined-network-ing-egr-octets, combined-service-ing-egr-octets, complete-service-ingress-egress, combined-sdp-ingress-egress, complete-sdp-ingress-egress, complete-subscriber-ingress-egress, aa-protocol, aa-application, aa-app-group, aa-subscriber-protocol, aa-subscriber-application, custom-record-subscriber, custom-record-service, custom-record-aa-sub, queue-group-octets, queue-group-packets, combined-queue-group, combined-mpls-lsp-ingress, combined-mpls-lsp-egress, combined-ldp-lsp-egress, saa, video, aa-performance, complete-ethernet-port, extended-service-ingress-egress, complete-network-ing-egr, aa-partition, complete-pm, aa-admit-deny, network-interface-ingress-octets, network-interface-egress-octets, network-interface-ingress-packets, network-interface-egress-packets, combined-network-interface-ingress, combined-network-interface-egress, complete-network-interface-ing-egr, access-egress-octets, access-egress-packets, combined-access-egress, combined-network-egress, complete-service-activation-test, combined-mpls-srte-egress, combined-sr-policy-egress
Introduced	16.0.R1
Platforms	All

app-route-notifications

Context	**configure** log file-storage-control accounting-files-total-size *number*
Tree	accounting-files-total-size
Description	This command configures the limit for the total space that all accounting files can occupy on each storage device on the active CPM. When this threshold is reached, new accounting files are no longer created in the \act-collect directory of the storage device until SR OS removes older accounting files from the \act directory and the occupancy is below the limit. Currently open, in-progress accounting files in the \act-collect directory are not affected by this limit and are completed. When unconfigured, there is no specific limit for the total size of all accounting files. Only accounting files in the \act directory with system generated names (including no file extension) are applicable toward the total size limit. If a user manually adds or deletes accounting files from the \act directory, the size of the files is not taken into account for up to 1 hour. The configured total size limit is not validated against the actual size of the installed storage devices. If the configured limit is larger than the installed compact flash (CF) device, the limit is never reached.
Range	50 to 4194304
Units	megabytes
Introduced	23.3.R1
Platforms	All

log-files-total-size *number*

Synopsis	Per CF total log file storage limit
Context	**configure** log file-storage-control log-files-total-size *number*
Tree	log-files-total-size
Description	This command configures the limit for the total space that all log files can occupy on each storage device on the active CPM. When this threshold is reached, log events are no longer written to the files in the \log directory until SR OS removes older log files and the occupancy is below the limit. When unconfigured, there is no specific limit for the total size of all log files.

cli

Synopsis	Enable the **cli** context
Context	**configure** log log-id *log-name* destination cli
Tree	cli
Description	Commands in this context configure log events directed to any subscribed CLI session. Subscribe to a CLI log from within a CLI session using the **tools perform log subscribe-to log-id** command. Events are sent to the CLI session for the duration of the CLI session or until a **tools perform log unsubscribe-from** command is issued. A local circular memory log is maintained for CLI logs.
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	16.0.R1

Synopsis	Number of events stored in this CLI log
Context	**configure** log log-id *log-name* destination cli max-entries *number*
Tree	max-entries
Range	50 to 3000
Default	100
Introduced	16.0.R1
Platforms	All

console

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	Send log events to the system console port
Context	**configure** log log-id *log-name* destination console
Tree	console
Description	When specified, the system directs log events to the console port. If the console is not connected, the system drops all entries.
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	16.0.R1
Platforms	All

file *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	File to send log events
Context	**configure** log log-id *log-name* destination file *reference*
Tree	file
Description	This command specifies the file where the system directs log events. When the command is modified, log files are not written to the new location until a rollover occurs or the log is manually cleared. Use the **clear log** command to force a rollover. Subsequent log entries are then written to the new location. If a rollover does not occur or the log is not cleared, the system continues to use the old location.
Reference	**configure** log file *file-policy-name*
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	16.0.R1
Platforms	All

memory

Synopsis	Enable the **memory** context
Context	**configure** log log-id *log-name* destination memory
Tree	memory
Description	Commands in this context configure log events directed to a memory file. A memory file is a circular buffer. When the file is full, each new entry replaces the oldest entry in the log.

max-entries *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in this memory log
Context	**configure** log log-id *log-name* destination memory max-entries *number*
Tree	max-entries
Range	50 to 3000
Default	100
Introduced	16.0.R1
Platforms	All

netconf

Synopsis	Enable the **netconf** context
Context	**configure** log log-id *log-name* destination netconf
Tree	netconf
Description	Commands in this context configure log events directed to a NETCONF session as notifications. A NETCONF client can subscribe to a NETCONF log using the configured **netconf-stream** for the log in a subscription request. One or more NETCONF sessions can subscribe to a NETCONF log or stream.
Notes	The following elements are part of a choice: **cli**, **console**, **file**, **memory**, **netconf**, **snmp**, or **syslog**.
Introduced	16.0.R1
Platforms	All

Introduced	16.0.R1
Platforms	All

anysec *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Mark the CA for use by ANYsec encryption only
Context	**configure** macsec connectivity-association *string* anysec *boolean*
Tree	anysec
Description	When configured to **true**, the system configures the Connectivity Association (CA) for exclusive use with ANYsec encyrption. The following MACsec commands cannot be configured while ANYsec is configured. • **configure macsec connectivity-association clear-tag-mode** • **configure macsec connectivity-association delay-protection** • **configure macsec connectivity-association encryption-offset** • **configure macsec connectivity-association macsec-encrypt** • **configure macsec connectivity-association replay-window-size** • **configure macsec mac-policy** When configured to **false**, the system removes the CA.
Default	false
Introduced	23.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

cipher-suite *keyword*

Synopsis	Data path encryption algorithm
Context	**configure** macsec connectivity-association *string* cipher-suite *keyword*
Tree	cipher-suite
Options	gcm-aes-128, gcm-aes-256, gcm-aes-xpn-128, gcm-aes-xpn-256
Default	gcm-aes-128
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

clear-tag-mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clear tag mode for clear text before the SecTAG
Context	**configure** macsec connectivity-association *string* clear-tag-mode *keyword*
Tree	clear-tag-mode
Options	none, single-tag, dual-tag
Default	none
Introduced	16.0.R1
Platforms	All

delay-protection *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable delay protection
Context	**configure** macsec connectivity-association *string* delay-protection *boolean*
Tree	delay-protection
Default	false
Introduced	20.10.R1
Platforms	All

description *string*

Synopsis	Text description
Context	**configure** macsec connectivity-association *string* description *string*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	All

encryption-offset *number*

Synopsis	Confidentiality (encryption) offset
Context	**configure** macsec connectivity-association *string* encryption-offset *number*
Tree	encryption-offset
Range	0 | 30 | 50
Default	0
Introduced	16.0.R1
Platforms	All

macsec-encrypt *boolean*

Synopsis	Encrypt and authenticate all PDUs
Context	**configure** macsec connectivity-association *string* macsec-encrypt *boolean*
Tree	macsec-encrypt
Description	When configured to **true**, all PDUs are encrypted and authenticated. When configured to **false**, all PDUs are transmitted in clear text, however, they are still authenticated and have the trailing ICV.
Default	true
Introduced	16.0.R1
Platforms	All

replay-protection *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Discard packet when not within the replay window size
Context	**configure** macsec connectivity-association *string* replay-protection *boolean*
Tree	replay-protection
Description	When configured to **true**, replay protection is enabled and packets are discarded when they are not within the replay window size. With replay protection, the sequence of the ID number of received packets is checked. If a packet arrives out of sequence and the difference between the packet IDs exceeds the replay protection window size, the packet is counted by the receiving port and discarded. For example if the replay protection window size is configured to five and a packet with an ID of 1006 arrives on the receiving link immediately following the packet

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

assigned an ID of 1000, the packet with ID 1006 is counted and discarded because it is outside the parameter of the window size.

Replay protection is particularly useful for addressing man-in-the-middle attacks. A packet that is replayed by a man-in-the-middle attacker on the Ethernet link that arrives on the receiving link out of sequence will be detected and dropped instead of forwarded through the network.

Replay protection should not be enabled in cases where packets are expected to arrive out of order.

When configured to **false**, replay protection is not enabled.

Default	false
Introduced	16.0.R1
Platforms	All

replay-window-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Replay protection window size
Context	**configure** macsec connectivity-association *string* replay-window-size *number*
Tree	replay-window-size
Range	0 to 4294967294
Default	0
Introduced	16.0.R1
Platforms	All

static-cak

Synopsis	Enter the **static-cak** context
Context	**configure** macsec connectivity-association *string* static-cak
Tree	static-cak
Description	Commands in this context configure the Connectivity Association Key (CAK) to manage the MACsec Key Agreement (MKA).
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

active-psk *number*

Synopsis	Active pre-shared-key (PSK)
Context	**configure** macsec connectivity-association *string* static-cak active-psk *number*
Tree	active-psk
Description	This command specifies the active transmitting PSK. If two PSKs are configured, the arriving MACsec MKA can be decrypted via CAKs using either PSK; however, only the active PSK is used for TX encryption of MKA PDUs.
Range	1 to 2
Default	1
Introduced	16.0.R1
Platforms	All

mka-hello-interval *keyword*

Synopsis	MKA hello interval
Context	**configure** macsec connectivity-association *string* static-cak mka-hello-interval *keyword*
Tree	mka-hello-interval
Description	This command configures the interval at which MKA hello packets are sent or received for the connectivity association.
Options	1, 2, 3, 4, 5, 6, 500ms
Default	2
Introduced	19.5.R1
Platforms	All

mka-key-server-priority *number*

Synopsis	Key server priority used by the MKA protocol
Context	**configure** macsec connectivity-association *string* static-cak mka-key-server-priority *number*
Tree	mka-key-server-priority
Description	This command specifies the key server priority used by the MACsec Key Agreement (MKA) protocol to select the key server when MACsec is enabled using static connectivity association key (CAK) security mode.
Range	0 to 255
Default	16

Introduced	16.0.R1
Platforms	All

pre-shared-key [psk-id] *number*

Synopsis	Enter the **pre-shared-key** list instance
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number*
Tree	pre-shared-key
Description	Commands in this context configure pre-shared key attributes to enable MACsec using static connectivity association key (CAK) security mode. A pre-shared key includes a connectivity association key name (CKN) and a connectivity association key (CAK). The pre-shared key, the CKN and the CAK, must match on both ends of a link. A pre-shared key is configured on both devices at each end of a point-to-point link to enable MACsec via static CAK security mode. The MACsec Key Agreement (MKA) protocol is enabled after the successful MKA liveliness negotiation. The encryption type is used to encrypt the SAK and authenticate the MKA packet. The symmetric encryption key SAK (Security Association Key) must be encrypted (wrapped) via the MKA protocols. The AES key is derived from the pre-shared-key.
Max. instances	2
Introduced	16.0.R1
Platforms	All

[**psk-id**] *number*

Synopsis	Pre-shared-key (PSK) ID
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number*
Tree	pre-shared-key
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

cak *encrypted-leaf-hex-without-prefix*

Synopsis	Connectivity association key (CAK) for the PSK

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number* cak *encrypted-leaf-hex-without-prefix*
Tree	cak
Description	This command specifies the connectivity association key (CAK) for the pre-shared key. Two values are derived from the CAK: • Key Encryption Key (KEK), used to encrypt the MKA and SAK (symmetric key used for data path PDUs) distributed between all members • Integrity Check Value (ICV), used to authenticate the MKA and SAK PDUs distributed between all members
String length	1 to 71
Introduced	16.0.R1
Platforms	All

cak-name *cak-name*

Synopsis	Connectivity association key name (CKN) for the PSK
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number* cak-name *cak-name*
Tree	cak-name
Description	This command specifies the connectivity association key name (CKN) for the pre-shared key. The CKN is appended to the MKA for identification of the appropriate CAK by the peer.
String length	1 to 64
Introduced	16.0.R1
Platforms	All

encryption-type *keyword*

Synopsis	Encryption for authentication of the MKA packet
Context	**configure** macsec connectivity-association *string* static-cak pre-shared-key *number* encryption-type *keyword*
Tree	encryption-type
Options	aes-128-cmac, aes-256-cmac
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

use-lag-port-weight *boolean*

Synopsis	Use LAG port weight in calculating MCAC constraints
Context	**configure** mcac policy *string* bundle *string* mc-constraints use-lag-port-weight *boolean*
Tree	use-lag-port-weight

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.
Default	false
Introduced	16.0.R1
Platforms	All

source-specific-accounting *keyword*

Synopsis	MCAC accounting setting
Context	**configure** mcac policy *string* bundle *string* source-specific-accounting *keyword*
Tree	source-specific-accounting
Description	This command configures the MCAC policy accounting behavior. **true** - Both multicast group and multicast source are used for MCAC accounting. For example, if multiple, multicast joins are for the same multicast group but each has a different multicast source, the MCAC accounts for each combination of group and source. **false** - Only the multicast group is used for MCAC accounting. The multicast source address is not used for MCAC accounting. For example, if multiple, multicast joins are for the same multicast group but each have a different multicast source, the MCAC only accounts for the mutlicast group once. **policy** - The bundle uses the source-specific accounting setting in the MCAC policy level.
Options	true – Use source-specific accounting at policy level false – Use multicast group and source MCAC accounting policy – Use multicast group for MCAC accounting
Default	policy
Introduced	24.7.R1
Platforms	All

default-action *keyword*

Synopsis	Default action for the MCAC policy
Context	**configure** mcac policy *string* default-action *keyword*
Tree	default-action
Options	accept, discard
Default	discard

source-specific-accounting *boolean*

Synopsis	Enable multicast group and source for MCAC accounting
Context	**configure** mcac policy *string* source-specific-accounting *boolean*
Tree	source-specific-accounting
Description	When configured to **true**, the router uses both multicast group and multicast source for MCAC accounting. For example, if multiple, multicast joins are for the same multicast group but each has a different multicast source, the MCAC accounts for each combination of group and source. If the multicast source is configured as a subnet instead of an address, the MCAC automatically accounts for every source address within the subnet. If the multicast source is not configured, the MCAC assumes only one source when calculating the mandatory bandwidth. However, when joins are coming in, each group and source combination is taken into account. When configured to **false**, the router only uses the multicast group for MCAC accounting. The multicast source address is not used for MCAC accounting. For example, if multiple, multicast joins are for the same multicast group but each has a different multicast source, the MCAC only accounts for the multicast group once.
Default	false
Introduced	24.7.R1
Platforms	All

4.27.1 mirror command descriptions

mirror

Synopsis	Enter the **mirror** context
Context	**configure** mirror
Tree	mirror
Introduced	16.0.R1
Platforms	All

global-sampling-rate *number*

Synopsis	System wide global sampling rate
Context	**configure** mirror global-sampling-rate *number*
Tree	global-sampling-rate
Description	This command configures the global sampling rate. The global sampling rate provides a higher sampling rate than the sampling rate specified on the mirror destination. When set, this command applies to all mirror destination services that have the **use-global-sampling-rate** command configured. The global sampling rate takes precedence over the rate specified on the mirror destination. This means that when this command and the **configure mirror mirror-dest sampling-rate** are configured under the same mirror destination, the system automatically samples using the higher rate configured with this command and ignores the lower rate configured with the **sampling-rate** command. When unconfigured, no mirror destinations are associated to a global sampling rate and all mirror destinations mirror at the full rate, which means every packet is mirrored unless a mirror destination rate is specified.
Range	0 | 2 to 255
Default	0
Introduced	22.10.R1
Platforms	All

mirror-dest [service-name] *service-name*

Synopsis	Enter the **mirror-dest** list instance
Context	**configure** mirror mirror-dest *service-name*
Tree	mirror-dest

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context set up a packet mirroring service to allow mirrored packets to be directed locally (within the same router) or remotely (over the core of the network and with a far-end decode mirror encapsulation). The mirror destination service is composed of destination options that define where the mirrored packets are sent. It also specifies whether the defined service will receive mirrored packets from a far-end router over the network core. The mirror destination services are persistent between boots of the router and are included in the configuration saves.
Max. instances	255
Introduced	16.0.R1
Platforms	All

[**service-name**] *service-name*

Synopsis	Administrative service name
Context	**configure** mirror mirror-dest *service-name*
Tree	mirror-dest
String length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1

Use subject to Terms available at: www.nokia.com/terms.

per-lag-hashing *boolean*

Synopsis	Enable per-LAG hashing on the mirror destination
Context	**configure** mirror mirror-dest *service-name* per-lag-hashing *boolean*
Tree	per-lag-hashing
Description	When configured to **true**, the router enables the use of all link members of the mirror destination SAP or SDP of type LAG. The hashing to link members are based on IP flows. When configured to **false**, the router disables per-LAG hashing. All mirrored packets sent to a SAP or SDP of type LAG, are sent to only one of the LAG link members. If the link member to which the mirrored packets are being sent fails, another link member takes over and provides mirrored packet forwarding. Although no hashing is performed, resiliency is still provided by this next link member.
Default	false
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-source

Synopsis	Enable the **remote-source** context
Context	**configure** mirror mirror-dest *service-name* remote-source

vc-label *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MPLS VC label that sends packets to the far end device
Context	**configure** mirror mirror-dest *service-name* spoke-sdp *sdp-bind-id* ingress vc-label *number*
Tree	vc-label
Range	1 to 1048575
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Mirror type information
Context	**configure** mirror mirror-dest *service-name* type *keyword*
Tree	type
Options	ether, ip-only
Default	ether
Introduced	16.0.R1
Platforms	All

use-global-sampling-rate *boolean*

Synopsis	Enables global sampling rate by mirror destination
Context	**configure** mirror mirror-dest *service-name* use-global-sampling-rate *boolean*
Tree	use-global-sampling-rate
Description	When configured to **true**, this command configures each mirror destination service to use the global sampling rate, which allows a single high sampling rate for the entire system.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the mirror destination mirrors at the full rate (all packets) or mirrors based on the sampling rate for the mirror destination if the **sampling-rate** command is configured.

Default	false
Introduced	22.10.R1
Platforms	All

mirror-source [service-name] *service-name*

Synopsis	Enter the **mirror-source** list instance
Context	**configure** mirror mirror-source *service-name*
Tree	mirror-source
Introduced	19.10.R1
Platforms	All

[**service-name**] *service-name*

Synopsis	Administrative service name
Context	**configure** mirror mirror-source *service-name*
Tree	mirror-source
String length	1 to 64
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the mirror service
Context	**configure** mirror mirror-source *service-name* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	19.10.R1
Platforms	All

4.28.1 multicast-management command descriptions

multicast-management

Synopsis	Enter the **multicast-management** context
Context	**configure** multicast-management
Tree	multicast-management
Introduced	16.0.R1
Platforms	All

bandwidth-policy [policy-name] *named-item*

Synopsis	Enter the **bandwidth-policy** list instance
Context	**configure** multicast-management bandwidth-policy *named-item*
Tree	bandwidth-policy
Max. instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

[**policy-name**] *named-item*

Synopsis	Bandwidth policy name
Context	**configure** multicast-management bandwidth-policy *named-item*
Tree	bandwidth-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

admin-bw-threshold *number*

Synopsis	Administrative bandwidth threshold

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** multicast-management bandwidth-policy *named-item* admin-bw-threshold *number*
Tree	admin-bw-threshold
Range	1 to 40000000
Units	kilobps
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

description *description*

Synopsis	Text description
Context	**configure** multicast-management bandwidth-policy *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

falling-percent-reset *number*

Synopsis	Percent of bandwidth that decreases before resetting
Context	**configure** multicast-management bandwidth-policy *named-item* falling-percent-reset *number*
Tree	falling-percent-reset
Range	1 to 100
Units	percent
Default	50
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

impm-paths

Synopsis	Enter the **impm-paths** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	impm-paths
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

primary-path

Synopsis	Enter the **primary-path** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path
Tree	primary-path
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

queue-parameters

Synopsis	Enter the **queue-parameters** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path queue-parameters
Tree	queue-parameters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

cbs *decimal-number*

Synopsis	Override for default CBS for single queue for each path
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path queue-parameters cbs *decimal-number*
Tree	cbs
Range	0.00 to 100.00
Units	percent
Default	5.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

drop-tail

Synopsis	Enter the **drop-tail** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path queue-parameters drop-tail
Tree	drop-tail
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

low

Synopsis	Enter the **low** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path queue-parameters drop-tail low
Tree	low
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

percent-reduction-from-mbs *number*

Synopsis	Low drop-tail percent from MBS that is reduced
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path queue-parameters drop-tail low percent-reduction-from-mbs *number*
Tree	percent-reduction-from-mbs
Range	0 to 100
Units	percent
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

mbs *decimal-number*

Synopsis	Override for default MBS for single queue for each path

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths primary-path queue-parameters mbs *decimal-number*
Tree	mbs
Range	0.00 to 100.00
Units	percent
Default	7.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

secondary-path

Synopsis	Enter the **secondary-path** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path
Tree	secondary-path
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

number-paths

Synopsis	Enter the **number-paths** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path number-paths
Tree	number-paths
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

number-of-paths *number*

Synopsis	Number of secondary paths
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path number-paths number-of-paths *number*
Tree	number-of-paths
Range	1 to 15

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

redundant-sfm *number*

Synopsis	Number of secondary paths in redundant SFM mode
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path number-paths redundant-sfm *number*
Tree	redundant-sfm
Range	1 to 15
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

queue-parameters

Synopsis	Enter the **queue-parameters** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path queue-parameters
Tree	queue-parameters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

cbs *decimal-number*

Synopsis	Override for default CBS for single queue for each path
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path queue-parameters cbs *decimal-number*
Tree	cbs
Range	0.00 to 100.00
Units	percent
Default	30.00
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

drop-tail

Synopsis	Enter the **drop-tail** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path queue-parameters drop-tail
Tree	drop-tail
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

low

Synopsis	Enter the **low** context
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path queue-parameters drop-tail low
Tree	low
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

percent-reduction-from-mbs *number*

Synopsis	Low drop-tail percent from MBS that is reduced
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path queue-parameters drop-tail low percent-reduction-from-mbs *number*
Tree	percent-reduction-from-mbs
Range	0 to 100
Units	percent
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mbs *decimal-number*

Synopsis	Override for default MBS for single queue for each path
Context	**configure** multicast-management bandwidth-policy *named-item* impm-paths secondary-path queue-parameters mbs *decimal-number*
Tree	mbs
Range	0.00 to 100.00
Units	percent
Default	40.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

mcast-pool

Synopsis	Enter the **mcast-pool** context
Context	**configure** multicast-management bandwidth-policy *named-item* mcast-pool
Tree	mcast-pool
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

percent-of-total *number*

Synopsis	Percent of ingress buffers assigned to multicast pool
Context	**configure** multicast-management bandwidth-policy *named-item* mcast-pool percent-of-total *number*
Tree	percent-of-total
Range	1 to 50
Units	percent
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

resv-cbs *number*

Synopsis	Percentage of pool reserved for multicast path queues
Context	**configure** multicast-management bandwidth-policy *named-item* mcast-pool resv-cbs *number*
Tree	resv-cbs
Range	1 to 100
Units	percent
Default	50
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

slope-policy *reference*

Synopsis	Slope policy name
Context	**configure** multicast-management bandwidth-policy *named-item* mcast-pool slope-policy *reference*
Tree	slope-policy
Reference	**configure** qos slope-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

chassis-level

Synopsis	Enter the **chassis-level** context
Context	**configure** multicast-management chassis-level
Tree	chassis-level
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

mmrp-impm-override *boolean*

Synopsis	Manage MMRP traffic by IMPM
Context	**configure** multicast-management chassis-level mmrp-impm-override *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	mmrp-impm-override
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

per-mcast-plane-capacity

Synopsis	Enter the **per-mcast-plane-capacity** context
Context	**configure** multicast-management chassis-level per-mcast-plane-capacity
Tree	per-mcast-plane-capacity
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

mcast-capacity

Synopsis	Enter the **mcast-capacity** context
Context	**configure** multicast-management chassis-level per-mcast-plane-capacity mcast-capacity
Tree	mcast-capacity
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

primary-percentage *decimal-number*

Synopsis	Percent of plane capacity for primary multicast planes
Context	**configure** multicast-management chassis-level per-mcast-plane-capacity mcast-capacity primary-percentage *decimal-number*
Tree	primary-percentage
Range	0.01 to 100.00
Units	percent
Default	87.50
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

secondary-percentage *decimal-number*

Synopsis	Percent of plane capacity for secondary multicast plane
Context	**configure** multicast-management chassis-level per-mcast-plane-capacity mcast-capacity secondary-percentage *decimal-number*
Tree	secondary-percentage
Range	0.01 to 100.00
Units	percent
Default	87.50
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

redundant-mcast-capacity

Synopsis	Enter the **redundant-mcast-capacity** context
Context	**configure** multicast-management chassis-level per-mcast-plane-capacity redundant-mcast-capacity
Tree	redundant-mcast-capacity
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

primary-percentage *decimal-number*

Synopsis	Percent of plane capacity for primary multicast planes
Context	**configure** multicast-management chassis-level per-mcast-plane-capacity redundant-mcast-capacity primary-percentage *decimal-number*
Tree	primary-percentage
Range	0.01 to 100.00
Units	percent
Default	87.50
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

secondary-percentage *decimal-number*

Synopsis	Percent of plane capacity for secondary multicast plane
Context	**configure** multicast-management chassis-level per-mcast-plane-capacity redundant-mcast-capacity secondary-percentage *decimal-number*
Tree	secondary-percentage
Range	0.01 to 100.00
Units	percent
Default	87.50
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

total-capacity *keyword*

Synopsis	Total multicast plane bandwidth
Context	**configure** multicast-management chassis-level per-mcast-plane-capacity total-capacity *keyword*
Tree	total-capacity
Units	megabps
Options	dynamic, 2000, 4000, 5250, 8250, 15000, 17000, 19000, 27000, 42000, 90000
Default	dynamic
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

round-robin-inactive-records *boolean*

Synopsis	Redistribute newly populated inactive records
Context	**configure** multicast-management chassis-level round-robin-inactive-records *boolean*
Tree	round-robin-inactive-records
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

multicast-info-policy [policy-name] *named-item*

Synopsis	Enter the **multicast-info-policy** list instance
Context	**configure** multicast-management multicast-info-policy *named-item*
Tree	multicast-info-policy
Max. instances	32
Introduced	16.0.R1
Platforms	All

[**policy-name**] *named-item*

Synopsis	Multicast information policy name
Context	**configure** multicast-management multicast-info-policy *named-item*
Tree	multicast-info-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

bundle [bundle-name] *named-item*

Synopsis	Enter the **bundle** list instance
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item*
Tree	bundle
Max. instances	32
Introduced	16.0.R1
Platforms	All

[**bundle-name**] *named-item*

Synopsis	Bundle name
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item*
Tree	bundle
String length	1 to 32

cc-error *boolean*

Synopsis	Check the continuity counter
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video analyzer alarms cc-error *boolean*
Tree	cc-error
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

non-vid-pid-absent *number*

Synopsis	PID checked within the specified interval
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video analyzer alarms non-vid-pid-absent *number*
Tree	non-vid-pid-absent
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

pat-repetition

Synopsis	Enable the **pat-repetition** context
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video analyzer alarms pat-repetition
Tree	pat-repetition
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

poa *number*

Synopsis	Time between two PATs for which a POA alarm is raised

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video analyzer alarms pat-repetition poa *number*
Tree	poa
Range	300 to 1000
Units	milliseconds
Default	500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

qos *number*

Synopsis	Time between two PATs for which a QoS alarm is raised
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video analyzer alarms pat-repetition qos *number*
Tree	qos
Range	200 to 900
Units	milliseconds
Default	200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

tnc *number*

Synopsis	Time between two PATs for which a TNC alarm is raised
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* channel start *(ipv4-address-no-zone | ipv6-address-no-zone)* end *(ipv4-address-no-zone | ipv6-address-no-zone)* video analyzer alarms pat-repetition tnc *number*
Tree	tnc
Range	100 to 800
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

© 2025 Nokia.

Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer alarms
Tree	alarms
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

cc-error *boolean*

Synopsis	Check the continuity counter
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer alarms cc-error *boolean*
Tree	cc-error
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

non-vid-pid-absent *number*

Synopsis	PID checked within the specified interval
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer alarms non-vid-pid-absent *number*
Tree	non-vid-pid-absent
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

pat-repetition

Synopsis	Enable the **pat-repetition** context
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer alarms pat-repetition
Tree	pat-repetition
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

poa *number*

Synopsis	Time between two PATs for which a POA alarm is raised
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer alarms pat-repetition poa *number*
Tree	poa
Range	300 to 1000
Units	milliseconds
Default	500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

qos *number*

Synopsis	Time between two PATs for which a QoS alarm is raised
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer alarms pat-repetition qos *number*
Tree	qos
Range	200 to 900
Units	milliseconds
Default	200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

tnc *number*

Synopsis	Time between two PATs for which a TNC alarm is raised
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer alarms pat-repetition tnc *number*
Tree	tnc
Range	100 to 800
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

pat-syntax *boolean*

Synopsis	Check for PAT syntax errors
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer alarms pat-syntax *boolean*
Tree	pat-syntax
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

pcr-repetition

Synopsis	Enable the **pcr-repetition** context
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer alarms pcr-repetition
Tree	pcr-repetition
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

poa *number*

Synopsis	Time between two PCRs for which a POA alarm is raised
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer alarms pcr-repetition poa *number*
Tree	poa
Range	300 to 1000
Units	milliseconds
Default	500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

qos *number*

Synopsis	Time between two PCRs for which a QoS alarm is raised
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video analyzer alarms pcr-repetition qos *number*

fcc-channel-type *keyword*

Synopsis	Channel type for the bundle or channel
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video fcc-channel-type *keyword*
Tree	fcc-channel-type
Options	hd, sd, pip
Default	hd
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-min-duration *number*

Synopsis	Minimum duration of the FCC burst
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video fcc-min-duration *number*
Tree	fcc-min-duration
Range	300 to 8000
Units	milliseconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-server *boolean*

Synopsis	Enable the FCC server for a multicast bundle
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video fcc-server *boolean*
Tree	fcc-server
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

local-fcc-port *number*

Synopsis	Local port for FCC requests

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video local-fcc-port *number*
Tree	local-fcc-port
Range	1024 to 5999 | 6251 to 65535
Default	4098
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

local-rt-port *number*

Synopsis	Local port for RET requests
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video local-rt-port *number*
Tree	local-rt-port
Range	1024 to 5999 | 6251 to 65535
Default	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

local-rt-server *boolean*

Synopsis	Enable local retransmission server capability
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video local-rt-server *boolean*
Tree	local-rt-server
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

reorder-audio *number*

Synopsis	Time the audio packets are reordered in the ad stream
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video reorder-audio *number*
Tree	reorder-audio
Range	100 to 1000

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source1 *ipv4-address*

Synopsis	Primary source IP address
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video stream-selection source1 *ipv4-address*
Tree	source1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source2 *ipv4-address*

Synopsis	Secondary source IP address
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video stream-selection source2 *ipv4-address*
Tree	source2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

stream-selection-buffer *keyword*

Synopsis	Buffer time for the stream selection
Context	**configure** multicast-management multicast-info-policy *named-item* bundle *named-item* video stream-selection-buffer *keyword*
Tree	stream-selection-buffer
Description	This command configures the maximum time before a video packet is aged out of the active cache. Nokia recommends to set the buffer time based on the maximum jitter for the stream. The video group must be administratively disabled and then enabled again (**configure isa video-group admin-state**) for the changed buffer time to take effect.
Units	milliseconds
Options	100, 200, 300, 400, 500, 600, 700, 800, 900, 1000, 1100, 1200, 1300, 1400, 1500, 1600, 1700, 1800, 1900, 2000, 2100, 2200, 2300, 2400, 2500, 2600, 2700, 2800, 2900, 3000
Default	1400
Introduced	25.3.R1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

[**ip-address**] *ipv4-unicast-address*

Synopsis	IP address of the video interface
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address*
Tree	video-interface
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

extended-unicast *boolean*

Synopsis	Extend video unicast session
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* extended-unicast *boolean*
Tree	extended-unicast
Description	When configured to **true**, video unicast is delayed from switching over to multicast for 5 minutes. The unicast session can be extended further by sending an RTCP extension request, which resets the 5-minute timer. This is ideal for services that require unicast video and end devices that require extended time to switch over from unicast to multicast. When configured to **false**, the unicast session switches over to multicast 1.5 seconds after the IGMP request is sent. Most Fast Channel Change deployments do not require a time extension.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-session-timeout *number*

Synopsis	FCC session timeout
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* fcc-session-timeout *number*
Tree	fcc-session-timeout
Range	5 to 300

Units	percent
Default	25
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

rt-rate *number*

Synopsis	Rate the RET packets are sent to client
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* pip rt-rate *number*
Tree	rt-rate
Range	1 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

ret-session-timeout *number*

Synopsis	RET session timeout
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* ret-session-timeout *number*
Tree	ret-session-timeout
Range	5 to 300
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

rt-payload-type *number*

Synopsis	Format for the received retransmission packets
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* rt-payload-type *number*
Tree	rt-payload-type
Range	33 | 96 to 127

Default	99
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

rt-rate *number*

Synopsis	Rate the RET packets are sent to client
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* rt-rate *number*
Tree	rt-rate
Range	1 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

sd

Synopsis	Enter the **sd** context
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* sd
Tree	sd
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

dent-threshold *number*

Synopsis	Threshold below which the FCC server dents unicast data
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* sd dent-threshold *number*
Tree	dent-threshold
Range	1 to 31
Default	16
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-burst *number*

Synopsis	Burst rate FCC server sends unicast data to FCC client
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* sd fcc-burst *number*
Tree	fcc-burst
Range	0 to 600
Units	percent
Default	25
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-server

Synopsis	Enter the **fcc-server** context
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* sd fcc-server
Tree	fcc-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

mode *keyword*

Synopsis	Mode the FCC server sends information to the client
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* sd fcc-server mode *keyword*
Tree	mode
Options	burst, dent, hybrid
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

local-rt-server *boolean*

Synopsis	Enable local retransmission server capability
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* sd local-rt-server *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	local-rt-server
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

mc-handover *number*

Synopsis	Rate the FCC server sends data during the handover
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* sd mc-handover *number*
Tree	mc-handover
Range	0 to 600
Units	percent
Default	25
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

rt-rate *number*

Synopsis	Rate the RET packets are sent to client
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* sd rt-rate *number*
Tree	rt-rate
Range	1 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

subscriber-bw-limit *number*

Synopsis	Egress bandwidth limit per subscriber
Context	**configure** multicast-management multicast-info-policy *named-item* video-policy video-interface *ipv4-unicast-address* subscriber-bw-limit *number*
Tree	subscriber-bw-limit
Range	1 to 4294967295

Units	kilobps
Default	4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

multicast-reporting-destination [name] *named-item*

Synopsis	Enter the **multicast-reporting-destination** list instance
Context	**configure** multicast-management multicast-reporting-destination *named-item*
Tree	multicast-reporting-destination
Introduced	16.0.R1
Platforms	All

[**name**] *named-item*

Synopsis	Multicast reporting destination name
Context	**configure** multicast-management multicast-reporting-destination *named-item*
Tree	multicast-reporting-destination
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

address *ipv4-address*

Synopsis	IP address of the multicast reporting destination
Context	**configure** multicast-management multicast-reporting-destination *named-item* address *ipv4-address*
Tree	address
Default	0.0.0.0
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.

admin-state *keyword*

Synopsis	Administrative state of multicast reporting destination
Context	**configure** multicast-management multicast-reporting-destination *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

description *description*

Synopsis	Text description
Context	**configure** multicast-management multicast-reporting-destination *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	All

maximum-transmission-delay *number*

Synopsis	Time delay before packet transmits to the destination
Context	**configure** multicast-management multicast-reporting-destination *named-item* maximum-transmission-delay *number*
Tree	maximum-transmission-delay
Range	0 to 100
Units	deciseconds
Default	1
Introduced	16.0.R1
Platforms	All

udp-port *number*

Synopsis	UDP port where multicast reports are sent

© 2025 Nokia.

4.29.1 oam-pm command descriptions

oam-pm

Synopsis	Enter the **oam-pm** context
Context	**configure** oam-pm
Tree	oam-pm
Introduced	16.0.R1
Platforms	All

bin-group [bin-group-id] *number*

Synopsis	Enter the **bin-group** list instance
Context	**configure** oam-pm bin-group *number*
Tree	bin-group
Introduced	16.0.R5
Platforms	All

[**bin-group-id**] *number*

Synopsis	Bin group ID
Context	**configure** oam-pm bin-group *number*
Tree	bin-group
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the bin group
Context	**configure** oam-pm bin-group *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	16.0.R5

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

bin-type [bin-metric] *keyword*

Synopsis	Enter the **bin-type** list instance
Context	**configure** oam-pm bin-group *number* bin-type *keyword*
Tree	bin-type
Introduced	16.0.R5
Platforms	All

[**bin-metric**] *keyword*

Synopsis	Delay metric bin structure
Context	**configure** oam-pm bin-group *number* bin-type *keyword*
Tree	bin-type
Options	fd – Frame Delay fdr – Frame Delay Range ifdv – Inter-Frame Delay Variation
Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

bin [bin-number] *number*

Synopsis	Enter the **bin** list instance
Context	**configure** oam-pm bin-group *number* bin-type *keyword* bin *number*
Tree	bin
Introduced	16.0.R5
Platforms	All

[**bin-number**] *number*

Synopsis	Bin number
Context	**configure** oam-pm bin-group *number* bin-type *keyword* bin *number*
Tree	bin
Range	0 to 9

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

lower-bound *number*

Synopsis	Lower bound for the bin
Context	**configure** oam-pm bin-group *number* bin-type *keyword* bin *number* lower-bound *number*
Tree	lower-bound
Range	0 | 1 to 4294967295
Units	microseconds
Introduced	16.0.R5
Platforms	All

delay-event [direction] *keyword*

Synopsis	Enter the **delay-event** list instance
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword*
Tree	delay-event
Introduced	16.0.R5
Platforms	All

[**direction**] *keyword*

Synopsis	Traffic flow direction of the OAM-PM test or metric
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword*
Tree	delay-event
Options	forward, backward, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

clear-threshold *number*

Synopsis	OAM-PM clear threshold for an excessive delay
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword* clear-threshold *number*
Tree	clear-threshold
Range	0 to 863999
Introduced	16.0.R5
Platforms	All

exclude-lowest-bin *number*

Synopsis	Lowest bin excluded from the TCA count
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword* exclude-lowest-bin *number*
Tree	exclude-lowest-bin
Range	1 to 9
Introduced	16.0.R5
Platforms	All

lowest-bin *number*

Synopsis	Lowest delay bin used when applying a delay threshold
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword* lowest-bin *number*
Tree	lowest-bin
Range	0 to 9
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	All

raise-threshold *number*

Synopsis	Raise threshold for excessive delay
Context	**configure** oam-pm bin-group *number* bin-type *keyword* delay-event *keyword* raise-threshold *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	raise-threshold
Range	1 to 864000
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	All

exclude-from-avg [direction] *keyword*

Synopsis	Enter the **exclude-from-avg** list instance
Context	**configure** oam-pm bin-group *number* bin-type *keyword* exclude-from-avg *keyword*
Tree	exclude-from-avg
Introduced	16.0.R5
Platforms	All

[**direction**] *keyword*

Synopsis	Traffic flow direction of the OAM-PM test or metric
Context	**configure** oam-pm bin-group *number* bin-type *keyword* exclude-from-avg *keyword*
Tree	exclude-from-avg
Options	forward, backward, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

bins *string*

Synopsis	Bin numbers excluded from the average calculation
Context	**configure** oam-pm bin-group *number* bin-type *keyword* exclude-from-avg *keyword* bins *string*
Tree	bins
String length	1 to 39
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *description*

Synopsis	Text description
Context	**configure** oam-pm bin-group *number* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R5
Platforms	All

session [session-name] *named-item*

Synopsis	Enter the **session** list instance
Context	**configure** oam-pm session *named-item*
Tree	session
Introduced	16.0.R5
Platforms	All

[**session-name**] *named-item*

Synopsis	OAM-PM session name
Context	**configure** oam-pm session *named-item*
Tree	session
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R5
Platforms	All

bin-group *reference*

Synopsis	Bin group for the session
Context	**configure** oam-pm session *named-item* bin-group *reference*
Tree	bin-group
Reference	**configure** oam-pm bin-group *number*
Introduced	16.0.R5
Platforms	All

description *description*

Synopsis	Text description
Context	**configure** oam-pm session *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R5
Platforms	All

ethernet

Synopsis	Enable the **ethernet** context
Context	**configure** oam-pm session *named-item* ethernet
Tree	ethernet
Notes	The following elements are part of a mandatory choice: **ethernet**, **ip**, or **mpls**.
Introduced	16.0.R5
Platforms	All

dest-mac *mac-unicast-address*

Synopsis	Destination MAC address for the session
Context	**configure** oam-pm session *named-item* ethernet dest-mac *mac-unicast-address*
Tree	dest-mac
Introduced	16.0.R5
Platforms	All

dmm

Synopsis	Enable the **dmm** context
Context	**configure** oam-pm session *named-item* ethernet dmm
Tree	dmm
Introduced	16.0.R5
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the test
Context	**configure** oam-pm session *named-item* ethernet dmm admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R5
Platforms	All

data-tlv-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Size of the pad TLV in the frames sent for the test
Context	**configure** oam-pm session *named-item* ethernet dmm data-tlv-size *number*
Tree	data-tlv-size
Range	0 | 3 to 2000
Units	octets
Default	0
Introduced	16.0.R5
Platforms	All

delay-template *named-item-64*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reference to a streaming delay template for the test
Context	**configure** oam-pm session *named-item* ethernet dmm delay-template *named-item-64*
Tree	delay-template
String length	1 to 64
Introduced	19.7.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between transmission PDUs for the session test
Context	**configure** oam-pm session *named-item* ethernet dmm interval *number*
Tree	interval
Description	This command configures the message period or probe spacing for the transmission of a frame.
Range	50 | 100 | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 | 1000 | 10000
Units	milliseconds
Introduced	16.0.R5
Platforms	All

test-duration *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Duration of an on-demand test
Context	**configure** oam-pm session *named-item* ethernet dmm test-duration *number*
Tree	test-duration
Range	1 to 86400
Units	seconds
Introduced	16.0.R5
Platforms	All

test-id *(number | keyword)*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	Test ID
Context	**configure** oam-pm session *named-item* ethernet dmm test-id *(number | keyword)*
Tree	test-id
Range	0 to 2147483647
Options	auto – Automatically assigns a test-id
Notes	This element is mandatory.
Introduced	16.0.R5
Platforms	All

lmm

Synopsis	Enable the **lmm** context
Context	**configure** oam-pm session *named-item* ethernet lmm
Tree	lmm
Introduced	16.0.R5
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the test
Context	**configure** oam-pm session *named-item* ethernet lmm admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R5
Platforms	All

availability

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **availability** context
Context	**configure** oam-pm session *named-item* ethernet lmm availability
Tree	availability

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R5
Platforms	All

admin-state *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of availability statistics
Context	**configure** oam-pm session *named-item* ethernet lmm availability admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R5
Platforms	All

flr-threshold *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FLR threshold for the test
Context	**configure** oam-pm session *named-item* ethernet lmm availability flr-threshold *number*
Tree	flr-threshold
Range	0 to 100
Units	percent
Default	50
Introduced	16.0.R5
Platforms	All

hli-force-count *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	Increment HLI/CHLI counters regardless of availability
Context	**configure** oam-pm session *named-item* ethernet lmm availability hli-force-count *boolean*
Tree	hli-force-count
Default	false
Introduced	16.0.R5
Platforms	All

timing

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **timing** context
Context	**configure** oam-pm session *named-item* ethernet lmm availability timing
Tree	timing
Introduced	16.0.R5
Platforms	All

chli-threshold *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	CHLI threshold
Context	**configure** oam-pm session *named-item* ethernet lmm availability timing chli-threshold *number*
Tree	chli-threshold
Range	1 to 9
Default	5
Introduced	16.0.R5
Platforms	All

consec-delta-t *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of consecutive delta-t intervals
Context	**configure** oam-pm session *named-item* ethernet lmm availability timing consec-delta-t *number*
Tree	consec-delta-t
Range	2 to 10
Default	10
Introduced	16.0.R5
Platforms	All

frames-per-delta-t *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of frames sent in one delta-t
Context	**configure** oam-pm session *named-item* ethernet lmm availability timing frames-per-delta-t *number*
Tree	frames-per-delta-t
Range	1 to 50
Units	frames
Introduced	16.0.R5
Platforms	All

fc-collection *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable collection of per-forwarding class counters
Context	**configure** oam-pm session *named-item* ethernet lmm fc-collection *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	fc-collection
Default	false
Introduced	16.0.R5
Platforms	All

interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between transmission PDUs for the session test
Context	**configure** oam-pm session *named-item* ethernet lmm interval *number*
Tree	interval
Description	This command configures the message period or probe spacing for the transmission of a frame.
Range	100 | 1000 | 10000
Units	milliseconds

source-udp-port *number*

Synopsis	Source UDP port for the session
Context	**configure** oam-pm session *named-item* ip source-udp-port *number*
Tree	source-udp-port
Range	64374 to 64383
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ttl *number*

Synopsis	TTL value for the session
Context	**configure** oam-pm session *named-item* ip ttl *number*
Tree	ttl
Range	1 to 255
Default	255
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tunnel

Synopsis	Enter the **tunnel** context
Context	**configure** oam-pm session *named-item* ip tunnel
Tree	tunnel
Description	Commands in this context configure packet tunneling options for the session. This command and the **oam-pm session ip forwarding** command are mutually exclusive.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mpls

Synopsis	Enable the **mpls** context
Context	**configure** oam-pm session *named-item* ip tunnel mpls
Tree	mpls
Description	Commands in this context configure the MPLS packet tunneling options for the session. Configure the **oam-pm session ip router-instance** to Base to configure commands in

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

the tunnel MPLS context. When entering a context under MPLS, the system removes any previous configuration of any sibling context. You can only configure one of the contexts for each OAM-PM session.

Introduced 23.3.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rsvp-te

Synopsis Enable the **rsvp-te** context

Context **configure** oam-pm session *named-item* ip tunnel mpls rsvp-te

Tree rsvp-te

Description Commands in this context allow for the specification of RSVP-TE specific tunnel information used to transport the test packets. Entering this context removes all other tunnel-type options configured under the **configure oam-pm session ip tunnel mpls** context. Only a single MPLS type can be configured for an OAM-PM session.

Notes The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.

Introduced 23.3.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp *named-item-64*

Synopsis Name of LSP that carries the test packets

Context **configure** oam-pm session *named-item* ip tunnel mpls rsvp-te lsp *named-item-64*

Tree lsp

String length 1 to 64

Introduced 23.3.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rsvp-te-auto

Synopsis Enable the **rsvp-te-auto** context

Context **configure** oam-pm session *named-item* ip tunnel mpls rsvp-te-auto

Tree rsvp-te-auto

Description Commands in this context configure the RSVP-TE-Auto feature and **rsvp-te-auto** (RSVP TE with dynamically-created LSPs) packet tunneling options for the session. If you enter a context within the MPLS context, the system removes any previous

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

configuration of any sibling context. You can only configure one of the contexts for each OAM-PM session.

Notes The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.

Introduced 23.3.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

from *ipv4-unicast-address*

Synopsis IPv4 address used to identify the LSP to be tested

Context **configure** oam-pm session *named-item* ip tunnel mpls rsvp-te-auto from *ipv4-unicast-address*

Tree from

Description This command configures the headend of the RSV LSP. Configure the following three commands to identify an RSVP-TE Auto LSP: **from**, **to**, and **lsp-template**. When all three of these values are configured, the specific RSVP LSP can be identified and the test packets can be carried across the tunnel.

Introduced 23.3.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lsp-template *named-item*

Synopsis LSP template used to identify the LSP to be tested

Context **configure** oam-pm session *named-item* ip tunnel mpls rsvp-te-auto lsp-template *named-item*

Tree lsp-template

Description This command configures the name of the LSP template used to identify the unique LSP. Configure the following three commands to identify an RSVP-TE Auto LSP: **from**, **to**, and **lsp-template**. When all three of these values are configured, the specific RSVP LSP can be identified and the test packets can be carried across the tunnel.

String length 1 to 32

Introduced 23.3.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

to *ipv4-unicast-address*

Synopsis IPv4 unicast address to identify the LSP to be tested

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** oam-pm session *named-item* ip tunnel mpls rsvp-te-auto to *ipv4-unicast-address*
Tree	to
Description	This command configures the termination point of the RSVP LSP. Configure the following three commands to identify an RSVP-TE Auto LSP: **from**, **to**, and **lsp-template**. When all three of these values are configured, the specific RSVP LSP can be identified and the test packets can be carried across the tunnel.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sr-isis

Synopsis	Enable the **sr-isis** context
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-isis
Tree	sr-isis
Description	Commands in this context allow for the specification of SR-ISIS specific tunnel information used to transport the test packets. Entering this context removes all the other tunnel type commands configured in the **configure oam-pm session ip tunnel mpls** context. Only a single MPLS type can be configured for an OAM-PM session.
Notes	The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

flex-algo *number*

Synopsis	Flex-algorithm to tunnel IP packets for session tests
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-isis flex-algo *number*
Tree	flex-algo
Range	128 to 255
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

igp-instance *number*

Synopsis	IGP instance used to tunnel IP packets
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-isis igp-instance *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	igp-instance
Description	This command configures the IGP instance to tunnel IP packets for the session test.
Range	0 to 127
Default	0
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix to tunnel IP packets for the session tests
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-isis prefix *(ipv4-prefix | ipv6-prefix)*
Tree	prefix
Description	This command configures the IP prefix used with the IGP instance to tunnel IP packets for the session tests.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sr-ospf

Synopsis	Enable the **sr-ospf** context
Context	**configure** oam-pm session *named-item* ip tunnel mpls sr-ospf
Tree	sr-ospf
Description	Commands in this context allow for the specification of SR-OSPF specific tunnel information used to transport the test packets. Entering this context removes all other tunnel type options configured under the **configure oam-pm session ip tunnel mpls** context. Only a single MPLS type can be configured for an OAM-PM session.
Notes	The following elements are part of a choice: **rsvp-te**, **rsvp-te-auto**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

flex-algo *number*

allow-ipv6-udp-checksum-zero *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	**configure** oam-pm session *named-item* ip twamp-light allow-ipv6-udp-checksum-zero *boolean*
Tree	allow-ipv6-udp-checksum-zero
Description	When configured to **true**, this command configures the acceptance of IPv6 packets with UDP checksums of 0. This optional configuration allows the router to process arriving IPv6 TWAMP Test packets that contain IPv6 UDP checksum of 0x0000. The UDP port specific to this TWAMP Light test bypasses the default discard IPv6 UDP checksum 0x0000. If this optional command is not configured, IPv6 UDP checksum 0x000 arriving packets are discarded. When configured to **false**, packets that arrive with an IPv6 UDP checksum of 0x0000 are discarded.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delay-template *named-item-64*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reference to a streaming delay template for the test
Context	**configure** oam-pm session *named-item* ip twamp-light delay-template *named-item-64*
Tree	delay-template
String length	1 to 64
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pad-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Amount of packet padding sent for the TWAMP-Light test
Context	**configure** oam-pm session *named-item* ip twamp-light pad-size *number*
Tree	pad-size
Range	0 to 2000
Units	octets
Default	0
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pad-tlv-size *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pad TLV size in each sent STAMP packet
Context	**configure** oam-pm session *named-item* ip twamp-light pad-tlv-size *number*
Tree	pad-tlv-size
Description	This command configures the PAD TLV included in the STAMP test packet with a total byte count specified by this command. TWAMP Light test packets do not allow TLVs. To pad the size of the TWAMP Light test packet the user must configure the **pad-size** command. STAMP test packets (the standard form of TWAMP Light) introduces TLVs for padding. Therefore, STAMP test packets must use the **pad-tlv-size** value.

Range	4 to 2000
Units	octets
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

record-stats *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of statistics recorded for the TWAMP-Light test
Context	**configure** oam-pm session *named-item* ip twamp-light record-stats *keyword*
Tree	record-stats
Options	delay, loss, delay-and-loss
Default	delay
Introduced	16.0.R5
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

session-sender-type *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Packet type sent by the test
Context	**configure** oam-pm session *named-item* ip twamp-light session-sender-type *keyword*
Tree	session-sender-type
Description	This command configures the type of test packet format to transmit. When the **stamp** option is configured, STAMP transmission, packet formatting, and packet processing is allowed and STAMP test packets support TLVs. When the **twamp-light** option is configured, TWAMP Light transmission, packet formatting, and packet processing is allowed, but TWAMP Light test packets do not allow TLVs.
Options	twamp-light – Two-Way Active Measurement Protocol, Light stamp – Simple Two-Way Active Measurement Protocol
Default	twamp-light
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

streaming

Synopsis	Enter the **streaming** context
Context	**configure** oam-pm streaming
Tree	streaming
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delay-template [delay-template-name] *named-item-64*

Synopsis	Enter the **delay-template** list instance
Context	**configure** oam-pm streaming delay-template *named-item-64*
Tree	delay-template
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**delay-template-name**] *named-item-64*

Synopsis	Streaming delay template name
Context	**configure** oam-pm streaming delay-template *named-item-64*
Tree	delay-template
String length	1 to 64
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the delay template
Context	**configure** oam-pm streaming delay-template *named-item-64* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

4.30.1 openflow command descriptions

openflow

Synopsis	Enter the **openflow** context
Context	**configure** openflow
Tree	openflow
Introduced	16.0.R4
Platforms	VSR

of-switch [name] *named-item*

Synopsis	Enter the **of-switch** list instance
Context	**configure** openflow of-switch *named-item*
Tree	of-switch
Max. instances	8
Introduced	16.0.R4
Platforms	VSR

[**name**] *named-item*

Synopsis	OpenFlow switch name
Context	**configure** openflow of-switch *named-item*
Tree	of-switch
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

admin-state *keyword*

Synopsis	Administrative state of the OpenFlow switch instance
Context	**configure** openflow of-switch *named-item* admin-state *keyword*
Tree	admin-state

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	VSR

aux-channel *boolean*

Synopsis	Enable the auxiliary connection for the H-OFS instance
Context	**configure** openflow of-switch *named-item* aux-channel *boolean*
Tree	aux-channel
Default	false
Introduced	16.0.R4
Platforms	VSR

controller [address] *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*

Synopsis	Enter the **controller** list instance
Context	**configure** openflow of-switch *named-item* controller *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	controller
Max. instances	2
Introduced	16.0.R4
Platforms	VSR

[**address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the OpenFlow channel to the controller
Context	**configure** openflow of-switch *named-item* controller *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	controller
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

port *number*

Synopsis	Controller port ID
Context	**configure** openflow of-switch *named-item* controller *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	controller
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

ofc-loopback *(ipv4-address-no-zone \| ipv6-address-no-zone)*

Synopsis	Loopback IP address in the VPRN
Context	**configure** openflow of-switch *named-item* controller *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* ofc-loopback *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ofc-loopback
Introduced	16.0.R4
Platforms	VSR

service-name *service-name*

Synopsis	Administrative service name
Context	**configure** openflow of-switch *named-item* controller *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* service-name *service-name*
Tree	service-name
String length	1 to 64
Introduced	16.0.R4
Platforms	VSR

tls-client-profile *reference*

Synopsis	TLS profile name for use on the control channel
Context	**configure** openflow of-switch *named-item* controller *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* tls-client-profile *reference*
Tree	tls-client-profile

Reference	**configure** system security tls client-tls-profile *named-item*
Introduced	16.0.R4
Platforms	VSR

description *very-long-description*

Synopsis	Text description
Context	**configure** openflow of-switch *named-item* description *very-long-description*
Tree	description
String length	1 to 255
Introduced	16.0.R4
Platforms	VSR

echo-interval *number*

Synopsis	Interval for monitoring OpenFlow control channels
Context	**configure** openflow of-switch *named-item* echo-interval *number*
Tree	echo-interval
Range	1 to 3600
Units	seconds
Default	10
Introduced	16.0.R4
Platforms	VSR

echo-multiple *number*

Synopsis	Consecutive lost messages before channel declared down
Context	**configure** openflow of-switch *named-item* echo-multiple *number*
Tree	echo-multiple
Range	3 to 100
Default	3
Introduced	16.0.R4
Platforms	VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

flowtable [table-id] *number*

Synopsis	Enter the **flowtable** list instance
Context	**configure** openflow of-switch *named-item* flowtable *number*
Tree	flowtable
Max. instances	1
Introduced	16.0.R4
Platforms	VSR

[**table-id**] *number*

Synopsis	OpenFlow table ID
Context	**configure** openflow of-switch *named-item* flowtable *number*
Tree	flowtable
Max. range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

max-size *number*

Synopsis	Maximum size of the flow table
Context	**configure** openflow of-switch *named-item* flowtable *number* max-size *number*
Tree	max-size
Range	1 to 524288
Default	1000
Introduced	16.0.R4
Platforms	VSR

mismatch-action *keyword*

Synopsis	Action taken when no match entries found in flow table
Context	**configure** openflow of-switch *named-item* flowtable *number* mismatch-action *keyword*
Tree	mismatch-action

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	drop, fall-through, packet-in
Default	fall-through
Introduced	16.0.R4
Platforms	VSR

switch-defined-cookie *boolean*

Synopsis	Enable switch-defined cookie encoding
Context	**configure** openflow of-switch *named-item* flowtable *number* switch-defined-cookie *boolean*
Tree	switch-defined-cookie
Default	false
Introduced	16.0.R4
Platforms	VSR

logical-port-status *keyword*

Synopsis	Logical port type for status change reporting
Context	**configure** openflow of-switch *named-item* logical-port-status *keyword*
Tree	logical-port-status
Options	rsvp-te, mpls-tp, sr-te
Max. instances	3
Introduced	16.0.R4
Platforms	VSR

ofs-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	OFS switch ID
Context	**configure** openflow of-switch *named-item* ofs-id *number*
Tree	ofs-id
Range	1 to 8

4.31.1 policy-options command descriptions

policy-options

Synopsis	Enter the **policy-options** context
Context	**configure** policy-options
Tree	policy-options
Introduced	16.0.R1
Platforms	All

as-path [name] *named-item*

Synopsis	Enter the **as-path** list instance
Context	**configure** policy-options as-path *named-item*
Tree	as-path
Introduced	16.0.R1
Platforms	All

[**name**] *named-item*

Synopsis	AS path name
Context	**configure** policy-options as-path *named-item*
Tree	as-path
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

expression *policy-as-path-regexp*

Synopsis	Regular expression string
Context	**configure** policy-options as-path *named-item* expression *policy-as-path-regexp*
Tree	expression
Description	This command configures a route policy AS path regular expression statement to use in route policy entries.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

An AS path in a BGP route matches an AS path regular expression, if the path matches the pattern of the regular expression. A regular expression incorporates terms and operators that use the terms. An individual AS number is an elementary term in the AS path regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS:

- .
- *
- ?
- {n}
- {m,n}
- {m, }

To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.

String length	1 to 255
Introduced	16.0.R1
Platforms	All

as-path-group [name] *named-item*

Synopsis	Enter the **as-path-group** list instance
Context	**configure** policy-options as-path-group *named-item*
Tree	as-path-group
Introduced	16.0.R1
Platforms	All

[**name**] *named-item*

Synopsis	AS path group name
Context	**configure** policy-options as-path-group *named-item*
Tree	as-path-group
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

expression *policy-as-path-regexp*

Synopsis	Regular expression string
Context	**configure** policy-options as-path-group *named-item* entry *number* expression *policy-as-path-regexp*
Tree	expression
Description	This command configures an AS path group regular expression.

An AS path in a BGP route matches an AS path group, if the pattern of the path matches the concatenation of all regular expressions in the group. A regular expression incorporates terms and operators that use the terms. An individual AS number is an elementary term in the AS path regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS:

- .
- *
- ?
- {n}
- {m,n}
- {m, }

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.
String length	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

community [name] *policy-community-name*

Synopsis	Enter the **community** list instance
Context	**configure** policy-options community *policy-community-name*

Tree	member
Description	This command configures a BGP community value. Each member of a community list is a standard, extended, or large community value or a regular expression that potentially matches many community values. A regular expression incorporates terms and operators that use the terms. An individual numerical digit is an elementary term in the community regular expression. More complex terms can be built from elementary terms. The following are key operators supported by SR OS: • . • * • ? • {n} • {m,n} • {m, } To reverse the match criteria when specifying a list of ranges or single values using square brackets, use the non-match operator (^) before the elements within the square brackets.

bgp-high-priority *boolean*

Synopsis	Tag routes as high priority for fast table updates
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-high-priority *boolean*
Tree	bgp-high-priority
Description	When configured to **true**, eligible BGP routes matched by the policy entry or policy default-action are tagged as needing faster route table updates. This action applies only when the policy is applied as a BGP import policy to a base router BGP peer or VPRN BGP peer and applies only to the following route types: • IPv4 • label-IPv4 • IPv6 • label-IPv6 This command is useful when the BGP RIB contains a large number of routes and quick routing table updates are needed for a small subset of these routes. The effectiveness of this command decreases as the subset becomes a larger proportion of the total RIB. When configured to **false**, no routes are tagged for faster route table updates.
Default	false
Introduced	20.5.R1
Platforms	All

bgp-leak *boolean*

Synopsis	Allow leaking for BGP routes

bgp-tunnel-metric

Synopsis	Enter the **bgp-tunnel-metric** context
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-tunnel-metric
Tree	bgp-tunnel-metric
Description	Commands in this context configure the tunnel-table metrics associated with BGP label unicast routes that pass through to the default action of the policy.
Introduced	20.5.R1
Platforms	All

prefer-aigp *boolean*

Synopsis	Use AIGP attribute as tunnel metric when present
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-tunnel-metric prefer-aigp *boolean*
Tree	prefer-aigp
Description	When configured to **true**, and a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy. The TTM metric of the tunnel is set to the AIGP metric value of the BGP-LU route plus the IGP cost to reach the BGP next-hop if it has the AIGP path attribute, otherwise it is set to the value implied by the value leaf. When configured to **false**, the AIGP attribute is removed from the advertised routes and is ignored if present in the received routes.
Default	false
Introduced	20.5.R1
Platforms	All

prefer-med *boolean*

Synopsis	Use MED attribute as tunnel metric when present
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-tunnel-metric prefer-med *boolean*
Tree	prefer-med
Description	When configured to **true**, if a BGP-LU route is selected for installation in the TTM and is matched by this action in a BGP import policy, the TTM metric of the tunnel is set to

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

the MED metric value of the BGP-LU route with the IGP cost to reach the BGP next hop added to it.

When configured to **false**, the BGP tunnel metric associated with the BGP-LU route accepted by this policy action is not determined using the MED attribute.

Default	false
Introduced	23.3.R1
Platforms	All

value *(string | number)*

Synopsis	BGP tunnel table metric value
Context	**configure** policy-options policy-statement *named-item-64* default-action bgp-tunnel-metric value *(string | number)*
Tree	value
Description	This command configures a BGP tunnel metric is assigned to routes that do not match any entry. If a BGP-LU route is selected for installation in TTM and it is matched by this action in a BGP import policy, the TTM metric of the associated tunnel is set to this value (or the value associated with the parameter name) if either: • the prefer-aigp option is set to false • the prefer-aigp option is set to true but the BGP-LU route does not have an AIGP attribute
String length	1 to 32

Context	**configure** policy-options policy-statement *named-item-64* default-action multicast-redirection ip-int-name *interface-name*
Tree	ip-int-name
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nat-policy *(param-midstring | string)*

Synopsis	BGP-VPN imported route and a NAT policy association
Context	**configure** policy-options policy-statement *named-item-64* default-action nat-policy *(param-midstring | string)*
Tree	nat-policy
Description	This command assigns a NAT policy to the matched routes that do not have a more specific NAT policy configured under action. A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route must be associated with a NAT policy that maps traffic into a NAT pool and outside routing context. If the NAT policy is not specified within the route policy entry, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context. All BGP-VPN routes that are destined to be imported into the NAT inside routing context must have action-type **accept** regardless of whether the NAT policy is configured in the action.
String length	1 to 32
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

sr-label-index

Synopsis	Enter the **sr-label-index** context
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-label-index
Tree	sr-label-index
Description	Commands in this context configure the policy action to associate a BGP segment-routing label index value with all /32 BGP labeled IPv4 routes. The use of this action in a policy entry that matches more than one /32 labeled IPv4 route may create SID conflicts. This action only takes effect in BGP peer import policies (and only on received /32 labeled IPv4 routes) and in route table import policies associated with the labeled IPv4 RIB. When this action occurs in a policy applied as a peer import policy, a prefix SID attribute can be added to a received /32 labeled IPv4 route that was not sent with this attribute, or the received prefix SID attribute can be replaced with a new one.
Introduced	19.10.R1
Platforms	All

prefer-igp *boolean*

Synopsis	Use the SR label index from the IGP route when present
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-label-index prefer-igp *boolean*
Tree	prefer-igp
Description	When configured to **true**, BGP obtains the SID index from the IGP route (if a SID index is present) and the **configure router bgp segment-routing prefix-sid-range global** command is set to **true**. This command applies only to route table import policies. When configured to **false**, or the SID index is not present in the IGP route, or the **configure router bgp segment-routing prefix-sid-range global** command is not set to **true**, BGP obtains the label index value from the **value** command.
Default	false
Introduced	19.10.R1
Platforms	All

value *(string | number)*

Synopsis	BGP SR label index associated with routes
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-label-index value *(string | number)*
Tree	value
Description	This command specifies the BGP SR label index value to be associated with a route or routes. If this command specifies an index value that causes a SID conflict with another BGP route, all conflicting BGP routes are re-advertised with label values based on dynamic allocation rather than SID-based allocation. If this command specifies an index value that causes a SID conflict with an IGP route, the BGP route is re-advertised with a label value based on dynamic allocation rather than SID-based allocation.
String length	1 to 32
Range	0 to 1048575
Introduced	19.10.R1
Platforms	All

sr-maintenance-policy *(param-midstring | string)*

Synopsis	SR maintenance policy as an action
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-maintenance-policy *(param-midstring | string)*
Tree	sr-maintenance-policy
Description	This command applies a named segment routing maintenance policy as an action for route policies. It is only used for SR policy routes.
String length	1 to 32
Introduced	20.10.R1
Platforms	All

sr-return-path-bfd-label *(policy-var-name | number)*

Synopsis	S-BFD return path label
Context	**configure** policy-options policy-statement *named-item-64* default-action sr-return-path-bfd-label *(policy-var-name | number)*
Tree	sr-return-path-bfd-label

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description This command configures an additional MPLS label to add to the bottom of the label stack for the S-BFD packet and sets the S-BFD session to echo mode.

This command applies to the initiator of the S-BFD sessions. The label value can either be a binding SID for an SR policy or another MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through the MPLS return path. This value takes precedence over the return path label value in a maintenance policy (configured using the **configure router segment-routing maintenance-policy return-path-label** command) that is also applied as the policy-statement action. This command can only be configured if the **sr-maintenance-policy** is also configured.

If this command is unconfigured, and there is no **return-path-label** command configuration in the maintenance policy that is also applied as an action, and the policy statement is reevaluated, S-BFD returns to asynchronous mode and no return path label is pushed by the initiator node. S-BFD packets for this LSP or path received by the reflector are routed through the IGP path.

String length 1 to 32

Range 32 to 1048575

Introduced 23.10.R1

Platforms All

srv6-locator *(param-midstring-64 | string)*

Synopsis Locator for SRv6 TLV to use

Context **configure** policy-options policy-statement *named-item-64* default-action srv6-locator *(param-midstring-64 | string)*

Tree srv6-locator

Description This command configures either a string encoding a midstring parameter delimited by at signs (@), or a reference to a named locator for the SRv6 TLV to use.

For a VRF export policy, the referenced locator must already be configured using the commands in the **configure service vprn segment-routing-v6 locator** context.

For a BGP export policy, the referenced locator must already be configured using the commands in the **configure router segment-routing segment-routing-v6 base-routing-instance locator** context.

String length 1 to 64

Introduced 23.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR
