4.45.1 subscriber-mgmt command descriptions

subscriber-mgmt

Synopsis	Enter the **subscriber-mgmt** context
Context	**configure** subscriber-mgmt
Tree	subscriber-mgmt
Description	Commands in this context configure subscriber management attributes, policies, and profiles.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accu-stats-policy [name] *named-item*

Synopsis	Enter the **accu-stats-policy** list instance
Context	**configure** subscriber-mgmt accu-stats-policy *named-item*
Tree	accu-stats-policy
Description	Commands in this context configure a storage policy for cumulative statistics for subscribers. The policy defines the direction for the policer or the queue to be stored. The policy stores subscriber statistics even if the subscriber session has ended. The subscriber statistics can be viewed even if the subscriber is offline. When the subscriber session ends, the statistics are added to the past statistics stored in memory so that all previous session statistics are accumulated. The accumulated statistics are not persistent; they are only stored in memory and reset to zero when the chassis reboots.
Max. instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Policy name
Context	**configure** subscriber-mgmt accu-stats-policy *named-item*
Tree	accu-stats-policy
String length	1 to 32

Range	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alternate-profile-threshold

Synopsis	Enter the **alternate-profile-threshold** context
Context	**configure** subscriber-mgmt alternate-profile-threshold
Tree	alternate-profile-threshold
Description	Commands in this context specify thresholds that determine when an alternate subscriber-management profile is used instead of the original profile. The alternate profile is configured under the original profile, for example using the **alternate-sub-profile** command in the **configure subscriber-management sub-profile** context and the **alternate-sla-profile** command in the **configure subscriber-management sla-profile** context.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-count *number*

Synopsis	Subscriber threshold to trigger alternate profile
Context	**configure** subscriber-mgmt alternate-profile-threshold subscriber-count *number*
Tree	subscriber-count
Description	This command configures the subscriber-count threshold. The system classifies every new subscriber either as "alternate" or "non-alternate". By default, the system classifies new subscribers as non-alternate. When the number of non-alternate subscribers reaches the configured subscriber-count threshold, the system classifies new subscribers as alternate. When the number of subscribers is set to 0, the threshold is disabled.
Range	0 to 500000
Default	0
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp

Synopsis	Enter the **ancp** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt ancp
Tree	ancp
Description	Commands in this context configure Access Node Control Protocol (ANCP) settings.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp-policy [name] *named-item*

Synopsis	Enter the **ancp-policy** list instance
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item*
Tree	ancp-policy
Description	Commands in this context configure the specified ANCP policy, which can be associated with either an ANCP string (static) or a subscriber-profile (dynamic), and define the behavior of hosts belonging to these profiles. ANCP policies control rates and subscribers based on port-up/port-down messages from the access node. When configured, the node stops SHCV to a host that is part of a port that is down (by port-down message). When a port-up message is received for the port that was down, the node initiates the SHCV process immediately to verify connectivity. When ANCP is used with ESM, all hosts of a subscriber are updated with the ANCP string last associated with the subscriber.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Policy name
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item*
Tree	ancp-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis	Enter the **egress** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress
Tree	egress
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-adjustment *number*

Synopsis	Rate adjustment for the scheduler
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-adjustment *number*
Tree	rate-adjustment
Description	This command configures the rate adjustment for the scheduler. This setting is used when the rate returned by the DSLAM is calculated with a different encapsulation than the SR node. The node adjusts the rate by the percentage specified as: DSLAM_RATE * (adjustment rate)/100 — (rate reduction)
Range	1 to 200
Units	percent
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-modify

Synopsis	Enter the **rate-modify** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-modify
Tree	rate-modify
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

agg-rate

Synopsis	Maximum total rate for all subscriber egress queues
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-modify agg-rate
Tree	agg-rate
Description	This command specifies the maximum total rate for all subscriber egress queues for each subscriber associated with the policy.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **agg-rate** or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scheduler *named-item*

Synopsis	Scheduler to be applied for rate modification
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-modify scheduler *named-item*
Tree	scheduler
String length	1 to 32
Notes	The following elements are part of a choice: **agg-rate** or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-monitor

Synopsis	Enter the **rate-monitor** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-monitor
Tree	rate-monitor
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alarm *boolean*

Synopsis	Generate SNMP notification when monitor event is raised
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-monitor alarm *boolean*
Tree	alarm
Description	When configured to **true**, the system generates an alarm (trap) to the management system including the rate, the ANCP policy name, and the ANCP string when the monitored rate is below the configured rate. When configured to **false**, no alarm is generated.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rate *number*

Synopsis	Rate below which the system generates an event
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-monitor rate *number*
Tree	rate
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-reduction *number*

Synopsis	Constant rate reduction to specified DSLAM rate
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-reduction *number*
Tree	rate-reduction
Description	This command configures a constant rate reduction to the rate specified by the DSLAM. This setting is used if the node must adjust the rate to a value that is offset (for example by a fixed multicast dedicated bandwidth) compared to the total available on the DSLAM. The rate is calculated as: DSLAM_RATE * (adjustment rate)/100 — (rate reduction)
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis	Enter the **ingress** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress
Tree	ingress
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

rate-monitor

Synopsis	Enter the **rate-monitor** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress rate-monitor
Tree	rate-monitor
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alarm *boolean*

Synopsis	Generate SNMP notification when monitor event is raised
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress rate-monitor alarm *boolean*
Tree	alarm
Description	When configured to **true**, the system generates an alarm (trap) to the management system including the rate, the ANCP policy name, and the ANCP string when the monitored rate is below the configured rate. When configured to **false**, no alarm is generated.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate *number*

Synopsis	Rate below which the system generates an event
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress rate-monitor rate *number*
Tree	rate
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-reduction *number*

Synopsis	Constant rate reduction to specified DSLAM rate

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress rate-reduction *number*
Tree	rate-reduction
Description	This command configures a constant rate reduction to the rate specified by the DSLAM. This setting is used if the node must adjust the rate to a value that is offset (for example by a fixed multicast dedicated bandwidth) compared to the total available on the DSLAM. The rate is calculated as: DSLAM_RATE * (adjustment rate)/100 — (rate reduction)
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

port-down

Synopsis	Enter the **port-down** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* port-down
Tree	port-down
Description	Commands in this context configure the actions taken on port-down.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suspend-shcv

Synopsis	Enable the **suspend-shcv** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* port-down suspend-shcv
Tree	suspend-shcv
Description	Commands in this context specify the configuration to suspend SHCV for the hosts defined with the ANCP policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alarm *boolean*

Synopsis	Send an alarm before suspending SHCV
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* port-down suspend-shcv alarm *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	alarm
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis	Time that SHCV is suspended
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* port-down suspend-shcv hold-time *number*
Tree	hold-time
Description	This command configures the time that the node suspends SHCV. When unconfigured, SHCV is suspended until a port-up message is received.
Range	1 to 7200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp-static-map

Synopsis	Enter the **ancp-static-map** context
Context	**configure** subscriber-mgmt ancp ancp-static-map
Tree	ancp-static-map
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multi-service-site-entry [ancp-string] *ancp-string* customer-name *reference* customer-site-name *reference*

Synopsis	Enter the **multi-service-site-entry** list instance
Context	**configure** subscriber-mgmt ancp ancp-static-map multi-service-site-entry *ancp-string* customer-name *reference* customer-site-name *reference*
Tree	multi-service-site-entry
Description	Commands in this context configure the ANCP key mapping (usually the circuit ID of the DSLAM port) to a customer, site, and scheduler name when Multi-Service site (MSS) is used.

Tree	priority
Description	Commands in this context arrange the relative order of authentication priorities.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Authentication origin priority override
Context	**configure** subscriber-mgmt authentication-origin overrides priority *number*
Tree	priority
Description	This command configures the insert position of the authentication origin priority override.
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source *keyword*

Synopsis	Source of authentication priority
Context	**configure** subscriber-mgmt authentication-origin overrides priority *number* source *keyword*
Tree	source
Description	This command specifies the prioritization of authentication sources.
Options	python, diameter-gx, ludb, radius, diameter-nasreq, gtp, dhcp, local-address-assignment, pfcp, config
Notes	This element is mandatory.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-sub-id

Synopsis	Enter the **auto-sub-id** context
Context	**configure** subscriber-mgmt auto-sub-id
Tree	auto-sub-id
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

implicit-generation *boolean*

Synopsis	Generate implicitly a subscriber ID when not provided
Context	**configure** subscriber-mgmt auto-sub-id implicit-generation *boolean*
Tree	implicit-generation
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-key *keyword*

Synopsis	Auto-generated subscriber ID key1 for IPoE hosts
Context	**configure** subscriber-mgmt auto-sub-id ipoe-key *keyword*
Tree	ipoe-key
Options	mac, sap-id, circuit-id, remote-id, dual-stack-remote-id, service-name
Max. instances	4
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-key *keyword*

Synopsis	Auto-generated subscriber identifier key1 for PPP hosts
Context	**configure** subscriber-mgmt auto-sub-id ppp-key *keyword*
Tree	ppp-key
Options	mac, sap-id, circuit-id, remote-id, session-id
Max. instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1

bgp-peering-policy [name] *named-item*

Synopsis	Enter the **bgp-peering-policy** list instance
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item*
Tree	bgp-peering-policy
Max. instances	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	BGP peer policy name
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item*
Tree	bgp-peering-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

advertise-inactive *boolean*

Synopsis	Advertise inactive BGP routes to other BGP peers
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* advertise-inactive *boolean*
Tree	advertise-inactive
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

aggregator-id-zero *boolean*

Synopsis	Add router ID to BGP aggregator path attribute
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* aggregator-id-zero *boolean*
Tree	aggregator-id-zero
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

as-override *boolean*

Synopsis	Replace the peer ASN with the local ASN in AS Path
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* as-override *boolean*
Tree	as-override
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

asn-4-byte *boolean*

Synopsis	Enable the use of 4-byte ASNs
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* asn-4-byte *boolean*
Tree	asn-4-byte
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-key *encrypted-leaf*

Synopsis	BGP authentication key for all peers
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* authentication-key *encrypted-leaf*
Tree	authentication-key
String length	1 to 370
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-keychain *reference*

Synopsis	Keychain name used for the TCP session
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* authentication-keychain *reference*
Tree	authentication-keychain
Reference	**configure** system security keychains keychain *named-item*
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* bfd-liveness *boolean*
Tree	bfd-liveness
Description	When configured to **true**, this command enables the use of Bi-directional Forwarding Detection (BFD) to control the state of an ESM dynamic BGP peer that is set up with the BGP peering policy. The parameters used for the BFD session are configured in the BFD context of the group interface or retail subscriber interface. When configured to **false**, this command disables the use of BFD for new ESM dynamic BGP peers that are set up with the BGP peering policy.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-reflect *boolean*

Synopsis	Enable client reflection of routes to all client peers
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* client-reflect *boolean*
Tree	client-reflect
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cluster *ipv4-address*

Synopsis	Cluster ID for route reflector server
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* cluster *ipv4-address*
Tree	cluster
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* connect-retry *number*
Tree	connect-retry

family

Synopsis	Enter the **family** context
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* family
Tree	family
Description	Commands in this context specify the BGP address families supported by the ESM dynamic BGP peers. When no address family is configured, the IPv4 address family is supported on BGPv4 peers and the IPv6 address family is supported on BGPv6 peers.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4 *boolean*

Synopsis	Advertise MP-BGP support for the IPv4 address family
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* family ipv4 *boolean*
Tree	ipv4
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the IPv6 address family
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* family ipv6 *boolean*
Tree	ipv6
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fast-external-failover *boolean*

Synopsis	Enable BGP fast external failover
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* fast-external-failover *boolean*
Tree	fast-external-failover
Introduced	16.0.R3

© 2025 Nokia.

Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multihop *number*

Synopsis	TTL value entered in IP header of packets sent to peer
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* multihop *number*
Tree	multihop
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-hop-self *boolean*

Synopsis	Set net hop path attribute to self when advertising
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* next-hop-self *boolean*
Tree	next-hop-self
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

passive *boolean*

Synopsis	Wait passively for BGP peer to connect
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* passive *boolean*
Tree	passive
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer-as *number*

Synopsis	AS number for remote peer
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* peer-as *number*
Tree	peer-as
Range	1 to 4294967295

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis	Route preference for routes learned via configured peer
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* preference *number*
Tree	preference
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-limits [family] *keyword*

Synopsis	Enter the **prefix-limits** list instance
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword*
Tree	prefix-limits
Description	Commands in this context limit the number of BGP routes per address family received from a BGP peer and define the actions when crossing the configured maximum.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**family**] *keyword*

Synopsis	Address family to which the limit applies
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword*
Tree	prefix-limits
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout *number*

Synopsis	Time BGP peering remains idle before reconnecting

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword* idle-timeout *number*
Tree	idle-timeout
Description	This command configures the time in minutes before a BGP peer is automatically re-established after reaching the prefix limit. When unconfigured, the BGP peer stays down until the operator performs a reset. This command and **log-only** cannot be configured simultaneously.
Range	1 to 1024
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

log-only *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword* log-only *boolean*
Tree	log-only
Description	When configured to **true**, the router disables the BGP session from being taken down upon reaching the prefix limit. Instead, only a warning message is sent when the limit is reached. A warning message is also sent when the configured threshold percentage of the limit is reached. This command and **idle-timeout** cannot be configured simultaneously. When configured to **false**, the router generates a log event and takes the BGP session down upon reaching the prefix limit.
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword* maximum *number*
Tree	maximum
Description	This command configures the maximum number of BGP routes of the specified address family that can be received from a peer before administrative action is taken. When **log-only** is unconfigured, the BGP session is taken down whenever the limit of any family is exceeded even if the limits of the other family has not been exceeded.

Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

post-import *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword* post-import *boolean*
Tree	post-import
Description	When configured to **true**, the system limits the number of routes that are accepted by import policies. Routes rejected by import policies are not counted against the configured limit. When configured to **false**, the system limits the number of routes to all routes received from the peer.
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

threshold *number*

Synopsis	Percentage threshold that triggers a warning message
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword* threshold *number*
Tree	threshold
Range	1 to 100
Default	90
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remove-private

Synopsis	Enable the **remove-private** context
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* remove-private

ip-filter

Synopsis	Enter the **ip-filter** context
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level ingress ip-filter
Tree	ip-filter
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

entry [id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level ingress ip-filter entry *number*
Tree	entry
Max. instances	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	IP filter entry ID
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level ingress ip-filter entry *number*
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the **action** context
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level ingress ip-filter entry *number* action
Tree	action

© 2025 Nokia.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drop

Synopsis	Packets matching the filter entry are dropped
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level ingress ip-filter entry *number* action drop
Tree	drop
Notes	The following elements are part of a choice: **drop**, **forward**, or **http-redirect**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

forward

Synopsis	Packets matching the filter entry are forwarded
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level ingress ip-filter entry *number* action forward
Tree	forward
Notes	The following elements are part of a choice: **drop**, **forward**, or **http-redirect**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

http-redirect

Synopsis	Enable the **http-redirect** context
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level ingress ip-filter entry *number* action http-redirect
Tree	http-redirect
Notes	The following elements are part of a choice: **drop**, **forward**, or **http-redirect**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-override *boolean*

Synopsis	Allow URL to be overridden by RADIUS/Diameter

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level ingress ip-filter entry *number* action http-redirect allow-override *boolean*
Tree	allow-override
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

url *http-redirect-url*

Synopsis	URL that is used to redirect the packets
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level ingress ip-filter entry *number* action http-redirect url *http-redirect-url*
Tree	url
String length	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level ingress ip-filter entry *number* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis	Enter the **match** context
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level ingress ip-filter entry *number* match
Tree	match
Introduced	16.0.R1

max-lifetime *number*

Synopsis	Maximum time that CCR-t messages are replayed
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx ccrt-replay max-lifetime *number*
Tree	max-lifetime
Description	This command specifies the maximum time that CCR-t messages for Diameter Gx sessions that belong to the Diameter application policy are replayed.
Range	1 to 24
Units	hours
Default	24
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

credit-mcs-interval *number*

Synopsis	Volume syncing interval for usage monitoring
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx credit-mcs-interval *number*
Tree	credit-mcs-interval
Description	This command configures the MCS interval at which the accounting data of subscriber hosts is updated.
Range	5 to 60
Units	minutes
Default	10
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-realm-learning *boolean*

Synopsis	Learn the destination realm from the incoming messages
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx destination-realm-learning *boolean*
Tree	destination-realm-learning
Description	When configured to **true**, destination realm learning is enabled on the application level. The destination realm is a mandatory configuration parameter used in outgoing Credit Control Request messages (CCR). The configured destination realm is always used in

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

the initial request (CCR-I) message. The consecutive request message of a Gx session can use the destination realm learned from the replies.

When configured to **false**, destination realm learning is disabled and the configured destination realm is used in outgoing request messages.

Default true

Introduced 20.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

features

Synopsis Enter the **features** context

Context **configure** subscriber-mgmt diameter-gx-policy *named-item* gx features

Tree features

Introduced 20.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

extended-bandwidth *boolean*

Synopsis Negotiate support for extended bandwidth AVPs

Context **configure** subscriber-mgmt diameter-gx-policy *named-item* gx features extended-bandwidth *boolean*

Tree extended-bandwidth

Description When configured to **true**, negotiation occurs for the support of extended AVPs that are capable of supporting bandwidth values greater than (2^32 –1) b/s. The extended AVPs allow bitrates in kb/s and are as follows:

- Extended-GBR-DL (AVP code 2850)
- Extended-GBR-UL (AVP code 2851)
- Extended-Max-Requested-BW-DL (AVP code 554)
- Extended-Max-Requested-BW-UL (AVP code 555)
- Extended-APN-AMBR-DL (AVP code 2848)
- Extended-APN-AMBR-UL (AVP code 2849)

When configured to **false**, the extended AVPs are not supported.

Default false

Introduced 20.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Tree	node
Notes	The following elements are part of a choice: **node** or **peer-policy**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-realm *string*

Synopsis	Destination-Realm AVP used by the Diameter peer policy
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* node destination-realm *string*
Tree	destination-realm
String length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin-host *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Origin-Host AVP used by the Diameter policy
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* node origin-host *reference*
Tree	origin-host
Reference	**configure** aaa diameter node *diam-fqdn*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-failure

Synopsis	Enter the **on-failure** context
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* on-failure
Tree	on-failure
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

failover *boolean*

Synopsis	Session peer failover
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* on-failure failover *boolean*
Tree	failover
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

handling *keyword*

Synopsis	Session peer failure handling
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* on-failure handling *keyword*
Tree	handling
Options	terminate, continue, retry-and-terminate
Default	terminate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tx-timer *number*

Synopsis	Maximum wait time for a pending session request
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* tx-timer *number*
Tree	tx-timer
Range	10 to 1000
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

diameter-gy-policy [name] *named-item*

Synopsis	Enter the **diameter-gy-policy** list instance
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item*
Tree	diameter-gy-policy

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Diameter application policy name
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item*
Tree	diameter-gy-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gy

Synopsis	Enter the **gy** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy
Tree	gy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

avp-subscription-id

Synopsis	Enter the **avp-subscription-id** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy avp-subscription-id
Tree	avp-subscription-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin *keyword*

Synopsis	Origin for the Subscription-Id-Data AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy avp-subscription-id origin *keyword*
Tree	origin
Options	subscriber-id, circuit-id, imsi, msisdn, imei, dual-stack-remote-id, mac, username, nas-port-id
Default	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Origin for the Subscription-Id-Type AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy avp-subscription-id type *keyword*
Tree	type
Options	e164, imsi, nai, private
Default	private
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ccrt-replay

Synopsis	Enable the **ccrt-replay** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy ccrt-replay
Tree	ccrt-replay
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

interval *number*

Synopsis	Interval at which CCR-t messages are replayed
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy ccrt-replay interval *number*
Tree	interval
Description	This command specifies the interval at which CCR-t messages for Diameter Gy sessions that belong to the Diameter application policy are replayed, until a valid CCA-t response is received or until the configured maximum lifetime period expires.
Range	60 to 86400
Default	3600
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-lifetime *number*

Synopsis	Maximum time that CCR-t messages are replayed
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy ccrt-replay max-lifetime *number*
Tree	max-lifetime
Description	This command specifies the maximum period of time that CCR-t messages for Diameter Gy sessions that belong to the Diameter application policy are replayed.
Range	1 to 24
Units	hours
Default	24
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-realm-learning *boolean*

Synopsis	Learn the destination realm from the incoming messages
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy destination-realm-learning *boolean*
Tree	destination-realm-learning
Description	When configured to **true**, destination realm learning is enabled on the application level. The destination realm is a mandatory configuration parameter used in outgoing Credit Control Request messages (CCR). The configured destination realm is always used in

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

the initial request (CCR-I) message. The consecutive request message of a Gy session can use the destination realm learned from the replies.

When configured to **false**, destination realm learning is disabled and the configured destination realm is used in outgoing request messages.

Default	true
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

extended-failure-handling

Synopsis	Enter the **extended-failure-handling** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy extended-failure-handling
Tree	extended-failure-handling
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of Extended Failure Handling
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy extended-failure-handling admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-credit

Synopsis	Enter the **interim-credit** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy extended-failure-handling interim-credit
Tree	interim-credit
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

volume

Synopsis	Enter the **volume** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy extended-failure-handling interim-credit volume
Tree	volume
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

credits *number*

Synopsis	Default volume credit value
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy extended-failure-handling interim-credit volume credits *number*
Tree	credits
Range	1 to 4294967295
Default	500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

units *keyword*

Synopsis	Default volume credit units
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy extended-failure-handling interim-credit volume units *keyword*
Tree	units
Options	bytes, kilobytes, megabytes, gigabytes
Default	megabytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

new-session-id *boolean*

Synopsis	Enable use of a new session ID for CCR-i messages
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy extended-failure-handling new-session-id *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	new-session-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-avp

Synopsis	Enter the **include-avp** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp
Tree	include-avp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

aaa-user-name *boolean*

Synopsis	Include RADIUS user name AVP in Diameter Gy messages
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp aaa-user-name *boolean*
Tree	aaa-user-name
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address-avp *boolean*

Synopsis	DCCA AVPs that contain the host address or prefix
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp address-avp *boolean*
Tree	address-avp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

called-station-id

Synopsis	Enable the **called-station-id** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp called-station-id
Tree	called-station-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

id *string-not-all-spaces*

Synopsis	Called station ID
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp called-station-id id *string-not-all-spaces*
Tree	id
String length	1 to 64
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

charging-rule-base-name

Synopsis	Enter the **charging-rule-base-name** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp charging-rule-base-name
Tree	charging-rule-base-name
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

category-map

Synopsis	Use the category map name in use for this session
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp charging-rule-base-name category-map
Tree	category-map
Notes	The following elements are part of a choice: **category-map**, **not-included**, or **user-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix

Synopsis	Enter the **suffix** context
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq include-avp nas-port-id suffix
Tree	suffix
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id

Synopsis	Add Circuit ID as suffix
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq include-avp nas-port-id suffix circuit-id
Tree	circuit-id
Notes	The following elements are part of a choice: **circuit-id**, **not-included**, **remote-id**, or **user-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

not-included

Synopsis	Do not add a suffix
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq include-avp nas-port-id suffix not-included
Tree	not-included
Notes	The following elements are part of a choice: **circuit-id**, **not-included**, **remote-id**, or **user-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id

Synopsis	Add Remote ID as suffix

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq include-avp nas-port-id suffix remote-id
Tree	remote-id
Notes	The following elements are part of a choice: **circuit-id**, **not-included**, **remote-id**, or **user-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-string *string*

Synopsis	Add a user configurable string as suffix
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq include-avp nas-port-id suffix user-string *string*
Tree	user-string
String length	1 to 64
Notes	The following elements are part of a choice: **circuit-id**, **not-included**, **remote-id**, or **user-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port-type

Synopsis	Enable the **nas-port-type** context
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq include-avp nas-port-type
Tree	nas-port-type
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *(keyword | number)*

Synopsis	NAS-Port-Type AVP value
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq include-avp nas-port-type type *(keyword | number)*
Tree	type
Range	0 to 255
Options	rfc-aligned

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	IP MTU applied to outgoing packets
Context	**configure** subscriber-mgmt group-interface-template *named-item* ip-mtu *number*
Tree	ip-mtu
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.
Range	512 to 9786
Units	bytes
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4
Tree	ipv4
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis	Enter the **icmp** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp
Tree	icmp
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp mask-reply *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	mask-reply
Default	true
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

param-problem

Synopsis	Enter the **param-problem** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp param-problem
Tree	param-problem
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp param-problem admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp param-problem number *number*
Tree	number
Range	10 to 1000
Default	100
Introduced	20.5.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp param-problem seconds *number*
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redirects

Synopsis	Enter the **redirects** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp redirects
Tree	redirects
Description	Commands in this context configure the settings for ICMP redirect messages generated by the interface. The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp redirects admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

number *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp redirects number *number*
Tree	number
Range	10 to 1000
Default	100
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp redirects seconds *number*
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ttl-expired

Synopsis	Enter the **ttl-expired** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp ttl-expired
Tree	ttl-expired
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending TTL expired messages

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp ttl-expired admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of TTL expired messages to send
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp ttl-expired number *number*
Tree	number
Range	10 to 2000
Default	100
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time used to limit the number of TTL expired messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp ttl-expired seconds *number*
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

unreachables

Synopsis	Enter the **unreachables** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp unreachables

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	unreachables
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp unreachables admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of unreachable messages to send
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp unreachables number *number*
Tree	number
Range	10 to 2000
Default	100
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time to limit the number of ICMP unreachable messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp unreachables seconds *number*
Tree	seconds
Range	1 to 60
Units	seconds

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	10
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

neighbor-discovery

Synopsis	Enter the **neighbor-discovery** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 neighbor-discovery
Tree	neighbor-discovery
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-arp-policy *reference*

Synopsis	Proxy ARP policy name
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 neighbor-discovery proxy-arp-policy *reference*
Tree	proxy-arp-policy
Reference	**configure** policy-options policy-statement *named-item-64*
Max. instances	5
Notes	This element is ordered by the user.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-proxy-arp *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 neighbor-discovery remote-proxy-arp *boolean*
Tree	remote-proxy-arp
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

urpf-check

Synopsis	Enable the **urpf-check** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 urpf-check
Tree	urpf-check
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	Unicast RPF check mode
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 urpf-check mode *keyword*
Tree	mode
Options	strict – Check source address match in RT and interface loose – Check source address match in RT only strict-no-ecmp – Check source address match in ECMP route
Default	strict
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv6
Tree	ipv6
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

urpf-check

Synopsis	Enable the **urpf-check** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv6 urpf-check
Tree	urpf-check
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mode *keyword*

Synopsis	Unicast RPF check mode
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv6 urpf-check mode *keyword*
Tree	mode
Options	strict – Check source address match in RT and interface loose – Check source address match in RT only strict-no-ecmp – Check source address match in ECMP route
Default	strict
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trigger-packet

Synopsis	Enter the **trigger-packet** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* trigger-packet
Tree	trigger-packet
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

data *boolean*

Synopsis	Sample and forward data packets
Context	**configure** subscriber-mgmt group-interface-template *named-item* trigger-packet data *boolean*
Tree	data
Description	When configured to **true**, the router processes data-trigger packets on dynamic SAPs. Data-trigger packets must also be enabled on the capture SAP.
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp

Synopsis	Enter the **gtp** context
Context	**configure** subscriber-mgmt gtp

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	gtp
Description	This command enables the context to configure box-wide GTP parameters and profiles.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

apn-policy [name] *named-item*

Synopsis	Enter the **apn-policy** list instance
Context	**configure** subscriber-mgmt gtp apn-policy *named-item*
Tree	apn-policy
Max. instances	128
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	APN policy name for a new incoming GTP connection
Context	**configure** subscriber-mgmt gtp apn-policy *named-item*
Tree	apn-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

apn [apn-name] *string*

Synopsis	Enter the **apn** list instance
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string*
Tree	apn
Max. instances	1024
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**apn-name**] *string*

Synopsis	GTP APN name
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string*
Tree	apn
String length	1 to 80
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ambr-qos-mapping

Synopsis	Enter the **ambr-qos-mapping** context
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping
Tree	ambr-qos-mapping
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

downlink

Synopsis	Enable the **downlink** context
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping downlink
Tree	downlink
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

aggregate-rate

Synopsis	Map the downlink APN-AMBR rate to an aggregate rate
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping downlink aggregate-rate
Tree	aggregate-rate
Notes	The following elements are part of a mandatory choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *named-item*

Synopsis	Name of arbiter to be overridden
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping downlink arbiter *named-item*
Tree	arbiter
String length	1 to 32
Notes	The following elements are part of a mandatory choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	ID of policer to be overridden
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping downlink policer *number*
Tree	policer
Range	1 to 63
Notes	The following elements are part of a mandatory choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue *number*

Synopsis	Map the downlink APN-AMBR rate to a queue PIR override
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping downlink queue *number*
Tree	queue
Range	1 to 8
Notes	The following elements are part of a mandatory choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler *named-item*

Synopsis	Name of the scheduler to be overridden
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping downlink scheduler *named-item*
Tree	scheduler
String length	1 to 32
Notes	The following elements are part of a mandatory choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

uplink

Synopsis	Enable the **uplink** context
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping uplink
Tree	uplink
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *named-item*

Synopsis	Name of arbiter to be overridden
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping uplink arbiter *named-item*
Tree	arbiter
String length	1 to 32
Notes	The following elements are part of a mandatory choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

policer *number*

Synopsis	Map the uplink APN-AMBR rate to a policer PIR override
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping uplink policer *number*
Tree	policer
Range	1 to 63
Notes	The following elements are part of a mandatory choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue *number*

Synopsis	Map the uplink APN-AMBR rate to a queue PIR override
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping uplink queue *number*
Tree	queue
Range	1 to 32
Notes	The following elements are part of a mandatory choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler *named-item*

Synopsis	Name of scheduler to be overridden
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping uplink scheduler *named-item*
Tree	scheduler
String length	1 to 32
Notes	The following elements are part of a mandatory choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

defaults

Synopsis	Enter the **defaults** context
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* defaults
Tree	defaults
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

group-interface

Synopsis	Enable the **group-interface** context
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* defaults group-interface
Tree	group-interface
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *interface-name*

Synopsis	Group interface name
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* defaults group-interface name *interface-name*
Tree	name
String length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

svc-name *service-name*

Synopsis	Service name where the group interface resides
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* defaults group-interface svc-name *service-name*
Tree	svc-name
String length	1 to 64
Notes	This element is mandatory.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

diameter-nasreq-policy *reference*

Synopsis	NASREQ authentication policy name
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* diameter-nasreq-policy *reference*
Tree	diameter-nasreq-policy
Reference	**configure** subscriber-mgmt diameter-nasreq-policy *named-item*
Notes	The following elements are part of a choice: **diameter-nasreq-policy**, **radius-auth-policy**, or **user-db**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-auth-policy *reference*

Synopsis	RADIUS authentication policy name
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* radius-auth-policy *reference*
Tree	radius-auth-policy
Reference	**configure** subscriber-mgmt radius-authentication-policy *named-item*
Notes	The following elements are part of a choice: **diameter-nasreq-policy**, **radius-auth-policy**, or **user-db**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

skip-gtp-ipv4-allocation *boolean*

Synopsis	defer IPv4 address allocation to DHCP
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* skip-gtp-ipv4-allocation *boolean*
Tree	skip-gtp-ipv4-allocation
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

user-db *reference*

Synopsis	Local user database name
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* user-db *reference*
Tree	user-db
Reference	**configure** subscriber-mgmt local-user-db *named-item*
Notes	The following elements are part of a choice: **diameter-nasreq-policy**, **radius-auth-policy**, or **user-db**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-u-ipv6-checksum *keyword*

Synopsis	UDP checksum for GTP-u packets transmitted over IPv6
Context	**configure** subscriber-mgmt gtp gtp-u-ipv6-checksum *keyword*
Tree	gtp-u-ipv6-checksum
Description	This command enables the calculation and insertion of a UDP checksum into the GTP-u tunneled traffic over IPv6 transport toward the RAN for 4G and 5G fixed-wireless access.
Options	false, true
Default	false
Introduced	24.10.R3
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-held-uplink-sessions *number*

Synopsis	Maximum GTP sessions held while UE is disconnected
Context	**configure** subscriber-mgmt gtp max-held-uplink-sessions *number*
Tree	max-held-uplink-sessions
Range	0 to 500000
Default	2000
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

peer-profile [name] *named-item*

Synopsis	Enter the **peer-profile** list instance
Context	**configure** subscriber-mgmt gtp peer-profile *named-item*
Tree	peer-profile
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Peer profile name
Context	**configure** subscriber-mgmt gtp peer-profile *named-item*
Tree	peer-profile
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

interface-type *keyword*

Synopsis	3GPP interface type for connections toward this peer
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* interface-type *keyword*
Tree	interface-type
Options	gn, s2a, s2b, s11
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-ttl *number*

Synopsis	IP header TTL value for GTP control messages
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* ip-ttl *number*
Tree	ip-ttl
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

keep-alive

Synopsis	Enter the **keep-alive** context
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* keep-alive
Tree	keep-alive
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of GTP-C echo request messages
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* keep-alive admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Frequency for sending keepalives
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* keep-alive interval *number*
Tree	interval
Range	60 to 180

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Default	60
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

retry-count *number*

Synopsis	Time between echo retries toward the same peer
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* keep-alive retry-count *number*
Tree	retry-count
Range	1 to 15
Default	4
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Timeout after which echo request is deemed unanswered
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* keep-alive timeout *number*
Tree	timeout
Range	1 to 20
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-retransmit

Synopsis	Enter the **message-retransmit** context
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* message-retransmit
Tree	message-retransmit
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

retry-count *number*

Synopsis	Maximum unanswered retries before message deemed failed
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* message-retransmit retry-count *number*
Tree	retry-count
Range	1 to 8
Default	3
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Timeout after which a message is considered unanswered
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* message-retransmit timeout *number*
Tree	timeout
Range	1 to 30
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy for MGW profile packets sent or received
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *named-item*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

s11

Synopsis	Enter the **s11** context
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11

© 2025 Nokia.

Tree	s11
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

change-reporting-action *(number | keyword)*

Synopsis	Value of change reporting action IE sends to the peer
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 change-reporting-action *(number | keyword)*
Tree	change-reporting-action
Description	This command specifies the value of the change reporting action IE sends to the peer in applicable messages. The peer needs to indicate support first using the appropriate flag in the indication IE. This can be overridden by AAA, if AAA explicitly request notification changes for either ECGI, TAI or both. If AAA does not request any notification changes or only the generic location changes, the configured value is used. When unconfigured, this command indicates that the IE is not sent, unless specified by AAA.
Range	0 to 255
Options	cgi-sai, rai, tai, ecgi, cgi-sai-rai, tai-ecgi
Introduced	16.0.R5
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-marker-count *number*

Synopsis	Number of GTP-U end marker packets that are sent
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 end-marker-count *number*
Tree	end-marker-count
Description	This command specifies the number of end marker packets that are sent when it is certain no more packets will be sent over the corresponding GTP-U tunnel, such as after a completed mobility event.
Range	0 to 5
Default	1
Introduced	16.0.R5
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv4-mtu *number*

Synopsis	IPv4-MTU PCO sent in S11 GTP messages
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 ipv4-mtu *number*
Tree	ipv4-mtu
Range	512 to 9000
Default	1400
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 qos
Tree	qos
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ambr

Synopsis	Enter the **ambr** context
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 qos ambr
Tree	ambr
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

down-link *number*

Synopsis	Downlink Aggregated Maximum Bit Rate (AMBR)
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 qos ambr down-link *number*
Tree	down-link
Range	0 to 10000000
Units	kilobps
Default	20000

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

rat-type *(number | keyword)*

Synopsis	Default Radio Access Type (RAT) signaled in GTP setup
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* uplink rat-type *(number | keyword)*
Tree	rat-type
Description	This command configures the default Radio Access Technology (RAT) type signaled during GTP setup. RAT identifies the underlying physical connection method for a radio-based communication network. This can be overridden by RADIUS.
Range	0 to 255
Options	utran, geran, wlan, gan, hspa, eutran, virtual
Default	wlan
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

report-wlan-location *boolean*

Synopsis	Report WLAN or cellular location of UE during setup
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* uplink report-wlan-location *boolean*
Tree	report-wlan-location
Description	When configured to **true**, this command enables reporting of the WLAN location or cellular location of the UE in the signaling interface (S2a or Gn) between the WLAN GW and the mobile gateway (PGW or GGSN). When configured to **false**, this command disables location reporting.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-hold-time *(number | keyword)*

Synopsis	Time to hold a GTP session after its UE is disconnected
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* uplink session-hold-time *(number | keyword)*
Tree	session-hold-time

© 2025 Nokia.

Reference	**configure** multicast-management multicast-reporting-destination *named-item*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

optional-fields

Synopsis	Enter the **optional-fields** context
Context	**configure** subscriber-mgmt igmp-policy *named-item* multicast-reporter optional-fields
Tree	optional-fields
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-mac *boolean*

Synopsis	Include host mac address
Context	**configure** subscriber-mgmt igmp-policy *named-item* multicast-reporter optional-fields host-mac *boolean*
Tree	host-mac
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe-session-id *boolean*

Synopsis	Include PPPoE session ID in multicast reporting message
Context	**configure** subscriber-mgmt igmp-policy *named-item* multicast-reporter optional-fields pppoe-session-id *boolean*
Tree	pppoe-session-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id *boolean*

Synopsis	Include sap ID

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt igmp-policy *named-item* multicast-reporter optional-fields sap-id *boolean*
Tree	sap-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

svc-id *boolean*

Synopsis	Include service ID
Context	**configure** subscriber-mgmt igmp-policy *named-item* multicast-reporter optional-fields svc-id *boolean*
Tree	svc-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	**configure** subscriber-mgmt igmp-policy *named-item* query-interval *number*
Tree	query-interval
Range	2 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	**configure** subscriber-mgmt igmp-policy *named-item* query-last-member-interval *number*
Tree	query-last-member-interval
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	**configure** subscriber-mgmt igmp-policy *named-item* query-response-interval *number*
Tree	query-response-interval
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redirection-policy *reference*

Synopsis	Multicast redirection action applied to the subscriber
Context	**configure** subscriber-mgmt igmp-policy *named-item* redirection-policy *reference*
Tree	redirection-policy
Reference	**configure** policy-options policy-statement *named-item-64*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

replication *keyword*

Synopsis	Multicast replication mode for subscriber multicast
Context	**configure** subscriber-mgmt igmp-policy *named-item* replication *keyword*
Tree	replication
Options	per-sap, per-host, per-spi
Default	per-sap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-alert-check *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	**configure** subscriber-mgmt igmp-policy *named-item* router-alert-check *boolean*
Tree	router-alert-check
Default	true
Introduced	16.0.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

static

Synopsis	Enter the **static** context
Context	**configure** subscriber-mgmt igmp-policy *named-item* static
Tree	static
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group [group-address] *ipv4-multicast-address*

Synopsis	Enter the **group** list instance
Context	**configure** subscriber-mgmt igmp-policy *named-item* static group *ipv4-multicast-address*
Tree	group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**group-address**] *ipv4-multicast-address*

Synopsis	Group address of static IGMP multicast channel
Context	**configure** subscriber-mgmt igmp-policy *named-item* static group *ipv4-multicast-address*
Tree	group
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source [source-address] *ipv4-unicast-address*

Synopsis	Add a list entry for **source**
Context	**configure** subscriber-mgmt igmp-policy *named-item* static group *ipv4-multicast-address* source *ipv4-unicast-address*
Tree	source
Notes	The following elements are part of a mandatory choice: **source** or **starg**.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**source-address**] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	**configure** subscriber-mgmt igmp-policy *named-item* static group *ipv4-multicast-address* source *ipv4-unicast-address*
Tree	source
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

starg

Synopsis	any source address (*,G)
Context	**configure** subscriber-mgmt igmp-policy *named-item* static group *ipv4-multicast-address* starg
Tree	starg
Notes	The following elements are part of a mandatory choice: **source** or **starg**.
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-multicast-destination-mac *boolean*

Synopsis	Use multicast destination MAC for outgoing traffic
Context	**configure** subscriber-mgmt igmp-policy *named-item* use-multicast-destination-mac *boolean*
Tree	use-multicast-destination-mac
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

version *keyword*

Synopsis	IGMP protocol version

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt igmp-policy *named-item* version *keyword*
Tree	version
Options	1, 2, 3
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-session-policy [name] *named-item*

Synopsis	Enter the **ipoe-session-policy** list instance
Context	**configure** subscriber-mgmt ipoe-session-policy *named-item*
Tree	ipoe-session-policy
Max. instances	256
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	IPoE session policy name
Context	**configure** subscriber-mgmt ipoe-session-policy *named-item*
Tree	ipoe-session-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id-from-auth *boolean*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use circuit ID from authentication server to identify session
Context	**configure** subscriber-mgmt ipoe-session-policy *named-item* circuit-id-from-auth *boolean*
Tree	circuit-id-from-auth

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

derived-id *display-string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Derived ID string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification derived-id *display-string*
Tree	derived-id
String length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en

Synopsis	Enter the **duid-en** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification duid-en
Tree	duid-en
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client ID of type duid-en as a hexadecimal string

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification duid-en hex-string *hex-string*
Tree	hex-string
Description	This command configures the hexadecimal value for use in matching against the concatenation of the enterprise number and identifier fields of the DHCPv6 option CLIENTID (1) with DUID type = 2 (assigned by the vendor based on the enterprise number) in the DHCPv6 client message.
String length	1 to 256
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-ll-llt *mac-unicast-address-no-zero*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address of the Client ID type duid-ll or duid-llt
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification duid-ll-llt *mac-unicast-address-no-zero*
Tree	duid-ll-llt
Description	This command configures the value for use in matching against the link-layer address field of the DHCPv6 option CLIENTID (1) with DUID type = 3 (based on the link-layer address) or DUID type = 1 (based on the link-layer address plus time) and hardware type = 1 (Ethernet) in the DHCPv6 client message. For DUID type = 1, the time field is ignored.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

encap-tag-range

Synopsis	Enable the **encap-tag-range** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification encap-tag-range
Tree	encap-tag-range
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Synopsis	VSO string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification string *display-string*
Tree	string
String length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

system-id *display-string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System ID
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification system-id *display-string*
Tree	system-id
String length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

identification

Synopsis	Enable the **identification** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* identification
Tree	identification
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp-string *string*

Synopsis	ANCP string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* identification ancp-string *string*
Tree	ancp-string

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile-string *string*

Synopsis	Application profile string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* identification app-profile-string *string*
Tree	app-profile-string
String length	1 to 16
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

category-map-name *named-item*

Synopsis	Category map name
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* identification category-map-name *named-item*
Tree	category-map-name
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

int-dest-id *int-dest-id*

Synopsis	Intermediate destination ID
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* identification int-dest-id *int-dest-id*
Tree	int-dest-id
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option-number *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Identification strings for the subscriber
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* identification option-number *number*
Tree	option-number
Range	1 to 254
Default	254
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile-string *string*

Synopsis	SLA profile string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* identification sla-profile-string *string*
Tree	sla-profile-string
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

spi-sharing-group-id *number*

Synopsis	SPI sharing group ID
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* identification spi-sharing-group-id *number*
Tree	spi-sharing-group-id
Range	0 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

sub-profile-string *string*

Synopsis	Sub profile string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* identification sub-profile-string *string*
Tree	sub-profile-string
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id *named-item-64*

Synopsis	Subscriber ID
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* identification subscriber-id *named-item-64*
Tree	subscriber-id
String length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address

Synopsis	Enter the **address** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 address
Tree	address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

gi-address *keyword*

Synopsis	Use gi-address to select a pool with the given scope
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 address gi-address *keyword*
Tree	gi-address
Options	subnet-scope, pool-scope
Notes	The following elements are part of a choice: **gi-address**, **ip-address**, **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-address *ipv4-unicast-address*

Synopsis	Fixed IPv4 address of the host
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 address ip-address *ipv4-unicast-address*
Tree	ip-address
Notes	The following elements are part of a choice: **gi-address**, **ip-address**, **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pool

Synopsis	Enable the **pool** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 address pool
Tree	pool
Notes	The following elements are part of a choice: **gi-address**, **ip-address**, **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delimiter *string*

Synopsis	Delimiter separating primary and secondary pool names

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 address pool delimiter *string*
Tree	delimiter
String length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

primary *named-item*

Synopsis	Primary pool name
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 address pool primary *named-item*
Tree	primary
String length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

secondary *named-item*

Synopsis	Secondary pool name
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 address pool secondary *named-item*
Tree	secondary
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-pool-from-client

Synopsis	Enable the **use-pool-from-client** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 address use-pool-from-client
Tree	use-pool-from-client
Notes	The following elements are part of a choice: **gi-address**, **ip-address**, **pool**, or **use-pool-from-client**.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delimiter *string*

Synopsis	Delimiter character to combine primary and secondary pool names
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 address use-pool-from-client delimiter *string*
Tree	delimiter
String length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gi-address *ipv4-unicast-address*

Synopsis	GI addresses based on the host entry in the LUDB
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 gi-address *ipv4-unicast-address*
Tree	gi-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option [number] *(number | keyword)*

Synopsis	Enter the **option** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)*
Tree	option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCP option to send identification strings to client
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)*
Tree	option

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string-not-all-spaces*

Synopsis	DHCP option specified as an ASCII string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)* ascii-string *string-not-all-spaces*
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	DHCP option as time duration
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)* duration *number*
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Remove DHCP option configuration
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)* empty

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)* hex-string *hex-string*
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-address *ipv4-address*

Synopsis	DHCP option as a list of IPv4 addresses
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)* ipv4-address *ipv4-address*
Tree	ipv4-address
Max. instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**. This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

netbios-node-type *keyword*

Synopsis	DHCP option as NetBIOS node type
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)* netbios-node-type *keyword*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	netbios-node-type
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *ipv4-unicast-address*

WARNING:
This element is deprecated and will be removed in a future release.

Synopsis	IPv4 address of the DHCP server
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 server *ipv4-unicast-address*
Tree	server
Introduced	16.0.R1
Deprecated	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6
Tree	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address *ipv6-unicast-address*

Synopsis	Fixed IPv6 address of the host
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 address *ipv6-unicast-address*
Tree	address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

Range	300 to 315446399
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

match-radius-proxy-cache

Synopsis	Enter the **match-radius-proxy-cache** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache
Tree	match-radius-proxy-cache
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fail-action *keyword*

Synopsis	Action when no match is found

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache fail-action *keyword*
Tree	fail-action
Options	continue, drop
Default	drop
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-format *mac-specification*

Synopsis	MAC address format
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache mac-format *mac-specification*
Tree	mac-format
String length	2 to 7
Default	aa:
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis	Enter the **match** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache match
Tree	match
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Match circuit ID in DHCP Option 82
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache match circuit-id *boolean*
Tree	circuit-id
Notes	The following elements are part of a choice: **circuit-id**, (**ipv4-option** and **ipv6-option**), **mac**, or **remote-id**.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-option *number*

Synopsis	DHCP option number
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache match ipv4-option *number*
Tree	ipv4-option
Range	1 to 254
Notes	The following elements are part of a choice: **circuit-id**, (**ipv4-option** and **ipv6-option**), **mac**, or **remote-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-option *number*

Synopsis	DHCPv6 option number
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache match ipv6-option *number*
Tree	ipv6-option
Range	1 to 65535
Notes	The following elements are part of a choice: **circuit-id**, (**ipv4-option** and **ipv6-option**), **mac**, or **remote-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac *boolean*

Synopsis	Match MAC address of DHCP client
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache match mac *boolean*
Tree	mac
Default	true
Notes	The following elements are part of a choice: **circuit-id**, (**ipv4-option** and **ipv6-option**), **mac**, or **remote-id**.
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis	Match remote ID in DHCP Option 82
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache match remote-id *boolean*
Tree	remote-id
Notes	The following elements are part of a choice: **circuit-id**, (**ipv4-option** and **ipv6-option**), **mac**, or **remote-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server

Synopsis	Enable the **server** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache server
Tree	server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *named-item*

Synopsis	Local user database server name
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache server name *named-item*
Tree	name
String length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service *number*

Synopsis	Service ID

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache server service *number*
Tree	service
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mld-import [policy-name] *named-item*

Synopsis	Add a list entry for **mld-import**
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* mld-import *named-item*
Tree	mld-import
Max. instances	14
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**policy-name**] *named-item*

Synopsis	MLD import policy used to control the multicast group
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* mld-import *named-item*
Tree	mld-import
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msap-defaults

Synopsis	Enter the **msap-defaults** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* msap-defaults
Tree	msap-defaults
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

Synopsis	Enable the **group-interface** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* msap-defaults group-interface
Tree	group-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *named-item*

Synopsis	IP interface name
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* msap-defaults group-interface name *named-item*
Tree	name
String length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix *keyword*

Synopsis	Prefix to the IP interface name
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* msap-defaults group-interface prefix *keyword*
Tree	prefix
Options	port-id
Notes	The following elements are part of a choice: **prefix** or **suffix**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix *keyword*

Synopsis	Suffix for the group interface

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* msap-defaults group-interface suffix *keyword*
Tree	suffix
Options	port-id
Notes	The following elements are part of a choice: **prefix** or **suffix**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy *named-item*

Synopsis	MSAP policy
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* msap-defaults policy *named-item*
Tree	policy
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service *number*

Synopsis	Service ID
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* msap-defaults service *number*
Tree	service
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381 | 2148278382 | 2148278383 to 2148278386 | 2148278387 to 2148282482
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy

Synopsis	Enter the **radius-accounting-policy** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* radius-accounting-policy
Tree	radius-accounting-policy

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duplicate *named-item*

Synopsis	RADIUS accounting policy for generating duplicate accounting information
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* radius-accounting-policy duplicate *named-item*
Tree	duplicate
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *named-item*

Synopsis	RADIUS accounting policy name
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* radius-accounting-policy name *named-item*
Tree	name
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retail-service-id *number*

Synopsis	Configure the retail service-id
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* retail-service-id *number*
Tree	retail-service-id
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381 | 2148278382 | 2148278383 to 2148278386 | 2148278387 to 2148282482
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

rip-policy *named-item*

Synopsis	RIP policy
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* rip-policy *named-item*
Tree	rip-policy
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

to-client-options

Synopsis	Enter the **to-client-options** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options
Tree	to-client-options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-option [number] *(number | keyword)*

Synopsis	Enter the **ipv4-option** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv4-option *(number | keyword)*
Tree	ipv4-option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCP option to send identification strings to client
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv4-option *(number | keyword)*
Tree	ipv4-option
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string-not-all-spaces*

Synopsis	DHCP option specified as an ASCII string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv4-option *(number | keyword)* ascii-string *string-not-all-spaces*
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	DHCP option as time duration
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv4-option *(number | keyword)* duration *number*
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Empty DHCP option
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv4-option *(number | keyword)* empty
Tree	empty

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv4-option *(number | keyword)* hex-string *hex-string*
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-address *ipv4-address*

Synopsis	DHCP option as a list of IPv4 addresses
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv4-option *(number | keyword)* ipv4-address *ipv4-address*
Tree	ipv4-address
Max. instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**. This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

netbios-node-type *keyword*

Synopsis	DHCP option as NetBIOS node type
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv4-option *(number | keyword)* netbios-node-type *keyword*
Tree	netbios-node-type

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-option [number] *(number | keyword)*

Synopsis	Enter the **ipv6-option** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv6-option *(number | keyword)*
Tree	ipv6-option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCP option to send as identification string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv6-option *(number | keyword)*
Tree	ipv6-option
Range	1 to 65535
Options	dns-server, domain-name
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string-not-all-spaces*

Synopsis	DHCP option specified as an ASCII string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv6-option *(number | keyword)* ascii-string *string-not-all-spaces*
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-string *string*

Synopsis	DHCP option specified as a domain name
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv6-option *(number | keyword)* domain-string *string*
Tree	domain-string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Empty DHCP option
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv6-option *(number | keyword)* empty
Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv6-option *(number | keyword)* hex-string *hex-string*
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R1

Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-server-options ipv6-option *(number | keyword)* empty
Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-server-options ipv6-option *(number | keyword)* hex-string *hex-string*
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *ipv6-address*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-server-options ipv6-option *(number | keyword)* ipv6-address *ipv6-address*
Tree	ipv6-address
Max. instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**. This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wpp

Synopsis	Enter the **wpp** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* wpp
Tree	wpp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

initial

Synopsis	Enter the **initial** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* wpp initial
Tree	initial
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *named-item*

Synopsis	Initial application profile name
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* wpp initial app-profile *named-item*
Tree	app-profile
String length	1 to 32
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sla-profile *named-item*

Synopsis	Initial SLA profile
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* wpp initial sla-profile *named-item*
Tree	sla-profile
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *named-item*

Synopsis	Initial subscriber profile

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* wpp initial sub-profile *named-item*
Tree	sub-profile
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal

Synopsis	Enter the **portal** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* wpp portal
Tree	portal
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *named-item*

Synopsis	Web portal server name
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* wpp portal name *named-item*
Tree	name
String length	1 to 32
Notes	The following elements are part of a choice: **portal-group** or (**name** and **router-instance**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal-group *named-item*

Synopsis	WPP portal group for this interface
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* wpp portal portal-group *named-item*
Tree	portal-group
String length	1 to 32
Notes	The following elements are part of a choice: **portal-group** or (**name** and **router-instance**).

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *(keyword | number)*

Synopsis	Virtual router instance of the WPP portal for the host
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* wpp portal router-instance *(keyword | number)*
Tree	router-instance
Range	1 to 2147483647
Options	base
Default	base
Notes	The following elements are part of a choice: **portal-group** or (**name** and **router-instance**).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

restore-to-initial-on-disconnect *keyword*

Synopsis	Restore initial profiles after a host has disconnected
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* wpp restore-to-initial-on-disconnect *keyword*
Tree	restore-to-initial-on-disconnect
Options	restore, no-restore
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mask type *keyword*

Synopsis	Enter the **mask** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe mask type *keyword*
Tree	mask
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

type *keyword*

Synopsis	Matching type to identify a host
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe mask type *keyword*
Tree	mask
Description	This command configures the data type that represents the type of matching performed to identify a DHCP host.
Options	circuit-id, remote-id, sap-id, string, system-id, option60, duid-en, duid-ll-llt
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix

Synopsis	Enable the **prefix** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe mask type *keyword* prefix
Tree	prefix
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

length *number*

Synopsis	PPP mask prefix length
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe mask type *keyword* prefix length *number*
Tree	length
Range	1 to 127
Notes	The following elements are part of a mandatory choice: **length** or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	Prefix string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe mask type *keyword* prefix string *string*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **length** or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix

Synopsis	Enable the **suffix** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe mask type *keyword* suffix
Tree	suffix
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

length *number*

Synopsis	PPP mask suffix length
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe mask type *keyword* suffix length *number*
Tree	length
Range	1 to 127
Notes	The following elements are part of a mandatory choice: **length** or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	Suffix substring
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe mask type *keyword* suffix string *string*
Tree	string
Description	This command specifies a substring that is stripped off the end of the incoming circuit ID before it is matched against the value configured in the circuit ID.
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **length** or **string**.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

match-list *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPoE host match type
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe match-list *keyword*
Tree	match-list
Description	This command specifies the type of matching done to identify a host. There are different match-types for IPoE hosts.
Options	circuit-id, mac, remote-id, sap-id, service-id, string, system-id, option60, encap-tag-range, dual-stack-remote-id, derived-id, ip, encap-tag-separate-range, duid-en, duid-ll-llt
Max. instances	4
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp

Synopsis	Enter the **ppp** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp
Tree	ppp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host [host-name] *named-item*

Synopsis	Enter the **host** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item*
Tree	host
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**host-name**] *named-item*

Synopsis	Host name
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item*
Tree	host
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access-loop-encapsulation

Synopsis	Enable the **access-loop-encapsulation** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* access-loop-encapsulation
Tree	access-loop-encapsulation
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

encap-offset

Synopsis	Enter the **encap-offset** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* access-loop-encapsulation encap-offset
Tree	encap-offset
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Egress encapsulation type
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* access-loop-encapsulation encap-offset type *keyword*
Tree	type

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

secondary *named-item*

Synopsis	Secondary pool name
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 address pool secondary *named-item*
Tree	secondary
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-length *number*

Synopsis	IPv4 host address prefix length
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 address prefix-length *number*
Tree	prefix-length
Range	1 to 32
Default	32
Notes	The following elements are part of a choice: **gi-address**, (**ip-address** and **prefix-length**), **pool**, or **use-pool-from-client**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-pool-from-client

Synopsis	Enable the **use-pool-from-client** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 address use-pool-from-client
Tree	use-pool-from-client
Notes	The following elements are part of a choice: **gi-address**, (**ip-address** and **prefix-length**), **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

delimiter *string*

Synopsis	Delimiter character to combine primary and secondary pool names
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 address use-pool-from-client delimiter *string*
Tree	delimiter
String length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-df-bit *boolean*

Synopsis	Ignore the DF bit in the IPv4 header when fragmenting
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 ignore-df-bit *boolean*
Tree	ignore-df-bit
Description	When configured to **true**, the router ignores the DF bit in the IPv4 header for frames egressing the subscriber interface. The frames are fragmented according the applicable egress MTU. The DF bit is reset for frames that are fragmented. This command applies to PPPoE PTA and L2TP LNS frames only. It is not applicable for L2TP LAC frames. When configured to **false**, the router does not ignore the DF bit in the IPv4 header for frames egressing the subscriber interface.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option [number] *(number | keyword)*

Synopsis	Enter the **option** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 option *(number | keyword)*
Tree	option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**number**] *(number | keyword)*

Synopsis	DHCP option to send identification strings to client
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 option *(number | keyword)*
Tree	option
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string-not-all-spaces*

Synopsis	DHCP option specified as an ASCII string
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 option *(number | keyword)* ascii-string *string-not-all-spaces*
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	DHCP option as time duration
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 option *(number | keyword)* duration *number*
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1

© 2025 Nokia.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option [number] *(number | keyword)*

Synopsis	Enter the **option** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 option *(number | keyword)*
Tree	option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCPv6 option
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 option *(number | keyword)*
Tree	option
Range	23
Options	dns-server
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 option *(number | keyword)* hex-string *hex-string*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a mandatory choice: **hex-string** or **ipv6-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *ipv6-address*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 option *(number | keyword)* ipv6-address *ipv6-address*
Tree	ipv6-address
Max. instances	4
Notes	The following elements are part of a mandatory choice: **hex-string** or **ipv6-address**. This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-advertisement-policy *named-item*

Synopsis	IPv6 router advertisement policy
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 router-advertisement-policy *named-item*
Tree	router-advertisement-policy
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

slaac-prefix *ipv6-unicast-prefix*

Synopsis	IPv6 SLAAC prefix of this host
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 slaac-prefix *ipv6-unicast-prefix*
Tree	slaac-prefix
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

slaac-prefix-pool *named-item*

Synopsis	IPv6 SLAAC prefix pool of this host
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 slaac-prefix-pool *named-item*
Tree	slaac-prefix-pool
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timers

Synopsis	Enter the **timers** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 timers
Tree	timers
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *(number | keyword)*

Synopsis	Time for a lease to remain preferred
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 timers preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	300 to 315446399
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rebind *number*

Synopsis	Rebind timer (T2)

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 timers rebind *number*
Tree	rebind
Range	0 to 1209600
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

renew *number*

Synopsis	Renew timer (T1)
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 timers renew *number*
Tree	renew
Range	0 to 604800
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *(number | keyword)*

Synopsis	Time for a lease to remain valid
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 timers valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	300 to 315446399
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tp

Synopsis	Enter the **l2tp** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* l2tp
Tree	l2tp

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group

Synopsis	Enable the **group** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* l2tp group
Tree	group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	L2TP tunnel group name
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* l2tp group name *string*
Tree	name
String length	1 to 63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-id *number*

Synopsis	Service ID for the L2TP tunnel group
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* l2tp group service-id *number*
Tree	service-id
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac-fragmentation *keyword*

Synopsis	L2TP LAC fragmentation override

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* l2tp lac-fragmentation *keyword*
Tree	lac-fragmentation
Description	This command configures the router or virtual L2TP LAC fragmentation override.
Options	deny – Deny packet fragmentation for L2TP sessions permit – Permit packet fragmentation for L2TP sessions
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lns-interface

Synopsis	Enable the **lns-interface** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* lns-interface
Tree	lns-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *named-item*

Synopsis	IP interface name
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* lns-interface name *named-item*
Tree	name
String length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-id *number*

Synopsis	Service ID
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* lns-interface service-id *number*
Tree	service-id
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077

© 2025 Nokia.

	to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381 | 2148278382 | 2148278383 to 2148278386 | 2148278387 to 2148282482
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mld-import [policy-name] *named-item*

Synopsis	Add a list entry for **mld-import**
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* mld-import *named-item*
Tree	mld-import
Max. instances	14
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**policy-name**] *named-item*

Synopsis	MLD import policy used to control the multicast group
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* mld-import *named-item*
Tree	mld-import
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msap-defaults

Synopsis	Enter the **msap-defaults** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* msap-defaults
Tree	msap-defaults
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

group-interface

Synopsis	Enable the **group-interface** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* msap-defaults group-interface
Tree	group-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *named-item*

Synopsis	IP interface name
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* msap-defaults group-interface name *named-item*
Tree	name
String length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix *keyword*

Synopsis	Prefix to the IP interface name
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* msap-defaults group-interface prefix *keyword*
Tree	prefix
Options	port-id
Notes	The following elements are part of a choice: **prefix** or **suffix**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix *keyword*

Synopsis	Suffix for the group interface
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* msap-defaults group-interface suffix *keyword*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	suffix
Options	port-id
Notes	The following elements are part of a choice: **prefix** or **suffix**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy *named-item*

Synopsis	MSAP policy
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* msap-defaults policy *named-item*
Tree	policy
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service *number*

Synopsis	Service ID
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* msap-defaults service *number*
Tree	service
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381 | 2148278382 | 2148278383 to 2148278386 | 2148278387 to 2148282482
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pado-delay *number*

Synopsis	Delay timeout before sending a PADO
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* pado-delay *number*
Tree	pado-delay
Range	1 to 30
Units	deciseconds

© 2025 Nokia.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password

Synopsis	Enter the **password** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* password
Tree	password
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

chap *encrypted-leaf*

Synopsis	CHAP protocol
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* password chap *encrypted-leaf*
Tree	chap
String length	1 to 115
Notes	The following elements are part of a choice: **chap**, **ignore**, or **pap**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore

Synopsis	Ignore the PAP and CHAP passwords
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* password ignore
Tree	ignore
Notes	The following elements are part of a choice: **chap**, **ignore**, or **pap**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pap *encrypted-leaf*

Synopsis	PAP for the password

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* password pap *encrypted-leaf*
Tree	pap
String length	1 to 115
Notes	The following elements are part of a choice: **chap**, **ignore**, or **pap**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-policy-parameters

Synopsis	Enter the **ppp-policy-parameters** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ppp-policy-parameters
Tree	ppp-policy-parameters
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

keepalive

Synopsis	Enable the **keepalive** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ppp-policy-parameters keepalive
Tree	keepalive
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-up-multiplier *number*

Synopsis	PPP LCP keepalive hold up multiplier override
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ppp-policy-parameters keepalive hold-up-multiplier *number*
Tree	hold-up-multiplier
Description	This command configures the number of LCP echo replies that can be missed before the PPP session is brought down and overrides the value configured in the **configure subscriber-mgmt ppp-policy** context for PPPoE PTA sessions or in the **configure l2tp group** context for L2TP LNS sessions.
Range	1 to 5

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	3
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	PPP LCP keepalive interval override
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ppp-policy-parameters keepalive interval *number*
Tree	interval
Description	This command configures the time interval in seconds at which LCP echo requests are transmitted for the PPP session and overrides the value configured in the **configure subscriber-mgmt ppp-policy** context for PPPoE PTA sessions or the **configure l2tp group** context for L2TP LNS sessions.
Range	4 to 300
Units	seconds
Default	30
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-sessions-per-mac *number*

Synopsis	Maximum number of sessions per MAC address
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ppp-policy-parameters max-sessions-per-mac *number*
Tree	max-sessions-per-mac
Description	This command sets the maximum PPP sessions that can be opened for a specified MAC address.
Range	1 to 8191
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy

Synopsis	Enter the **radius-accounting-policy** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* radius-accounting-policy

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	radius-accounting-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duplicate *named-item*

Synopsis	RADIUS accounting policy for generating duplicate accounting information
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* radius-accounting-policy duplicate *named-item*
Tree	duplicate
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *named-item*

Synopsis	RADIUS accounting policy name
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* radius-accounting-policy name *named-item*
Tree	name
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retail-service-id *number*

Synopsis	Configure the retail service-id
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* retail-service-id *number*
Tree	retail-service-id
Range	1 to 2147483647 | 2147483648 | 2147483649 | 2147483650 | 2147483651 to 2147483690 | 2147483691 to 2148007980 | 2148007981 to 2148012076 | 2148012077 to 2148016172 | 2148016173 to 2148278316 | 2148278317 | 2148278318 to 2148278381 | 2148278382 | 2148278383 to 2148278386 | 2148278387 to 2148282482
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Empty DHCP option
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* to-client-options ipv6-option *(number | keyword)* empty
Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* to-client-options ipv6-option *(number | keyword)* hex-string *hex-string*
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *ipv6-address*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* to-client-options ipv6-option *(number | keyword)* ipv6-address *ipv6-address*
Tree	ipv6-address
Max. instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**. This element is ordered by the user.
Introduced	16.0.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mask type *keyword*

Synopsis	Enter the **mask** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp mask type *keyword*
Tree	mask
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Matching type to identify a host
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp mask type *keyword*
Tree	mask
Options	circuit-id, mac, remote-id, user-name, service-name, sap-id
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix

Synopsis	Enable the **prefix** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp mask type *keyword* prefix
Tree	prefix
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

length *number*

Synopsis	PPP mask prefix length
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp mask type *keyword* prefix length *number*
Tree	length
Range	1 to 127

© 2025 Nokia.

Notes	The following elements are part of a mandatory choice: **length** or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	Prefix string
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp mask type *keyword* prefix string *string*
Tree	string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **length** or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix

Synopsis	Enable the **suffix** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp mask type *keyword* suffix
Tree	suffix
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

length *number*

Synopsis	PPP mask suffix length
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp mask type *keyword* suffix length *number*
Tree	length
Range	1 to 127
Notes	The following elements are part of a mandatory choice: **length** or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis	Suffix substring
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp mask type *keyword* suffix string *string*
Tree	string
Description	This command specifies a substring that is stripped off the end of the incoming circuit ID before it is matched against the value configured in the circuit ID.
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **length** or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

match-list *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PPP host match type
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp match-list *keyword*
Tree	match-list
Options	circuit-id, mac, remote-id, user-name, service-name, sap-id, encap-tag-range, derived-id, encap-tag-separate-range
Max. instances	3
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mld-policy [name] *named-item*

Synopsis	Enter the **mld-policy** list instance
Context	**configure** subscriber-mgmt mld-policy *named-item*
Tree	mld-policy
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Policy name
Context	**configure** subscriber-mgmt mld-policy *named-item*
Tree	mld-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt mld-policy *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

egress-rate-modify

Synopsis	Enter the **egress-rate-modify** context
Context	**configure** subscriber-mgmt mld-policy *named-item* egress-rate-modify
Tree	egress-rate-modify
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

agg-rate

Synopsis	Maximum total rate for all subscriber egress queues
Context	**configure** subscriber-mgmt mld-policy *named-item* egress-rate-modify agg-rate
Tree	agg-rate

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the maximum total rate for all subscriber egress queues for each subscriber associated with the policy.
Notes	The following elements are part of a choice: **agg-rate** or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scheduler *named-item*

Synopsis	Scheduler to be applied for rate modification
Context	**configure** subscriber-mgmt mld-policy *named-item* egress-rate-modify scheduler *named-item*
Tree	scheduler
String length	1 to 32
Notes	The following elements are part of a choice: **agg-rate** or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fast-leave *boolean*

Synopsis	Enable fast leave
Context	**configure** subscriber-mgmt mld-policy *named-item* fast-leave *boolean*
Tree	fast-leave
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

import-policy *reference*

Synopsis	Import policy to filter MLD packets
Context	**configure** subscriber-mgmt mld-policy *named-item* import-policy *reference*
Tree	import-policy
Reference	**configure** policy-options policy-statement *named-item-64*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-group-sources *number*

Synopsis	Maximum number of group sources for this interface
Context	**configure** subscriber-mgmt mld-policy *named-item* maximum-number-group-sources *number*
Tree	maximum-number-group-sources
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-groups *number*

Synopsis	Maximum number of groups for this interface
Context	**configure** subscriber-mgmt mld-policy *named-item* maximum-number-groups *number*
Tree	maximum-number-groups
Range	1 to 16000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-sources *number*

Synopsis	Maximum number of sources that are allowed per group
Context	**configure** subscriber-mgmt mld-policy *named-item* maximum-number-sources *number*
Tree	maximum-number-sources
Range	1 to 1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	**configure** subscriber-mgmt mld-policy *named-item* query-interval *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	query-interval
Range	2 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	**configure** subscriber-mgmt mld-policy *named-item* query-last-member-interval *number*
Tree	query-last-member-interval
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	**configure** subscriber-mgmt mld-policy *named-item* query-response-interval *number*
Tree	query-response-interval
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redirection-policy *reference*

Synopsis	Multicast redirection action applied to the subscriber
Context	**configure** subscriber-mgmt mld-policy *named-item* redirection-policy *reference*
Tree	redirection-policy
Reference	**configure** policy-options policy-statement *named-item-64*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

replication *keyword*

Synopsis	Multicast replication mode for subscriber multicast

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt mld-policy *named-item* replication *keyword*
Tree	replication
Options	per-sap, per-host, per-spi
Default	per-sap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-alert-check *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	**configure** subscriber-mgmt mld-policy *named-item* router-alert-check *boolean*
Tree	router-alert-check
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

static

Synopsis	Enter the **static** context
Context	**configure** subscriber-mgmt mld-policy *named-item* static
Tree	static
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group [group-address] *ipv6-multicast-address*

Synopsis	Enter the **group** list instance
Context	**configure** subscriber-mgmt mld-policy *named-item* static group *ipv6-multicast-address*
Tree	group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**group-address**] *ipv6-multicast-address*

Synopsis	Group address of multicast channel

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt mld-policy *named-item* static group *ipv6-multicast-address*
Tree	group
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source [source-address] *ipv6-unicast-address*

Synopsis	Add a list entry for **source**
Context	**configure** subscriber-mgmt mld-policy *named-item* static group *ipv6-multicast-address* source *ipv6-unicast-address*
Tree	source
Notes	The following elements are part of a mandatory choice: **source** or **starg**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**source-address**] *ipv6-unicast-address*

Synopsis	Source IP address
Context	**configure** subscriber-mgmt mld-policy *named-item* static group *ipv6-multicast-address* source *ipv6-unicast-address*
Tree	source
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

starg

Synopsis	Any source address (*,G)
Context	**configure** subscriber-mgmt mld-policy *named-item* static group *ipv6-multicast-address* starg
Tree	starg
Notes	The following elements are part of a mandatory choice: **source** or **starg**.
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sticky-msaps *boolean*

Synopsis	Prevent MSAPs from being deleted
Context	**configure** subscriber-mgmt msap-policy *named-item* sticky-msaps *boolean*
Tree	sticky-msaps
Description	When configured to **true**, MSAPs associated with the specified MSAP policy are not removed unless a manual **clear** command is issued. This feature is useful if historical statistics records on MSAPs need to be retained. It can also reduce host creation time because the MSAP is already created. When configured to **false**, MSAPs can be automatically removed when a host creation fails or when a subscriber is no longer associated with the MSAP, for example, when a subscriber ends the session.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sticky-msaps-idle-timeout *number*

Synopsis	Timeout used for sticky MSAPs
Context	**configure** subscriber-mgmt msap-policy *named-item* sticky-msaps-idle-timeout *number*
Tree	sticky-msaps-idle-timeout
Description	This command configures the timeout interval which determines when idle sticky MSAPs can be removed. By default, MSAPs are deleted shortly after the subscriber session ends. The system is prevented from automatically deleting sticky MSAPs after the session ends, allowing for a faster subsequent subscriber connection without MSAP creation; however, sticky MSAPs require SAP resources. The configuration of this command allows for the removal of sticky MSAPs that are idle for the specified time period. When unconfigured, no timeout interval is applied.
Range	5 to 604800
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-sla-mgmt

Synopsis	Enter the **sub-sla-mgmt** context
Context	**configure** subscriber-mgmt msap-policy *named-item* sub-sla-mgmt

ingress

Synopsis	Enter the **ingress** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters ingress
Tree	ingress
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters ingress qos
Tree	qos
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	QoS policy ID or name to associate with the MSAPs
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters ingress qos policy-name *reference*
Tree	policy-name
Reference	**configure** qos sap-ingress *qos-policy-name*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

queuing-type *keyword*

Synopsis	Queuing type
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters ingress qos queuing-type *keyword*
Tree	queuing-type
Options	multipoint-shared, service
Default	multipoint-shared
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-da-hashing *boolean*

Synopsis	Include hashing on MAC DA ISO subscriber ID
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters mac-da-hashing *boolean*
Tree	mac-da-hashing
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

split-horizon-group *named-item*

Synopsis	Name of the split horizon group for the MSAP
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters split-horizon-group *named-item*
Tree	split-horizon-group
String length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp

Synopsis	Enter the **pfcp** context
Context	**configure** subscriber-mgmt pfcp
Tree	pfcp
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

association [name] *named-item*

Synopsis	Enter the **association** list instance
Context	**configure** subscriber-mgmt pfcp association *named-item*
Tree	association
Description	Commands in this context configure a PFCP association towards a BNG CUPS CPF.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	PFCP association name
Context	**configure** subscriber-mgmt pfcp association *named-item*
Tree	association
String length	1 to 32
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the PFCP association
Context	**configure** subscriber-mgmt pfcp association *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

association-release-timeout *(keyword | number)*

Synopsis	Time to wait for a response to a release request
Context	**configure** subscriber-mgmt pfcp association *named-item* association-release-timeout *(keyword | number)*
Tree	association-release-timeout
Description	This command configures the time to wait to clean up the PFCP association after it has been disabled. After administratively disabling a PFCP association, the system requests a shutdown to the BNG CPF. If the BNG CPF does not gracefully remove the association before expiry of the timer, the full association and all related sessions are forcefully removed. The PFCP protocol encoding does not allow the full range of configured values. The system automatically rounds up the configured value to the nearest value allowed by

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	the protocol. For more information about the protocol encoding, see 3GPP TS 29.244 8.2.78.1.
Range	30 to 3600
Units	seconds
Options	none
Default	3600
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bfd-expedited-path-down *boolean*

Synopsis	Track BFD sessions to expedite PFCP path down detection
Context	**configure** subscriber-mgmt pfcp association *named-item* bfd-expedited-path-down *boolean*
Tree	bfd-expedited-path-down
Description	When configured to **true**, the system tracks BFD sessions to expedite PFCP path down detection on BFD down events. This requires the configuration of **path-restoration-time**.
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-calltrace-profile *named-item*

Synopsis	Default profile when the CP-provided profile is unknown
Context	**configure** subscriber-mgmt pfcp association *named-item* default-calltrace-profile *named-item*
Tree	default-calltrace-profile
Description	This command configures the default call-trace profile that the BNG-UP uses if the CP enables call trace for a session, but the signaled profile is not known on the BNG-UP. If no default is configured and the CP enables call trace with an unknown profile, no trace is started.
String length	1 to 32
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt pfcp association *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

heartbeat

Synopsis	Enter the **heartbeat** context
Context	**configure** subscriber-mgmt pfcp association *named-item* heartbeat
Tree	heartbeat
Description	Commands in this context configure the parameters for transmitting PFCP Heartbeat Request messages to a PFCP peer.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Time between two successful heartbeat request messages
Context	**configure** subscriber-mgmt pfcp association *named-item* heartbeat interval *number*
Tree	interval
Range	1 to 180
Units	seconds
Default	60
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retries *number*

Synopsis	Number of retries after the heartbeat timeout expires
Context	**configure** subscriber-mgmt pfcp association *named-item* heartbeat retries *number*
Tree	retries

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the number of times the same Heartbeat Request is sent before the PFCP path to the peer is considered down.
Range	0 to 30
Default	4
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Time the system waits for a heartbeat response message
Context	**configure** subscriber-mgmt pfcp association *named-item* heartbeat timeout *number*
Tree	timeout
Description	This command configures the timeout after which a Heartbeat Request is considered unanswered.
Range	1 to 20
Units	seconds
Default	5
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface

Synopsis	Enter the **interface** context
Context	**configure** subscriber-mgmt pfcp association *named-item* interface
Tree	interface
Description	Commands in this context configure the interface from which PFCP messages will be sent and on which PFCP messages will be received.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *interface-name*

Reference	**configure** isa nat-group *number*
Notes	The following elements are part of a choice: **nat-group** or **wlan-gw-group**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group *reference*

Synopsis	WLAN gateway group used for CUPS NAT functionality
Context	**configure** subscriber-mgmt pfcp association *named-item* nat wlan-gw-group *reference*
Tree	wlan-gw-group
Reference	**configure** isa wlan-gw-group *number*
Notes	The following elements are part of a choice: **nat-group** or **wlan-gw-group**.
Introduced	20.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

node-id

Synopsis	Enter the **node-id** context
Context	**configure** subscriber-mgmt pfcp association *named-item* node-id
Tree	node-id
Description	Commands in this context configure the UPF Node Identifier as sent in PFCP. It can either be configured to use the linked interface source IP or a preconfigured FQDN.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fqdn *fully-qualified-domain-name*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN that identifies the local system for PFCP
Context	**configure** subscriber-mgmt pfcp association *named-item* node-id fqdn *fully-qualified-domain-name*
Tree	fqdn
String length	1 to 255

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **fqdn** or **use-ip-address**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-ip-address

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use the IP address of interface for the association
Context	**configure** subscriber-mgmt pfcp association *named-item* node-id use-ip-address
Tree	use-ip-address
Description	When configured, the binding interface address is used as identification of the local system for PFCP.
Notes	The following elements are part of a choice: **fqdn** or **use-ip-address**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

path-restoration-time *number*

Synopsis	Time to wait before declaring the path down
Context	**configure** subscriber-mgmt pfcp association *named-item* path-restoration-time *number*
Tree	path-restoration-time
Description	This command configures the time for which sessions are kept after a PFCP path failure is detected. If the path recovers without a restart before this time expires, the sessions are kept. Otherwise, they are removed.
Range	1 to 11520
Units	minutes
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer

Description	This command configures the FQDN that identifies the peer Node ID used to match incoming PFCP messages to the PFCP association.
String length	1 to 255
Notes	The following elements are part of a choice: **fully-qualified-domain-name** or **use-ip-address**.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-ip-address

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use the configured peer IP address to match the Node ID
Context	**configure** subscriber-mgmt pfcp association *named-item* peer node-id use-ip-address
Tree	use-ip-address
Description	When this command is specified, the system uses the configured peer IP address to identify the peer Node ID used to match incoming PFCP messages to the PFCP association. This configuration is ignored if only one association is configured.
Notes	The following elements are part of a choice: **fully-qualified-domain-name** or **use-ip-address**.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy to process PFCP messages
Context	**configure** subscriber-mgmt pfcp association *named-item* python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *named-item*
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tx

Synopsis	Enter the **tx** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt pfcp association *named-item* tx
Tree	tx
Description	Commands in this context configure how PFCP messages are sent.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retries *number*

Synopsis	Number of retries
Context	**configure** subscriber-mgmt pfcp association *named-item* tx retries *number*
Tree	retries
Description	This command configures the number of times a message is retried before it is considered lost, also known as N1.
Range	0 to 7
Default	3
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Retransmission timer
Context	**configure** subscriber-mgmt pfcp association *named-item* tx timeout *number*
Tree	timeout
Description	This command configures the time after which a message is considered unanswered, also known as T1.
Range	1 to 30
Units	seconds
Default	1
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ttl *number*

Synopsis	TTL value in the IP header of egress PFCP packets
Context	**configure** subscriber-mgmt pfcp association *named-item* tx ttl *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ttl
Range	1 to 255
Default	255
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pim-policy [name] *named-item*

Synopsis	Enter the **pim-policy** list instance
Context	**configure** subscriber-mgmt pim-policy *named-item*
Tree	pim-policy
Max. instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Policy name
Context	**configure** subscriber-mgmt pim-policy *named-item*
Tree	pim-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

ppp-policy [name] *named-item*

Synopsis	Enter the **ppp-policy** list instance
Context	**configure** subscriber-mgmt ppp-policy *named-item*
Tree	ppp-policy
Max. instances	256
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	PPP policy name
Context	**configure** subscriber-mgmt ppp-policy *named-item*
Tree	ppp-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-same-circuit-id-for-dhcp *boolean*

Synopsis	Enable support for IPv4 address allocation on a SAP
Context	**configure** subscriber-mgmt ppp-policy *named-item* allow-same-circuit-id-for-dhcp *boolean*
Tree	allow-same-circuit-id-for-dhcp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cookies *boolean*

Synopsis	Enable use of cookies
Context	**configure** subscriber-mgmt ppp-policy *named-item* cookies *boolean*
Tree	cookies
Default	true

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-pap-password *encrypted-leaf*

Synopsis	Default PAP password when no password from PPP client
Context	**configure** subscriber-mgmt ppp-policy *named-item* default-pap-password *encrypted-leaf*
Tree	default-pap-password
String length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-user-name *string-not-all-spaces*

Synopsis	Default username used for authentication
Context	**configure** subscriber-mgmt ppp-policy *named-item* default-user-name *string-not-all-spaces*
Tree	default-user-name
Description	This command configures the default username for authentication when not provided in PAP/CHAP authentication (no Name field in CHAP Response message or Peer0Id-Length=0 in PAP Authenticate-Request). The PPP session terminates when no username is provided in the PAP/CHAP authentication and no default username is configured.
String length	1 to 253
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt ppp-policy *named-item* description *description*

force-ppp-mtu-gt-1492 *boolean*

Synopsis	Enable PPPoE MRU negotiations greater than 1492 bytes
Context	**configure** subscriber-mgmt ppp-policy *named-item* force-ppp-mtu-gt-1492 *boolean*
Tree	force-ppp-mtu-gt-1492
Description	When configured to **true**, this command enables PPPoE MRU negotiations greater than 1492 bytes without the need to receive a “PPP-Max-Payload” tag in PADI/PADR from the client as defined in RFC 4638, *Accommodating a Maximum Transit Unit/ Maximum Receive Unit (MTU/MRU) Greater Than 1492 in the Point-to-Point Protocol over Ethernet (PPPoE)*. When configured to **false**, this command disables PPPoE MRU negotiations greater than 1492 bytes.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipcp-subnet-negotiation *boolean*

Synopsis	Allow IPCP subnet negotiation for PPPoE hosts
Context	**configure** subscriber-mgmt ppp-policy *named-item* ipcp-subnet-negotiation *boolean*
Tree	ipcp-subnet-negotiation
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

keepalive

Synopsis	Enter the **keepalive** context
Context	**configure** subscriber-mgmt ppp-policy *named-item* keepalive
Tree	keepalive
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-up-multiplier *number*

Synopsis	PPP keepalive multiplier
Context	**configure** subscriber-mgmt ppp-policy *named-item* keepalive hold-up-multiplier *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	hold-up-multiplier
Range	1 to 5
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	PPP keepalive interval
Context	**configure** subscriber-mgmt ppp-policy *named-item* keepalive interval *number*
Tree	interval
Range	4 to 300
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lcp-ignore-identifier *boolean*

Synopsis	Ignore identifier values in the LCP Echo Reply
Context	**configure** subscriber-mgmt ppp-policy *named-item* lcp-ignore-identifier *boolean*
Tree	lcp-ignore-identifier
Description	When configured to **true**, BNG ignores the Identifier field of the Echo-Reply message and keeps the PPP session up. When configured to **false**, BNG does not ignore the identifier value, discards any incorrect messages, and the PPP session terminates because of the echo timeout.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lcp-ignore-magic-numbers *boolean*

Synopsis	Ignore LCP peer magic number mismatch
Context	**configure** subscriber-mgmt ppp-policy *named-item* lcp-ignore-magic-numbers *boolean*
Tree	lcp-ignore-magic-numbers
Default	false

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-sessions-per-cid

Synopsis	Enable the **max-sessions-per-cid** context
Context	**configure** subscriber-mgmt ppp-policy *named-item* max-sessions-per-cid
Tree	max-sessions-per-cid
Description	Commands in this context specify the configuration settings for PPPoE sessions based on the Agent Circuit ID. When this context is configured, the limit for PPPoE sessions per Agent Circuit ID must be configured. The limit does not apply to sessions without an Agent Circuit ID; however, sessions without an Agent Circuit ID can only be established when the **allow-sessions-without-cid** command is configured to **true**. When this context is unconfigured, no limit is placed on the number of PPPoE sessions with the same Agent Circuit ID on the same SAP or MSAP and PPPoE sessions with or without an Agent Circuit ID can be established.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-sessions-without-cid *boolean*

Synopsis	Allow PPPoE sessions without an Agent Circuit ID
Context	**configure** subscriber-mgmt ppp-policy *named-item* max-sessions-per-cid allow-sessions-without-cid *boolean*
Tree	allow-sessions-without-cid
Description	When configured to **true**, PPPoE sessions without an Agent Circuit ID can be established on a SAP. The limit configured for the maximum number of sessions allowed per Agent Circuit ID does not apply to these sessions. When configured to **false**, PPPoE sessions without an Agent Circuit ID are denied. The command is valid only when a limit is configured for the maximum sessions per Agent Circuit ID on a SAP.
Default	false
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

limit *number*

Synopsis	Maximum sessions per Agent Circuit ID and per SAP
Context	**configure** subscriber-mgmt ppp-policy *named-item* max-sessions-per-cid limit *number*
Tree	limit
Description	This command configures the maximum number of PPPoE sessions that can be active with the same Agent Circuit ID on the same SAP or MSAP. This limit is enforced in the discovery phase, prior to PAP or CHAP authentication, based on the Agent Circuit ID sub-option present in the vendor-specific PPPoE access loop identification tag added in PADI and PADR messages by a PPPoE intermediate agent. PPPoE sessions without an Agent Circuit ID are not subject to the configured limit; however, sessions without an Agent Circuit ID can only be established when the **allow-sessions-without-cid** command is configured to **true**.
Range	1 to 8190
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-sessions-per-mac *number*

Synopsis	Maximum number of sessions per MAC address
Context	**configure** subscriber-mgmt ppp-policy *named-item* max-sessions-per-mac *number*
Tree	max-sessions-per-mac
Description	This command sets the maximum PPP sessions that can be opened for a specified MAC address. To enable IPv4 address allocation using the internal DHCPv4 client for multiple PPPoE sessions on a single SAP and having the same MAC address and circuit-ID, the optional CLI parameter **allow-same-circuit-id-for-dhcp** should be added. The SR OS local DHCP server detects the additional vendor-specific options inserted by the internal DHCPv4 client and use an extended unique key for lease allocation.
Range	1 to 8191
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mlppp

Synopsis	Enter the **mlppp** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt ppp-policy *named-item* mlppp
Tree	mlppp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

accept-mrru *boolean*

Synopsis	Accept multilink MRRU LCP option
Context	**configure** subscriber-mgmt ppp-policy *named-item* mlppp accept-mrru *boolean*
Tree	accept-mrru
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

endpoint

Synopsis	Enter the **endpoint** context
Context	**configure** subscriber-mgmt ppp-policy *named-item* mlppp endpoint

Range	1 to 31104000
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sid-allocation *keyword*

Synopsis	PPPoE session ID allocation method
Context	**configure** subscriber-mgmt ppp-policy *named-item* sid-allocation *keyword*
Tree	sid-allocation
Description	This command determines the allocation of session IDs for a PPPoE session with a given MAC address that is active on a given SAP.
Options	sequential, random
Default	sequential
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

unique-sid *keyword*

Synopsis	Mode in which a unique session ID is allocated
Context	**configure** subscriber-mgmt ppp-policy *named-item* unique-sid *keyword*
Tree	unique-sid
Description	This command specifies how unique session IDs are assigned to PPPoE sessions that are active on a single SAP.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	This command is used with the **sid-allocation** command to determine the assignment of session IDs to subsequent PPPoE sessions.
Options	per-sap, per-sap-mac, per-msap
Default	per-sap-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe-client-policy [name] *named-item*

Synopsis	Enter the **pppoe-client-policy** list instance
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item*
Tree	pppoe-client-policy
Max. instances	256
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	PPPoE client policy name
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item*
Tree	pppoe-client-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

keepalive

Synopsis	Enter the **keepalive** context
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* keepalive
Tree	keepalive
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-up-multiplier *number*

Synopsis	PPPoE keepalive multiplier
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* keepalive hold-up-multiplier *number*
Tree	hold-up-multiplier
Range	1 to 5
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	PPPoE keepalive interval
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* keepalive interval *number*
Tree	interval
Range	10 to 300
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mru *number*

Synopsis	PPPoE MRU
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* mru *number*
Tree	mru

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	512 to 9154
Default	1492
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mtu *number*

Synopsis	PPPoE MTU
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* mtu *number*
Tree	mtu
Range	512 to 9154
Default	1492
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy for all messages to and from PPPoE client
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

restart-backoff

Synopsis	Enter the **restart-backoff** context
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* restart-backoff
Tree	restart-backoff
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

initial-time *number*

Synopsis	Initial backoff time

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* restart-backoff initial-time *number*
Tree	initial-time
Range	10 to 3600
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-time *number*

Synopsis	Maximum backoff time
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* restart-backoff max-time *number*
Tree	max-time
Range	10 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stack

Synopsis	Enter the **stack** context
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* stack
Tree	stack
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4 *boolean*

Synopsis	Start IPCP to retrieve an IPv4 address
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* stack ipv4 *boolean*
Tree	ipv4
Default	true
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-slaac *boolean*

Synopsis	Start IPv6CP and use SLAAC to retrieve an IPv6 prefix
Context	**configure** subscriber-mgmt pppoe-client-policy *named-item* stack ipv6-slaac *boolean*
Tree	ipv6-slaac
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy [name] *named-item*

Synopsis	Enter the **radius-accounting-policy** list instance
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item*
Tree	radius-accounting-policy
Max. instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RADIUS-based accounting policy name
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item*
Tree	radius-accounting-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-tunnel-connection-fmt *ascii-specification*

Synopsis	String sent in the accounting message
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* acct-tunnel-connection-fmt *ascii-specification*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	acct-tunnel-connection-fmt
String length	1 to 253
Default	%n
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

custom-record

Synopsis	Enter the **custom-record** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record
Tree	custom-record
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

queue [id] *number*

Synopsis	Enter the **queue** list instance
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record queue *number*
Tree	queue
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Queue ID for which counters are collected in the record
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record queue *number*
Tree	queue
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

id *reference*

Synopsis	Queue ID
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record ref-queue id *reference*
Tree	id
Reference	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record queue *number*
Notes	The following elements are part of a choice: **all** or **id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

significant-change *number*

Synopsis	Significant change required to generate the record
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record significant-change *number*
Tree	significant-change
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delay-start-time *number*

Synopsis	Accounting start delay
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* delay-start-time *number*
Tree	delay-start-time
Range	1 to 10
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-accounting

Synopsis	Enter the **host-accounting** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* host-accounting
Tree	host-accounting
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of per-host accounting
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* host-accounting admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-update *boolean*

Synopsis	Allow interim-update accounting messages to be sent
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* host-accounting interim-update *boolean*
Tree	interim-update
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute
Tree	include-radius-attribute
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access-loop-options *boolean*

Synopsis	Include access loop information
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute access-loop-options *boolean*
Tree	access-loop-options
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-authentic *boolean*

Synopsis	Enable generation of the acct-authentic RADIUS attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute acct-authentic *boolean*
Tree	acct-authentic
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-delay-time *boolean*

Synopsis	Include the acct-delay-time RADIUS attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute acct-delay-time *boolean*
Tree	acct-delay-time
Default	false

© 2025 Nokia.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-triggered-reason *boolean*

Synopsis	Include Alc-Acct-Triggered-Reason attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute acct-triggered-reason *boolean*
Tree	acct-triggered-reason
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all-authorized-session-addresses *boolean*

Synopsis	Include all address/prefix attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute all-authorized-session-addresses *boolean*
Tree	all-authorized-session-addresses
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

apn *boolean*

Synopsis	Enable inclusion of the APN attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute apn *boolean*
Tree	apn
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

bearer-fteid *boolean*

Synopsis	Include bearer-fteid attribute

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute bearer-fteid *boolean*
Tree	bearer-fteid
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

bonding-active-connections *boolean*

Synopsis	Include the RADIUS Alc-Bonding-Active-Connection VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute bonding-active-connections *boolean*
Tree	bonding-active-connections
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bonding-id *boolean*

Synopsis	Include the Alc-Bonding-Id VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute bonding-id *boolean*
Tree	bonding-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

brg-num-active-sessions *boolean*

Synopsis	Include the RADIUS Alc-BRG-Num-Active-Sessions VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute brg-num-active-sessions *boolean*
Tree	brg-num-active-sessions
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

called-station-id *boolean*

Synopsis	Include called-station-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

calling-station-id

Synopsis	Enable the **calling-station-id** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute calling-station-id
Tree	calling-station-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Format of the Calling-Station-ID attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute calling-station-id type *keyword*
Tree	type
Options	sap-string, mac, sap-id, remote-id, llid
Default	sap-string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Include circuit-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute circuit-id *boolean*
Tree	circuit-id

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delegated-ipv6-prefix *boolean*

Synopsis	Include delegated-ipv6-prefix attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute delegated-ipv6-prefix *boolean*
Tree	delegated-ipv6-prefix
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detailed-acct-attributes *boolean*

Synopsis	Include more detailed accounting attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute detailed-acct-attributes *boolean*
Tree	detailed-acct-attributes
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-vendor-class-id *boolean*

Synopsis	Include the RADIUS Alc-DHCP-Vendor-Class-Id VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute dhcp-vendor-class-id *boolean*
Tree	dhcp-vendor-class-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

error-code *boolean*

Synopsis	Include detailed error codes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute error-code *boolean*
Tree	error-code
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

firewall-info *boolean*

Synopsis	Include the Firewall Information VSA in AAA protocols
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute firewall-info *boolean*
Tree	firewall-info
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-interface-id *boolean*

Synopsis	Include framed-interface-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute framed-interface-id *boolean*
Tree	framed-interface-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-ip-address *boolean*

Synopsis	Include framed-ip-address attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute framed-ip-address *boolean*
Tree	framed-ip-address

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-ip-netmask *boolean*

Synopsis	Include framed-ip-netmask attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute framed-ip-netmask *boolean*
Tree	framed-ip-netmask
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-ipv6-prefix *boolean*

Synopsis	Include framed-ipv6-prefix attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute framed-ipv6-prefix *boolean*
Tree	framed-ipv6-prefix
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-ipv6-route *boolean*

Synopsis	Include framed-ipv6-route attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute framed-ipv6-route *boolean*
Tree	framed-ipv6-route
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

framed-route *boolean*

Synopsis	Include framed-route attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute framed-route *boolean*
Tree	framed-route
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

imei *boolean*

Synopsis	Enable inclusion of the IMEI attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute imei *boolean*
Tree	imei
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi *boolean*

Synopsis	Include the IMSI attribute for FWA sessions
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute imsi *boolean*
Tree	imsi
Default	false
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *boolean*

Synopsis	Include the IPv6 address attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute ipv6-address *boolean*
Tree	ipv6-address

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac-fragmentation *boolean*

Synopsis	Include the L2TP LAC fragmentation attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute lac-fragmentation *boolean*
Tree	lac-fragmentation
Default	false
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext-bridge-id *boolean*

Synopsis	Include Alc-Bridge-Id in RADIUS accounting packets
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute lanext-bridge-id *boolean*
Tree	lanext-bridge-id
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext-device-type *boolean*

Synopsis	Include Alc-HLE-Device-type in accounting packets
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute lanext-device-type *boolean*
Tree	lanext-device-type
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lanext-route-distinguisher *boolean*

Synopsis	Include route distinguisher (Alc-RD) in RADIUS packets
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute lanext-route-distinguisher *boolean*
Tree	lanext-route-distinguisher
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext-route-target *boolean*

Synopsis	Include route target (Alc-RT) in RADIUS packets
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute lanext-route-target *boolean*
Tree	lanext-route-target
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext-vni *boolean*

Synopsis	Enable inclusion of the lanext-vni attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute lanext-vni *boolean*
Tree	lanext-vni
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *boolean*

Synopsis	Include the client MAC address in the RADIUS message
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute mac-address *boolean*
Tree	mac-address

© 2025 Nokia.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msisdn *boolean*

Synopsis	Enable inclusion of the MSISDN in AAA protocols
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute msisdn *boolean*
Tree	msisdn
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Enable inclusion of the NAS-Identifier attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port

Synopsis	Enable the **nas-port** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-port
Tree	nas-port
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bit-spec *binary-specification*

Synopsis	RADIUS NAS-Port attribute

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-port bit-spec *binary-specification*
Tree	bit-spec
String length	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port-id

Synopsis	Enable the **nas-port-id** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-port-id
Tree	nas-port-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-string *string*

Synopsis	String to be prefixed to the NAS-Port-Id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-port-id prefix-string *string*
Tree	prefix-string
String length	1 to 8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix *keyword*

Synopsis	String to be suffixed to the NAS-Port-Id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-port-id suffix *keyword*
Tree	suffix
Options	circuit-id, remote-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

steering-profile *boolean*

Synopsis	Include the RADIUS Alc-Steering-Profile VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute steering-profile *boolean*
Tree	steering-profile
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *boolean*

Synopsis	Include sub-profile attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute sub-profile *boolean*
Tree	sub-profile
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id *boolean*

Synopsis	Include subscriber-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute subscriber-id *boolean*
Tree	subscriber-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel-client-attrs *boolean*

Synopsis	Enable inclusion of tunnel-client attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute tunnel-client-attrs *boolean*
Tree	tunnel-client-attrs

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel-server-attrs *boolean*

Synopsis	Enable inclusion of tunnel-server attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute tunnel-server-attrs *boolean*
Tree	tunnel-server-attrs
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

uli *boolean*

Synopsis	Generate the ULI RADIUS attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute uli *boolean*
Tree	uli
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-name *boolean*

Synopsis	Include the user-name attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute user-name *boolean*
Tree	user-name
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

v6-aggregate-stats *boolean*

Synopsis	Report IPv6 aggregated forwarded octet and packet counters
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute v6-aggregate-stats *boolean*
Tree	v6-aggregate-stats
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wifi-num-attached-ues *boolean*

Synopsis	Include the RADIUS Alc-Num-Attached-UEs VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute wifi-num-attached-ues *boolean*
Tree	wifi-num-attached-ues
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wifi-rssi *boolean*

Synopsis	Include 802.11 received signal strength indicator
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute wifi-rssi *boolean*
Tree	wifi-rssi
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wifi-ssid-vlan *boolean*

Synopsis	Include per-SSID VLAN ID in the Alc-Wlan-SSID-VLAN VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute wifi-ssid-vlan *boolean*
Tree	wifi-ssid-vlan

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-home-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Home-Ipv6 attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute xconnect-tunnel-home-address *boolean*
Tree	xconnect-tunnel-home-address
Default	false
Introduced	16.0.R3
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mcs-interval

Synopsis	Enter the **mcs-interval** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* mcs-interval
Tree	mcs-interval
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *(keyword | number)*

Synopsis	MCS synchronization interval of usage counters
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* mcs-interval interval *(keyword | number)*
Tree	interval
Description	This command specifies the interval at which the active BNG in a dual-homed deployment synchronizes subscriber accounting data using MCS to the standby BNG. The MCS interval is a statically configured value or equal to the configured RADIUS accounting update-interval.
Range	5 to 60
Units	minutes
Options	none, use-update-interval
Introduced	19.10.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

queue-instance-accounting

Synopsis	Enter the **queue-instance-accounting** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* queue-instance-accounting
Tree	queue-instance-accounting
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of per-queue instance accounting
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* queue-instance-accounting admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-update *boolean*

Synopsis	Send accounting messages for the queue instance
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* queue-instance-accounting interim-update *boolean*
Tree	interim-update
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* radius-server-policy *reference*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-accounting

Synopsis	Enter the **session-accounting** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* session-accounting
Tree	session-accounting
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of per-session accounting
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* session-accounting admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-update *boolean*

Synopsis	Allow host updates
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* session-accounting host-update *boolean*
Tree	host-update
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

interim-update *boolean*

Synopsis	Allow interim-update accounting messages to be sent
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* session-accounting interim-update *boolean*
Tree	interim-update
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-id-format *keyword*

Synopsis	Format used in accounting session ID attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* session-id-format *keyword*
Tree	session-id-format
Options	description, number
Default	description
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

triggered-updates

Synopsis	Enter the **triggered-updates** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates
Tree	triggered-updates
Description	Commands in this context configure non-periodic accounting updates that are triggered by specific events.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp-change

Synopsis	Enter the **gtp-change** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-change

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	gtp-change
Description	Commands in this context configure which GTP-related changes trigger an interim accounting update. This command is mutually exclusive with the legacy **gtp-mobility** command, which triggers interim accounting updates for all changes.
Notes	The following elements are part of a choice: **gtp-change** or **gtp-mobility**.
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

s1-release *boolean*

Synopsis	Send an IU for S1 release (idle) procedure
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-change s1-release *boolean*
Tree	s1-release
Default	false
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

service-request *boolean*

Synopsis	Send an IU for service request (reactivation) procedure
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-change service-request *boolean*
Tree	service-request
Default	false
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

teidc-change *boolean*

Synopsis	Send an IU when GTP-C TEIDs are changed
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-change teidc-change *boolean*
Tree	teidc-change
Description	When configured to **true**, the router sends an interim accounting update when GTP-C TEIDs are changed. Changes to GTP-C TEIDs typically indicate an MME change.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

teidu-change *boolean*

Synopsis	Send an IU when GTP-U TEIDs are changed
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-change teidu-change *boolean*
Tree	teidu-change
Description	When configured to **true**, the router sends an interim accounting update when GTP-U TEIDs are changed. This update typically happens during mobility, idling, or service request procedures
Default	false
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

uli-change *boolean*

Synopsis	Send an IU when a user location change is detected
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-change uli-change *boolean*
Tree	uli-change
Default	false
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-mobility *boolean*

WARNING:
This element is deprecated and will be removed in a future release.

Synopsis	Send updates for mobility events
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-mobility *boolean*
Tree	gtp-mobility
Default	false

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **gtp-change** or **gtp-mobility**.
Introduced	16.0.R5
Deprecated	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

update-interval

Synopsis	Enter the **update-interval** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* update-interval
Tree	update-interval
Description	Commands in this context configure the attributes of the intermediate update interval.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Intermediate update interval
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* update-interval interval *number*
Tree	interval
Description	This command specifies the interval at which accounting data of subscriber hosts is updated in a RADIUS Accounting Interim-Update message. When specifying the accounting mode in the RADIUS accounting policy, the interim-update command for subscriber hosts must be set to true in one of the following context: • **configure subscriber-mgmt radius-accounting-policy host-accounting** • **configure subscriber-mgmt radius-accounting-policy queue-instance-accounting** • **configure subscriber-mgmt radiuis-accounting-policy session-accounting** A RADIUS-specified interim interval (attribute [85] Acct-Interim-Interval) overrides the CLI configured value.
Range	5 to 259200
Units	minutes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

jitter *(keyword | number)*

Synopsis	Maximum random delay for intermediate update interval
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* update-interval jitter *(keyword | number)*
Tree	jitter
Description	This command specifies the absolute maximum random delay introduced on the update interval between two accounting interim update messages. The effective maximum random delay value is the minimum of the configured absolute jitter value and 10% of the configured update-interval. A value of zero sends the accounting interim update message without introducing an additional random delay.
Range	0 to 3600
Units	seconds
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-authentication-policy [name] *named-item*

Synopsis	Enter the **radius-authentication-policy** list instance
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item*
Tree	radius-authentication-policy
Max. instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RADIUS authentication policy name
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item*
Tree	radius-authentication-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fallback

Synopsis	Enter the **fallback** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* fallback
Tree	fallback
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the **action** context

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-session-id

Synopsis	Enable the **acct-session-id** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute acct-session-id
Tree	acct-session-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Format of the accounting session ID attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute acct-session-id type *keyword*
Tree	type
Options	host, session
Default	host
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

apn *boolean*

Synopsis	Enable inclusion of the APN attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute apn *boolean*
Tree	apn
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

called-station-id *boolean*

Synopsis	Include called-station-id attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

calling-station-id

Synopsis	Enable the **calling-station-id** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute calling-station-id
Tree	calling-station-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Format of the Calling-Station-ID attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute calling-station-id type *keyword*
Tree	type
Options	sap-string, mac, sap-id, remote-id, llid
Default	sap-string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Include circuit-id attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute circuit-id *boolean*
Tree	circuit-id

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-options *boolean*

Synopsis	Generate the DHCP options RADIUS attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute dhcp-options *boolean*
Tree	dhcp-options
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-vendor-class-id *boolean*

Synopsis	Include the RADIUS Alc-DHCP-Vendor-Class-Id VSA
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute dhcp-vendor-class-id *boolean*
Tree	dhcp-vendor-class-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp6-options *boolean*

Synopsis	Generate the DHCPv6 options RADIUS attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute dhcp6-options *boolean*
Tree	dhcp6-options
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

gprs-negotiated-qos-profile *boolean*

Synopsis	Generate GPRS negotiated QoS profile RADIUS attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute gprs-negotiated-qos-profile *boolean*
Tree	gprs-negotiated-qos-profile
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

imei *boolean*

Synopsis	Enable inclusion of the IMEI attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute imei *boolean*
Tree	imei
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi *boolean*

Synopsis	Include the IMSI attribute for FWA sessions
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute imsi *boolean*
Tree	imsi
Default	false
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *boolean*

Synopsis	Include the client MAC address in the RADIUS message
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute mac-address *boolean*
Tree	mac-address

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msisdn *boolean*

Synopsis	Enable inclusion of the MSISDN in AAA protocols
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute msisdn *boolean*
Tree	msisdn
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Enable inclusion of the NAS-Identifier attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port

Synopsis	Enable the **nas-port** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port
Tree	nas-port
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bit-spec *binary-specification*

Synopsis	RADIUS NAS-Port attribute

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port bit-spec *binary-specification*
Tree	bit-spec
String length	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port-id

Synopsis	Enable the **nas-port-id** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port-id
Tree	nas-port-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-string *string*

Synopsis	String to be prefixed to the NAS-Port-Id attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port-id prefix-string *string*
Tree	prefix-string
String length	1 to 8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix *keyword*

Synopsis	String to be suffixed to the NAS-Port-Id attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port-id suffix *keyword*
Tree	suffix
Options	circuit-id, remote-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

nas-port-type

Synopsis	Enable the **nas-port-type** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port-type
Tree	nas-port-type
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *(keyword | number)*

Synopsis	Value for RADIUS NAS-Port-Type attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port-type type *(keyword | number)*
Tree	type
Range	0 to 255
Options	rfc-aligned
Default	rfc-aligned
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe-service-name *boolean*

Synopsis	Generate the pppoe-service-name RADIUS attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute pppoe-service-name *boolean*
Tree	pppoe-service-name
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rat-type *boolean*

Synopsis	Generate the RAT type RADIUS attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute rat-type *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	rat-type
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis	Include remote-id attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute remote-id *boolean*
Tree	remote-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-session-index *boolean*

Synopsis	Generate the per-SAP unique session index
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute sap-session-index *boolean*
Tree	sap-session-index
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel-server-attrs *boolean*

Synopsis	Enable inclusion of tunnel-server attributes
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute tunnel-server-attrs *boolean*
Tree	tunnel-server-attrs
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

uli *boolean*

Synopsis	Generate the ULI RADIUS attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute uli *boolean*
Tree	uli
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wifi-num-attached-ues *boolean*

Synopsis	Include the RADIUS Alc-Num-Attached-UEs VSA
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute wifi-num-attached-ues *boolean*
Tree	wifi-num-attached-ues
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wifi-ssid-vlan *boolean*

Synopsis	Include per-SSID VLAN ID in the Alc-Wlan-SSID-VLAN VSA
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute wifi-ssid-vlan *boolean*
Tree	wifi-ssid-vlan
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-home-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Home-Ipv6 attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute xconnect-tunnel-home-address *boolean*
Tree	xconnect-tunnel-home-address

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R5
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

password *encrypted-leaf*

Synopsis	RADIUS request password
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* password *encrypted-leaf*
Tree	password
String length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-user-name

Synopsis	Enter the **ppp-user-name** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* ppp-user-name
Tree	ppp-user-name
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-name *string*

Synopsis	Domain name
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* ppp-user-name domain-name *string*
Tree	domain-name
String length	1 to 128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-operation *keyword*

Synopsis	Operation to perform on the PAP or CHAP username

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* ppp-user-name domain-operation *keyword*
Tree	domain-operation
Description	This command specifies the operation to perform on the PAP or CHAP username. When unconfigured, there is no operation and the PAP or CHAP username is not changed.
Options	append, strip, replace, default
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe-access-method *keyword*

Synopsis	PPPoE access method
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* pppoe-access-method *keyword*
Tree	pppoe-access-method
Options	none, padi, pap-chap
Default	padi
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

re-authentication *boolean*

Synopsis	Enable re-authentication on IPOE renewal
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* re-authentication *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	re-authentication
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

send-acct-stop-on-fail

Synopsis	Enter the **send-acct-stop-on-fail** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* send-acct-stop-on-fail
Tree	send-acct-stop-on-fail
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-accept-failure *boolean*

Synopsis	Send an accounting stop message when a failure occurs
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* send-acct-stop-on-fail on-accept-failure *boolean*
Tree	on-accept-failure
Description	When configured to **true**, the system sends an accounting stop message when a failure occurs after the reception of a RADIUS Access-Accept message (such as a duplicate IP address).
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-reject *boolean*

Synopsis	Send an accounting stop message for Access-Reject
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* send-acct-stop-on-fail on-reject *boolean*
Tree	on-reject
Description	When configured to **true**, the system sends an accounting stop message when an Access-Reject message is received.
Default	false
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-request-failure *boolean*

Synopsis	Send an accounting stop message for failures
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* send-acct-stop-on-fail on-request-failure *boolean*
Tree	on-request-failure
Description	When configured to **true**, the system sends an accounting stop message when a RADIUS Access-Request message cannot be sent (for example, there is no server configured, or timeout).
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-name

Synopsis	Enter the **user-name** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* user-name
Tree	user-name
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-name *string*

Synopsis	Domain name
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* user-name domain-name *string*
Tree	domain-name
String length	1 to 128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-operation *keyword*

Synopsis	Operation to perform on the username

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* user-name domain-operation *keyword*
Tree	domain-operation
Description	This command specifies the operation to perform on the username. When unconfigured, there is no operation and the username is not changed.
Options	append, strip, replace, default
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

format *keyword*

Synopsis	User name format in the RADIUS message
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* user-name format *keyword*
Tree	format
Options	mac, circuit-id, tuple, ascii-converted-circuit-id, ascii-converted-tuple, dhcp-client-vendor-opts, mac-giaddr, ppp-user-name
Default	mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp-format *keyword*

Synopsis	Username format used for FWA sessions
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* user-name gtp-format *keyword*
Tree	gtp-format
Description	This command specifies the username format to use for FWA sessions. If a PAP message is present in the PCO IE of the Create Session request, the system uses that for authentication instead of the format specified for this command. If you specify a format that includes APN, the separator is an @ character; for example, msisdn@apn.
Options	imsi, imsi-apn, msisdn, msisdn-apn
Default	imsi
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mac-format *mac-specification*

Synopsis	MAC address format when contacting a RADIUS server
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* user-name mac-format *mac-specification*
Tree	mac-format
String length	2 to 7
Default	aa:
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rip-policy [name] *named-item*

Synopsis	Enter the **rip-policy** list instance
Context	**configure** subscriber-mgmt rip-policy *named-item*
Tree	rip-policy
Max. instances	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RIP policy name
Context	**configure** subscriber-mgmt rip-policy *named-item*
Tree	rip-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-key *encrypted-leaf*

Synopsis	Authentication key
Context	**configure** subscriber-mgmt rip-policy *named-item* authentication-key *encrypted-leaf*
Tree	authentication-key

© 2025 Nokia.

Tree	current-hop-limit
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dns

Synopsis	Enter the **dns** context
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options dns
Tree	dns
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-rdnss *boolean*

Synopsis	Include the RDNSS server option 25

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options dns include-rdnss *boolean*
Tree	include-rdnss
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rdnss-lifetime *(number | keyword)*

Synopsis	Maximum time for the RDNSS address to remain valid
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options dns rdnss-lifetime *(number | keyword)*
Tree	rdnss-lifetime
Range	900 to 3600
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-configuration *boolean*

Synopsis	Managed address configuration flag
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options managed-configuration *boolean*
Tree	managed-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mtu *(number | keyword)*

Synopsis	Advertised MTU value
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options mtu *(number | keyword)*
Tree	mtu

Range	1280 to 9212
Units	bytes
Options	not-included
Default	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other-stateful-configuration *boolean*

Synopsis	Other stateful configuration flag
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options other-stateful-configuration *boolean*
Tree	other-stateful-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reachable-time *number*

Synopsis	Reachable time for advertisements
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options reachable-time *number*
Tree	reachable-time
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retransmit-timer *number*

Synopsis	Retransmit time in router advertisements from interface
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options retransmit-timer *number*
Tree	retransmit-timer
Range	0 to 1800000

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-lifetime *(number | keyword)*

Synopsis	Router lifetime
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options router-lifetime *(number | keyword)*
Tree	router-lifetime
Range	2700 to 9000
Units	seconds
Options	no-default-router
Default	4500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-options

Synopsis	Enter the **prefix-options** context
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options
Tree	prefix-options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stateful

Synopsis	Enter the **stateful** context
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options stateful
Tree	stateful
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

auto-lifetimes *boolean*

Synopsis	Use automatic lifetimes for stateful prefixes
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options stateful auto-lifetimes *boolean*
Tree	auto-lifetimes
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-link *boolean*

Synopsis	Assign the prefix to an interface on the specified link
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options stateful on-link *boolean*
Tree	on-link
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *(number | keyword)*

Synopsis	Time for a prefix to remain preferred
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options stateful preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *(number | keyword)*

Synopsis	Time for a prefix to remain valid

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options stateful valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stateless

Synopsis	Enter the **stateless** context
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options stateless
Tree	stateless
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-link *boolean*

Synopsis	Assign the prefix to an interface on the specified link
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options stateless on-link *boolean*
Tree	on-link
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *(number | keyword)*

Synopsis	Time for a prefix to remain preferred
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options stateless preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	0 to 4294967294

Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *(number | keyword)*

Synopsis	Time for a prefix to remain valid
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options stateless valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-template [name] *named-item*

Synopsis	Enter the **sap-template** list instance
Context	**configure** subscriber-mgmt sap-template *named-item*
Tree	sap-template
Description	Commands in this context configure a template for automatically-generated subscriber SAPs that is used when creating CUPS sessions. A template with name "default" is used when no other instance is created, however, the "default" template must be explicitly provisioned.
Max. instances	256
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	SAP template name

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sap-template *named-item*
Tree	sap-template
String length	1 to 32
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cpu-protection

Synopsis	Enter the **cpu-protection** context
Context	**configure** subscriber-mgmt sap-template *named-item* cpu-protection
Tree	cpu-protection
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

ip-src-monitoring

Synopsis	Apply CPU protection policy on IP sources
Context	**configure** subscriber-mgmt sap-template *named-item* cpu-protection ip-src-monitoring
Tree	ip-src-monitoring
Notes	The following elements are part of a choice: **ip-src-monitoring** or **mac-monitoring**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

mac-monitoring

Synopsis	Apply CPU protection policy on MAC sources
Context	**configure** subscriber-mgmt sap-template *named-item* cpu-protection mac-monitoring
Tree	mac-monitoring
Notes	The following elements are part of a choice: **ip-src-monitoring** or **mac-monitoring**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

policy-id *reference*

Synopsis	CPU protection policy ID
Context	**configure** subscriber-mgmt sap-template *named-item* cpu-protection policy-id *reference*
Tree	policy-id
Reference	**configure** system security cpu-protection policy *number*
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt sap-template *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dist-cpu-protection *reference*

Synopsis	Distributed CPU protection policy name
Context	**configure** subscriber-mgmt sap-template *named-item* dist-cpu-protection *reference*
Tree	dist-cpu-protection
Reference	**configure** system security dist-cpu-protection policy *named-item*
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time *(number | keyword)*

Synopsis	Time to hold a SAP after last PFCP session is removed
Context	**configure** subscriber-mgmt sap-template *named-item* hold-time *(number | keyword)*
Tree	hold-time
Description	This command configures the time for which an SAP will be kept after the last session has been removed. Idle SAPs can be forcefully removed by the command **clear subscriber-mgmt sap-template template-name idle-saps**.

layer-3

Synopsis	Enter the **layer-3** context
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* layer-3
Tree	layer-3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-ip-origin *keyword*

Synopsis	Source IP address to be used for SHCV messages
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* layer-3 source-ip-origin *keyword*
Tree	source-ip-origin
Options	interface – IP address of the interface vrrp – Primary IP address of the VRRP
Default	interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

unnumbered-source-ip *ipv4-unicast-address*

Synopsis	Source IPv4 address for unnumbered subscriber hosts
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* layer-3 unnumbered-source-ip *ipv4-unicast-address*
Tree	unnumbered-source-ip
Description	This command configures the source IPv4 address (also known as the sender IP address) used in SHCV ARP requests for unnumbered hosts. When unconfigured, 0.0.0.0 is used as the source IPv4 address in SHCV ARP requests.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

periodic

Synopsis	Enter the **periodic** context
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* periodic
Tree	periodic

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action when periodic connectivity verification fails
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* periodic action *keyword*
Tree	action
Options	alarm, remove
Default	alarm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of periodic connectivity check
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* periodic admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Time interval which all known sources are verified
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* periodic interval *number*
Tree	interval
Description	This command specifies the time interval which all known sources are verified. The actual rate is dependent on the number of known hosts and intervals.
Range	1 to 6000
Units	minutes
Default	30
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retry-count *number*

Synopsis	Number of retransmissions in connectivity verification
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* periodic retry-count *number*
Tree	retry-count
Range	1 to 29
Default	2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Timeout before connectivity verification retransmitted
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* periodic timeout *number*
Tree	timeout
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trigger

Synopsis	Enter the **trigger** context
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* trigger
Tree	trigger
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-limit-exceeded

Synopsis	Enter the **host-limit-exceeded** context
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* trigger host-limit-exceeded

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *external-named-item*

Synopsis	SLA profile name
Context	**configure** subscriber-mgmt sla-profile *external-named-item*
Tree	sla-profile
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

aggregate-qos-statistics

Synopsis	Enter the **aggregate-qos-statistics** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* aggregate-qos-statistics
Tree	aggregate-qos-statistics
Description	Commands in this context configure how aggregate QoS statistics are calculated.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis	Enter the **egress** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* aggregate-qos-statistics egress
Tree	egress
Description	Commands in this context configure which types of egress QoS object statistics are used to calculate the total egress aggregate statistics. This can include static queues and policers that are configured in a QoS SAP-egress policy, and dynamic queues and policers that are created on demand, according to the session needs.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

none

Synopsis	Ignore all static and dynamic queues
Context	**configure** subscriber-mgmt sla-profile *external-named-item* aggregate-qos-statistics egress queues none
Tree	none
Notes	The following elements are part of a choice: **all**, **all-dynamic**, **all-static**, **none**, or **queue**.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

queue *reference*

Synopsis	Static queues
Context	**configure** subscriber-mgmt sla-profile *external-named-item* aggregate-qos-statistics egress queues queue *reference*
Tree	queue
Reference	**configure** qos sap-egress *qos-policy-name* queue *number*
Max. instances	8
Notes	The following elements are part of a choice: **all**, **all-dynamic**, **all-static**, **none**, or **queue**.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alternate-sla-profile *reference*

Synopsis	Alternate SLA profile to use if threshold is met
Context	**configure** subscriber-mgmt sla-profile *external-named-item* alternate-sla-profile *reference*
Tree	alternate-sla-profile
Description	This command configures the alternate SLA profile to use if the system meets any of the thresholds configured using the **configure subscriber-management alternate-profile-threshold** command. In this case, the alternate profile is used instead of the current profile.
Reference	**configure** subscriber-mgmt sla-profile *external-named-item*
Introduced	24.10.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

control

Synopsis	Enter the **control** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* control
Tree	control
Description	Commands in this context determine which sessions can use the SLA profile. By default, only sessions set up by the local system can use the SLA profile, but the SLA profile can also be enabled for sessions set up by a BNG CUPS Control Plane Function (CPF).
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cups *boolean*

Synopsis	Allow the CUPS control plane to use the profile
Context	**configure** subscriber-mgmt sla-profile *external-named-item* control cups *boolean*
Tree	cups
Description	When configured to **true**, the profile can be used by sessions set up by a BNG CUPS Control Plane Function (CPF).
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local *boolean*

Synopsis	Allow the local control plane to use the profile
Context	**configure** subscriber-mgmt sla-profile *external-named-item* control local *boolean*
Tree	local
Description	When configured to **true**, the profile can be used by sessions set up by the local system.
Default	true
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

Reference	**configure** qos sap-egress *qos-policy-name* policer *number*
Max. instances	63
Notes	The following elements are part of a choice: **none** or **policer**.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

def-instance-sharing *keyword*

Synopsis	Default SPI sharing method for IPoE and PPPoE sessions
Context	**configure** subscriber-mgmt sla-profile *external-named-item* def-instance-sharing *keyword*
Tree	def-instance-sharing
Description	This command configures the default SLA Profile Instance (SPI) sharing method used for IPoE and PPPoE sessions from the same subscriber, associated with the same SLA profile, and active on the same SAP. The default SPI sharing method can be overwritten per session at initial authentication or mid-session.
Options	per-sap – IPoE and PPP sessions share an SPI per-session – IPoE and PPP sessions obtain a dedicated SPI per session
Default	per-sap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

rate

Synopsis	Enter the **rate** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides policer *reference* rate
Tree	rate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cir *(number | keyword)*

Synopsis	CIR override for the packet byte offset
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides policer *reference* rate cir *(number | keyword)*
Tree	cir
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pir *(number | keyword)*

Synopsis	PIR override for the packet bye offset
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides policer *reference* rate pir *(number | keyword)*
Tree	pir
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

stat-mode *keyword*

Synopsis	Stat mode for the policer

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides policer *reference* stat-mode *keyword*
Tree	stat-mode
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, v4-v6, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue [id] *reference*

Synopsis	Enter the **queue** list instance
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference*
Tree	queue
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *reference*

Synopsis	Queue ID
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference*
Tree	queue
Reference	**configure** qos sap-egress *qos-policy-name* queue *number*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

avg-frame-overhead *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference* avg-frame-overhead *decimal-number*
Tree	avg-frame-overhead
Description	This command configures overrides for the average frame overhead. The overrides supersede the average frame overhead configuration under the queue.

Use subject to Terms available at: www.nokia.com/terms.

For a full description of this command, see the **configure qos network-queue queue avg-frame-overhead** and **configure qos sap-egress queue avg-frame-overhead** contexts.

Range	0.00 to 100.00
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cbs *(number | keyword)*

Synopsis	CBS
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference* cbs *(number | keyword)*
Tree	cbs
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

high-prio-only *(number | keyword)*

Synopsis	High priority burst size
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference* high-prio-only *(number | keyword)*
Tree	high-prio-only
Range	0 to 100
Units	percent
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hs-class-weight *number*

Synopsis	Class-weight override for expanded egress HS queues
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference* hs-class-weight *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	hs-class-weight
Range	1 | 2 | 4 | 8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-wred-queue

Synopsis	Enter the **hs-wred-queue** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference* hs-wred-queue
Tree	hs-wred-queue
Introduced	16.0.R4
Platforms	7750 SR-7/12/12e

policy *reference*

Synopsis	Name of the slope-policy override applied to HS queue
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference* hs-wred-queue policy *reference*
Tree	policy
Reference	**configure** qos slope-policy *named-item*
Introduced	16.0.R4
Platforms	7750 SR-7/12/12e

hs-wrr-weight *number*

Synopsis	Maximum rate for expanded egress HS queues
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference* hs-wrr-weight *number*
Tree	hs-wrr-weight
Range	1 to 127
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference* rate pir *(number | keyword)*
Tree	pir
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stat-mode *keyword*

Synopsis	Stat mode for the policer
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference* stat-mode *keyword*
Tree	stat-mode
Options	v4-v6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	SAP-egress QoS policy
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress policy-name *reference*
Tree	policy-name
Reference	**configure** qos sap-egress *qos-policy-name*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

port-parent-location *keyword*

Synopsis	Scheduling type for queued traffic
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress port-parent-location *keyword*
Tree	port-parent-location
Options	port, vport

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	port
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scheduler-policy

Synopsis	Enter the **scheduler-policy** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos scheduler-policy
Tree	scheduler-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

overrides

Synopsis	Enter the **overrides** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos scheduler-policy overrides
Tree	overrides
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scheduler [scheduler-name] *reference*

Synopsis	Enter the **scheduler** list instance
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos scheduler-policy overrides scheduler *reference*
Tree	scheduler
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**scheduler-name**] *reference*

Synopsis	Scheduler policy name
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos scheduler-policy overrides scheduler *reference*
Tree	scheduler

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Reference	**configure** qos scheduler-policy *named-item* tier *number* scheduler *named-item*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate

Synopsis	Enter the **rate** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos scheduler-policy overrides scheduler *reference* rate
Tree	rate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cir *(number | keyword)*

Synopsis	Administrative CIR
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos scheduler-policy overrides scheduler *reference* rate cir *(number | keyword)*
Tree	cir
Range	0 to 3200000000
Units	kilobps
Options	sum, max
Default	sum
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pir *(number | keyword)*

Synopsis	Administrative PIR
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos scheduler-policy overrides scheduler *reference* rate pir *(number | keyword)*
Tree	pir
Range	1 to 3200000000
Units	kilobps
Options	max

agg-rate

Synopsis	Report the aggregate rate
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress report-rate agg-rate
Tree	agg-rate
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	Report the rate of the specified policer
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress report-rate policer *number*
Tree	policer
Range	1 to 63
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe-actual-rate

Synopsis	Report rate from the DSL characteristics PPPoE tags
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress report-rate pppoe-actual-rate
Tree	pppoe-actual-rate
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rfc5515-actual-rate

Synopsis	Report the rate as specified in RFC 5515

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress report-rate rfc5515-actual-rate
Tree	rfc5515-actual-rate
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scheduler *named-item*

Synopsis	Report the rate of the specified scheduler
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress report-rate scheduler *named-item*
Tree	scheduler
String length	1 to 32
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-limits

Synopsis	Enter the **host-limits** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* host-limits
Tree	host-limits
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* host-limits ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

arp *number*

Synopsis	Maximum number of IPv4 ARP hosts
Context	**configure** subscriber-mgmt sla-profile *external-named-item* host-limits ipv4 arp *number*
Tree	arp
Description	This command configures the maximum number of IPv4 ARP hosts per SLA profile instance. The operational maximum value may be smaller due to equipped hardware dependencies.
Range	0 to 131071
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *number*

Synopsis	Maximum number of IPv4 DHCP hosts
Context	**configure** subscriber-mgmt sla-profile *external-named-item* host-limits ipv4 dhcp *number*
Tree	dhcp
Description	This command configures the maximum number of IPv4 DHCP hosts per SLA profile instance. The operational maximum value may be smaller due to equipped hardware dependencies.
Range	0 to 131071
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

overall *number*

Synopsis	Maximum number of IPv4 hosts
Context	**configure** subscriber-mgmt sla-profile *external-named-item* host-limits ipv4 overall *number*
Tree	overall
Description	This command configures the maximum number of IPv4 hosts per SLA profile instance. The operational maximum value may be smaller due to equipped hardware dependencies.
Range	0 to 131071

© 2025 Nokia.

idle-timeout

Synopsis	Enable the **idle-timeout** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* idle-timeout
Tree	idle-timeout
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

category [category-name] *reference*

Synopsis	Enter the **category** list instance
Context	**configure** subscriber-mgmt sla-profile *external-named-item* idle-timeout category *reference*
Tree	category
Max. instances	16
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**category-name**] *reference*

Synopsis	Category name
Context	**configure** subscriber-mgmt sla-profile *external-named-item* idle-timeout category *reference*
Tree	category
Description	This command specifies the category name where the queues and policers are defined for the idle-timeout monitoring for subscriber hosts.
Reference	**configure** subscriber-mgmt category-map *named-item* category *named-item*
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action when the idle-timeout is reached

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sla-profile *external-named-item* idle-timeout category *reference* action *keyword*
Tree	action
Description	This command specifies the action to be executed when the idle-timeout is reached. The action is performed for all hosts associated with the SLA profile instance.
Options	terminate, shcv
Default	terminate
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Time the category can stay below its activity threshold
Context	**configure** subscriber-mgmt sla-profile *external-named-item* idle-timeout category *reference* timeout *number*
Tree	timeout
Range	60 to 15552000
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

category-map-name *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Category map name
Context	**configure** subscriber-mgmt sla-profile *external-named-item* idle-timeout category-map-name *reference*
Tree	category-map-name
Reference	**configure** subscriber-mgmt category-map *named-item*
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis	Enter the **ingress** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* ingress
Tree	ingress
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-filter *reference*

Synopsis	IPv4 filter policy name
Context	**configure** subscriber-mgmt sla-profile *external-named-item* ingress ip-filter *reference*
Tree	ip-filter
Reference	**configure** filter ip-filter *filter-name*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-filter *reference*

Synopsis	IPv6 filter policy name
Context	**configure** subscriber-mgmt sla-profile *external-named-item* ingress ipv6-filter *reference*
Tree	ipv6-filter
Reference	**configure** filter ipv6-filter *filter-name*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* ingress qos
Tree	qos
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

sap-ingress

Synopsis	Enter the **sap-ingress** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* ingress qos sap-ingress
Tree	sap-ingress
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

overrides

Synopsis	Enter the **overrides** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* ingress qos sap-ingress overrides
Tree	overrides
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policer [id] *reference*

Synopsis	Enter the **policer** list instance
Context	**configure** subscriber-mgmt sla-profile *external-named-item* ingress qos sap-ingress overrides policer *reference*
Tree	policer
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *reference*

Synopsis	Policer ID
Context	**configure** subscriber-mgmt sla-profile *external-named-item* ingress qos sap-ingress overrides policer *reference*
Tree	policer
Reference	**configure** qos sap-ingress *qos-policy-name* policer *number*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler *named-item*

Synopsis	Report the rate of the specified scheduler
Context	**configure** subscriber-mgmt sla-profile *external-named-item* ingress report-rate scheduler *named-item*
Tree	scheduler
String length	1 to 32
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

one-time-http-redirection

Synopsis	Enter the **one-time-http-redirection** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* one-time-http-redirection
Tree	one-time-http-redirection
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-filter *reference*

Synopsis	IPv4 filter policy name
Context	**configure** subscriber-mgmt sla-profile *external-named-item* one-time-http-redirection ip-filter *reference*
Tree	ip-filter
Reference	**configure** filter ip-filter *filter-name*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp-mappings

Synopsis	Enter the **pfcp-mappings** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings
Tree	pfcp-mappings

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the mapping of packet forwarding control protocol (PFCP) QoS IEs (such as QoS enforcement rule (QER) GBR/MBR IEs), to local QoS overrides (such as queue and policer rates).
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-qer

Synopsis	Enter the **session-qer** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer
Tree	session-qer
Description	Commands in this context configure the mapping of the PFCP session QER rate to the local QoS rate. If a signaled PFCP QER rate applies to all data-plane rules, it is interpreted as the session QER rate and is mapped to the QoS overrides in the configuration. Examples of such QER rates are APN-AMBR for 4G FWA sessions and session-AMBR for 5G FWA sessions. A QER that contains a QER correlation ID does not use the QER mapping because it is assumed not to be a per-session construct.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

downlink

Synopsis	Enter the **downlink** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer downlink
Tree	downlink
Description	Commands in this context configure the downlink MBR/GBR to QoS override mapping.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

aggregate-rate

Synopsis	Map MBR/GBR to a rate override for the aggregate rate
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer downlink aggregate-rate
Tree	aggregate-rate

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *named-item*

Synopsis	Arbiter target of MBR/GBR override
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer downlink arbiter *named-item*
Tree	arbiter
String length	1 to 32
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	Policer target of MBR/GBR override
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer downlink policer *number*
Tree	policer
Range	1 to 8
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue *number*

Synopsis	Queue target of MBR/GBR override
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer downlink queue *number*
Tree	queue
Range	1 to 8

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler *named-item*

Synopsis	Scheduler target of MBR/GBR override
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer downlink scheduler *named-item*
Tree	scheduler
String length	1 to 32
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

uplink

Synopsis	Enter the **uplink** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer uplink
Tree	uplink
Description	Commands in this context configure the uplink MBR/GBR to QoS override mapping.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *named-item*

Synopsis	Arbiter target of MBR/GBR override
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer uplink arbiter *named-item*
Tree	arbiter
String length	1 to 32
Notes	The following elements are part of a choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1

pppoe

Synopsis	Enter the **pppoe** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* session-limits pppoe
Tree	pppoe
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac *number*

Synopsis	Maximum number of PPPoE L2TP LAC sessions
Context	**configure** subscriber-mgmt sla-profile *external-named-item* session-limits pppoe lac *number*
Tree	lac
Description	This command configures the maximum number of PPPoE L2TP LAC sessions per SLA profile instance.
Range	0 to 131071
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local *number*

Synopsis	Maximum number of PPPoE local terminated sessions
Context	**configure** subscriber-mgmt sla-profile *external-named-item* session-limits pppoe local *number*
Tree	local
Description	This command configures the maximum number of PPPoE local terminated sessions (PTA) per SLA profile instance.
Range	0 to 131071
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

overall *number*

Synopsis	Maximum number of PPPoE sessions

© 2025 Nokia.

Context	**configure** subscriber-mgmt sub-profile *external-named-item* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis	Enter the **egress** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress
Tree	egress
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lag-per-link-hash

Synopsis	Enter the **lag-per-link-hash** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress lag-per-link-hash
Tree	lag-per-link-hash
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

class *number*

Synopsis	Class used to select a LAG link
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress lag-per-link-hash class *number*
Tree	class
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

weight *number*

Synopsis	Weight associated with SAP when selecting a LAG link

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress lag-per-link-hash weight *number*
Tree	weight
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos
Tree	qos
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

agg-rate

Synopsis	Enter the **agg-rate** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos agg-rate
Tree	agg-rate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

adaptation-rule *keyword*

Synopsis	Adaptation rule for operational PIR value of subscriber
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos agg-rate adaptation-rule *keyword*
Tree	adaptation-rule
Description	This command configures the adaptation rule for the PIR value of the subscriber aggregate rate. This rule determines which configured value is adapted to **oper-agg-rate** based on hardware capabilities.
Options	max, min, closest
Default	closest
Introduced	21.7.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s

burst-limit *(number | keyword)*

Synopsis	Burst limit of the subscriber aggregate rate
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos agg-rate burst-limit *(number | keyword)*
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s

min-resv-bw *number*

Synopsis	Reserved minimum total rate of all egress queues
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos agg-rate min-resv-bw *number*
Tree	min-resv-bw
Range	0 to 800000000
Units	kilobps
Default	1
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

queue-frame-based-accounting *boolean*

Synopsis	Use frame-based accounting to evaluate rate limit
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos agg-rate queue-frame-based-accounting *boolean*
Tree	queue-frame-based-accounting
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rate *number*

Synopsis	Maximum total rate of all egress queues
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos agg-rate rate *number*
Tree	rate
Range	1 to 800000000
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

encap-offset

Synopsis	Enable the **encap-offset** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos encap-offset
Tree	encap-offset
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Offset type
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos encap-offset type *keyword*
Tree	type
Options	pppoa-llc, pppoa-null, pppoeoa-llc, pppoeoa-llc-fcs, pppoeoa-llc-tagged, pppoeoa-llc-tagged-fcs, pppoeoa-null, pppoeoa-null-fcs, pppoeoa-null-tagged, pppoeoa-null-tagged-fcs, ipoa-llc, ipoa-null, ipoeoa-llc, ipoeoa-llc-fcs, ipoeoa-llc-tagged, ipoeoa-llc-tagged-fcs, ipoeoa-null, ipoeoa-null-fcs, ipoeoa-null-tagged, ipoeoa-null-tagged-fcs, pppoe, pppoe-tagged, ipoe, ipoe-tagged
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hs-agg-rate *number*

Synopsis	Maximum rate for single egress HS queues

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos hs-agg-rate *number*
Tree	hs-agg-rate
Range	1 to 100000000
Units	kilobps
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-low-burst-max-class *number*

Synopsis	Scheduling classes to map the low burst limit threshold
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos hs-low-burst-max-class *number*
Tree	hs-low-burst-max-class
Range	1 to 6
Default	6
Introduced	16.0.R4
Platforms	7750 SR-7/12/12e

hs-min-resv-bw *number*

Synopsis	Reserved minimum total rate of all egress queues
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos hs-min-resv-bw *number*
Tree	hs-min-resv-bw
Range	0 to 100000000
Units	kilobps
Default	1
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

policer-control-policy

Synopsis	Enter the **policer-control-policy** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos policer-control-policy

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	policer-control-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overrides

Synopsis	Enter the **overrides** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos policer-control-policy overrides
Tree	overrides
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

root

Synopsis	Enable the **root** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos policer-control-policy overrides root
Tree	root
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-rate *(number | keyword)*

Synopsis	Maximum rate
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos policer-control-policy overrides root max-rate *(number | keyword)*
Tree	max-rate
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

priority-mbs-thresholds

Synopsis	Enter the **priority-mbs-thresholds** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos policer-control-policy overrides root priority-mbs-thresholds
Tree	priority-mbs-thresholds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

min-thresh-separation *(number | keyword)*

Synopsis	Minimum threshold separation
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation *(number | keyword)*
Tree	min-thresh-separation
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority [level] *number*

Synopsis	Enter the **priority** list instance
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos policer-control-policy overrides root priority-mbs-thresholds priority *number*
Tree	priority
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[level] *number*

Synopsis	Strict priority level
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos policer-control-policy overrides root priority-mbs-thresholds priority *number*
Tree	priority

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mbs-contribution *(number | keyword)*

Synopsis	MBS size
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos policer-control-policy overrides root priority-mbs-thresholds priority *number* mbs-contribution *(number | keyword)*
Tree	mbs-contribution
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	Policer control policy name
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos policer-control-policy policy-name *reference*
Tree	policy-name
Reference	**configure** qos policer-control-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler-policy

Synopsis	Enter the **scheduler-policy** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos scheduler-policy
Tree	scheduler-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

firewall-policy *reference*

Synopsis	Firewall policy
Context	**configure** subscriber-mgmt sub-profile *external-named-item* firewall-policy *reference*
Tree	firewall-policy
Reference	**configure** service nat firewall-policy *external-named-item*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

host-limits

Synopsis	Enter the **host-limits** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* host-limits
Tree	host-limits
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* host-limits ipv4
Tree	ipv4
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

arp *number*

Synopsis	Maximum number of IPv4 ARP hosts
Context	**configure** subscriber-mgmt sub-profile *external-named-item* host-limits ipv4 arp *number*
Tree	arp
Description	This command configures the maximum number of IPv4 ARP hosts per subscriber instance. The operational maximum value may be smaller due to equipped hardware dependencies.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	0 to 131071
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *number*

Synopsis	Maximum number of IPv4 DHCP hosts
Context	**configure** subscriber-mgmt sub-profile *external-named-item* host-limits ipv4 dhcp *number*
Tree	dhcp
Description	This command configures the maximum number of IPv4 DHCP hosts per subscriber instance. The operational maximum value may be smaller due to equipped hardware dependencies.
Range	0 to 131071
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

overall *number*

Synopsis	Maximum number of IPv4 hosts
Context	**configure** subscriber-mgmt sub-profile *external-named-item* host-limits ipv4 overall *number*
Tree	overall
Description	This command configures the maximum number of IPv4 hosts per subscriber instance. The operational maximum value may be smaller due to equipped hardware dependencies.
Range	0 to 131071
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *number*

Synopsis	Maximum number of IPv4 PPP hosts
Context	**configure** subscriber-mgmt sub-profile *external-named-item* host-limits ipv4 ppp *number*
Tree	ppp

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the maximum number of IPv4 PPP hosts per subscriber instance. The operational maximum value may be smaller due to equipped hardware dependencies.
Range	0 to 131071
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* host-limits ipv6
Tree	ipv6
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

overall *number*

Synopsis	Maximum number of IPv6 hosts
Context	**configure** subscriber-mgmt sub-profile *external-named-item* host-limits ipv6 overall *number*
Tree	overall
Description	This command configures the maximum number of IPv6 hosts per subscriber instance. The operational maximum value may be smaller due to equipped hardware dependencies.
Range	0 to 131071
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pd-ipoe-dhcp *number*

Synopsis	Maximum number of IPv6 IPoE DHCP PD hosts
Context	**configure** subscriber-mgmt sub-profile *external-named-item* host-limits ipv6 pd-ipoe-dhcp *number*
Tree	pd-ipoe-dhcp
Description	This command configures the maximum number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) per subscriber instance.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The operational maximum value may be smaller due to equipped hardware dependencies.

Range 0 to 131071

Introduced 20.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pd-overall *number*

Synopsis Maximum number of IPv6 DHCP PD hosts

Context **configure** subscriber-mgmt sub-profile *external-named-item* host-limits ipv6 pd-overall *number*

Tree pd-overall

Description The command configures the maximum number of IPv6 DHCP Prefix Delegation hosts (IA-PD) per subscriber instance.

The operational maximum value may be smaller due to equipped hardware dependencies.

Range 0 to 131071

Introduced 20.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pd-ppp-dhcp *number*

Synopsis Maximum number of IPv6 PPPoE DHCP PD hosts

Context **configure** subscriber-mgmt sub-profile *external-named-item* host-limits ipv6 pd-ppp-dhcp *number*

Tree pd-ppp-dhcp

Description This command configures the maximum number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) per subscriber instance.

The operational maximum value may be smaller due to equipped hardware dependencies.

Range 0 to 131071

Introduced 20.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wan-ipoe-dhcp *number*

Synopsis Maximum number of IPv6 IPoE DHCP WAN hosts

© 2025 Nokia.

Context	**configure** subscriber-mgmt sub-profile *external-named-item* sub-mcac-policy *reference*
Tree	sub-mcac-policy
Reference	**configure** subscriber-mgmt sub-mcac-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

upnp-policy *reference*

Synopsis	UPnP policy for the subscriber profile
Context	**configure** subscriber-mgmt sub-profile *external-named-item* upnp-policy *reference*
Tree	upnp-policy
Description	This command specifies the Universal Plug 'n Play policy (UPnP) IGD service for the subscriber profile. All ESM hosts of the subscriber can use the UPnP protocol to create port mapping. This feature only supports L2-Aware NAT hosts. The UPnP parameters are defined in the referenced UPnP policy configured in the **configure service upnp** context.
Reference	**configure** service upnp policy *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

volume-stats-type *keyword*

Synopsis	Include non-IP headers in the accounting statistics
Context	**configure** subscriber-mgmt sub-profile *external-named-item* volume-stats-type *keyword*
Tree	volume-stats-type
Options	l2, ip
Default	l2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vport-hashing *boolean*

Synopsis	Include LAG hashing on Vport

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sub-profile *external-named-item* vport-hashing *boolean*
Tree	vport-hashing
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-interface-statistics

Synopsis	Enter the **subscriber-interface-statistics** context
Context	**configure** subscriber-mgmt subscriber-interface-statistics
Tree	subscriber-interface-statistics
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state for statistics collection
Context	**configure** subscriber-mgmt subscriber-interface-statistics admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

svlan-statistics

Synopsis	Enter the **svlan-statistics** context
Context	**configure** subscriber-mgmt svlan-statistics
Tree	svlan-statistics
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of statistics collection

© 2025 Nokia.

Context	**configure** subscriber-mgmt svlan-statistics admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

system-behavior

Synopsis	Enter the **system-behavior** context
Context	**configure** subscriber-mgmt system-behavior
Tree	system-behavior
Description	Commands in this context configure the attributes of system-wide subscriber management behavior.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

legacy-dns-nbns *boolean*

Synopsis	Restrict authentication origins for name servers
Context	**configure** subscriber-mgmt system-behavior legacy-dns-nbns *boolean*
Tree	legacy-dns-nbns
Description	When configured to **true**, this command enables legacy DNS NBNS behavior, which restricts the supported default extended authentication origins for DNS and NBNS name servers. The main differences include: • only support DHCP server as origin for DHCP relay: IPoE DHCPv4/DHCPv6 and PPPoE DHCPv6 • Local Address Assignment (LAA) is highest priority origin: IPoE and PPPoE SLAAC DNSv6 and PPPoE DNSv4 • no default DNS for IPoE DHCPv4 proxy When configured to **false**, this command reverts to the recommended default extended DNS and NBNS name server origin priorities.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

up-resiliency

Synopsis	Enter the **up-resiliency** context
Context	**configure** subscriber-mgmt up-resiliency
Tree	up-resiliency
Description	Commands in this context configure the inter-UPF resiliency in a CUPS system.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fate-sharing-group-template [name] *named-item*

Synopsis	Enter the **fate-sharing-group-template** list instance
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item*
Tree	fate-sharing-group-template
Description	Commands in this context configure resiliency parameters per FSG.
Max. instances	256
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	FSG template ID
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item*
Tree	fate-sharing-group-template
String length	1 to 32
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Tree	description
String length	1 to 80
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gratuitous-arp *keyword*

Synopsis	Granularity for sending GARP packets on switchover
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* gratuitous-arp *keyword*
Tree	gratuitous-arp
Options	one-per-outer-tag – Send a single Gratuitous ARP for all q-in-q SAPs sharing the same outer tag on any one of those SAP one-per-sap – Send a single Gratuitous ARP per SAP
Default	one-per-sap
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

path-restoration-state *keyword*

Synopsis	Method for managing FSGs during headless mode
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* path-restoration-state *keyword*
Tree	path-restoration-state
Description	This command configures how the BNG-UP manages the state of active FSGs, if the BNG-UP becomes headless (PFCP path is in restoration/headless). The BNG-UP can always move all active FSGs to standby, or decide whether to move them to standby based on a series of heuristic tests. If any test indicates that the BNG-UP cannot forward traffic for the FSG, or if another BNG-UP becomes active, the BNG-UP moves the FSG to standby. This only applies to active FSGs; the BNG-UP never makes a standby FSG active without CPF intervention.
Options	standby – Always change FSG state to standby auto – Change FSG state based on a series of heuristic tests
Default	auto
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.

redundant-interface

Synopsis	Enter the **redundant-interface** context
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* redundant-interface
Tree	redundant-interface
Description	Commands in this context configure downstream traffic shunting from a standby BNG-UP to an active BNG-UP. Downstream traffic that is received for standby sessions is sent over the redundant interface to the active BNG-UP. This requires the configuration of the **multi-chassis-shunt-id** in the service that receives the session traffic.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *interface-name*

Synopsis	Redundant interface name
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* redundant-interface name *interface-name*
Tree	name
Description	This command configures the name of the redundant interface. It must exist in the service that contains the redundant interface.
String length	1 to 32
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service *service-name*

Synopsis	Service that contains the redundant interface
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* redundant-interface service *service-name*
Tree	service
Description	This command configures the service that contains the redundant interface. It can be different from the service where the session traffic is terminated.
String length	1 to 64
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

uplink-forwarding-while-standby *boolean*

Synopsis	Allows a standby BNG-UP to forward packets
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* uplink-forwarding-while-standby *boolean*
Tree	uplink-forwarding-while-standby
Description	This command allows a standby BNG-UP to forward uplink traffic. To prevent the possibility of packet replication towards the network, this command should only be enabled if the access network is provisioned not to replicate unicast packets to the BNG-UP.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vrgw

Synopsis	Enter the **vrgw** context
Context	**configure** subscriber-mgmt vrgw
Tree	vrgw
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

brg-profile [brg-profile-name] *named-item*

Synopsis	Enter the **brg-profile** list instance
Context	**configure** subscriber-mgmt vrgw brg-profile *named-item*
Tree	brg-profile
Max. instances	16
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**brg-profile-name**] *named-item*

Synopsis	BRG profile name
Context	**configure** subscriber-mgmt vrgw brg-profile *named-item*
Tree	brg-profile

Default	0
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

home-pool

Synopsis	Enter the **home-pool** context
Context	**configure** subscriber-mgmt vrgw brg-profile *named-item* home-pool
Tree	home-pool
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-time *number*

Synopsis	Lease time used when allocating addresses from the pool
Context	**configure** subscriber-mgmt vrgw brg-profile *named-item* home-pool lease-time *number*
Tree	lease-time
Range	300 to 315446399
Units	seconds
Default	21600
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option [number] *(number | keyword)*

Synopsis	Enter the **option** list instance
Context	**configure** subscriber-mgmt vrgw brg-profile *named-item* home-pool option *(number | keyword)*
Tree	option
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCP option to send identification strings to client

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt vrgw brg-profile *named-item* home-pool option *(number | keyword)*
Tree	option
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string-not-all-spaces*

Synopsis	ASCII string of the DHCP option
Context	**configure** subscriber-mgmt vrgw brg-profile *named-item* home-pool option *(number | keyword)* ascii-string *string-not-all-spaces*
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	DHCP option as time duration
Context	**configure** subscriber-mgmt vrgw brg-profile *named-item* home-pool option *(number | keyword)* duration *number*
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Remove DHCP option configuration
Context	**configure** subscriber-mgmt vrgw brg-profile *named-item* home-pool option *(number | keyword)* empty
Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

Synopsis	DHCP option as a hexadecimal string
Context	**configure** subscriber-mgmt vrgw brg-profile *named-item* home-pool option *(number | keyword)* hex-string *hex-string*
Tree	hex-string
String length	1 to 256
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-address *ipv4-address*

Synopsis	DHCP option as a list of IPv4 addresses
Context	**configure** subscriber-mgmt vrgw brg-profile *named-item* home-pool option *(number | keyword)* ipv4-address *ipv4-address*
Tree	ipv4-address
Max. instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**. This element is ordered by the user.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2

Synopsis	Enter the **l2** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l2
Tree	l2
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

inner-vlan *number*

Synopsis	Value to match the Layer 2 access point of the tunnel
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l2 inner-vlan *number*
Tree	inner-vlan
Range	0 to 4095
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

outer-vlan *number*

Synopsis	Layer 2 access point matching with a specified S-VLAN
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l2 outer-vlan *number*
Tree	outer-vlan
Range	0 to 4095
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap *sap*

Synopsis	Value to match the L2-AP Access Point of the tunnel
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l2 sap *sap*
Tree	sap
String length	1 to 45
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l3

Synopsis	Enter the **l3** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l3
Tree	l3
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

address-type *keyword*

Synopsis	Address type to match
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l3 address-type *keyword*
Tree	address-type
Options	ipv4, ipv6
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address as local endpoint to match
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l3 local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address as remote endpoint to match
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l3 remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	remote-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

router-instance *string*

Synopsis	Router instance to match
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l3 router-instance *string*
Tree	router-instance
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ues

Synopsis	Enter the **ues** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues
Tree	ues
Description	Commands in this context filter tunnels based on the properties of UEs that are currently active on the tunnel.
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-user-group *named-item-or-empty*

Synopsis	Name of the custom user group
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues custom-user-group *named-item-or-empty*
Tree	custom-user-group
Description	This command specifies to use a custom user group as a filter. A user equipment (UE) can be assigned up to four custom user groups during RADIUS authentication using the Alc-Wlan-Custom-User-Group attribute.
String length	0 to 32
Introduced	24.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

maximum *number*

Synopsis	Maximum number of UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues maximum *number*
Tree	maximum

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. range	0 to 4294967295
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

minimum *number*

Synopsis	Minimum number of UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues minimum *number*
Tree	minimum
Max. range	0 to 4294967295
Default	1
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

state

Synopsis	Enable the **state** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues state
Tree	state
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

cross-connect *boolean*

Synopsis	Match on tunnels with cross-connect UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues state cross-connect *boolean*
Tree	cross-connect
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dsm *boolean*

Synopsis	Match on DSM UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues state dsm *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	dsm
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm *boolean*

Synopsis	Match on ESM UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues state esm *boolean*
Tree	esm
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2 *boolean*

Synopsis	Match on tunnels with L2W UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues state l2 *boolean*
Tree	l2
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

migrant *boolean*

Synopsis	Match on tunnels with migrant UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues state migrant *boolean*
Tree	migrant
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ue [name] *named-item*

Synopsis	Enter the **ue** list instance

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item*
Tree	ue
Description	Commands in this context query for WLAN Gateway UEs where the filter criteria over WLAN-GW UEs are defined. The query can be used to retrieve the state of the UEs matching the configured criteria.
Max. instances	1024
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	UE query name
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item*
Tree	ue
String length	1 to 32
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

address

Synopsis	Enter the **address** context
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* address
Tree	address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp6-na *ipv6-unicast-without-local-address*

Synopsis	DHCPv6 IA-NA address to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* address dhcp6-na *ipv6-unicast-without-local-address*
Tree	dhcp6-na
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv4 *ipv4-unicast-address*

Synopsis	IPv4 address to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* address ipv4 *ipv4-unicast-address*
Tree	ipv4
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

slaac *ipv6-unicast-without-local-address*

Synopsis	SLAAC prefix to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* address slaac *ipv6-unicast-without-local-address*
Tree	slaac
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Address type to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* address type *keyword*
Tree	type
Options	ipv4 – Any IPv4 address ipv6 – Any IPv6 address ipv4-only – IPv4 address only ipv6-only – IPv6 address only ipv4v6 – IPv4 and IPv6 address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

bridge-domain *number*

Synopsis	Bridge Domain to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* bridge-domain *number*
Tree	bridge-domain
Range	0 to 4294967294

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

connection-state

Synopsis	Enable the **connection-state** context
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state
Tree	connection-state
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

already-signed-in *boolean*

Synopsis	Enable matching on UEs that are already signed in
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state already-signed-in *boolean*
Tree	already-signed-in
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

authorized-only *boolean*

Synopsis	Enable matching on UEs in an authorized state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state authorized-only *boolean*
Tree	authorized-only
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

cross-connect *boolean*

Synopsis	Enable matching on cross-connected UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state cross-connect *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	cross-connect
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

data-triggered *boolean*

Synopsis	Enable matching on UEs in a data-triggered state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state data-triggered *boolean*
Tree	data-triggered
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

delete-pending *boolean*

Synopsis	Enable matching on UEs in a delete-pending state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state delete-pending *boolean*
Tree	delete-pending
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-triggered *boolean*

Synopsis	Enable matching on UEs in DHCP-triggered state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state dhcp-triggered *boolean*
Tree	dhcp-triggered
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dsm *boolean*

Synopsis	Controls whether the query returns UEs in DSM state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state dsm *boolean*
Tree	dsm
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm *boolean*

Synopsis	Controls whether the query returns UEs in ESM state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state esm *boolean*
Tree	esm
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-authorized *boolean*

Synopsis	Enable matching on UEs in GTP-authorized state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state gtp-authorized *boolean*
Tree	gtp-authorized
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-assigned *boolean*

Synopsis	Match on UEs in an IP-assigned state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state ip-assigned *boolean*
Tree	ip-assigned

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-assigned-authorized *boolean*

Synopsis	Match on UEs in an IP-assigned and authorized state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state ip-assigned-authorized *boolean*
Tree	ip-assigned-authorized
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2 *boolean*

Synopsis	Match on Layer-2 wholesale state for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state l2 *boolean*
Tree	l2
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

portal *boolean*

Synopsis	Controls whether the query returns UEs in portal state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state portal *boolean*
Tree	portal
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

custom-user-group *named-item-or-empty*

Synopsis	Name of the custom user group
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* custom-user-group *named-item-or-empty*
Tree	custom-user-group
Description	This command specifies to use a custom user group as a filter. A user equipment (UE) can be assigned up to four custom user groups during RADIUS authentication using the Alc-Wlan-Custom-User-Group attribute.
String length	0 to 32
Introduced	24.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *mac-address*

Synopsis	MAC address to use for matching on UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* mac-address *mac-address*
Tree	mac-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

soft-quota-exhausted *boolean*

Synopsis	Send interim update message when the quota is reached
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* soft-quota-exhausted *boolean*
Tree	soft-quota-exhausted
Default	false
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel

Synopsis	Enter the **tunnel** context
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* tunnel
Tree	tunnel

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

encapsulation *keyword*

Synopsis	Tunnel type to match for active UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* tunnel encapsulation *keyword*
Tree	encapsulation
Options	gre, l2tp, l2, vxlan
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address as local tunnel endpoint to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* tunnel local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address as remote tunnel endpoint to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* tunnel remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	remote-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router instance of tunnels to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* tunnel router-instance *string*
Tree	router-instance

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan *number*

Synopsis	VLAN tag within the tunnel to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* vlan *number*
Tree	vlan
Range	0 to 4095
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group

Synopsis	Enable the **wlan-gw-group** context
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* wlan-gw-group
Tree	wlan-gw-group
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

id *number*

Synopsis	WLAN-GW ISA group ID
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* wlan-gw-group id *number*
Tree	id
Range	1 to 4
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

member *number*

Synopsis	The member of the WLAN-GW ISA group
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* wlan-gw-group member *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	member
Range	1 to 1024
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

virtual-chassis-identifier *string-not-all-spaces*

Synopsis	WLAN Gateway virtual chassis ID or dual homing key
Context	**configure** subscriber-mgmt wlan-gw virtual-chassis-identifier *string-not-all-spaces*
Tree	virtual-chassis-identifier
String length	1 to 16
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

4.46.1 system command descriptions

system

Synopsis	Enter the **system** context
Context	**configure** system
Tree	system
Description	Commands in this context enable configuring of general system level functions and router management protocols.
Introduced	16.0.R1
Platforms	All

alarm-contact-in-power *boolean*

Synopsis	Power the output pin on the CPM alarm interface port
Context	**configure** system alarm-contact-in-power *boolean*
Tree	alarm-contact-in-power
Default	false
Introduced	16.0.R1
Platforms	7750 SR-a

alarm-contact-input [input-pin-number] *number*

Synopsis	Enter the **alarm-contact-input** list instance
Context	**configure** system alarm-contact-input *number*
Tree	alarm-contact-input
Introduced	16.0.R1
Platforms	7750 SR-a

[input-pin-number] *number*

Synopsis	Alarm contact input pin
Context	**configure** system alarm-contact-input *number*
Tree	alarm-contact-input
Range	1 to 4

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-a

admin-state *keyword*

Synopsis	Administrative state of the alarm contact input
Context	**configure** system alarm-contact-input *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR-a

clear-message *description*

Synopsis	Text message sent in the log event when an alarm clears
Context	**configure** system alarm-contact-input *number* clear-message *description*
Tree	clear-message
Description	This command configures a text message to be included in the log event that is sent when the system clears an alarm. The system generates the default "Alarm Input Cleared" message if no message is configured. The **clear-message** string is included in the log event when the pin changes to the normal state.
String length	1 to 80
Default	Alarm Input Cleared
Introduced	16.0.R1
Platforms	7750 SR-a

description *long-description*

Synopsis	Text description
Context	**configure** system alarm-contact-input *number* description *long-description*
Tree	description
String length	1 to 160
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR-a

normal-state *keyword*

Synopsis	Normal state associated with the alarm contact input
Context	**configure** system alarm-contact-input *number* normal-state *keyword*
Tree	normal-state
Options	open, closed
Default	open
Introduced	16.0.R1
Platforms	7750 SR-a

trigger-message *description*

Synopsis	Text message sent in the log event when input changes
Context	**configure** system alarm-contact-input *number* trigger-message *description*
Tree	trigger-message
Description	This command configures a text message to be included in the log event that is sent when the system generates an alarm. The system generates the default message "Alarm Input Triggered" if no message is configured. This command's message string is included in the log event when the pin changes from the normal state.
String length	1 to 80
Default	Alarm Input Triggered
Introduced	16.0.R1
Platforms	7750 SR-a

alarms

Synopsis	Enter the **alarms** context
Context	**configure** system alarms
Tree	alarms
Introduced	16.0.R4
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the system alarm
Context	**configure** system alarms admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

max-cleared *number*

Synopsis	Maximum number of cleared alarms
Context	**configure** system alarms max-cleared *number*
Tree	max-cleared
Range	0 to 500
Default	500
Introduced	16.0.R4
Platforms	All

allow-boot-license-violations *boolean*

Synopsis	Allow boot license violations in boot-up configuration
Context	**configure** system allow-boot-license-violations *boolean*
Tree	allow-boot-license-violations
Default	true
Introduced	16.0.R4
Platforms	All

bluetooth

Synopsis	Enter the **bluetooth** context
Context	**configure** system bluetooth
Tree	bluetooth
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s, 7950 XRS-20e

admin-state *keyword*

Synopsis	Administrative state of the Bluetooth module
Context	**configure** system bluetooth admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.2.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s, 7950 XRS-20e

advertising-timeout *number*

Synopsis	Bluetooth advertising timeout
Context	**configure** system bluetooth advertising-timeout *number*
Tree	advertising-timeout
Range	30 to 3600
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s, 7950 XRS-20e

device [mac-address] *mac-address*

Synopsis	Enter the **device** list instance
Context	**configure** system bluetooth device *mac-address*
Tree	device
Max. instances	5
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s, 7950 XRS-20e

[**mac-address**] *mac-address*

Synopsis	Bluetooth client device MAC address
Context	**configure** system bluetooth device *mac-address*

module [cpm-slot] *cpm-card-slot*

Synopsis	Enter the **module** list instance
Context	**configure** system bluetooth module *cpm-card-slot*
Tree	module
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s, 7950 XRS-20e

[**cpm-slot**] *cpm-card-slot*

Synopsis	CPM slot on which the module resides
Context	**configure** system bluetooth module *cpm-card-slot*
Tree	module
String length	1
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s, 7950 XRS-20e

provisioned-identifier *display-string*

Synopsis	Bluetooth module ID

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system bluetooth module *cpm-card-slot* provisioned-identifier *display-string*
Tree	provisioned-identifier
String length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s, 7950 XRS-20e

pairing-button *boolean*

Synopsis	Enable the pairing button
Context	**configure** system bluetooth pairing-button *boolean*
Tree	pairing-button
Default	false
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s, 7950 XRS-20e

passkey *string*

Synopsis	Bluetooth passkey
Context	**configure** system bluetooth passkey *string*
Tree	passkey
String length	6
Default	123456
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s, 7950 XRS-20e

power-mode *keyword*

Synopsis	Bluetooth module power mode
Context	**configure** system bluetooth power-mode *keyword*
Tree	power-mode
Options	manual, automatic
Default	automatic
Introduced	20.2.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s, 7950 XRS-20e

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

boot-bad-exec *url*

Synopsis	CLI script file to execute following a failed boot
Context	**configure** system boot-bad-exec *url*
Tree	boot-bad-exec
Description	This command configures the name of the CLI script file to be run following the failure of a boot configuration. **Note**: This command has no effect in model-driven mode.
String length	1 to 180
Introduced	16.0.R1
Platforms	All

boot-good-exec *url*

Synopsis	CLI script file to execute following successful boot
Context	**configure** system boot-good-exec *url*
Tree	boot-good-exec
Description	This command configures a URL for a CLI script to **exec** following the success of a boot configuration. **Related Commands** **exec** - This command executes the contents of a text file as if they were CLI commands entered at the console.
String length	1 to 180
Introduced	16.0.R1
Platforms	All

central-frequency-clock

Synopsis	Enter the **central-frequency-clock** context
Context	**configure** system central-frequency-clock
Tree	central-frequency-clock
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bits

Synopsis	Enter the **bits** context
Context	**configure** system central-frequency-clock bits
Tree	bits
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

input

Synopsis	Enter the **input** context
Context	**configure** system central-frequency-clock bits input
Tree	input
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the BITS input timing reference
Context	**configure** system central-frequency-clock bits input admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface-type *keyword*

Synopsis	Interface type of the BITS timing reference
Context	**configure** system central-frequency-clock bits interface-type *keyword*
Tree	interface-type
Options	ds1-esf, ds1-sf, e1-pcm30crc, e1-pcm31crc, g703-2048khz
Default	ds1-esf
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

output

Synopsis	Enter the **output** context
Context	**configure** system central-frequency-clock bits output
Tree	output
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of BITS output timing reference
Context	**configure** system central-frequency-clock bits output admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

line-length *keyword*

Synopsis	Line length for the BITS output timing reference
Context	**configure** system central-frequency-clock bits output line-length *keyword*
Tree	line-length
Options	length-not-applicable, 110, 220, 330, 440, 550, 660
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ql-minimum *keyword*

Synopsis	Minimum signal quality level for BITSout port
Context	**configure** system central-frequency-clock bits output ql-minimum *keyword*
Tree	ql-minimum
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Default	unused
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

source *keyword*

Synopsis	Source of the BITS output timing reference
Context	**configure** system central-frequency-clock bits output source *keyword*
Tree	source
Options	line-ref, internal-clock
Default	line-ref
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch *boolean*

Synopsis	Squelch the signal of the BITS output timing reference
Context	**configure** system central-frequency-clock bits output squelch *boolean*
Tree	squelch
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ql-override *keyword*

Synopsis	Override for the quality level of the timing reference
Context	**configure** system central-frequency-clock bits ql-override *keyword*
Tree	ql-override
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec
Default	unused
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ssm-bit *number*

Synopsis	Sa bit to convey SSM information
Context	**configure** system central-frequency-clock bits ssm-bit *number*
Tree	ssm-bit
Range	4 to 8

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

gnss

Synopsis	Enter the **gnss** context
Context	**configure** system central-frequency-clock gnss
Tree	gnss
Introduced	22.10.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se, 7750 SR-2se

admin-state *keyword*

Synopsis	Administrative state of the gnss timing reference
Context	**configure** system central-frequency-clock gnss admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se, 7750 SR-2se

ql-override *keyword*

Synopsis	Quality level override for a timing reference
Context	**configure** system central-frequency-clock gnss ql-override *keyword*
Tree	ql-override
Options	unused, prs, stu, st2, tnc, st3e, st3
Default	unused
Introduced	22.10.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se, 7750 SR-2se

ptp

Synopsis	Enter the **ptp** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system central-frequency-clock ptp
Tree	ptp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the PTP timing reference
Context	**configure** system central-frequency-clock ptp admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ql-override *keyword*

Synopsis	Quality level of a timing reference that overrides any value provided by the reference's SSM process
Context	**configure** system central-frequency-clock ptp ql-override *keyword*
Tree	ql-override
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec
Default	unused
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ql-minimum *keyword*

Synopsis	Minimum signal quality level for system timing module
Context	**configure** system central-frequency-clock ql-minimum *keyword*
Tree	ql-minimum
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Default	unused
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ql-selection *boolean*

Synopsis	Consider quality level in system and BITS output timing
Context	**configure** system central-frequency-clock ql-selection *boolean*
Tree	ql-selection
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ref-order

Synopsis	Enter the **ref-order** context
Context	**configure** system central-frequency-clock ref-order
Tree	ref-order
Description	Commands in this context specify the priority order of the synchronous equipment timing subsystem**.** If a reference source is disabled, this command defines the next reference source for the clock. If all reference sources are disabled, clocking is derived from a local oscillator. If a timing reference is linked to a source port that is operationally down, the port is no longer a qualified, valid reference.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fifth *keyword*

Synopsis	Fifth preferred timing reference source
Context	**configure** system central-frequency-clock ref-order fifth *keyword*
Tree	fifth
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

first *keyword*

Synopsis	First preferred timing reference source
Context	**configure** system central-frequency-clock ref-order first *keyword*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	first
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fourth *keyword*

Synopsis	Fourth preferred timing reference source
Context	**configure** system central-frequency-clock ref-order fourth *keyword*
Tree	fourth
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

second *keyword*

Synopsis	Second preferred timing reference source
Context	**configure** system central-frequency-clock ref-order second *keyword*
Tree	second
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sixth *keyword*

Synopsis	Sixth preferred timing reference source
Context	**configure** system central-frequency-clock ref-order sixth *keyword*
Tree	sixth
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	22.10.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se, 7750 SR-2se

third *keyword*

Synopsis	Third preferred timing reference source

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system central-frequency-clock ref-order third *keyword*
Tree	third
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ref1

Synopsis	Enter the **ref1** context
Context	**configure** system central-frequency-clock ref1
Tree	ref1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the first timing reference
Context	**configure** system central-frequency-clock ref1 admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ql-override *keyword*

Synopsis	Quality level override of a timing reference
Context	**configure** system central-frequency-clock ref1 ql-override *keyword*
Tree	ql-override
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Default	unused
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

source-port *port*

Synopsis	Source port for the first timing reference
Context	**configure** system central-frequency-clock ref1 source-port *port*
Tree	source-port
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ref2

Synopsis	Enter the **ref2** context
Context	**configure** system central-frequency-clock ref2
Tree	ref2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the second timing reference
Context	**configure** system central-frequency-clock ref2 admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ql-override *keyword*

Synopsis	Quality level override of a timing reference
Context	**configure** system central-frequency-clock ref2 ql-override *keyword*
Tree	ql-override
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Default	unused
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

source-port *port*

Synopsis	Source port for the second timing reference
Context	**configure** system central-frequency-clock ref2 source-port *port*
Tree	source-port
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

revert *boolean*

Synopsis	Revert to higher-priority reference source
Context	**configure** system central-frequency-clock revert *boolean*
Tree	revert
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

synce

Synopsis	Enter the **synce** context
Context	**configure** system central-frequency-clock synce
Tree	synce
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the SyncE timing reference
Context	**configure** system central-frequency-clock synce admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ql-override *keyword*

Synopsis	Override the quality level of a timing reference
Context	**configure** system central-frequency-clock sync ql-override *keyword*
Tree	ql-override
Options	unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Default	unused
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

wait-to-restore *number*

Synopsis	Time to re-validate a previously failed input reference
Context	**configure** system central-frequency-clock wait-to-restore *number*
Tree	wait-to-restore
Range	1 to 12
Units	minutes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

clli-code *clli-description*

Synopsis	CLLI code value for the system
Context	**configure** system clli-code *clli-description*
Tree	clli-code
String length	11
Introduced	16.0.R1
Platforms	All

congestion-management *boolean*

Synopsis	Enable Virtual Service Router congestion management
Context	**configure** system congestion-management *boolean*
Tree	congestion-management
Default	false

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	VSR

contact *description*

Synopsis	Contact information for the managed node
Context	**configure** system contact *description*
Tree	contact
String length	1 to 80
Introduced	16.0.R1
Platforms	All

coordinates *description*

Synopsis	GPS coordinates for the system location
Context	**configure** system coordinates *description*
Tree	coordinates
String length	1 to 80
Introduced	16.0.R1
Platforms	All

cpm-http-redirect

Synopsis	Enter the **cpm-http-redirect** context
Context	**configure** system cpm-http-redirect
Tree	cpm-http-redirect
Introduced	16.0.R4
Platforms	All

optimized-mode *boolean*

Synopsis	Enable optimized mode for CPM HTTP redirect messages
Context	**configure** system cpm-http-redirect optimized-mode *boolean*
Tree	optimized-mode
Default	true

Tree	dying-gasp-tx-on-reset
Default	false
Introduced	16.0.R1
Platforms	All

grace-tx *boolean*

Synopsis	Send Grace TLVs for soft reset graceful recovery events
Context	**configure** system efm-oam grace-tx *boolean*
Tree	grace-tx
Description	When configured to **true**, the system sends the Nokia Vendor specific Grace TLV in the information PDU after an ISSU or a soft reset. The Grace TLV informs a remote peer to ignore the negotiated interval and multiplier and instead use the new timeout interval. By default, the command is disabled at the system level and enabled at the port level. Both the system and port level must be enabled to support grace on a specific port. When configured to **true**, the EFM-OAM protocol does not enter a non-operational state when both nodes acknowledge the grace function. This feature minimizes service interruption by giving the restarting router time to become operationally and administratively up within the grace period. The peer receiving the Grace TLV must be able to parse and process the vendor-specific messaging. Do not configure grace if the Nokia Vendor Specific Grace TLV is not supported on the remote peer. When configured to **false**, the Nokia Vendor Specific Grace TLV is not sent.
Default	false
Introduced	16.0.R1
Platforms	All

eth-cfm

Synopsis	Enter the **eth-cfm** context
Context	**configure** system eth-cfm
Tree	eth-cfm
Introduced	16.0.R1

grpc

Synopsis	Enter the **grpc** context
Context	**configure** system grpc
Tree	grpc
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the gRPC server
Context	**configure** system grpc admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

allow-unsecure-connection

Synopsis	Allow connection without secured transport protocol
Context	**configure** system grpc allow-unsecure-connection
Tree	allow-unsecure-connection
Description	When configured, the system allows an unsecured connection to remote managers; TCP connections are not encrypted, including username and password information.
Notes	The following elements are part of a choice: **allow-unsecure-connection** or **tls-server-profile**.
Introduced	16.0.R1
Platforms	All

delay-on-boot *number*

Synopsis	Delay for gRPC connections after system boot
Context	**configure** system grpc delay-on-boot *number*
Tree	delay-on-boot

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the delay timer for gRPC connections. When the timer expires, gRPC becomes operational and connections are accepted. This delay prevents automation from managing the system while it is still converging. When no delay is configured, connections are accepted after the system boots and gRPC becomes operational.
Range	1 to 3600
Units	seconds
Introduced	23.10.R1
Platforms	All

gnmi

Synopsis	Enter the **gnmi** context
Context	**configure** system grpc gnmi
Tree	gnmi
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the gNMI service
Context	**configure** system grpc gnmi admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

auto-config-save *boolean*

Synopsis	Automatically save configuration as part of commit
Context	**configure** system grpc gnmi auto-config-save *boolean*
Tree	auto-config-save
Description	When configured to **true**, the system automatically writes the running configuration to the saved configuration file as part of a successful commit operation.
Default	true

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

proto-version *keyword*

Synopsis	gnmi.proto version
Context	**configure** system grpc gnmi proto-version *keyword*
Tree	proto-version
Description	This command sets the gnmi.proto version that the gRPC server should use for all gNMI RPCs. Only use options other than **latest** for backward compatibility with legacy collectors.
Options	latest – Latest supported version v070 – gNMI version 0.7.0
Default	latest
Introduced	23.3.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the TCP keepalive algorithm
Context	**configure** system grpc-tunnel destination-group *named-item* tcp-keepalive admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.2.R1
Platforms	All

idle-time *number*

Synopsis	Time until the first TCP keepalive probe is sent
Context	**configure** system grpc-tunnel destination-group *named-item* tcp-keepalive idle-time *number*
Tree	idle-time
Description	This command configures the amount of time the connection must be idle before TCP keepalives are sent.
Range	1 to 100000
Units	seconds
Default	600
Introduced	22.2.R1
Platforms	All

interval *number*

Synopsis	Time between TCP keep-alive probes
Context	**configure** system grpc-tunnel destination-group *named-item* tcp-keepalive interval *number*
Tree	interval
Range	1 to 100000
Units	seconds
Default	15
Introduced	22.2.R1
Platforms	All

retries *number*

Synopsis	Number of probe retries before closing the connection
Context	**configure** system grpc-tunnel destination-group *named-item* tcp-keepalive retries *number*
Tree	retries
Description	This command configures the number of missed TCP keepalive probes before closing the TCP connection and attempting to reach the other destinations within the same destination group.
Range	3 to 100
Default	4
Introduced	22.2.R1
Platforms	All

tls-client-profile *reference*

Synopsis	TLS client profile assigned to the destination group
Context	**configure** system grpc-tunnel destination-group *named-item* tls-client-profile *reference*
Tree	tls-client-profile
Reference	**configure** system security tls client-tls-profile *named-item*
Notes	The following elements are part of a choice: **allow-unsecure-connection** or **tls-client-profile**.
Introduced	22.2.R1
Platforms	All

tunnel [name] *named-item*

Synopsis	Enter the **tunnel** list instance
Context	**configure** system grpc-tunnel tunnel *named-item*
Tree	tunnel
Description	Commands in this context configure gRPC-tunnel-related parameters.
Max. instances	4
Introduced	22.2.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**name**] *named-item*

Synopsis	Tunnel name
Context	**configure** system grpc-tunnel tunnel *named-item*
Tree	tunnel
String length	1 to 32
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the tunnel
Context	**configure** system grpc-tunnel tunnel *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.2.R1
Platforms	All

description *description*

Synopsis	Text description
Context	**configure** system grpc-tunnel tunnel *named-item* description *description*
Tree	description
String length	1 to 80
Introduced	22.2.R1

port *number*

Synopsis	TCP port number the handler listens to internally
Context	**configure** system grpc-tunnel tunnel *named-item* handler *named-item* port *number*
Tree	port
Range	1 to 65535
Introduced	22.2.R1
Platforms	All

target-type

Synopsis	Enter the **target-type** context
Context	**configure** system grpc-tunnel tunnel *named-item* handler *named-item* target-type
Tree	target-type
Introduced	22.2.R1
Platforms	All

custom-type *string*

Synopsis	Custom string for target type
Context	**configure** system grpc-tunnel tunnel *named-item* handler *named-item* target-type custom-type *string*
Tree	custom-type
Description	This command configures a custom string for the target type. This string can correspond to specific values used by the gRPC tunnel protocol, such as GNMI_GNOI or SSH. If a custom string is defined, the gRPC tunnel client must specify the string to request a session for that handler. The string must be unique within a tunnel.
String length	1 to 64
Notes	The following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.
Introduced	22.2.R1
Platforms	All

grpc-server

Synopsis	Target type set to GNMI_GNOI

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system grpc-tunnel tunnel *named-item* handler *named-item* target-type grpc-server
Tree	grpc-server
Description	When configured, this command assigns the gRPC server as a handler for all tunnels sessions. At the gRPC tunnel protocol level, this corresponds to a value of GNMI_GNOI.
Notes	The following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.
Introduced	22.2.R1
Platforms	All

ssh-server

Synopsis	Target type is SSH
Context	**configure** system grpc-tunnel tunnel *named-item* handler *named-item* target-type ssh-server
Tree	ssh-server
Description	When configured, this command assigns the SSH server as a handler for all tunnels sessions. At the gRPC tunnel protocol level, this corresponds to a value of SSH.
Notes	The following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.
Introduced	22.2.R1
Platforms	All

target-name

Synopsis	Enter the **target-name** context
Context	**configure** system grpc-tunnel tunnel *named-item* target-name
Tree	target-name
Introduced	22.2.R1
Platforms	All

custom-string *named-item-64*

Synopsis	Custom target name

Notes	The following elements are part of a choice: **custom-string**, **node-name**, or **user-agent**.
Introduced	22.2.R1
Platforms	All

node-name

Synopsis	Set the node name as target name
Context	**configure** system grpc-tunnel tunnel *named-item* target-name node-name
Tree	node-name
Description	When configured, this command uses the node name as the target name. The node name is configured by the **configure system name** command.
Notes	The following elements are part of a choice: **custom-string**, **node-name**, or **user-agent**.
Introduced	22.2.R1
Platforms	All

user-agent

Synopsis	Set the user agent as the target name
Context	**configure** system grpc-tunnel tunnel *named-item* target-name user-agent
Tree	user-agent
Description	When configured, this command uses the user agent as the target name. The agent is a string consisting of *node-name*:*vendor*:*model*:*software-version*.
Notes	The following elements are part of a choice: **custom-string**, **node-name**, or **user-agent**.
Introduced	22.2.R1
Platforms	All

icmp-vse *boolean*

Synopsis	Enable vendor-specific extensions to ICMP
Context	**configure** system icmp-vse *boolean*
Tree	icmp-vse
Default	false
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

ip

Synopsis	Enter the **ip** context
Context	**configure** system ip
Tree	ip
Description	Commands in this context configure system-wide IP router options.
Introduced	16.0.R1
Platforms	All

allow-qinq-network-interface *boolean*

Synopsis	Allow QinQ encapsulation for network interfaces
Context	**configure** system ip allow-qinq-network-interface *boolean*
Tree	allow-qinq-network-interface
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

buffer-unresolved-packets *boolean*

Synopsis	Buffer unresolved packets during ARP
Context	**configure** system ip buffer-unresolved-packets *boolean*
Tree	buffer-unresolved-packets
Description	When configured to **true**, the system buffers IPv4 and IPv6 packets waiting for the address resolution process (ARP) or neighbor discovery (ND) reply. When configured to **false**, the system discards packets during the address resolution process. The system discards IPv4 and IPv6 traffic needing a destination resolution that is buffered while waiting for a response to avoid any potential of out-of-order delivery of packets to the resolved destination. As a result, after the ARP or ND entry is populated, the system delivers only newly received packets in order.
Default	true
Introduced	24.10.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

enforce-unique-if-index *boolean*

Synopsis	Force creation of globally unique IP interface indexes
Context	**configure** system ip enforce-unique-if-index *boolean*
Tree	enforce-unique-if-index
Default	false
Introduced	16.0.R1
Platforms	All

forward-6in4 *boolean*

Synopsis	Allow forwarding of IPv6 over IPv4 to system IP address
Context	**configure** system ip forward-6in4 *boolean*
Tree	forward-6in4
Default	false
Introduced	19.10.R1
Platforms	All

forward-ip-over-gre *boolean*

Synopsis	Allow forwarding of IP over GRE to system IP address
Context	**configure** system ip forward-ip-over-gre *boolean*
Tree	forward-ip-over-gre
Default	false
Introduced	19.10.R1
Platforms	All

load-balancing

Synopsis	Enter the **load-balancing** context
Context	**configure** system load-balancing
Tree	load-balancing
Description	Commands in this context configure the interface per-flow load-balancing options that apply to traffic entering this interface and egressing over a LAG or ECMP on system egress. This setting is per interface.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Load-balancing options configured at the interface level overwrite load-balancing options configured at the system level.

Introduced 16.0.R1

Platforms All

eler-enh-load-balancing *boolean*

Synopsis Use eLER load balancing based on outer MPLS label stack

Context **configure** system load-balancing eler-enh-load-balancing *boolean*

Tree eler-enh-load-balancing

Description When configured to **true**, the system acting as the eLER load-balances non-IP traffic ingressing at the network interface based on the outer MPLS label stack. The eLER load-balances the incoming traffic using one of the following options:

- the entropy label if EL/ELI is present
- the hash label (BoS) if the hash label is present in the MPLS label stack

If both the hash label and EL/ELI are present, the eLER load-balances the incoming traffic using the hash label in the MPLS label stack.

Enhanced load balancing is operational only in cards using FP4 or higher. For cards with FP3 or lower, this command is available in the CLI but has no effect when configured.

When configured to **false**, the system acting as the eLER does not load-balance based on the outer MPLS label stack.

The 7450 ESS, 7750 SR, 7950 XRS, and VSR do not support use of the entropy label and hash label at the same time. Consequently, both these labels may only be present in the same packet at the same time if the packet is received from a third-party device in the network.

Default false

Introduced 24.7.R1

Platforms All

l2tp-load-balancing *boolean*

Synopsis Include L2TP header information for load balancing

Context **configure** system load-balancing l2tp-load-balancing *boolean*

Tree l2tp-load-balancing

l4-load-balancing *boolean*

Synopsis	Use load balancing based on Layer 4 fields
Context	**configure** system load-balancing l4-load-balancing *boolean*
Tree	l4-load-balancing
Introduced	16.0.R1
Platforms	All

lsr-load-balancing *keyword*

Synopsis	Algorithm for system-wide LSR load balancing
Context	**configure** system load-balancing lsr-load-balancing *keyword*
Tree	lsr-load-balancing
Description	This command configures system-wide LSR load balancing. Hashing can be enabled on the label stack, IP header, or both. The hashing can be at an LSR for spraying labeled IP packets over multiple equal-cost paths, or over multiple links of a LAG group. The LSR hash routine operates on the label stack and the IP header, if a packet is IPv4. An LSR considers a packet to be IPv4 if the first nibble following the bottom of the label stack is 4. The hash on the label stack and IPv4 and IPv6 headers can be enabled or disabled at the system level or incoming network IP interface level. **lbl-ip-l4-teid** - Specifies that the hashing applies as follows for Layer 2 and Layer 3 encapsulated traffic: • If an IPv4 or IPv6 header is found immediately after the MPLS label stack, the hashing includes label stack, source and destination IP addresses, TCP/UDP port numbers, and, if present, TEID values. • If an IPv4 or IPv6 header is not found immediately after the MPLS label stack, the data plane searches for a valid Ethertype value for the IPv4 and IPv6 payload. If a valid Ethertype value is found and an IP header follows the Ethernet header, hashing includes the source and destination IP addresses, TCP/UDP port numbers, and, if present, TEID values. **eth-encap-ip** - Specifies that the hash algorithm parses down the label stack and after it reaches the bottom, the stack assumes the Ethernet II non-tagged, dot1q, or QinQ header follows. At the expected Ethertype offset location, the algorithm checks whether the value present is IPv4/IPv6 (0x0800/0x86DD). If the check passes, the hash algorithm checks the first nibble at the expected IP header location for IPv4/IPv6 (0x0100/0x0110). If the secondary check passes, the algorithm performs the hash using the IP SA/DA fields in the expected IP header. If any of the checks fail, the label-stack hash is performed.
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid, lbl-eth-ip-l4-teid, lbl-ip-or-teid
Introduced	16.0.R1
Platforms	All

login-scripts

Synopsis	Enter the **login-scripts** context
Context	**configure** system login-control login-scripts
Tree	login-scripts
Description	Commands in this context configure CLI scripts that execute when a user (authenticated via any method including local user database, TACACS+, or RADIUS) first logs into a CLI session.
Introduced	16.0.R1
Platforms	All

global-script *string-not-all-spaces*

Synopsis	URL of the global CLI login script
Context	**configure** system login-control login-scripts global-script *string-not-all-spaces*
Tree	global-script
Description	This command specifies a common CLI script that executes when any user logs into a CLI session. This login exec script is executed when any user (authenticated by any means including local user database, TACACS+, or RADIUS) opens a CLI session. This allows a user, for example, to define a common set of CLI aliases that are made available on the router for all users. This global login exec script is executed before any user-specific login exec files that may be configured. This CLI script executes in the context of the user who opens the CLI session. Any commands in the script that the user is not authorized to execute will fail.
String length	1 to 180
Introduced	16.0.R1
Platforms	All

per-user-script

Synopsis	Enter the **per-user-script** context
Context	**configure** system login-control login-scripts per-user-script
Tree	per-user-script
Description	Commands in this context allow users to define their own login scripts that can be executed each time they first login to a CLI session. The command executes the script "*file-url / username / file-name*" when the user *username* logs into a CLI session (authenticated by any means including local user database, TACACS+, or RADIUS). For example:

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

per-user user-directory "cf1:/local/users" file-name "login-script.txt"

would search for the following script when user “admin” logs in and authenticates via RADIUS:

cf1:/local/users/admin/login-script.txt

The per user login script is executed after any global script executes and before any login-exec script configured against a local user is executed. This allows users, for example, who are authenticated via TACACS+ or RADIUS to define their own login scripts.

This CLI script executes in the context of the user who opens the CLI session. Any commands in the script that the user is not authorized to execute will fail.

Introduced	16.0.R1
Platforms	All

file-name *filename*

Synopsis	File name of the per-user login script
Context	**configure** system login-control login-scripts per-user-script file-name *filename*
Tree	file-name
Description	This command specifies the name of the file (located in the **configure system login-control login-scripts per-user-script user-directory** directory) including the extension.
String length	1 to 180
Introduced	16.0.R1
Platforms	All

user-directory *string-not-all-spaces*

Synopsis	Directory name of user-defined login script
Context	**configure** system login-control login-scripts per-user-script user-directory *string-not-all-spaces*
Tree	user-directory
String length	1 to 180
Introduced	16.0.R1

motd

Synopsis	Enter the **motd** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system login-control motd
Tree	motd
Description	Commands in this context create the message of the day displayed after a successful console login. Only one message can be configured.
Introduced	16.0.R1
Platforms	All

text *string-not-all-spaces*

Synopsis	Message of the day displayed after console login
Context	**configure** system login-control motd text *string-not-all-spaces*
Tree	text
String length	1 to 900
Notes	The following elements are part of a choice: **text** or **url**.
Introduced	16.0.R1
Platforms	All

url *string-not-all-spaces*

Synopsis	URL of the location of message of the day
Context	**configure** system login-control motd url *string-not-all-spaces*
Tree	url
String length	1 to 180
Notes	The following elements are part of a choice: **text** or **url**.
Introduced	16.0.R1
Platforms	All

pre-login-message

Synopsis	Enter the **pre-login-message** context
Context	**configure** system login-control pre-login-message
Tree	pre-login-message
Description	Commands in this context configure a message to display before logging in to the router using Telnet, SSH, or the console port. Only one message can be configured. If a new pre-login message is configured, the new message overwrites the previous message.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Note: The pre-login message is displayed on both active and standby systems.

Introduced 16.0.R1

Platforms All

message *string-not-all-spaces*

Synopsis Message displayed before the login prompt

Context **configure** system login-control pre-login-message message *string-not-all-spaces*

Tree message

Description This command configures the pre-login message.

Any printable, 7-bit ASCII characters can be used. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes. Some special characters can be used to format the message text. Use the newline (\n) character to create multiline messages. A newline (\n) character in the message moves to the beginning of the next line by sending ASCII/UTF-8 characters 0xA (LF) and 0xD (CR) to the client terminal. A carriage return (\r) character in the message sends the ASCII/UTF-8 character 0xD (CR) to the client terminal.

String length 1 to 900

Introduced 16.0.R1

Platforms All

name *boolean*

Synopsis Display the system name before the pre-login message

Context **configure** system login-control pre-login-message name *boolean*

Tree name

Default false

Introduced 16.0.R1

Platforms All

ssh

Synopsis Enter the **ssh** context

Context **configure** system login-control ssh

Tree ssh

Description Commands in this context configure the SSH command options.

Introduced 16.0.R1

Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

graceful-shutdown *boolean*

Synopsis	Allow graceful shutdown of SSH sessions
Context	**configure** system login-control ssh graceful-shutdown *boolean*
Tree	graceful-shutdown
Default	true
Introduced	16.0.R1
Platforms	All

inbound-max-sessions *number*

Synopsis	Maximum number of concurrent inbound sessions
Context	**configure** system login-control ssh inbound-max-sessions *number*
Tree	inbound-max-sessions
Range	0 to 50
Default	5
Introduced	16.0.R1
Platforms	All

max-channels-per-connection *number*

Synopsis	Maximum number of channels per SSH connection
Context	**configure** system login-control ssh max-channels-per-connection *number*
Tree	max-channels-per-connection
Range	1 to 50
Default	5
Introduced	24.7.R1
Platforms	All

outbound-max-sessions *number*

Synopsis	Maximum number of concurrent outbound sessions
Context	**configure** system login-control ssh outbound-max-sessions *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	outbound-max-sessions
Description	This command configures the maximum number of outbound Telnet and SSH sessions. The local serial port cannot be disabled.
Range	0 to 15
Default	5
Introduced	16.0.R1
Platforms	All

ttl-security *number*

Synopsis	Minimum TTL value for incoming packets
Context	**configure** system login-control ssh ttl-security *number*
Tree	ttl-security
Description	This command configures TTL security command options for incoming packets. When the feature is enabled, LDP accepts incoming IP packets from a peer only if the TTL value in the packet is greater than or equal to the minimum TTL value configured for that peer. Per-peer-queueing must be enabled in order for TTL protection to operate.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

telnet

Synopsis	Enter the **telnet** context
Context	**configure** system login-control telnet
Tree	telnet
Description	Commands in this context configure the Telnet command options.
Introduced	16.0.R1
Platforms	All

graceful-shutdown *boolean*

Synopsis	Allow graceful shutdown of Telnet sessions
Context	**configure** system login-control telnet graceful-shutdown *boolean*
Tree	graceful-shutdown
Default	false

classic-cli

Synopsis	Enter the **classic-cli** context
Context	**configure** system management-interface cli classic-cli
Tree	classic-cli
Description	Commands in this context configure the classic CLI management interface.
Introduced	16.0.R1
Platforms	All

allow-immediate *boolean*

Synopsis	Allow writable access in classic CLI configure branch
Context	**configure** system management-interface cli classic-cli allow-immediate *boolean*
Tree	allow-immediate

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command enables write access in the classic CLI configuration branch without having to use the classic CLI **candidate edit** functionality. When configured to **false**, this command blocks write access and configuration changes in the classic CLI configuration branch, and the classic CLI configuration branch is read-only. This enforces using the classic CLI **candidate edit** functionality, including **candidate commit**, to modify the router configuration, instead of allowing immediate line-by-line configuration changes.
Default	true
Introduced	16.0.R1
Platforms	All

rollback

Synopsis	Enter the **rollback** context
Context	**configure** system management-interface cli classic-cli rollback
Tree	rollback
Description	Commands in this context control classic CLI configuration rollback functionality, such as the maximum number of rollback checkpoints the system maintains. Configuration rollback allows the operator to revert to previous router configuration states while minimizing impacts to services.
Introduced	16.0.R1
Platforms	All

local-checkpoints *number*

Synopsis	Maximum number of rollback files on local storage
Context	**configure** system management-interface cli classic-cli rollback local-checkpoints *number*
Tree	local-checkpoints
Range	1 to 50
Default	10
Introduced	16.0.R1
Platforms	All

location *url*

Synopsis	Path and filename prefix for rollback checkpoint files
Context	**configure** system management-interface cli classic-cli rollback location *url*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	location
Description	This command configures the local (for example, compact flash) or remote location and name of the classic CLI rollback checkpoint files. The filename must not contain a suffix. The suffixes for rollback checkpoint files are, for example, .rb, .rb.1, .rb.2, and so on. The suffixes are automatically appended to rollback checkpoint files.
String length	1 to 180
Introduced	16.0.R1
Platforms	All

remote-checkpoints *number*

Synopsis	Maximum rollback files saved at a remote location
Context	**configure** system management-interface cli classic-cli rollback remote-checkpoints *number*
Tree	remote-checkpoints
Range	1 to 200
Default	10
Introduced	16.0.R1
Platforms	All

rescue

Synopsis	Enter the **rescue** context
Context	**configure** system management-interface cli classic-cli rollback rescue
Tree	rescue
Introduced	16.0.R1
Platforms	All

location *url*

Synopsis	Location of the rescue configuration file
Context	**configure** system management-interface cli classic-cli rollback rescue location *url*
Tree	location
Description	This command configures the local or remote location and filename of the classic CLI rescue configuration file. The suffix (.rc) is automatically appended to the filename when a rescue configuration file is saved. Trivial FTP (TFTP) is not supported for remote locations.

Context	**configure** system management-interface cli md-cli environment python timeout *number*
Tree	timeout
Range	30 to 86400
Units	seconds
Default	3600
Introduced	21.10.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

time-display *keyword*

Synopsis	Time zone to display time
Context	**configure** system management-interface cli md-cli environment time-display *keyword*
Tree	time-display
Description	This command configures the time zone for a timestamp displayed in outputs, such as event logs and **show** commands for the current CLI session. In event logs, the selected time is used to control the timestamps in the CLI output of **show log log-id** and in YANG state in the /state/log/log-id branch (for logs such as session, cli, memory, SNMP, and NETCONF). Also see the **configure log log-id time-format** command.
Options	local, utc
Default	local
Introduced	16.0.R1
Platforms	All

time-format *keyword*

Synopsis	Format to display the date and time
Context	**configure** system management-interface cli md-cli environment time-format *keyword*
Tree	time-format
Description	This command specifies the format of the time display in the prompt, configuration, state, and certain **show** command output in the current CLI session.
Options	iso-8601, rfc-1123, rfc-3339
Default	rfc-3339
Introduced	20.5.R1
Platforms	All

commit-history *number*

Synopsis	Number of commit history IDs to store
Context	**configure** system management-interface commit-history *number*
Tree	commit-history
Description	This command sets the number of IDs to store in the commit history. Setting the value to 0 disables the commit history.
Range	0 to 200

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	50
Introduced	21.10.R1
Platforms	All

configuration-mode *keyword*

Synopsis	Management interfaces allowed to edit the configuration
Context	**configure** system management-interface configuration-mode *keyword*
Tree	configuration-mode
Description	This command controls which of the classic or model-driven management interfaces can modify the configuration of the router. Any management interface can be used in any configuration mode (to gather state information or perform operations, for example), but only specific management interfaces (CLI, NETCONF, and so on) are allowed to edit the configuration of the router in different modes. For example, only classic CLI and SNMP can be used to edit the configuration when in classic mode.
Options	classic, model-driven, mixed
Introduced	16.0.R1
Platforms	All

configuration-save

Synopsis	Enter the **configuration-save** context
Context	**configure** system management-interface configuration-save
Tree	configuration-save
Description	Commands in this context configure the attributes for saved configuration files.
Introduced	16.0.R1
Platforms	All

configuration-backups *number*

Synopsis	Maximum number of configuration versions maintained
Context	**configure** system management-interface configuration-save configuration-backups *number*
Tree	configuration-backups
Description	This command configures the maximum number of saved configuration file versions the router maintains.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When the configuration is saved, configuration file names are appended with a numeric extension. Each subsequent configuration save creates a new configuration file version with an incremented numeric extension until the maximum count is reached, after which the next configuration save overwrites the oldest file version.

Each persistent index file is updated at the same time as the associated configuration file. The system synchronizes the active and standby CPM for all configurations and their associated persistent index files.

Range	1 to 200
Default	50
Introduced	16.0.R1
Platforms	All

incremental-saves *boolean*

Synopsis	Use incremental saved configuration files
Context	**configure** system management-interface configuration-save incremental-saves *boolean*
Tree	incremental-saves
Description	When configured to **true**, the system saves each commit to the **configure** configuration region in a separate incremental saved configuration file, which allows for faster commits, instead of saving a complete saved configuration file each time.
Default	true
Introduced	22.7.R1
Platforms	All

netconf

Synopsis	Enter the **netconf** context
Context	**configure** system management-interface netconf
Tree	netconf
Introduced	16.0.R1
Platforms	All

Context	**configure** system management-interface netconf capabilities
Tree	capabilities

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure explicit capabilities for the NETCONF server.
Introduced	16.0.R1
Platforms	All

candidate *boolean*

Synopsis	Allow the NETCONF server to access candidate datastore
Context	**configure** system management-interface netconf capabilities candidate *boolean*
Tree	candidate
Description	When configured to **true**, this command allows the SR OS NETCONF server to access the candidate configuration datastore. Configuring this command to **true** also enables using **commit** and **discard-changes**. When **configure system management-interface configuration-mode** is set to **classic**, the candidate capability is disabled, even if this command is configured to **true**. When configured to **false**, this command disables the SR OS NETCONF server from accessing the candidate datastore. If the candidate is disabled, requests that reference the candidate datastore return an error, and when a NETCONF client establishes a new session, the candidate capability is not advertised in the SR OS NETCONF Hello message.
Default	true
Introduced	16.0.R1
Platforms	All

listen

Synopsis	Enter the **listen** context
Context	**configure** system management-interface netconf listen

delay-on-boot *number*

Synopsis	Delay before NETCONF server is operational after boot
Context	**configure** system management-interface netconf listen delay-on-boot *number*
Tree	delay-on-boot
Description	This command configures the delay timer for NETCONF connections. When the timer expires, NETCONF becomes operational and connections are accepted. This delay prevents automation from managing the system while it is still converging. When no delay is configured, connections are accepted after the system boots and NETCONF becomes operational.
Range	1 to 3600
Units	seconds
Introduced	24.3.R1
Platforms	All

port *number*

Synopsis	Port on which NETCONF server listens for connections
Context	**configure** system management-interface netconf listen port *number*
Tree	port
Description	This command specifies the port on which the SR OS NETCONF server listens for new connections. One port can be configured for NETCONF management. The configured port applies to both non-VPRN and VPRN management. New NETCONF connections are able to use the configured port. For NETCONF connections not using VPRN management, active NETCONF connections are not disconnected if the connection port changes. For NETCONF connections are not disconnected if the connection port changes. For NETCONF connections using VPRN management, active NETCONF connections are disconnected if the connection port changes.
Range	22 | 830 | 1024 to 49151
Default	830
Introduced	24.3.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

operations

Synopsis	Enter the **operations** context
Context	**configure** system management-interface operations
Tree	operations
Description	Commands in this context configure parameters associated with operational commands in model-driven interfaces.
Introduced	21.5.R1
Platforms	All

global-timeouts

Synopsis	Enter the **global-timeouts** context
Context	**configure** system management-interface operations global-timeouts
Tree	global-timeouts
Description	Commands in this context configure system timeout parameters for operational commands. Timeout parameters provide default system-level control for various types of operational commands in model-driven interfaces. The timeout values are used when specific execution and retention timeouts are not requested for a specific operation.
Introduced	21.5.R1
Platforms	All

asynchronous-execution *(number | keyword)*

Synopsis	Timeout for asynchronous operation execution
Context	**configure** system management-interface operations global-timeouts asynchronous-execution *(number | keyword)*
Tree	asynchronous-execution
Description	This command configures the period of time that operations launched as “asynchronous” are allowed to execute before being automatically stopped by the SR OS. An asynchronous operation is not deleted from the system when it is stopped. See the **asynchronous-retention** command. If a specific execution timeout is not included in the request for a particular asynchronous operation, this system-level timeout applies.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Note: This execution timeout is part of the general global operations infrastructure and is separate and independent from any operation-specific timeouts (for example, the **ping** operation also has its own timeout parameter).

Range	1 to 604800
Units	seconds
Options	never
Default	3600
Introduced	21.5.R1
Platforms	All

asynchronous-retention *(number | keyword)*

Synopsis	Timeout for asynchronous operation data retention
Context	**configure** system management-interface operations global-timeouts asynchronous-retention *(number | keyword)*
Tree	asynchronous-retention
Description	This command configures the period of time that data related to operations launched as “asynchronous” is retained in the system. After the retention timeout expires, all information related to the operation is deleted, including any status information and result data. If a specific retention timeout is not included in the request for a particular asynchronous operation, this system-level timeout applies.
Range	1 to 604800
Units	seconds
Options	never
Default	86400
Introduced	21.5.R1
Platforms	All

synchronous-execution *(number | keyword)*

Synopsis	Timeout for synchronous operation execution
Context	**configure** system management-interface operations global-timeouts synchronous-execution *(number | keyword)*
Tree	synchronous-execution
Description	This command configures the period of time that operations launched as “'synchronous” (the default method for all operations) are allowed to execute before they are automatically stopped, and their associated data is deleted.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If a specific execution timeout is not included in the request for a particular synchronous operation, this system-level timeout applies.

Note: This execution timeout is part of the general global operations infrastructure and is separate and independent from any operation-specific timeouts (for example, the **ping** operation also has its own timeout parameter).

Caution: If this command is set with a specific time value, MD-CLI operations are subject to the timeout and are interrupted if they execute longer than the time value. This situation can arise because the timeout also applies to operations requested in the MD-CLI interface (for example, **ping**, **file dir**, and so on).

Range	1 to 604800
Units	seconds
Options	never
Default	never
Introduced	21.5.R1
Platforms	All

remote-management

Synopsis	Enter the **remote-management** context
Context	**configure** system management-interface remote-management
Tree	remote-management
Description	Commands in this context configure the SR OS node to use the remote management service. Configuring remote management enables the SR OS node to report itself to a remote manager service running on a remote server, so that it is included in the dynamic list of available nodes. The manager service streamlines the management of multiple SR OS nodes running different SR OS versions using the same client application providing a similar shell to the MD-CLI.
Introduced	20.5.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of remote management registration
Context	**configure** system management-interface remote-management admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.5.R1

schema-path *url*

Synopsis	Schema path URL
Context	**configure** system management-interface schema-path *url*
Tree	schema-path

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the schema path where the SR OS YANG modules can be placed by the user before using a <get-schema> request. Nokia recommends that the URL string not exceed 135 characters for the <get-schema> request to work correctly with all schema files. If this command is not configured, the software upgrade process manages the YANG schema files to ensure the schema files are synchronized with the software image on both the primary and standby CPM.
String length	1 to 180
Introduced	16.0.R4
Platforms	All

snmp

Synopsis	Enter the **snmp** context
Context	**configure** system management-interface snmp
Tree	snmp
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the SNMP agent
Context	**configure** system management-interface snmp admin-state *keyword*
Tree	admin-state
Description	This command administratively enables or disables SNMP agent operations. Disabling SNMP does not prevent the agent from sending SNMP notifications to configured SNMP trap destinations. In classic and mixed configuration mode, the agent is administratively disabled in the event of a reboot when the processing of the configuration file fails to complete or when an SNMP persistent index file fails while the **bof system persistent-indices** command is set to **true**. This prevents an SNMP-based management system from accessing and possibly synchronizing with a partially booted or incomplete network element. This auto-disable behavior is not applicable to model-driven configuration mode.
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

engine-id *engine-id-as-string*

Synopsis	SNMP engine ID that identifies the SNMPv3 node
Context	**configure** system management-interface snmp engine-id *engine-id-as-string*
Tree	engine-id
Description	This command sets the SNMP engine ID that uniquely identifies the SNMPv3 node. If unconfigured, the system uses an engine ID based on the information from the system backplane. If the SNMP engine ID is changed, the current configuration must be saved and a reboot must be executed. Otherwise, the previously configured SNMP communities and logger trap-target notify communities will not be valid for the new engine ID. **Note:** Changing the SNMP engine ID invalidates all SNMPv3 MD5 and SHA security digest keys, which may render the node unmanageable. When replacing a chassis, configure the new router to use the same engine ID as the previous router. This preserves SNMPv3 security keys and allows management stations to use their existing authentication keys for the new router. Ensure that the engine ID of each router is unique. A management domain can only maintain one instance of a specific engine ID.
String length	10 to 64
Introduced	16.0.R1
Platforms	All

general-port *number*

Synopsis	Port number used to send general SNMP messages
Context	**configure** system management-interface snmp general-port *number*
Tree	general-port
Description	This command configures the port number used to receive SNMP request messages and send replies. For the port used for SNMP notifications, configure the **configure log snmp-trap-group trap-target port** command.
Range	0 | 1 to 65535
Default	161
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-bulk-duration *number*

Synopsis	Maximum process duration before responses are returned
Context	**configure** system management-interface snmp max-bulk-duration *number*
Tree	max-bulk-duration
Description	This command sets the maximum duration to process an SNMP request before bulk responses are returned to avoid a timeout on the management system when a lot of information is returned in the response.
Range	100 to 5000
Units	milliseconds
Introduced	23.3.R1
Platforms	All

packet-size *number*

Synopsis	Maximum SNMP packet size generated by the node
Context	**configure** system management-interface snmp packet-size *number*
Tree	packet-size
Range	484 to 9216
Default	1500
Introduced	16.0.R1

nmda

Synopsis	Enter the **nmda** context
Context	**configure** system management-interface yang-modules nmda
Tree	nmda
Description	Commands in this context configure the attributes for the Network Management Datastores Architecture (NMDA).
Introduced	21.7.R1
Platforms	All

nmda-support *boolean*

Synopsis	Advertise NMDA support over NETCONF
Context	**configure** system management-interface yang-modules nmda nmda-support *boolean*
Tree	nmda-support
Description	When configured to **true**, this command enables the advertisement of NMDA support over NETCONF through the use of YANG library 1.1. When configured to **false**, this command disables NMDA advertisement over NETCONF and YANG library 1.0 is used.
Default	false
Introduced	21.7.R1
Platforms	All

nokia-combined-modules *boolean*

Synopsis	Support access to combined Nokia YANG models
Context	**configure** system management-interface yang-modules nokia-combined-modules *boolean*
Tree	nokia-combined-modules
Description	When configured to **true**, the system supports the combined Nokia YANG files for both configuration and state data in the NETCONF server. When the system is operating in classic configuration mode, attempts to access (read or write) the configuration using the Nokia configuration modules or namespace via NETCONF result in errors, even if this command is set to **true**. When configured to **false**, access to the combined Nokia YANG files is not supported. This command and the **nokia-submodules** command cannot both be set to **true** at the same time.

Default	true
Introduced	16.0.R4
Platforms	All

nokia-submodules *boolean*

Synopsis	Support submodule-based packaging of Nokia YANG models
Context	**configure** system management-interface yang-modules nokia-submodules *boolean*
Tree	nokia-submodules
Description	When configured to **true**, the system supports the alternative submodule-based packaging of the Nokia YANG files for both configuration and state data in the NETCONF server. When the system is operating in classic configuration mode, attempts to access (read or write) the configuration using the Nokia configuration modules or namespace via NETCONF result in errors, even if this command is set to **true**. When configured to **false**, access to the submodule-based packaging of the Nokia YANG files is not supported. This command and the **nokia-combined-module**s command cannot both be set to **true** at the same time.
Default	false
Introduced	21.2.R1
Platforms	All

openconfig-modules *boolean*

Synopsis	Support access to OpenConfig YANG models
Context	**configure** system management-interface yang-modules openconfig-modules *boolean*
Tree	openconfig-modules
Description	When configured to **true**, this command allows access to OpenConfig YANG models in all model-driven interfaces.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

shared-model-management *boolean*

Synopsis	Allow multiple models to configure the same elements

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system management-interface yang-modules shared-model-management *boolean*
Tree	shared-model-management
Description	When configured to **true**, the router allows Nokia and third-party models to configure the same elements in model-driven interfaces. When configured to **false**, only one model can be used to configure the same element.
Default	true
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

name *named-item-64*

Platforms	All

persistence

Synopsis	Enter the **persistence** context
Context	**configure** system persistence
Tree	persistence
Description	Commands in this context configure persistence on the system. The persistence feature enables the system to retain state information learned through DHCP snooping across reboots. This information includes data such as the IP address and MAC binding information, lease-length information, and ingress SAP information (required for VPLS snooping to identify the ingress interface). If persistence is enabled when there are no DHCP relay or snooping commands enabled, the system creates an empty file.
Introduced	16.0.R1

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	PTP announce message interval in log form
Context	**configure** system ptp alternate-profile *named-item-64* log-announce-interval *number*
Tree	log-announce-interval
Description	This command configures the announce message interval used for multicast messages within the alternate profile. For multicast messages used on PTP Ethernet ports, this command configures the message interval used for announce messages transmitted by the local node. This value has no impact on the interval used for the BTCA, which is controlled by the value defined for the primary profile.
Range	-3 to 4
Default	-3
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

profile *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Standard based profile used within an alternate profile
Context	**configure** system ptp alternate-profile *named-item-64* profile *keyword*
Tree	profile
Description	This command specifies the standard based profile that is used as the basis for the alternate profile. This setting controls the contents of PTP messages sent on ports and peers using this alternate profile. The **iec-61850-9-3-2016** and **c37dot238-2017** options are not supported on the 7750 SR, 7450 ESS, and 7950 XRS.
Options	g8265dot1-2010 – ITU-T G.8265.1 specification ieee1588-2008 – 2008 version of IEEE 1588 standard g8275dot1-2014 – 2014 version of ITU-T G.8275.1 specification g8275dot2-2016 – 2016 version of ITU-T G.8275.1 specification iec-61850-9-3-2016 – 2016 version of IEC/IEEE 61850-9-3 standard c37dot238-2017 – 2017 version of C37.238 specification
Default	g8275dot1-2014
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

domain *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PTP domain
Context	**configure** system ptp domain *number*
Tree	domain
Description	This command configures the PTP domain. The default and valid range of the domain depend on the configured PTP profile. • IEEE 1588-2008 - domain range of 0 to 255 (default 0) • G.8265.1 - domain range of 0 to 255 (default 4) • G.8275.1 - domain range of 24 to 43 (default 24) • G.8275.2 - domain range of 0 to 255 (default 44) • IEC/IEEE 61850-9-3 - domain range of 0 to 255 (default 0) • C37.238 - domain range of 0 to 255 (default 254) The **iec-61850-9-3** and **c37dot238-2017** options are not supported on the 7750 SR, 7450 ESS, and 7950 XRS.
Range	0 to 255
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

local-priority *number*

Synopsis	PTP clock local priority
Context	**configure** system ptp local-priority *number*
Tree	local-priority
Description	This command configures the local priority used to choose between PTP time Transmitters in the best timeTransmitter clock algorithm (BTCA). This setting applies when the PTP profile is either configured for G.8275.1 or G.8275.2 and is ignored for any other profile. For G.8275.1 or G.8275.2, this command configures the localPriority command option associated with the local clock (**ptp** context). See the ITU-T G.8275.1 or G.8275.2 standard for detailed information.
Range	1 to 255
Default	128
Introduced	21.7.R1

log-announce-interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Announce message interval in log form

Context **configure** system ptp log-announce-interval *number*

Tree log-announce-interval

Description This command configures the Announce message interval used for both unicast and multicast messages.

For unicast messages, the Announce message interval is requested during unicast negotiation to any peer. This controls the Announce message rate sent from remote peers to the local node. It does not affect the announce message rate that may be sent from the local node to remote peers. Remote peers may request an Announce message rate within the acceptable grant range.

For multicast messages used on PTP Ethernet ports, this command specifies the message interval used for Announce messages transmitted by the local node.

This value also defines the interval between executions of the BTCA within the node.

To minimize BTCA-driven reconfigurations, IEEE recommends that the Announce interval should be consistent across the entire 1588 network.

Range -3 to 4

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

network-type *keyword*

Synopsis PTP network type

Context **configure** system ptp network-type *keyword*

Tree network-type

Description This command configures the codeset to be used for the encoding of QL values into PTP clockClass values and vice versa when the profile is configured for G.8265.1 or G.8275.2.

This setting only applies to the range of values observed in the clockClass values transmitted out of the node in Announce messages. The router supports the reception of any valid value in Table 1/G.8265.1 and Table2/G.8275.2.

Options sonet, sdh

Default	sdh
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port [port-id] *reference*

Synopsis	Enter the **port** list instance
Context	**configure** system ptp port *reference*
Tree	port
Description	Commands in this context configure PTP over Ethernet on the physical port. The PTP process transmits and receives PTP messages through the port using Ethernet encapsulation (as opposed to UDP/IPv4 encapsulation). Frames are transmitted with no VLAN tags, even if the port is configured for dot1q or qinq modes for encap-type. The received frames from the external PTP clock must also be untagged. Two reserved multicast addresses are allocated for PTP messages (see Annex F IEEE Std 1588-2008). Either address can be configured for the PTP messages sent through the port. A PTP port cannot be created if the PTP profile is configured for G.8265.1. If the port supports 1588 port-based timestamping, Synchronous Ethernet must be enabled on the MDA when PTP over Ethernet is enabled. De-provisioning of the card or MDA containing the specified port is not permitted while the port is configured within PTP. Changing the encapsulation or the port type of the Ethernet port is not permitted when PTP Ethernet Multicast operation is configured on the port. To allocate an Ethernet satellite client port as a PTP port, the Ethernet satellite must first be enabled for the transparent clock function. For more information, see the **configure satellite ethernet-satellite ptp-tc** command. The SyncE/1588 ports of the CPM and CCMs can be specified as PTP ports. These use the ‘A/3’ and ‘B/3’ designation and both must be specified as two PTP ports if both are used. The active CPM sends and receives messages on both ports if they are specified and enabled.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Synopsis	Alternate profile for the PTP port
Context	**configure** system ptp port *reference* alternate-profile *reference*
Tree	alternate-profile

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command creates the alternate profile that is used in communications with the port or peer. If no alternate profile is specified, the primary profile is used.
Reference	**configure** system ptp alternate-profile *named-item-64*
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

local-priority *number*

Synopsis	PTP port local priority
Context	**configure** system ptp port *reference* local-priority *number*
Tree	local-priority
Description	This command configures the local priority used to choose between PTP time Transmitters in the best timeTransmitter clock algorithm (BTCA). This setting applies when the PTP profile is either configured for G.8275.1 or G.8275.2 and is ignored for any other profile. For G.8275.1 or G.8275.2, this command configures the localPriority parameter associated with the Announce messages received from the external clocks (**ptp port** context). See G.8275.1 or G.8275.2 for detailed information.
Range	1 to 255
Default	128
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

log-delay-interval *number*

Synopsis	Minimum interval for Delay_Req messages in log form
Context	**configure** system ptp port *reference* log-delay-interval *number*
Tree	log-delay-interval
Description	This command configures the minimum interval used for multicast Delay_Req messages for the port. For ports in a slave state, the interval is used, unless the parent port indicates a longer interval. For a port in master state, the interval is advertised to external slave ports as the minimum acceptable interval for Delay_Req messages from the slave ports. The router supports the 1588 standard requirement for a port in slave state to check the logMessageInterval field of received multicast Delay_Resp messages. If the value of the logMessageInterval field of the messages is greater than the value configured locally for the generation of Delay_Req messages, the slave must use the longer interval for the generation of Delay_Req messages. The interval value is specified as the logarithm to the base 2.

Range	-6 to 0
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

log-sync-interval *number*

Synopsis	Interval for transmission of Sync messages in log form
Context	**configure** system ptp port *reference* log-sync-interval *number*
Tree	log-sync-interval
Description	This command configures the interval used for Sync messages transmitted by the local node when the port is in master state. The interval value is specified as the logarithm to the base 2.
Range	-6 to 0
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

master-only *boolean*

Synopsis	Restrict the local port to master state
Context	**configure** system ptp port *reference* master-only *boolean*
Tree	master-only
Description	When configured to **true**, the local port is restricted to master state only, ensuring that the system does not obtain synchronization from attached external devices. This command is supported only when the PTP profile is set for G.8275.1 or G.8275.2.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

monitor-receiver *boolean*

Synopsis	Enable the PTP port as a monitor-receiver
Context	**configure** system ptp port *reference* monitor-receiver *boolean*
Tree	monitor-receiver
Description	When configured to **true**, the router enables the PTP port as a monitorReceiver for PTP. When not in TimeReceiver mode, the PTP port runs a time-recovery engine for PTP monitoring. This object is supported only when the PTP profile is set to G.8275.1 or G.8275.2.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, monitoring is disabled.

Default	false
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

monitor-sender *boolean*

Synopsis	Enable the PTP port as a monitor-sender
Context	**configure** system ptp port *reference* monitor-sender *boolean*
Tree	monitor-sender
Description	When configured to **true**, the router enables the PTP port as a monitorSender for PTP. When not in TimeTransmitter mode, the PTP port sends Announce, Sync, and Delay_Resp messages with the alternateMasterFlag set to TRUE for PTP monitoring at the remote clock. This object is supported only when the PTP profile is set to G.8275.1 or G.8275.2. When configured to **false**, monitoring is disabled.
Default	false
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

not-master *boolean*

Synopsis	Block PTP port from entering the timeTransmitter state
Context	**configure** system ptp port *reference* not-master *boolean*
Tree	not-master
Description	When configured to **true**, the router blocks the port from entering the timeTransmitter state.
Default	false
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority1 *number*

Synopsis	PTP profile
Context	**configure** system ptp profile *keyword*
Tree	profile
Description	This command configures the profile to be used for the internal PTP clock. It defines the Best timeTransmitter Clock Algorithm (BTCA) behavior.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Profile changes may affect the settings of other configuration elements, such as the clock type and default settings for the delay interval, announce interval, and the Sync interval.

The following clock types are supported for the indicated profiles:

- G.8265.1: slave only, master only
- IEEE 1588 2008: slave only, master only, boundary
- G.8275.1: slave only, boundary, master only (master only, only if the platform includes an embedded GNSS receiver)
- G.8275.2: slave only, boundary, master only (master only, only if the platform includes an embedded GNSS receiver)
- IEC/IEEE 61850-9-3: slave only, master only, boundary
- C37.238: slave only, master only, boundary

The **iec-61850-9-3-2016** and **c37dot238-2017** options are not supported on the 7750 SR, 7450 ESS, and 7950 XRS.

Options
g8265dot1-2010 – ITU-T G.8265.1 specification
ieee1588-2008 – 2008 version of IEEE 1588 standard
g8275dot1-2014 – 2014 version of ITU-T G.8275.1 specification
g8275dot2-2016 – 2016 version of ITU-T G.8275.1 specification
iec-61850-9-3-2016 – 2016 version of IEC/IEEE 61850-9-3 standard
c37dot238-2017 – 2017 version of C37.238 specification

Introduced 21.7.R1

monitor-ptsf-unusable

Synopsis Enter the **monitor-ptsf-unusable** context

Context **configure** system ptp ptsf monitor-ptsf-unusable

Tree monitor-ptsf-unusable

Description Commands in this context configure monitoring of neighbor clocks for the PTSF-unusable state (condition) when the profile is set to g8275dot1-2014.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When administratively enabled, the local clock monitors the noise level of PTP event messages between external neighbor PTP ports and the local clock. If it detects a high variation in the network path between the external neighbor port and the local port, it considers the neighbor port unusable. Announce messages from the neighbor are discarded and excluded from the BTCA and the port cannot be selected as the parent clock. The unusable condition must be manually cleared.

When administratively disabled, the monitor PTSF function of the PTP clock clears PTSF-unusable states from all neighbor PTP ports. If no PTP messages are received from a neighbor for 15 minutes, the neighbor information is purged and the PTSF-unusable state is cleared.

Synopsis	PTP peer interval for Sync messages in log form

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system ptp router *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)* log-sync-interval *number*
Tree	log-sync-interval
Description	This command configures the message interval used for Sync and Delay_Resp messages that are requested during unicast negotiation to the peer. The setting controls messages sent from remote peers to the local node but the packet rate from the local node to remote peers is not affected. Remote peers may request a packet rate within the acceptable range. The interval value is specified as the logarithm to the base 2.
Range	-6 to 0
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

monitor-receiver *boolean*

Synopsis	Enable the PTP peer as a monitor-receiver
Context	**configure** system ptp router *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)* monitor-receiver *boolean*
Tree	monitor-receiver
Description	When configured to **true**, the router enables the PTP peer as a monitorReceiver for PTP. When not in TimeReceiver mode, the PTP port runs a time-recovery engine for PTP monitoring. This object is only supported when the PTP profile is set to G.8275.1 or G.8275.2. When configured to **false**, monitoring is disabled.
Default	false
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

not-master *boolean*

Synopsis	Block PTP port from entering the timeTransmitter state
Context	**configure** system ptp router *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)* not-master *boolean*
Tree	not-master
Description	When configured to **true**, the router blocks the port associated with the peer from entering the timeTransmitter state.
Default	false
Introduced	25.3.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

peer-limit *number*

Synopsis	Number of discovered peers allowed for routing instance
Context	**configure** system ptp router *string* peer-limit *number*
Tree	peer-limit
Description	This command specifies the maximum number of discovered peers permitted within the routing instance. This ensures that a routing instance does not consume all the possible discovered peers and prevents the routing instance from blocking discovered peers in other routing instances. The sum of all peer limit values for all routing instances cannot exceed the maximum number of discovered peers supported by the system.
Range	0 to 1600
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-while-sync-uncertain *boolean*

Synopsis	Send Announce messages while clock is unsynchronized
Context	**configure** system ptp tx-while-sync-uncertain *boolean*
Tree	tx-while-sync-uncertain
Description	When configured to **true**, the local PTP clock transmits Announce messages to downstream clocks to indicate it has not yet stabilized on the recovered synchronization source (upstream clocks or GM clock). While the PTP clock is unsynchronized, the Sync Uncertain state is true. When configured to **false**, the local PTP clock does not send Announce messages to downstream clocks to indicate it is not synchronized to a valid timing source. If the Sync Uncertain state of the clock is true while this command is configured to **false**, unicast negotiation grant requests are not granted and current grants are canceled.
Default	true
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Synopsis	Enter the **script-policy** list instance
Context	**configure** system script-control script-policy *named-item* owner *named-item*
Tree	script-policy
Max. instances	1500
Introduced	16.0.R1
Platforms	All

[**policy-name**] *named-item*

Synopsis	Script policy name
Context	**configure** system script-control script-policy *named-item* owner *named-item*
Tree	script-policy
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

owner *named-item*

Synopsis	Script policy owner
Context	**configure** system script-control script-policy *named-item* owner *named-item*
Tree	script-policy
Description	This command configures the owner to be associated with the script policy. The owner is optional and "TiMOS CLI" is used if an owner is not specified. The owner is an arbitrary name and not necessarily a user name. Commands in the scripts are not authorized against the owner. The **configure system security cli-script authorization** x **cli-user** command determines the user context against which commands in the scripts are authorized.
String length	1 to 32

default-user *reference*

Synopsis	Local user to display with mTLS authentication
Context	**configure** system security aaa management-interface grpc tls-authentication default-user *reference*
Tree	default-user
Description	This command configures the local user to display for gRPC sessions authenticated using mTLS when the username metadata is not sent during authentication. The configured local user is associated with every session that authenticates with mTLS without a username. This username is displayed in several places, for example, in the command output for the **show users** command, YANG state, log messages, and debug messages. The local user must be configured but is not used in mTLS authentication.
Reference	**configure** system security user-params local-user user *named-item*
Introduced	25.7.R1
Platforms	All

md-cli

Synopsis	Enter the **md-cli** context
Context	**configure** system security aaa management-interface md-cli
Tree	md-cli
Introduced	20.10.R1
Platforms	All

command-accounting-during-load *boolean*

Synopsis	Perform file command accounting for load or rollback
Context	**configure** system security aaa management-interface md-cli command-accounting-during-load *boolean*
Tree	command-accounting-during-load
Default	true
Introduced	20.10.R1
Platforms	All

© 2025 Nokia.

output-authorization

Synopsis	Enter the **output-authorization** context
Context	**configure** system security aaa management-interface output-authorization
Tree	output-authorization
Description	Commands in this context configure output authorization for model-driven interfaces and telemetry. When output authorization is performed, commands that display configuration or state output must authorize every element in the output. If a remote AAA server is configured, there may be delays in displaying output while the output is authorized. The remote AAA server may receive a large volume of authorization requests when substantial output displays are needed, such as for system configuration details. Input to edit the configuration is always authorized, and is not affected by commands in this context.
Introduced	20.10.R1
Platforms	All

md-interfaces *boolean*

Synopsis	Authorize output in model-driven interfaces
Context	**configure** system security aaa management-interface output-authorization md-interfaces *boolean*
Tree	md-interfaces
Description	When configured to **true**, output is authorized for the following: • MD-CLI **info** and **compare** commands • MD-CLI command completion of list key values • NETCONF <get> and <get-config> RPC • gRPC/gNMI Get RPCs
Default	true
Introduced	20.10.R1
Platforms	All

telemetry-data *boolean*

Synopsis	Authorize dial-in telemetry output
Context	**configure** system security aaa management-interface output-authorization telemetry-data *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	telemetry-data
Description	When configured to **true**, the system authorizes telemetry data in gNMI Subscriber RPC responses for dial-in telemetry. When configured to **false**, telemetry data is not authorized.
Default	false
Introduced	20.10.R1
Platforms	All

telemetry-default-user *reference*

Synopsis	Local user for dial-out telemetry output authorization
Context	**configure** system security aaa management-interface output-authorization telemetry-default-user *reference*
Tree	telemetry-default-user
Description	This command specifies the local user for telemetry data authorization in gNMI Publish RPCs for dial-out telemetry. The administrator must configure the local user to ensure the subscription is operational.
Reference	**configure** system security user-params local-user user *named-item*
Introduced	25.3.R1
Platforms	All

remote-servers

Synopsis	Enter the **remote-servers** context
Context	**configure** system security aaa remote-servers
Tree	remote-servers

Use subject to Terms available at: www.nokia.com/terms.

use-priv-lvl *boolean*

Synopsis	Allow privilege level mapping
Context	**configure** system security aaa remote-servers tacplus authorization use-priv-lvl *boolean*
Tree	use-priv-lvl
Description	When configured to **true**, this command automatically performs a single authorization request to the TACACS+ server for cmd* (all commands) immediately after login, and then uses the local profile associated (via the **priv-lvl-map**) with the priv-lvl returned by the TACACS+ server for all subsequent authorization (except **enable-admin**). After the initial authorization for cmd*, no further authorization requests are sent to the TACACS+ server (except **enable-admin**). When configured to **false**, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the **tacplus use-default-template** setting is enabled).
Default	false
Introduced	16.0.R1
Platforms	All

ignore-unknown-mandatory-vsas *boolean*

Synopsis	Ignore unknown mandatory VSAs and fail authentication
Context	**configure** system security aaa remote-servers tacplus ignore-unknown-mandatory-vsas *boolean*
Tree	ignore-unknown-mandatory-vsas
Description	When configured to **true**, the system ignores unknown mandatory VSAs and authentication succeeds. When configured to **false**, the system ignores unknown mandatory VSAs received in a reply from the TACACS+ server. Authentication fails and the user is disconnected because the system cannot process a mandatory VSA that is unknown.
Default	false
Introduced	25.3.R1
Platforms	All

interactive-authentication *boolean*

Synopsis	Allows TACACS+ interactive authentication
Context	**configure** system security aaa remote-servers tacplus interactive-authentication *boolean*
Tree	interactive-authentication

Context	**configure** system security aaa remote-servers vprn-server outband *reference*
Tree	outband
Description	This command configures TACACS+ and RADIUS servers in a VPRN to be used for AAA by that VPRN and by sessions on the console or out-of-band (OOB) Ethernet ports.
Reference	**configure** service vprn *service-name*
Introduced	22.2.R1
Platforms	All

vprn *reference*

Synopsis	VPRN used for AAA in VPRNs without a AAA server
Context	**configure** system security aaa remote-servers vprn-server vprn *reference*
Tree	vprn
Description	This command configures TACACS+ or RADIUS servers in a VPRN to be used for AAA by that VPRN and by sessions in VPRNs without a AAA server configured.
Reference	**configure** service vprn *service-name*
Introduced	22.2.R1
Platforms	All

user-template [user-template-name] *keyword*

Synopsis	Enter the **user-template** list instance
Context	**configure** system security aaa user-template *keyword*
Tree	user-template
Description	Commands in this context configure templates for remote users.
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

[**user-template-name**] *keyword*

Synopsis	Default user template applied to the remote user
Context	**configure** system security aaa user-template *keyword*
Tree	user-template
Options	ldap-default – Default LDAP user template radius-default – Default RADIUS user template tacplus-default – Default TACACS+ user template
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

access

Synopsis	Enter the **access** context
Context	**configure** system security aaa user-template *keyword* access
Tree	access
Description	Commands in this context grant a user access to the router management access methods. If a user requires access to more than one method, multiple methods can be specified.
Introduced	16.0.R1
Platforms	All

bluetooth *boolean*

Synopsis	Allow Bluetooth access
Context	**configure** system security aaa user-template *keyword* access bluetooth *boolean*
Tree	bluetooth
Default	false
Introduced	24.7.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

console *boolean*

Synopsis	Allow Bluetooth, console port CLI, SCP/SFTP, SSH CLI, and Telnet CLI access
Context	**configure** system security aaa user-template *keyword* access console *boolean*
Tree	console
Description	When configured to **true**, the system allows this access method to take precedence over other access methods in all cases.
Default	true
Introduced	16.0.R1
Platforms	All

console-port-cli *boolean*

Synopsis	Allow console port CLI access
Context	**configure** system security aaa user-template *keyword* access console-port-cli *boolean*
Tree	console-port-cli
Default	false
Introduced	24.7.R1
Platforms	All

ftp *boolean*

Synopsis	Allow FTP access
Context	**configure** system security aaa user-template *keyword* access ftp *boolean*
Tree	ftp
Default	false
Introduced	16.0.R1
Platforms	All

grpc *boolean*

Synopsis	Allow gRPC access
Context	**configure** system security aaa user-template *keyword* access grpc *boolean*
Tree	grpc
Default	false

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

li *boolean*

Synopsis	Allow access to Lawful Intercept (LI) commands
Context	**configure** system security aaa user-template *keyword* access li *boolean*
Tree	li
Default	false
Introduced	19.10.R1
Platforms	All

netconf *boolean*

Synopsis	Allow NETCONF access
Context	**configure** system security aaa user-template *keyword* access netconf *boolean*
Tree	netconf
Default	false
Introduced	16.0.R1
Platforms	All

scp-sftp *boolean*

Synopsis	Allow SCP/SFTP access
Context	**configure** system security aaa user-template *keyword* access scp-sftp *boolean*
Tree	scp-sftp
Default	false
Introduced	24.7.R1
Platforms	All

ssh-cli *boolean*

Synopsis	Allow SSH CLI access
Context	**configure** system security aaa user-template *keyword* access ssh-cli *boolean*
Tree	ssh-cli

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	24.7.R1
Platforms	All

telnet-cli *boolean*

Synopsis	Allow Telnet CLI access
Context	**configure** system security aaa user-template *keyword* access telnet-cli *boolean*
Tree	telnet-cli
Default	false
Introduced	24.7.R1
Platforms	All

console

Synopsis	Enter the **console** context
Context	**configure** system security aaa user-template *keyword* console
Tree	console
Introduced	16.0.R1
Platforms	All

login-exec *string-not-all-spaces*

Synopsis	File to execute when the user logs in
Context	**configure** system security aaa user-template *keyword* console login-exec *string-not-all-spaces*
Tree	login-exec
String length	1 to 200
Introduced	16.0.R1
Platforms	All

home-directory *cflash-without-slot-url*

Synopsis	User local home directory based on the template
Context	**configure** system security aaa user-template *keyword* home-directory *cflash-without-slot-url*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	home-directory
Description	This command configures the home directory of the user for file access. Files can be accessed locally by CLI **file** commands and output modifiers such as **>** (file redirect), or remotely via FTP and SCP. If the home directory does not exist, a warning message is displayed when the user logs in. When **restricted-to-home** is configured, file access is denied unless the **home-directory** is configured and the directory is created by an administrator.
String length	1 to 200
Introduced	16.0.R1
Platforms	All

profile *named-item*

Synopsis	User profile based on the template
Context	**configure** system security aaa user-template *keyword* profile *named-item*
Tree	profile
String length	1 to 32
Introduced	16.0.R1
Platforms	All

restricted-to-home *boolean*

Synopsis	Restrict file access to the home directory of the user
Context	**configure** system security aaa user-template *keyword* restricted-to-home *boolean*
Tree	restricted-to-home
Description	When configured to **true**, the router denies the user from accessing files outside of their local home directory. Files can be accessed locally by CLI file commands and output modifiers such as **>** (file redirect). The system denies all configuration save operations (such as **admin save**) via any management interface (such as CLI and NETCONF) unless **save-when-restricted** is enabled. File access is denied unless a home directory is configured and the directory is created by an administrator. When configured to **false**, the router permits the user to access all files on the system and to remote files.
Default	true
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

save-when-restricted *boolean*

Synopsis	Save configurations when the user is restricted to home
Context	**configure** system security aaa user-template *keyword* save-when-restricted *boolean*
Tree	save-when-restricted
Description	When configured to **true**, the system permits configuration save operations for all configuration regions (such as bof and configure) via any management interface (such as CLI and NETCONF) even if **restricted-to-home** is enabled. The configuration for each region can be saved with **admin save** CLI commands or when committed over NETCONF and gRPC. When configured to **false**, the system denies saving the configuration when **restricted-to-home** is enabled, unless the home directory of the user includes the location of the saved configuration file.
Default	true
Introduced	22.10.R1
Platforms	All

cli-script

Synopsis	Enter the **cli-script** context
Context	**configure** system security cli-script
Tree	cli-script
Introduced	16.0.R1
Platforms	All

authorization

Synopsis	Enter the **authorization** context
Context	**configure** system security cli-script authorization
Tree	authorization
Introduced	16.0.R1
Platforms	All

cron

Synopsis	Enter the **cron** context
Context	**configure** system security cli-script authorization cron

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	cron
Description	Commands in this context configure authorization for the cron job scheduler.
Introduced	16.0.R1
Platforms	All

cli-user *reference*

Synopsis	User profile name for CLI command script authorization
Context	**configure** system security cli-script authorization cron cli-user *reference*
Tree	cli-user
Reference	**configure** system security user-params local-user user *named-item*
Introduced	16.0.R1
Platforms	All

event-handler

Synopsis	Enter the **event-handler** context
Context	**configure** system security cli-script authorization event-handler
Tree	event-handler
Description	Commands in this context configure authorization for the Event Handling System (EHS). EHS allows user-controlled programmatic exception handling by allowing a CLI script to be executed upon the detection of a log event.
Introduced	16.0.R1
Platforms	All

cli-user *reference*

Synopsis	User profile name for CLI command script authorization
Context	**configure** system security cli-script authorization event-handler cli-user *reference*
Tree	cli-user
Reference	**configure** system security user-params local-user user *named-item*
Introduced	16.0.R1
Platforms	All

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port
Tree	dst-port
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eq *number*

Synopsis	Port number as the match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Port mask as the match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

port-list *reference*

Synopsis	Port list as the match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enable the **range** context
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

end *number*

Synopsis	Upper bound of the port number to match
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port range end *number*
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

start *number*

Synopsis	Lower bound of the port number to match
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port range start *number*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	start
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fragment *keyword*

Synopsis	Match criterion based on presence of fragmented packets
Context	**configure** system security cpm-filter ip-filter entry *number* match fragment *keyword*
Tree	fragment
Description	This command specifies the match criterion based on the existence or absence of fragmented IP packets. Matching on fragmented IPv4 packets occurs when all packets have either the MF (more fragment) bit set or have the Fragment Offset field of the IP header set to a non-zero value. For IPv6, the existence of the IPv6 Fragmentation Extension Header results in a fragmented packet match. Matching on non-fragmented IPv4 packets occurs when all packets have the MF bit set to zero and the Fragment Offset field is also set to zero. For IPv6, the absence of an IPv6 Fragmentation Extension Header results in a non-fragmented packet match.
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

icmp

Synopsis	Enter the **icmp** context
Context	**configure** system security cpm-filter ip-filter entry *number* match icmp
Tree	icmp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

code *number*

Synopsis	ICMP code to match
Context	**configure** system security cpm-filter ip-filter entry *number* match icmp code *number*
Tree	code

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	0 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

type *number*

Synopsis	ICMP type to match
Context	**configure** system security cpm-filter ip-filter entry *number* match icmp type *number*
Tree	type
Range	0 to 255

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

extension-header

Synopsis	Enter the **extension-header** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match extension-header

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	extension-header
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hop-by-hop *boolean*

Synopsis	Match on existence of Hop-By-Hop Options Header
Context	**configure** system security cpm-filter ipv6-filter entry *number* match extension-header hop-by-hop *boolean*
Tree	hop-by-hop
Description	When configured to **true**, a match occurs when the Hop-by-Hop Options Extension Header is present. When configured to **false**, a match occurs when the Hop-by-Hop Options Extension Header is not present.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

flow-label *number*

Synopsis	Flow label in the IPv6 header as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match flow-label *number*
Tree	flow-label
Range	0 to 1048575
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fragment *keyword*

Synopsis	Match criterion based on presence of fragmented packets
Context	**configure** system security cpm-filter ipv6-filter entry *number* match fragment *keyword*
Tree	fragment
Description	This command specifies the match criterion based on the existence or absence of fragmented IP packets. Matching on fragmented IPv4 packets occurs when all packets have either the MF (more fragment) bit set or have the Fragment Offset field of the IP header set to a non-zero value. For IPv6, the existence of the IPv6 Fragmentation Extension Header results in a fragmented packet match.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Matching on non-fragmented IPv4 packets occurs when all packets have the MF bit set to zero and the Fragment Offset field is also set to zero. For IPv6, the absence of an IPv6 Fragmentation Extension Header results in a non-fragmented packet match.

Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

icmp

Synopsis	Enter the **icmp** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match icmp
Tree	icmp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

code *number*

Synopsis	ICMP code as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match icmp code *number*
Tree	code
Range	0 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

type *number*

Synopsis	ICMP type as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match icmp type *number*
Tree	type
Range	0 to 255
Introduced	16.0.R1

Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port

Synopsis	Enter the **port** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match port
Tree	port
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eq *number*

Synopsis	Port number as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Port mask as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match port mask *number*
Tree	mask
Range	1 to 65535
Default	65535

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-list *reference*

Synopsis	Port list as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enable the **range** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match port range
Tree	range
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

end *number*

Synopsis	Upper bound of the port number to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match port range end *number*
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

start *number*

Synopsis	Lower bound of the port number to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match port range start *number*
Tree	start
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

router-instance *named-item-64*

Synopsis	Router instance as the match criteria
Context	**configure** system security cpm-filter ipv6-filter entry *number* match router-instance *named-item-64*
Tree	router-instance
String length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

src-ip

Synopsis	Enter the **src-ip** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-ip
Tree	src-ip
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *(ipv6-prefix-with-host-bits | ipv6-address)*

Synopsis	IPv6 address used as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-ip address *(ipv6-prefix-with-host-bits | ipv6-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-ip ipv6-prefix-list *reference*
Tree	ipv6-prefix-list
Reference	**configure** filter match-list ipv6-prefix-list *named-item*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *ipv6-address*

Synopsis	IPv6 address mask used as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-ip mask *ipv6-address*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

src-port

Synopsis	Enter the **src-port** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port
Tree	src-port
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

eq *number*

Synopsis	Port number as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Port mask as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-list *reference*

Synopsis	Port list as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

range

Synopsis	Enable the **range** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port range
Tree	range
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

end *number*

Synopsis	Upper bound of the port number to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port range end *number*
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

start *number*

Synopsis	Lower bound of the port number to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port range start *number*
Tree	start
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tcp-flags

Synopsis	Enter the **tcp-flags** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match tcp-flags

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	tcp-flags
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ack *boolean*

Synopsis	ACK bit in TCP header control bits as match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match tcp-flags ack *boolean*
Tree	ack
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

syn *boolean*

Synopsis	SYN bit in TCP header control bits as match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match tcp-flags syn *boolean*
Tree	syn
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-filter

Synopsis	Enter the **mac-filter** context
Context	**configure** system security cpm-filter mac-filter
Tree	mac-filter
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the CPM filter
Context	**configure** system security cpm-filter mac-filter admin-state *keyword*
Tree	admin-state
Options	enable, disable

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security cpm-filter mac-filter entry *number*
Tree	entry
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**entry-id**] *number*

Synopsis	Filter entry ID
Context	**configure** system security cpm-filter mac-filter entry *number*
Tree	entry
Range	1 to 131072
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

action

Synopsis	Enter the **action** context
Context	**configure** system security cpm-filter mac-filter entry *number* action
Tree	action
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

accept

Synopsis	Forward matching packets
Context	**configure** system security cpm-filter mac-filter entry *number* action accept
Tree	accept

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

default

Synopsis	Use default action for matching packets
Context	**configure** system security cpm-filter mac-filter entry *number* action default
Tree	default
Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis	Drop matching packets
Context	**configure** system security cpm-filter mac-filter entry *number* action drop
Tree	drop
Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

queue *reference*

Synopsis	Forward matching packets to the CPM hardware queue
Context	**configure** system security cpm-filter mac-filter entry *number* action queue *reference*
Tree	queue
Reference	**configure** system security cpm-queue queue *number*
Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *description*

Synopsis	Text description

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpm-filter mac-filter entry *number* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

log *reference*

Synopsis	Log ID where matching packets are entered
Context	**configure** system security cpm-filter mac-filter entry *number* log *reference*
Tree	log
Reference	**configure** filter log *number*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

match

Synopsis	Enter the **match** context
Context	**configure** system security cpm-filter mac-filter entry *number* match
Tree	match
Description	Commands in this context specify match criteria for the entry. When the match criteria have been satisfied, the action associated with the entry is executed. If more than one match criterion is configured, all criteria must be met before the action associated with the entry is executed.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-opcode

Synopsis	Enter the **cfm-opcode** context
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode
Tree	cfm-opcode
Description	Commands in this context specify match criteria based on the CFM opcode.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

eq *number*

Synopsis	Equal to comparison operator for the CFM opcode
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode eq *number*
Tree	eq
Range	0 to 255
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

gt *number*

Synopsis	Greater than comparison operator for the CFM opcode
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode gt *number*
Tree	gt
Range	0 to 254
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lt *number*

Synopsis	Less than comparison operator for the CFM opcode
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode lt *number*
Tree	lt
Range	1 to 255
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enable the **range** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

end *number*

Synopsis	Upper bound of the Opcode range to match
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode range end *number*
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

start *number*

Synopsis	Lower bound of the OpCode range to match
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dst-mac

Synopsis	Enable the **dst-mac** context
Context	**configure** system security cpm-filter mac-filter entry *number* match dst-mac
Tree	dst-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

address *mac-address*

Synopsis	MAC address used as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match dst-mac address *mac-address*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *mac-address*

Synopsis	MAC address mask as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match dst-mac mask *mac-address*
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

etype *etype-value*

Synopsis	Ethernet type as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match etype *etype-value*
Tree	etype
Description	This command specifies an Ethernet type II Ethertype value to be used as a MAC filter match criterion. The Ethernet type field is used by the Ethernet version-II frames and does not apply to IEEE 802.3 Ethernet frames.
String length	5 to 6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

frame-type *keyword*

Synopsis	MAC frame type as the match criterion

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpm-filter mac-filter entry *number* match frame-type *keyword*
Tree	frame-type
Options	802dot2-llc, ethernet-ii
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

llc-dsap

Synopsis	Enable the **llc-dsap** context
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-dsap
Tree	llc-dsap
Description	Commands in this context specify match criteria based on the Destination Service Access Point (DSAP).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dsap *number*

Synopsis	8-bit DSAP as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-dsap dsap *number*
Tree	dsap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Mask for DSAP value as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-dsap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

llc-ssap

Synopsis	Enable the **llc-ssap** context
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-ssap
Tree	llc-ssap
Description	Commands in this context specify match criteria based on the Source Service Access Point (SSAP).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Mask for SSAP value as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-ssap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ssap *number*

Synopsis	8-bit SSAP as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-ssap ssap *number*
Tree	ssap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

service *reference*

Synopsis	Service ID used as the match condition
Context	**configure** system security cpm-filter mac-filter entry *number* match service *reference*
Tree	service
Reference	**configure** service vpls *service-name*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

src-mac

Synopsis	Enable the **src-mac** context
Context	**configure** system security cpm-filter mac-filter entry *number* match src-mac
Tree	src-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *mac-address*

Synopsis	MAC address used as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match src-mac address *mac-address*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *mac-address*

Synopsis	MAC address mask as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match src-mac mask *mac-address*
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cpm-queue

Synopsis	Enter the **cpm-queue** context
Context	**configure** system security cpm-queue
Tree	cpm-queue
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

queue [queue-id] *number*

Synopsis	Enter the **queue** list instance
Context	**configure** system security cpm-queue queue *number*
Tree	queue
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**queue-id**] *number*

Synopsis	CPM queue ID
Context	**configure** system security cpm-queue queue *number*
Tree	queue
Range	33 to 2000
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cbs *number*

Synopsis	Buffer size that can be drawn from queue buffer pool
Context	**configure** system security cpm-queue queue *number* cbs *number*
Tree	cbs
Description	This command specifies the amount of buffer that can be drawn from the reserved buffer portion of the buffer pool of the queue.

igmp *boolean*

Synopsis	Include extracted IGMP packets for IP source monitoring
Context	**configure** system security cpu-protection ip-src-monitoring included-protocols igmp *boolean*
Tree	igmp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

link-specific-rate *(number | keyword)*

Synopsis	Packet arrival rate limit for link level protocols
Context	**configure** system security cpu-protection link-specific-rate *(number | keyword)*
Tree	link-specific-rate
Description	This command configures a link-specific rate for CPU protection. The limit is applied to all ports within the system. The CPU receives no more than the configured packet rate for all link level protocols, such as LACP, from any one port. The measurement is cleared each second and is based on the ingress port.
Range	1 to 65535
Units	packets per second
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

per-source-rate *(number | keyword)*

Synopsis	Per-source packet arrival rate limit

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpu-protection policy *number* per-source-rate *(number | keyword)*
Tree	per-source-rate
Description	This command configures the per-source packet arrival rate limit. A source is defined as a unique combination of SAP and MAC source address or SAP and source IP address. The CPU receives no more than the specified packet rate from each source. The measurement is cleared every second. This configuration is applicable only if the policy is assigned to an interface (such as SAPs, subscriber interfaces, and spoke SDPs), and MAC monitoring or IP source monitoring is specified in the CPU protection configuration of the interface.
Range	1 to 65534
Units	packets per second
Options	max
Default	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

port-overall-rate

Synopsis	Enter the **port-overall-rate** context
Context	**configure** system security cpu-protection port-overall-rate
Tree	port-overall-rate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

action-low-priority *boolean*

Synopsis	Mark packets that exceed the rate as low-priority
Context	**configure** system security cpu-protection port-overall-rate action-low-priority *boolean*
Tree	action-low-priority
Description	When configured to **true**, packets that exceed the per-port packet arrival rate limit are marked as low priority for preferential discard later (if there is congestion in the control plane) rather than discarded immediately.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

© 2025 Nokia.

Synopsis	Per-port packet arrival rate limit
Context	**configure** system security cpu-protection port-overall-rate pir *(number | keyword)*
Tree	pir
Range	1 to 65535
Units	packets per second
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

protocol-protection

Synopsis	Enable the **protocol-protection** context
Context	**configure** system security cpu-protection protocol-protection
Tree	protocol-protection
Description	When enabled, the network processor on the CPM discards all packets received for protocols that are not configured on the interface. This action helps to mitigate DoS attacks by filtering invalid control traffic before it ingresses the CPU. For example, if IS-IS is not configured on an interface, protocol protection discards any IS-IS packets received on the interface. Commands in this context further define the action when the context is enabled.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

allow-sham-links *boolean*

Synopsis	Allow OSPF sham link traffic
Context	**configure** system security cpu-protection protocol-protection allow-sham-links *boolean*
Tree	allow-sham-links
Description	When configured to **true**, tunneled OSPF packets received over the backbone network must be explicitly allowed when OSPF sham links form an adjacency over the MPLS-VPRN backbone network.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

hold-down *(keyword | number)*

Synopsis	Hold down behavior
Context	**configure** system security dist-cpu-protection policy *named-item* protocol *keyword* dynamic-parameters exceed-action hold-down *(keyword | number)*
Tree	hold-down
Description	This command specifies the behavior when the system detects that an enforcement policer has marked or discarded one or more packets and there is no action specified for the scenario when the rates are exceeded. The hold time condition is cleared after the specified time has expired. The detection time (the minimum time that the policer remains allocated) begins after the hold down is complete. The hold down behavior is not applicable to a local monitoring policer. An indefinite hold down behavior must be cleared using the **tools perform security dist-cpu-protection release-hold-down** command.
Range	1 to 10080
Units	seconds

management

Synopsis	Enter the **management** context
Context	**configure** system security management
Tree	management
Description	Commands in this context control which management protocols can be used to access the SR OS router via the 'Base' and 'management' router instances.
Introduced	16.0.R5
Platforms	All

allow-ftp *boolean*

Synopsis	Allow access to the FTP server
Context	**configure** system security management allow-ftp *boolean*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	allow-ftp
Description	When configured to **true**, this command allows FTP access to the SR OS router via the 'Base' and 'management' router instances. When configured to **false**, this command disallows access to the SR OS FTP server.
Default	true
Introduced	16.0.R6
Platforms	All

allow-grpc *boolean*

Synopsis	Allow access to the gRPC server
Context	**configure** system security management allow-grpc *boolean*
Tree	allow-grpc
Description	When configured to **true**, the system allows access to the gRPC server via the 'Base' and 'management' router instances.
Default	true
Introduced	19.5.R1
Platforms	All

allow-netconf *boolean*

Synopsis	Allow access to the NETCONF server
Context	**configure** system security management allow-netconf *boolean*
Tree	allow-netconf
Description	When configured to **true**, the system allows NETCONF server access to the SR OS router via the 'Base' and 'management' router instances.
Default	true
Introduced	19.5.R1
Platforms	All

allow-ssh *boolean*

Synopsis	Allow access to the SSH server
Context	**configure** system security management allow-ssh *boolean*
Tree	allow-ssh

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command allows SSH server access to the SR OS router via the 'Base' and 'management' router instances. When configured to **false**, this command disallows SSH server access.
Default	true
Introduced	16.0.R5
Platforms	All

allow-telnet *boolean*

Synopsis	Allow access to the IPv4 Telnet server
Context	**configure** system security management allow-telnet *boolean*
Tree	allow-telnet
Description	When configured to **true**, the system allows IPv4 Telnet server access to the SR OS router via the 'Base' and 'management' router instances. When configured to **false**, access to the IPv4 Telnet server is not allowed.
Default	true
Introduced	16.0.R5
Platforms	All

allow-telnet6 *boolean*

Synopsis	Allow access to the Telnet IPv6 server
Context	**configure** system security management allow-telnet6 *boolean*
Tree	allow-telnet6
Description	When configured to **true**, the system allows IPv6 Telnet server access to the SR OS router via the 'Base' and 'management' router instances. When configured to **false**, the system prevents access to the IPv6 Telnet server.
Default	true
Introduced	16.0.R5
Platforms	All

management-access-filter

Synopsis	Enter the **management-access-filter** context
Context	**configure** system security management-access-filter
Tree	management-access-filter

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the attributes for management access filters. Management access filters control all traffic in and out of the CPM. The filters can be used to restrict management of the router by other nodes outside of specific networks (or sub-networks) or through designated ports. Management filters are enforced by the system software.
Introduced	16.0.R4
Platforms	All

ip-filter

Synopsis	Enter the **ip-filter** context
Context	**configure** system security management-access-filter ip-filter
Tree	ip-filter
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of management-access filters
Context	**configure** system security management-access-filter ip-filter admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

default-action *keyword*

Synopsis	Default action for the management access filter
Context	**configure** system security management-access-filter ip-filter default-action *keyword*
Tree	default-action
Description	This command specifies the default action for management access in the absence of a specific management access filter match.
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	16.0.R4

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security management-access-filter ip-filter entry *number*
Tree	entry
Introduced	16.0.R4
Platforms	All

[**entry-id**] *number*

Synopsis	Entry ID to identify the match criteria and the action
Context	**configure** system security management-access-filter ip-filter entry *number*
Tree	entry
Description	This command specifies the entry ID to identify the match criteria and the corresponding action. It is recommended that entries are numbered in staggered increments. This allows users to insert a new entry in an existing policy without having to renumber the existing entries.
Range	1 to 9999
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

action *keyword*

Synopsis	Action associated with the management access filter
Context	**configure** system security management-access-filter ip-filter entry *number* action *keyword*
Tree	action
Description	This command specifies the action associated with the management access filter match criteria entry. If the packet does not meet any of the match criteria, the configured default action is applied.
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	16.0.R4

router-instance *string*

Synopsis	Router instance as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match router-instance *string*
Tree	router-instance
Introduced	16.0.R4
Platforms	All

src-ip

Synopsis	Enter the **src-ip** context
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-ip
Tree	src-ip
Description	Commands in this context specify match criteria based on the source port.
Introduced	16.0.R4
Platforms	All

address *(ipv6-prefix | ipv6-address)*

Synopsis	IPv6 address or IPv6 prefix to match
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-ip address *(ipv6-prefix | ipv6-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R4
Platforms	All

ipv6-prefix-list *reference*

Synopsis	IPv6 prefix list as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-ip ipv6-prefix-list *reference*
Tree	ipv6-prefix-list
Reference	**configure** filter match-list ipv6-prefix-list *named-item*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	20.7.R1
Platforms	All

mask *ipv6-address*

Synopsis	IP address mask as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-ip mask *ipv6-address*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R4
Platforms	All

src-port

Synopsis	Enable the **src-port** context
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-port
Tree	src-port
Description	Commands in this context specify match criteria based on the source port.
Introduced	21.7.R1
Platforms	All

mask *number*

Synopsis	IP address mask as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Introduced	21.7.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

port *number*

Synopsis	TCP or UDP port number as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-port port *number*
Tree	port
Range	1 to 65535
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	All

mac-filter

Synopsis	Enter the **mac-filter** context
Context	**configure** system security management-access-filter mac-filter
Tree	mac-filter
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of management access MAC filter
Context	**configure** system security management-access-filter mac-filter admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

default-action *keyword*

Synopsis	Default action for the management access filter
Context	**configure** system security management-access-filter mac-filter default-action *keyword*
Tree	default-action

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the default action for management access in the absence of a specific management access filter match.
Options	ignore-match, accept, drop
Default	ignore-match
Introduced	16.0.R4
Platforms	All

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security management-access-filter mac-filter entry *number*
Tree	entry
Introduced	16.0.R4
Platforms	All

[**entry-id**] *number*

Synopsis	Entry ID to identify the match criteria and the action
Context	**configure** system security management-access-filter mac-filter entry *number*
Tree	entry
Description	This command specifies the entry ID to identify the match criteria and the corresponding action. It is recommended that entries are numbered in staggered increments. This allows users to insert a new entry in an existing policy without having to renumber the existing entries.
Range	1 to 9999
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

action *keyword*

Synopsis	Action associated with the management access filter
Context	**configure** system security management-access-filter mac-filter entry *number* action *keyword*
Tree	action
Description	This command specifies the action associated with the management access filter match criteria entry.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	If the packet does not meet any of the match criteria, the configured default action is applied.
Options	ignore-match, accept, drop
Default	ignore-match
Introduced	16.0.R4
Platforms	All

description *description*

Synopsis	Text description
Context	**configure** system security management-access-filter mac-filter entry *number* description *description*
Tree	description
String length	1 to 80
Introduced	16.0.R4
Platforms	All

log-events *boolean*

Synopsis	Enable match logging
Context	**configure** system security management-access-filter mac-filter entry *number* log-events *boolean*
Tree	log-events
Description	When configured to **true**, this command enables match logging. When enabled, matches on the entry cause the Security event mafEntryMatch to be raised. When configured to **false**, match logging is disabled.
Default	false
Introduced	16.0.R4
Platforms	All

match

Synopsis	Enter the **match** context
Context	**configure** system security management-access-filter mac-filter entry *number* match
Tree	match
Description	Commands in this context specify match criteria for the entry.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	All

cfm-opcode

Synopsis	Enter the **cfm-opcode** context
Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode
Tree	cfm-opcode
Description	Commands in this context specify match criteria based on the CFM opcode.
Introduced	16.0.R4
Platforms	All

eq *number*

Synopsis	Equal to comparison operator for the CFM opcode
Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode eq *number*
Tree	eq
Range	0 to 255
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R4
Platforms	All

gt *number*

Synopsis	Greater than comparison operator for the CFM opcode
Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode gt *number*
Tree	gt
Range	0 to 254
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R4
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lt *number*

Synopsis	Less than comparison operator for the CFM opcode
Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode lt *number*
Tree	lt
Range	1 to 255
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R4
Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R4
Platforms	All

end *number*

Synopsis	Upper bound of the range for the OpCode to match
Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode range end *number*
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

start *number*

Synopsis	Lower bound of the range for the OpCode to match

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

dot1p

Synopsis	Enable the **dot1p** context
Context	**configure** system security management-access-filter mac-filter entry *number* match dot1p
Tree	dot1p
Description	Commands in this context specify match criteria based on the IEEE 802.1p value.
Introduced	16.0.R4
Platforms	All

mask *number*

Synopsis	3-bit mask as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match dot1p mask *number*
Tree	mask
Range	1 to 7
Default	7
Introduced	16.0.R4
Platforms	All

priority *number*

Synopsis	IEEE 802.1p value as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match dot1p priority *number*
Tree	priority
Range	0 to 7

etype *etype-value*

Synopsis	Ethernet type II Ethertype value as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match etype *etype-value*
Tree	etype
Description	This command specifies an Ethernet type II Ethertype value to be used as a MAC filter match criterion. The Ethernet type field is used by the Ethernet version-II frames and does not apply to IEEE 802.3 Ethernet frames.
String length	5 to 6
Introduced	16.0.R4
Platforms	All

frame-type *keyword*

Synopsis	MAC frame type as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match frame-type *keyword*
Tree	frame-type
Options	802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii, 802dot1-ag
Default	802dot3
Introduced	16.0.R4
Platforms	All

llc-dsap

Synopsis	Enable the **llc-dsap** context
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-dsap
Tree	llc-dsap
Description	Commands in this context specify match criteria based on the Destination Service Access Point (DSAP).
Introduced	16.0.R4
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dsap *number*

Synopsis	8-bit DSAP as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-dsap dsap *number*
Tree	dsap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

mask *number*

Synopsis	Mask for DSAP value as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-dsap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R4
Platforms	All

llc-ssap

Synopsis	Enable the **llc-ssap** context
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-ssap
Tree	llc-ssap
Description	Commands in this context specify match criteria based on the Source Service Access Point (SSAP).
Introduced	16.0.R4
Platforms	All

mask *number*

Synopsis	Mask for SSAP value as the match criterion

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security management-access-filter mac-filter entry *number* match llc-ssap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R4
Platforms	All

ssap *number*

Synopsis	8-bit SSAP as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-ssap ssap *number*
Tree	ssap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

service *service-name*

Synopsis	Service ID used as the match condition
Context	**configure** system security management-access-filter mac-filter entry *number* match service *service-name*
Tree	service
String length	1 to 64
Introduced	16.0.R4
Platforms	All

snap-oui *keyword*

Synopsis	IEEE 802.3 LLC SNAP Ethernet Frame OUI value for match
Context	**configure** system security management-access-filter mac-filter entry *number* match snap-oui *keyword*
Tree	snap-oui

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the IEEE 802.3 LLC SNAP Ethernet Frame OUI value as the MAC filter match criterion.
Options	zero, non-zero
Introduced	16.0.R4
Platforms	All

snap-pid *number*

Synopsis	IEEE 802.3 LLC SNAP Ethernet Frame PID as the match
Context	**configure** system security management-access-filter mac-filter entry *number* match snap-pid *number*
Tree	snap-pid
Description	This command specifies an IEEE 802.3 LLC SNAP Ethernet Frame PID value used as the MAC filter match criterion. The SNAP PID match criterion is independent of the OUI field within the SNAP header. Two packets with different 3-byte OUI fields but the same PID field match the same filter entry based on a SNAP PID match criterion.
Range	0 to 65535
Introduced	16.0.R4
Platforms	All

src-mac

Synopsis	Enable the **src-mac** context
Context	**configure** system security management-access-filter mac-filter entry *number* match src-mac
Tree	src-mac
Description	Commands in this context specify match criteria based on the source MAC.
Introduced	16.0.R4
Platforms	All

address *mac-address*

Synopsis	MAC address used as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match src-mac address *mac-address*
Tree	address

© 2025 Nokia.

Context	**configure** system security pki certificate-update-profile *named-item* dsa
Tree	dsa
Notes	The following elements are part of a choice: **dsa**, **ecdsa**, **rsa**, or **same-as-existing-key**.
Introduced	22.10.R1
Platforms	All

key-size *number*

Synopsis	Length of the generated DSA key
Context	**configure** system security pki certificate-update-profile *named-item* dsa key-size *number*
Tree	key-size
Description	This command specifies that the newly generated key is an DSA key with the specified key length in bits.
Range	512 to 8192
Default	2048

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	22.10.R1
Platforms	All

ecdsa

Synopsis	Enter the **ecdsa** context
Context	**configure** system security pki certificate-update-profile *named-item* ecdsa
Tree	ecdsa
Notes	The following elements are part of a choice: **dsa**, **ecdsa**, **rsa**, or **same-as-existing-key**.
Introduced	22.10.R1
Platforms	All

curve *keyword*

Synopsis	Elliptic curve to be used in ECDSA key generation
Context	**configure** system security pki certificate-update-profile *named-item* ecdsa curve *keyword*
Tree	curve
Description	This command specifies that the newly generated key is an ECDSA key with the specified curve.
Options	secp256r1, secp384r1, secp521r1
Default	secp256r1
Introduced	22.10.R1
Platforms	All

est

Synopsis	Enter the **est** context
Context	**configure** system security pki certificate-update-profile *named-item* est
Tree	est
Notes	The following elements are part of a choice: **cmpv2** or **est**.
Introduced	22.10.R1
Platforms	All

est-profile *reference*

Synopsis	EST profile name
Context	**configure** system security pki certificate-update-profile *named-item* est est-profile *reference*
Tree	est-profile
Description	This command specifies the use of EST as the protocol to update the certificate. The EST configuration is derived from the referenced EST profile.
Reference	**configure** system security pki est-profile *named-item*
Introduced	22.10.R1
Platforms	All

hash-algorithm *keyword*

Synopsis	Hash algorithm for a certificate request
Context	**configure** system security pki certificate-update-profile *named-item* hash-algorithm *keyword*
Tree	hash-algorithm
Description	This command specifies the hash algorithm used to generate a certificate request.
Options	md5, sha1, sha224, sha256, sha384, sha512
Default	sha256
Introduced	22.10.R1
Platforms	All

retry-interval *number*

Synopsis	Retry interval after a failed update
Context	**configure** system security pki certificate-update-profile *named-item* retry-interval *number*
Tree	retry-interval
Description	This command configures the retry interval after the update fails.
Range	60 to 36000
Units	seconds
Default	3600
Introduced	22.10.R1

© 2025 Nokia.

Platforms	All

rsa

Synopsis	Enter the **rsa** context
Context	**configure** system security pki certificate-update-profile *named-item* rsa
Tree	rsa
Notes	The following elements are part of a choice: **dsa**, **ecdsa**, **rsa**, or **same-as-existing-key**.
Introduced	22.10.R1
Platforms	All

key-size *number*

Synopsis	Length of the generated RSA key
Context	**configure** system security pki certificate-update-profile *named-item* rsa key-size *number*
Tree	key-size
Description	This command specifies that the newly generated key is a RSA key with the specified key length in bits.
Range	512 to 8192
Default	2048
Introduced	22.10.R1
Platforms	All

same-as-existing-key

Synopsis	Generate the new key to same type and key length
Context	**configure** system security pki certificate-update-profile *named-item* same-as-existing-key
Tree	same-as-existing-key
Description	When configured, this command specifies that the newly generated key is the same type and key length as the existing key.
Notes	The following elements are part of a choice: **dsa**, **ecdsa**, **rsa**, or **same-as-existing-key**.
Introduced	22.10.R1
Platforms	All

read *named-item*

Synopsis	SNMP view for read access
Context	**configure** system security snmp access *named-item* context *named-item-or-empty* security-model *keyword* security-level *keyword* read *named-item*
Tree	read
Description	This command specifies the SNMP view used to control which MIB objects can be accessed using a read (get) operation.
String length	1 to 32
Introduced	16.0.R1
Platforms	All

write *named-item*

Synopsis	SNMP view for write access
Context	**configure** system security snmp access *named-item* context *named-item-or-empty* security-model *keyword* security-level *keyword* write *named-item*
Tree	write

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the SNMP view used to control which MIB objects can be accessed using a write (set) operation.
String length	1 to 32
Introduced	16.0.R1
Platforms	All

attempts

Synopsis	Enter the **attempts** context
Context	**configure** system security snmp attempts
Tree	attempts
Description	Commands in this context configure settings for SNMPv2 or SNMPv3 connection attempts. The command settings are used to counter Denial of Service (DOS) attacks through SNMP. If the threshold is exceeded, the host is locked out for the lockout time period.
Introduced	16.0.R1
Platforms	All

count *number*

Synopsis	Unsuccessful attempts allowed within time period
Context	**configure** system security snmp attempts count *number*
Tree	count
Range	1 to 64
Default	20
Introduced	16.0.R1
Platforms	All

lockout *number*

Synopsis	Lockout period during which the host cannot log in
Context	**configure** system security snmp attempts lockout *number*
Tree	lockout
Description	This command configures the time period during which the host cannot log in. When the host exceeds the attempted counts setting, the host is locked out from further login attempts for the configured time period.

Synopsis	Type of SNMP security view mask
Context	**configure** system security snmp view *named-item* subtree *string* type *keyword*
Tree	type
Options	included, excluded
Introduced	16.0.R1
Platforms	All

source-address

Synopsis	Enter the **source-address** context
Context	**configure** system security source-address
Tree	source-address
Description	Commands in this context configure the IP source address that is used in all unsolicited packets sent by the specified applications.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This configuration applies to packets transmitted in-band (for example, a network port on an IOM) and does not apply to packets transmitted out-of-band on the management interface on the CPM Ethernet port. Packets transmitted using the CPM Ethernet port use the address of the CPM Ethernet port as the IP source address in the packet.

When a source address is specified for the PTP application, the port-based 1588 hardware timestamping assist function is applied to PTP packets matching the IPv4 address of the router interface used to ingress the SR/ESS or IP address specified in this command. If the IP address is removed, the port-based 1588 hardware timestamping assist function is only applied to PTP packets matching the IPv4 address of the router interface.

Introduced 16.0.R1

Platforms All

ipv4 [application] *keyword*

system-passwords

Synopsis	Enter the **system-passwords** context
Context	**configure** system security system-passwords
Tree	system-passwords
Description	This command enters the context to configure system passwords.
Introduced	16.0.R1
Platforms	All

admin-password *hashed-leaf*

Synopsis	Administrative password for the enable command
Context	**configure** system security system-passwords admin-password *hashed-leaf*
Tree	admin-password
Description	This command allows a user with administrative permissions to configure a password that enables a user to become an administrator. This password is valid only for one session. When enabled, no authorization to TACACS + or RADIUS is performed and the user is locally regarded as an administrative user. If the **admin-password** is configured in the **configure system security system-passwords admin-password** context, any user can enter the special mode by entering the **enable** command. **enable** is in the default profile. By default, all users are given access to this command. After the **enable** command is entered, the user is prompted for a password. If the password matches, user is given unrestricted access to all commands. The minimum length of the password is determined by the **minimum-length** command. The complexity requirements for the password are determined by the **complexity** command. **Note:** This command applies to a local user, in addition to users on RADIUS, TACACS, and LDAP.
String length	3 to 136
Introduced	16.0.R1
Platforms	All

tech-support

Synopsis	Enter the **tech-support** context
Context	**configure** system security tech-support

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

status-verify

Synopsis	Enter the **status-verify** context
Context	**configure** system security tls client-tls-profile *named-item* status-verify
Tree	status-verify
Description	Commands in this context configure certificate revocation status verification options for the end-entity certificate in a TLS client.
Introduced	23.7.R1
Platforms	All

default-result *keyword*

Synopsis	Default result of certificate status verification
Context	**configure** system security tls client-tls-profile *named-item* status-verify default-result *keyword*
Tree	default-result
Description	This command configures the default result of the entity certificate verification in the TLS client profile. This command overwrites the EE certificate revocation verification for the TLS client profile. By default the router checks the certification revocation status, but if this command is set to **good**, the end-entity certificate revocation status is overwritten and a good revocation status is returned for the EE certificate. If this command is set to **revoked**, the router returns the actual revocation status of the end-entity certificate.
Options	revoked, good
Default	revoked
Introduced	23.7.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

ee-revocation

Synopsis	Enter the **ee-revocation** context
Context	**configure** system security tls client-tls-profile *named-item* status-verify ee-revocation
Tree	ee-revocation
Description	Commands in this context configure the methods used to verify the end entity certificate revocation status for the TLS client profile.
Introduced	24.10.R1
Platforms	All

primary *keyword*

Synopsis	Primary method used to verify certificate revocation
Context	**configure** system security tls client-tls-profile *named-item* status-verify ee-revocation primary *keyword*
Tree	primary
Options	crl, ocsp
Default	crl

status-verify

Synopsis	Enter the **status-verify** context
Context	**configure** system security tls server-tls-profile *named-item* status-verify
Tree	status-verify
Description	Commands in this context configure certificate revocation status verification options for the end-entity certificate in a TLS server.
Introduced	23.7.R1
Platforms	All

default-result *keyword*

Synopsis	Default result of certificate status verification
Context	**configure** system security tls server-tls-profile *named-item* status-verify default-result *keyword*
Tree	default-result
Description	This command configures the default result of the entity certificate verification in the TLS server profile. This command overwrites the EE certificate revocation verification for the TLS server profile. By default the router checks the certification revocation status, but if this command is set to **good**, the end-entity certificate revocation status is overwritten and a good revocation status is returned for the EE certificate. If this command is set to **revoked**, the router returns the actual revocation status of the end-entity certificate.
Options	revoked, good
Default	revoked
Introduced	23.7.R1
Platforms	All

ee-revocation

Synopsis	Enter the **ee-revocation** context
Context	**configure** system security tls server-tls-profile *named-item* status-verify ee-revocation

authentication-order

Synopsis	Enter the **authentication-order** context
Context	**configure** system security user-params authentication-order
Tree	authentication-order
Description	Commands in this context configure the sequence in which the system attempts authentication and authorization among the local user database, RADIUS servers, TACACS+ servers, and LDAP servers. Configure the order from the most preferred method to the least preferred. The presence of all methods in the command line does not guarantee they are all operational. Specifying options that are not available delays user authentication. If all operational methods are attempted and no authentication for a particular login has been granted, an entry in the security log records the failed attempt. Both the attempted login identification and originating IP address are logged with a timestamp. The default order is [**radius tacplus ldap local**]. The order is not applicable to SNMPv3. SNMPv3 messages ignore the configured order and are authorized using the locally configured users only. TACACS+, RADIUS, and LDAP are not supported for SNMPv3 authentication. **Note:** This command applies to a local user, in addition to users on RADIUS, TACACS+, and LDAP.

Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

exit-on-reject *boolean*

Synopsis	Ignore subsequent AAA methods after a reject
Context	**configure** system security user-params authentication-order exit-on-reject *boolean*
Tree	exit-on-reject
Description	When configured to **true**, the router stops authentication if one of the AAA methods configured in the authentication order sends a rejection. When configured to **false**, the router attempts the next AAA method if a AAA method sends a rejection. If all AAA methods are exhausted, authentication and authorization is rejected. If the order specifies **local** as the first method, the following actions apply: • If this command is set to **true** and the user does not exist, the user is not authenticated. • If the user can be authenticated locally, other methods, if configured, are used for authorization and accounting. • If the user is configured locally but without console access, login is denied.
Default	false
Introduced	16.0.R1
Platforms	All

order *keyword*

Synopsis	Authentication and authorization order
Context	**configure** system security user-params authentication-order order *keyword*

disallow-sequence-keys *number*

Synopsis	Minimum length of disallowed sequential characters
Context	**configure** system security user-params local-user password complexity-rules disallow-sequence-keys *number*
Tree	disallow-sequence-keys
Description	This command configures the number of consecutive characters that are not allowed to be entered as part of the password on a U.S. English or Korean keyboard. These characters can be lowercase or uppercase letters, or numbers. Special characters are not taken into account. These consecutive characters can be horizontal (left to right) or (right to left) or diagonal (up to bottom or bottom to top). If the number of consecutive characters is equal to or larger than the configured value, the password is disallowed. For example, if the user attempts to use the password "dsalkjhgfdsa", with this command configured to 8, the system rejects the password because the first consecutive sequence "dsa" is 3 lowercase letters, which passes the check, but the

© 2025 Nokia.

new-password-at-login *boolean*

Synopsis	Prompt a user to change password at next console login
Context	**configure** system security user-params local-user user *named-item* console new-password-at-login *boolean*
Tree	new-password-at-login
Default	false
Introduced	16.0.R1
Platforms	All

home-directory *cflash-without-slot-url*

Synopsis	Home directory for the user
Context	**configure** system security user-params local-user user *named-item* home-directory *cflash-without-slot-url*
Tree	home-directory
Description	This command configures the home directory of the user for file access. Files can be accessed locally by CLI **file** commands and output modifiers such as **>** (file redirect), or remotely via FTP and SCP. If the home directory does not exist, a warning message is displayed when the user logs in. When **restricted-to-home** is configured, file access is denied unless the **home-directory** is configured and the directory is created by an administrator.
String length	1 to 200
Introduced	16.0.R1
Platforms	All

password *hashed-leaf*

Synopsis	User password
Context	**configure** system security user-params local-user user *named-item* password *hashed-leaf*
Tree	password
String length	3 to 136
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

public-keys

Synopsis	Enter the **public-keys** context
Context	**configure** system security user-params local-user user *named-item* public-keys
Tree	public-keys
Description	Commands in this context configure public keys for SSH.
Introduced	16.0.R1
Platforms	All

ecdsa

Synopsis	Enter the **ecdsa** context
Context	**configure** system security user-params local-user user *named-item* public-keys ecdsa
Tree	ecdsa
Description	Commands in this context configure Elliptic Curve Digital Signature Algorithm (ECDSA) public keys.
Introduced	16.0.R1
Platforms	All

ecdsa-key [ecdsa-public-key-id] *number*

Synopsis	Enter the **ecdsa-key** list instance
Context	**configure** system security user-params local-user user *named-item* public-keys ecdsa ecdsa-key *number*
Tree	ecdsa-key
Description	Commands in this context configure an ECDSA public key and associate the key with a username. A user can associate multiple public keys with a username. The key ID identifies these keys for the user.
Introduced	16.0.R1
Platforms	All

[**ecdsa-public-key-id**] *number*

Synopsis	ECDSA public key identifier
Context	**configure** system security user-params local-user user *named-item* public-keys ecdsa ecdsa-key *number*

key-value *string-not-all-spaces*

Synopsis	RSA public key value
Context	**configure** system security user-params local-user user *named-item* public-keys rsa rsa-key *number* key-value *string-not-all-spaces*
Tree	key-value
Description	This command configures a value for the RSA public key. The public key must be enclosed in quotation marks. For RSA, the key is between 768 and 4096 bits.
String length	1 to 800
Introduced	16.0.R1
Platforms	All

restricted-to-home *boolean*

Synopsis	Restrict file access to the home directory of the user
Context	**configure** system security user-params local-user user *named-item* restricted-to-home *boolean*
Tree	restricted-to-home
Description	When configured to **true**, the router denies the user from accessing files outside of their local home directory. Files can be accessed locally by CLI file commands and output modifiers such as **>** (file redirect). The system denies all configuration save operations (such as **admin save**) via any management interface (such as CLI and NETCONF) unless **save-when-restricted** is enabled. File access is denied unless a home directory is configured and the directory is created by an administrator. When configured to **false**, the router permits the user to access all files on the system and to remote files.
Default	true
Introduced	16.0.R1
Platforms	All

save-when-restricted *boolean*

Synopsis	Save configurations when the user is restricted to home
Context	**configure** system security user-params local-user user *named-item* save-when-restricted *boolean*
Tree	save-when-restricted

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the system permits configuration save operations for all configuration regions (such as bof and configure) via any management interface (such as CLI and NETCONF) even if **restricted-to-home** is enabled. The configuration for each region can be saved with **admin save** CLI commands or when committed over NETCONF and gRPC. When configured to **false**, the system denies saving the configuration when **restricted-to-home** is enabled, unless the home directory of the user includes the location of the saved configuration file.
Default	true
Introduced	22.10.R1
Platforms	All

snmp

Synopsis	Enter the **snmp** context
Context	**configure** system security user-params local-user user *named-item* snmp
Tree	snmp
Introduced	16.0.R1
Platforms	All

authentication

Synopsis	Enable the **authentication** context
Context	**configure** system security user-params local-user user *named-item* snmp authentication
Tree	authentication
Description	Commands in this context configure the SNMPv3 authentication and privacy protocols for the user to communicate with the router. The keys are stored in an encrypted format in the configuration. The keys configured with these commands must be localized keys, which are a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the **tools perform system management-interface snmp generate-key** command to generate localized authentication and privacy keys. If authentication is not configured, only the username is required to allow and authenticate SNMPv3 operations.
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

authentication-key *encrypted-leaf-hex-without-prefix*

Synopsis	Localized authentication key
Context	**configure** system security user-params local-user user *named-item* snmp authentication authentication-key *encrypted-leaf-hex-without-prefix*
Tree	authentication-key
Description	This command specifies the authentication key for the authentication protocol. The key must be a localized key, which is a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the **tools perform system management-interface snmp generate-key** command to generate a localized authentication key.
String length	1 to 115
Introduced	16.0.R1
Platforms	All

authentication-protocol *keyword*

Synopsis	Authentication protocol
Context	**configure** system security user-params local-user user *named-item* snmp authentication authentication-protocol *keyword*
Tree	authentication-protocol
Options	hmac-md5-96, hmac-sha1-96, hmac-sha2-224, hmac-sha2-256, hmac-sha2-384, hmac-sha2-512

privacy-key *encrypted-leaf-hex-without-prefix*

Synopsis	Localized privacy key

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security user-params local-user user *named-item* snmp authentication privacy privacy-key *encrypted-leaf-hex-without-prefix*
Tree	privacy-key
Description	This command specifies the privacy key for the privacy protocol. The key must be a localized key, which is a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the **tools perform system management-interface snmp generate-key** command to generate a localized privacy key.
String length	1 to 71
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

privacy-protocol *keyword*

Synopsis	Privacy protocol
Context	**configure** system security user-params local-user user *named-item* snmp authentication privacy privacy-protocol *keyword*
Tree	privacy-protocol
Options	cbc-des, cfb128-aes-128, cfb128-aes-192, cfb128-aes-256
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

group *named-item*

Synopsis	User to associate with a group name
Context	**configure** system security user-params local-user user *named-item* snmp group *named-item*
Tree	group
String length	1 to 32
Introduced	16.0.R1
Platforms	All

ssh-authentication-method

Synopsis	Enter the **ssh-authentication-method** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security user-params local-user user *named-item* ssh-authentication-method
Tree	ssh-authentication-method
Introduced	23.7.R1
Platforms	All

client

Synopsis	Enter the **client** context
Context	**configure** system security user-params local-user user *named-item* ssh-authentication-method client
Tree	client
Introduced	23.10.R3
Platforms	All

public-key-only *keyword*

Synopsis	Public key only SSH authentication for this user
Context	**configure** system security user-params local-user user *named-item* ssh-authentication-method client public-key-only *keyword*
Tree	public-key-only
Description	This command configures the authentication method accepted for the SSH session for the specified user. This user-level configuration overrides the system-level configuration defined in the **configure system security ssh authentication-method public-key-only** command. When unconfigured, the command inherits the setting from the system level command. The command options are: • **true** — accept only public key client authentication for the SSH server • **false** — accept public key or password client authentication for the SSH server. If **interactive-authentication** is configured to **true** in the **configure system security aaa remote-servers radius** or **configure system security aaa remote-servers tacplus** context, the system also accepts interactive keyboard authentication.
Options	false, true
Introduced	23.10.R3
Platforms	All

Use subject to Terms available at: www.nokia.com/terms.

server

Synopsis	Enter the **server** context
Context	**configure** system security user-params local-user user *named-item* ssh-authentication-method server
Tree	server
Introduced	23.7.R1
Platforms	All

public-key-only *keyword*

Synopsis	Public key only SSH authentication for this user
Context	**configure** system security user-params local-user user *named-item* ssh-authentication-method server public-key-only *keyword*
Tree	public-key-only
Description	This command configures the authentication method accepted for the SSH session for the specified user. This user-level configuration overrides the system-level configuration defined in the **configure system security ssh authentication-method public-key-only** command. When unconfigured, the command inherits the setting from the system level command. The command options are: • **true** — accept only public key client authentication for the SSH server • **false** — accept public key or password client authentication for the SSH server. If **interactive-authentication** is configured to **true** in the **configure system security aaa remote-servers radius** or **configure system security aaa remote-servers tacplus** context, the system also accepts interactive keyboard authentication.
Options	false, true
Introduced	23.7.R1
Platforms	All

vprn-network-exceptions

Synopsis	Enable the **vprn-network-exceptions** context
Context	**configure** system security vprn-network-exceptions
Tree	vprn-network-exceptions
Description	Commands in this context configure the rate limiting attributes for processing packets with label TTL expiry received within an LSP shortcut or VPRN instances in the system and from all network IP interfaces. This includes labeled user and control plan packets, ping, and traceroute packets within GRT and VPRN, and ICMP replies.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

These commands do not rate limit MPLS or service OAM packets.

Introduced	16.0.R1
Platforms	All

count *number*

Synopsis	Limit of exception messages received
Context	**configure** system security vprn-network-exceptions count *number*
Tree	count
Description	This command specifies the threshold limit of exception messages. If the threshold value is exceeded within the configured time interval, packets are dropped.
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

window *number*

Synopsis	Time interval to measure exception messages
Context	**configure** system security vprn-network-exceptions window *number*
Tree	window
Description	This command configures the time interval within which exception messages are counted. If the threshold value is exceeded within the configured time interval, packets are dropped.
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

selective-fib *boolean*

Synopsis	FIB assigned to the system
Context	**configure** system selective-fib *boolean*
Tree	selective-fib
Default	false

Context	**configure** system software-repository *named-item* secondary-location *string*
Tree	secondary-location
String length	1 to 180
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tertiary-location *string*

Synopsis	Tertiary location for files in the software repository
Context	**configure** system software-repository *named-item* tertiary-location *string*
Tree	tertiary-location
String length	1 to 180
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

switch-fabric

Synopsis	Enter the **switch-fabric** context
Context	**configure** system switch-fabric
Tree	switch-fabric
Description	Commands in this context configure system level attributes related to the switch fabric.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR-7, 7750 SR-12e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

failure-recovery

Synopsis	Enter the **failure-recovery** context

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system switch-fabric failure-recovery
Tree	failure-recovery
Description	Commands in this context configure the attributes related to the automatic switch fabric recovery process. This process is triggered when there are two resets of an IOM/XCM due to ICC failures within a small time frame. The recovery process involves the sequential resetting of SFM in case the issues are due to one of the SFM in the ICC communication path. As the final step in the recovery process, a CPM switchover is triggered to reset the active CPM.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR-7, 7750 SR-12e, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the failure recovery process
Context	**configure** system switch-fabric failure-recovery admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR-7, 7750 SR-12e, 7950 XRS

sfm-loss-threshold *number*

Synopsis	Number of SFMs that can fail before SFM overload state
Context	**configure** system switch-fabric sfm-loss-threshold *number*
Tree	sfm-loss-threshold
Description	This command specifies the number of SFMs that are permitted to fail before the system goes into SFM overload state. The default value for the 7750 SR-7s is 1 and the default value for the 7750 SR-14s is 2. Users can select the SFM limit based on the number possible for the system minus one. For the 7750 SR-7s, the limit is 3 and the limit for the 7750 SR-14s is 7.
Range	1 to 7
Introduced	20.5.R1
Platforms	7750 SR-7s, 7750 SR-14s

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

telemetry

Synopsis	Enter the **telemetry** context
Context	**configure** system telemetry
Tree	telemetry
Description	Commands in this context configure the parameters for the dial-out telemetry functionality.
Introduced	20.2.R1
Platforms	All

destination-group [name] *named-item*

Synopsis	Enter the **destination-group** list instance
Context	**configure** system telemetry destination-group *named-item*
Tree	destination-group
Description	Commands in this context configure parameters for destination groups.
Max. instances	225
Introduced	20.5.R1
Platforms	All

[**name**] *named-item*

Synopsis	Destination group name
Context	**configure** system telemetry destination-group *named-item*
Tree	destination-group
String length	1 to 32
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	All

allow-unsecure-connection

Synopsis	Allow connection without secured transport protocol
Context	**configure** system telemetry destination-group *named-item* allow-unsecure-connection

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	allow-unsecure-connection
Description	When configured, this command allows an unsecured connection to remote managers; TCP connections are not encrypted, including username and password information.
Notes	The following elements are part of a choice: **allow-unsecure-connection** or **tls-client-profile**.
Introduced	20.5.R1
Platforms	All

description *description*

Synopsis	Text description

retries *number*

Synopsis	Number of probe retries before closing the connection
Context	**configure** system telemetry destination-group *named-item* tcp-keepalive retries *number*
Tree	retries
Description	This command configures the number of missed TCP keepalive probes before closing the TCP connection and attempting to reach the other destinations within the same destination group.
Range	3 to 100
Default	4
Introduced	20.5.R1
Platforms	All

tls-client-profile *reference*

Synopsis	TLS client profile assigned to the destination group
Context	**configure** system telemetry destination-group *named-item* tls-client-profile *reference*
Tree	tls-client-profile
Reference	**configure** system security tls client-tls-profile *named-item*
Notes	The following elements are part of a choice: **allow-unsecure-connection** or **tls-client-profile**.
Introduced	20.5.R1
Platforms	All

notification-bundling

Synopsis	Enter the **notification-bundling** context
Context	**configure** system telemetry notification-bundling
Tree	notification-bundling
Description	Commands in this context configure the bundling of multiple notifications into one telemetry message.
Introduced	21.10.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of notification bundling
Context	**configure** system telemetry notification-bundling admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	All

max-msg-count *number*

Synopsis	Maximum notifications count in telemetry message bundle
Context	**configure** system telemetry notification-bundling max-msg-count *number*
Tree	max-msg-count
Range	2 to 1000
Default	100
Introduced	21.10.R1
Platforms	All

max-time-granularity *number*

Synopsis	Maximum interval when bundling of notifications occurs
Context	**configure** system telemetry notification-bundling max-time-granularity *number*
Tree	max-time-granularity
Description	This command sets the maximum time interval during which telemetry notifications are bundled. All bundled notifications have the same timestamp, which is the timestamp of the bundle.
Range	1 to 1000
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

persistent-subscriptions

Synopsis	Enter the **persistent-subscriptions** context
Context	**configure** system telemetry persistent-subscriptions
Tree	persistent-subscriptions
Introduced	20.5.R1
Platforms	All

delay-on-boot *number*

Synopsis	Delay for persistent subscriptions after system boot
Context	**configure** system telemetry persistent-subscriptions delay-on-boot *number*
Tree	delay-on-boot
Description	This command configures the delay timer for gRPC telemetry persistent subscriptions. When the timer expires, gRPC telemetry persistent subscriptions become operational and connections are initiated. This delay prevents the system from trying to establish gRPC persistent subscriptions while it is still converging. When no delay is configured, gRPC telemetry persistent subscriptions are initiated after the system boots and gRPC becomes operational.
Range	1 to 3600
Units	seconds
Introduced	23.10.R1
Platforms	All

subscription [name] *named-item*

[**xpath**] *string*

Synopsis	gNMI path to be streamed
Context	**configure** system telemetry sensor-groups sensor-group *named-item* path *string*
Tree	path
Description	This command configures a path for the specified sensor group. Multiple paths can be defined for a single sensor group. Streamed data includes all descendants of the tree indicated by the path. The path is defined in the form of an XML Path (XPath) syntax that refers to single or multiple objects within the YANG model. The path must be enclosed in quotation marks (") when it includes a list key, for example, "/state/router[router-name=Base]".
String length	1 to 512
Notes	This element is part of a list key.

falling-threshold *number*

Synopsis	Falling threshold for the sampled statistic
Context	**configure** system thresholds cflash-cap-alarm-percent *thresholds-cflash-url* falling-threshold *number*
Tree	falling-threshold
Description	This command specifies a falling threshold for the sampled statistic. When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single threshold-crossing event is generated. A single threshold-crossing event is also generated if the first sample taken is less

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

than or equal to this threshold and the associated **startup-alarm** command is equal to the **falling** or **either** values.

After a falling threshold-crossing event is generated, another such event is not generated until the sampled value rises above this threshold and reaches greater than or equal to the **rising-threshold** command.

Range	0 to 100
Units	percent
Introduced	16.0.R4
Platforms	All

interval *number*

Synopsis	Polling period over which data is sampled and compared
Context	**configure** system thresholds cflash-cap-alarm-percent *thresholds-cflash-url* interval *number*
Tree	interval
Description	This command specifies the polling interval over which the data is sampled and compared with the rising and falling thresholds.
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

rising-threshold *number*

Synopsis	Rising threshold for the sampled statistic
Context	**configure** system thresholds cflash-cap-alarm-percent *thresholds-cflash-url* rising-threshold *number*
Tree	rising-threshold
Description	This command specifies a rising threshold for the sampled statistic. When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single threshold-crossing event is generated. A single threshold crossing event is also generated if the first sample taken is greater than or equal to this threshold and the associated **startup-alarm** command is equal to the **rising** or **either** values. After a rising threshold-crossing event is generated, another such event is not generated until the sampled value falls below this threshold and reaches less than or equal the **falling-threshold** command.

daylight-saving-time-zone

Synopsis	Enter the **daylight-saving-time-zone** context
Context	**configure** system time daylight-saving-time-zone
Tree	daylight-saving-time-zone
Description	Commands in this context configure the start and end dates and offset for summer time (or Daylight Savings Time [DST]). A daylight savings time zone can be specified using a standard name or a non-standard name. The parameters (start day, end day, and offset) for a standard name zone are well defined and not configurable. The parameters for a nonstandard name zone are configurable. The time is adjusted by adding the offset when summer time starts and subtracting the offset when summer time ends. If no summer (daylight savings) time is supplied, the system assumes no summer time adjustment is required.

prefer-local-time *boolean*

Synopsis	Use local time over UTC time in the system
Context	**configure** system time prefer-local-time *boolean*
Tree	prefer-local-time
Description	When configured to **true**, the system uses local time. This preference is applied to objects such as log file names, created and completed times reported in log files, NETCONF and gRPC date-and-time leafs, and rollback times displayed in **show** command outputs. When configured to **false**, the system uses UTC time. **Note**: The timezone used for **show** command outputs during a CLI session can be controlled using the **environment time-display** command. **Note**: The format used for the date-time strings may change, depending on the command setting. For example, when this command is set to **true**, all date-time strings include a suffix of three to five characters that indicates the timezone used. **Note**: The time format for timestamps on log events is controlled on a per-log basis, using the **configure log log-id time-format** command.

Context	**configure** system transmission-profile *named-item* ipv6-source-address *ipv6-address*
Tree	ipv6-source-address
Introduced	16.0.R4
Platforms	All

redirection *number*

Synopsis	Maximum level of redirection
Context	**configure** system transmission-profile *named-item* redirection *number*
Tree	redirection
Range	1 to 8

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	All

retry *number*

Synopsis	Number of attempts to reconnecting to the server
Context	**configure** system transmission-profile *named-item* retry *number*
Tree	retry
Range	1 to 256
Introduced	16.0.R4
Platforms	All

router-instance *router-instance-base-management-vprn-loose*

Synopsis	Router instance used by the transport protocol
Context	**configure** system transmission-profile *named-item* router-instance *router-instance-base-management-vprn-loose*
Tree	router-instance
String length	1 to 64
Default	Base
Introduced	16.0.R4
Platforms	All

timeout *number*

Synopsis	Timeout for a response from the server
Context	**configure** system transmission-profile *named-item* timeout *number*
Tree	timeout
Range	1 to 3600
Units	seconds
Default	60
Introduced	16.0.R4
Platforms	All

usb [usb-cflash] *keyword*

Synopsis	Enter the **usb** list instance
Context	**configure** system usb *keyword*
Tree	usb
Description	Commands in this context configure the operational state of the USB port.
Introduced	22.10.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se, 7750 SR-2se

[**usb-cflash**] *keyword*

Synopsis	Specifies the compact flash ID
Context	**configure** system usb *keyword*
Tree	usb
Options	cf2
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se, 7750 SR-2se

admin-state *keyword*

Synopsis	Administrative state of the USB port
Context	**configure** system usb *keyword* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se, 7750 SR-2se

4.47 test-oam commands

```
configure
   –  test-oam
      –  apply-groups reference
      –  apply-groups-exclude reference
      –  icmp
         –  ipv6
            –  apply-groups reference
            –  apply-groups-exclude reference
            –  length-field boolean
            –  maximum-original-datagram boolean
         –  ping-template named-item-64
            –  apply-groups reference
            –  apply-groups-exclude reference
            –  description description
            –  dot1p number
            –  dscp keyword
            –  failure-threshold number
            –  interval number
            –  reactivation-failure-threshold number
            –  reactivation-interval number
            –  reactivation-threshold number
            –  reactivation-timeout number
            –  size number
            –  timeout number
            –  ttl number
      –  lag-ip-measurement
         –  lag-ip-measurement-template named-item-64
            –  admin-state keyword
            –  apply-groups reference
            –  apply-groups-exclude reference
            –  description description
            –  interval number
            –  sample-window
               –  multiplier number
            –  twamp-light
               –  allow-egress-remark-dscp boolean
               –  allow-ipv6-udp-checksum-zero boolean
               –  dest-udp-port number
               –  dscp keyword
               –  fc keyword
               –  profile keyword
               –  session-sender-type keyword
               –  src-udp-port number
               –  timestamp-format keyword
               –  ttl number
      –  link-measurement
         –  measurement-template named-item-64
            –  admin-state keyword
            –  aggregate-sample-window
               –  multiplier number
               –  threshold
                  –  absolute number
                  –  relative number
               –  window-integrity number
            –  apply-groups reference
            –  apply-groups-exclude reference

4.47.1 test-oam command descriptions

test-oam

Synopsis	Enter the **test-oam** context
Context	**configure** test-oam
Tree	test-oam
Introduced	16.0.R4
Platforms	All

icmp

Synopsis	Enter the **icmp** context
Context	**configure** test-oam icmp
Tree	icmp
Introduced	20.10.R1
Platforms	All

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** test-oam icmp ipv6
Tree	ipv6
Introduced	22.7.R1
Platforms	All

length-field *boolean*

Synopsis	Use length field in ICMPv6 responses
Context	**configure** test-oam icmp ipv6 length-field *boolean*
Tree	length-field
Default	false
Introduced	22.7.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

maximum-original-datagram *boolean*

Synopsis	ICMPv6 traceroute responses with largest datagram
Context	**configure** test-oam icmp ipv6 maximum-original-datagram *boolean*
Tree	maximum-original-datagram
Description	When configured to **true**, this command enables the original datagram field of the ICMPv6 error message to be a maximum of 1232 bytes. When configured to **false**, the original datagram field of the ICMPv6 error message smaller than 1232 bytes be built smaller.
Default	false
Introduced	22.7.R1
Platforms	All

ping-template [name] *named-item-64*

Synopsis	Enter the **ping-template** list instance
Context	**configure** test-oam icmp ping-template *named-item-64*
Tree	ping-template
Description	Commands in this context define ping timers and thresholds that verify connectivity and the the operational state of the IP interface.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**name**] *named-item-64*

Synopsis	Ping template name
Context	**configure** test-oam icmp ping-template *named-item-64*
Tree	ping-template
String length	1 to 64
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *description*

Synopsis	Text description

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam icmp ping-template *named-item-64* description *description*
Tree	description
String length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dot1p *number*

Synopsis	Dot1p in Ethernet header of outgoing ping packets
Context	**configure** test-oam icmp ping-template *named-item-64* dot1p *number*
Tree	dot1p
Range	0 to 7
Default	7
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dscp *keyword*

Synopsis	DSCP value used in the outgoing ping packet
Context	**configure** test-oam icmp ping-template *named-item-64* dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Default	nc1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

failure-threshold *number*

Synopsis	Failure threshold to declare inter-connectivity down
Context	**configure** test-oam icmp ping-template *named-item-64* failure-threshold *number*
Tree	failure-threshold
Range	2 to 10

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

Synopsis	Packet transmit interval
Context	**configure** test-oam icmp ping-template *named-item-64* interval *number*
Tree	interval
Range	1 to 60
Units	seconds
Default	60
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reactivation-failure-threshold *number*

Synopsis	Threshold of consecutive failures at reactivation
Context	**configure** test-oam icmp ping-template *named-item-64* reactivation-failure-threshold *number*
Tree	reactivation-failure-threshold
Description	This command configures the number of consecutive failures that must occur when transmitting at the reactivation interval without success before the transmission interval is changed to the standard interval.
Range	1 to 10
Default	4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reactivation-interval *number*

Synopsis	Ping reactivation interval
Context	**configure** test-oam icmp ping-template *named-item-64* reactivation-interval *number*
Tree	reactivation-interval

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the packet transmit interval used when the IP interface becomes operationally down because of a ping template failure after receiving a successful response to the previous ICMP echo request.
Range	1 to 60
Units	seconds
Default	1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reactivation-threshold *number*

Synopsis	Success threshold to declare inter-connectivity up
Context	**configure** test-oam icmp ping-template *named-item-64* reactivation-threshold *number*
Tree	reactivation-threshold
Description	This command configures the minimum number of consecutive successful responses of ICMP replies that must occur before the IP interface transitions from operationally down (due to ping validation failure) to operationally up. This value is a stability metric intended to prevent flapping.
Range	1 to 10
Default	3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reactivation-timeout *number*

Synopsis	Reactivation wait time before packet is declared lost
Context	**configure** test-oam icmp ping-template *named-item-64* reactivation-timeout *number*
Tree	reactivation-timeout
Range	1 to 60
Units	seconds
Default	1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

size *number*

Synopsis	Data field size of the outgoing ICMP echo packet
Context	**configure** test-oam icmp ping-template *named-item-64* size *number*
Tree	size
Range	12 to 9786
Units	octets
Default	56
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

timeout *number*

Synopsis	Wait time before ICMP echo request is declared lost
Context	**configure** test-oam icmp ping-template *named-item-64* timeout *number*
Tree	timeout
Range	1 to 60
Units	seconds
Default	5
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ttl *number*

Synopsis	TTL value for the outgoing ping packet
Context	**configure** test-oam icmp ping-template *named-item-64* ttl *number*
Tree	ttl
Description	This command configures the TTL value used in the outgoing ping packet. The tested interface must be directly connected on the same subnet.
Range	1 to 255
Default	1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lag-ip-measurement

Synopsis	Enter the **lag-ip-measurement** context
Context	**configure** test-oam lag-ip-measurement
Tree	lag-ip-measurement
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lag-ip-measurement-template [template-name] *named-item-64*

Synopsis	Enter the **lag-ip-measurement-template** list instance
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64*
Tree	lag-ip-measurement-template
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**template-name**] *named-item-64*

Synopsis	LAG IP measurement template name
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64*
Tree	lag-ip-measurement-template
String length	1 to 64
Notes	This element is part of a list key.
Introduced	24.10.R1

link-measurement

Synopsis	Enter the **link-measurement** context
Context	**configure** test-oam link-measurement
Tree	link-measurement
Description	Commands in this context configure the link measurement template attributes that are inherited on associated IP interfaces for delay reporting to the routing engine.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

measurement-template [template-name] *named-item-64*

Synopsis	Enter the **measurement-template** list instance
Context	**configure** test-oam link-measurement measurement-template *named-item-64*
Tree	measurement-template
Description	Commands in this context configure the attributes of the measurement template that can be assigned to an IP interface. Changes can be made without disabling the template, although some modifications cause the test on associated IP interfaces to terminate and restart. A measurement template can be removed if no interfaces reference it.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**template-name**] *named-item-64*

Synopsis	Measurement template name
Context	**configure** test-oam link-measurement measurement-template *named-item-64*
Tree	measurement-template
String length	1 to 64
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the measurement template

© 2025 Nokia.

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

aggregate-sample-window

Synopsis	Enter the **aggregate-sample-window** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* aggregate-sample-window
Tree	aggregate-sample-window
Description	Commands in this context configure the attributes of the aggregate sample window used with the measurement template assigned to an IP interface. The aggregate sample window is the collection of sample windows.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *number*

Synopsis	Number of sample windows in the aggregate sample window
Context	**configure** test-oam link-measurement measurement-template *named-item-64* aggregate-sample-window multiplier *number*
Tree	multiplier
Range	1 to 12
Default	12
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold

Synopsis	Enter the **threshold** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* aggregate-sample-window threshold
Tree	threshold

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

absolute *number*

Synopsis	Absolute delta for delay measurement reporting
Context	**configure** test-oam link-measurement measurement-template *named-item-64* aggregate-sample-window threshold absolute *number*
Tree	absolute
Description	This command configures the absolute minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine. If an absolute value is not configured the threshold is disabled.
Range	1 to 100000
Units	microseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

relative *number*

Synopsis	Relative delta for measurement reporting
Context	**configure** test-oam link-measurement measurement-template *named-item-64* aggregate-sample-window threshold relative *number*
Tree	relative
Description	This command configures the relative minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine. If a relative value is not configured, the threshold is disabled.
Range	1 to 100
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

window-integrity *number*

Synopsis	Sample percentage required for window integrity report

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam link-measurement measurement-template *named-item-64* aggregate-sample-window window-integrity *number*
Tree	window-integrity
Description	This command configures the percentage value that is used to determine whether the aggregate sample window is integral, by comparing the number of samples received from the sample window to the percentage configured. The configured percentage translates to a required sample window count that must be included in the aggregate sample window. The number of samples is computed as follows: (window-integrity (%)) x (((aggregate-sample-window length (s)) / (sample-window length (s))) If the number of samples in the aggregate sample window is equal to or greater than the computed number of required samples, the sample window has integrity and the aggregate sample window result is compared to the configured sample window thresholds. If the count is less than the computed number of required samples, the aggregate sample window does not have integrity and the value is not considered as representative. In this case the aggregate sample window results are not compared to the configured sample window thresholds. If this parameter is not configured, integrity checking is disabled and all results are compared to the configured thresholds.
Range	1 to 100
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delay *keyword*

Synopsis	Delay measurement statistic type
Context	**configure** test-oam link-measurement measurement-template *named-item-64* delay *keyword*
Tree	delay
Description	This command configures the type of delay measurement statistic used in the sample window and aggregate sample window.
Options	min, max, avg
Default	min
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *description*

Synopsis	Text description
Context	**configure** test-oam link-measurement measurement-template *named-item-64* description *description*
Tree	description
String length	1 to 80
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

Synopsis	Interval between test packet transmissions
Context	**configure** test-oam link-measurement measurement-template *named-item-64* interval *number*
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

last-reported-delay-hold *number*

Synopsis	Time to wait to flush the last reported delay
Context	**configure** test-oam link-measurement measurement-template *named-item-64* last-reported-delay-hold *number*
Tree	last-reported-delay-hold
Description	This command configures the timer that specifies the wait time before the last reported delay measurement is flushed after a link measurement test enters the operationally down state. The aging timer delays the flushing of the last reported delay metric to the routing engine. This timer starts a countdown to zero when an administrative function causes the operational state of the test on that specific interface to transition from up to down. If the timer expires before the operational state transitions to up, the previously reported value is flushed. The Delay Measurement Last Reported indicates “Cleared”. The timestamp indicates the time of the clear event. The Triggered By indicates “Expired”. If the administrative state recovers to operationally up before the expiration of the timer, the previous reported value is not flushed.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The aging timer does not apply to failure conditions that do not affect the administrative state of the interface, for example interface failure or routing changes.

Range	0 | 1 to 86400
Units	seconds
Default	86400
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reporting *boolean*

Synopsis	Report behavior for values for the configured threshold
Context	**configure** test-oam link-measurement measurement-template *named-item-64* reporting *boolean*
Tree	reporting
Description	When configured to **true**, the system reports a reached threshold to the routing engine.Reaching a configured **sample-window** or **aggregate-sample-window** indicates a value of interest. When configured to **false**, values reaching thresholds are not reported to the routing engine. In both enabled and disabled cases, the sample-window and aggregate-sample-window information and computed values are stored on the node until overwriting occurs.
Default	true
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sample-window

Synopsis	Enter the **sample-window** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* sample-window
Tree	sample-window
Description	Commands in this context configure sample window attributes used when the measurement template is assigned to an IP interface. The sample window is the collection of individual probe results over a defined period.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

multiplier *number*

Synopsis	Multiplier of interval used for sample window length
Context	**configure** test-oam link-measurement measurement-template *named-item-64* sample-window multiplier *number*
Tree	multiplier
Description	This command configures the number of probe results that should be in the sample window. For example, a multiplier of 10 and an interval of 5 equals 50 probes being transmitted from an individual sample window. Consequently, 50 probe results are expected within the 50 second duration that the sample window is “In-progress”.
Range	1 to 900
Default	10
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold

Synopsis	Enter the **threshold** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* sample-window threshold
Tree	threshold
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

absolute *number*

Synopsis	Absolute delta for delay measurement reporting
Context	**configure** test-oam link-measurement measurement-template *named-item-64* sample-window threshold absolute *number*
Tree	absolute
Description	This command configures the absolute minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine. If an absolute value is not configured the threshold is disabled.
Range	1 to 100000
Units	microseconds
Introduced	21.7.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

relative *number*

Synopsis	Relative delta for delay measurement reporting
Context	**configure** test-oam link-measurement measurement-template *named-item-64* sample-window threshold relative *number*
Tree	relative
Description	This command configures the relative minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine. If a relative value is not configured, the threshold is disabled.
Range	1 to 500
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

window-integrity *number*

Synopsis	Sample percentage required for window integrity report
Context	**configure** test-oam link-measurement measurement-template *named-item-64* sample-window window-integrity *number*
Tree	window-integrity
Description	This command configures the percentage value that is used to determine whether the sample window has enough samples to be considered representative for that window (integrity), by comparing the number of samples received from the sample window to the percentage configured. The configured percentage considers the interval of probes and the length of the sample window to determine the number of packets required in the sample: (window-integrity (%)) x ((sample-window length (s)) / pps per test (interval)) If the count is less than the computed number of required samples, the sample window does not have integrity and the sample window results are not compared to configured sample window thresholds. If the count is equal to or greater than the computed number of required samples, the sample window has integrity and the aggregate sample window result is compared to the configured sample window thresholds. If the count is less than the computed number of required samples, the sample window does not have integrity and the value is not considered as representative. In this case the sample window results are not compared to the configured sample window thresholds.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If this parameter is not configured, integrity checking is disabled and all results are compared to the configured thresholds.

Range	1 to 100
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

twamp-light

Synopsis	Enter the **twamp-light** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light
Tree	twamp-light
Description	Commands in this context configure TWAMP Light attributes that are used with the measurement template when assigned to IP interfaces.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-egress-remark-dscp *boolean*

Synopsis	Allow overwrite of DSCP value by the egress QoS policy
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light allow-egress-remark-dscp *boolean*
Tree	allow-egress-remark-dscp
Description	When configured to **true**, the egress QoS process is able to modify the DSCP based on the egress QoS configuration and expose the DSCP to egress DSCP processing rules. When configured to **false**, the egress QoS process uses the DSCP as configured and bypasses egress QoS DSCP marking. If the **configure qos network egress remark-trusted force-egress-marking** command is configured for the network egress QoS profile, the egress QoS process is applied and the DSCP can be overwritten regardless of the **allow-egress-remark-dscp** configuration.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

allow-ipv6-udp-checksum-zero *boolean*

Synopsis	Process IPv6 packets with UDP check sum zero
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light allow-ipv6-udp-checksum-zero *boolean*
Tree	allow-ipv6-udp-checksum-zero
Description	When configured to **true**, processing of IPv6 packets that arrive with a UDP checksum of zero is allowed. The destination UDP ports that are registered as TWAMP Test packets in the template allow this behavior. When configured to **false**, IPv6 packets that arrive with a UDP checksum of zero are discarded.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dest-udp-port *number*

Synopsis	Destination UDP port used by link measurement tests
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light dest-udp-port *number*
Tree	dest-udp-port
Description	This command configures the destination UDP port on outbound TWAMP Light measurement packets sent from the session controller. The destination UDP port must match the UDP port value configured on the TWAMP Light reflector that responds to this specific TWAMP Light test.
Range	1 to 65535
Default	862
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dscp *keyword*

Synopsis	DSCP copied to TWAMP Light echo request packet header
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light dscp *keyword*
Tree	dscp
Description	This command configures the DSCP to be copied into the IP header of each TWAMP Light echo request packet launched for the test.

fc *keyword*

Synopsis	Forwarding class name for the TWAMP Light packets
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light fc *keyword*
Tree	fc
Options	be – Best effort l2 – Low 2 (best effort) af – Assured forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited forwarding (high priority) h1 – High 1 (high priority) nc – Network control (high priority)
Default	h1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6-destination-discovery

Synopsis	Enter the **ipv6-destination-discovery** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light ipv6-destination-discovery
Tree	ipv6-destination-discovery
Description	Commands in this context configure IPv6 discovery of a directly-connected IPv6 peer address.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of IPv6 auto destination discovery
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light ipv6-destination-discovery admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

discovery-interval *number*

Synopsis	Transmission frequency for discovery packets
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light ipv6-destination-discovery discovery-interval *number*
Tree	discovery-interval
Description	This command configures transmission frequency of the discovery packet to the all-routers multicast group (ff02::2) to discover the link-local address of the peer. This frequency is used during the **discover-timer** interval.
Range	1 to 10
Units	seconds
Default	10
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

discovery-timer *number*

Synopsis	Maximum time to remain in the discovery phase
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light ipv6-destination-discovery discovery-timer *number*
Tree	discovery-timer
Description	This command configures the amount of time to transmit peer discovery packets at the **discovery-interval**. The timer starts when the IPv6 protocols is enabled under the **configure router interface if-attribute delay dynamic twamp-light ipv6** context. At the expiration of the **discovery-interval** or when a peer is discovered, whichever comes first, the probe interval changes to the value configured for the **update-interval**.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 1800
Units	seconds
Default	60
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

update-interval *number*

Synopsis	Transmission frequency to maintain the peer address
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light ipv6-destination-discovery update-interval *number*
Tree	update-interval
Range	0 | 1 to 3600
Units	seconds
Default	600
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pad-tlv-size *number*

Synopsis	Optional PAD TLV size
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light pad-tlv-size *number*
Tree	pad-tlv-size
Description	This command enables a STAMP PDU to include the PAD TLV. This increases the size of the STAMP PDU by the size of the added TLV. The PAD TLV includes an all zeros pattern.
Range	4 to 9714
Units	bytes
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

profile *keyword*

Synopsis	QoS profile for packet treatment in local node

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light profile *keyword*
Tree	profile
Description	This command specifies if the packets should be treated as in or out of profile as they move through the local node.
Options	in – In profile out – Out of profile
Default	in
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

return-path

Synopsis	Enter the **return-path** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light return-path
Tree	return-path
Description	Commands in this context configure the return-path TLV carried in the STAMP PDU.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

link *boolean*

Synopsis	The Return Path sub-TLV specifying link
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light return-path link *boolean*
Tree	link
Description	When configured to **true**, the system includes the **return-path** TLV link. The link sub-tlv instructs a Session-Reflector configured for type **stamp** to use the receiving logical IP interface for the transmission of the response packet from the reflector to the **session-sender**. The destination of the reflected packet must be installed in the forwarding table and reachable out the IP interface or the packet is dropped by the Session-Reflector. When there are parallel non-equal cost return paths between the Session-Reflector and the Session-Sender the response packet can only be returned on the lowest cost path. When configured to **false**, the Return Path TLV carried in the STAMP PDU is not included with the test packet.
Default	false
Introduced	22.7.R1

Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

src-udp-port *number*

Synopsis	Fixed source UDP port for link measurement tests
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light src-udp-port *number*
Tree	src-udp-port
Description	This command specifies a source UDP port for link measurement tests. Unless required, Nokia suggests that the link measurement dynamically select an available source UDP port from the dynamic range. Before a UDP port in the configurable range can be configured as a source it must be owned by the application. Use the **configure test-oam twamp twamp-light source-udp-port-pools port pool-type** command to map the port range to the application. By default a source UDP port allocates from the dynamic range. The configuration of the source port should only be configured when required for interoperability. When the source IP, destination IP, and destination UPD port are the same for a test, the source UDP port must be different in order to uniquely identify the session.
Range	64374 to 64383
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

timestamp-format *keyword*

Synopsis	Format of the timestamp used in TWAMP Light PDU
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light timestamp-format *keyword*
Tree	timestamp-format
Description	This command configures the format of the timestamp used in the TWAMP Light PDU and places the requested timestamp format in the packet using the appropriate epoch. This is unrelated to any time distribution protocol used to synchronize time between clocks.
Options	ntp – Network Time Protocol ptp – Precision Time Protocol
Default	ntp
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ttl *number*

Synopsis	Time to live value used in the TWAMP Light test packet
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light ttl *number*
Tree	ttl
Range	1 to 255
Default	1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

unidirectional-measurement *keyword*

Synopsis	Method used to compute the unidirectional delay value
Context	**configure** test-oam link-measurement measurement-template *named-item-64* unidirectional-measurement *keyword*
Tree	unidirectional-measurement
Description	This command specifies the unidirectional delay computation method as the actual forward delay (calculated using T2-T1 timestamps) or as derived using the round-trip delay divided by two (required if nodal clocks are not synchronized using an accurate time-synchronization method or protocol such as PTP).
Options	derived, actual
Default	derived
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mpls

Synopsis	Enter the **mpls** context
Context	**configure** test-oam mpls

echo-request-downstream-map *keyword*

Synopsis	Format of the downstream mapping TLV

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam mpls echo-request-downstream-map *keyword*
Tree	echo-request-downstream-map
Description	This command specifies the format of the downstream mapping TLV to use in all LSP trace packets and LDP tree trace packets originated on this node. The following downstream mapping TLVs are supported: the original Downstream Mapping (DSMAP) TLV, defined in RFC 4379 (obsoleted by RFC 8029) and the Downstream Detailed Mapping (DDMAP) TLV, defined in RFC 6424. See the "DDMAP TLV" section in the *7450 ESS, 7750 SR, 7950 XRS, and VSR OAM and Diagnostics Guide* for more information.
Options	dsmap – Downstream Mapping TLV ddmap – Downstream Detailed Mapping TLV
Default	dsmap
Introduced	23.7.R1
Platforms	All

timestamp-format *keyword*

Synopsis	Timestamp format for MPLS ping request and reply PDUs
Context	**configure** test-oam mpls timestamp-format *keyword*
Tree	timestamp-format
Options	rfc4379 – 1900-based timestamp (standard) unix – 1970-based timestamp
Default	unix
Introduced	23.7.R1
Platforms	All

mpls-dm

Synopsis	Enter the **mpls-dm** context
Context	**configure** test-oam mpls-dm
Tree	mpls-dm
Introduced	16.0.R6

Options	enable, disable
Default	disable
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

service-activation-testhead

Synopsis	Enter the **service-activation-testhead** context
Context	**configure** test-oam service-activation-testhead
Tree	service-activation-testhead
Description	Commands in this context configure service activation launch parameters for the testhead function. This functionality is supported on FP4 and later platforms.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

acceptance-criteria-template [ac-template-name] *named-item-64*

Synopsis	Enter the **acceptance-criteria-template** list instance
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64*
Tree	acceptance-criteria-template
Description	Commands in this context configure the test acceptance criteria policy that the service test testhead OAM tool uses to determine the test result after test completion. The “default” value of this command is attached to every **service-stream** created under the **service-test** context for which no explicit acceptance criteria template policy is configured by the user. The default acceptance criteria template is not user-configurable. The default template does not set thresholds and only reports the end-of-run values.
Max. instances	100
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**ac-template-name**] *named-item-64*

loss-threshold *decimal-number*

Synopsis	Loss threshold for acceptance criteria template
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64* loss-threshold *decimal-number*
Tree	loss-threshold
Description	This command configures a frame loss ratio (FLR) value that is compared to the measured FLR at the end of the test to determine the test result. If the measured value is greater than the configured value, the test fails; otherwise, it passes. Thresholds must be explicitly configured to use them for the comparison.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The FLR is computed as a ratio of the difference of the number of received frames to the number of injected or sent frames divided by the number of sent frames.

Range	0.0000 to 100.0000
Units	percent
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

loss-threshold-policing *decimal-number*

Synopsis	Frame loss ratio for a policing test
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64* loss-threshold-policing *decimal-number*
Tree	loss-threshold-policing
Description	This command configures a frame loss ratio (FLR) value for a policing test. The value is compared to the measured FLR at the end of the test to determine the test result. If the measured value is greater than the configured value, the test fails; otherwise, it passes. Thresholds must be explicitly configured before they can be used for comparison. The FLR is computed as a ratio of the difference of the number of received frames to the number of injected or sent frames divided by the number of sent frames.
Range	0.0000 to 100.0000
Units	percent
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

m-factor *number*

Synopsis	Throughput margin configuration
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64* m-factor *number*
Tree	m-factor
Description	This command configures the margin by which the observed throughput is off from the configured throughput to determine whether a service test passes or fails. The M-factor is used with the CIR threshold and PIR threshold values for different test types to determine whether a test passes or fails. type **cir** • If the measured throughput is less than the difference of the configured CIR threshold and the M-factor, the test fails. type **cir-pir**

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- If the measured throughput is less than the difference of the configured PIR threshold and the M-factor, the test fails.

type **policing**

- If the measured throughput is less than the difference of the configured PIR threshold and the M-factor, the test fails.
- If the measured throughput is greater than the sum of the configured PIR threshold and the M-factor, the test fails.

type **performance**

- If the measured throughput is less than the difference of the configured PIR threshold and the M-factor, the test fails.

Range	1 to 400000000
Units	kilobps
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

Synopsis	Repeated 4-byte pattern to pad each packet sent
Context	**configure** test-oam service-activation-testhead service-test *named-item-64* service-stream *number* frame-payload data-pattern repeat *(hex-string | number)*
Tree	repeat
Description	This command configures the data pattern padding bytes for the frames launched for the service stream. The specified data pattern value is repeated as many times as required to fill the remaining length of the payload for the highest level of the specified PDU. If only the Ethernet and ETH-CFM information is added, the data pattern is included in the data TLV of the ETH-CFM frame.
String length	10
Max. range	0 to 4294967295
Default	0x00000000
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

ethernet

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **ethernet** context
Context	**configure** test-oam service-activation-testhead service-test *named-item-64* service-stream *number* frame-payload ethernet
Tree	ethernet
Description	Commands in this context configure the Ethernet header parameters and ETH-CFM information used by the testhead tool. Only the specified header information is included in the frame. At a minimum, Ethernet MAC address and ETH-CFM information must be included.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

c-tag

rate-cir *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	CIR packet transmit rate for the service stream
Context	**configure** test-oam service-activation-testhead service-test *named-item-64* service-stream *number* rate-cir *number*
Tree	rate-cir
Description	This command configures the CIR that must be validated for a specific stream. If configured, the PIR value must be equal to or greater than the CIR value. When specified, the CIR rate overrides the default CIR value. The configured value must be a positive integer; fractional values are not allowed. If this command is not executed, or the CIR parameter is not explicitly specified, the default CIR value applies. The service activation testhead generates traffic up to the specified rate based on the test-types command, as follows. • For **type cir**, traffic is generated at a rate up to the configured CIR.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- For **type cir-pir**, traffic is generated at a rate up to the configured PIR.
- For **type policing**, traffic is generated at a rate up to 125% of the configured PIR.
- For **type performance**, traffic is generated at a rate up to the configured PIR.

Range	0 to 400000000
Units	kilobps
Default	0
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

Context	**configure** test-oam twamp server admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-ipv6-udp-checksum-zero *boolean*

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	**configure** test-oam twamp server allow-ipv6-udp-checksum-zero *boolean*
Tree	allow-ipv6-udp-checksum-zero
Description	When configured to **true**, this command configures the acceptance of IPv6 packets with UDP checksums of 0. This optional configuration allows the router to process arriving IPv6 TWAMP Test packets that contain IPv6 UDP checksum of 0x0000. The UDP port specific to this TWAMP Light test bypasses the default discard IPv6 UDP checksum 0x0000. If this optional command is not configured, IPv6 UDP checksum 0x000 arriving packets are discarded. When configured to **false**, packets that arrive with an IPv6 UDP checksum of 0x0000 are discarded.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

enforce-test-session-start-time *boolean*

Synopsis	Discard TWAMP packets before test-session start time
Context	**configure** test-oam twamp server enforce-test-session-start-time *boolean*
Tree	enforce-test-session-start-time
Description	When configured to **true**, the router checks the signalled test-session start time against the server time and discards TWAMP test packets that arrive before the negotiated test-session start time. When configured to **false**, the router processes all TWAMP test packets without checking the test-session start time against the server time.
Default	true

[**port-number**] *number*

Synopsis	Source UDP port pools port number
Context	**configure** test-oam twamp twamp-light source-udp-port-pools port *number*
Tree	port
Range	64374 to 64383
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pool-type *keyword*

Synopsis	Pool type of an application pool

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam twamp twamp-light source-udp-port-pools port *number* pool-type *keyword*
Tree	pool-type
Description	This command maps the specified source UDP port to the TWAMP Light application allowed to configure the source UDP port. OAM-PM IP tests can only configure the source UDP port when the port pool UDP source port is configured with a **pool-type oam-pm**. The **test-oam link-measurement measurement-template** can only configure the **src-udp-port** when the port pool UDP source port is configured with **pool-type link-measurement**. A pool type cannot be changed if its current application is a test (either an oam-pm session or link-measurement template) and is configured to use the specified port, regardless of the administrative or operational state. The configuration reference linking to the source UDP prevents the change.
Options	oam-pm, link-measurement
Default	oam-pm
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Context	**configure** vrrp policy *number* priority-event mc-ipsec-non-forwarding *number* hold-set *number*
Tree	hold-set
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority

Synopsis	Enter the **priority** context
Context	**configure** vrrp policy *number* priority-event mc-ipsec-non-forwarding *number* priority
Tree	priority
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-type *keyword*

Synopsis	Event type
Context	**configure** vrrp policy *number* priority-event mc-ipsec-non-forwarding *number* priority event-type *keyword*
Tree	event-type

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	delta, explicit
Default	delta
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority-level *number*

Synopsis	Priority level associated with this event
Context	**configure** vrrp policy *number* priority-event mc-ipsec-non-forwarding *number* priority priority-level *number*
Tree	priority-level
Range	1 to 254
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-down [port-id] *port-named*

Synopsis	Enter the **port-down** list instance
Context	**configure** vrrp policy *number* priority-event port-down *port-named*
Tree	port-down
Introduced	16.0.R1
Platforms	All

[**port-id**] *port-named*

Synopsis	Port ID for the reduced LAG ports
Context	**configure** vrrp policy *number* priority-event port-down *port-named*
Tree	port-down
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** vrrp policy *number* priority-event port-down *port-named* hold-clear *number*
Tree	hold-clear
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	All

hold-set *number*

Synopsis	Hold time before transitioning to cleared state
Context	**configure** vrrp policy *number* priority-event port-down *port-named* hold-set *number*
Tree	hold-set
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	All

priority

Synopsis	Enter the **priority** context
Context	**configure** vrrp policy *number* priority-event port-down *port-named* priority
Tree	priority
Introduced	16.0.R1
Platforms	All

event-type *keyword*

Synopsis	Effect of priority-level value on base priority value
Context	**configure** vrrp policy *number* priority-event port-down *port-named* priority event-type *keyword*
Tree	event-type
Options	delta, explicit
Default	delta
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

priority-level *number*

Synopsis	Priority level associated with this event
Context	**configure** vrrp policy *number* priority-event port-down *port-named* priority priority-level *number*
Tree	priority-level
Range	1 to 254
Introduced	16.0.R1
Platforms	All

route-unknown [ip-prefix] *(ipv4-prefix | ipv6-prefix)*

Synopsis	Enter the **route-unknown** list instance
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)*
Tree	route-unknown
Introduced	16.0.R1
Platforms	All

[**ip-prefix**] *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix of route monitored by priority control event
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)*
Tree	route-unknown
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* hold-clear *number*
Tree	hold-clear
Range	1 to 86400
Units	seconds
Introduced	16.0.R1

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

hold-set *number*

Synopsis	Hold time before transitioning to cleared state
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* hold-set *number*
Tree	hold-set
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	All

less-specific

Synopsis	Enable the **less-specific** context
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* less-specific
Tree	less-specific
Introduced	16.0.R1
Platforms	All

allow-default *boolean*

Synopsis	Match on default route
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* less-specific allow-default *boolean*
Tree	allow-default
Default	false
Introduced	16.0.R1
Platforms	All

next-hop [ip-address] *(ipv4-address-with-zone | ipv6-address-with-zone)*

Synopsis	Add a list entry for **next-hop**
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* next-hop *(ipv4-address-with-zone | ipv6-address-with-zone)*

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	next-hop
Introduced	19.5.R1
Platforms	All

[**ip-address**] *(ipv4-address-with-zone | ipv6-address-with-zone)*

Synopsis	Next-hop IP address for a returned route prefix
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* next-hop *(ipv4-address-with-zone | ipv6-address-with-zone)*
Tree	next-hop
Description	This command configures the next-hop IP address used to match the route prefix being monitored by the priority control event with the results of a route table lookup.
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

priority

Synopsis	Enter the **priority** context
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* priority
Tree	priority
Introduced	16.0.R1
Platforms	All

event-type *keyword*

Synopsis	Effect of priority-level value on base priority value
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* priority event-type *keyword*
Tree	event-type
Options	delta, explicit
Default	delta
Introduced	16.0.R1
Platforms	All

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

priority-level *number*

Synopsis	Priority level associated with this event
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* priority priority-level *number*
Tree	priority-level
Range	1 to 254
Introduced	16.0.R1
Platforms	All

protocol *keyword*

Synopsis	Routing protocol as match criterion
Context	**configure** vrrp policy *number* priority-event route-unknown *(ipv4-prefix | ipv6-prefix)* protocol *keyword*
Tree	protocol
Options	bgp, ospf, isis, rip, static, bgp-vpn
Max. instances	6
Introduced	16.0.R1
Platforms	All

5 Deprecated and obsolete commands

This section lists the deprecated and obsolete commands in this major release.

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

5.1 Deprecated commands

This chapter provides a list of commands that are marked as “status deprecated” in the Nokia YANG models and the MD-CLI and should no longer be used. Only releases in which commands are initially deprecated are included in this section. If applicable, the equivalent configuration groups command is also deprecated (but not explicitly listed).

See the SR OS Software Release Notes for more information.

5.1.1 25.7.R1

subscriber-mgmt commands:

- configure subscriber-mgmt local-user-db ipoe host ipv4 server
- configure subscriber-mgmt local-user-db ipoe host ipv6 server

© 2025 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

5.2 Obsolete commands

This chapter provides a list of commands that are marked as “status obsolete” in the Nokia YANG models and the MD-CLI. These commands can no longer be used and are considered invalid. Only releases in which commands are initially obsoleted are included in this section. If applicable, the equivalent configuration groups command is also obsoleted (but not explicitly listed).

See the SR OS Software Release Notes for more information.

5.2.1 25.3.R1

anysec commands:

- configure anysec tunnel-encryption security-termination-policy
- configure anysec tunnel-encryption security-termination-policy admin-state
- configure anysec tunnel-encryption security-termination-policy apply-groups
- configure anysec tunnel-encryption security-termination-policy apply-groups-exclude
- configure anysec tunnel-encryption security-termination-policy flex-algo-id
- configure anysec tunnel-encryption security-termination-policy igp-instance-id
- configure anysec tunnel-encryption security-termination-policy local-address
- configure anysec tunnel-encryption security-termination-policy policy-name
- configure anysec tunnel-encryption security-termination-policy protocol
- configure anysec tunnel-encryption security-termination-policy rx-must-be-encrypted

application-assurance commands:

- configure application-assurance group partition transit-prefix-policy static-aa-sub is-remote

isa commands:

- configure isa application-assurance-group transit-prefix-limits ipv4-remote-entries
- configure isa application-assurance-group transit-prefix-limits ipv6-remote-entries

qos commands:

- configure qos adv-config-policy child-control offered-measurement sample-interval

service commands:

- configure service epipe sap ingress aggregate-policer burst
- configure service ies interface sap ingress aggregate-policer burst
- configure service nat up-nat-policy port-limits dynamic-ports
- configure service vpls sap ingress aggregate-policer burst
- configure service vprn bgp best-path-selection d-path-length-ignore
- configure service vprn bgp domain-id
- configure service vprn interface sap ingress aggregate-policer burst
