1 Getting started

1.1 About this guide

This document describes the commands available in the MD-CLI that can be used to manage the router.

See the *7250 IXR, 7450 ESS, 7705 SAR Gen 2, 7750 SR, 7950 XRS, and VSR Acronyms Reference Guide* for expansions of acronyms used in this guide.

For a list of unsupported features by platform and chassis, see the *SR OS R26.x.Rx Software Release Notes*, part number 3HE 29176 000*x* TQZZA.

Command outputs shown in this guide are examples only; actual output may differ depending on supported functionality and user configuration.

Note:
This guide generically covers Release 26.*x*.R*x* content and may contain some content that will be released in later maintenance loads. In addition, some SR OS features are platform-specific and may not be available or visible on all platforms. See the *SR OS R26.x.Rx Software Release Notes*, part number 3HE 29176 000*x* TQZZA, for information about the supported features and applicable platforms in each load of the Release 26.*x*.R*x* software.

To access the configuration statements within the MD-CLI, the MD-CLI engine must be enabled and the configuration mode must be **mixed** or **model-driven**. For information about using the MD-CLI, see the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide.*

1.2 Platforms and terminology

Note:
Unless explicitly noted otherwise, this guide uses the terminology defined in the following table to collectively designate the specified platforms.

Table 1: Platforms and terminology

Platform	Collective platform designation
7450 ESS-7	All
7450 ESS-12	
7750 SR-1	
7750 SR-1-24D	
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platform	Collective platform designation
7750 SR-1x-48D	
7750 SR-1x-92S	
7750 SR-7	
7750 SR-12	
7750 SR-12e	
7750 SR-a4	
7750 SR-a8	
7750 SR-1e	
7750 SR-2e	
7750 SR-3e	
7750 SR-1s	
7750 SR-1se	
7750 SR-2s	
7750 SR-2se	
7750 SR-7s	
7750 SR-14s	
7950 XRS-20	
7950 XRS-20e	
7950 XRS-40	
VSR	
VSR-NRC	
7450 ESS-7	7450 ESS
7450 ESS-12	
7750 SR-1	7750 SR
7750 SR-1-24D	
7750 SR-1-46S	
7750 SR-1-48D	
7750 SR-1-92S	
7750 SR-1x-48D	
7750 SR-1x-92S

1.3 Conventions

This section describes the general conventions used in this guide.

1.3.1 Precautionary and information messages

The following information symbols are used in the documentation.

DANGER: Danger warns that the described activity or situation may result in serious personal injury or death. An electric shock hazard could exist. Before you begin work on this equipment, be aware of hazards involving electrical circuitry, be familiar with networking environments, and implement accident prevention procedures.

WARNING: Warning indicates that the described activity or situation may, or will, cause equipment damage, serious performance problems, or loss of data.

Caution: Caution indicates that the described activity or situation may reduce your component or system performance.

Note: Note provides additional operational information.

Tip: Tip provides suggestions for use or best practices.

1.3.2 Options or substeps in procedures and sequential workflows

Options in a procedure or a sequential workflow are indicated by a bulleted list. In the following example, at step 1, the user must perform the described action. At step 2, the user must perform one of the listed options to complete the step.

Example: Options in a procedure

1. User must perform this step.
2. This step offers three options. User must perform one option to complete this step.
   - This is one option.
   - This is another option.
   - This is yet another option.

Substeps in a procedure or a sequential workflow are indicated by letters. In the following example, at step 1, the user must perform the described action. At step 2, the user must perform two substeps (a. and b.) to complete the step.

Example: Substeps in a procedure

1. User must perform this step.
2. User must perform all substeps to complete this action.
   a. This is one substep.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

   b. This is another substep.

Nested substeps within a procedure or a sequential workflow are indicated by roman numerals. In the following example, at step 1, the user must perform the described action. At step 2, the user must perform two substeps (a. and b.) to complete the step. At substep b, the user must perform two additional substeps (i. and ii.) to complete the step.

Example: Nested substeps in a procedure

1. User must perform this step.
2. User must perform all substeps to complete this action.
   a. This is one substep.
   b. User must perform all nested substeps to complete this action.
      i. This is a nested substep.
      ii. This is another nested substep.

1.4 MD-CLI command reference

1.4.1 MD-CLI tree hierarchy

Table 2: Command syntax symbols

Symbol	Description
|	A vertical bar represents an “or” condition, indicating that only one of the parameters in the brackets or parentheses can be selected.
( )	Parentheses indicate that one of the parameters must be selected.
[ ]	Brackets indicate optional parameters.
Bold	Commands in **bold** indicate commands and keywords.
Italic	Commands in *italics* indicate that you must enter text for the parameter.

In the following examples, **location** and **graceful-shutdown** are command names. For the **location** command, *keyword* must be one of the keywords **cf1**, **cf2**, or **cf3**. For the **graceful-shutdown** command, *boolean* must be one of the keywords **true** or **false**, although explicitly using the keyword **true** is optional.

```
location keyword
keyword - (cf1 | cf2 | cf3)

graceful-shutdown boolean
boolean - ([true] | false)
```

The configuration branch of the MD-CLI shows the commands and parameters (also known as elements) that are available, shown in a hierarchical structure as in the following figure.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Figure 1: MD-CLI configuration tree example

```
configure
  – cflowd
    – active-flow-timeout number
    – admin-state keyword
    – analyze-gre-payload boolean
    – analyze-l2tp-traffic boolean
    – analyze-v4overv6-traffic boolean
    – apply-groups reference
    – apply-groups-exclude reference
    – cache-size number
    – collector (ipv4-address-no-zone | ipv6-address-no-zone) port number
      – admin-state keyword
      – aggregation
        – as-matrix boolean
        – destination-prefix boolean
        – protocol-port boolean
        – raw boolean
        – source-destination-prefix boolean
        – source-prefix boolean
      – apply-groups reference
      – apply-groups-exclude reference
      – autonomous-system-type keyword
      – description string
      – export-filter
        – family
          – ipv4 boolean
          – ipv6 boolean
          – l2-ip boolean
          – mcast-ipv4 boolean
          – mcast-ipv6 boolean
          – mpls boolean
        – interface-list
          – router reference interface-name reference
          – service
```

sw4113

The **configure** context is the root level of the configuration branch within the configuration mode in the MD-CLI. Each chapter of this guide describes a configuration branch in the MD-CLI configuration tree.

Commands are linked to their command descriptions in the configuration tree with some exceptions (for example, to reduce repeated content), including the **apply-groups**, **apply-groups-exclude**, and **groups** commands. These commands are used to direct the use of configuration templates called configuration groups in the configure region at all configuration levels. The **apply-groups** command applies a configuration group at a configuration level and the **apply-groups-exclude** command excludes a configuration group at a configuration level. See "Using configuration groups" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide* for more information.

Some commands require one or more keys to be entered with the command. For example, the **collector** command has two keys which must be entered: the IP address and the port number. The key name for the IP address (**ip-address**) is optional, however, the key name **port** must be entered before the port number.

```
- collector (ipv4-address-no-zone | ipv6-address-no-zone) port number
```

The command description indicates the required syntax for each command. See MD-CLI command descriptions for more information.

collector [**ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **port** *number*

Italicized names after a command or parameter name indicate the parameter type. The parameter types include (but are not limited to):

- Boolean (**true** and **false** values)
- keyword (enumerated values)
- string

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- number
- IPv4 address
- IPv6 address
- MAC address

The **summary-only** parameter, for example, requires a Boolean value. The **autonomous-system** parameter requires a number. For more information about the input values, click the command or parameter name from the MD-CLI tree to be linked to the command description.

```
- summary-only boolean
- autonomous-system number
```

A parameter type may also be a combination of different base types. These parameters are displayed in the MD-CLI tree with the individual parameter types enclosed in round brackets (()), separated by a vertical bar (|). For example, the **indirect** parameter can be configured with either an IPv4 address or IPv6 address:

```
- indirect (ipv4-address-no-zone | ipv6-address-no-zone)
```

Allowed values in strings are printable, 7-bit ASCII characters. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotation marks. Double quotation marks within a string are not supported.

1.4.1.1 Context path

In the CLI tree section, a contextual path at the top of a page refers to the full context of the first command on the page, as shown in the following figure.

Figure 2: Command tree navigation

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

1.4.2 MD-CLI command descriptions

The command syntax is shown in the command description, where the command is displayed in bold, followed by any key names and a type. From the MD-CLI tree, the **configure log accounting-policy** command shows that the key for the command is a number:

```
- log
    - accounting-policy number
```

The command description for **accounting-policy** shows that the key for the command is a policy identifier:

accounting-policy [**policy-id**] *number*

The square brackets ([ ]) indicate that the **policy-id** key name is optional. From the **policy-id** command description, the range of the identifier is a number from 1 to 99. Therefore, when using the **accounting-policy** command, the following inputs are acceptable:

```
accounting-policy policy-id 15
accounting-policy 25
accounting-policy 1
accounting-policy policy-id 99
```

The following table describes the fields that may be displayed for a command. Not all fields are applicable for all commands.

Table 3: Command descriptions fields

Field	Description
Element Name	Name of the element (command or parameter) and its syntax
Synopsis	Summary description of the element
Context	Full path to the command (with links to parent commands)
Tree	Link to the command in the CLI tree. For key elements, the link is to the parent element.
Description	Detailed description of the element, as needed
String length	For string elements, the range of the number of characters allowed
String format	For string elements, the format of the characters in the string
Range/Max. range	For number elements, the range of allowed values. A maximum range may be overridden by a platform-specific range.
Units	Base unit type of the element

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Field	Description
Options	Enumerated values allowed for the element. Not all options are available on all platforms.
MD-CLI default	MD-CLI default value for the element
Default	YANG default value when there is no MD-CLI default. Platform-specific defaults are not displayed.
Reference	Reference to an element instance in the configuration or state datastore
Min./Max. instances	For lists and leaf-lists, the minimum or maximum number of instances for this element
Notes	Information about special attributes of the element, including whether the element is: • a key for an element • mandatory • ordered by the user (instead of by the system) • part of a choice of elements
Introduced	Release in which the element was introduced
Deprecated	Release in which the element was deprecated
Platforms	Hardware platforms on which the element is available. See Platforms and terminology for more information about the platforms. **Note:** Some SR OS features are platform-specific and therefore may not be available or visible on all platforms. See the *SR OS R26.x.Rx Software Release Notes*, part number 3HE 29176 000*x* TQZZA, for information about platform support.

A description of the element is also available from the online help for the element. For information about using the online help in the MD-CLI, see the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide*.

Note:
All options for enumerated types and numerical ranges are listed in the MD-CLI command descriptions, however, not all options or ranges are valid on all platforms.

Use subject to Terms available at: www.nokia.com/terms.

2 Operational commands

This section lists the commands available at the operation level of the MD-CLI.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

2.1 admin commands

The **admin** commands are used to perform administrative functions, such as displaying configuration that is not subject to AAA, manually saving the configuration, clearing user sessions, and rebooting the system.

```
admin
   –  application-assurance
      –  group reference
         –  url-list reference
            –  upgrade
      –  upgrade
   –  clear
      –  security
         –  lockout
            –  all
            –  user named-item
         –  password-history
            –  all
            –  user named-item
   –  disconnect
      –  address (ipv4-address-no-zone | ipv6-address-no-zone)
      –  op-table-bypass boolean
      –  session-id number
      –  session-type keyword
      –  username named-item
   –  ipsec
      –  show
         –  key
            –  gateway named-item
            –  idi display-string
            –  ip-tunnel interface-name
            –  ipsec-tunnel named-item
            –  json
            –  peer-tunnel-ip-address (ipv4-address-no-zone | ipv6-address-no-zone)
            –  peer-tunnel-port number
            –  removed-tunnels boolean
            –  type keyword
   –  isa
      –  application-assurance-group reference
         –  esa reference vm reference
            –  load-balance
               –  avoid-subs
               –  normal
         –  isa reference
            –  load-balance
               –  avoid-subs
               –  normal
   –  nat
      –  save-deterministic-script
   –  reboot
      –  [card] keyword
      –  hold
      –  now
   –  redundancy
      –  force-switchover
         –  ignore-status
         –  now
      –  synchronize
         –  boot-environment
         –  certificate
         –  configuration
```

2.1.1 admin command descriptions

admin

Synopsis	Enter the administrative context for system operations
Context	admin
Tree	admin
Introduced	16.0.R1
Platforms	All

application-assurance

Synopsis	Enter the **application-assurance** context
Context	admin application-assurance
Tree	application-assurance
Description	Commands in this context configure Application Assurance (AA) upgrade and AA group upgrade operations.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group [aa-group-id] *reference*

Synopsis	Enter the **group** list instance
Context	admin application-assurance group *reference*
Tree	group
Description	Commands in this context configure the attributes of the group-specific upgrade.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-group-id**] *reference*

Synopsis	AA group ID
Context	admin application-assurance group *reference*
Tree	group
Reference	**state application-assurance group** *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

url-list [url-list-name] *reference*

Synopsis	Enter the **url-list** list instance
Context	admin application-assurance group *reference* url-list *reference*
Tree	url-list
Description	Commands in this context configure the URL list upgrade parameters.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**url-list-name**] *reference*

Synopsis	AA URL list name
Context	admin application-assurance group *reference* url-list *reference*
Tree	url-list
Reference	**state application-assurance group** *number* **url-list** *named-item*
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

upgrade

Synopsis	Upgrade the referenced URL list
Context	admin application-assurance group *reference* url-list *reference* upgrade
Tree	upgrade
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

upgrade

Synopsis	Upgrade to a new isa-aa.tim file
Context	admin application-assurance upgrade

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	upgrade
Description	This command loads a new isa-aa.tim file as part of a router-independent signature upgrade. An AA ISA reboot is required for the upgrade to take effect.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

clear

Synopsis	Enter the **clear** context
Context	admin clear
Tree	clear
Introduced	19.10.R1
Platforms	All

security

Synopsis	Enter the **security** context
Context	admin clear security
Tree	security
Introduced	19.10.R1
Platforms	All

lockout

Synopsis	Reset the lockout timer
Context	admin clear security lockout
Tree	lockout
Introduced	19.10.R1
Platforms	All

all

Synopsis	Clear lockout of all users
Context	admin clear security lockout all
Tree	all

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **all** or **user**.
Introduced	19.10.R1
Platforms	All

user *named-item*

Synopsis	User to be cleared of lockout
Context	admin clear security lockout user *named-item*
Tree	user
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **all** or **user**.
Introduced	19.10.R1
Platforms	All

password-history

Synopsis	Clear the password history
Context	admin clear security password-history
Tree	password-history
Introduced	19.10.R1
Platforms	All

all

Synopsis	Clear password history of all users
Context	admin clear security password-history all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or **user**.
Introduced	19.10.R1
Platforms	All

user *named-item*

Synopsis	User to be cleared of password history information

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	admin clear security password-history user *named-item*
Tree	user
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **all** or **user**.
Introduced	19.10.R1
Platforms	All

disconnect

Synopsis	Disconnect a user session
Context	admin disconnect
Tree	disconnect
Introduced	16.0.R1
Platforms	All

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the session to disconnect
Context	admin disconnect address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Introduced	19.10.R1
Platforms	All

op-table-bypass *boolean*

Synopsis	Avoid operation ID allocation
Context	admin disconnect op-table-bypass *boolean*
Tree	op-table-bypass
Description	When configured to **true**, the system bypasses the YANG-based operations infrastructure and avoids the allocation of an operation ID. This is useful if the global operations table is full and a delete operation or **admin disconnect** is required.
Introduced	21.5.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

session-id *number*

Synopsis	ID of the session to disconnect
Context	admin disconnect session-id *number*
Tree	session-id
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

session-type *keyword*

Synopsis	Type of session to disconnect
Context	admin disconnect session-type *keyword*
Tree	session-type
Options	console, telnet, ssh, ftp, netconf, grpc, cron-ehs
Introduced	19.10.R1
Platforms	All

username *named-item*

Synopsis	Username to disconnect
Context	admin disconnect username *named-item*
Tree	username
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	19.10.R1
Platforms	All

ipsec

Synopsis	Enter the **ipsec** context
Context	admin ipsec
Tree	ipsec
Introduced	23.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

show

Synopsis	Enter the **show** context
Context	admin ipsec show
Tree	show
Introduced	23.10.R1
Platforms	All

key

Synopsis	Display IPsec key history
Context	admin ipsec show key
Tree	key
Introduced	23.10.R1
Platforms	All

gateway *named-item*

Synopsis	IPsec gateway name
Context	admin ipsec show key gateway *named-item*
Tree	gateway
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: (**gateway**, **idi**, **peer-tunnel-ip-address**, **peer-tunnel-port**, and **removed-tunnels**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

idi *display-string*

Synopsis	Regular expression string to match IDi of saved records
Context	admin ipsec show key idi *display-string*
Tree	idi
String length	1 to 255

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: (**gateway**, **idi**, **peer-tunnel-ip-address**, **peer-tunnel-port**, and **removed-tunnels**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-tunnel *interface-name*

Synopsis	IPsec transport mode IP tunnel name
Context	admin ipsec show key ip-tunnel *interface-name*
Tree	ip-tunnel
String length	1 to 32
Notes	The following elements are part of a mandatory choice: (**gateway**, **idi**, **peer-tunnel-ip-address**, **peer-tunnel-port**, and **removed-tunnels**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	23.10.R1
Platforms	All

ipsec-tunnel *named-item*

Synopsis	IPsec tunnel name
Context	admin ipsec show key ipsec-tunnel *named-item*
Tree	ipsec-tunnel
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: (**gateway**, **idi**, **peer-tunnel-ip-address**, **peer-tunnel-port**, and **removed-tunnels**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

json

Synopsis	Show the output in indented JSON format
Context	admin ipsec show key json
Tree	json
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

peer-tunnel-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Dynamic tunnel IP address
Context	admin ipsec show key peer-tunnel-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	peer-tunnel-ip-address
Notes	The following elements are part of a mandatory choice: (**gateway**, **idi**, **peer-tunnel-ip-address**, **peer-tunnel-port**, and **removed-tunnels**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	23.10.R1
Platforms	All

peer-tunnel-port *number*

Synopsis	Dynamic tunnel port
Context	admin ipsec show key peer-tunnel-port *number*
Tree	peer-tunnel-port
Range	0 | 1 to 65535
Notes	The following elements are part of a mandatory choice: (**gateway**, **idi**, **peer-tunnel-ip-address**, **peer-tunnel-port**, and **removed-tunnels**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	23.10.R1
Platforms	All

removed-tunnels *boolean*

Synopsis	Show the keys of removed dynamic tunnels
Context	admin ipsec show key removed-tunnels *boolean*
Tree	removed-tunnels
Description	When configured to true, the system displays IKE keys of removed dynamic tunnels.
Default	false
Notes	The following elements are part of a mandatory choice: (**gateway**, **idi**, **peer-tunnel-ip-address**, **peer-tunnel-port**, and **removed-tunnels**), **ip-tunnel**, or **ipsec-tunnel**.
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

type *keyword*

Synopsis	Key type
Context	admin ipsec show key type *keyword*
Tree	type
Options	ike, child
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	All

isa

Synopsis	Enter the **isa** context
Context	admin isa
Tree	isa
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application-assurance-group [aa-group-id] *reference*

Synopsis	Enter the **application-assurance-group** list instance
Context	admin isa application-assurance-group *reference*
Tree	application-assurance-group
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-group-id**] *reference*

Synopsis	AA group ID
Context	admin isa application-assurance-group *reference*
Tree	application-assurance-group
Reference	**state isa application-assurance-group** *number*
Notes	This element is part of a list key.
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

esa [esa-id] *reference* vm *reference*

Synopsis	Enter the **esa** list instance
Context	admin isa application-assurance-group *reference* esa *reference* vm *reference*
Tree	esa
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**esa-id**] *reference*

Synopsis	ESA ID
Context	admin isa application-assurance-group *reference* esa *reference* vm *reference*
Tree	esa
Reference	**state isa application-assurance-group** *number* **esa** *number* **vm** *number*
Notes	This element is part of a list key.
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vm *reference*

Synopsis	ESA-VM ID
Context	admin isa application-assurance-group *reference* esa *reference* vm *reference*
Tree	esa
Reference	**state isa application-assurance-group** *number* **esa** *number* **vm** *number*
Notes	This element is part of a list key.
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

load-balance

Synopsis	Assign load-balancing mode to an AA group ISA or ESA-VM
Context	admin isa application-assurance-group *reference* esa *reference* vm *reference* load-balance
Tree	load-balance
Introduced	25.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

avoid-subs

Synopsis	Avoid-subscribers ISA or ESA-VM load-balancing mode
Context	admin isa application-assurance-group *reference* esa *reference* vm *reference* load-balance avoid-subs
Tree	avoid-subs
Description	This command prevents subscribers from being load-balanced to the ISA or ESA-VM. When the ESA-VM instance administrative state of load-balancing is set to avoid-subscribers, new subscribers are not assigned. If the **tools perform application-assurance group load-balance** command is executed, the system moves the existing subscribers away from the ISA or ESA-VM.
Notes	The following elements are part of a choice: **avoid-subs** or **normal**.
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

normal

Synopsis	Normal ISA or ESA-VM load-balancing mode
Context	admin isa application-assurance-group *reference* esa *reference* vm *reference* load-balance normal
Tree	normal
Description	This command load balances new subscribers to the ISA or ESA-VM.
Notes	The following elements are part of a choice: **avoid-subs** or **normal**.
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isa [mda-id] *reference*

Synopsis	Enter the **isa** list instance
Context	admin isa application-assurance-group *reference* isa *reference*
Tree	isa
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Use subject to Terms available at: www.nokia.com/terms.

[**mda-id**] *reference*

Synopsis	ISA MDA ID
Context	admin isa application-assurance-group *reference* isa *reference*
Tree	isa
Reference	**state isa application-assurance-group** *number* **isa** *slot-mda*
Notes	This element is part of a list key.
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

load-balance

Synopsis	Assign load-balancing mode to an AA group ISA or ESA-VM
Context	admin isa application-assurance-group *reference* isa *reference* load-balance
Tree	load-balance
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

avoid-subs

Synopsis	Avoid-subscribers ISA or ESA-VM load-balancing mode
Context	admin isa application-assurance-group *reference* isa *reference* load-balance avoid-subs
Tree	avoid-subs
Description	This command prevents subscribers from being load-balanced to the ISA or ESA-VM. When the ESA-VM instance administrative state of load-balancing is set to avoid-subscribers, new subscribers are not assigned. If the **tools perform application-assurance group load-balance** command is executed, the system moves the existing subscribers away from the ISA or ESA-VM.
Notes	The following elements are part of a choice: **avoid-subs** or **normal**.
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

normal

Synopsis	Normal ISA or ESA-VM load-balancing mode
Context	admin isa application-assurance-group *reference* isa *reference* load-balance normal

tech-support

Synopsis	Save satellite technical support information
Context	admin satellite ethernet-satellite *reference* tech-support
Tree	tech-support
Description	When executed, the router generates a file containing encrypted state and diagnostic information for analysis by Nokia technical support. If the file URL is omitted, and a directory is configured with the **configure system security tech-support** command, the technical support filename is generated in the ts-NAME.YYYYMMDD.HHMMUTC.suffix format. • NAME is the system name with special characters encoded using URL encoding (for example, a "." is encoded as "%2e") • YYYYMMDD is the date, with leading zeros in each field • HHMM is the time in hours and minutes in the UTC time zone in 24-hour format, with leading zeros in each field • .suffix: ".txt.gz" for state and diagnostic files, or ".dat" for extensive files
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cmpv2

Synopsis	Enter the **cmpv2** context
Context	admin system security pki cmpv2
Tree	cmpv2
Description	Commands in this context specify options for Certificate Management Protocol v2 (CMPv2) operations.
Introduced	23.3.R1
Platforms	All

cert-request

Synopsis	Request an additional certificate
Context	admin system security pki cmpv2 cert-request
Tree	cert-request
Description	When specified, the system requests an additional certificate after the initial certificate has been obtained from the CA. The request is authenticated by a signature signed by the current key, along with the current certificate. CA may not return a certificate immediately, for example, if the request process requires manual intervention. The **poll** command can be used to poll the status of the request. The hash algorithm used for the signature depends on the key type: • DSA key - SHA1 • RSA key: MD5 | SHA1 | SHA224 | SHA256 | SHA384 | SHA512 (default is SHA1) • ECDSA key: SHA1 | SHA224 | SHA256 | SHA384 | SHA512 (default is SHA256)
Introduced	23.3.R1
Platforms	All

ca-profile *reference*

Synopsis	PKI CA profile name
Context	admin system security pki cmpv2 cert-request ca-profile *reference*
Tree	ca-profile
Description	This command configures the CA profile that contains the CMPv2 configuration like server URL.
Reference	**state system security pki ca-profile** *named-item*

Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	All

current-certificate *pki-file-name*

Synopsis	Existing imported certificate file to create request
Context	admin system security pki cmpv2 cert-request current-certificate *pki-file-name*
Tree	current-certificate
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	All

current-key *pki-file-name*

Synopsis	Imported key file used to create the request
Context	admin system security pki cmpv2 cert-request current-key *pki-file-name*
Tree	current-key
Description	This command specifies the imported key file corresponding to the existing imported certificate file used to create the request.
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	All

domain-name *string*

Synopsis	FQDNs for the Subject Alternative Name
Context	admin system security pki cmpv2 cert-request domain-name *string*
Tree	domain-name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the Fully Qualified Domain Names (FQDNs) for the Subject Alternative Name extension of the requesting certificate, separated by commas.
String length	1 to 512
Introduced	23.3.R1
Platforms	All

hash-algorithm *keyword*

Synopsis	Hash algorithm used for the certificate signature
Context	admin system security pki cmpv2 cert-request hash-algorithm *keyword*
Tree	hash-algorithm
Options	md5, sha1, sha224, sha256, sha384, sha512
Introduced	23.3.R1
Platforms	All

ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address for the Subject Alternative Name
Context	admin system security pki cmpv2 cert-request ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ip-address
Description	This command specifies an IPv4 or IPv6 address for the Subject Alternative Name extension of the requesting certificate.
Introduced	23.3.R1
Platforms	All

new-key *pki-file-name*

Synopsis	New imported key file to create certificate request
Context	admin system security pki cmpv2 cert-request new-key *pki-file-name*
Tree	new-key
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)

Use subject to Terms available at: www.nokia.com/terms.

ca-profile *reference*

Synopsis	PKI CA profile name
Context	admin system security pki cmpv2 clear-request ca-profile *reference*
Tree	ca-profile
Description	This command configures the CA profile that contains the CMPv2 configuration like server URL.
Reference	**state system security pki ca-profile** *named-item*
Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	All

initial-registration

Synopsis	Request initial certificate using the CMPv2 protocol
Context	admin system security pki cmpv2 initial-registration
Tree	initial-registration
Description	When specified, the system requests the initial certificate from the CA using the CMPv2 initial registration procedure. The request is authenticated via one of the following methods: • A password and a reference number that was pre-distributed by CA via out-of-band means. The specified password and reference number are not necessarily in the key list configured in the corresponding CA profile. If the key list is not configured in the corresponding CA profile, the system uses the existing password to authenticate the CMPv2 packets from the server if it is password protected. If the key list is configured in the corresponding CA profile and the server does not send SenderKID, the system uses the lexicographical first key in the key list to authenticate the CMPv2 packets from the server in case it is password protected. • A signature signed by the **protection-key** or **key-to-certify**, optionally with the corresponding certificate. If the **protection-key** command is not specified, the system uses the **key-to-certify** configuration for message protection. The hash algorithm used for the signature depends on the key type. Optionally, the system may send a certificate or a chain of certificates in the extraCertsfield. The certificate is specified by the **certificate** command and must include the public key of the key used for message protection. Sending a chain is enabled by specifying the **send-chain** and **with-ca** commands. The CA may not return the certificate immediately, for example, if the request process requires manual intervention. In such cases, the **poll** command can be used to poll the status of the request.
Introduced	23.3.R1

Tree	with-ca
Reference	**state system security pki ca-profile** *named-item*
Notes	The following elements are part of a mandatory choice: (**certificate**, **hash-algorithm**, **protection-key**, **send-chain**, and **with-ca**) or (**password** and **reference**).
Introduced	23.3.R1
Platforms	All

key-update

Synopsis	Request new certificate to update existing certificate
Context	admin system security pki cmpv2 key-update
Tree	key-update
Description	When specified, the system requests a new certificate from the CA to update an existing certificate due to reasons such as a key refresh or to replace a compromised key. The CA may not return the certificate immediately, for example, if the request process requires manual intervention. In these cases, the **poll** command can be used to poll the status of the request.
Introduced	23.3.R1
Platforms	All

ca-profile *reference*

Synopsis	PKI CA profile name
Context	admin system security pki cmpv2 key-update ca-profile *reference*
Tree	ca-profile
Description	This command configures the CA profile that contains the CMPv2 configuration like server URL.
Reference	**state system security pki ca-profile** *named-item*
Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	All

Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	All

save-as *cflash-url*

Synopsis	Full path to save the result certificate file
Context	admin system security pki cmpv2 key-update save-as *cflash-url*
Tree	save-as
String length	1 to 200
String format	'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters
Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	All

poll

Synopsis	Poll the CMPv2 server for pending request status
Context	admin system security pki cmpv2 poll
Tree	poll
Description	When specified, the system polls the status of the pending CMPv2 request toward the specified CA. If the response is ready, the system resumes the CMPv2 protocol exchange with the server. SR OS allows only one pending CMP request per CA; therefore, no new request is allowed when a pending request is present.

enroll

Synopsis	Enroll a new certificate with CA with the EST protocol
Context	admin system security pki est enroll
Tree	enroll
Description	When specified, the system enrolls a new certificate with Certificate Authority (CA) by the EST protocol specified with the **est-profile** command with a imported private key specified by the **key** command. The **est-profile** commad specifies the authentication between the system and EST server. The **hash-alg**, **subject-dn**, **domain-name**, and **ip-address** commands are used to generate the Certificate Signing Request (CSR) in the EST request message. The **domain-name** and **ip-address** commands are used as subject alternative names. If **validate-certificate-chain** is specified, the system validates the chain of result certificate before importing it. The certificate chain is the chain of all certificates from the result certificate to the issuing CA. The result certificate is the new certificate returned by the EST server. The result certificate is imported and saved with the filename specified by the **output-file** command. If the **force** command is specified, the system overwrites the existing file with same name as the output file.
Introduced	23.3.R1
Platforms	All

domain-name *string*

Synopsis	FQDNs for the Subject Alternative Name
Context	admin system security pki est enroll domain-name *string*
Tree	domain-name
Description	This command specifies the Fully Qualified Domain Names (FQDNs) for the Subject Alternative Name extension of the requesting certificate, separated by commas.
String length	1 to 512
Introduced	23.3.R1
Platforms	All

est-profile *string*

Synopsis	PKI EST profile name
Context	admin system security pki est enroll est-profile *string*

Introduced	23.3.R1
Platforms	All

format *keyword*

Synopsis	Format of the file to display
Context	admin system security pki show file-content format *keyword*
Tree	format
Options	pkcs10, pkcs12, pkcs7-der, pkcs7-pem, pem, der
Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	All

password *string*

Synopsis	File decryption password
Context	admin system security pki show file-content password *string*
Tree	password
String length	1 to 32
Introduced	23.3.R1
Platforms	All

type *keyword*

Synopsis	Type of the file to display
Context	admin system security pki show file-content type *keyword*
Tree	type
Options	certificate, key, crl, csr
Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	All

update-certificate

Synopsis	Update End Entity certificate

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	admin system security pki update-certificate
Tree	update-certificate
Description	When specified, the system triggers an update for the specified certificate according to the corresponding **configure system security pki certificate-auto-update** configuration.
Introduced	23.3.R1
Platforms	All

certificate *reference*

Synopsis	Name of the certificate file to be updated
Context	admin system security pki update-certificate certificate *reference*
Tree	certificate
Reference	**state system security pki certificate-auto-update** *pki-file-name*
Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	All

secure-boot

Synopsis	Enter the **secure-boot** context
Context	admin system security secure-boot
Tree	secure-boot
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

activate

Synopsis	Activate secure boot on a CPM
Context	admin system security secure-boot activate
Tree	activate
Description	This command activates Secure Boot to enforce digital signature verification of the software on every boot. After Secure Boot is activated on a CPM, the capability is permanently enabled and cannot be disabled.
Introduced	23.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

card *reference*

Synopsis	CPM slot where secure boot is activated or modified
Context	admin system security secure-boot activate card *reference*
Tree	card
Reference	**state cpm** *cpm-card-slot*
Notes	The following elements are part of a mandatory choice: **card** or **ethernet-satellite**.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

confirmation-code *string-not-all-spaces*

Synopsis	Confirmation code
Context	admin system security secure-boot activate confirmation-code *string-not-all-spaces*
Tree	confirmation-code
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ethernet-satellite *reference*

Synopsis	Ethernet satellite where secure boot settings apply
Context	admin system security secure-boot activate ethernet-satellite *reference*
Tree	ethernet-satellite
Reference	**state satellite ethernet-satellite** *number*
Notes	The following elements are part of a mandatory choice: **card** or **ethernet-satellite**.
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

serial-number *string-not-all-spaces*

Synopsis	CPM card serial number which secure-boot activates

storage-encryption

Synopsis	Enter the **storage-encryption** context
Context	admin system security storage-encryption
Tree	storage-encryption
Description	Commands in this context are used to manage storage encryption such as the primary secret for hash3 configuration shared secrets.
Introduced	26.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

primary-secret

Synopsis	Enter the **primary-secret** context
Context	admin system security storage-encryption primary-secret
Tree	primary-secret
Description	Commands in this context manage the base secret used for encryption of items such as hash3 configuration shared secrets.
Introduced	26.7.R1
Platforms	All

set-secret

Synopsis	Set or change the primary secret
Context	admin system security storage-encryption primary-secret set-secret
Tree	set-secret
Description	This command sets or changes the primary secret used as a base secret for encryption of items, such as hash3 configuration shared secrets. The user is prompted to enter the secret twice. If a primary secret is already set on this system, the user must enter the old secret to change it. Setting or changing the primary secret will cause the main configuration to be saved to disk. If the user is setting the primary secret on a replacement chassis as part of a chassis failure recovery, it is essential to run this command on the new chassis before copying the old configuration file from the failed chassis to the new chassis.
Introduced	26.7.R1
Platforms	All

system-password

Synopsis	Change a local system password
Context	admin system security system-password
Tree	system-password
Introduced	22.10.R2
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-password

Synopsis	Administrative password
Context	admin system security system-password admin-password
Tree	admin-password
Notes	This element is mandatory.
Introduced	22.10.R2
Platforms	All

telemetry

Synopsis	Enter the **telemetry** context

Introduced	19.10.R1
Platforms	All

tech-support

Synopsis	Save technical support information to a file
Context	admin tech-support
Tree	tech-support
Description	When executed, the router generates a file containing technical support information for analysis by Nokia technical support. If the file URL is omitted, and a directory is configured with the **configure system security tech-support** command, the technical support filename is generated in the ts-NAME.YYYYMMDD.HHMMUTC.suffix format. • NAME is the system name with special characters encoded using URL encoding (for example, a "." is encoded as "%2e") • YYYYMMDD is the date, with leading zeros in each field • HHMM is the time in hours and minutes in UTC time zone in 24-hour format, with leading zeros in each field • .suffix: ".txt.gz" for state and diagnostic files, or ".dat" for extensive files Several levels of technical support information can be saved in cleartext or encrypted format.
Introduced	20.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

diagnostic

Synopsis	Save cleartext state and encrypted diagnostic information
Context	admin tech-support diagnostic
Tree	diagnostic
Description	When executed, the router generates a file containing cleartext state and encrypted diagnostic information for analysis by Nokia technical support.
Notes	The following elements are part of a choice: **diagnostic**, **extensive**, or **state**.
Introduced	26.10.R1
Platforms	All

extensive

Synopsis	Save encrypted state and diagnostic information (default)
Context	admin tech-support extensive
Tree	extensive
Description	When executed, the router generates a file containing encrypted state and diagnostic information for analysis by Nokia technical support. The router defaults to this output level when no level is specified for the **tech-support** command.
Notes	The following elements are part of a choice: **diagnostic**, **extensive**, or **state**.
Introduced	26.10.R1
Platforms	All

state

Synopsis	Save cleartext state information
Context	admin tech-support state
Tree	state
Description	When executed, the router generates a file containing cleartext state information for analysis by Nokia technical support.
Notes	The following elements are part of a choice: **diagnostic**, **extensive**, or **state**.

2.2 environment commands

See “Environment commands” in the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide* for more information.

```
environment
   –  command-alias
      –  alias string
         –  admin-state keyword
         –  cli-command string
         –  description string-not-all-spaces
         –  mount-point (keyword | string)
         –  python-script reference
   –  command-completion
      –  enter boolean
      –  space boolean
      –  tab boolean
   –  commit-options
      –  comment boolean
      –  confirm boolean
   –  console
      –  length number
      –  width number
   –  history
      –  recall boolean
      –  size number
   –  info-output
      –  always-display
         –  admin-state boolean
   –  match-highlight
      –  admin-state keyword
      –  style keyword
   –  message-severity-level
      –  cli keyword
   –  more boolean
   –  progress-indicator
      –  admin-state keyword
      –  delay number
      –  type keyword
   –  prompt
      –  context boolean
      –  newline boolean
      –  timestamp boolean
      –  uncommitted-changes-indicator boolean
   –  python
      –  memory-reservation number
      –  minimum-available-memory number
      –  timeout number
   –  time-display keyword
   –  time-format keyword
```

2.2.1 environment command descriptions

environment

Synopsis	Configure the environment settings for this session
Context	environment
Tree	environment
Introduced	16.0.R1
Platforms	All

command-alias

Synopsis	Enter the **command-alias** context
Context	environment command-alias
Tree	command-alias
Description	Commands in this context create aliases to existing MD-CLI commands or to Python scripts. Aliases may be mounted for use globally or for selected context paths. Arguments and output modifiers may be provided to aliases at configuration or run time.
Introduced	21.7.R1
Platforms	All

alias [alias-name] *string*

Synopsis	Enter the **alias** list instance
Context	environment command-alias alias *string*
Tree	alias
Description	Commands in this context create aliases to existing MD-CLI commands or to Python applications. Aliases may be mounted for use globally or for selected context paths. Arguments and output modifiers may be provided to aliases at configuration or run time.
Introduced	21.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**alias-name**] *string*

Synopsis	Alias name
Context	environment command-alias alias *string*
Tree	alias
String length	1 to 64
String format	must only contain alpha-numeric characters, underscore or hyphen (not as the first character)
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the alias
Context	environment command-alias alias *string* admin-state *keyword*
Tree	admin-state
Description	This command controls the administrative state of the MD-CLI alias. MD-CLI aliases that are administratively disabled cannot be executed, do not autocomplete in operational mode, and do not appear in **?** help.
Options	enable, disable
Introduced	21.10.R1
Platforms	All

cli-command *string*

Synopsis	CLI command to run when executing the alias
Context	environment command-alias alias *string* cli-command *string*
Tree	cli-command
String length	1 to 255
Notes	The following elements are part of a mandatory choice: **cli-command** or **python-script**.
Introduced	21.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *string-not-all-spaces*

Synopsis	Text description
Context	environment command-alias alias *string* description *string-not-all-spaces*
Tree	description
String length	1 to 110
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.7.R1
Platforms	All

mount-point [path] *(keyword | string)*

Synopsis	Add a list entry for **mount-point**
Context	environment command-alias alias *string* mount-point *(keyword | string)*
Tree	mount-point
Min. instances	1
Introduced	21.7.R1
Platforms	All

[**path**] *(keyword | string)*

Synopsis	Mount point where the alias is available
Context	environment command-alias alias *string* mount-point *(keyword | string)*
Tree	mount-point
String length	1 to 255
String format	must start with forward slash
Options	global
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	All

python-script *reference*

Synopsis	Python script to run when executing the alias

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	environment command-alias alias *string* python-script *reference*
Tree	python-script
Reference	**state python python-script** *named-item*
Notes	The following elements are part of a mandatory choice: **cli-command** or **python-script**.
Introduced	21.7.R1
Platforms	All

command-completion

Synopsis	Enter the **command-completion** context
Context	environment command-completion
Tree	command-completion
Introduced	16.0.R1
Platforms	All

enter *boolean*

Synopsis	Complete the command when the Enter key is pressed
Context	environment command-completion enter *boolean*
Tree	enter
Default	true
Introduced	16.0.R1
Platforms	All

space *boolean*

Synopsis	Complete the command when the Space key is pressed
Context	environment command-completion space *boolean*
Tree	space
Default	true
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tab *boolean*

Synopsis	Complete the command when the Tab key is pressed
Context	environment command-completion tab *boolean*
Tree	tab
Default	true
Introduced	16.0.R1
Platforms	All

commit-options

Synopsis	Enter the **commit-options** context
Context	environment commit-options
Tree	commit-options
Introduced	24.10.R1
Platforms	All

comment *boolean*

Synopsis	Require a commit comment when committing configuration
Context	environment commit-options comment *boolean*
Tree	comment
Default	false
Introduced	24.10.R1
Platforms	All

confirm *boolean*

Synopsis	Require confirmed commit when committing configuration
Context	environment commit-options confirm *boolean*
Tree	confirm
Default	false
Introduced	24.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

console

Synopsis	Enter the **console** context
Context	environment console
Tree	console
Introduced	16.0.R1
Platforms	All

length *number*

Synopsis	Number of lines displayed on the console
Context	environment console length *number*
Tree	length
Range	24 to 512
Default	24
Introduced	16.0.R1
Platforms	All

width *number*

Synopsis	Number of columns displayed on the console
Context	environment console width *number*
Tree	width
Range	80 to 512
Default	80
Introduced	16.0.R1
Platforms	All

history

Synopsis	Enter the **history** context
Context	environment history
Tree	history
Introduced	24.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

recall *boolean*

Synopsis	Allow command history recall and search execution
Context	environment history recall *boolean*
Tree	recall
Description	When configured to **true**, the command history recall (**!**), substitution (**!$**), display (**:p**, **Esc+.**), and backward search (**Ctrl-R**) are enabled. When configured to **false**, the command history can be displayed using the **history** command, but commands in the history cannot be executed.
Default	true
Introduced	24.7.R1
Platforms	All

size *number*

Synopsis	Command history size
Context	environment history size *number*
Tree	size
Description	This command specifies the maximum size of the command history. A value of 0 disables the command history.
Range	0 to 1000
Default	50
Introduced	24.7.R1
Platforms	All

info-output

Synopsis	Enter the **info-output** context
Context	environment info-output
Tree	info-output
Introduced	22.2.R1
Platforms	All

always-display

Synopsis	Enter the **always-display** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	environment info-output always-display
Tree	always-display
Description	Commands in this context specify elements that are always displayed, regardless of whether they are set to their default value.
Introduced	22.2.R1
Platforms	All

admin-state *boolean*

Synopsis	Always display admin-state elements
Context	environment info-output always-display admin-state *boolean*
Tree	admin-state
Description	When configured to **true**, the values of the **admin-state** elements in **info** output (without the **detail** option) are always displayed, even if they are the default values.
Default	false
Introduced	22.2.R1
Platforms	All

match-highlight

Synopsis	Enter the **match-highlight** context
Context	environment match-highlight
Tree	match-highlight
Introduced	26.3.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of match highlighting
Context	environment match-highlight admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	All

minimum-available-memory *number*

Synopsis	Minimum memory requirement to run a Python interpreter
Context	environment python minimum-available-memory *number*
Tree	minimum-available-memory
Range	5 to 50
Units	percent
Introduced	21.10.R1
Platforms	All

timeout *number*

Synopsis	Maximum run time before a Python application is stopped
Context	environment python timeout *number*
Tree	timeout
Range	30 to 86400
Units	seconds
Default	3600
Introduced	21.10.R1
Platforms	All

time-display *keyword*

Synopsis	Time zone to display time
Context	environment time-display *keyword*
Tree	time-display
Description	This command configures the time zone for a timestamp displayed in outputs, such as event logs and **show** commands for the current CLI session. In event logs, the selected time is used to control the timestamps in the CLI output of **show log log-id** and in YANG state in the /state/log/log-id branch (for logs such as session, cli, memory, SNMP, and NETCONF). Also see the **configure log log-id time-format** command.
Options	local, utc
Default	local
Introduced	16.0.R1

2.3 file commands

See “File management” in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Basic System Configuration Guide* for more information.

```
file
   –  change-directory
      –  router-instance string
      –  [url] (ftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)
   –  checksum
      –  router-instance string
      –  [type] keyword
      –  [url] (ftp-tftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)
   –  copy
      –  client-tls-profile string
      –  [destination-url] (ftp-tftp-url | http-url-loose | scp-url | sftp-url | sat-url |
 cflash-url | string-not-all-spaces)
      –  direct-http
      –  force
      –  proxy http-url
      –  recursive
      –  router-instance string
      –  [source-url] (ftp-tftp-url | http-url-loose | sftp-url | sat-url | cflash-url |
 string-not-all-spaces)
   –  disable
      –  active
      –  cflash-id cflash-id
      –  standby
   –  edit
      –  [url] (sat-url | cflash-url | string-not-all-spaces)
   –  enable
      –  active
      –  cflash-id cflash-id
      –  standby
   –  format
      –  [cflash-id] cflash-id
   –  list
      –  reverse
      –  router-instance string
      –  [sort-order] keyword
      –  [url] (ftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)
   –  make-directory
      –  router-instance string
      –  [url] (ftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)
   –  move
      –  client-tls-profile string
      –  [destination-url] (ftp-url | http-url-loose | sftp-url | sat-url | cflash-url |
 string-not-all-spaces)
      –  direct-http
      –  force
      –  proxy http-url
      –  router-instance string
      –  [source-url] (ftp-url | http-url-loose | sftp-url | sat-url | cflash-url | string-not-
all-spaces)
   –  permission
      –  [attribute] keyword
      –  [url] (sat-url | cflash-url | string-not-all-spaces)
   –  remove
      –  client-tls-profile string
      –  direct-http
      –  force
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

file remove proxy

```
      –  proxy http-url
      –  router-instance string
      –  [url] (ftp-url | http-url-loose | sftp-url | sat-url | cflash-url | string-not-all-
spaces)
   –  remove-directory
      –  force
      –  recursive
      –  router-instance string
      –  [url] (ftp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)
   –  repair
      –  [cflash-id] cflash-id
   –  secure-erase
      –  [cflash-id] cflash-id
   –  show
      –  client-tls-profile string
      –  direct-http
      –  proxy http-url
      –  router-instance string
      –  [url] (ftp-tftp-url | http-url-loose | sftp-url | sat-url | cflash-url | string-not-
all-spaces)
   –  unzip
      –  create-destination
      –  [destination-url] (sat-url | cflash-url | string-not-all-spaces)
      –  force
      –  list
      –  router-instance string
      –  [source-url] (ftp-tftp-url | http-url-loose | sftp-url | sat-url | cflash-url |
 string-not-all-spaces)
   –  version
      –  [url] (sat-url | cflash-url | string-not-all-spaces | ftp-tftp-url)
```

2.3.1 file command descriptions

file

Synopsis	Perform file operations
Context	file
Tree	file
Description	Commands in this context execute file management operations.
Introduced	20.10.R1
Platforms	All

change-directory

Synopsis	Change the working directory
Context	file change-directory
Tree	change-directory
Introduced	20.10.R1
Platforms	All

router-instance *string*

Synopsis	Router name or VPRN service name
Context	file change-directory router-instance *string*
Tree	router-instance
Introduced	25.10.R1
Platforms	All

[**url**] *(ftp-url* | *sftp-url* | *sat-url* | *cflash-url* | *string-not-all-spaces)*

Synopsis	New working directory URL
Context	file change-directory [url] *(ftp-url* | *sftp-url* | *sat-url* | *cflash-url* | *string-not-all-spaces)*
Tree	[url]
String length	1 to 180 (*ftp-url*) 1 to 512 (*sftp-url*) 1 to 200 (*sat-url*, *cflash-url*, *string-not-all-spaces*)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String format	'ftp-url' must not contain illegal characters 'ftp-url' must be ftp:// with optional user:pass@, hostname and path (e.g. ftp://user:pass@hostname.domain/path/file) 'sftp-url' must not contain illegal characters 'sftp-url' must be sftp:// with optional user:pass@, hostname and path (e.g. sftp://user:pass@hostname.domain/path/file) 'sat-url' must start with sat: (e.g. sat:path/to/file) 'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters 'string-not-all-spaces' must contain at least one non-space character
Default	.
Introduced	20.10.R1
Platforms	All

checksum

Synopsis	Compute and display checksums
Context	file checksum
Tree	checksum
Description	This command computes and displays an image file or a checksum for a file.
Introduced	20.10.R1
Platforms	All

router-instance *string*

Synopsis	Router name or VPRN service name
Context	file checksum router-instance *string*
Tree	router-instance
Introduced	25.10.R1
Platforms	All

[**type**] *keyword*

Synopsis	Checksum option type
Context	file checksum [type] *keyword*
Tree	[type]
Options	image, md5, sha256

Tree	[url]
String length	1 to 199 (*ftp-tftp-url*) 1 to 512 (*sftp-url*) 1 to 200 (*sat-url*, *cflash-url*, *string-not-all-spaces*)
String format	'ftp-tftp-url' must be ftp:// or tftp:// with host and path (e.g. ftp://user:pass@hostname.domain/path/file) 'ftp-tftp-url' must have valid hostname and optional path after scheme 'sftp-url' must not contain illegal characters 'sftp-url' must be sftp:// with optional user:pass@, hostname and path (e.g. sftp://user:pass@hostname.domain/path/file) 'sat-url' must start with sat: (e.g. sat:path/to/file) 'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

copy

Synopsis	Copy files
Context	file copy
Tree	copy
Introduced	20.10.R1
Platforms	All

client-tls-profile *string*

Synopsis	Connect over HTTP with a client TLS profile
Context	file copy client-tls-profile *string*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	client-tls-profile
String length	1 to 32
Introduced	20.10.R1
Platforms	All

[**destination-url**] *(ftp-tftp-url | http-url-loose | scp-url | sftp-url | sat-url | cflash-url | string-not-all-spaces)*

Synopsis	Destination URL or '.' for the working directory
Context	file copy [destination-url] *(ftp-tftp-url* | *http-url-loose* | *scp-url* | *sftp-url* | *sat-url* | *cflash-url* | *string-not-all-spaces)*
Tree	[destination-url]
String length	1 to 199 (*ftp-tftp-url*) 1 to 180 (*http-url-loose*, *scp-url*) 1 to 512 (*sftp-url*) 1 to 200 (*sat-url*, *cflash-url*, *string-not-all-spaces*)
String format	'ftp-tftp-url' must be ftp:// or tftp:// with host and path (e.g. ftp://user:pass@hostname.domain/path/file) 'ftp-tftp-url' must have valid hostname and optional path after scheme 'http-url-loose' must be http:// with host and optional port and path (e.g. http://hostname.domain/path) 'scp-url' must be scp:// with optional user:pass@, hostname and path (e.g. scp://user:pass@hostname.domain/path/file) 'sftp-url' must not contain illegal characters 'sftp-url' must be sftp:// with optional user:pass@, hostname and path (e.g. sftp://user:pass@hostname.domain/path/file) 'sat-url' must start with sat: (e.g. sat:path/to/file) 'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

direct-http

Synopsis	Allow direct HTTP connection, do not follow redirects
Context	file copy direct-http
Tree	direct-http
Introduced	20.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

force

Synopsis	Force copy without prompting before overwriting
Context	file copy force
Tree	force
Introduced	20.10.R1
Platforms	All

proxy *http-url*

Synopsis	Connect over HTTP with a proxy
Context	file copy proxy *http-url*
Tree	proxy
String length	1 to 255
Introduced	20.10.R1
Platforms	All

recursive

Synopsis	Copy sub-directories encountered at the source URL
Context	file copy recursive
Tree	recursive
Description	This command recursively copies files and directories. If files or directories already exist, the operator is prompted to overwrite them. When the **force** command is enabled, a positive response to the overwrite prompts is assumed, and the operator is not prompted for confirmation. The existing files or directories are overwritten.
Introduced	21.10.R1
Platforms	All

router-instance *string*

Synopsis	Router name or VPRN service name
Context	file copy router-instance *string*
Tree	router-instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	23.10.R1
Platforms	All

[**source-url**] *(ftp-tftp-url | http-url-loose | sftp-url | sat-url | cflash-url | string-not-all-spaces)*

Synopsis	Source URL
Context	file copy [source-url] *(ftp-tftp-url | http-url-loose | sftp-url | sat-url | cflash-url | string-not-all-spaces)*
Tree	[source-url]
String length	1 to 199 (*ftp-tftp-url*) 1 to 180 (*http-url-loose*) 1 to 512 (*sftp-url*) 1 to 200 (*sat-url*, *cflash-url*, *string-not-all-spaces*)
String format	'ftp-tftp-url' must be ftp:// or tftp:// with host and path (e.g. ftp://user:pass@hostname.domain/path/file) 'ftp-tftp-url' must have valid hostname and optional path after scheme 'http-url-loose' must be http:// with host and optional port and path (e.g. http://hostname.domain/path) 'sftp-url' must not contain illegal characters 'sftp-url' must be sftp:// with optional user:pass@, hostname and path (e.g. sftp://user:pass@hostname.domain/path/file) 'sat-url' must start with sat: (e.g. sat:path/to/file) 'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.

Tree	[destination-url]
String length	1 to 200
String format	'sat-url' must start with sat: (e.g. sat:path/to/file) 'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters 'string-not-all-spaces' must contain at least one non-space character
Introduced	20.10.R1
Platforms	All

force

Synopsis	Force the unzip operation without prompting
Context	file unzip force
Tree	force
Description	When configured, files and directories that already exist in the destination URL are overwritten without prompting. The system does not automatically create directories explicitly specified by the destination URL. To allow the system to create new directories, use the **create-destination** command. When unconfigured, the system prompts the user before overwriting a file or directory.

converted

Synopsis	Include converted third-party model configuration from the running datastore
Context	info *keyword* converted
Tree	converted
Description	This option specifies the inclusion of converted configuration values from third-party models in the output and is only available when **configure system management-interface yang-modules openconfig-modules** is set to **true**. This option should only be used in the **configure** region when third-party models are used. The output with this option is the same as **info** when used in other configuration regions. This option is not supported for **state** elements.
Introduced	16.0.R1
Platforms	All

depth *number*

Synopsis	Depth limit from the pwc

differences

Synopsis	Show the different values each model tries to set

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	info *keyword* differences
Tree	differences
Description	When specified, this command shows only the values that are different when multiple models try to set the same configuration element. This option is supported only with the **converted** option and is available only when **configure system management-interface yang-modules openconfig-modules** is set to **true**. This option is not supported for **state** elements.
Notes	The following elements are part of a choice: **differences**, **model**, or **values**.
Introduced	23.3.R1
Platforms	All

flat

Synopsis	Show the context from the pwc on each line
Context	info *keyword* flat
Tree	flat
Description	This option shows the hierarchy on each line starting from the present working context.
Notes	The following elements are part of a choice: **flat**, **json**, or **xml**.
Introduced	16.0.R1
Platforms	All

full-context

Synopsis	Show the full context on each line

Range	0 to 1500
Units	bytes
Default	0
Introduced	20.2.R1
Platforms	All

timeout *number*

Synopsis	Wait time for a reply to a sent message request
Context	oam eth-cfm loopback timeout *number*
Tree	timeout
Description	This command specifies the time the router waits for a message reply after sending a message request. After expiration of the timeout, the router assumes that the message response is not received. Any response received after the timeout is silently discarded.
Range	1 to 10
Units	seconds
Default	5
Introduced	20.2.R1
Platforms	All

one-way-delay-test

Synopsis	Initiate a one-way delay test
Context	oam eth-cfm one-way-delay-test
Tree	one-way-delay-test
Introduced	20.2.R1
Platforms	All

sr-ospf

Synopsis	Perform an LSP treetrace test for SR-OSPF
Context	oam lsp-treetrace sr-ospf
Tree	sr-ospf
Description	When specified, the router performs an LSP treetrace test for an IPv4 SR-OSPF node-SID tunnel. When the user runs this command, the sender node originates successive TTL incrementing LSP trace probes to discover the ECMP paths of an IPv4 SR-OSPF node-SID tunnel. The probes operate on the IPv4 SR-OSPF tunnel prefix in the specified OSPFv2 instance and on the node SID programmed in Segment Routing algorithm zero topology.
Introduced	26.7.R1
Platforms	All

Introduced	26.7.R1
Platforms	All

fc *keyword*

Synopsis	QoS FC for the transmitted Echo Request packets
Context	oam lsp-treetrace sr-ospf fc *keyword*
Tree	fc
Description	This command specifies the command options used to indicate the forwarding class and profile of the MPLS Echo Request packet. When the CPM generates an MPLS Echo Request packet and forwards it to the outgoing interface, the packet is queued in the egress network queue corresponding to the specified FC and profile command options. The LSP-EXP mappings on the outgoing interface control the marking of the packet MPLS header EXP field.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When the responding node receives the MPLS Echo Request packet, the LSP-EXP mappings of the incoming interface control the FC and profile command options.

When the CPM generates an MPLS Echo Reply packet and forwards it to the outgoing interface, the packet is queued in the egress network queue corresponding to the command option values. These values are derived from the classification of the Echo Request packet, which is being replied to, at the incoming interface. The LSP-EXP mappings on the outgoing interface control the marking of the EXP of the packet MPLS header EXP field. The ToS byte is not modified.

Options
be – Best Effort
l2 – Low 2 (best effort)
af – Assured Forwarding (assured)
l1 – Low 1 (assured)
h2 – High 2 (high priority)
ef – Expedited Forwarding (high priority)

Introduced	19.10.R1
Platforms	All

source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source IP address used in the ICMP Echo Request packet
Context	ping source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	source-address
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	19.10.R1
Platforms	All

srv6-policy

Synopsis	Ping a Segment Routing IPv6 policy
Context	ping srv6-policy
Tree	srv6-policy
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	23.7.R1
Platforms	All

subscriber *subscriber-id*

Synopsis	Subscriber ID for sending ICMP Echo Request packets
Context	ping subscriber *subscriber-id*
Tree	subscriber
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **bypass-routing**, **interface**, **next-hop-address**, or **subscriber**.
Introduced	19.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

timeout *number*

Synopsis	Wait time for the ICMP Echo Reply packet
Context	ping timeout *number*
Tree	timeout
Description	This command specifies the time to wait for the ICMP Echo Reply packet. The timer is started when the last ICMP Echo Request is sent.
Range	1 to 10
Units	seconds
Default	5
Introduced	19.10.R2
Platforms	All

tos *number*

Synopsis	Type of Service (ToS) bits in the IP header
Context	ping tos *number*
Tree	tos
Range	0 to 255
Default	0
Introduced	19.10.R1
Platforms	All

ttl *number*

Synopsis	Time to Live (TTL) included in the request packet
Context	ping ttl *number*
Tree	ttl
Range	1 to 128
Default	64
Introduced	19.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

pwc

Synopsis	Show the present working context
Context	pwc
Tree	pwc
Introduced	16.0.R1
Platforms	All

[**path-type**] *keyword*

Synopsis	Alternative format to display the path
Context	pwc [path-type] *keyword*
Tree	[path-type]
Description	This command provides alternative formats to display the present working context. The **gnmi-path** option replaces the **xpath** option.
Options	model-path – YANG-modeled format for RESTCONF gnmi-path – gNMI format for streaming telemetry cli-path – MD-CLI format on a single line for copying and pasting json-instance-path – YANG-modeled format for pySROS
Introduced	19.10.R1
Platforms	All

previous

Synopsis	Display previous working context
Context	pwc previous
Tree	previous
Introduced	16.0.R1
Platforms	All

pyexec [url] *(string | string)*

Synopsis	Execute a Python application
Context	pyexec *(string | string)*
Tree	pyexec
Introduced	21.7.R1

quit-config

Synopsis	Exit the candidate configuration mode

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	quit-config
Tree	quit-config
Introduced	16.0.R1
Platforms	All

ssh

Synopsis	SSH to an IP address or DNS name
Context	ssh
Tree	ssh
Introduced	20.7.R1
Platforms	All

[**destination**] *(ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces)*

Synopsis	Destination IP address or DNS name
Context	ssh [destination] *(ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces)*
Tree	[destination]
String length	1 to 128
String format	'ipv4-address-with-zone' must be a.b.c.d with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	All

key-re-exchange

Synopsis	Enter the **key-re-exchange** context
Context	ssh key-re-exchange
Tree	key-re-exchange
Introduced	20.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mbytes *(number | keyword)*

Synopsis	Maximum bytes before initiating key re-exchange
Context	ssh key-re-exchange mbytes *(number | keyword)*
Tree	mbytes
Description	This command specifies the number of bytes transmitted on an SSH session, after which the SSH client initiates the key re-exchange.
Range	1 to 64000
Units	megabytes
Options	infinite
Default	1024
Introduced	20.7.R1
Platforms	All

minutes *(number | keyword)*

Synopsis	Time after which SSH client initiates key re-exchange
Context	ssh key-re-exchange minutes *(number | keyword)*
Tree	minutes
Range	1 to 1440
Units	minutes
Options	infinite
Default	60
Introduced	20.7.R1
Platforms	All

login-name *string-not-all-spaces*

Synopsis	SSH login username
Context	ssh login-name *string-not-all-spaces*
Tree	login-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	20.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

port *number*

Synopsis	TCP listening port on SSH client for SSH session
Context	ssh port *number*
Tree	port
Description	This command configures the listening port for the SR OS SSH client to establish the SSH session with the SSH server.
Range	1 to 65535
Default	22
Introduced	24.7.R1
Platforms	All

private-key-file *string*

Synopsis	SSH private key file for public-key authentication
Context	ssh private-key-file *string*
Tree	private-key-file
Description	This command configures the name of the file containing the private key for public-key authentication on the SR OS SSH client, up to 255 characters. (The public key must be provided to the SSH server.) If the file containing the private key is encrypted, the system asks for the password to decrypt the file.
Introduced	24.7.R1
Platforms	All

router-instance *(string | string)*

Synopsis	Router name or VPRN service name
Context	ssh router-instance *(string | string)*
Tree	router-instance
Default	Base
Introduced	20.7.R1
Platforms	All

telnet

Synopsis	Telnet to an IP address or DNS name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	telnet
Tree	telnet
Description	This command opens a Telnet session to a remote host. In SR OS, the Telnet servers limit Telnet clients to three login attempts; if unsuccessful, the Telnet client session disconnects. The number is not user configurable.
Introduced	20.7.R1
Platforms	All

[**destination**] *(ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces)*

Synopsis	Destination IP address or DNS name
Context	telnet [destination] *(ipv4-address-with-zone | ipv6-address-with-zone | string-not-all-spaces)*
Tree	[destination]
Description	This command specifies the IP address or DNS name (if DNS name resolution is configured) of the remote host for the Telnet session.
String length	1 to 128
String format	'ipv4-address-with-zone' must be a.b.c.d with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	All

port *number*

Synopsis	Remote host TCP port for the Telnet connection
Context	telnet port *number*
Tree	port
Range	1 to 65535
Default	23
Introduced	20.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

router-instance *(string | string)*

Synopsis	Router name or VPRN service name
Context	telnet router-instance *(string | string)*
Tree	router-instance
Default	Base
Introduced	20.7.R1
Platforms	All

source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source IP address of the Telnet packets
Context	telnet source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	source-address
Introduced	20.7.R1
Platforms	All

top

Synopsis	Move to the top level of the context
Context	top
Tree	top
Introduced	16.0.R1
Platforms	All

traceroute

Synopsis	Show the route taken to an IP address or DNS name
Context	traceroute
Tree	traceroute
Introduced	19.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

candidate-path

Synopsis	Trace route of the candidate path of the SRv6 policy
Context	traceroute candidate-path
Tree	candidate-path
Description	When configured, this command allows the user to specify a candidate path of the SRv6 policy to traceroute. The candidate path does not need to be the currently active candidate path.
Introduced	23.10.R1
Platforms	All

color *number*

Synopsis	Color ID of the SRv6 policy to trace
Context	traceroute color *number*
Tree	color
Description	This command launches a traceroute of an SRv6 policy that matches a specific color.
Max. range	0 to 4294967295
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	23.3.R1
Platforms	All

decode *keyword*

Synopsis	Perform original datagram parsing functions
Context	traceroute decode *keyword*
Tree	decode
Options	none, original-datagram
Default	none
Introduced	22.7.R1
Platforms	All

dest-port *number*

Synopsis	Transport protocol destination port number

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	traceroute dest-port *number*
Tree	dest-port
Range	1 to 65535
Default	33434
Introduced	20.10.R1
Platforms	All

dest-port-udp-fixed

Synopsis	Avoid increment of destination port number for UDP test
Context	traceroute dest-port-udp-fixed
Tree	dest-port-udp-fixed
Introduced	21.10.R1
Platforms	All

[**destination**] *(ipv4-address-no-zone | ipv6-address-no-zone | string-not-all-spaces)*

Synopsis	Destination IP address or DNS name
Context	traceroute [destination] *(ipv4-address-no-zone | ipv6-address-no-zone | string-not-all-spaces)*
Tree	[destination]
String length	1 to 128
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	19.10.R1
Platforms	All

detail

Synopsis	Display MPLS label stack information or TCP port status
Context	traceroute detail
Tree	detail
Introduced	19.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

distinguisher *number*

Synopsis	SRv6 policy candidate path distinguisher
Context	traceroute distinguisher *number*
Tree	distinguisher
Description	This command specifies the distinguisher of the SRv6 policy candidate path to send the traceroute probe on. This command must be configured if the **protocol-owner** command is configured to **bgp**.
Range	1 to 4294967295
Introduced	23.10.R1
Platforms	All

endpoint *ipv6-unicast-or-zero-address*

Synopsis	Endpoint of the SRv6 policy to trace
Context	traceroute endpoint *ipv6-unicast-or-zero-address*
Tree	endpoint
Description	This command configures an IPv6 endpoint address for an SRv6 policy as the target of the traceroute.
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	23.3.R1
Platforms	All

min-ttl *number*

Synopsis	First hop traceroute probes using the TTL value
Context	traceroute min-ttl *number*
Tree	min-ttl
Description	This command specifies the first hop traceroute probes, using the **ttl** value.
Range	1 to 255
Default	1
Introduced	21.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

numeric

Synopsis	Display IP addresses instead of DNS names
Context	traceroute numeric
Tree	numeric
Introduced	19.10.R1
Platforms	All

preference *number*

Synopsis	SRv6 policy candidate path preference
Context	traceroute preference *number*
Tree	preference
Description	This command specifies the preference of the SRv6 policy candidate path to send the traceroute probe on.
Max. range	0 to 4294967295
Default	100
Introduced	23.10.R1
Platforms	All

probe-count *number*

Synopsis	Number of probes to send per hop
Context	traceroute probe-count *number*
Tree	probe-count
Range	1 to 10
Default	3
Introduced	20.10.R1
Platforms	All

protocol *keyword*

Synopsis	Packet type to send
Context	traceroute protocol *keyword*
Tree	protocol

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command sets the transport protocol, UDP or TCP, for the traceroute packet. A targeted VPRN service silently discards TCP traceroutes and only responds to UDP traceroutes.
Options	udp, tcp
Default	udp
Introduced	21.10.R1
Platforms	All

protocol-owner *keyword*

Synopsis	Protocol owner
Context	traceroute protocol-owner *keyword*
Tree	protocol-owner
Description	This command specifies the protocol owner of the SRv6 policy candidate path to traceroute. The **bgp** option specifies a BGP SRv6 policy. The **static** option specifies a locally configured static SRv6 policy.
Options	bgp, static
Introduced	23.10.R1
Platforms	All

router-instance *string*

Synopsis	Router name or VPRN service name
Context	traceroute router-instance *string*
Tree	router-instance
Default	Base
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	19.10.R1
Platforms	All

segment-list *number*

Synopsis	SR IPv6 segment list to trace
Context	traceroute segment-list *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	segment-list
Description	This command configures the traceroute probe to target a specific segment list of an SRv6 policy. When the segment list is not specified, the traceroute probe is sent on the lowest available segment list.
Range	1 to 32
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	23.3.R1
Platforms	All

size *number*

Synopsis	Number of pad bytes in each transmitted packet
Context	traceroute size *number*
Tree	size
Range	0 to 9786
Units	bytes
Default	0
Introduced	21.10.R1
Platforms	All

source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source address of the probe packets
Context	traceroute source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	source-address
Description	This command specifies the source address of the probe packets. If the IP address is not one of the interfaces of the device, the system returns an error.
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	19.10.R1
Platforms	All

srv6-policy

Synopsis	Trace an SRv6 policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	traceroute srv6-policy
Tree	srv6-policy
Description	This command launches a traceroute of a Segment Routing IPv6 (SRv6) policy.
Notes	The following elements are part of a mandatory choice: (**destination**, **router-instance**, and **source-address**) or (**color**, **endpoint**, **segment-list**, and **srv6-policy**).
Introduced	23.3.R1
Platforms	All

tos *number*

Synopsis	Type of Service (ToS) bits in the IP header
Context	traceroute tos *number*
Tree	tos
Range	0 to 255
Default	0
Introduced	19.10.R1
Platforms	All

ttl *number*

Synopsis	Maximum number of hops (TTL) to probe
Context	traceroute ttl *number*
Tree	ttl
Range	1 to 255
Default	30
Introduced	19.10.R1
Platforms	All

wait *number*

Synopsis	Time to wait for a response to the probe
Context	traceroute wait *number*
Tree	wait
Range	10 to 60000
Units	milliseconds

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	5000
Introduced	19.10.R1
Platforms	All

tree

Synopsis	Show the command tree under the present working context
Context	tree
Tree	tree
Introduced	16.0.R1
Platforms	All

[**cli-path**] *cli-path-type*

Synopsis	Absolute path or relative path from pwc
Context	tree [cli-path] *cli-path-type*
Tree	[cli-path]
Introduced	20.10.R1
Platforms	All

depth *number*

Synopsis	Depth limit of the tree
Context	tree depth *number*
Tree	depth
Range	1 to 4294967040
Introduced	26.10.R1
Platforms	All

detail

Synopsis	Display the tree with keys and field values
Context	tree detail
Tree	detail
Notes	The following elements are part of a choice: (**detail** and **flat**) or **path-format**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

flat

Synopsis	Show the context from the pwc on each line
Context	tree flat
Tree	flat
Notes	The following elements are part of a choice: (**detail** and **flat**) or **path-format**.
Introduced	16.0.R1
Platforms	All

[**path-format**] *keyword*

Synopsis	Alternative format to display the path
Context	tree [path-format] *keyword*
Tree	[path-format]
Description	This option outputs the tree information in alternative YANG formats for use in external tools, such as pySROS, gNMI, or the Network Services Platform (NSP).
Options	model-path – YANG-modeled format for RESTCONF gnmi-path – gNMI format for streaming telemetry json-instance-path – YANG-modeled format for pySROS
Notes	The following elements are part of a choice: (**detail** and **flat**) or **path-format**.
Introduced	24.7.R1
Platforms	All

2.6 perform commands

The **perform** commands are YANG-modeled versions of the **tools perform** commands and are available in MD-CLI and NETCONF interfaces. The **perform** commands execute actions in the router, such as:

- force a LAG subgroup to become active
- set an IS-IS overload condition
- terminate a Python script

```
perform
   –  application-assurance
      –  aarp reference
         –  force-evaluate
            –  [force-evaluate]
      –  group reference
         –  load-balance
            –  service-id number
         –  partition reference
            –  aa-sub
               –  esm
                  –  clear-quarantine
                  –  quarantine
                  –  [sub-ident-string] named-item
               –  esm-mac
                  –  clear-quarantine
                  –  [esm-mac-name] named-item
                  –  quarantine
               –  sap
                  –  clear-quarantine
                  –  quarantine
                  –  [sap-id] sap
               –  spoke-sdp
                  –  clear-quarantine
                  –  quarantine
                  –  [sdp-bind-id] sdp-bind-id
               –  transit
                  –  clear-quarantine
                  –  quarantine
                  –  [transit-aasub-name] named-item
            –  tethering
               –  [clear-counters]
   –  card number
      –  power-cycle

2.6.1 perform command descriptions

perform

Synopsis	Perform troubleshooting and debugging
Context	perform
Tree	perform
Introduced	23.7.R1
Platforms	All

application-assurance

Synopsis	Enter the **application-assurance** context
Context	perform application-assurance
Tree	application-assurance
Description	Commands in this context perform Application Assurance (AA) operations.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp [aarp-id] *reference*

Synopsis	Enter the **aarp** list instance
Context	perform application-assurance aarp *reference*
Tree	aarp
Description	Commands in this context perform Application Assurance Redundancy Protocol (AARP) instance operations.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aarp-id**] *reference*

Synopsis	AARP ID
Context	perform application-assurance aarp *reference*
Tree	aarp
Reference	**state application-assurance aarp** *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

force-evaluate

Synopsis	Force an evaluation of the specific AARP instance
Context	perform application-assurance aarp *reference* force-evaluate
Tree	force-evaluate
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**force-evaluate**]

Synopsis	Perform an AARP force-evaluate operation
Context	perform application-assurance aarp *reference* force-evaluate [force-evaluate]
Tree	[force-evaluate]
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group [aa-group-id] *reference*

Synopsis	Enter the **group** list instance
Context	perform application-assurance group *reference*
Tree	group
Description	Commands in this context perform AA group operations.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-group-id**] *reference*

Synopsis	AA group ID
Context	perform application-assurance group *reference*
Tree	group

fetch-ahs-log

Synopsis	Fetch AHS log
Context	perform esa *reference* fetch-ahs-log
Tree	fetch-ahs-log
Description	When specified, the system retrieves the ESA instance AHS log for a specified number of past days and copies it to a local or remote destination.
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

file-url *cflash-and-url*

Synopsis	File URL
Context	perform esa *reference* fetch-ahs-log file-url *cflash-and-url*
Tree	file-url
Description	This command configures a local or remote destination for the AHS log.
String length	1 to 180
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

period *(number | keyword)*

Synopsis	Number of days to fetch
Context	perform esa *reference* fetch-ahs-log period *(number | keyword)*
Tree	period
Description	This command specifies the number of past days for which AHS log events are retrieved.
Range	1 to 31
Options	all
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

log

Synopsis	Enter the **log** context
Context	perform log
Tree	log
Introduced	24.10.R1
Platforms	All

custom-event

Synopsis	Send a custom generic log event
Context	perform log custom-event
Tree	custom-event
Description	When specified, the system sends a custom generic log event. The total length of the message string and all parameter strings must be less than or equal to 2400 characters.
Introduced	24.10.R1
Platforms	All

[**event-number**] *number*

Synopsis	Custom event to send
Context	perform log custom-event [event-number] *number*
Tree	[event-number]
Range	1 to 6
Notes	This element is mandatory.
Introduced	24.10.R1
Platforms	All

message-string *string*

Synopsis	Message for the log event
Context	perform log custom-event message-string *string*
Tree	message-string
Description	This command specifies the string for the message field of the log event. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (").

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 2000
Notes	This element is mandatory.
Introduced	24.10.R1
Platforms	All

parameter1 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter1 *string*
Tree	parameter1
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (”).
String length	0 to 2000
Introduced	24.10.R1
Platforms	All

parameter2 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter2 *string*
Tree	parameter2
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (”).
String length	0 to 2000
Introduced	24.10.R1
Platforms	All

parameter3 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter3 *string*
Tree	parameter3

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (”).
String length	0 to 2000
Introduced	24.10.R1
Platforms	All

parameter4 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter4 *string*
Tree	parameter4
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (”).
String length	0 to 2000
Introduced	24.10.R1
Platforms	All

parameter5 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter5 *string*
Tree	parameter5
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (”).
String length	0 to 2000
Introduced	24.10.R1
Platforms	All

parameter6 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter6 *string*
Tree	parameter6

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (”).
String length	0 to 2000
Introduced	24.10.R1
Platforms	All

parameter7 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter7 *string*
Tree	parameter7
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (”).
String length	0 to 2000
Introduced	24.10.R1
Platforms	All

parameter8 *string*

Synopsis	Custom text of the parameter
Context	perform log custom-event parameter8 *string*
Tree	parameter8
Description	This command specifies the string for the parameter. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (”).
String length	0 to 2000
Introduced	24.10.R1
Platforms	All

subject *string*

Synopsis	Subject of the log event
Context	perform log custom-event subject *string*
Tree	subject

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the string in the subject field of the log event. Embedded double quotes are supported by using the backslash character (\) followed by the double quote character (”).
String length	1 to 32
Notes	This element is mandatory.
Introduced	24.10.R1
Platforms	All

test-event

Synopsis	Send a test log event
Context	perform log test-event
Tree	test-event
Introduced	24.10.R1
Platforms	All

custom-text *string*

Synopsis	Custom text of the test event message field
Context	perform log test-event custom-text *string*
Tree	custom-text
Description	This command specifies custom text for the message section of the test log event. Embedded double quotes are not supported in the custom-text string. There is no special treatment for or \r sequences. For example, in the custom-text string is output as the backslash character (\) and "n" (the equivalent of ASCII 0x5C and 0x6e).
String length	0 to 800
Introduced	24.10.R1
Platforms	All

mda

Synopsis	Enter the **mda** context
Context	perform mda
Tree	mda

ptp-reset

Synopsis	Reset the PTP timing on the specified MDA
Context	perform mda card-slot *reference* mda-slot *reference* ptp-reset
Tree	ptp-reset
Description	This command resets the PTP timing subsystem on the specified MDA. When a PTP timeReceiver port indicates abnormal or extreme values for the offset FromMaster or the meanPathDelay, it may be because of the PTP timing subsystem of the MDA on the timeTransmitter or the timeReceiver. This command can be used to reinitialize the timing subsystem on an MDA without impacting traffic. **Note:** While this command can be used to remedy such a situation, Nokia recommends to first capture any relevant debug files for Nokia investigation.
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

capacity *decimal-number*

Synopsis	Low-power switch fabric mode percentage
Context	perform system power-management power-save low-power-fabric capacity *decimal-number*
Tree	capacity
Description	This command operationally enables the low-power switch fabric mode to reduce SFM power consumption. Setting the capacity to a percentage less than 100.00 puts the corresponding number of SFMs into power save mode. Setting the capacity to 100.00 operationally disables the low-power fabric mode. The following values can be specified: • 7750 SR-2s: 50.00, 100.00 • 7750 SR-2se: 50.00, 75.00, 100.00 • 7750 SR-7s: 25.00, 50.00, 75.00, 100.00 • 7750 SR-14s: 12.50, 25.00, 37.50, 50.00, 62.50, 75.00, 87.50, 100.00
Range	12.50 to 100.00
Units	percent
Notes	This element is mandatory.
Introduced	25.7.R1
Platforms	7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

script-control

client-known-hosts

Synopsis	Enter the **client-known-hosts** context
Context	perform system ssh client-known-hosts
Tree	client-known-hosts
Description	Commands in this context remove dynamically learned SSH host public keys. Known-host keys are stored per user.
Introduced	26.10.R1
Platforms	All

remove-key

Synopsis	Remove dynamically learned SSH host public keys
Context	perform system ssh client-known-hosts remove-key
Tree	remove-key
Description	When invoked, the router removes dynamically learned SSH host public keys for a specified user or for all users. This operation does not remove statically configured known-host keys. **Note:** Restrict this command to administrative users by using user profiles.
Introduced	26.10.R1
Platforms	All

all-hosts

Synopsis	Remove keys for all hosts
Context	perform system ssh client-known-hosts remove-key all-hosts
Tree	all-hosts
Description	When specified, the router removes dynamically learned host keys for all hosts.
Notes	The following elements are part of a mandatory choice: **all-hosts** or **host**.
Introduced	26.10.R1
Platforms	All

all-users

Synopsis	Remove keys for all users
Context	perform system ssh client-known-hosts remove-key all-users

generate-keypair

Synopsis	Generate SSH authentication key pair
Context	perform system ssh generate-keypair
Tree	generate-keypair
Introduced	24.3.R3
Platforms	All

ecdsa-curve *keyword*

Synopsis	Elliptic curve of the ECDSA key to be generated

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	perform system ssh generate-keypair ecdsa-curve *keyword*
Tree	ecdsa-curve
Options	secp256r1, secp384r1, secp521r1
Default	secp256r1
Notes	The following elements are part of a mandatory choice: **ecdsa-curve**, **ed25519**, or **rsa-key-size**.
Introduced	24.3.R3
Platforms	All

ed25519

Synopsis	Generate an ed25519 key
Context	perform system ssh generate-keypair ed25519
Tree	ed25519
Notes	The following elements are part of a mandatory choice: **ecdsa-curve**, **ed25519**, or **rsa-key-size**.
Introduced	24.3.R3
Platforms	All

rsa-key-size *number*

Synopsis	Length in bits of the RSA key to be generated
Context	perform system ssh generate-keypair rsa-key-size *number*
Tree	rsa-key-size
Range	2048 to 4096
Default	3072
Notes	The following elements are part of a mandatory choice: **ecdsa-curve**, **ed25519**, or **rsa-key-size**.
Introduced	24.3.R3
Platforms	All

[**save-path**] *cflash-url*

Synopsis	Path to save the result key file
Context	perform system ssh generate-keypair [save-path] *cflash-url*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	[save-path]
String length	1 to 200
String format	'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters
Notes	This element is mandatory.
Introduced	24.3.R3
Platforms	All

2.7 reset commands

The **reset** commands are YANG-modeled versions of the **clear** commands and are available in MD-CLI and NETCONF interfaces. The **reset** commands are primarily used to:

- set statistics in a specific area back to a value of zero
- reset specific hardware assemblies, for example, cards
- delete temporary operational state data, for example, contents of a log in memory

```
reset

2.7.1 reset command descriptions

reset

Synopsis	Clear statistics or reset operational state
Context	reset
Tree	reset
Description	Commands in this context are used to clear specific statistics, reset specific hardware assemblies (for example, cards), and delete temporary operational state data (for example, contents of a log in memory).
Introduced	23.3.R1
Platforms	All

application-assurance

Synopsis	Enter the **application-assurance** context
Context	reset application-assurance
Tree	application-assurance
Description	Commands in this context reset Application Assurance (AA) data.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group [aa-group-id] *reference*

Synopsis	Enter the **group** list instance
Context	reset application-assurance group *reference*
Tree	group
Description	Commands in this context reset AA group data.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-group-id**] *reference*

Synopsis	AA group ID
Context	reset application-assurance group *reference*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	group
Reference	**state application-assurance group** *number*
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cflowd

Synopsis	Reset AA group cflowd
Context	reset application-assurance group *reference* cflowd
Tree	cflowd
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

partition [aa-partition-id] *reference*

Synopsis	Enter the **partition** list instance
Context	reset application-assurance group *reference* partition *reference*
Tree	partition
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-partition-id**] *reference*

Synopsis	AA partition ID
Context	reset application-assurance group *reference* partition *reference*
Tree	partition
Reference	**state application-assurance group** *number* **partition** *number*
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log

Synopsis	Reset the AA event log for the group partition

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	reset application-assurance group *reference* partition *reference* event-log
Tree	event-log
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *reference*

Synopsis	Event log name
Context	reset application-assurance group *reference* partition *reference* event-log name *reference*
Tree	name
Reference	**state application-assurance group** *number* **partition** *number* **event-log** *named-item*
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp

Synopsis	Reset the AA GTP for the group partition
Context	reset application-assurance group *reference* partition *reference* gtp
Tree	gtp
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

statistics

Synopsis	Reset AA group statistics
Context	reset application-assurance group *reference* statistics
Tree	statistics
Description	This command resets statistics displayed using the **show application-assurance group status** command. **Note**: This command resets all the application assurance statistics counters to zero on the CPM; however, in some instances these counters may still display non-zero values if there are active flows on the ISA.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

force

Synopsis	Force the reset action
Context	reset application-assurance group *reference* statistics force
Tree	force
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

status

Synopsis	Reset status and statistics
Context	reset application-assurance group *reference* status
Tree	status
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy [name] *reference*

Synopsis	Enter the **radius-accounting-policy** list instance
Context	reset application-assurance radius-accounting-policy *reference*
Tree	radius-accounting-policy
Description	Commands in this context reset application assurance RADIUS accounting statistics for the specified policy.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *reference*

Synopsis	AA RADIUS accounting policy
Context	reset application-assurance radius-accounting-policy *reference*
Tree	radius-accounting-policy
Reference	**state application-assurance radius-accounting-policy** *named-item*
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esa [esa-id] *reference*

Synopsis	Enter the **esa** list instance
Context	reset esa *reference*
Tree	esa
Description	Commands in this context reset the ESA hypervisor or ESA hardware.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[**esa-id**] *reference*

Synopsis	ESA ID
Context	reset esa *reference*
Tree	esa
Reference	**state esa** *number*
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

reboot-type

Synopsis	Reset the specified ESA with warm or cold reboot
Context	reset esa *reference* reboot-type
Tree	reboot-type
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

cold

Synopsis	Cold reboot of specified ESA
Context	reset esa *reference* reboot-type cold

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	cold
Description	This command performs a cold reboot of the ESA, which resets the physical ESA hardware.
Notes	The following elements are part of a mandatory choice: **cold** or **warm**.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

warm

Synopsis	Warm reboot of specified ESA
Context	reset esa *reference* reboot-type warm
Tree	warm
Description	This command performs a warm reboot of the ESA, which resets the ESA hypervisor and clears the statistics or status information for the specified ESA.
Notes	The following elements are part of a mandatory choice: **cold** or **warm**.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

vm

Synopsis	Reset specified ESA VM
Context	reset esa *reference* vm
Tree	vm
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[**vm-id**] *reference*

Synopsis	VM ID
Context	reset esa *reference* vm [vm-id] *reference*
Tree	[vm-id]
Reference	**state esa** *number* **vm** *number*
Notes	This element is mandatory.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover-pool-statistics

Synopsis	Enter the **failover-pool-statistics** context
Context	reset router *string* dhcp-server dhcpv4 *named-item* failover-pool-statistics
Tree	failover-pool-statistics
Description	Commands in this context reset the per pool failover statistics.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Reset failover statistics for all pools
Context	reset router *string* dhcp-server dhcpv4 *named-item* failover-pool-statistics all
Tree	all
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pool

Synopsis	Reset failover statistics for the specified pool
Context	reset router *string* dhcp-server dhcpv4 *named-item* failover-pool-statistics pool
Tree	pool
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**pool**] *named-item*

Synopsis	Pool name

pool

Synopsis	Reset extended statistics peak values for the pool
Context	reset router *string* dhcp-server dhcpv4 *named-item* pool-extended-statistics pool
Tree	pool
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**pool**] *named-item*

Synopsis	Pool name
Context	reset router *string* dhcp-server dhcpv4 *named-item* pool-extended-statistics pool [pool] *named-item*
Tree	[pool]
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

statistics

Synopsis	Reset DHCPv4 server statistics
Context	reset router *string* dhcp-server dhcpv4 *named-item* statistics
Tree	statistics
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sticky-leases

Synopsis	Enter the **sticky-leases** context
Context	reset router *string* dhcp-server dhcpv4 *named-item* sticky-leases
Tree	sticky-leases

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context delete sticky leases.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-name

Synopsis	Delete the sticky lease associated with the hostname
Context	reset router *string* dhcp-server dhcpv4 *named-item* sticky-leases host-name
Tree	host-name
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**host-name**] *named-item*

Synopsis	Hostname
Context	reset router *string* dhcp-server dhcpv4 *named-item* sticky-leases host-name [host-name] *named-item*
Tree	[host-name]
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-name-prefix

Synopsis	Delete sticky leases associated with hostnames containing the prefix
Context	reset router *string* dhcp-server dhcpv4 *named-item* sticky-leases host-name-prefix
Tree	host-name-prefix
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**host-name-prefix**] *named-item*

Synopsis	Hostname prefix

pool

Synopsis	Reset threshold statistics peak values for all prefixes in the pool
Context	reset router *string* dhcp-server dhcpv6 *named-item* prefix-threshold-statistics pool
Tree	pool
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**pool**] *named-item*

Synopsis	Pool name
Context	reset router *string* dhcp-server dhcpv6 *named-item* prefix-threshold-statistics pool [pool] *named-item*
Tree	[pool]
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix

Synopsis	Reset threshold statistics peak values for the specified prefix
Context	reset router *string* dhcp-server dhcpv6 *named-item* prefix-threshold-statistics prefix
Tree	prefix
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**prefix**] *ipv6-prefix*

Synopsis	IPv6 prefix
Context	reset router *string* dhcp-server dhcpv6 *named-item* prefix-threshold-statistics prefix [prefix] *ipv6-prefix*
Tree	[prefix]
Notes	This element is mandatory.

version

Synopsis	Enter the **version** context
Context	reset router *string* igmp version
Tree	version
Description	Commands in this context reset the IGMP version on a specified interface or IP address.
Introduced	24.3.R1
Platforms	All

all

Synopsis	Reset the version for all interfaces, groups, and hosts
Context	reset router *string* igmp version all
Tree	all
Introduced	24.3.R1
Platforms	All

all-group-interfaces

Synopsis	Reset the version for all group interfaces
Context	reset router *string* igmp version all-group-interfaces
Tree	all-group-interfaces
Introduced	24.3.R1

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all-hosts

Synopsis	Reset the version for all hosts
Context	reset router *string* igmp version all-hosts
Tree	all-hosts
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

forwarding-group-interface

Synopsis	Reset the version on a group interface
Context	reset router *string* igmp version forwarding-group-interface
Tree	forwarding-group-interface
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

forwarding-service *service-name*

Synopsis	Forwarding service for a subscriber interface
Context	reset router *string* igmp version forwarding-group-interface forwarding-service *service-name*
Tree	forwarding-service
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface-name *interface-name*

Synopsis	Group interface name
Context	reset router *string* igmp version forwarding-group-interface group-interface-name *interface-name*
Tree	group-interface-name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 32
Notes	This element is mandatory.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

Synopsis	Reset the version on a group interface
Context	reset router *string* igmp version group-interface
Tree	group-interface
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface-name *interface-name*

Synopsis	Group interface name
Context	reset router *string* igmp version group-interface group-interface-name *interface-name*
Tree	group-interface-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host

Synopsis	Reset the version on a host
Context	reset router *string* igmp version host
Tree	host
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-ip-address *ipv4-address*

Synopsis	Host address
Context	reset router *string* igmp version host host-ip-address *ipv4-address*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	host-ip-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface

Synopsis	Reset the version on an interface
Context	reset router *string* igmp version interface
Tree	interface
Introduced	24.3.R1
Platforms	All

interface-name *interface-name*

Synopsis	Interface name
Context	reset router *string* igmp version interface interface-name *interface-name*
Tree	interface-name
String length	1 to 32
Notes	This element is mandatory.
Introduced	24.3.R1
Platforms	All

interface [interface-name] *interface-name*

Synopsis	Enter the **interface** list instance
Context	reset router *string* interface *interface-name*
Tree	interface
Description	Commands in this context reset IP interface statistics.
Introduced	23.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**interface-name**] *interface-name*

Synopsis	Interface name
Context	reset router *string* interface *interface-name*
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	23.7.R1
Platforms	All

hold-time

Synopsis	Reset the IP interface activation hold timers
Context	reset router *string* interface *interface-name* hold-time
Tree	hold-time
Introduced	23.7.R1
Platforms	All

mac

Synopsis	Enter the **mac** context
Context	reset router *string* interface *interface-name* mac
Tree	mac
Introduced	23.7.R1
Platforms	All

address

Synopsis	Reset specified MAC address from associated interface
Context	reset router *string* interface *interface-name* mac address
Tree	address
Introduced	23.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**mac-address**] *mac-address*

Synopsis	MAC address
Context	reset router *string* interface *interface-name* mac address [mac-address] *mac-address*
Tree	[mac-address]
Notes	This element is mandatory.
Introduced	23.7.R2
Platforms	All

all

Synopsis	Reset all MAC addresses for the specified interface
Context	reset router *string* interface *interface-name* mac all
Tree	all
Introduced	23.7.R1
Platforms	All

policy-accounting

Synopsis	Enter the **policy-accounting** context
Context	reset router *string* interface *interface-name* policy-accounting
Tree	policy-accounting
Description	Commands in this context reset the accounting statistics.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

all

Synopsis	Reset all the policy-accounting statistics
Context	reset router *string* interface *interface-name* policy-accounting all
Tree	all
Description	When configured, the system resets all classes, indexes, and policers.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

class

Synopsis	Reset the specified policy-accounting class
Context	reset router *string* interface *interface-name* policy-accounting class
Tree	class
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

all

Synopsis	Reset all policy-accounting class indexes
Context	reset router *string* interface *interface-name* policy-accounting class all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or **index**.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

index *number*

Synopsis	Policy-accounting class index
Context	reset router *string* interface *interface-name* policy-accounting class index *number*
Tree	index
Range	1 to 255
Notes	The following elements are part of a mandatory choice: **all** or **index**.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

[**name**] *keyword*

Synopsis	Policy-accounting class counters to reset
Context	reset router *string* interface *interface-name* policy-accounting class [name] *keyword*
Tree	[name]
Options	source-class, destination-class
Notes	This element is mandatory.
Introduced	23.7.R2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

policer

Synopsis	Enter the **policer** context
Context	reset router *string* interface *interface-name* policy-accounting policer
Tree	policer
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

all

Synopsis	Reset all the policer statistics
Context	reset router *string* interface *interface-name* policy-accounting policer all
Tree	all
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

index

Synopsis	Reset the specified policer
Context	reset router *string* interface *interface-name* policy-accounting policer index
Tree	index
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

[**policer-index**] *number*

Synopsis	Policer index
Context	reset router *string* interface *interface-name* policy-accounting policer index [policer-index] *number*
Tree	[policer-index]
Range	1 to 63
Notes	This element is mandatory.
Introduced	23.7.R2

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

statistics

Synopsis	Reset the interface traffic statistics
Context	reset router *string* interface *interface-name* statistics
Tree	statistics
Introduced	23.7.R1
Platforms	All

urpf-statistics

Synopsis	Reset the interface uRPF statistics
Context	reset router *string* interface *interface-name* urpf-statistics
Tree	urpf-statistics
Introduced	23.7.R1
Platforms	All

isis [isis-instance] *reference*

Synopsis	Enter the **isis** list instance
Context	reset router *string* isis *reference*
Tree	isis
Description	Commands in this context reset the IS-IS protocol entities.
Introduced	23.10.R1
Platforms	All

[**isis-instance**] *reference*

Synopsis	IS-IS instance
Context	reset router *string* isis *reference*
Tree	isis
MD-CLI default	0
Reference	**state router** *named-item-64* **isis** *number*

© 2026 Nokia.

Notes	This element is part of a list key.
Introduced	23.10.R1
Platforms	All

adjacency

Synopsis	Enter the **adjacency** context
Context	reset router *string* isis *reference* adjacency
Tree	adjacency
Description	Commands in this context reset the entries from the IS-IS adjacency database.
Introduced	23.10.R1
Platforms	All

all-adjacencies

Synopsis	Reset all IS-IS adjacencies
Context	reset router *string* isis *reference* adjacency all-adjacencies
Tree	all-adjacencies
Introduced	23.10.R1
Platforms	All

system-id

Synopsis	Reset the IS-IS adjacency to a node
Context	reset router *string* isis *reference* adjacency system-id
Tree	system-id
Introduced	23.10.R1
Platforms	All

[**system-id**] *system-id*

Synopsis	System ID for a specific node
Context	reset router *string* isis *reference* adjacency system-id [system-id] *system-id*
Tree	[system-id]
String length	14

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String format	'system-id' must be 12 hex digits in XXXX.XXXX.XXXX form (e.g. 0143.0438.aef0)
Default	0000.0000.0000
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	All

database

Synopsis	Enter the **database** context
Context	reset router *string* isis *reference* database
Tree	database
Description	Commands in this context reset the entries from the IS-IS link-state database.
Introduced	23.10.R1
Platforms	All

all-databases

Synopsis	Reset all IS-IS databases system wide
Context	reset router *string* isis *reference* database all-databases
Tree	all-databases
Introduced	23.10.R1
Platforms	All

system-id

Synopsis	Reset the IS-IS database for a node
Context	reset router *string* isis *reference* database system-id
Tree	system-id
Introduced	23.10.R1
Platforms	All

[**system-id**] *system-id*

Synopsis	System ID for a specific node

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Reset GTP messaging statistics
Context	reset subscriber-management statistics gtp all
Tree	all
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-and-session

Synopsis	Enter the **host-and-session** context
Context	reset subscriber-management statistics host-and-session
Tree	host-and-session
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peakvalues

Synopsis	Enter the **peakvalues** context
Context	reset subscriber-management statistics host-and-session peakvalues
Tree	peakvalues
Description	Commands in this context reset the peak values of subscriber management host and session statistics **Note**: Peak values statistics can be reset at each level independently. For example, clearing the most recent peak value for an IOM does not impact the MDA peak value.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

card

Synopsis	Enter the **card** context
Context	reset subscriber-management statistics host-and-session peakvalues card
Tree	card

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Reset the peak value statistics for all cards
Context	reset subscriber-management statistics host-and-session peakvalues card all
Tree	all
Description	This command resets the subscriber management statistics peak values for all cards.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recursive

Synopsis	Reset the statistics recursively
Context	reset subscriber-management statistics host-and-session peakvalues card all recursive
Tree	recursive
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

slot

Synopsis	Reset peak values statistics for the specified card
Context	reset subscriber-management statistics host-and-session peakvalues card slot
Tree	slot
Description	This command resets the subscriber management statistics peak values for the specified card.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recursive

Synopsis	Reset the statistics recursively
Context	reset subscriber-management statistics host-and-session peakvalues card slot recursive
Tree	recursive

Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**slot-number**] *reference*

Synopsis	Slot number
Context	reset subscriber-management statistics host-and-session peakvalues card slot [slot-number] *reference*
Tree	[slot-number]
Reference	**state card** *number*
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mda

Synopsis	Enter the **mda** context
Context	reset subscriber-management statistics host-and-session peakvalues mda
Tree	mda
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Reset peak value statistics for all MDAs
Context	reset subscriber-management statistics host-and-session peakvalues mda all
Tree	all
Description	This command resets the subscriber management statistics peak values for all MDA.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recursive

Synopsis	Reset the statistics recursively
Context	reset subscriber-management statistics host-and-session peakvalues mda all recursive

ntp

Synopsis	Enter the **ntp** context
Context	reset system ntp
Tree	ntp
Introduced	25.10.R1
Platforms	All

statistics

Synopsis	Reset NTP statistics
Context	reset system ntp statistics
Tree	statistics
Introduced	25.10.R1
Platforms	All

ptp

Synopsis	Enter the **ptp** context
Context	reset system ptp
Tree	ptp
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

clock-recovery

Synopsis	Reset PTP clock recovery algorithm
Context	reset system ptp clock-recovery
Tree	clock-recovery
Description	This command resets the algorithms involved in PTP frequency and time recovery to initial conditions. This clears out any previous history and can be used to ensure a consistent starting state for a test or can be used to clear any unexpected behavior in the algorithm.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

reboot-required

Synopsis	Clear the reboot required state
Context	reset system reboot-required
Tree	reboot-required
Description	This command clears the reboot required information. Use this command after a configuration triggers the reboot required state, but the configuration is removed.
Introduced	24.3.R1
Platforms	All

satellite

Synopsis	Enter the **satellite** context
Context	reset system satellite
Tree	satellite
Description	Commands in this context reset satellite information.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ethernet-satellite [satellite-id] *reference*

Synopsis	Enter the **ethernet-satellite** list instance
Context	reset system satellite ethernet-satellite *reference*
Tree	ethernet-satellite
Description	Commands in this context reset Ethernet satellite information.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**satellite-id**] *reference*

Synopsis	Satellite ID
Context	reset system satellite ethernet-satellite *reference*
Tree	ethernet-satellite
Reference	**state satellite ethernet-satellite** *number*
Notes	This element is part of a list key.

3.1.1 Configuration mode command descriptions

annotate [comment-text] *comment-text-type*

Synopsis	Annotate a configuration element with a comment
Context	annotate *comment-text-type*
Tree	annotate
Introduced	21.5.R1
Platforms	All

[**comment-text**] *comment-text-type*

Synopsis	Comment for the configuration element
Context	annotate *comment-text-type*
Tree	annotate
String length	0 to 2048
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	All

[**cli-path**] *cli-path-type*

Synopsis	Absolute path or relative path from pwc, or 'pwc'
Context	annotate *comment-text-type* [cli-path] *cli-path-type*
Tree	[cli-path]
Notes	This element is mandatory.
Introduced	21.5.R1
Platforms	All

commit

Synopsis	Commit the candidate configuration
Context	commit
Tree	commit

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

comment *string*

Synopsis	Comment associated with the commit
Context	commit comment *string*
Tree	comment
String length	1 to 2048
Introduced	21.10.R1
Platforms	All

confirmed

Synopsis	Enter the **confirmed** context
Context	commit confirmed
Tree	confirmed
Description	This context is not supported for the BOF or debug configuration regions. Additionally, this context is not supported for LI configuration regions where LI is supported.
Introduced	16.0.R1
Platforms	All

accept

Synopsis	Accept commit confirmed and cancel automatic rollback
Context	commit confirmed accept
Tree	accept
Notes	The following elements are part of a choice: **accept**, **cancel**, or (**comment** and **timeout**).
Introduced	16.0.R1
Platforms	All

cancel

Synopsis	Cancel commit confirmed and roll back changes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	commit confirmed cancel
Tree	cancel
Description	When specified, the router rolls back the configuration and returns the changes to the candidate.
Notes	The following elements are part of a choice: **accept**, **cancel**, or (**comment** and **timeout**).
Introduced	16.0.R1
Platforms	All

comment *string*

Synopsis	Comment associated with the commit
Context	commit confirmed comment *string*
Tree	comment
String length	1 to 2048
Notes	The following elements are part of a choice: **accept**, **cancel**, or (**comment** and **timeout**).
Introduced	21.10.R1
Platforms	All

persist-id *string*

Synopsis	Persistent confirmed commit ID
Context	commit confirmed persist-id *string*
Tree	persist-id
Introduced	16.0.R1
Platforms	All

[**timeout**] *number*

Synopsis	Confirmed commit expiration timeout interval
Context	commit confirmed [timeout] *number*
Tree	[timeout]
Range	1 to 65535
Units	minutes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	10
Notes	The following elements are part of a choice: **accept**, **cancel**, or (**comment** and **timeout**).
Introduced	16.0.R1
Platforms	All

compare [from] *string* to *string*

Synopsis	Compare changes between datastores
Context	compare *string* [to] *string*
Tree	compare
Introduced	16.0.R1
Platforms	All

[**from**] *string*

Synopsis	Source configuration from which to compare
Context	compare *string* [to] *string*
Tree	compare
MD-CLI default	baseline
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

[**to**] *string*

Synopsis	Configuration to compare against source configuration
Context	compare *string* [to] *string*
Tree	compare
MD-CLI default	candidate
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**cli-path**] *cli-path-type*

Synopsis	Absolute path or relative path from pwc
Context	compare *string* [to] *string* [cli-path] *cli-path-type*
Tree	[cli-path]
Introduced	20.10.R1
Platforms	All

flat

Synopsis	Show the context from the pwc on each line
Context	compare *string* [to] *string* flat
Tree	flat
Description	This option shows the hierarchy on each line starting from the present working context.
Notes	The following elements are part of a choice: **flat** or **netconf-rpc**.
Introduced	16.0.R1
Platforms	All

full-context

Synopsis	Show the full context on each line
Context	compare *string* [to] *string* full-context
Tree	full-context
Introduced	16.0.R1
Platforms	All

lines *number*

Synopsis	Number of lines of context to display before and after
Context	compare *string* [to] *string* lines *number*
Tree	lines
Description	This command specifies the number of lines of context to display before and after changed elements. The context is evaluated separately at each container. If the parameter value is larger than the available context, the maximum available context up to the container boundary is displayed.
Max. range	0 to 4294967295

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	0
Introduced	16.0.R1
Platforms	All

netconf-rpc

Synopsis	Display changes in NETCONF <edit-config> RPC format
Context	compare *string* [to] *string* netconf-rpc
Tree	netconf-rpc
Description	This option specifies the display of changes in NETCONF <edit-config> RPC format. This option is only supported with the **summary** option.
Notes	The following elements are part of a choice: **flat** or **netconf-rpc**.
Introduced	21.5.R1
Platforms	All

summary

Synopsis	Suppress specific differences and display a summary
Context	compare *string* [to] *string* summary
Tree	summary
Description	This command allows the suppression of specific differences and displays a summarized comparison. The summarized differences in elements under the highest level container that was deleted is displayed with { ... }. A tilde (~) character is displayed to indicate the new value of an element that has changed.
Introduced	16.0.R1
Platforms	All

copy

Synopsis	Copy a configuration element to another
Context	copy
Tree	copy
Introduced	20.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**cli-path**] *cli-path-type*

Synopsis	Absolute path or relative path from pwc, or 'pwc'
Context	copy [cli-path] *cli-path-type*
Tree	[cli-path]
Introduced	20.10.R1
Platforms	All

to *cli-path-type*

Synopsis	Destination path, or 'pwc'
Context	copy to *cli-path-type*
Tree	to
Introduced	20.10.R1
Platforms	All

discard

Synopsis	Discard changes in the candidate configuration
Context	discard
Tree	discard
Introduced	16.0.R1
Platforms	All

[**cli-path**] *cli-path-type*

Synopsis	Absolute path or relative path from pwc
Context	discard [cli-path] *cli-path-type*
Tree	[cli-path]
Introduced	20.10.R1
Platforms	All

insert [new-entry] *instance-id*

Synopsis	Insert an element into a user-ordered list

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	insert *instance-id*
Tree	insert
Introduced	19.10.R1
Platforms	All

[**new-entry**] *instance-id*

Synopsis	Identification of the new entry
Context	insert *instance-id*
Tree	insert
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

after

Synopsis	Insert an entry after the specified entry
Context	insert *instance-id* after
Tree	after
Notes	The following elements are part of a choice: **after**, **before**, **beginning**, or **end**.
Introduced	19.10.R1
Platforms	All

[**cli-path**] *instance-id*

Synopsis	Absolute path or relative path from pwc
Context	insert *instance-id* after [cli-path] *instance-id*
Tree	[cli-path]
Introduced	19.10.R1
Platforms	All

before

Synopsis	Insert an entry before the specified entry
Context	insert *instance-id* before

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	before
Notes	The following elements are part of a choice: **after**, **before**, **beginning**, or **end**.
Introduced	19.10.R1
Platforms	All

[**cli-path**] *instance-id*

Synopsis	Absolute path or relative path from pwc
Context	insert *instance-id* before [cli-path] *instance-id*
Tree	[cli-path]
Introduced	19.10.R1
Platforms	All

beginning

Synopsis	Insert the new entry at the beginning of the list
Context	insert *instance-id* beginning
Tree	beginning
Notes	The following elements are part of a choice: **after**, **before**, **beginning**, or **end**.
Introduced	19.10.R1
Platforms	All

end

Synopsis	Insert the new entry at the end of the list
Context	insert *instance-id* end
Tree	end
Notes	The following elements are part of a choice: **after**, **before**, **beginning**, or **end**.
Introduced	19.10.R1
Platforms	All

load [mode] *keyword*

Synopsis	Load configuration into the candidate configuration
Context	load *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	load
Introduced	16.0.R1
Platforms	All

[**mode**] *keyword*

Synopsis	Load mode
Context	load *keyword*
Tree	load
Options	merge – Merge with the candidate configuration full-replace – Replace the candidate configuration
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

encryption-key *string*

Synopsis	Encryption key of the file to be loaded
Context	load *keyword* encryption-key *string*
Tree	encryption-key
String length	8 to 32
Notes	The following elements are part of a mandatory choice: **interactive** or (**encryption-key** and **url**).
Introduced	21.7.R1
Platforms	All

interactive

Synopsis	Load the configuration interactively
Context	load *keyword* interactive
Tree	interactive
Description	This command allows the user to enter configuration commands directly in an interactive session. This command is available with the **merge** option of the **load** command. See "Loading configuration interactively" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide* for more information.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **interactive** or (**encryption-key** and **url**).
Introduced	22.10.R1
Platforms	All

[**url**] *string*

Synopsis	Location of the file to be loaded
Context	load *keyword* [url] *string*
Tree	[url]
String length	1 to 255
Notes	The following elements are part of a mandatory choice: **interactive** or (**encryption-key** and **url**).
Introduced	16.0.R1
Platforms	All

rename

Synopsis	Rename a list element
Context	rename
Tree	rename
Introduced	20.10.R1
Platforms	All

[**cli-path**] *cli-path-type*

Synopsis	Source element path to the list, or 'pwc'
Context	rename [cli-path] *cli-path-type*
Tree	[cli-path]
Introduced	20.10.R1
Platforms	All

to *cli-path-type*

Synopsis	Destination key name
Context	rename to *cli-path-type*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	to
Introduced	20.10.R1
Platforms	All

replace [pattern] *string* with *string*

Synopsis	Match and replace values in the candidate configuration
Context	replace *string* with *string*
Tree	replace
Introduced	23.7.R1
Platforms	All

[**pattern**] *string*

Synopsis	String (") or regular expression (') pattern to match
Context	replace *string* with *string*
Tree	replace
Description	This command configures a text string or regular expression that defines the values to match.
String length	1 to 255
Notes	This element is part of a list key.
Introduced	23.7.R1
Platforms	All

with *string*

Synopsis	String (") or regular expression (') pattern to replace
Context	replace *string* with *string*
Tree	replace
String length	0 to 255
Notes	This element is part of a list key.
Introduced	23.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**cli-path**] *cli-path-type*

Synopsis	Absolute path or relative path from pwc
Context	replace *string* with *string* [cli-path] *cli-path-type*
Tree	[cli-path]
Introduced	23.7.R1
Platforms	All

continue-on-error

Synopsis	Continue the replace operation upon errors
Context	replace *string* with *string* continue-on-error
Tree	continue-on-error
Introduced	23.7.R1
Platforms	All

depth *number*

Synopsis	Replace operation depth from the pwc
Context	replace *string* with *string* depth *number*
Tree	depth
Range	1 to 4294967040
Introduced	23.7.R1
Platforms	All

ignore-case

Synopsis	Ignore case in pattern match
Context	replace *string* with *string* ignore-case
Tree	ignore-case
Introduced	23.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rollback

Synopsis	Roll back to a previous configuration
Context	rollback
Tree	rollback
Introduced	16.0.R1
Platforms	All

commit-id *number*

Synopsis	Commit ID to roll back to
Context	rollback commit-id *number*
Tree	commit-id
Range	1 to 4294967295
Notes	The following elements are part of a choice: **commit-id** or **rollback-id**.
Introduced	23.3.R1
Platforms	All

[**rollback-id**] *(keyword* | *number)*

Synopsis	Previous configuration to roll back to
Context	rollback [rollback-id] *(keyword* | *number)*
Tree	[rollback-id]
Range	0 to 200
Options	startup – Configuration loaded when the system boots
Notes	The following elements are part of a choice: **commit-id** or **rollback-id**.
Introduced	23.3.R1
Platforms	All

update

Synopsis	Update the candidate baseline
Context	update
Tree	update
Introduced	16.0.R4

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

/configure

Synopsis	Update the entire candidate
Context	update /configure
Tree	/configure
Introduced	16.0.R4
Platforms	All

/bof

Synopsis	Update the entire BOF candidate
Context	update /bof
Tree	/bof
Introduced	20.10.R1
Platforms	All

check

Synopsis	Perform dry-run update report without an actual update
Context	update check
Tree	check
Introduced	16.0.R4
Platforms	All

/debug

Synopsis	Update the entire debug candidate
Context	update /debug
Tree	/debug
Introduced	21.5.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

/li

Synopsis	Update the entire LI candidate
Context	update /li
Tree	/li
Introduced	19.10.R1
Platforms	All

validate

Synopsis	Validate changes in the candidate configuration
Context	validate
Tree	validate
Introduced	16.0.R1
Platforms	All

4 Configuration commands

This section lists MD-CLI configuration commands.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

4.1 aaa commands

```
configure
  - aaa
    - apply-groups reference
    - apply-groups-exclude reference
    - diameter
      - node diam-fqdn
        - apply-groups reference
        - apply-groups-exclude reference
        - connection
          - ipv4
            - allow-connections boolean
            - local-address ipv4-unicast-address
          - ipv6
            - allow-connections boolean
            - local-address ipv6-unicast-address
          - timer number
        - description description
        - origin-realm diam-fqdn
        - peer index number
          - address (ipv4-address-no-zone | ipv6-address-no-zone)
          - admin-state keyword
          - apply-groups reference
          - apply-groups-exclude reference
          - connection-timer number
          - default-peer boolean
          - destination-host diam-fqdn
          - preference number
          - route index number
            - application keyword
            - apply-groups reference
            - apply-groups-exclude reference
            - preference number
            - realm diam-fqdn
          - watchdog-timer number
        - python-policy reference
        - router-instance string
    - radius
      - acct-on-off-group named-item
        - apply-groups reference
        - apply-groups-exclude reference
        - description description
      - coa-port number
      - isa-policy named-item
        - accounting
          - include-attributes
            - acct-delay-time boolean
            - acct-triggered-reason boolean
            - called-station-id boolean
            - calling-station-id boolean
            - circuit-id boolean
            - class boolean
            - credit-control-quota boolean
            - dhcp-options boolean
            - dhcp-vendor-class-id boolean
            - frame-counters boolean
            - framed-ip-address boolean
            - framed-ip-netmask boolean
            - framed-ipv6-prefix boolean
            - hardware-timestamp boolean
```

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

configure aaa radius isa-policy accounting include-attributes ipv6-address

```
                  - ipv6-address boolean
                  - mac-address boolean
                  - millisecond-event-timestamp boolean
                  - multi-session-id boolean
                  - nas-identifier boolean
                  - nas-ip-address boolean
                  - nas-ipv6-address boolean
                  - nas-port boolean
                  - nas-port-id boolean
                  - nas-port-type boolean
                  - nat-inside-service-id boolean
                  - nat-outside-ip-address boolean
                  - nat-outside-service-id boolean
                  - nat-port-forward-logging boolean
                  - nat-port-range-block boolean
                  - nat-port-time boolean
                  - nat-subscriber-string boolean
                  - octet-counters boolean
                  - proxied-subscriber-data boolean
                  - release-reason boolean
                  - remote-id boolean
                  - rssi boolean
                  - session-time boolean
                  - subscriber-id boolean
                  - toserver-dhcp6-options boolean
                  - ue-creation-type boolean
                  - user-name boolean
                  - wlan-custom-user-group boolean
                  - wlan-ssid-vlan boolean
                  - xconnect-tunnel-home-address boolean
                  - xconnect-tunnel-local-ipv6-address boolean
                  - xconnect-tunnel-remote-ipv6-address boolean
                  - xconnect-tunnel-service boolean
                  - xconnect-tunnel-type boolean
               - nat-periodic-update
                  - interval number
                  - rate-limit (number | keyword)
               - update-triggers
                  - address-state boolean
                  - soft-quota-exhausted boolean
            - apply-groups reference
            - apply-groups-exclude reference
            - authentication
               - include-attributes
                  - called-station-id boolean
                  - calling-station-id boolean
                  - circuit-id boolean
                  - dhcp-vendor-class-id boolean
                  - framed-ip-address boolean
                  - ipv6-address boolean
                  - mac-address boolean
                  - nas-identifier boolean

4.1.1 aaa command descriptions

aaa

Synopsis	Enter the **aaa** context
Context	**configure** aaa
Tree	aaa
Description	Commands in this context configure authentication, authorization, and accounting.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

diameter

Synopsis	Enter the **diameter** context
Context	**configure** aaa diameter
Tree	diameter
Description	Commands in this context configure Diameter Base parameters.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

node [origin-host] *diam-fqdn*

Synopsis	Enter the **node** list instance
Context	**configure** aaa diameter node *diam-fqdn*
Tree	node
Max. instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**origin-host**] *diam-fqdn*

Synopsis	Origin-Host AVP
Context	**configure** aaa diameter node *diam-fqdn*
Tree	node

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character 'diam-fqdn' must be letters, digits, hyphen or dot (e.g. host.example.com)
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connection

Synopsis	Enter the **connection** context
Context	**configure** aaa diameter node *diam-fqdn* connection
Tree	connection
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** aaa diameter node *diam-fqdn* connection ipv4
Tree	ipv4
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-connections *boolean*

Synopsis	Listen on local address for incoming peer connections
Context	**configure** aaa diameter node *diam-fqdn* connection ipv4 allow-connections *boolean*
Tree	allow-connections
Description	When configured to **true**, the router accepts inter-peering connections on the configured source IPv4 address. A listening TCP socket is opened on the Diameter node within the corresponding router context, IP address, and Diameter port. When enabled, each Diameter node within the same routing context in SR must be configured with a unique IP address. The peer initiating the connection must be an inter-chassis peer. Specifically, the Origin-Host in the CER message must match the locally configured peer identity. When configured to **false**, the router refuses incoming requests for connections.
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address *ipv4-unicast-address*

Synopsis	IPv4 source address for the TCP peer connection
Context	**configure** aaa diameter node *diam-fqdn* connection ipv4 local-address *ipv4-unicast-address*
Tree	local-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** aaa diameter node *diam-fqdn* connection ipv6
Tree	ipv6
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-connections *boolean*

Synopsis	Listen on local address for incoming peer connections
Context	**configure** aaa diameter node *diam-fqdn* connection ipv6 allow-connections *boolean*
Tree	allow-connections
Description	When configured to **true**, the router accepts inter-peering connections on the configured source IPv6 address. A listening TCP socket is opened on the Diameter node within the corresponding router context, IP address, and Diameter port. When enabled, each Diameter node within the same routing context in SR must be configured with a unique IP address. The peer initiating the connection must be an inter-chassis peer. Specifically, the Origin-Host in the CER message must match the locally configured peer identity. When configured to **false**, the router refuses incoming requests for connections.
Default	false
Introduced	19.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address *ipv6-unicast-address*

Synopsis	IPv6 source address for the TCP peer connection
Context	**configure** aaa diameter node *diam-fqdn* connection ipv6 local-address *ipv6-unicast-address*
Tree	local-address
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timer *number*

Synopsis	Connection reestablishment timer for the Diameter peer
Context	**configure** aaa diameter node *diam-fqdn* connection timer *number*
Tree	timer
Description	This command configures the frequency of attempts to open a TCP connection to each peer within a specific Diameter client node. After a TCP connection fails to be established (because of timeouts of TCP SYN packets) or an existing TCP connection fails, the next attempt to open the connection is tried after the expiry of the **timer**. There is no limit on the number of attempts.
Range	1 to 1000
Units	seconds
Default	30
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** aaa diameter node *diam-fqdn* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin-realm *diam-fqdn*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Origin-realm name
Context	**configure** aaa diameter node *diam-fqdn* origin-realm *diam-fqdn*
Tree	origin-realm
Description	This command configures the origin-realm name. This is an optional command that translates to an Origin-Realm AVP that is carried in all Diameter messages. The origin host and origin realm form a Diameter Identity that must be unique within the Diameter network in which they participate. If the realm name is not configured, the realm name is extracted from the host as follows: • it is set to the string after the first dot (.) in the configured origin-host string • it is set to the configured origin-host-string if a dot (.) is not present in the string
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character 'diam-fqdn' must be letters, digits, hyphen or dot (e.g. host.example.com)
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer index *number*

Synopsis	Enter the **peer** list instance
Context	**configure** aaa diameter node *diam-fqdn* peer index *number*
Tree	peer
Max. instances	5
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

index *number*

Synopsis	Index of a peer within the node
Context	**configure** aaa diameter node *diam-fqdn* peer index *number*
Tree	peer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 5
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Diameter peer address
Context	**configure** aaa diameter node *diam-fqdn* peer index *number* address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the Diameter peer
Context	**configure** aaa diameter node *diam-fqdn* peer index *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connection-timer *number*

Synopsis	Wait time before attempting reconnection to peer
Context	**configure** aaa diameter node *diam-fqdn* peer index *number* connection-timer *number*
Tree	connection-timer
Description	This command configures the Diameter node connection timer that defines the time the systems waits before attempting to reconnect to a peer after the connection was lost.
Range	1 to 1000
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

default-peer *boolean*

Synopsis	Use the peer as default route for realm-based routing
Context	**configure** aaa diameter node *diam-fqdn* peer index *number* default-peer *boolean*
Tree	default-peer
Description	When configured to **true**, the system designates a peer as a default peer. Traffic that is destined for realms that are not associated with locally configured peers, is sent to the default-peer. In effect, the default peer becomes a default route for Diameter realms. This command is mandatory in multi-chassis redundancy where the inter-chassis peer is designated as default peer. Then, the SR with no open connections toward agents or servers, forwards all traffic to the inter-peer which maintains, as part of MCS, open connections with agents and servers.
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-host *diam-fqdn*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination-Host AVP string for Diameter messages
Context	**configure** aaa diameter node *diam-fqdn* peer index *number* destination-host *diam-fqdn*
Tree	destination-host
Description	This command identifies the peer by its name. This peer name must match the one in Origin-Host AVP received in Capability Exchange Answer message. In case of a mismatch, the TCP connection will be terminated.
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character 'diam-fqdn' must be letters, digits, hyphen or dot (e.g. host.example.com)
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis	Diameter routing preference for a peer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa diameter node *diam-fqdn* peer index *number* preference *number*
Tree	preference
Description	This command configures the Diameter routing preference for a peer. All open peers are installed in the Diameter realm routing table but only the one with the lowest numerical value for preference is used as next-hop for a given destination realm. If multiple peers with the same preference are configured for the same realm, the peer index with the lowest value is used to break the tie.
Range	1 to 100
Default	50
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

route index *number*

Synopsis	Enter the **route** list instance
Context	**configure** aaa diameter node *diam-fqdn* peer index *number* route index *number*
Tree	route
Max. instances	15
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

index *number*

Synopsis	Static Diameter route ID
Context	**configure** aaa diameter node *diam-fqdn* peer index *number* route index *number*
Tree	route
Description	This command configures the ID of the static route used to reach remote realms that are not directly connected to the origin realm. The route can also be used to override the route preference (peer preference) of the directly-connected realms.
Range	1 to 15
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

application *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Diameter application to which the route applies
Context	**configure** aaa diameter node *diam-fqdn* peer index *number* route index *number* application *keyword*
Tree	application
Description	This command specifies the Diameter application in the destination realm reachable via the static route.
Options	nasreq, gy, gx
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis	Static route preference; lower value is preferred
Context	**configure** aaa diameter node *diam-fqdn* peer index *number* route index *number* preference *number*
Tree	preference
Description	This command configures the preference of the static route. The preference is compared with the preference values of all other static and dynamic routes. The dynamic route is a realm route learned directly from the peer via the Capabilities Exchange process during the peer negotiation phase. The preference value of the dynamic route is configured directly under the peer configuration. A lower preference value is preferred for route selection.
Range	1 to 100
Default	50
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

realm *diam-fqdn*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination realm reachable via the static route
Context	**configure** aaa diameter node *diam-fqdn* peer index *number* route index *number* realm *diam-fqdn*
Tree	realm
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character 'diam-fqdn' must be letters, digits, hyphen or dot (e.g. host.example.com)
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

watchdog-timer *number*

Synopsis	Time between consecutive watchdog messages
Context	**configure** aaa diameter node *diam-fqdn* peer index *number* watchdog-timer *number*
Tree	watchdog-timer
Description	This command configures the time between consecutive watchdog messages. Watchdog messages are used to verify liveliness of a Diameter peer. A single watchdog message is sent to a peer in case that no traffic is received from it within a configured watchdog-timer. This watchdog request message solicits a watchdog answer message from the peer. If no traffic (watchdog answer or otherwise) is received from the peer in response to watchdog request while the watchdog timer is running, the peer is put in suspicious state and a peer failover routine is triggered. The peer closes after it has been in suspicious mode for the duration of one more watchdog-timer interval without receiving any traffic from it. After the peer is recovered, it takes three successful exchanges of Diameter watchdog messages (DWR/DWA) for the peer to become used again in Diameter forwarding. This behavior is described in RFC 3539, 3.4.1, *Authentication, Authorization and Accounting (AAA) Transport Profile*). This command is not applicable to legacy implementations of Diameter base in the SR OS.
Range	1 to 1000
Units	seconds

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	30
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy for received or sent Diameter messages
Context	**configure** aaa diameter node *diam-fqdn* python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *named-item*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router in which this node connects to its peers
Context	**configure** aaa diameter node *diam-fqdn* router-instance *string*
Tree	router-instance
Description	This command references the routing instance from which Diameter peering connection is initiated.
Default	Base
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius

Synopsis	Enter the **radius** context
Context	**configure** aaa radius
Tree	radius
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-on-off-group [name] *named-item*

Synopsis	Enter the **acct-on-off-group** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius acct-on-off-group *named-item*
Tree	acct-on-off-group
Description	Commands in this context create an acct-on-off-group. An acct-on-off-group can be referenced by: • A single radius-server-policy as controller — The acct-on-off oper-state of the acct-on-off-group is set to the acct-on-off oper-state of the radius-server-policy. • Multiple radius-server-policies as monitor — The acct-on-off oper-state of the radius-server-policy is inherited from the acct-on-off oper-state of the acct-on-off group.
Max. instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Group name for accounting on/off
Context	**configure** aaa radius acct-on-off-group *named-item*
Tree	acct-on-off-group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description

coa-port *number*

Synopsis	RADIUS listening port for CoA and Disconnect messages
Context	**configure** aaa radius coa-port *number*
Tree	coa-port
Description	This command configures the system-wide UDP port number that RADIUS is listening on for CoA and Disconnect messages.
Range	1647 | 1700 | 1812 | 3799
Default	3799
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

isa-policy [name] *named-item*

Synopsis	Enter the **isa-policy** list instance
Context	**configure** aaa radius isa-policy *named-item*
Tree	isa-policy
Description	Commands in this context create a policy template related to transport of accounting messages from the BB-ISA card to the accounting server. It also defines accounting attributes that will be included in accounting messages. The policy template will be instantiated once it is applied to the BB-ISA cards in the nat-group.
Max. instances	8
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	ISA RADIUS policy name referenced by a NAT application
Context	**configure** aaa radius isa-policy *named-item*
Tree	isa-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting

Synopsis	Enter the **accounting** context
Context	**configure** aaa radius isa-policy *named-item* accounting
Tree	accounting
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-attributes

Synopsis	Enter the **include-attributes** context
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes
Tree	include-attributes
Description	Commands in this context specify the attributes to include in the RADIUS accounting messages.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

acct-delay-time *boolean*

Synopsis	Include the accounting delay time attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes acct-delay-time *boolean*
Tree	acct-delay-time
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

acct-triggered-reason *boolean*

Synopsis	Include the accounting triggered reason attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes acct-triggered-reason *boolean*
Tree	acct-triggered-reason
Default	false
Introduced	16.0.R4

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes calling-station-id *boolean*
Tree	calling-station-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Include the Agent-Circuit-Id attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes circuit-id *boolean*
Tree	circuit-id
Description	When configured to **true**, the system enables the generation of the Broad Band Forum Agent-Circuit-Id Vendor Specific AVP in Diameter NASREQ AAR messages.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

class *boolean*

Synopsis	Include the Class attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes class *boolean*
Tree	class
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

credit-control-quota *boolean*

Synopsis	Add unconsumed volume quota to Credit-Control-Quota
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes credit-control-quota *boolean*
Tree	credit-control-quota
Default	false
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-options *boolean*

Synopsis	Include the Alc-ToServer-Dhcp-Options attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes dhcp-options *boolean*
Tree	dhcp-options
Description	When configured to **true**, the system enables insertion of RADIUS VSA containing all dhcp-options from dhcp-discover (or dhcp-request) message. The VSA contains all dhcp-options in a form of the string. If required (the total length of all dhcp-options exceeds 255B), multiple VSAs are included.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-vendor-class-id *boolean*

Synopsis	Include the Alc-Dhcp-Vendor-Class-Id attribute

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes dhcp-vendor-class-id *boolean*
Tree	dhcp-vendor-class-id
Description	When configured to **true**, the router includes the "[26-6527-36] Alc-DHCP-Vendor-Class-Id" attribute in RADIUS accounting messages. The content of the DHCP Vendor-Class-Identifier option (60) is mapped in this attribute.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

frame-counters *boolean*

Synopsis	Include Acct-Input-Packets and Acct-Output-Packets
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes frame-counters *boolean*
Tree	frame-counters
Description	When configured to **true**, the router includes the frame-counters attribute.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ip-address *boolean*

Synopsis	Include the Framed-IP-Address attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes framed-ip-address *boolean*
Tree	framed-ip-address
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ip-netmask *boolean*

Synopsis	Include the Framed-IP-Netmask attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes framed-ip-netmask *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	framed-ip-netmask
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ipv6-prefix *boolean*

Synopsis	Include the Framed-IPv6-Prefix attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes framed-ipv6-prefix *boolean*
Tree	framed-ipv6-prefix
Description	When configured to **true**, the router includes the Framed-IPv6-Prefix attribute. If an active SLAAC lease exists, this attribute defines if the SLAAC prefix of the UE is present in accounting.
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hardware-timestamp *boolean*

Synopsis	Include the Event-Timestamp attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes hardware-timestamp *boolean*
Tree	hardware-timestamp
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *boolean*

Synopsis	Include the Alc-Ipv6-Address attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes ipv6-address *boolean*
Tree	ipv6-address
Description	When configured to **true**, the IA_NA address of the UE is included in the accounting message if an active IA_NA lease exists.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the address is not included.

Default false

Introduced 16.0.R4

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *boolean*

Synopsis Include the Alc-Client-Hardware-Addr attribute

Context **configure** aaa radius isa-policy *named-item* accounting include-attributes mac-address *boolean*

Tree mac-address

Default false

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

millisecond-event-timestamp *boolean*

Synopsis Include the Alc-Millisecond-Event-Timestamp attribute

Context **configure** aaa radius isa-policy *named-item* accounting include-attributes millisecond-event-timestamp *boolean*

Tree millisecond-event-timestamp

Description When configured to **true**, the router includes the Alc-Millisecond-Event-Timestamp attribute in the accounting message. This attribute includes the time the accounting event was logged in milliseconds since Jan 1, 1970 00:00:00 UTC.

When configured to **false**, the router does not include this attribute.

Default false

Introduced 20.10.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multi-session-id *boolean*

Synopsis Include the Acct-Multi-Session-Id attribute

Context **configure** aaa radius isa-policy *named-item* accounting include-attributes multi-session-id *boolean*

Tree multi-session-id

Default false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-address *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nas-ip-address *boolean*
Tree	nas-ip-address
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ipv6-address *boolean*

Synopsis	Include the NAS-IPv6-Address attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nas-ipv6-address *boolean*
Tree	nas-ipv6-address
Description	When configured to **true**, the router includes the NAS-IPv6-Address attribute in RADIUS accounting messages using the address specified in the **configure aaa radius isa-policy nas-ip-address-origin** command. The NAS-IPv6-Address attribute is included in both IPv4 and IPv6 RADIUS connections. When configured to **false**, the router does not include the NAS-IPv6-Address attribute in RADIUS accounting messages.
Default	false
Introduced	22.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port *boolean*

Synopsis	Include the NAS-Port attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nas-port *boolean*
Tree	nas-port
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nas-port-id *boolean*
Tree	nas-port-id
Description	When configured to **true**, the system generates the nas-port-id RADIUS attribute. Optionally, the value of this attribute (the SAP-id) can be prefixed by a fixed string and suffixed by the circuit-id or the remote-id of the client connection. If a suffix is configured, but no corresponding data is available, the suffix used will be 0/0/0/0/0/0.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-type *boolean*

Synopsis	Include the NAS-Port-Type attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nas-port-type *boolean*
Tree	nas-port-type
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

nat-inside-service-id *boolean*

Synopsis	Include NAT inside service ID in Alc-Serv-Id attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nat-inside-service-id *boolean*
Tree	nat-inside-service-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-outside-ip-address *boolean*

Synopsis	Include the Alc-Nat-Outside-Ip-Addr attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nat-outside-ip-address *boolean*
Tree	nat-outside-ip-address
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-outside-service-id *boolean*

Synopsis	Include NAT outside service ID in Alc-Serv-Id attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nat-outside-service-id *boolean*
Tree	nat-outside-service-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-port-forward-logging *boolean*

Synopsis	Enable logging of port forwards via RADIUS
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nat-port-forward-logging *boolean*
Tree	nat-port-forward-logging

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router enables static or PCP port-forward logging via RADIUS. Port-forward logging is supported only in conjunction with the logging of port blocks. When configured to **false**, the router disables static or PCP port-forward logging.
Default	false
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-port-range-block *boolean*

Synopsis	Include the Alc-Nat-Port-Range attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nat-port-range-block *boolean*
Tree	nat-port-range-block
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-port-time *boolean*

Synopsis	Enable the Alc-Nat-Port-Time RADIUS attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nat-port-time *boolean*
Tree	nat-port-time
Description	When configured to **true**, the router records the duration of port-blocks or port-forwards allocated to a NAT subscriber using the Alc-Nat-Port-Time RADIUS attribute. When configured to **false**, the router disables the Alc-Nat-Port-Time RADIUS attribute.
Default	false
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-subscriber-string *boolean*

Synopsis	Include the Alc-Subsc-ID-Str attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes nat-subscriber-string *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	nat-subscriber-string
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

octet-counters *boolean*

Synopsis	Include Acct-Input-Octets and Acct-Output-Octets
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes octet-counters *boolean*
Tree	octet-counters
Description	When configured to **true**, the router includes the octet-counters attributes.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

proxied-subscriber-data *boolean*

Synopsis	Include subscriber data as RADIUS attributes
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes proxied-subscriber-data *boolean*
Tree	proxied-subscriber-data
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

release-reason *boolean*

Synopsis	Include reason in the Acct-Terminate-Cause attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes release-reason *boolean*
Tree	release-reason
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

remote-id *boolean*

Synopsis	Include the Agent-Remote-Id attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes remote-id *boolean*
Tree	remote-id
Description	When configured to **true**, the router sends the remote ID option. The client DHCP Unique Identifier (DUID) is used as the remote ID.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rssi *boolean*

Synopsis	Include the Alc-RSSI attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes rssi *boolean*
Tree	rssi
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-time *boolean*

Synopsis	Include the Acct-Session-Time attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes session-time *boolean*
Tree	session-time
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber-id *boolean*

Synopsis	Include the Alc-Subsc-ID-Str attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes subscriber-id *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	subscriber-id
Description	When configured to **true**, the subscriber ID attributes are included in RADIUS accounting messages.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

toserver-dhcp6-options *boolean*

Synopsis	Include the Alc-ToServer-Dhcp6-Options attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes toserver-dhcp6-options *boolean*
Tree	toserver-dhcp6-options
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ue-creation-type *boolean*

Synopsis	Include the Alc-Wlan-Ue-Creation-Type attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes ue-creation-type *boolean*
Tree	ue-creation-type
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-name *boolean*

Synopsis	Include the User-Name attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes user-name *boolean*
Tree	user-name
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

wlan-custom-user-group *boolean*

Synopsis	Include Wlan-Custom-User-Group attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes wlan-custom-user-group *boolean*
Tree	wlan-custom-user-group
Description	When configured to **true**, this command includes the Alc-Wlan-Custom-User-Group attribute in the RADIUS accounting messages.
Default	false
Introduced	24.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-ssid-vlan *boolean*

Synopsis	Include per-SSID VLAN in Alc-Wlan-SSID-VLAN attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes wlan-ssid-vlan *boolean*
Tree	wlan-ssid-vlan
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-home-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Home-Ipv6 attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes xconnect-tunnel-home-address *boolean*
Tree	xconnect-tunnel-home-address
Description	When configured to **true**, the router enables the cross connect tunnel home address RADIUS attribute.
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

xconnect-tunnel-local-ipv6-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Local-Ipv6 attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes xconnect-tunnel-local-ipv6-address *boolean*
Tree	xconnect-tunnel-local-ipv6-address
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-remote-ipv6-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Remote-Ipv6 attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes xconnect-tunnel-remote-ipv6-address *boolean*
Tree	xconnect-tunnel-remote-ipv6-address
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-service *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Service attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes xconnect-tunnel-service *boolean*
Tree	xconnect-tunnel-service
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-type *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Type attribute
Context	**configure** aaa radius isa-policy *named-item* accounting include-attributes xconnect-tunnel-type *boolean*
Tree	xconnect-tunnel-type

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-periodic-update

Synopsis	Enter the **nat-periodic-update** context
Context	**configure** aaa radius isa-policy *named-item* accounting nat-periodic-update
Tree	nat-periodic-update
Description	Commands in this context configure periodic RADIUS logging of currently allocated port blocks for a NAT subscriber (NAT binding).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval for periodic RADIUS Interim-Update messages
Context	**configure** aaa radius isa-policy *named-item* accounting nat-periodic-update interval *number*
Tree	interval
Description	This command configures the interval at which RADIUS logging is refreshed. The log generation might delayed past the configured interval value if the message pacing (rate-limit) is enabled or when the number of un-acknowledged (pending) messages in SR OS has reached its upper limit. An increased number of pending Interim Update messages in SR OS is due to lack of adequate responsiveness of the RADIUS server.
Range	1 to 72
Units	hours
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit *(number | keyword)*

Synopsis	Rate limit for periodic RADIUS Interim-Update messages
Context	**configure** aaa radius isa-policy *named-item* accounting nat-periodic-update rate-limit *(number | keyword)*
Tree	rate-limit

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the pacing of the Interim Update messages related to refreshment of the currently allocated port blocks. By default, when this command is not configured, the messages are sent at a high rate determined by the processing capability of the SR OS. Such a high message rate can exceed the processing power of the logging server which can result in the loss of logging information. To overcome this, the Interim Update messages can be generated in a staggered manner at a configured interval that is accommodating toward the processing capabilities of the logging server.
Range	1 to 100000
Units	packets per second
Options	unlimited
Default	unlimited
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

update-triggers

Synopsis	Enter the **update-triggers** context
Context	**configure** aaa radius isa-policy *named-item* accounting update-triggers
Tree	update-triggers
Description	Commands in this context enable or disable the sending of triggered interim-updates, with the exception of the following: • After an update interval change, an interim update is always sent to indicate the start of the new interval. • Mobility-triggered updates are configured in the **configure service vprn***service-name***wlan-gw mobility-triggered-accounting** context. • NAT port block allocation depends on the inclusion of NAT-related attributes (port-range, outside-service, outside-ip).
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

address-state *boolean*

Synopsis	Send an Interim-Update when address allocated or freed
Context	**configure** aaa radius isa-policy *named-item* accounting update-triggers address-state *boolean*
Tree	address-state
Description	When configured to **true**, the router sends an interim-update for a DSM UE whenever a DHCP, SLAAC or DHCPv6 address gets allocated or freed.

Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

soft-quota-exhausted *boolean*

Synopsis	Send interim update when soft volume quota is reached
Context	**configure** aaa radius isa-policy *named-item* accounting update-triggers soft-quota-exhausted *boolean*
Tree	soft-quota-exhausted
Default	false
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication

Synopsis	Enter the **authentication** context
Context	**configure** aaa radius isa-policy *named-item* authentication
Tree	authentication
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-attributes

Synopsis	Enter the **include-attributes** context
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes
Tree	include-attributes
Description	Commands in this context specify the attributes to include in the RADIUS authentication messages.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes calling-station-id *boolean*
Tree	calling-station-id
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Include the Agent-Circuit-Id attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes circuit-id *boolean*
Tree	circuit-id
Description	When configured to **true**, the router is enabled to generate Broad Band Forum Agent-Circuit-Id Vendor Specific AVP in Diameter NASREQ AAR messages.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-vendor-class-id *boolean*

Synopsis	Include the Alc-DHCP-Vendor-Class-Id attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes dhcp-vendor-class-id *boolean*
Tree	dhcp-vendor-class-id

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router includes the "[26-6527-36] Alc-DHCP-Vendor-Class-Id" attribute in RADIUS authentication messages. The content of the DHCP Vendor-Class-Identifier option (60) is mapped in this attribute.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ip-address *boolean*

Synopsis	Include the Framed-IP-Address attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes framed-ip-address *boolean*
Tree	framed-ip-address
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *boolean*

Synopsis	Include the Alc-IPv6-address attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes ipv6-address *boolean*
Tree	ipv6-address
Description	When configured to **true**, the router includes the Alc-IPv6-address attribute, which defines if the IPv6 address of the UE is present during authentication if the datatrigger packet is IPv6.
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *boolean*

Synopsis	Include the Alc-Client-Hardware-Addr attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes mac-address *boolean*
Tree	mac-address
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-address *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes nas-ip-address *boolean*
Tree	nas-ip-address
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ipv6-address *boolean*

Synopsis	Include the NAS-IPv6-Address attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes nas-ipv6-address *boolean*
Tree	nas-ipv6-address
Description	When configured to **true**, the router includes the NAS-IPv6-Address attribute in RADIUS authentication messages using the address specified in the **configure aaa radius isa-policy nas-ip-address-origin** command. The NAS-IPv6-Address attribute is included in both IPv4 and IPv6 RADIUS connections. When configured to **false**, the router does not include the NAS-IPv6-Address attribute in RADIUS authentication messages.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

nas-port *boolean*

Synopsis	Include the NAS-Port attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes nas-port *boolean*
Tree	nas-port
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes nas-port-id *boolean*
Tree	nas-port-id
Description	When configured to **true**, the router is enabled to generate the nas-port-id RADIUS attribute. Optionally, the value of this attribute (the SAP-id) can be prefixed by a fixed string and suffixed by the circuit-id or the remote-id of the client connection. If a suffix is configured, but no corresponding data is available, the suffix used will be 0/0/0/0/0/0.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-port-type *boolean*

Synopsis	Include the NAS-Port-Type attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes nas-port-type *boolean*
Tree	nas-port-type
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis	Include the Agent-Remote-Id attribute

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes remote-id *boolean*
Tree	remote-id
Description	When configured to **true**, the router includes the remote ID option. The client DHCP Unique Identifier (DUID) is used as the remote ID.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

toserver-dhcp-options *boolean*

Synopsis	Include the Alc-ToServer-Dhcp-Options attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes toserver-dhcp-options *boolean*
Tree	toserver-dhcp-options
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

toserver-dhcp6-options *boolean*

Synopsis	Include the Alc-ToServer-Dhcp6-Options attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes toserver-dhcp6-options *boolean*
Tree	toserver-dhcp6-options
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-ssid-vlan *boolean*

Synopsis	Include per-SSID VLAN in Alc-Wlan-SSID-VLAN attribute
Context	**configure** aaa radius isa-policy *named-item* authentication include-attributes wlan-ssid-vlan *boolean*
Tree	wlan-ssid-vlan
Default	false

© 2026 Nokia.

password *encrypted-leaf*

Synopsis	Password used in the RADIUS access requests
Context	**configure** aaa radius isa-policy *named-item* password *encrypted-leaf*
Tree	password
Description	This command specifies the password used in the RADIUS access requests in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 94
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy used for modifying RADIUS messages
Context	**configure** aaa radius isa-policy *named-item* python-policy *reference*
Tree	python-policy
Description	This command configures the Python policy for the ISA RADIUS proxy server. This is the Python policy for RADIUS packets to and from the client.
Reference	**configure** python python-policy *named-item*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

servers

Synopsis	Enter the **servers** context
Context	**configure** aaa radius isa-policy *named-item* servers
Tree	servers
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

access-algorithm *keyword*

Synopsis	Algorithm that accesses the RADIUS servers

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius isa-policy *named-item* servers access-algorithm *keyword*
Tree	access-algorithm
Description	This command defines the algorithm used to access the list of available RADIUS servers. A RADIUS server is considered available initially and marked as unavailable if no response packets are received in a period equal to the configured packet **timeout** multiplied by the **retry** after sending a request. A server is always marked as available when any valid RADIUS packet is received from that server. Some access algorithms periodically probe unavailable servers by sending a single request. If the server responds to the request, it is immediately marked as available. direct - Use the first server as the primary server for all requests, the second as secondary, and so on round-robin - Use the first server as the primary server for the first request, the second server as primary for the second request, and so on. If the router gets to the end of the list, it starts again with the first server. hash-based - Selection is based on the hash-based procedures direct-priority - Use the first server for all requests. If that server is not available, the second server is used, and so on. This method periodically probes and falls back to higher-priority servers.
Options	direct, round-robin, hash-based, direct-priority
Default	direct
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** aaa radius isa-policy *named-item* servers ipv6
Tree	ipv6
Description	Commands in this context configure how to communicate with IPv6 RADIUS servers.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu *number*

Synopsis	MTU used to fragment outgoing IPv6 RADIUS packets
Context	**configure** aaa radius isa-policy *named-item* servers ipv6 mtu *number*
Tree	mtu
Range	1280 to 9000

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	9000
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source-prefix *ipv6-prefix*

Synopsis	Prefix containing individual source addresses per ISA
Context	**configure** aaa radius isa-policy *named-item* servers ipv6 source-prefix *ipv6-prefix*
Tree	source-prefix
Description	This command configures an IPv6 prefix containing individual /128 addresses. These addresses are used as the source address for connections to IPv6 RADIUS servers. The prefix must be large enough to accommodate all BB-ISAs or ESA VMs in the system.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Routing instance
Context	**configure** aaa radius isa-policy *named-item* servers router-instance *string*
Tree	router-instance
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [index] *number*

Synopsis	Enter the **server** list instance
Context	**configure** aaa radius isa-policy *named-item* servers server *number*
Tree	server
Description	Commands in this context configure a RADIUS server and configures the RADIUS server IP address, index, and key values. RADIUS servers are accessed in order from lowest to highest index for authentication requests until a response from a server is received. A higher indexed server is only queried if no response is received from a lower indexed server (which implies that the server is not available). If a response from a server is received, no other RADIUS servers are queried.

secret *encrypted-leaf*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Secret key to access the RADIUS server

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius isa-policy *named-item* servers server *number* secret *encrypted-leaf*
Tree	secret
Description	This command specifies the secret key to access the RADIUS server in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source-address-range *ipv4-unicast-address*

Synopsis	Starting IP address of the IP address range
Context	**configure** aaa radius isa-policy *named-item* servers source-address-range *ipv4-unicast-address*
Tree	source-address-range
Description	This command configures the first IP address in the range of IPv4 addresses that are assigned to a BB-ISA in a given NAT group for NAT RADIUS accounting. The IP addresses are unique within the NAT group and are used to bind the RADIUS client instantiated on each BB-ISA card. The number of IPv4 addresses allocated is equal to the number of BB-ISAs in a NAT group that are enabled for NAT RADIUS accounting. Although only the first IPv4 address is explicitly configured with this command, each internally allocated IPv4 address associated with the BB-ISA card can be seen in the routing table (via **show** commands) as /32 with protocol designation "NAT".
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Timeout for a response from the RADIUS server
Context	**configure** aaa radius isa-policy *named-item* servers timeout *number*
Tree	timeout
Description	This command configures the time the router waits for a response from a RADIUS server.
Range	1 to 90

tunnel *boolean*

Synopsis	Enable per-tunnel accounting
Context	**configure** aaa radius l2tp-accounting-policy *named-item* accounting-type tunnel *boolean*
Tree	tunnel
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-tunnel-connection-fmt *display-string*

Synopsis	Accounting tunnel connection ASCII specification

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius l2tp-accounting-policy *named-item* acct-tunnel-connection-fmt *display-string*
Tree	acct-tunnel-connection-fmt
String length	1 to 253
String format	'acct-tunnel-connection-fmt' must be text with %n %s %S %t %T %c %C escapes only
Default	%n
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** aaa radius l2tp-accounting-policy *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** aaa radius l2tp-accounting-policy *named-item* include-radius-attribute
Tree	include-radius-attribute
Description	Commands in this context specify the RADIUS attributes that the system should include into RADIUS Access-Request (for authentication) and Accounting-Request (for accounting) messages.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** aaa radius l2tp-accounting-policy *named-item* include-radius-attribute calling-station-id *boolean*
Tree	calling-station-id

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** aaa radius l2tp-accounting-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port

Synopsis	Enable the **nas-port** context
Context	**configure** aaa radius l2tp-accounting-policy *named-item* include-radius-attribute nas-port
Tree	nas-port
Description	Commands in this context enable the generation of the nas-port RADIUS attribute. Enter decimal representation of a 32-bit string that indicates the port information. This 32-bit string can be compiled based on different information from the port (data types). Using number-of-bits data-type syntax indicates the number of bits from the 32 bits that are used for the specific data type. These data types can be combined up to 32 bits. In between the different data types, 0s and 1s as bits can be added.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bit-spec *binary-specification*

Synopsis	RADIUS NAS-Port attribute
Context	**configure** aaa radius l2tp-accounting-policy *named-item* include-radius-attribute nas-port bit-spec *binary-specification*
Tree	bit-spec
String length	1 to 255
String format	'bit-spec' must be 0/1 bits or *N<origin> (s m p o i v c)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port-id

Synopsis	Enable the **nas-port-id** context
Context	**configure** aaa radius l2tp-accounting-policy *named-item* include-radius-attribute nas-port-id
Tree	nas-port-id
Description	Commands in this context enable the generation of the nas-port-id RADIUS attribute. Optionally, the value of this attribute (the SAP ID) can be prefixed by a fixed string and suffixed by the circuit-id or the remote-id of the client connection. If a suffix is configured, but no corresponding data is available, the suffix used is 0/0/0/0/0/0.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-string *string-not-all-spaces*

Synopsis	Prefix string added to RADIUS NAS-Port attribute
Context	**configure** aaa radius l2tp-accounting-policy *named-item* include-radius-attribute nas-port-id prefix-string *string-not-all-spaces*
Tree	prefix-string
String length	1 to 8
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix *keyword*

Synopsis	Suffix type to add to the RADIUS NAS port attribute
Context	**configure** aaa radius l2tp-accounting-policy *named-item* include-radius-attribute nas-port-id suffix *keyword*
Tree	suffix
Options	circuit-id, remote-id
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

nas-port-type

Synopsis	Enable the **nas-port-type** context
Context	**configure** aaa radius l2tp-accounting-policy *named-item* include-radius-attribute nas-port-type
Tree	nas-port-type
Description	Commands in this context enable the generation of the nas-port-type RADIUS attribute. If set to **nas-port-type**, the following values are sent: 32 (null-encap), 33 (dot1q), 34 (qinq), 15 (DHCP hosts). The **nas-port-type** can also be set as a specified value, with an integer from 0 to 255.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *(keyword | number)*

Synopsis	Value for RADIUS NAS-Port-Type attribute
Context	**configure** aaa radius l2tp-accounting-policy *named-item* include-radius-attribute nas-port-type type *(keyword | number)*
Tree	type
Range	0 to 255
Options	rfc-aligned
Default	rfc-aligned
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

route-downloader [name] *named-item*

Synopsis	Enter the **route-downloader** list instance
Context	**configure** aaa radius route-downloader *named-item*
Tree	route-downloader
Description	Commands in this context configure a route-downloader instance. The route-downloader is a process that uses radius access-request messages to a particular server. The server returns either an access-accept or access-deny message. Access-accept messages also contain the prefixes (in the form of static blackhole routes in various formats). Only a single route-downloader object can be created.
Max. instances	1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RADIUS route downloader name
Context	**configure** aaa radius route-downloader *named-item*
Tree	route-downloader
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of this route downloader
Context	**configure** aaa radius route-downloader *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

base-user-name *named-item*

Synopsis	Prefix of the username used as access requests
Context	**configure** aaa radius route-downloader *named-item* base-user-name *named-item*
Tree	base-user-name
Description	This command sets the prefix for the username that is used for access requests. The actual name used is a concatenation of this string, the “-” (dash) character and a monotonically increasing integer.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-metric *number*

Synopsis	Default metric that RTM imported routes acquire
Context	**configure** aaa radius route-downloader *named-item* default-metric *number*
Tree	default-metric
Range	0 to 254
Default	2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-tag *number*

Synopsis	Default tag of this route downloader
Context	**configure** aaa radius route-downloader *named-item* default-tag *number*
Tree	default-tag
Description	This command configures the default tag that routes processed by the AAA route downloader will take. Any route received with a specific tag retains the specific tag. The tag value is passed to the Route Table Manager and is available as match condition on the export statement of other routing protocols.
Range	0 to 4294967295
Default	0
Introduced	16.0.R4

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** aaa radius route-downloader *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

download-interval *number*

Synopsis	Wait time between consecutive runs of the process
Context	**configure** aaa radius route-downloader *named-item* download-interval *number*
Tree	download-interval
Description	This command configures the time interval that the system waits for between two consecutive runs of the route-download process. The time is counted from the start-time of the run, thus, if a route-download process is still ongoing by the time the timer expires, the process will restart from count=1.
Range	1 to 1440
Units	minutes
Default	720
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-routes *number*

Synopsis	Maximum routes imported by this route downloader
Context	**configure** aaa radius route-downloader *named-item* max-routes *number*
Tree	max-routes
Description	This command configures the upper limit for the total number of routes to be received and accepted by the system. The total number is inclusive of both IPv4 and IPv6 addresses and no differentiation is needed across protocols. It includes the sum of both. Once this limit is reached, the download process stops sending new access-requests until the next download-interval expires.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 200000
Default	200000
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *encrypted-leaf*

Synopsis	Route downloader password for RADIUS access requests
Context	**configure** aaa radius route-downloader *named-item* password *encrypted-leaf*
Tree	password
Description	This command specifies the route downloader password for RADIUS access requests in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 126
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	RADIUS server policy referenced
Context	**configure** aaa radius route-downloader *named-item* radius-server-policy *reference*
Tree	radius-server-policy
Description	This command references an existing **radius-server-policy** (available under the **configure aaa** context). The server (or servers) referenced by the policy is used as the targets for the access-request message.
Reference	**configure** aaa radius server-policy *named-item*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

retry-interval

Synopsis	Enter the **retry-interval** context
Context	**configure** aaa radius route-downloader *named-item* retry-interval
Tree	retry-interval
Description	Commands in this context configure parameters of the retry interval timer, which is an exponential backoff timer. The system retries sending an Access Request message after the previous message was unanswered (for example, a RADIUS failure or ICMP port unreachable error).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max *number*

Synopsis	Maximum duration of the retry interval
Context	**configure** aaa radius route-downloader *named-item* retry-interval max *number*
Tree	max
Range	1 to 1440
Units	minutes
Default	20
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min *number*

Synopsis	Minimum duration of the retry interval
Context	**configure** aaa radius route-downloader *named-item* retry-interval min *number*
Tree	min
Description	This command specifies the minimum duration of the retry interval. This duration grows exponentially after each sequential failure.
Range	1 to 1440
Units	minutes
Default	10
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

server-policy [name] *named-item*

Synopsis	Enter the **server-policy** list instance
Context	**configure** aaa radius server-policy *named-item*
Tree	server-policy
Description	Commands in this context create a RADIUS server policy. A RADIUS server policy can be used in: • radius-proxy, for applications like EAP authentication for WIFI access • authentication policy, for Enhanced Subscriber Management authentication • RADIUS accounting policy, for Enhanced Subscriber Management accounting • dynamic data service RADIUS accounting • AAA route downloader
Max. instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RADIUS server policy name
Context	**configure** aaa radius server-policy *named-item*
Tree	server-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-on-off

Synopsis	Enable the **acct-on-off** context
Context	**configure** aaa radius server-policy *named-item* acct-on-off
Tree	acct-on-off
Description	Commands in this context control the sending of Accounting-On and Accounting-Off messages and the acct-on-off oper-state of the radius-server-policy:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- **acct-on-off**: enables the sending of Accounting-On and Accounting-Off messages for this radius-server-policy. The acct-on-off oper-state is always not blocked.
- **acct-on-off oper-state-change**: enables the sending of Accounting-On and Accounting-Off messages for this radius-server-policy. The acct-on-off oper-state is function of the Accounting-response received for the Accounting-On and Accounting-Off. Optionally, sets the acct-on-off oper-state of the acct-on-off-group.
- **acct-on-off monitor**: no Accounting-On and Accounting-Off messages are sent for this radius-server-policy. The acct-on-off oper-state is inherited from the acct-on-off-group.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

monitor *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Accounting on/off group name
Context	**configure** aaa radius server-policy *named-item* acct-on-off monitor *reference*
Tree	monitor
Reference	**configure** aaa radius acct-on-off-group *named-item*
Notes	The following elements are part of a choice: **monitor** or **oper-state-change**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

oper-state-change

Synopsis	Enable the **oper-state-change** context
Context	**configure** aaa radius server-policy *named-item* acct-on-off oper-state-change
Tree	oper-state-change
Notes	The following elements are part of a choice: **monitor** or **oper-state-change**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

group *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Operational state for a group
Context	**configure** aaa radius server-policy *named-item* acct-on-off oper-state-change group *reference*
Tree	group
Reference	**configure** aaa radius acct-on-off-group *named-item*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** aaa radius server-policy *named-item* description *description*

String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy for RADIUS packets to/from RADIUS servers
Context	**configure** aaa radius server-policy *named-item* python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *named-item*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

servers

Synopsis	Enter the **servers** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius server-policy *named-item* servers
Tree	servers
Description	Commands in this context configure RADIUS server policy command options.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access-algorithm *keyword*

Synopsis	Algorithm to select a RADIUS server from the pool
Context	**configure** aaa radius server-policy *named-item* servers access-algorithm *keyword*
Tree	access-algorithm
Options	direct, round-robin, hash-based
Default	direct
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

buffering

Synopsis	Enter the **buffering** context
Context	**configure** aaa radius server-policy *named-item* servers buffering
Tree	buffering
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-interim

Synopsis	Enable the **acct-interim** context
Context	**configure** aaa radius server-policy *named-item* servers buffering acct-interim
Tree	acct-interim
Description	Commands in this context enable RADIUS accounting interim update message buffering. **1.** The message is stored in the buffer, a lifetime timer is started and the message is sent to the RADIUS server **2.** If after retry*timeout seconds no RADIUS accounting response is received for the interim update then a new attempt to send the message is started after minimum[(min-val*2n), max-val] seconds.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

3. Repeat step 2 until one of the following occurs:
- a RADIUS accounting response is received
- the lifetime of the buffered message expires
- a new RADIUS accounting interim-update or a RADIUS accounting stop for the same accounting session ID and radius-server-policy is stored in the buffer
- the message is manually purged from the message buffer via a **clear** command
- The message is purged from the buffer.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lifetime *number*

Synopsis	Time accounting message can be in retransmission buffer

health-check

Synopsis	Enter the **health-check** context
Context	**configure** aaa radius server-policy *named-item* servers health-check
Tree	health-check
Description	Commands in this context configure health check command options for the RADIUS server.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

down-timeout *number*

Synopsis	Wait time before declaring RADIUS server out-of-service
Context	**configure** aaa radius server-policy *named-item* servers health-check down-timeout *number*
Tree	down-timeout
Description	This command configures the interval to wait for a RADIUS reply message from the RADIUS server before a RADIUS server is declared out-of-service. By default, the value of the down-timeout is the number of retries multiplied by the timeout interval. Each host will use the configured timeout and retry value under the AAA RADIUS server policy. The **configure aaa radius server-policy servers timeout** command refers to the waiting period before the next retry attempt. The **configure aaa radius server-policy servers retry-count** command refers to the number of times the host attempts to contact the RADIUS server. If a RADIUS server is declared out-of-service, the host pending retry attempts moves on to the next RADIUS server.
Range	1 to 340
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

test-account

Synopsis	Enter the **test-account** context
Context	**configure** aaa radius server-policy *named-item* servers health-check test-account
Tree	test-account

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context set up a test account as a probing mechanism to check the connectivity of all configured RADIUS authentication servers within the RADIUS server policy.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the health check
Context	**configure** aaa radius server-policy *named-item* servers health-check test-account admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Time for test account to check health of RADIUS servers
Context	**configure** aaa radius server-policy *named-item* servers health-check test-account interval *number*
Tree	interval
Description	This command configures the interval at which the test account sends its access requests to probe the RADIUS servers.
Range	1 to 60
Units	seconds
Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *encrypted-leaf*

Synopsis	Test account password for RADIUS server health check
Context	**configure** aaa radius server-policy *named-item* servers health-check test-account password *encrypted-leaf*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	password
Description	This command specifies the test account password for RADIUS server health check in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-name *display-string*

Synopsis	Username to send access requests to probe RADIUS server
Context	**configure** aaa radius server-policy *named-item* servers health-check test-account user-name *display-string*
Tree	user-name
String length	1 to 64
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-down-time *number*

Synopsis	Hold time before reusing a RADIUS server that was down
Context	**configure** aaa radius server-policy *named-item* servers hold-down-time *number*
Tree	hold-down-time
Description	This command configures the interval during which no new communication attempts are made to a RADIUS server that is marked down to prevent immediately overloading the server when it is starting up. The only exception is when all servers in the authentication policy are marked down; in that case, they will all be used again to prevent failures on new client connections.
Range	30 to 86400
Units	seconds
Default	30
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6-source-address *ipv6-address*

Synopsis	Source address for IPv6 RADIUS datagrams
Context	**configure** aaa radius server-policy *named-item* servers ipv6-source-address *ipv6-address*
Tree	ipv6-source-address
Description	This command configures the source address of an IPv6 RADIUS packet. When **ipv6-source-address** is unconfigured, the system IPv6 address (inband RADIUS server connection) or Boot Option File (BOF) IPv6 address (outband RADIUS server connection) must be configured in order for the RADIUS client to work with an IPv6 RADIUS server. This address is also used in the NAS-IPv6-Address attribute.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retry-count *number*

Synopsis	Number of retries for contacting the RADIUS server
Context	**configure** aaa radius server-policy *named-item* servers retry-count *number*
Tree	retry-count
Description	This command configures the number of times the router attempts to contact the RADIUS server, if not successful the first time.
Range	1 to 256
Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	RADIUS routing instance
Context	**configure** aaa radius server-policy *named-item* servers router-instance *string*
Tree	router-instance
Description	This command specifies the virtual router instance applicable for the set of configured RADIUS servers. This value cannot be changed once a RADIUS server is configured for this policy.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

server [server-index] *number*

Synopsis	Enter the **server** list instance
Context	**configure** aaa radius server-policy *named-item* servers server *number*
Tree	server
Max. instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**server-index**] *number*

Synopsis	RADIUS server index
Context	**configure** aaa radius server-policy *named-item* servers server *number*
Tree	server
Range	1 to 16
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server-name *named-item*

Synopsis	RADIUS server name
Context	**configure** aaa radius server-policy *named-item* servers server *number* server-name *named-item*
Tree	server-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-address *ipv4-address*

Synopsis	Source address of RADIUS messages

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aaa radius server-policy *named-item* servers source-address *ipv4-address*
Tree	source-address
Description	This command configures the source address of the RADIUS packet. The system IP address must be configured in order for the RADIUS client to work. The system IP address must only be configured if the source-address is not specified. When the no **source-address** command is executed, the source address is determined at the moment the request is sent. This address is also used in the NAS-IP-Address attribute; over there it is set to the system IP address if no source-address was given. See "Configuring a System Interface" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide*.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stickiness *boolean*

Synopsis	Allow stickiness in a multi-server application
Context	**configure** aaa radius server-policy *named-item* servers stickiness *boolean*
Tree	stickiness
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Time until the next retry to the RADIUS server
Context	**configure** aaa radius server-policy *named-item* servers timeout *number*
Tree	timeout
Range	1 to 340
Units	seconds
Default	5
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

wpp

Synopsis	Enter the **wpp** context
Context	**configure** aaa wpp
Tree	wpp
Description	Commands in this context enable the contfiguration of Wireless Portal Protocol (WPP) command options.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal-group [group-name] *named-item*

Synopsis	Enter the **portal-group** list instance
Context	**configure** aaa wpp portal-group *named-item*
Tree	portal-group
Description	Commands in this context configure portal group command options for WPP.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**group-name**] *named-item*

Synopsis	Portal group name
Context	**configure** aaa wpp portal-group *named-item*
Tree	portal-group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the portal group
Context	**configure** aaa wpp portal-group *named-item* admin-state *keyword*
Tree	admin-state

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** aaa wpp portal-group *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal [router-instance] *string* name *named-item*

Synopsis	Add a list entry for **portal**
Context	**configure** aaa wpp portal-group *named-item* portal *string* name *named-item*
Tree	portal
Description	This command configures a portal for the portal group.
Max. instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**router-instance**] *string*

Synopsis	Router on which the portal is configured
Context	**configure** aaa wpp portal-group *named-item* portal *string* name *named-item*
Tree	portal
Notes	This element is part of a list key.
Introduced	16.0.R1

4.2.1 anysec command descriptions

anysec

Synopsis	Enter the **anysec** context
Context	**configure** anysec
Tree	anysec
Introduced	23.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

mka-over-ip

Synopsis	Enter the **mka-over-ip** context
Context	**configure** anysec mka-over-ip
Tree	mka-over-ip
Introduced	23.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

mka-udp-port *number*

Synopsis	ANYSec MKA UDP port
Context	**configure** anysec mka-over-ip mka-udp-port *number*
Tree	mka-udp-port
Description	This command configures the UDP port that identifies the MKA packet on the system. Nokia recommends configuring this UDP port network wide. In addition, ensure the UDP port is not used by any other protocols in the network.
Range	1024 to 49151
Introduced	23.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

mpls

Synopsis	Enter the **mpls** context
Context	**configure** anysec mpls
Tree	mpls

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

security-termination-policies

Synopsis	Enter the **security-termination-policies** context
Context	**configure** anysec mpls security-termination-policies
Tree	security-termination-policies
Description	Commands in this context configure local security termination policies.
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

policy [policy-name] *named-item*

Synopsis	Enter the **policy** list instance
Context	**configure** anysec mpls security-termination-policies policy *named-item*
Tree	policy
Description	Commands in this context configure ANYsec for locally terminating tunnels.
Max. instances	1023
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

[**policy-name**] *named-item*

Synopsis	ANYsec security termination policy name
Context	**configure** anysec mpls security-termination-policies policy *named-item*
Tree	policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the security termination policy
Context	**configure** anysec mpls security-termination-policies policy *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

flex-algo-id *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Flexible algorithm ID
Context	**configure** anysec mpls security-termination-policies policy *named-item* flex-algo-id *number*
Tree	flex-algo-id
Description	This command configures the flexible algorithm ID. This ID must match the local terminating ANYsec tunnel.
Range	128 to 255
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

igp-instance-id *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IGP instance ID
Context	**configure** anysec mpls security-termination-policies policy *named-item* igp-instance-id *number*
Tree	igp-instance-id

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the IGP instance ID. This IGP instance ID must match the IGP instance that the incoming encrypted LSP was signaled on.
Range	0 to 31 | 64 to 95
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local address of node SID associated with ANYsec tunnel
Context	**configure** anysec mpls security-termination-policies policy *named-item* local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address
Description	This command configures the local IPv4 or IPv6 address for the system IP or loopback node SID. This is used to program the FP5 label stack to match the incoming ANYsec tunnel and decryption of the tunnel.
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

protocol *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Protocol used to advertise node SID of incoming tunnel
Context	**configure** anysec mpls security-termination-policies policy *named-item* protocol *keyword*
Tree	protocol
Options	sr-ospf, sr-ospf3, sr-isis
Default	sr-isis
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rx-must-be-encrypted *boolean*

Synopsis	Enforce encryption for received packets
Context	**configure** anysec mpls security-termination-policies policy *named-item* rx-must-be-encrypted *boolean*
Tree	rx-must-be-encrypted
Description	When configured to **true**, the router accepts all arriving traffic that is ANYsec secured on the port. All other traffic is dropped. When configured to **false**, the router accepts all arriving traffic on the port.
Default	false
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

service-encryption

Synopsis	Enter the **service-encryption** context
Context	**configure** anysec mpls service-encryption
Tree	service-encryption
Description	Commands in this context configure ANYsec for service encryption.
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

encryption-group [group-name] *named-item*

Synopsis	Enter the **encryption-group** list instance
Context	**configure** anysec mpls service-encryption encryption-group *named-item*
Tree	encryption-group
Description	Commands in this context configure an encryption group, which contains a set of tunnels that use a single connectivity association and its PSK.
Max. instances	1023
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**group-name**] *named-item*

Synopsis	ANYsec encryption group name
Context	**configure** anysec mpls service-encryption encryption-group *named-item*
Tree	encryption-group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	26.3.R1

encryption-label *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Label identifying packets sent from the node to peers
Context	**configure** anysec mpls service-encryption encryption-group *named-item* encryption-label *number*
Tree	encryption-label
Description	This command creates an encryption SID for the encryption group. The encryption SID can be assigned per encryption group. However, all encryption groups can have the same encryption SID. To save label space, Nokia recommends limiting the number of encryption SIDs within a network. To configure the encryption SID, a **reserved-label-block** command must be configured under the **anysec** context. For SRv6 ANYsec, the encryption SID is only used as part of the Security Channel Identifier (SCI) and is not used on the datapath packets like MPLS.
Range	32 to 1048575
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

peer [peer-ip-address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Enter the **peer** list instance
Context	**configure** anysec mpls service-encryption encryption-group *named-item* peer *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	peer
Description	Commands in this context configure a peer address as part of the specified encryption group.
Max. instances	1023
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

peer-tunnel-attributes

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **peer-tunnel-attributes** context
Context	**configure** anysec mpls tunnel-encryption encryption-group *named-item* peer-tunnel-attributes
Tree	peer-tunnel-attributes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the peer-tunnel attributes. Tunnel attributes are used to match and identify the outgoing tunnels for encryptoin with ANYsec. A single tunnel attribute is used for multiple peers. Since an LSP is unidirectional, the outgoing tunnel can have different attributes from the incoming tunnel (for example, security termination policy).
Introduced	26.3.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-12e, 7750 SR-s

4.3.1 application-assurance command descriptions

application-assurance

Synopsis	Enter the **application-assurance** context
Context	**configure** application-assurance
Tree	application-assurance
Description	Commands in this context configure the attributes of Application Assurance (AA) operations.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-transit-redundancy [aatr-id] *number*

Synopsis	Enter the **aa-transit-redundancy** list instance
Context	**configure** application-assurance aa-transit-redundancy *number*
Tree	aa-transit-redundancy
Description	Commands in this context configure the AATR instances used for multichassis transit IP redundancy. AATR allows the system to immediately synchronize learned subscriber information to the standby redundant node.
Max. instances	16
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aatr-id**] *number*

Synopsis	AATR instance ID
Context	**configure** application-assurance aa-transit-redundancy *number*
Tree	aa-transit-redundancy
Range	1 to 16
Notes	This element is part of a list key.
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the AATR instance
Context	**configure** application-assurance aa-transit-redundancy *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance aa-transit-redundancy *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer *(ipv4-address-no-zone | ipv6-address-no-zone)*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AATR instance peer
Context	**configure** application-assurance aa-transit-redundancy *number* peer *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	peer
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp [aarp-id] *number*

Synopsis	Enter the **aarp** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance aarp *number*
Tree	aarp
Description	Commands in this context define an Application Assurance Redundancy Protocol (AARP) instance. This instance is paired with the same AARP ID in a peer node, as part of the configuration to provide flow and packet asymmetry removal for traffic of a multi-homed SAP or spoke SDP.
Max. instances	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aarp-id**] *number*

Synopsis	AARP ID
Context	**configure** application-assurance aarp *number*
Tree	aarp
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AARP instance
Context	**configure** application-assurance aarp *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance aarp *number* description *description*
Tree	description

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

master-selection-mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AARP master selection mode
Context	**configure** application-assurance aarp *number* master-selection-mode *keyword*
Tree	master-selection-mode
Description	This command configures the AARP mode of operation with the peer instance. The modes affect the AARP state machine behavior according to the specified behavior.
Options	minimize-switchovers, inter-chassis-efficiency, priority-based-balance
Default	minimize-switchovers
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer *(ipv4-address-no-zone | ipv6-address-no-zone)*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AARP peer IP address
Context	**configure** application-assurance aarp *number* peer *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	peer
Description	This command defines the IP address of the AARP peer router, which must be a routable system IP address. If no peer is configured when the AARP is administratively enabled, it is configured as a single node AARP instance.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

peer-endpoint

Synopsis	Enter the **peer-endpoint** context
Context	**configure** application-assurance aarp *number* peer-endpoint
Tree	peer-endpoint
Description	Commands in this context specify the attributes of the peer endpoint parent AA subscriber of the AARP peer.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap

Synopsis	Enable the **sap** context
Context	**configure** application-assurance aarp *number* peer-endpoint sap
Tree	sap
Notes	The following elements are part of a choice: **sap** or **spoke-sdp**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encap-type *keyword*

Synopsis	Encapsulation type for peer endpoint SAP
Context	**configure** application-assurance aarp *number* peer-endpoint sap encap-type *keyword*
Tree	encap-type
Options	null, dot1q, qinq
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap-id *sap*

Synopsis	AARP peer endpoint SAP ID
Context	**configure** application-assurance aarp *number* peer-endpoint sap sap-id *sap*
Tree	sap-id
String length	1 to 45

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

spoke-sdp *sdp-bind-id*

Synopsis	AARP peer endpoint spoke SDP
Context	**configure** application-assurance aarp *number* peer-endpoint spoke-sdp *sdp-bind-id*
Tree	spoke-sdp
String length	3 to 16
String format	'sdp-bind-id' must be sdp-id:vc-id (sdp 1..32767, vc 1..4294967295)
Notes	The following elements are part of a choice: **sap** or **spoke-sdp**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AARP priority
Context	**configure** application-assurance aarp *number* priority *number*
Tree	priority
Description	This command defines the priority for the AARP instance. The priority value is used to determine the master and backup upon initialization or rebalance.
Range	0 to 255
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cflowd

Synopsis	Enter the **cflowd** context
Context	**configure** application-assurance cflowd
Tree	cflowd

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field [field-name] *named-item*

Synopsis	Enter the **field** list instance
Context	**configure** application-assurance cflowd field *named-item*
Tree	field
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**field-name**] *named-item*

Synopsis	Cflowd record field name
Context	**configure** application-assurance cflowd field *named-item*
Tree	field
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comment *named-item*

Synopsis	User information comment
Context	**configure** application-assurance cflowd field *named-item* comment *named-item*
Tree	comment
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-attribute

Synopsis	Enter the **flow-attribute** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance flow-attribute
Tree	flow-attribute
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

attribute [attribute-name] *named-item*

Synopsis	Enter the **attribute** list instance
Context	**configure** application-assurance flow-attribute attribute *named-item*
Tree	attribute
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**attribute-name**] *named-item*

Synopsis	Attribute name
Context	**configure** application-assurance flow-attribute attribute *named-item*
Tree	attribute
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comment *named-item*

Synopsis	User information comment
Context	**configure** application-assurance flow-attribute attribute *named-item* comment *named-item*
Tree	comment
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

group [aa-group-id] *number*

Synopsis	Enter the **group** list instance
Context	**configure** application-assurance group *number*
Tree	group
Description	Commands in this context configure an Application Assurance group and partition options.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-group-id**] *number*

Synopsis	AA group ID
Context	**configure** application-assurance group *number*
Tree	group
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

certificate-profile [cert-prof-name] *named-item*

Synopsis	Enter the **certificate-profile** list instance
Context	**configure** application-assurance group *number* certificate-profile *named-item*
Tree	certificate-profile
Description	Commands in this context create a certificate profile to be used for certificate-based encryption in HTTP header enrichment.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**cert-prof-name**] *named-item*

Synopsis	AA group certificate profile name
Context	**configure** application-assurance group *number* certificate-profile *named-item*
Tree	certificate-profile

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AA certificate profile
Context	**configure** application-assurance group *number* certificate-profile *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* certificate-profile *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

file *certificate-file*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Certificate file name
Context	**configure** application-assurance group *number* certificate-profile *named-item* file *certificate-file*

© 2026 Nokia.

Tree	file
String length	1 to 95
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cflowd

Synopsis	Enter the **cflowd** context
Context	**configure** application-assurance group *number* cflowd
Tree	cflowd
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of cflowd export
Context	**configure** application-assurance group *number* cflowd admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collector [ip-address] *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*

Synopsis	Enter the **collector** list instance
Context	**configure** application-assurance group *number* cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	collector
Description	Commands in this context configure flow data collectors for cflowd data. In the current release, the system supports IPv4 addresses only for the cflowd collector host.
Max. instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field [field-name] *named-item*

Synopsis	Add a list entry for **field**
Context	**configure** application-assurance group *number* cflowd comprehensive template dynamic-fields field *named-item*
Tree	field
Description	This command adds a dynamic field to be included in the exported cflowd template.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**field-name**] *named-item*

Synopsis	Cflowd template dynamic field name
Context	**configure** application-assurance group *number* cflowd comprehensive template dynamic-fields field *named-item*
Tree	field
Description	This command specifies the name of the field to include in the exported cflowd template:

- Common to all templates are the following values: session/flowStartSeconds, session/flowDurationMilliseconds, postIpPrecedence, ipTTL, aaProt, aaApp, aa AppGrp, hostName, deviceId, deviceMfgId, deviceOsId, ipFamily, deviceOsVer1, deviceOsVer2, deviceOsVer3, anlType, anlTopology, anlCongestionState, timeZone, aaChargingGrp, flowAttr_video, flowAttr_abr_service, flowAttr_audio, flowAttr_encrypted, flowAttr_download, flowAttr_upload, flowAttr_realtime_communication, aa SubTetheringState
- When AA is deployed in FWA SR, the following value applies: ApnExtended
- For the TCP and comprehensive templates only, the following values apply: tcp SessionEstDelay, tcpRetransmittedBytes, tcpRetransmittedPackets
- For the comprehensive templates only when deployed on VSR or ESA in FWA SR configured in the residential mode, the following values apply: dnsAnswerName, dnsType, dnsState, dnsTid, tlsCname, sliceId, mmeAmfAddr, flowActiveBytes, flow ActiveTime, qci, policyRuleName chargeVolumeIPBytes, http-url-len http-uri http-referer http-ua http-ua-len http-request-method http-content-type httpReplyCode http-contentlen, tcpSessionEstDelayUsec

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- For the comprehensive template only (in residential AA scale mode): sessionStart Milliseconds, sessionEndMilliseconds, flow-end-reason, aaSystemName
- For the comprehensive template only (require the use of per-flow policer in **monitor** mode: Session-average-throughput, Session-Peak-throughput
- For the comprehensive template only (require TCP optimization to be enabled): TCPSession-average-delay, TCPSession-min-delay, TCPSession-max-delay, MSS

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field-selection *keyword*

Synopsis	Field selection method
Context	**configure** application-assurance group *number* cflowd comprehensive template field-selection *keyword*
Tree	field-selection
Description	This command configures the method for selecting the fields to be included in the exported cflowd template.
Options	legacy, dynamic
Default	legacy
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Context	**configure** application-assurance group *number* cflowd direct-export collector *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-id *number*

Synopsis	Cflowd direct export VLAN ID
Context	**configure** application-assurance group *number* cflowd direct-export vlan-id *number*
Tree	vlan-id
Range	1 to 4094
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-override

Synopsis	Enter the **export-override** context
Context	**configure** application-assurance group *number* cflowd export-override
Tree	export-override
Description	Commands in this context configure the AA subtype used in the cflowd record export. The cflowd statistics exported to the cflowd collector look identical to AA for the type of system defined by the mode. The following cflowd export fields are affected: • The cflowd export observation point (field 138) mode is derived from the export-override category that is selected. • The cflowd export AA_Subscriber_Type (field 12) mode is modified as configured, using existing field types. • The cflowd interface name is used as the sub-ID field, optionally modified to use the configured **mode** and **prefix** commands for global identifiers.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

All AA cflowd record types are affected by export override. To change the export override or prefix, cflowd must first be disabled. When this command is set back to the default, the prefix is also set back to its default.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AA cflowd export override mode
Context	**configure** application-assurance group *number* cflowd export-override mode *keyword*
Tree	mode
Description	This command specifies the type of system emulated for the cflowd export.
Options	mobile, ifname-obfuscate
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix *named-item*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AA group cflowd export override prefix
Context	**configure** application-assurance group *number* cflowd export-override prefix *named-item*
Tree	prefix
Description	This command specifies the prefix-string associated with the export override. The prefix string specifies up to an 8 character string. If the 8 character prefix is "ABCDEFG_" for a particular node, the cflowd export override would generate IPv4 interface names such as ABCDEFG_255.255.255.255 or IPv6 as ABCDEFG_2001:DB8:EF01:2345::/64. By default, the prefix is left blank.
String length	1 to 8
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1

- When AA is deployed in FWA SR, the following value applies: ApnExtended
- For the TCP and comprehensive templates only, the following values apply: tcp SessionEstDelay, tcpRetransmittedBytes, tcpRetransmittedPackets
- For the comprehensive templates only when deployed on VSR or ESA in FWA SR configured in the residential mode, the following values apply: dnsAnswerName, dnsType, dnsState, dnsTid, tlsCname, sliceId, mmeAmfAddr, flowActiveBytes, flow ActiveTime, qci, policyRuleName chargeVolumeIPBytes, http-url-len http-uri http-referer http-ua http-ua-len http-request-method http-content-type httpReplyCode http-contentlen, tcpSessionEstDelayUsec
- For the comprehensive template only (in residential AA scale mode): sessionStart Milliseconds, sessionEndMilliseconds, flow-end-reason, aaSystemName
- For the comprehensive template only (require the use of per-flow policer in **monitor** mode: Session-average-throughput, Session-Peak-throughput
- For the comprehensive template only (require TCP optimization to be enabled): TCPSession-average-delay, TCPSession-min-delay, TCPSession-max-delay, MSS

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field-selection *keyword*

Synopsis	Field selection method
Context	**configure** application-assurance group *number* cflowd volume template field-selection *keyword*
Tree	field-selection
Description	This command configures the method for selecting the fields to be included in the exported cflowd template.
Options	legacy, dynamic
Default	legacy
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-enrich [dns-enrich-name] *named-item*

Synopsis	Enter the **dns-enrich** list instance
Context	**configure** application-assurance group *number* dns-enrich *named-item*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	dns-enrich
Description	Commands in this context configure the DNS enrichment template.
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**dns-enrich-name**] *named-item*

Synopsis	DNS enrichment object name
Context	**configure** application-assurance group *number* dns-enrich *named-item*
Tree	dns-enrich
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DNS enrichment object
Context	**configure** application-assurance group *number* dns-enrich *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* dns-enrich *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character

Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gateway-id *number*

Synopsis	Gateway ID portion of the enriched device ID
Context	**configure** application-assurance group *number* dns-enrich *named-item* gateway-id *number*
Tree	gateway-id
Description	This command configures a unique ID that the Application Assurance (AA) node uses, along with a per-sub policy ID passed from Policy Control Function (PCF), to construct a device ID that is inserted into the DNS request packets.
Max. range	0 to 4294967295
Default	0
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

option [option-type] *keyword*

Synopsis	Add a list entry for **option**
Context	**configure** application-assurance group *number* dns-enrich *named-item* option *keyword*
Tree	option
Description	Commands in this context configure the DNS options for the enriched device ID.
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**option-type**] *keyword*

Synopsis	Name of the DNS option to enrich by AA
Context	**configure** application-assurance group *number* dns-enrich *named-item* option *keyword*
Tree	option
Options	device-id
Notes	This element is part of a list key.
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packet-size-limit *number*

Synopsis	Maximum packet size after DNS enrichment
Context	**configure** application-assurance group *number* dns-enrich *named-item* packet-size-limit *number*
Tree	packet-size-limit
Description	This command configures the maximum DNS packet size. If enrichment causes the size of the packet to exceed this configured maximum value, AA does not enrich the DNS packet.
Range	256 to 9212
Units	octets
Default	1500
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-ip-cache [dns-ip-cache-name] *named-item*

Synopsis	Enter the **dns-ip-cache** list instance
Context	**configure** application-assurance group *number* dns-ip-cache *named-item*
Tree	dns-ip-cache
Description	Commands in this context configure a DNS IP cache that is used to snoop DNS requests generated by subscribers, to populate a cache of IP addresses that match a specified list of domain names. In the context of strengthening URL-content charging, Operators may also specify a list of trusted DNS servers to populate the DNS IP cache.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**dns-ip-cache-name**] *named-item*

Synopsis	DNS IP cache name within the AA group
Context	**configure** application-assurance group *number* dns-ip-cache *named-item*
Tree	dns-ip-cache
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AA DNS IP cache object
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-match

Synopsis	Enter the **dns-match** context
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* dns-match
Tree	dns-match
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

domain [domain-name] *named-item*

Synopsis	Enter the **domain** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* dns-ip-cache *named-item* dns-match domain *named-item*
Tree	domain
Description	Commands in this context configure a domain expression to populate the DNS IP cache.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**domain-name**] *named-item*

Synopsis	DNS IP cache domain name
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* dns-match domain *named-item*
Tree	domain
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

expression *display-string*

Synopsis	AA DNS domain expression to match
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* dns-match domain *named-item* expression *display-string*
Tree	expression
Description	This command specifies a domain name expression string used to define a pattern match. The domain expression uses the same syntax as the expressions used in **configure application-assurance group partition policy app-filter entry app-filters** configuration.
String length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trusted-server-address [dns-server-address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Enter the **trusted-server-address** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* dns-ip-cache *named-item* dns-match trusted-server-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	trusted-server-address
Description	Commands in this context configure a trusted DNS server address. DNS responses from this DNS server are used to populate the DNS IP cache.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**dns-server-address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Trusted DNS server address
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* dns-match trusted-server-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	trusted-server-address
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server-name *named-item*

Synopsis	DNS server name
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* dns-match trusted-server-address *(ipv4-address-no-zone | ipv6-address-no-zone)* server-name *named-item*
Tree	server-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-cache

Synopsis	Enter the **ip-cache** context
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* ip-cache
Tree	ip-cache
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high-watermark *number*

Synopsis	High watermark value for the DNS IP cache
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* ip-cache high-watermark *number*
Tree	high-watermark
Description	This command configures the high watermark value for the DNS IP cache. When the number of cached IP addresses exceeds the threshold, the system generates a trap.
Range	0 to 100
Default	90
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low-watermark *number*

Synopsis	Low watermark value for the DNS IP cache
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* ip-cache low-watermark *number*
Tree	low-watermark
Description	This command configures the low watermark value for the DNS IP cache. When the number of cached IP addresses exceeds the high watermark threshold, the system generates a trap based on the high watermark. The trap clears after the number of cached IP addresses drops below the configured low watermark value.
Range	0 to 100
Default	80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

size *number*

Synopsis	Maximum number of IP addresses stored in the cache
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* ip-cache size *number*
Tree	size
Range	10 to 64000

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	10
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

static-address [static-ip-address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Add a list entry for **static-address**
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* ip-cache static-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	static-address
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**static-ip-address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Trusted IP address for the DNS IP cache
Context	**configure** application-assurance group *number* dns-ip-cache *named-item* ip-cache static-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	static-address
Description	This command configures an IP address to be used as a trusted IP address. For packets whose destination IP address matches that of the trusted IP address, a cache hit is assumed.
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-enrich [http-enrich-name] *named-item*

Synopsis	Enter the **http-enrich** list instance
Context	**configure** application-assurance group *number* http-enrich *named-item*
Tree	http-enrich
Description	Commands in this context configure the attributes of the HTTP enrichment policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**http-enrich-name**] *named-item*

Synopsis	HTTP header enrichment policy name
Context	**configure** application-assurance group *number* http-enrich *named-item*
Tree	http-enrich
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the HTTP enrichment policy
Context	**configure** application-assurance group *number* http-enrich *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* http-enrich *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

field [field-name] *named-item*

Synopsis	Enter the **field** list instance
Context	**configure** application-assurance group *number* http-enrich *named-item* field *named-item*
Tree	field
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**field-name**] *named-item*

Synopsis	Field name to insert into the HTTP header
Context	**configure** application-assurance group *number* http-enrich *named-item* field *named-item*
Tree	field
Description	This command specifies the field type to insert into the HTTTP header. The command must be repeated for each field to be inserted. The same field cannot be inserted twice into the header under different header names. **Note**: AA can insert two copies of the following fields in the same HTTP header (with a different header name): imei-hyphenated, imei-hyphenated-2, imsi, imsi-2, static-string, static-string-2, user-location-raw, and user-location-raw2. The following field types are supported in any deployment: static-string - header name for the inserted string static-string-2 - header name for the inserted string subscriber-id - header name for the subscriber ID subscriber-ip - header name for the subscriber IP address The following field types are supported in Fixed Wireless Access (FWA) deployments only: apn - complete APN string apn-ni - APN Network Identifier (APN-NI) used by the UE billing-type - UE charging type (charging characteristics) dynamic-acr - dynamic Anonymous Customer Record (ACR) static-acr - static ACR imei-hyphenated - subscriber IMEI with format AABBBBBB-CCCCCC-EE imei-hyphenated-2 - subscriber IMEI with format AABBBBBB-CCCCCC-EE imei-sv - subscriber IMEI with format AABBBBBBCCCCCCEE imsi - subscriber IMSI

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

imsi-2 - subscriber IMSI

msisdn - subscriber MSISDN

msisdn-ts - subscriber MSISDN appended with the UNIX timestamp

msisdn-without-cc - subscriber MSISDN without a country code

pgw-ggsn-address - PGW/GGSN address serving the UE

plmn-id - Public Land Mobile Network (PLMN) ID of the SGSN/MME

rat-type - Radio Access Technology (RAT) type

timestamp - timestamp inserted in UNIX time format; for example, 1531204313

user-location - UE LOCATION (ULI)

user-location-3gpp - ULI encoded as defined in 3GPP 29.061

user-location-raw - ULI in raw format:<ULI-TYPE1>[+<ULI-TYPE2>]=<ULI HEX>

Example: x-locinfo: TAI+ECGI=1300622c46130062014adf16

user-location-raw-2 - ULI in raw format:<ULI-TYPE1>[+<ULI-TYPE2>]=<ULI HEX>

Example: x-locinfo: TAI+ECGI=1300622c46130062014adf16

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aes-initialization-vector *hex-string*

Synopsis	Initialization vector for the AES CBC encryption
Context	**configure** application-assurance group *number* http-enrich *named-item* field *named-item* aes-initialization-vector *hex-string*
Tree	aes-initialization-vector
Description	This command configures the initialization vector used for the AES CBC encryption. The vector consists of 34 characters, that is, 0x followed by exactly 32 hexadecimal characters.
String length	34
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b) 'aes-initialization-vector' must be hexadecimal with prefix 0x
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

anti-spoof *boolean*

Synopsis	Enable anti-spoofing
Context	**configure** application-assurance group *number* http-enrich *named-item* field *named-item* anti-spoof *boolean*
Tree	anti-spoof
Description	When configured to **true**, this command enables the HTTP header enrichment anti-spoofing functionality.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-line-id *boolean*

Synopsis	Enable calling line identification
Context	**configure** application-assurance group *number* http-enrich *named-item* field *named-item* calling-line-id *boolean*
Tree	calling-line-id
Description	When configured to **true**, this command configures the HTTP header for “x-up-calling-line-id” anti-spoofing.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encode

Synopsis	Enter the **encode** context
Context	**configure** application-assurance group *number* http-enrich *named-item* field *named-item* encode
Tree	encode
Description	Commands in this context configure the encoding applied to the HTTP header enrichment field.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

cert-base64 *reference*

Synopsis	Certificate profile name
Context	**configure** application-assurance group *number* http-enrich *named-item* field *named-item* encode cert-base64 *reference*
Tree	cert-base64
Reference	**configure** application-assurance group *number* certificate-profile *named-item*
Notes	The following elements are part of a choice: **cert-base64**, **cert-profile**, or **key**.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert-profile *reference*

Synopsis	Certificate profile name used for encryption
Context	**configure** application-assurance group *number* http-enrich *named-item* field *named-item* encode cert-profile *reference*
Tree	cert-profile
Reference	**configure** application-assurance group *number* certificate-profile *named-item*
Notes	The following elements are part of a choice: **cert-base64**, **cert-profile**, or **key**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key

Synopsis	Enter the **key** context
Context	**configure** application-assurance group *number* http-enrich *named-item* field *named-item* encode key
Tree	key
Description	Commands in this context configure the encryption fields.
Notes	The following elements are part of a choice: **cert-base64**, **cert-profile**, or **key**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

type *keyword*

Synopsis	Encoding type
Context	**configure** application-assurance group *number* http-enrich *named-item* field *named-item* encode key type *keyword*
Tree	type
Description	This command configures the encoding/ encryption method.
Options	md5, rc4, rc4-md5-base64, aes128, aes256, aes128cbc, aes256cbc
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value *encrypted-leaf*

Synopsis	Secret key for encrypting the field
Context	**configure** application-assurance group *number* http-enrich *named-item* field *named-item* encode key value *encrypted-leaf*
Tree	value
Description	This command specifies the secret key for encrypting the field in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

md5-salt *string-not-all-spaces*

Synopsis	MD5 salt string
Context	**configure** application-assurance group *number* http-enrich *named-item* field *named-item* md5-salt *string-not-all-spaces*
Tree	md5-salt
Description	This command configures an MD5 salt string. The configured string is appended to the parameter before performing MD5 hashing of the field.
String length	1 to 16
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	22.5.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *named-item*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	HTTP header field name

rat-type [rat-type-name] *keyword*

Synopsis	Enter the **rat-type** list instance
Context	**configure** application-assurance group *number* http-enrich *named-item* rat-type-enrichment rat-type *keyword*
Tree	rat-type
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**rat-type-name**] *keyword*

Synopsis	RAT type name
Context	**configure** application-assurance group *number* http-enrich *named-item* rat-type-enrichment rat-type *keyword*
Tree	rat-type
Description	This command configures a customised RAT value for the specified RAT-Type.
Options	utran, geran, wlan, gan, hspa-evol, eutran, virtual, eutran-nb, ehrpd, hrpd, cdma-1x, umb, wifi, nr, lte-m
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rat-string *string-not-all-spaces*

Synopsis	Customised RAT type value
Context	**configure** application-assurance group *number* http-enrich *named-item* rat-type-enrichment rat-type *keyword* rat-string *string-not-all-spaces*
Tree	rat-string
String length	1 to 31
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-error-redirect [http-error-redirect-name] *named-item*

Synopsis	Enter the **http-error-redirect** list instance
Context	**configure** application-assurance group *number* http-error-redirect *named-item*
Tree	http-error-redirect
Description	Commands in this context configure an HTTP error redirect policy that contains important information relevant to the redirect server.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**http-error-redirect-name**] *named-item*

Synopsis	HTTP error redirect policy name
Context	**configure** application-assurance group *number* http-error-redirect *named-item*
Tree	http-error-redirect
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the HTTP error redirect object
Context	**configure** application-assurance group *number* http-error-redirect *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description

© 2026 Nokia.

Context	**configure** application-assurance group *number* http-error-redirect *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

error-code [error-code-value] *number*

Synopsis	Enter the **error-code** list instance
Context	**configure** application-assurance group *number* http-error-redirect *named-item* error-code *number*
Tree	error-code
Description	Commands in this context configure the HTTP error status codes to which a redirect action is applied. Only messages with sizes less than that configured for the **custom-message-size** command are eligible for redirect action.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**error-code-value**] *number*

Synopsis	HTTP error code value for an HTTP error redirect
Context	**configure** application-assurance group *number* http-error-redirect *named-item* error-code *number*
Tree	error-code
Range	400 to 999
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-message-size *number*

Synopsis	HTTP error redirect error code custom message size
Context	**configure** application-assurance group *number* http-error-redirect *named-item* error-code *number* custom-message-size *number*
Tree	custom-message-size

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the maximum message size above which an HTTP error redirect is not performed.
Max. range	0 to 4294967295
Units	octets
Default	1024
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-host *display-string*

Synopsis	HTTP host for the HTTP error redirect object
Context	**configure** application-assurance group *number* http-error-redirect *named-item* http-host *display-string*
Tree	http-host
Description	This command specifies the HTTP hostname of the landing server (Barefruit or Xerocole). It is used in the HTTP GET operation from the client (which is being redirected) to the redirect search landing server. The hostname must contain a valid IP address or HTTP hostname or URI for the HTTP GET from the client to the landing server.
String length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

participant-id *named-item*

Synopsis	Participant ID for the HTTP error redirect object
Context	**configure** application-assurance group *number* http-error-redirect *named-item* participant-id *named-item*
Tree	participant-id
Description	This command specifies a string assigned to the operator by Barefruit. It is used by Barefruit landing servers (applies to template # 1 only).
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

template *number*

Synopsis	Template ID for the HTTP error redirect object
Context	**configure** application-assurance group *number* http-error-redirect *named-item* template *number*
Tree	template
Description	This command configures the template of parameters passed from the AA-ISA to the redirect server using JavaScript in the redirect packet. The template is specific to the redirect server used in the network. Currently, two partners are supported with AA-ISA redirect solution, Barefruit, and Xerocole.
Max. range	0 to 4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-notification [http-notification-name] *named-item*

Synopsis	Enter the **http-notification** list instance
Context	**configure** application-assurance group *number* http-notification *named-item*
Tree	http-notification
Description	Commands in this context configure an HTTP notification object for the subscriber in-browser notification.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**http-notification-name**] *named-item*

Synopsis	HTTP notification policy name
Context	**configure** application-assurance group *number* http-notification *named-item*
Tree	http-notification
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the AA HTTP notification object
Context	**configure** application-assurance group *number* http-notification *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* http-notification *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *(number | keyword)*

Synopsis	Minimum HTTP response notification interval
Context	**configure** application-assurance group *number* http-notification *named-item* interval *(number | keyword)*
Tree	interval
Range	1 to 1440
Units	minutes
Options	one-time
Default	one-time
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

script-url *http-redirect-url*

Synopsis	Script URL inserted into the HTTP response
Context	**configure** application-assurance group *number* http-notification *named-item* script-url *http-redirect-url*
Tree	script-url
Description	This command configures the URL of the script used by the HTTP notification policy.
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

template *number*

Synopsis	Template ID for the AA HTTP notification object
Context	**configure** application-assurance group *number* http-notification *named-item* template *number*
Tree	template
Description	This command configures the template that defines the format and attributes included in the HTTP notification message.
Max. range	0 to 4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect [http-redirect-name] *named-item*

Synopsis	Enter the **http-redirect** list instance
Context	**configure** application-assurance group *number* http-redirect *named-item*
Tree	http-redirect
Description	Commands in this context configure the parameters of the HTTP redirect policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**http-redirect-name**] *named-item*

Synopsis	HTTP redirect policy name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* http-redirect *named-item*
Tree	http-redirect
Description	This command specifies the applied HTTP redirect name. If no redirect name is specified, HTTP redirect is not enabled.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AA HTTP redirect object
Context	**configure** application-assurance group *number* http-redirect *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

captive-redirect

Synopsis	Enter the **captive-redirect** context
Context	**configure** application-assurance group *number* http-redirect *named-item* captive-redirect
Tree	captive-redirect
Description	Commands in this context configure the captive redirect capability for an HTTP redirect policy. HTTP redirect policies using captive redirect can be used in conjunction with a session-filter policy to terminate TCP flows in the ISA-AA card before reaching the Internet to redirect subscribers to the predefined redirect URL. Non-HTTP TCP flows are TCP reset. Captive redirect uses the provisioned VLAN ID to send the HTTP response to subscribers; therefore, this VLAN ID must be properly assigned in the same VPN as the subscriber. The operator can select the URL arguments to include in the redirect URL using either a specific template ID or by configuring the redirect URL using a supported macro substitution keyword.
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-id *number*

Synopsis	Captive redirect VLAN ID
Context	**configure** application-assurance group *number* http-redirect *named-item* captive-redirect vlan-id *number*
Tree	vlan-id
Description	This command configures the VLAN ID for a captive redirect. Captive redirect uses the provisioned VLAN ID to send the HTTP response to subscribers; therefore, this VLAN ID must be properly assigned in the same VPN as the subscriber.
Range	1 to 4094
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* http-redirect *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

redirect-https *boolean*

Synopsis	Enable HTTPS redirect
Context	**configure** application-assurance group *number* http-redirect *named-item* redirect-https *boolean*
Tree	redirect-https
Description	When set to **true**, the HTTP redirect policy redirects HTTPS sessions to the configured redirect URL.
Default	false
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

redirect-url *http-redirect-url*

Synopsis HTTP redirect URL

Context **configure** application-assurance group *number* http-redirect *named-item* redirect-url *http-redirect-url*

Tree redirect-url

Description This command configures the HTTP redirect URL which is the URL (page) that the user is redirected to when an HTTP redirect takes effect.

The operator can select the URL arguments to include in the redirect URL, using either a specific template ID or by configuring any of the following macro substitution keywords:

- $URL - The Request-URI in the HTTP GET Request received
- $SUB - The subscriber ID
- $IP - The IP address of the subscriber host
- $RTRID - The router ID
- $URLPRM - The HTTP URL parameter associated with the subscriber
- $MAC - The UE MAC address
- $SAP - The UE SAP
- $CID - The circuit ID or interface ID of the subscriber
- $RID - The remote ID of the subscriber
- $CATID - The URL filter web-service rating category identifier
- $CATNAME - The URL filter web-service rating category name

Only ESM and ESM-MAC sub types support $MAC, $SAP, $CID, and $RID macro substitution.

String length 1 to 255

String format 'string-not-all-spaces' must contain at least one non-space character

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-client-reset *boolean*

Synopsis Enable TCP client reset

Context **configure** application-assurance group *number* http-redirect *named-item* tcp-client-reset *boolean*

Tree tcp-client-reset

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command enables an HTTP-redirect policy to initiate a TCP reset towards the client if the AA policy results in a redirect with packet drop but the HTTP redirect cannot be delivered. Scenarios for this include HTTP (TLS) sessions, blocking of non-HTTP TCP traffic, and blocking of existing flows after a policy re-evaluation of an existing subscriber.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

template *number*

Synopsis	Template ID for the HTTP redirect object
Context	**configure** application-assurance group *number* http-redirect *named-item* template *number*
Tree	template
Description	This command configures the template that defines which parameters are appended to the HTTP host redirect field in the redirect message. The HTTP redirect template provides HTTP 302 redirect containing only the URL specified in the redirect policy, with no other parameters.
Max. range	0 to 4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-identification-assist

Synopsis	Enter the **ip-identification-assist** context
Context	**configure** application-assurance group *number* ip-identification-assist
Tree	ip-identification-assist
Description	Commands in this context configure the IP identification assist feature, which uses IP addresses to assist in traffic identification. This optional mechanism is enabled by default and consults an internally generated and stored database when app-filters fail to classify the traffic as one of the configured applications from the AppDB. Use the **configure application-assurance group ip-identification-assist admin-state** command to disable the administrative state of the IP identification assist feature.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of IP identification assist
Context	**configure** application-assurance group *number* ip-identification-assist admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

passive-dns

Synopsis	Enter the **passive-dns** context
Context	**configure** application-assurance group *number* ip-identification-assist passive-dns
Tree	passive-dns
Description	Commands in this context configure passive DNS monitoring for the IP identification assist feature.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

monitor *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use passive DNS monitoring to collect IP addresses
Context	**configure** application-assurance group *number* ip-identification-assist passive-dns monitor *boolean*
Tree	monitor
Description	When configured to **true**, the router collects IP addresses by passively monitoring DNS traffic. The router uses the collected IP addresses to build its internal database.
Default	true
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

trusted-server [ip-address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Enter the **trusted-server** list instance
Context	**configure** application-assurance group *number* ip-identification-assist passive-dns trusted-server *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	trusted-server
Description	Commands in this context configure a DNS server that the IP identification assist feature is allowed to passively monitor.
Max. instances	64
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**ip-address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the DNS server
Context	**configure** application-assurance group *number* ip-identification-assist passive-dns trusted-server *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	trusted-server
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

comment *named-item-or-empty*

Synopsis	Name or description to associate with the DNS server
Context	**configure** application-assurance group *number* ip-identification-assist passive-dns trusted-server *(ipv4-address-no-zone | ipv6-address-no-zone)* comment *named-item-or-empty*
Tree	comment
String length	0 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

positive-app-id

Synopsis	Enter the **positive-app-id** context
Context	**configure** application-assurance group *number* ip-identification-assist positive-app-id
Tree	positive-app-id
Description	Commands in this context implement the positive application identification mechanism, which monitors the correlations between IP addresses and applications identified with a high degree of confidence independently of any IP identification assist mechanism.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

enabled *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use the positive application identification mechanism
Context	**configure** application-assurance group *number* ip-identification-assist positive-app-id enabled *boolean*
Tree	enabled
Description	When configured to **true**, the router uses the positive application identification mechanism. This mechanism causes the router to add the IP addresses of the global applications learned through AA analysis into the IP identification assist cache. The router uses the harvested IP addresses to build its internal application-IP database. When configured to **false**, only DNS is used to harvest IP addresses.
Default	true
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

partition [aa-partition-id] *number*

Synopsis	Enter the **partition** list instance
Context	**configure** application-assurance group *number* partition *number*
Tree	partition
Description	Commands in this context configure the AA partition-related policies.
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-partition-id**] *number*

Synopsis	Partition ID within the AA group
Context	**configure** application-assurance group *number* partition *number*
Tree	partition
Range	0 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-congestion-detection

Synopsis	Enter the **aa-sub-congestion-detection** context
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection
Tree	aa-sub-congestion-detection
Description	Commands in this context configure congestion detection parameters related to Non-location Based Dynamic Experience Management (NLB-DEM). **Note:** NLB-DEM cannot be enabled if Access-Network Location (ANL) DEM mode is enabled; the two are mutually exclusive.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of congestion detection
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1

rat-type [rat-type-name] *keyword*

Synopsis	Enter the **rat-type** list instance
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection rat-type *keyword*
Tree	rat-type
Description	Commands in this context configure the RAT types for which unique RTT thresholds are configured.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**rat-type-name**] *keyword*

Synopsis	Mobile radio access technology (RAT) type
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection rat-type *keyword*
Tree	rat-type
Options	utran, geran, wlan, gan, hspa-evol, eutran, virtual, eutran-nb, ehrpd, hrpd, cdma-1x, umb, wifi, nr, lte-m
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold *(number | keyword)*

Synopsis	Round trip time congestion threshold for a RAT type
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection rat-type *keyword* rtt-threshold *(number | keyword)*
Tree	rtt-threshold
Description	This command configures the maximum acceptable round trip time (RTT) under no congestion. Any measured RTT above the threshold is considered an indication of possible congestion.
Range	1 to 500
Units	milliseconds
Options	not-applicable
Notes	This element is mandatory.
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold *(number | keyword)*

Synopsis	Round trip time congestion threshold
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection rtt-threshold *(number | keyword)*
Tree	rtt-threshold
Description	This command configures the default round trip delay threshold used by the DEM gateway algorithm to determine subscriber congestion for NLB-DEM. This default value is used when the current RAT-Type is not known, or has no associated configured RTT threshold.
Range	1 to 500
Units	milliseconds
Options	not-applicable
Default	173
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold-tolerance *number*

Synopsis	RTT threshold tolerance for congestion detection
Context	**configure** application-assurance group *number* partition *number* aa-sub-congestion-detection rtt-threshold-tolerance *number*
Tree	rtt-threshold-tolerance
Description	This command configures the round trip delay threshold tolerance used by the DEM gateway algorithm to determine subscriber-level congestion.
Range	0 to 100
Units	percent
Default	50
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-remote *boolean*

Synopsis	Reverse subscriber traffic direction

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* aa-sub-remote *boolean*
Tree	aa-sub-remote
Description	When configured to **true**, the direction of the from-subscriber and to-subscriber traffic is reversed for this group partition.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

access-network-location

Synopsis	Enter the **access-network-location** context
Context	**configure** application-assurance group *number* partition *number* access-network-location
Tree	access-network-location
Description	Commands in this context configure parameters related to dynamic experience management, also known as Access Network Location (ANL).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source [source-type] *keyword*

Synopsis	Enter the **source** list instance
Context	**configure** application-assurance group *number* partition *number* access-network-location source *keyword*
Tree	source
Description	Commands in this context configure location sources for dynamic experience management.
Max. instances	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**source-type**] *keyword*

Synopsis	Access network location source

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* access-network-location source *keyword*
Tree	source
Description	This command specifies the location or access technology. AA supports access points for WLGW access points or ULI-2gpp for mobile (for example, FWA).
Options	mobile-3g, access-point, uli-3gpp
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rat-type [rat-type-name] *keyword*

Synopsis	Enter the **rat-type** list instance
Context	**configure** application-assurance group *number* partition *number* access-network-location source *keyword* rat-type *keyword*
Tree	rat-type
Description	Commands in this context configure the RAT types for which unique RTT thresholds are configured.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**rat-type-name**] *keyword*

Synopsis	Access network location RAT type
Context	**configure** application-assurance group *number* partition *number* access-network-location source *keyword* rat-type *keyword*
Tree	rat-type
Options	utran, geran, wlan, gan, hspa-evol, eutran, virtual, eutran-nb, ehrpd, hrpd, cdma-1x, umb, wifi, nr, lte-m
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold *(number | keyword)*

Synopsis	RTT congestion threshold for a RAT type

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* access-network-location source *keyword* rat-type *keyword* rtt-threshold *(number | keyword)*
Tree	rtt-threshold
Description	This command specifies the maximum acceptable round trip time (RTT) under no congestion. Any measured RTT above the threshold is considered an indication of possible congestion.
Range	1 to 500
Units	milliseconds
Options	not-applicable
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold *(number | keyword)*

Synopsis	Source round trip time congestion threshold
Context	**configure** application-assurance group *number* partition *number* access-network-location source *keyword* rtt-threshold *(number | keyword)*
Tree	rtt-threshold
Description	This command configures the default round trip delay threshold used by the DEM gateway algorithm to determine ANL congestion. This default value is used when either the ANL RAT-Type is not known or has no associated configured RTT threshold.
Range	1 to 500
Units	milliseconds
Options	not-applicable
Default	173
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rtt-threshold-tolerance *number*

Synopsis	Source round trip time congestion threshold tolerance
Context	**configure** application-assurance group *number* partition *number* access-network-location source *keyword* rtt-threshold-tolerance *number*
Tree	rtt-threshold-tolerance
Description	This command configures the ANL round trip delay threshold tolerance used by the DEM gateway algorithm to determine ANL-level congestion.

© 2026 Nokia.

Range	0 to 100
Units	percent
Default	50
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source-level *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Access network location source level
Context	**configure** application-assurance group *number* partition *number* access-network-location source *keyword* source-level *keyword*
Tree	source-level
Options	cell, transport-network-link, mac-vlan
Default	cell
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aqp-initial-lookup *boolean*

Synopsis	Enable AQP initial lookup
Context	**configure** application-assurance group *number* partition *number* aqp-initial-lookup *boolean*
Tree	aqp-initial-lookup
Description	When configured to **true**, this command allows AA to perform application QoS policy (AQP) lookups on flows prior to complete application identification. As usual, AQP will be looked up again when identification is complete. Without this, AA executes AQPs that are part of the sub-default policy. The sub-default policy is formed by regular AQPs that contain ASOs, subID, or flow direction as matching conditions. This behavior is required, for example, to apply GTP and SCTP filtering on the first packet of a new GTP/SCTP flow (AQP matching conditions). When configured to **false**, AA only performs AQP lookups when identification is complete.
Default	false
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cflowd

Synopsis	Enter the **cflowd** context
Context	**configure** application-assurance group *number* partition *number* cflowd
Tree	cflowd
Description	Commands in this context configure the AA partition-based cflowd fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-type [flow-export-type] *keyword*

Synopsis	Enter the **export-type** list instance
Context	**configure** application-assurance group *number* partition *number* cflowd export-type *keyword*
Tree	export-type
Description	Commands in this context configure the scope of traffic subjected to AA cflowd export.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**flow-export-type**] *keyword*

Synopsis	Cflowd flow export type for the partition
Context	**configure** application-assurance group *number* partition *number* cflowd export-type *keyword*
Tree	export-type
Description	This command allows the operator to configure the scope of traffic that can be sampled for cflowd export for the configured cflowd template.
Options	volume, tcp-performance, comprehensive
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of cflowd export
Context	**configure** application-assurance group *number* partition *number* cflowd export-type *keyword* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-group [app-group-name] *reference*

Synopsis	Enter the **app-group** list instance
Context	**configure** application-assurance group *number* partition *number* cflowd export-type *keyword* app-group *reference*
Tree	app-group
Description	Commands in this context configure application groups for flow sampling and cflowd export.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**app-group-name**] *reference*

Synopsis	Application group name

gtp-in-gtp *keyword*

Synopsis	GTP in GTP packet filtering
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item* gtp-in-gtp *keyword*
Tree	gtp-in-gtp
Options	deny, permit
Default	permit
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-tunnel-database

Synopsis	Enter the **gtp-tunnel-database** context
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item* gtp-tunnel-database
Tree	gtp-tunnel-database
Description	Commands in this context configure GTP advanced firewall functions, such as validating GTP tunnels, sequence numbers, and source IP addresses).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

default-tunnel-endpoint-limit *number*

Synopsis	Default GTP tunnel endpoint limit
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item* gtp-tunnel-database default-tunnel-endpoint-limit *number*
Tree	default-tunnel-endpoint-limit
Description	This command configures the maximum number of GTP endpoints requested in GTP-C messages by using, for example, the PDP Context Create message type. The **validate-gtp-tunnels** command must be enabled before using this command.
Range	1 to 4294967295
Default	4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

validate-gtp-tunnels *boolean*

Synopsis	Enable GTP tunnel validation
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item* gtp-tunnel-database validate-gtp-tunnels *boolean*
Tree	validate-gtp-tunnels
Description	When configured to **true**, this command configures GTP tunnel validation. This allows for the validation of TEIDs and is a prerequisite for sequence checking and UE IP address validation. This command is only applicable when AA GTP FW is deployed on S8/S5/Gp/Gn interfaces. The **gtpc-inspection** command in the **configure application-assurance group partition gtp** context must be configured to true before using this command. When configured to **false**, the GTP tunnels cannot be validated.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

validate-sequence-number *boolean*

Synopsis	Enable GTP sequence number checking
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item* gtp-tunnel-database validate-sequence-number *boolean*
Tree	validate-sequence-number

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command enables GTP sequence number checking. GTP packets that fail the sequence number check are discarded. The **validate-gtp-tunnels** command in the **configure application-assurance group partition gtp gtp-filter gtp-tunnel-database** context must be configured to **true** before using this command. When configured to **false**, the GTP packet sequence number cannot be checked.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

validate-source-ip-addr *boolean*

Synopsis	Validate source IP address in GTP frames
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item* gtp-tunnel-database validate-source-ip-addr *boolean*
Tree	validate-source-ip-addr
Description	When configured to **true**, this command enables checking for spoofed or invalid UE IP addresses. Upstream GTP packets that contain invalid UE IP addresses are discarded. When a packet is dropped due to source-ip-address “invalid source IP add”, the statistics counter is updated. The **validate-gtp-tunnels** command in the **configure application-assurance group partition gtp gtp-filter gtp-tunnel-database** context must be configured to **true** before using this command. When configured to **false**, the spoofed or invalid UE IP addresses cannot be checked.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi-apn-filter

Synopsis	Enter the **imsi-apn-filter** context
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item* imsi-apn-filter
Tree	imsi-apn-filter
Description	Commands in this context configure IMSI and APN filtering. The **gtpc-inspection** command in the **configure application-assurance group partition gtp** context must be configured to true before using this command.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This command is only applicable to the GTP packets that contain IMSI or APN information elements (IEs).

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action *keyword*

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

apn *display-string*

Synopsis	APN as GTP filter match criterion
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item* imsi-apn-filter entry *number* apn *display-string*
Tree	apn
Description	This command configures a matching condition for an APN configured as a GTP filter. If no APN is specified, the entry is not checked for the APN IE in GTP-C packets. The values for this command are: • string:The extracted APN must match string exactly. • ^string: The extracted APN must start with string. • string$: The extracted APN must end with string. • WILDCARD_APN: Special string that indicates that the extracted APN must be “*” (that is, a length octet with value one, followed by the ASCII code for the asterisk) • EMPTY_APN: Special string that indicates that the extracted APN must be empty (that is, “”) • ANY_APN: Special string that indicates that the extracted APN IE must be present and can have any value in order for the filter entry to match
String length	1 to 100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi-mcc-mnc-prefix *display-string*

Synopsis	IMSI (MCC-MNC) prefix as GTP filter match criterion
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item* imsi-apn-filter entry *number* imsi-mcc-mnc-prefix *display-string*
Tree	imsi-mcc-mnc-prefix
Description	This command configures a matching condition for the IMSI (MCC-MNC) prefix. This string represents the IMSI prefix to be matched against the IMSI IE of the packet, or the special value ANY_IMSI to indicate that an IMSI IE must be present as a matching condition regardless of the IMSI IE value. If no MCC-MNC prefix is specified, the entry will match GTP packets that have an IMSI IE containing any value.
String length	1 to 8
String format	'imsi-mcc-mnc-prefix' must be 1..6 digits or ANY_IMSI
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

src-gsn

Synopsis	Enter the **src-gsn** context
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item* imsi-apn-filter entry *number* src-gsn
Tree	src-gsn
Description	Commands in this context configure a matching condition for the GSN IP address. The IP address value is checked only against the source IP address of the GTP packets that contain an APN IE or an IMSI IE.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	Source GSN IP address prefix as filter match criterion
Context	**configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item* imsi-apn-filter entry *number* src-gsn ip-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	ip-prefix
Description	This command specifies a valid unicast address associated with the IMSI-APN filter entry.
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1

message-type-gtp-v2

Synopsis Enter the **message-type-gtp-v2** context

Context **configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item* message-type-gtp-v2

Tree message-type-gtp-v2

Description Commands in this context configure the GTPv2 message-type filtering.

If message-type GTPv2 is not specified within a filter, all GTP message types are allowed, except for the messages that are dropped by GTP-C inspection because they violate the expected GTP protocol for the deployment interface (for example, roaming deployment).

The **gtpc-inspection** command in the **configure application-assurance group partition gtp** context must be configured to true before configuring GTPv2 message-type filtering.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-setup-direction *keyword*

Synopsis	Traffic flow direction for the application filter entry
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* flow-setup-direction *keyword*
Tree	flow-setup-direction
Options	subscriber-to-network, network-to-subscriber, both
Default	both
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-match-all-requests *boolean*

Synopsis	Enable HTTP matching for all requests
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* http-match-all-requests *boolean*
Tree	http-match-all-requests
Description	When configured to **true**, this command enables HTTP matching for all requests for an HTTP expression. When configured to **false**, this command restores the default for this app-filter entry which matches the first request.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-port

Synopsis	Enter the **http-port** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* http-port
Tree	http-port
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the **eq** context
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* http-port eq
Tree	eq
Description	Commands in this context configure the exact value as the match criterion.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis	Port list name
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* http-port eq port-list *reference*
Tree	port-list
Reference	**configure** application-assurance group *number* partition *number* port-list *named-item*
Notes	The following elements are part of a choice: **port-list** or **port-number**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis	Server port number
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* http-port eq port-number *number*
Tree	port-number
Range	0 | 1 to 65535
Default	0

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-identification-assist *boolean*

Synopsis	Enable IP identification assist for this entry
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* ip-identification-assist *boolean*
Tree	ip-identification-assist
Description	When configured to **true**, the router performs a network IP address lookup that overrides the assigned application if it finds the network IP address in its internal application-IP database. If an IP match is found, the application assigned from the app-filter is overridden with the application from the IP lookup. This also affects the app-group and charging group. If an IP match is not found, the application assigned from the app-filter is not overridden and remains (including the app-group and charging group). When configured to **false**, this command disables the router from performing a network IP address lookup and overriding the assigned application.
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-protocol

Synopsis	Enter the **ip-protocol** context
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* ip-protocol
Tree	ip-protocol
Description	Commands in this context configure the IP protocol to use in the application definition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *(number | keyword)*

Synopsis	Exact match criterion used for the IP protocol number
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* ip-protocol eq *(number | keyword)*

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

network-address

Synopsis	Enter the **network-address** context
Context	**configure** application-assurance group *number* partition *number* policy app-filter entry *number* network-address
Tree	network-address
Description	Commands in this context configure the network address to use for the application filter entry. The network address is the address on the network side of AA, independent of whether the subscriber is acting as a client or server and is not normally used in AA app-filters. The network address will match the destination IP address in a from-sub flow or the source IP address in a to-sub flow.
Notes	The following elements are part of a choice: **network-address** or **server-address**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-id *number*

Synopsis	App group export ID used in RADIUS accounting export
Context	**configure** application-assurance group *number* partition *number* policy app-group *named-item* export-id *number*
Tree	export-id
Description	This command assigns an export ID value to a charging group, an application group, or an application that RADIUS accounting uses for accounting export identification. This export ID is encoded in the top two bytes of the RADIUS accounting VSA to identify which charging group the counter value represents. If no export ID is assigned, the counter cannot be added to the AA subscriber stats RADIUS export-type. After a charging group index is referenced, it cannot be deleted without removing the reference.
Range	1 to 255
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-profile [app-profile-name] *named-item*

Synopsis	Enter the **app-profile** list instance
Context	**configure** application-assurance group *number* partition *number* policy app-profile *named-item*
Tree	app-profile
Description	Commands in this context configure an application profile.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**app-profile-name**] *named-item*

Synopsis	Application profile name
Context	**configure** application-assurance group *number* partition *number* policy app-profile *named-item*
Tree	app-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-distribute-traffic-by-ip *boolean*

Synopsis	Allow application assurance to divert traffic
Context	**configure** application-assurance group *number* partition *number* policy app-profile *named-item* aa-sub-distribute-traffic-by-ip *boolean*
Tree	aa-sub-distribute-traffic-by-ip
Description	When configured to **true**, the system diverts traffic on the parent SAPor spoke-SDP to multiple ISAs or ESAs based on the source IP address. This is useful when the bandwidth of a single SAP is larger than the capacity of a single ISA or ESA. This is only supported for the auto-created transit IP subscribers. The traffic is diverted when the hashing is enabled at the AA group level and in the parent SAP application profile.
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

aa-sub-suppressible *boolean*

Synopsis	Enable AA suppression for subs with this app profile
Context	**configure** application-assurance group *number* partition *number* policy app-profile *named-item* aa-sub-suppressible *boolean*
Tree	aa-sub-suppressible
Description	When configured to **true**, this command configures the ability to suppress Application Assurance for subscribers with this application profile. This function is used in the context of an SRRP group interface. If an SRRP group interface is configured as **configure service ies subscriber-interface group-interface suppress-aa-sub** or **configure service vprn subscriber-interface group-interface suppress-aa-sub**, subscribers with an application profile configured as suppressible are not diverted to Application Assurance.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

capacity-cost *number*

Synopsis	Application profile capacity cost
Context	**configure** application-assurance group *number* partition *number* policy app-profile *named-item* capacity-cost *number*
Tree	capacity-cost
Description	This command configures an application profile capacity cost. Capacity cost based load balancing allows a cost to be assigned to diverted SAPs (with the application profile). This allows for load balancing SAPs between ISAs and acts as a threshold to notify the operator if capacity planning is exceeded.
Range	1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic [characteristic-name] *reference*

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

divert *boolean*

Synopsis	Enable traffic redirection to AA ISAs or ESA VMs
Context	**configure** application-assurance group *number* partition *number* policy app-profile *named-item* divert *boolean*
Tree	divert
Description	When configured to **true**, this command enables the redirection of traffic to AA ISAs or ESA VMs for the system-wide forwarding classes diverted to Application Assurance (**configure isa application-assurance-group divert-fc**) for AA subscribers using this application profile. When configured to **false**, this command stops the redirection of traffic to AA ISAs or ESA VMs for the AA subscribers using this application profile.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-qos-policy

Synopsis	Enter the **app-qos-policy** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy
Tree	app-qos-policy
Description	Commands in this context configure an application QoS policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number*
Tree	entry

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context create an application QoS policy (AQP) entry. A flow that matches multiple AQP entries will have multiple AQP entries actions applied. If a conflict occurs for two or more actions, the action from the AQP entry with the lowest numerical value takes precedence.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**entry-id**] *number*

Synopsis	AQP entry ID
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number*
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the **action** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action
Tree	action
Description	Commands in this context configure AQP actions to be performed on flows that match the match criteria of the AQP entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

abandon-tcp-optimization *boolean*

Synopsis	Abandon TCPO for this entry
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action abandon-tcp-optimization *boolean*
Tree	abandon-tcp-optimization
Description	When configured to **true**, this command disables TCPO for flows matching this AQP entry.

Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bandwidth-policer

Synopsis	Enter the **bandwidth-policer** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action bandwidth-policer
Tree	bandwidth-policer
Description	Commands in this context assign an existing bandwidth policer as an action on flows matching this AQP entry. The match criteria for the AQP entry must specify a unidirectional traffic direction before a policer action can be configured. If a policer is used in one direction in an AQP match entry, the same policer name cannot be used by another AQP entry that uses different traffic direction match criteria. When multiple policers apply to a single flow, the final action on a packet is the worst case of all policer outcomes (for example, if one of the policers marks packet out of profile, the final marking will reflect that).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

anl *reference*

Synopsis	Access network locator bandwidth policer
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action bandwidth-policer anl *reference*
Tree	anl
Description	This command creates an Application Assurance policy profile for a policer instance for each ANL that limits traffic bandwidth in the scope of that ANL. For ANL, only single-bucket bandwidth policers can be configured.
Reference	**configure** application-assurance group *number* policer anl-bandwidth-policer *named-item*
Notes	The following elements are part of a choice: **anl**, **dual-bucket**, **flow**, or **single-bucket**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dual-bucket *reference*

Synopsis	Dual bucket bandwidth limiting policer
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action bandwidth-policer dual-bucket *reference*
Tree	dual-bucket
Description	This command creates an Application Assurance policy profile for a dual bucket (PIR) bandwidth limiting policer.
Reference	**configure** application-assurance group *number* policer dual-bucket-bandwidth-policer *named-item*
Notes	The following elements are part of a choice: **anl**, **dual-bucket**, **flow**, or **single-bucket**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow *reference*

Synopsis	Flow policer
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action bandwidth-policer flow *reference*
Tree	flow
Reference	**configure** application-assurance group *number* policer flow-bandwidth-policer *named-item*
Notes	The following elements are part of a choice: **anl**, **dual-bucket**, **flow**, or **single-bucket**.

dns-enrich *reference*

Synopsis	DNS enrichment to apply
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action dns-enrich *reference*
Tree	dns-enrich
Description	This command assigns an existing DNS enrichment template as an action to flows matching the specified Application QoS Policy (AQP) entry. This action is applicable only to matched DNS flows. This command can only be configured in the AQP default sub-policy entries. These entries must meet the following criteria: • no matching conditions based on information extracted from incoming IP packets (for example, no application or IP address criteria) • allowed match conditions are: • none • aa-sub • characteristic • traffic-direction
Reference	**configure** application-assurance group *number* dns-enrich *named-item*
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fragment-drop

Synopsis	Enter the **fragment-drop** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action fragment-drop
Tree	fragment-drop
Description	Commands in this context specify the drop action options to apply to fragments.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

drop-scope *keyword*

Synopsis	Fragment-drop scope
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action fragment-drop drop-scope *keyword*
Tree	drop-scope
Description	This command specifies which fragments to drop as an action on flows matching this AQP entry.
Options	all, out-of-order
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event log name
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action fragment-drop event-log *reference*
Tree	event-log

Reference	**configure** application-assurance group *number* partition *number* event-log *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-filter *reference*

Synopsis	GTP filter executed for flows matching this AQP entry
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action gtp-filter *reference*
Tree	gtp-filter
Reference	**configure** application-assurance group *number* partition *number* gtp gtp-filter *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-enrich *reference*

Synopsis	HTTP header enrichment action for the AQP entry
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action http-enrich *reference*
Tree	http-enrich
Description	This command configures the HTTP header enrichment template name that is applied as defined in the tmnxBsxHttpEnrichTable. An empty value specifies no HTTP header enrichment template.
Reference	**configure** application-assurance group *number* http-enrich *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-error-redirect *reference*

Synopsis	HTTP error redirect for the AQP entry
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action http-error-redirect *reference*
Tree	http-error-redirect
Description	This command specifies the HTTP error redirect that is applied as defined in the redirect table. An empty value specifies no HTTP error redirect.
Reference	**configure** application-assurance group *number* http-error-redirect *named-item*

© 2026 Nokia.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-notification *reference*

Synopsis	HTTP notification to use for flows matching AQP entry
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action http-notification *reference*
Tree	http-notification
Reference	**configure** application-assurance group *number* http-notification *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect

Synopsis	Enter the **http-redirect** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action http-redirect
Tree	http-redirect
Description	Commands in this context assign an existing HTTP redirect policy as an action on flows matching this AQP entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-type *keyword*

Synopsis	Flow type for HTTP redirect of flows matching the entry
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action http-redirect flow-type *keyword*
Tree	flow-type
Description	This command assigns an existing HTTP redirect policy as an action on flows matching this AQP entry. The redirect only takes effect if the matching flows are HTTP and the condition specified is met. The condition specified by dropped flows means the flow is dropped due to an AQP action, such as flow rate, count policers, or drop actions. The admitted flows condition allows the operator to redirect HTTP traffic to a web portal while allowing non-HTTP traffic matching the same AQP rule to be forwarded.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

No HTTP redirect takes place if the HTTP redirect action and a drop/flow-police action are part of the default AQP policy. In this case, any flow drop actions take place before identification of the application/application-group.

Options dropped-flows, admitted-flows

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *reference*

Synopsis HTTP redirect policy name

Context **configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action http-redirect name *reference*

Tree name

Description This command specifies the name of an existing HTTP policy redirect.

Reference **configure** application-assurance group *number* http-redirect *named-item*

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mirror-source

Synopsis Enter the **mirror-source** context

Context **configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action mirror-source

Tree mirror-source

Description Commands in this context configure an application-based policy mirroring service that uses the AQP entry of this AA ISA as a mirror source.

When configured, the AQP entry becomes a mirror source for IP packets seen by AA. The mirrored packet is an IP packet analyzed by AA and does not include encapsulations present on the incoming interfaces.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

all-inclusive *boolean*

Synopsis Mirror flows matching the AQP subscriber default policy

Context **configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action mirror-source all-inclusive *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	all-inclusive
Description	This command specifies that all packets during the identification phase that could match a given AQP rule are mirrored in addition to packets after an application identification completes that match the AQP rule. This ensures that all packets of a flow are mirrored at a cost of sending some unidentified packets, which after the application is identified no longer match this AQP entry.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mirror-service *reference*

Synopsis	Mirror source service ID for flows matching the entry
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action mirror-source mirror-service *reference*
Tree	mirror-service
Description	This command specifies the mirror source service ID to use for flows that match this policy.
Reference	**configure** mirror mirror-dest *service-name*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overload-drop

Synopsis	Enable the **overload-drop** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action overload-drop
Tree	overload-drop
Description	Commands in this context configure a drop action for cases where flow records are not created (overload). This command is only applicable to ISA2 hardware.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event log name

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remark

Synopsis	Enter the **remark** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action remark
Tree	remark
Description	Commands in this context configure the remark action on flows matching this AQP entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dscp

Synopsis	Enter the **dscp** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action remark dscp
Tree	dscp
Description	Commands in this context configure the DSCP remark action or actions on flows matching this AQP entry. All packets for all flows matching this AQP entry are remarked to the configured DSCP name. DSCP remark can only be applied when the entry remarks forwarding class or forwarding class and priority. In-profile and out-of-profile of a packet for DSCP remark is assessed after all AQP policing and priority remarking actions have taken place.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

in-profile *keyword*

Synopsis	DSCP name to remark matching in-profile flows

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-validate *reference*

Synopsis	TCP validation policy action for entry matching flows
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* action tcp-validate *reference*
Tree	tcp-validate
Description	This command assigns an existing TCP validation policy as an action on flows matching this AQP entry. TCP validation can only be called from AQP entries that: • have no matching conditions that relate to information extracted from the incoming IP packets; for example, no application or IP address. • allow the following match conditions: none, aa-sub, characteristic, traffic-direction (both only), traffic-direction cannot be unidirectional (from or to sub). It can either be set to both or left unspecified.
Reference	**configure** application-assurance group *number* partition *number* tcp-validate *named-item*

Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq *named-item*

Synopsis	Non-match criterion used for a transit AA subscriber
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match aa-sub transit neq *named-item*
Tree	neq
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-tethering *keyword*

Synopsis	Tethering detection status for flow match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match aa-sub-tethering *keyword*
Tree	aa-sub-tethering
Description	This command configures the match criteria for subscribers in a tethering state.
Options	not-applicable, detected, not-detected
Default	not-applicable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-group

Synopsis	Enter the **app-group** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match app-group
Tree	app-group
Description	Commands in this context add an application group to the match criteria used by this AQP entry.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip
Tree	dst-ip
Description	Commands in this context configure a destination IP address to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the **eq** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip eq
Tree	eq
Description	Commands in this context specify the exact match value as the match criterion. A successful match occurs when the flow matches the specified address or prefix.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP address prefix used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip eq ip-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	ip-prefix
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-prefix-list *reference*

Synopsis	IP address prefix list used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip eq ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** application-assurance group *number* partition *number* ip-prefix-list *named-item*
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis	Enter the **neq** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip neq
Tree	neq
Description	Commands in this context specify the non-match value as the match criterion. A successful match occurs when the flow does not match the specified address or prefix.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP address prefix used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip neq ip-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	ip-prefix
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP address prefix list used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-ip neq ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** application-assurance group *number* partition *number* ip-prefix-list *named-item*
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port
Tree	dst-port
Description	Commands in this context configure a destination TCP/UDP port, a destination port list, or a destination range to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the **eq** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port eq
Tree	eq
Description	Commands in this context specify the exact match criterion. A successful match occurs when the flow matches the specified port.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Use subject to Terms available at: www.nokia.com/terms.

port-list *reference*

Synopsis	IP port list used as match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port eq port-list *reference*
Tree	port-list
Reference	**configure** application-assurance group *number* partition *number* port-list *named-item*
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis	Server port number used as match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port eq port-number *number*
Tree	port-number
Range	0 | 1 to 65535
Default	0
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enter the **range** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port eq range
Tree	range
Description	Commands in this context specify the match value as the match criterion based on the starting or ending port number.
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

end *number*

Synopsis	TCP/UDP ending port number
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port eq range end *number*
Tree	end
Range	0 | 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	TCP/UDP starting port number
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port eq range start *number*
Tree	start
Range	0 | 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis	Enter the **neq** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port neq
Tree	neq
Description	Commands in this context specify the non-match value as the match criterion. A successful match occurs when the flow does not match the specified port.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

port-list *reference*

Synopsis	IP port list used as match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port neq port-list *reference*
Tree	port-list
Reference	**configure** application-assurance group *number* partition *number* port-list *named-item*
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-number *number*

Synopsis	Server port number used as match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port neq port-number *number*
Tree	port-number
Range	0 | 1 to 65535
Default	0
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enter the **range** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port neq range
Tree	range
Description	Commands in this context specify the match value as the match criterion based on the starting or ending port number.
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

end *number*

Synopsis	TCP/UDP ending port number
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port neq range end *number*
Tree	end
Range	0 | 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start *number*

Synopsis	TCP/UDP starting port number
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match dst-port neq range start *number*
Tree	start
Range	0 | 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-attribute [flow-attribute-name] *named-item*

Synopsis	Enter the **flow-attribute** list instance
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match flow-attribute *named-item*
Tree	flow-attribute
Description	Commands in this context configure a flow attribute to use as match criteria. The supported options are: • abr_service • audio • download • encrypted • esni • real_time_communication

Tree	neq
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

src-ip

Synopsis	Enter the **src-ip** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-ip
Tree	src-ip
Description	Commands in this context configure a source IP address to use as match criteria.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the **eq** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-ip eq
Tree	eq
Description	Commands in this context specify the exact match value as the match criterion. A successful match occurs when the flow matches the specified address or prefix.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP address prefix used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-ip eq ip-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	ip-prefix
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP address prefix list used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-ip eq ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** application-assurance group *number* partition *number* ip-prefix-list *named-item*
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq

Synopsis	Enter the **neq** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-ip neq
Tree	neq
Description	Commands in this context specify the non-match value as the match criterion. A successful match occurs when the flow does not match the specified address or prefix.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP address prefix used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-ip neq ip-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	ip-prefix
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix-list *reference*

Synopsis	IP address prefix list used for match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-ip neq ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** application-assurance group *number* partition *number* ip-prefix-list *named-item*
Notes	The following elements are part of a choice: **ip-prefix** or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

src-port

Synopsis	Enter the **src-port** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-port
Tree	src-port
Description	Commands in this context specify a source IP port, a source port list, or a source range to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq

Synopsis	Enter the **eq** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-port eq
Tree	eq
Description	Commands in this context specify the exact match criterion. A successful match occurs when the flow matches the specified port.
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-list *reference*

Synopsis	IP port list used as match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-port eq port-list *reference*
Tree	port-list
Reference	**configure** application-assurance group *number* partition *number* port-list *named-item*
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

port-number *number*

Synopsis	Server port number used as match criterion
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-port eq port-number *number*
Tree	port-number
Range	0 | 1 to 65535
Default	0
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enter the **range** context
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-port eq range
Tree	range
Description	Commands in this context specify the match value as the match criterion based on the starting or ending port number.
Notes	The following elements are part of a choice: **port-list**, **port-number**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	TCP/UDP ending port number
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-port eq range end *number*
Tree	end
Range	0 | 1 to 65535
Default	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

start *number*

Synopsis	TCP/UDP starting port number
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match src-port neq range start *number*
Tree	start
Range	0 | 1 to 65535
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

traffic-direction *keyword*

Synopsis	Traffic direction to which AQP match entry is applied
Context	**configure** application-assurance group *number* partition *number* policy app-qos-policy entry *number* match traffic-direction *keyword*
Tree	traffic-direction
Options	subscriber-to-network, network-to-subscriber, both
Default	both
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-service-options

Synopsis	Enter the **app-service-options** context
Context	**configure** application-assurance group *number* partition *number* policy app-service-options
Tree	app-service-options
Description	Commands in this context configure application service option characteristics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic [characteristic-name] *named-item*

Synopsis	Enter the **characteristic** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* policy app-service-options characteristic *named-item*
Tree	characteristic
Description	Commands in this context create the characteristic of the application service options.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**characteristic-name**] *named-item*

Synopsis	ASO characteristic name
Context	**configure** application-assurance group *number* partition *number* policy app-service-options characteristic *named-item*
Tree	characteristic
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-value *named-item*

Synopsis	ASO characteristic default value
Context	**configure** application-assurance group *number* partition *number* policy app-service-options characteristic *named-item* default-value *named-item*
Tree	default-value
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value [value-name] *named-item*

Synopsis	Add a list entry for **value**
Context	**configure** application-assurance group *number* partition *number* policy app-service-options characteristic *named-item* value *named-item*
Tree	value

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-id *number*

Synopsis	Application export ID used for RADIUS accounting
Context	**configure** application-assurance group *number* partition *number* policy application *named-item* export-id *number*
Tree	export-id
Range	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-filter

Synopsis	Enter the **charging-filter** context
Context	**configure** application-assurance group *number* partition *number* policy charging-filter
Tree	charging-filter
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number*
Tree	entry
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**entry-id**] *number*

Synopsis	Charging filter entry ID in the AA partition policy
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number*
Tree	entry

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command defines a charging filter entry ID. Charging filter entries are an ordered list; the lowest numerical entry that matches the flow, defines the charging filter for this flow.
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AA charging filter entry
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group *reference*

Synopsis	Charging group to associate to flows matching the entry
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* charging-group *reference*
Tree	charging-group
Description	This command associates a charging group to the flows that match the charging filter entry.
Reference	**configure** application-assurance group *number* partition *number* policy charging-group *named-item*
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* description *description*

Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis	Enter the **match** context
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match
Tree	match
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-group

Synopsis	Enter the **app-group** context
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match app-group
Tree	app-group
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *reference*

Synopsis	Exact value as the match criterion
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match app-group eq *reference*
Tree	eq
Description	This command specifies that the value configured and the value in the flow must be equal for a match to occur.
Reference	**configure** application-assurance group *number* partition *number* policy app-group *named-item*
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	22.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq *reference*

Synopsis	Non-matching application to resolve to a charging group
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match app-group neq *reference*
Tree	neq
Description	This command specifies that the value configured and the value in the flow must differ for a match to occur.
Reference	**configure** application-assurance group *number* partition *number* policy app-group *named-item*
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application

Synopsis	Enter the **application** context
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match application
Tree	application
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *reference*

Synopsis	Exact value as the match criterion
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match application eq *reference*
Tree	eq
Description	This command specifies that the value configured and the value in the flow must be equal for a match to occur.
Reference	**configure** application-assurance group *number* partition *number* policy application *named-item*
Notes	The following elements are part of a choice: **eq** or **neq**.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

neq *reference*

Synopsis	Non-matching application to resolve to a charging group
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match application neq *reference*
Tree	neq
Description	This command specifies that the value configured and the value in the flow must differ for a match to occur.
Reference	**configure** application-assurance group *number* partition *number* policy application *named-item*
Notes	The following elements are part of a choice: **eq** or **neq**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-attribute [flow-attribute-name] *named-item*

Synopsis	Enter the **flow-attribute** list instance
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match flow-attribute *named-item*
Tree	flow-attribute
Max. instances	10
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**flow-attribute-name**] *named-item*

Synopsis	Flow attribute name match criteria
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match flow-attribute *named-item*
Tree	flow-attribute
Description	This command adds a flow attribute to the match criteria used by this charging filter entry.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

confidence

Synopsis	Enter the **confidence** context
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match flow-attribute *named-item* confidence
Tree	confidence
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *number*

Synopsis	Exact value as the match criterion
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match flow-attribute *named-item* confidence eq *number*
Tree	eq
Description	This command specifies that a successful match occurs when the flow attribute confidence level is equal to the specified value.
Range	0 to 100
Notes	The following elements are part of a choice: **eq**, **gte**, or **lt**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gte *number*

Synopsis	Confidence value to resolve to a charging group
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match flow-attribute *named-item* confidence gte *number*
Tree	gte
Description	This command specifies that a successful match occurs when the flow attribute confidence level is greater than or equal to the specified value.
Range	0 to 100
Notes	The following elements are part of a choice: **eq**, **gte**, or **lt**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lt *number*

Synopsis	Less than value as the match criterion
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match flow-attribute *named-item* confidence lt *number*
Tree	lt
Description	This command specifies that a successful match occurs when the flow attribute confidence level is less than the specified value.
Range	1 to 100
Notes	The following elements are part of a choice: **eq**, **gte**, or **lt**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tethered-flow

Synopsis	Enable the **tethered-flow** context
Context	**configure** application-assurance group *number* partition *number* policy charging-filter entry *number* match tethered-flow
Tree	tethered-flow
Description	Commands in this context add the tethering status to the match criteria used by this charging filter entry.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group [charging-group-name] *named-item*

Synopsis	Enter the **charging-group** list instance
Context	**configure** application-assurance group *number* partition *number* policy charging-group *named-item*
Tree	charging-group
Description	Commands in this context create a charging group for an Application Assurance policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**charging-group-name**] *named-item*

Synopsis	Charging group name
Context	**configure** application-assurance group *number* partition *number* policy charging-group *named-item*
Tree	charging-group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* partition *number* policy charging-group *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-id *number*

Synopsis	Charging group export ID used for RADIUS accounting
Context	**configure** application-assurance group *number* partition *number* policy charging-group *named-item* export-id *number*
Tree	export-id
Description	This command assigns an export ID value to a charging group, an app application group, or an application to be used for accounting export identification in RADIUS accounting. This ID is encoded in the top 2 bytes of the RADIUS accounting VSA to identify which charging group the counter value represents.
Range	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

notify-start-stop *keyword*

Synopsis	Start and stop notification for the charging group
Context	**configure** application-assurance group *number* partition *number* policy charging-group *named-item* notify-start-stop *keyword*
Tree	notify-start-stop
Options	none, flow, charging-group
Default	none
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-protocol [custom-protocol-id] *custom-protocol-name*

Synopsis	Enter the **custom-protocol** list instance
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *custom-protocol-name*
Tree	custom-protocol
Description	Commands in this context configure custom protocols. Custom protocols allow the creation of TCP and UDP-based custom protocols that employ pattern-match at offset in the protocol signature definition. Operator-configurable custom protocols are evaluated ahead of any Nokia-provided protocol signature in order of custom protocol ID within the context the protocol is defined. The lower ID is matched first in case of flow matching multiple custom protocols. Custom protocols must be created before they can be used in an application definition but do not have to be enabled. To reference a custom protocol in an application definition, or any other CLI configuration one must use the protocol name that is a concatenation of “custom_” and, (for example, custom_01, custom_02 ... custom_10, and so on). This concatenation is also used when reporting custom protocol statistics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**custom-protocol-id**] *custom-protocol-name*

Synopsis	Custom protocol ID for the AA policy custom protocol
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *custom-protocol-name*
Tree	custom-protocol

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the index into the protocol list that defines a custom protocol for Application Assurance.
String length	9
String format	'custom-protocol-name' must be custom_01 to custom_10 (e.g. custom_05)
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the custom protocol
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *custom-protocol-name* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *custom-protocol-name* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

expression [expr-index] *number*

Synopsis	Enter the **expression** list instance
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *custom-protocol-name* expression *number*
Tree	expression

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure an expression string value for pattern-based custom protocols match. A flow matches a custom protocol if the specified string is found at an offset of a TCP/UDP of the first payload packet.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**expr-index**] *number*

Synopsis	Expression substring index for custom protocol matching
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *custom-protocol-name* expression *number*
Tree	expression
Range	1
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Flow direction for custom-protocol expression matching
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *custom-protocol-name* expression *number* direction *keyword*
Tree	direction
Description	This command configures the protocol direction to match against for a custom protocol.
Options	client-to-server, server-to-client, any
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *display-string*

Synopsis	Exact match criterion for custom protocol expression
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *custom-protocol-name* expression *number* eq *display-string*
Tree	eq

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 255
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

offset *number*

Synopsis	Offset in protocol flow to start custom-protocol match
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *custom-protocol-name* expression *number* offset *number*
Tree	offset
Description	This command configures the offset into the protocol payload where the expr-string match criteria starts.
Range	0 to 127
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-protocol *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP protocol number for custom-protocol match criterion
Context	**configure** application-assurance group *number* partition *number* policy custom-protocol *custom-protocol-name* ip-protocol *keyword*
Tree	ip-protocol
Description	This command configures the IP protocol number of the TCP and UDP-based custom protocols.
Options	tcp, udp
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-charging-group *reference*

Synopsis	Default charging group
Context	**configure** application-assurance group *number* partition *number* policy default-charging-group *reference*
Tree	default-charging-group
Description	This command associates a charging group with any applications or application groups that do not have an explicitly assigned charging group for the Application Assurance policy.
Reference	**configure** application-assurance group *number* partition *number* policy charging-group *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-tethered-charging-group *reference*

Synopsis	Default charging group for tethered traffic
Context	**configure** application-assurance group *number* partition *number* policy default-tethered-charging-group *reference*
Tree	default-tethered-charging-group
Description	This command configures the default charging group to be assigned to all flows which are classified as tethered. For flows that have been identified as tethered, the AA will replace the charging group configured at the application level with the charging group configured for tethered traffic (that is, configured with **default-tethered-charging-group**).
Reference	**configure** application-assurance group *number* partition *number* policy charging-group *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy-override

Synopsis	Enter the **policy-override** context
Context	**configure** application-assurance group *number* partition *number* policy-override
Tree	policy-override
Description	Commands in this context configure policy override parameters.
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub

Synopsis	Enter the **aa-sub** context
Context	**configure** application-assurance group *number* partition *number* policy-override aa-sub
Tree	aa-sub
Description	Commands in this context configure the AA policy override subscriber fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Enter the **sap** list instance
Context	**configure** application-assurance group *number* partition *number* policy-override aa-sub sap *sap*
Tree	sap
Description	Commands in this context configure the Service Access Point (SAP) within the partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	AA subscriber SAP ID
Context	**configure** application-assurance group *number* partition *number* policy-override aa-sub sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

characteristic [characteristic-name] *reference*

Synopsis	Enter the **characteristic** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* policy-override aa-sub sap *sap* characteristic *reference*
Tree	characteristic
Description	Commands in this context configure an override characteristic and value.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**characteristic-name**] *reference*

Synopsis	ASO characteristic name
Context	**configure** application-assurance group *number* partition *number* policy-override aa-sub sap *sap* characteristic *reference*
Tree	characteristic
Reference	**configure** application-assurance group *number* partition *number* policy app-service-options characteristic *named-item*
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value *reference*

Synopsis	Characteristic value used in subscriber policy override
Context	**configure** application-assurance group *number* partition *number* policy-override aa-sub sap *sap* characteristic *reference* value *reference*
Tree	value
Reference	**configure** application-assurance group *number* partition *number* policy app-service-options characteristic *named-item* value *named-item*

ppid-range

Synopsis	Enter the **ppid-range** context
Context	**configure** application-assurance group *number* partition *number* sctp-filter *named-item* ppid-range
Tree	ppid-range
Description	Commands in this context specify the range of PPID values that are allowed by the AA SCTP filter firewall.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max *number*

Synopsis	Maximum PPID value
Context	**configure** application-assurance group *number* partition *number* sctp-filter *named-item* ppid-range max *number*
Tree	max
Description	This command configures the maximum SCTP Payload Protocol Identifier (PPID) to be permitted by the SCTP filter. The value must be greater or equal to the minimum PPID value.
Range	0 to 4294967295
Default	4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

min *number*

Synopsis	Minimum PPID value
Context	**configure** application-assurance group *number* partition *number* sctp-filter *named-item* ppid-range min *number*
Tree	min
Description	This command configures the minimum SCTP Payload Protocol Identifier (PPID) to be permitted by the SCTP filter. The value must be less than or equal to the maximum PPID value.
Range	0 to 4294967295
Default	0
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-filter [session-filter-name] *named-item*

Synopsis	Enter the **session-filter** list instance
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item*
Tree	session-filter
Description	Commands in this context create a session filter.
Max. instances	1000
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**session-filter-name**] *named-item*

Synopsis	Session filter name
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item*
Tree	session-filter
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action

Synopsis	Enter the **default-action** context
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* default-action
Tree	default-action
Description	Commands in this context specify the default action to take for packets that do not match any filter entries.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

action *keyword*

Synopsis	Default action for packets not matching filter entries
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* default-action action *keyword*
Tree	action
Options	deny, permit
Default	deny
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event logging of default action
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* default-action event-log *reference*
Tree	event-log
Reference	**configure** application-assurance group *number* partition *number* event-log *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number*
Tree	entry
Description	Commands in this context configure an AA session filter match entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**entry-id**] *number*

Synopsis	Entry ID for the session filter entry
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number*
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the **action** context
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* action
Tree	action
Description	Commands in this context configure the action for this entry.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

deny

Synopsis	Deny sessions matching the criteria
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* action deny
Tree	deny
Notes	The following elements are part of a choice: **deny**, **http-redirect**, **l3-l4-redirect**, **permit**, or **tcp-optimizer**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis	Event log name used to log the action
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* action event-log *reference*
Tree	event-log
Reference	**configure** application-assurance group *number* partition *number* event-log *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect *reference*

Synopsis	HTTP redirect for matching sessions
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* action http-redirect *reference*
Tree	http-redirect
Reference	**configure** application-assurance group *number* http-redirect *named-item*
Notes	The following elements are part of a choice: **deny**, **http-redirect**, **l3-l4-redirect**, **permit**, or **tcp-optimizer**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l3-l4-redirect

Synopsis	Enter the **l3-l4-redirect** context
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* action l3-l4-redirect
Tree	l3-l4-redirect
Description	Commands in this context specify sessions matching the criteria are redirected to a different destination using Layer 3 and Layer 4 redirect. If the redirect action is removed from a session filter, the existing redirected flows are not affected, redirect still occurs. However, no redirect will be applied to newly-established flows.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **deny**, **http-redirect**, **l3-l4-redirect**, **permit**, or **tcp-optimizer**.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Destination IP address for traffic redirection
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* action l3-l4-redirect dst-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	dst-ip-address
Description	This command specifies a valid unicast server IPv4 or IPv6 address to forward the traffic to. The destination IP address (Layer 3) is modified as indicated. In the reverse direction (toward the subscriber), AA restores the original IP address as the source IP field.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-port *number*

Synopsis	Destination port for traffic redirection
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* action l3-l4-redirect dst-port *number*
Tree	dst-port
Description	This command specifies a valid TCP/UDP server destination port number. The destination port is modified as indicated. In the reverse direction (toward the subscriber), AA restores the original port number as the port field.
Range	0 | 1 to 65535
Default	0
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

permit

Synopsis	Permit sessions that match the criteria
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* action permit

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	permit
Notes	The following elements are part of a choice: **deny**, **http-redirect**, **l3-l4-redirect**, **permit**, or **tcp-optimizer**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-optimizer *reference*

Synopsis	TCP optimizer to handle sessions matching the criteria
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* action tcp-optimizer *reference*
Tree	tcp-optimizer
Reference	**configure** application-assurance group *number* tcp-optimizer *named-item*
Notes	The following elements are part of a choice: **deny**, **http-redirect**, **l3-l4-redirect**, **permit**, or **tcp-optimizer**.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis	Enter the **match** context
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* match
Tree	match
Description	Commands in this context configure session conditions for this entry.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* match dst-ip
Tree	dst-ip
Description	Commands in this context configure the destination IP address to match.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns-ip-cache *reference*

Synopsis	Destination IPs in specified DNS IP Cache
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* match dst-ip dns-ip-cache *reference*
Tree	dns-ip-cache
Reference	**configure** application-assurance group *number* dns-ip-cache *named-item*
Notes	The following elements are part of a choice: **dns-ip-cache**, **ip-prefix**, or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	Destination IP address prefix as match criterion
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* match dst-ip ip-prefix *(ipv4-prefix | ipv6-prefix)*
Tree	ip-prefix
Notes	The following elements are part of a choice: **dns-ip-cache**, **ip-prefix**, or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip-prefix-list *reference*

Synopsis	IP address prefix list as match criterion
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* match dst-ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** application-assurance group *number* partition *number* ip-prefix-list *named-item*
Notes	The following elements are part of a choice: **dns-ip-cache**, **ip-prefix**, or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* match dst-port
Tree	dst-port
Description	Commands in this context specify a destination TCP/UDP port, a destination port list, or a destination range to use as match criteria.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

eq *number*

Synopsis	Match criterion used for destination or source port
Context	**configure** application-assurance group *number* partition *number* session-filter *named-item* entry *number* match dst-port eq *number*
Tree	eq
Range	0 | 1 to 65535
Default	0
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

statistics

Synopsis	Enter the **statistics** context
Context	**configure** application-assurance group *number* partition *number* statistics
Tree	statistics
Description	Commands in this context configure accounting and billing statistics for this AA group.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-admit-deny

Synopsis	Enter the **aa-admit-deny** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny
Tree	aa-admit-deny
Description	Commands in this context configure admit-deny statistics generation.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Use subject to Terms available at: www.nokia.com/terms.

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny collect-stats *boolean*
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-filter-stats *boolean*

Synopsis	Include GTP filter admit-deny statistics in records
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny gtp-filter-stats *boolean*
Tree	gtp-filter-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer-stats *boolean*

Synopsis	Include admit-deny policer statistics in records
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny policer-stats *boolean*
Tree	policer-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer-stats-resources *boolean*

Synopsis	Allocate resources for policer admit-deny statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny policer-stats-resources *boolean*
Tree	policer-stats-resources

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sctp-filter-stats *boolean*

Synopsis	Include SCTP filter admit-deny statistics in accounting
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny sctp-filter-stats *boolean*
Tree	sctp-filter-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-filter-stats *boolean*

Synopsis	Include session filter admit-deny statistics in records
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny session-filter-stats *boolean*
Tree	session-filter-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-validate-stats *boolean*

Synopsis	Include TCP validate admit-deny statistics in records
Context	**configure** application-assurance group *number* partition *number* statistics aa-admit-deny tcp-validate-stats *boolean*
Tree	tcp-validate-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

aa-app-group

Synopsis	Enter the **aa-app-group** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-app-group
Tree	aa-app-group
Description	Commands in this context configure the AA application group statistics fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	**configure** application-assurance group *number* partition *number* statistics aa-app-group accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-app-group collect-stats *boolean*
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-application

Synopsis	Enter the **aa-application** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-application
Tree	aa-application
Description	Commands in this context configure the application statistics fields.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	**configure** application-assurance group *number* partition *number* statistics aa-application accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-application collect-stats *boolean*
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-partition

Synopsis	Enter the **aa-partition** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-partition
Tree	aa-partition
Description	Commands in this context configure the AA partition statistics fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy

© 2026 Nokia.

Context	**configure** application-assurance group *number* partition *number* statistics aa-partition accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-partition collect-stats *boolean*
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tethering-stats *boolean*

Synopsis	Collect tethering statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-partition tethering-stats *boolean*
Tree	tethering-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

traffic-type-stats *boolean*

Synopsis	Collect traffic type statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-partition traffic-type-stats *boolean*
Tree	traffic-type-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-protocol

Synopsis	Enter the **aa-protocol** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-protocol
Tree	aa-protocol
Description	Commands in this context configure the AA protocol statistics fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	**configure** application-assurance group *number* partition *number* statistics aa-protocol accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of protocol statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-protocol admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-protocol collect-stats *boolean*
Tree	collect-stats

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub

Synopsis	Enter the **aa-sub** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub
Tree	aa-sub
Description	Commands in this context configure accounting and statistics collection parameters for Application Assurance subscribers.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aggregate-stats-export-using *keyword*

Synopsis	Method of statistics export to be used
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub aggregate-stats-export-using *keyword*
Tree	aggregate-stats-export-using
Options	accounting-policy, radius-accounting-policy
Max. instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

app-group [app-group-name] *reference*

Synopsis	Enter the **app-group** list instance
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub app-group *reference*
Tree	app-group
Description	Commands in this context configure accounting and statistics collection parameters for AA application groups for a specific AA group/partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**app-group-name**] *reference*

Synopsis	Application group name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub app-group *reference*
Tree	app-group
Reference	**configure** application-assurance group *number* partition *number* policy app-group *named-item*
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-using *keyword*

Synopsis	Method used to export statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub app-group *reference* export-using *keyword*
Tree	export-using
Options	accounting-policy, radius-accounting-policy
Max. instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application [application-name] *reference*

Synopsis	Enter the **application** list instance
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub application *reference*
Tree	application
Description	Commands in this context configure the AA subscriber accounting statistics for the export of AA applications for an AA group/partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**application-name**] *reference*

Synopsis	Application name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub application *reference*
Tree	application
Reference	**configure** application-assurance group *number* partition *number* policy application *named-item*
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-using *keyword*

Synopsis	Method used to export statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub application *reference* export-using *keyword*
Tree	export-using
Options	accounting-policy, radius-accounting-policy
Max. instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group [charging-group-name] *reference*

Synopsis	Enter the **charging-group** list instance
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub charging-group *reference*
Tree	charging-group
Description	Commands in this context configure AA subscriber accounting statistics for the export of AA charging groups of an AA group/partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**charging-group-name**] *reference*

Synopsis	Charging group name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub charging-group *reference*
Tree	charging-group
Description	This command specifies the AA charging group to be included in the exported accounting records.
Reference	**configure** application-assurance group *number* partition *number* policy charging-group *named-item*
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-using *keyword*

Synopsis	Method used to export statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub charging-group *reference* export-using *keyword*
Tree	export-using
Options	accounting-policy, radius-accounting-policy
Max. instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

collect-stats *boolean*

Synopsis	Collect statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub collect-stats *boolean*
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

exclude-tcp-retrans *boolean*

Synopsis	Exclude TCP retransmission and error statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub exclude-tcp-retrans *boolean*
Tree	exclude-tcp-retrans
Description	When configured to **true**, TCP errors and retransmission packets are not counted for the purpose of content-based billing. **Note:** This command is only applicable to EPC.This setting has no impact on app/app-group aggregate AA stats.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-stats *boolean*

Synopsis	Collect maximum throughput statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub max-throughput-stats *boolean*
Tree	max-throughput-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

obfuscate-sub-name

Synopsis	Enter the **obfuscate-sub-name** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* statistics aa-sub obfuscate-sub-name
Tree	obfuscate-sub-name
Description	Commands in this context obfuscate subscriber names in the accounting XML records using a unique encrypted or hashed value.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key *encrypted-leaf*

Synopsis	Secret key to encrypt the subscriber name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub obfuscate-sub-name key *encrypted-leaf*
Tree	key
String length	1 to 102
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Encoding type
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub obfuscate-sub-name type *keyword*
Tree	type
Options	sha1
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol [protocol-name] *named-item*

Synopsis	Enter the **protocol** list instance
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub protocol *named-item*
Tree	protocol
Description	Commands in this context configure AA subscriber accounting statistics for the export of aa-sub protocols of an AA group/partition.
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**protocol-name**] *named-item*

Synopsis	AA protocol name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub protocol *named-item*
Tree	protocol
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-using *keyword*

Synopsis	Method used to export statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub protocol *named-item* export-using *keyword*
Tree	export-using
Options	accounting-policy, radius-accounting-policy
Max. instances	2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis	RADIUS accounting policy name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub radius-accounting-policy *reference*
Tree	radius-accounting-policy
Reference	**configure** application-assurance radius-accounting-policy *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

usage-monitoring *boolean*

Synopsis	Collect usage monitoring statistics
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub usage-monitoring *boolean*
Tree	usage-monitoring
Description	When configured to **true**, this command allows the system to activate Gx usage monitoring at AA group/partition level, if enough usage monitoring resources exist for all existing subs. When configured to **false**, this command silently removes all monitoring instances (no PCRF notifications) for AA subscribers and all subsequent AA Gx usage monitoring messages are ignored.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-study [study-type] *keyword*

Synopsis	Enter the **aa-sub-study** list instance
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword*
Tree	aa-sub-study
Description	Commands in this context configure accounting and statistics collection parameters per AA special study subscribers.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**study-type**] *keyword*

Synopsis	Statistic type that the study is using
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword*
Tree	aa-sub-study
Options	protocol, application
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

aa-sub

Synopsis	Enter the **aa-sub** context
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub
Tree	aa-sub
Description	Commands in this context add an existing subscriber identification to a group of special study subscribers. Identifying a group of special study subscribers allows statistics and accounting records for those subscribers to be collected for protocols and applications through Application Assurance. When adding a subscriber to the special study group, accounting records and statistics generation commence immediately. When removing a subscriber from the group, special study statistics and accounting records for that subscriber in the current interval are lost.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm [esm-sub-name] *named-item*

Synopsis	Add a list entry for **esm**
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub esm *named-item*
Tree	esm
Description	Commands in this context configure the ESM fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**esm-sub-name**] *named-item*

Synopsis	ESM subscriber name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub esm *named-item*
Tree	esm
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm-mac [esm-mac-sub-name] *named-item*

Synopsis	Add a list entry for **esm-mac**
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub esm-mac *named-item*
Tree	esm-mac
Description	Commands in this context configure the ESM MAC fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**esm-mac-sub-name**] *named-item*

Synopsis	ESM MAC subscriber name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub esm-mac *named-item*
Tree	esm-mac
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub sap *sap*
Tree	sap
Description	Commands in this context configure the Service Access Point (SAP) for the purpose of enabling special study statistics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**sap-id**] *sap*

Synopsis	AA subscriber SAP ID
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Synopsis	Add a list entry for **spoke-sdp**
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub spoke-sdp *sdp-bind-id*
Tree	spoke-sdp
Description	Commands in this context specify the spoke SDP ID and VC ID for the purpose of including the subscriber into AA special study statistics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**sdp-bind-id**] *sdp-bind-id*

Synopsis	Spoke SDP ID for an AA subscriber
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub spoke-sdp *sdp-bind-id*
Tree	spoke-sdp
String length	3 to 16
String format	'sdp-bind-id' must be sdp-id:vc-id (sdp 1..32767, vc 1..4294967295)
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

transit [transit-sub-name] *named-item*

Synopsis	Add a list entry for **transit**
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub transit *named-item*
Tree	transit
Description	Commands in the context specify an existing transit subscriber to be included in AA sub special study statistics.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**transit-sub-name**] *named-item*

Synopsis	Transit subscriber name
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* aa-sub transit *named-item*
Tree	transit
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

collect-stats *boolean*

Synopsis	Collect statistics

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* statistics aa-sub-study *keyword* collect-stats *boolean*
Tree	collect-stats
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-strict-order *keyword*

Synopsis	Specifies whether this partition monitors and enforces strict TCP sequence numbering for TCP flows for during the traffic identification phase. Packets where the TCP sequence number jumps ahead from the previous sequence plus payload are discarded before identification so that traffic is seen in order for identification and URL-filtering.
Context	**configure** application-assurance group *number* partition *number* tcp-strict-order *keyword*
Tree	tcp-strict-order
Options	not-enforced – not enforced bidirectional – both directions are enforced
Default	not-enforced
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-validate [tcp-validate-name] *named-item*

Synopsis	Enter the **tcp-validate** list instance
Context	**configure** application-assurance group *number* partition *number* tcp-validate *named-item*
Tree	tcp-validate
Description	Commands in this context configure a TCP validation policy.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**tcp-validate-name**] *named-item*

Synopsis	TCP validation policy name
Context	**configure** application-assurance group *number* partition *number* tcp-validate *named-item*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	tcp-validate
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* partition *number* tcp-validate *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

log

Synopsis	Enter the **log** context
Context	**configure** application-assurance group *number* partition *number* tcp-validate *named-item* log
Tree	log
Description	Commands in this context enable event logging of traffic dropped by TCP validation.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

all *boolean*

Synopsis	Enable logging of all dropped TCP packets
Context	**configure** application-assurance group *number* partition *number* tcp-validate *named-item* log all *boolean*
Tree	all
Description	When configured to **true**, all dropped TCP packets are logged, including the following: • packets received after an RST and discarded

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- packets received before TCP session establishment (before SYN) and discarded

An event log must also be configured to enable logging of all dropped packets.

When configured to **false**, discards related to the described cases are not captured in any event log.

Default false

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event-log *reference*

Synopsis Event log name

Context **configure** application-assurance group *number* partition *number* tcp-validate *named-item* log event-log *reference*

Tree event-log

Reference **configure** application-assurance group *number* partition *number* event-log *named-item*

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

strict *boolean*

Synopsis Enable strict checking of TCP traffic

Context **configure** application-assurance group *number* partition *number* tcp-validate *named-item* strict *boolean*

Tree strict

Description When configured to **true**, the command specifies whether enforcement of TCP sequence and acknowledgment numbers are applied. If a packet does not meet the expected sequence or acknowledgment number, it is dropped. This command should only be enabled if the expected bit error rate or packet loss is low.

For example, if acknowledgments are lost before being detected by AA, the server timeouts are triggered and retransmissions occur. If strict is enabled, these retransmissions resemble a reply attack and are dropped by AA.

When configured to **false**, the command removes the TCP sequence and acknowledgment number enforcement.

Default false

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tethering-detection

Synopsis	Enter the **tethering-detection** context
Context	**configure** application-assurance group *number* partition *number* tethering-detection
Tree	tethering-detection
Description	Commands in this context configure tethering detection for the group.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of tethering detection
Context	**configure** application-assurance group *number* partition *number* tethering-detection admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

single-device

Synopsis	Enter the **single-device** context
Context	**configure** application-assurance group *number* partition *number* tethering-detection single-device
Tree	single-device
Description	Commands in this context configure the single-device fields and expected TTL values for flow-level tethering detection.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

expected-ttl [ttl] *number*

Synopsis	Add a list entry for **expected-ttl**
Context	**configure** application-assurance group *number* partition *number* tethering-detection single-device expected-ttl *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	expected-ttl
Description	Commands in this context configure the TTL values for single-device tethering detection.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**ttl**] *number*

Synopsis	Expected TTL traffic value from host devices
Context	**configure** application-assurance group *number* partition *number* tethering-detection single-device expected-ttl *number*
Tree	expected-ttl
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

invert-match *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Mark flows with expected TTL values as tethered
Context	**configure** application-assurance group *number* partition *number* tethering-detection single-device invert-match *boolean*
Tree	invert-match
Description	When configured to **true**, AA classifies flows with expected TTL values as coming from a connected device (tethered). When configured to **false**, AA classifies flows with expected TTL values as coming from the host device (untethered).
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ttl-monitor

Synopsis	Enter the **ttl-monitor** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* partition *number* tethering-detection ttl-monitor
Tree	ttl-monitor
Description	Commands in this context configure the scope of analysis for TCP and UDP traffic for tethering detection.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-protocols *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Scope of analysis for TCP traffic
Context	**configure** application-assurance group *number* partition *number* tethering-detection ttl-monitor tcp-protocols *keyword*
Tree	tcp-protocols
Description	This command configures whether AA analyzes all TCP traffic or only traffic from standard applications that generate consistent TTL values. Configuring AA to analyze all TCP traffic is typically recommended.
Options	standard – Protocols with reliable TTL-tethering state association all – All protocols
Default	standard
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp-protocols *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Scope of analysis for UDP traffic
Context	**configure** application-assurance group *number* partition *number* tethering-detection ttl-monitor udp-protocols *keyword*
Tree	udp-protocols

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures whether AA analyzes all UDP traffic or only traffic from standard applications that generate consistent TTL values. Configuring AA to analyze only standard UDP traffic is recommended.
Options	standard – Protocols with reliable TTL-tethering state association all – All protocols
Default	standard
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

threshold-crossing-alert

Synopsis	Enter the **threshold-crossing-alert** context
Context	**configure** application-assurance group *number* partition *number* threshold-crossing-alert
Tree	threshold-crossing-alert
Description	Commands in this context configure the generation of threshold crossing alerts (TCAs).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

criteria [criteria-id] *keyword* direction *keyword*

Synopsis	Enter the **criteria** list instance
Context	**configure** application-assurance group *number* partition *number* threshold-crossing-alert criteria *keyword* direction *keyword*
Tree	criteria
Description	Commands in this context configure the TCA criteria for the partition.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**criteria-id**] *keyword*

Synopsis	Statistics TCA criteria ID
Context	**configure** application-assurance group *number* partition *number* threshold-crossing-alert criteria *keyword* direction *keyword*
Tree	criteria
Options	error-drop, fragment-drop-out-of-order, fragment-drop-all, overload-drop, gtp-sanity-drop

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**address**] *(ipv4-unicast-address | ipv6-prefix)*

Synopsis	IP address for an AA static transit subscriber
Context	**configure** application-assurance group *number* partition *number* transit-ip-policy *number* static-aa-sub *named-item* ip *(ipv4-unicast-address | ipv6-prefix)*
Tree	ip
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy *reference*

Synopsis	Subscriber identification policy
Context	**configure** application-assurance group *number* partition *number* transit-ip-policy *number* sub-ident-policy *reference*
Tree	sub-ident-policy
Description	This command defines the subscriber identification policy for the transit IP policy that will be associated with a SAP. The subscriber identification policy must be defined prior to associating the profile with a SAP in the **configure subscriber-mgmt sub-ident-policy** context. Subscribers are managed by the system through the use of subscriber identification strings. A subscriber identification string uniquely identifies a subscriber. For static hosts, the subscriber identification string is explicitly defined with each static subscriber host. For dynamic hosts, the subscriber identification string must be derived from the DHCP ACK message sent to the subscriber host. The default value for the string is the content of Option 82 CIRCUIT-ID and REMOTE-ID fields interpreted as an octet string. As an option, the DHCP ACK message may be processed by a subscriber identification policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

which has the capability to parse the message into an alternative ASCII or octet string value.

When multiple hosts on the same port are associated with the same subscriber identification string, they are considered to be host members of the same subscriber. A subscriber identification policy can also be used for identifying dynamic transit subscriber names.

Reference **configure** subscriber-mgmt sub-ident-policy *external-named-item*

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transit-auto-create

Synopsis Enter the **transit-auto-create** context

Context **configure** application-assurance group *number* partition *number* transit-ip-policy *number* transit-auto-create

Tree transit-auto-create

Description Commands in this context enable the seen-IP auto creation of transit subscribers using the transit IP policy name and subscriber IP address as the aa-sub name. The default app-profile configured against the transit IP policy is applied to these subscribers.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-transit-redundancy *reference*

Synopsis AATR instance to use in the transit IP policy

Context **configure** application-assurance group *number* partition *number* transit-ip-policy *number* transit-auto-create aa-transit-redundancy *reference*

Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inactivity-monitor *boolean*

Synopsis	Monitor inactivity on auto-created transit subscribers
Context	**configure** application-assurance group *number* partition *number* transit-ip-policy *number* transit-auto-create inactivity-monitor *boolean*
Tree	inactivity-monitor
Description	When configured to **true**, this command enables the auto-removal of inactive transit subscribers. Periodically, AA removes any inactive auto-created subscribers. An inactive subscriber is defined as having no active flows in the last period. When configured to **false**, this command disables the auto-removal of inactive transit subscribers.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

transit-prefix-policy [prefix-policy-id] *number*

Synopsis	Enter the **transit-prefix-policy** list instance
Context	**configure** application-assurance group *number* partition *number* transit-prefix-policy *number*
Tree	transit-prefix-policy
Description	Commands in this context define a transit AA subscriber prefix policy. Transit AA subscribers are managed by the system through the use of this policy assigned to services, which determines how transit subscribers are created and removed for that service.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Context	**configure** application-assurance group *number* partition *number* transit-prefix-policy *number* entry *number* match aa-sub-ip *(ipv4-prefix | ipv6-prefix)*
Tree	aa-sub-ip
Description	This command configures a transit prefix subscriber IP address prefix. It is used when the site is on the local side, the same side of the system as the parent SAP. The local aa-sub-ip addresses represent the source IP in the from-SAP direction and destination IP in the to-SAP direction.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer

Synopsis	Enter the **policer** context
Context	**configure** application-assurance group *number* policer
Tree	policer
Description	Commands in this context create application assurance policer profiles of a specified type. Policers can be bandwidth or flow-limiting and can have a granularity of system scope (limits traffic entering AA ISA for all or a subset of AA subscribers) or a subscriber scope (limits apply to each AA subscriber traffic).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The policer type and granularity can only be configured during creation. They cannot be modified. The policer profile must be removed from all AQPs to be removed. Changes to policer profile parameters take effect immediately for policers instantiated as a result of AQP actions using this profile.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

anl-bandwidth-policer [policer-name] *named-item*

Synopsis	Enter the **anl-bandwidth-policer** list instance
Context	**configure** application-assurance group *number* policer anl-bandwidth-policer *named-item*
Tree	anl-bandwidth-policer
Description	Commands in this context configure the AA ANL policer.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**policer-name**] *named-item*

Synopsis	Policer name
Context	**configure** application-assurance group *number* policer anl-bandwidth-policer *named-item*
Tree	anl-bandwidth-policer
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action for packets violating configured policer rate
Context	**configure** application-assurance group *number* policer anl-bandwidth-policer *named-item* action *keyword*
Tree	action
Description	This command configures the action to be performed by single-bucket bandwidth policers for non-conformant traffic.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Dual bucket bandwidth policers cannot have their action configured and always mark traffic below CIR as in-profile, between CIR and PIR as out-of-profile, and drop traffic above PIR. Flow policers always discard non-conformant traffic.

When multiple application assurance policers are configured against a single flow (including policers at both subscriber and system), the flow/packet is dropped if one of the policers requires the packet to be discarded. This occurs regardless of the action of the other policers.

Options permit-deny, priority-mark, monitor, peak-measure

Default permit-deny

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

adaptation-rule

Synopsis Enter the **adaptation-rule** context

Context **configure** application-assurance group *number* policer anl-bandwidth-policer *named-item* adaptation-rule

Tree adaptation-rule

Description Commands in this context configure the AA policer adaptation rule fields and define the method used by the system to derive the operational CIR and PIR values when the queue is provisioned. For the CIR and PIR values individually, the system attempts to find the best operational rate depending on the defined option. To change the CIR adaptation rule only, the current PIR rule must be part of the command executed.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pir *keyword*

Synopsis Peak information rate value for the adaptation rule

Context **configure** application-assurance group *number* policer anl-bandwidth-policer *named-item* adaptation-rule pir *keyword*

Tree pir

Description This command configures the adaptation rule to be used while computing the operational PIR value. The adaptation rule specifies the rules to compute the operational values while maintaining minimum offset.

Options max – At maximum, the configured rate
min – At minimum, the configured rate
closest – Closest rate to the configured value

Default closest

mbs *number*

Synopsis	ANL bandwidth policer maximum burst size
Context	**configure** application-assurance group *number* policer anl-bandwidth-policer *named-item* mbs *number*
Tree	mbs
Description	This command configures the maximum burst size (MBS) for the policer. Nokia recommends configuring MBS larger than twice the MTU for the traffic handled by the policer to allow for some burstiness of the traffic. MBS is configurable for single-bucket, dual-bucket bandwidth, and flow setup rate policers only.
Range	0 to 131071
Units	kilobytes
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-percentage *number*

Synopsis	Rate used by Access-Network-Location policers
Context	**configure** application-assurance group *number* policer anl-bandwidth-policer *named-item* rate-percentage *number*
Tree	rate-percentage

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the stage 1 congestion percentage used by Access-Network-Location (ANL) policers. Because ANL total bandwidth is dynamically measured and estimated by AA, this command allows the operator to configure the ratio of that measured bandwidth to be used by the ANL policer as the policer rate. No limiting is performed if not specified.
Range	0 to 200
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-percentage-stage-2 *number*

Synopsis	Rate used by Access-Network-Location policers

flow-bandwidth-policer [policer-name] *named-item*

Synopsis	Enter the **flow-bandwidth-policer** list instance
Context	**configure** application-assurance group *number* policer flow-bandwidth-policer *named-item*
Tree	flow-bandwidth-policer
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**policer-name**] *named-item*

Synopsis	Policer name
Context	**configure** application-assurance group *number* policer flow-bandwidth-policer *named-item*
Tree	flow-bandwidth-policer
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action for packets violating configured policer rate
Context	**configure** application-assurance group *number* policer flow-bandwidth-policer *named-item* action *keyword*
Tree	action
Description	This command configures the action to be performed by single-bucket bandwidth policers for non-conformant traffic. Dual bucket bandwidth policers cannot have their action configured and always mark traffic below CIR as in-profile, between CIR and PIR as out-of-profile, and drop traffic above PIR. Flow policers always discard non-conformant traffic. When multiple application assurance policers are configured against a single flow (including policers at both subscriber and system), the flow/packet is dropped if one of the policers requires the packet to be discarded. This occurs regardless of the action of the other policers.

Options	sunday, monday, tuesday, wednesday, thursday, friday, saturday
Notes	This element is mandatory.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

time *policer-start-time*

Synopsis	Weekly start time
Context	**configure** application-assurance group *number* policer flow-bandwidth-policer *named-item* time-of-day-override *number* time-range weekly start time *policer-start-time*
Tree	time
Description	This command configures the weekly start time of the policer override. The time format must be [hh:mm]. The hh value is 00 to 24. The mm value is 00, 15, 30, or 45. If hh is 24, mm must be 00.
String length	3 to 5
String format	'time' must be hh:mm, hours 00-23, minutes 00|15|30|45 (e.g. 14:30)
Notes	This element is mandatory.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-count-limit-policer [policer-name] *named-item*

Synopsis	Enter the **flow-count-limit-policer** list instance
Context	**configure** application-assurance group *number* policer flow-count-limit-policer *named-item*
Tree	flow-count-limit-policer
Description	Commands in this context configure the AA flow count limit policer.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**policer-name**] *named-item*

Synopsis	Policer name
Context	**configure** application-assurance group *number* policer flow-count-limit-policer *named-item*
Tree	flow-count-limit-policer

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action for packets violating configured policer rate
Context	**configure** application-assurance group *number* policer flow-count-limit-policer *named-item* action *keyword*
Tree	action
Description	This command configures the action to be performed by single-bucket bandwidth policers for non-conformant traffic. Dual bucket bandwidth policers cannot have their action configured and always mark traffic below CIR as in-profile, between CIR and PIR as out-of-profile, and drop traffic above PIR. Flow policers always discard non-conformant traffic. When multiple application assurance policers are configured against a single flow (including policers at both subscriber and system), the flow/packet is dropped if one of the policers requires the packet to be discarded. This occurs regardless of the action of the other policers.
Options	permit-deny, priority-mark, monitor, peak-measure
Default	permit-deny
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action for packets violating configured policer rate

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* policer flow-setup-rate-policer *named-item* action *keyword*
Tree	action
Description	This command configures the action to be performed by single-bucket bandwidth policers for non-conformant traffic. Dual bucket bandwidth policers cannot have their action configured and always mark traffic below CIR as in-profile, between CIR and PIR as out-of-profile, and drop traffic above PIR. Flow policers always discard non-conformant traffic. When multiple application assurance policers are configured against a single flow (including policers at both subscriber and system), the flow/packet is dropped if one of the policers requires the packet to be discarded. This occurs regardless of the action of the other policers.
Options	permit-deny, priority-mark, monitor, peak-measure
Default	permit-deny
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

adaptation-rule

Synopsis	Enter the **adaptation-rule** context
Context	**configure** application-assurance group *number* policer flow-setup-rate-policer *named-item* adaptation-rule
Tree	adaptation-rule
Description	Commands in this context configure the AA policer adaptation rule fields and define the method used by the system to derive the operational CIR and PIR values when the queue is provisioned. For the CIR and PIR values individually, the system attempts to find the best operational rate depending on the defined option. To change the CIR adaptation rule only, the current PIR rule must be part of the command executed.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

peak-flow-setup-rate *keyword*

action *keyword*

Synopsis	Action for packets violating configured policer rate
Context	**configure** application-assurance group *number* policer single-bucket-bandwidth-policer *named-item* action *keyword*
Tree	action
Description	This command configures the action to be performed by single-bucket bandwidth policers for non-conformant traffic. Dual bucket bandwidth policers cannot have their action configured and always mark traffic below CIR as in-profile, between CIR and PIR as out-of-profile, and drop traffic above PIR. Flow policers always discard non-conformant traffic. When multiple application assurance policers are configured against a single flow (including policers at both subscriber and system), the flow/packet is dropped if one of

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	the policers requires the packet to be discarded. This occurs regardless of the action of the other policers.
Options	permit-deny, priority-mark, monitor, peak-measure
Default	permit-deny
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

adaptation-rule

Synopsis	Enter the **adaptation-rule** context

	The time format must be [hh:mm]. The hh value is 00 to 24. The mm value is 00, 15, 30, or 45. If hh is 24, mm must be 00.
String length	3 to 5
String format	'time' must be hh:mm, hours 00-23, minutes 00|15|30|45 (e.g. 14:30)
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-optimizer [tcp-optimizer-name] *named-item*

Synopsis	Enter the **tcp-optimizer** list instance
Context	**configure** application-assurance group *number* tcp-optimizer *named-item*
Tree	tcp-optimizer
Description	Commands in this context configure the TCP optimizer policy. When a TCP optimizer policy is removed or deleted, the existing flows using this policy are abandoned, and optimization is stopped.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**tcp-optimizer-name**] *named-item*

Synopsis	TCP optimizer name
Context	**configure** application-assurance group *number* tcp-optimizer *named-item*
Tree	tcp-optimizer
Description	This command configures the name of the TCP optimizer policy.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dack-timeout *number*

Synopsis	Delayed acknowledgment timeout for client and server
Context	**configure** application-assurance group *number* tcp-optimizer *named-item* dack-timeout *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	dack-timeout
Description	This command configures a delay ACK (DACK) timeout for the TCP optimizer. By entering this command a default of 200 ms timeout is enabled for delayed acknowledgment. This value is not configurable.
Range	200
Units	milliseconds
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* tcp-optimizer *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high-cpu-backoff *boolean*

Synopsis	Stop optimizing sessions when CPU capacity is limited
Context	**configure** application-assurance group *number* tcp-optimizer *named-item* high-cpu-backoff *boolean*
Tree	high-cpu-backoff
Description	When configured to **true**, AA stops optimizing TCP sessions when the CPU capacity is limited. AA implements the following CPU utilization thresholds: • level 1 - 75% • level 2 - 85% • level 3 - 90% The following describes the functionality of the preceding thresholds: • **early random bypass stage (level 1)** When the CPU utilization is between level 1 and level 2, AA randomly optimizes or bypasses new TCP sessions proportional to the position of the CPU utilization within the range between level 1 and level 2.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- **stop optimization of new flows stage (level 2)**

When the CPU utilization is at or above level 2, AA stops optimizing new TCP sessions.

- **abandon stage (level 3)**

When the CPU utilization is at or above level 3, AA abandons existing optimized TCP sessions.

Note: The CPU utilization is measured once per second in each core or worker. The CPU utilization may differ between cores.

When configured to **false**, AA optimizes TCP sessions, regardless of the CPU capacity.

Default	false
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial-cwnd *number*

Synopsis	MSS of the TCP optimizer initial congestion window
Context	**configure** application-assurance group *number* tcp-optimizer *named-item* initial-cwnd *number*
Tree	initial-cwnd
Description	This command configures the maximum segment size (MSS) of the initial congestion window used by the TCP optimizer (TCPO) during the Slow Start (SS) period.
Range	1 to 256
Default	8
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial-ss-threshold *(number | keyword)*

Synopsis	Initial TCP Slow Start threshold for client and server
Context	**configure** application-assurance group *number* tcp-optimizer *named-item* initial-ss-threshold *(number | keyword)*
Tree	initial-ss-threshold
Description	This command configures the initial Slow Start (SS) threshold for a specific TCP optimizer policy. Nokia recommends setting the threshold close to the access network Bandwidth Delay Product (BDP).
Range	0 to 1000000
Units	kilobytes
Options	auto

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	1000000
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

network-rtt-threshold *number*

Synopsis	Network round trip time threshold
Context	**configure** application-assurance group *number* tcp-optimizer *named-item* network-rtt-threshold *number*
Tree	network-rtt-threshold
Description	This command configures the threshold of the Round Trip Time (RTT) delay of the network side (between AA and the content provider) above which TCP Optimization (TCPO) is performed. This enables the operator to disable optimization for content that is served from a location close to the TCP optimizer.
Range	1 to 100
Units	milliseconds
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tcp-stack *keyword*

Synopsis	TCP stack congestion control algorithm
Context	**configure** application-assurance group *number* tcp-optimizer *named-item* tcp-stack *keyword*
Tree	tcp-stack
Description	This command configures the TCP stack used toward the subscriber. **Note:** The TCP stack used toward the core network is new-reno, and it is not configurable. TCP BBR, BBRv2, TCP Illinois, and TCP Westwood implement a sender-side modification of the TCP congestion window algorithm that improves the performance of TCP Reno in wireless networks with lossy links.
Options	westwood, illinois, new-reno, bbr, bbrv2
Default	westwood
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

url-filter [url-filter-name] *named-item*

Synopsis	Enter the **url-filter** list instance
Context	**configure** application-assurance group *number* url-filter *named-item*
Tree	url-filter
Description	Commands in this context configure a URL filter action for flows of a specific type matching this entry. If no URL filters are specified, then no URL filters are evaluated.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**url-filter-name**] *named-item*

Synopsis	URL filter name
Context	**configure** application-assurance group *number* url-filter *named-item*
Tree	url-filter
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the AA URL filter
Context	**configure** application-assurance group *number* url-filter *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

apply-function-specific-behaviour *boolean*

Synopsis	Use function-specific behavior for action or redirect

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* url-filter *named-item* apply-function-specific-behaviour *boolean*
Tree	apply-function-specific-behaviour
Description	When configured to **true**, the function-specific configurations for URL list, ICAP, and web service (**url-list**, **icap**, and **web-service)** are used for default action (**default-action**) and HTTP redirect (**http-redirect**). When configured to **false**, the configuration at the URL filter level (**url-filter**) is used for default action and HTTP redirect.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action

Synopsis	Enter the **default-action** context
Context	**configure** application-assurance group *number* url-filter *named-item* default-action
Tree	default-action
Description	Commands in this context configure the default action to take effect when the URL filter cannot be used. This may occur in the following cases: • for the local URL list when the URL list is shut down or the file is not loaded due to an error. • in the case of ICAP or web filtering when all TCP connections are busy or down.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

allow

Synopsis	Allow all requests as the default URL filter action
Context	**configure** application-assurance group *number* url-filter *named-item* default-action allow
Tree	allow
Description	When configured, the router allows all requests as the default URL filter action when the URL filter cannot be used.
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

block-all

Synopsis	Block all requests as the default URL filter action
Context	**configure** application-assurance group *number* url-filter *named-item* default-action block-all
Tree	block-all
Description	When configured, the router blocks all requests as the default URL filter action when the URL filter cannot be used.
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-http-redirect *reference*

Synopsis	HTTP URL name for block and redirect request action
Context	**configure** application-assurance group *number* url-filter *named-item* default-action block-http-redirect *reference*
Tree	block-http-redirect
Description	This command specifies the URL that the user is directed to when the router blocks traffic. The information page can be different from the page the user is redirected to when the site that the user tried to access is found in the URL filter. This page is configured using the **configure application-assurance group url-filter http-redirect** command.
Reference	**configure** application-assurance group *number* http-redirect *named-item*
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance group *number* url-filter *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect *reference*

Synopsis	HTTP redirect for a blocked HTTP request
Context	**configure** application-assurance group *number* url-filter *named-item* http-redirect *reference*
Tree	http-redirect
Reference	**configure** application-assurance group *number* http-redirect *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-request-filtering *keyword*

Synopsis	HTTP filtering for all HTTP requests
Context	**configure** application-assurance group *number* url-filter *named-item* http-request-filtering *keyword*
Tree	http-request-filtering
Options	all, first
Default	all
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icap

Synopsis	Enter the **icap** context
Context	**configure** application-assurance group *number* url-filter *named-item* icap
Tree	icap
Description	Commands in this context configure the URL filter ICAP policy fields.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-x-header *named-item*

Synopsis	Custom x-header field name to include in ICAP requests

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* url-filter *named-item* icap custom-x-header *named-item*
Tree	custom-x-header
Description	This command configures the URL filter ICAP policy to include a new x-header field; the content of the x-header is populated based on the AQP URL filter action which can optionally specify the ASO characteristic value to include in the x-header.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action

Synopsis	Enter the **default-action** context
Context	**configure** application-assurance group *number* url-filter *named-item* icap default-action
Tree	default-action
Description	Commands in this context configure a default action for the URL filter. The default action takes effect when the URL filter cannot be used. This may happen when all TCP connections are busy or down.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

allow

Synopsis	Allow all requests as the default action
Context	**configure** application-assurance group *number* url-filter *named-item* icap default-action allow
Tree	allow
Description	When configured, this command allows all traffic when the URL filter cannot be used.
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-all

Synopsis	Block all requests as the default action

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* url-filter *named-item* icap default-action block-all
Tree	block-all
Description	When configured, this command blocks all traffic when the URL filter cannot be used.
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-http-redirect *reference*

Synopsis	HTTP URL for redirection when URL filter cannot be used
Context	**configure** application-assurance group *number* url-filter *named-item* icap default-action block-http-redirect *reference*
Tree	block-http-redirect
Description	This command blocks traffic and redirects the user to an information page, which can be different than the page the user is redirected to when the site they attempted to access was found in the URL filter; this page is configured using the **configure application-assurance group url-filter http-redirect** command.
Reference	**configure** application-assurance group *number* http-redirect *named-item*
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect *reference*

Synopsis	HTTP redirect object used when ICAP blocks HTTP request
Context	**configure** application-assurance group *number* url-filter *named-item* icap http-redirect *reference*
Tree	http-redirect
Reference	**configure** application-assurance group *number* http-redirect *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [ip-address] *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*

Synopsis	Enter the **server** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance group *number* url-filter *named-item* icap server *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	server
Description	Commands in this context configure the IP address and server port of the ICAP server. In the current release, the system supports IPv4 addresses only for the ICAP server.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**ip-address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	ICAP server IP address
Context	**configure** application-assurance group *number* url-filter *named-item* icap server *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	server
Description	This command configures the ICAP server address. In the current release, the system supports IPv4 addresses only for the ICAP server.
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

classifier *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Web service classifier
Context	**configure** application-assurance group *number* url-filter *named-item* web-service classifier *keyword*
Tree	classifier
Options	web-service-1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-action

Synopsis	Enter the **default-action** context
Context	**configure** application-assurance group *number* url-filter *named-item* web-service default-action
Tree	default-action
Description	Commands in this context configure a default action for the URL filter. The default action takes effect when the URL filter cannot be used. This may happen when all TCP connections are busy or down.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

allow

Synopsis	Allow all requests as the default action
Context	**configure** application-assurance group *number* url-filter *named-item* web-service default-action allow
Tree	allow
Description	This command allows all traffic when the web service is unavailable.
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

block-all

Synopsis	Block all requests as the default action
Context	**configure** application-assurance group *number* url-filter *named-item* web-service default-action block-all
Tree	block-all
Description	This command blocks all traffic when the web service is unavailable.
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block-http-redirect *reference*

Synopsis	HTTP URL for redirection when traffic is blocked
Context	**configure** application-assurance group *number* url-filter *named-item* web-service default-action block-http-redirect *reference*
Tree	block-http-redirect
Description	This command specifies the HTTP URL to be redirected to when traffic is blocked. This URL can be different than the URL the user is redirected to when the site they attempted to access was found in the URL filter (which is configured in the **configure application-assurance group url-filter http-redirect** command).
Reference	**configure** application-assurance group *number* http-redirect *named-item*
Notes	The following elements are part of a choice: **allow**, **block-all**, or **block-http-redirect**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-profile *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Web service default profile
Context	**configure** application-assurance group *number* url-filter *named-item* web-service default-profile *reference*
Tree	default-profile

Options	enable, disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy [rad-acct-plcy-name] *named-item*

Synopsis	Enter the **radius-accounting-policy** list instance
Context	**configure** application-assurance radius-accounting-policy *named-item*
Tree	radius-accounting-policy
Description	Commands in this context configure an existing subscriber RADIUS-based accounting policy to use for AA. RADIUS accounting policies are configured in the **configure application-assurance radius-accounting-policy** context.
Max. instances	8
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**rad-acct-plcy-name**] *named-item*

Synopsis	AA RADIUS accounting policy name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance radius-accounting-policy *named-item*
Tree	radius-accounting-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** application-assurance radius-accounting-policy *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interim-update-interval *number*

Synopsis	AA RADIUS accounting policy interim update interval
Context	**configure** application-assurance radius-accounting-policy *named-item* interim-update-interval *number*
Tree	interim-update-interval
Range	5 to 1080
Units	minutes
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-server

Synopsis	Enter the **radius-accounting-server** context
Context	**configure** application-assurance radius-accounting-policy *named-item* radius-accounting-server
Tree	radius-accounting-server

© 2026 Nokia.

Description	Commands in this context configure an existing subscriber RADIUS-based accounting policy to use for AA. RADIUS accounting policies are configured in the **configure application-assurance radius-accounting-policy** context.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

access-algorithm *keyword*

Synopsis	Access algorithm for the list of RADIUS servers
Context	**configure** application-assurance radius-accounting-policy *named-item* radius-accounting-server access-algorithm *keyword*
Tree	access-algorithm
Options	direct, round-robin
Default	direct
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

retry *number*

Synopsis	Number of retries for contacting the RADIUS server
Context	**configure** application-assurance radius-accounting-policy *named-item* radius-accounting-server retry *number*
Tree	retry
Range	1 to 10
Default	3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router or VPRN service name
Context	**configure** application-assurance radius-accounting-policy *named-item* radius-accounting-server router-instance *string*
Tree	router-instance
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [server-index] *number*

Synopsis	Enter the **server** list instance
Context	**configure** application-assurance radius-accounting-policy *named-item* radius-accounting-server server *number*
Tree	server
Description	Commands in this context configure the RADIUS server and the RADIUS server IP address, index, and key values. RADIUS servers are accessed in order from lowest to highest index for authentication requests until a response from a server is received. A higher indexed server is only queried if no response is received from a lower indexed server (which implies that the server is not available). If a response from a server is received, no other RADIUS servers are queried.
Max. instances	5
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**server-index**] *number*

Synopsis	RADIUS accounting server index
Context	**configure** application-assurance radius-accounting-policy *named-item* radius-accounting-server server *number*
Tree	server
Description	This command configures the index for the RADIUS server. The index determines the sequence in which the servers are queried for authentication requests. Servers are queried in order from lowest to highest index.
Range	1 to 5
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address *ipv4-unicast-address*

Synopsis	RADIUS server IP address
Context	**configure** application-assurance radius-accounting-policy *named-item* radius-accounting-server server *number* address *ipv4-unicast-address*
Tree	address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the IP address of the RADIUS server. Two RADIUS servers cannot have the same IP address. An error message is generated if the server address is a duplicate.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port *number*

Synopsis	RADIUS server UDP port used for authentication
Context	**configure** application-assurance radius-accounting-policy *named-item* radius-accounting-server server *number* port *number*
Tree	port
Range	1 to 65535
Default	1813
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

secret *encrypted-leaf*

Synopsis	RADIUS server secret key
Context	**configure** application-assurance radius-accounting-policy *named-item* radius-accounting-server server *number* secret *encrypted-leaf*
Tree	secret
Description	This command configures the secret key to access the RADIUS server. This secret key must match the password on the RADIUS server.
String length	1 to 110
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

source-address *ipv4-unicast-address*

Synopsis	Source IP address of RADIUS packets

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** application-assurance radius-accounting-policy *named-item* radius-accounting-server source-address *ipv4-unicast-address*
Tree	source-address
Description	This command configures the source IP address of the RADIUS packet. The system IP address must be configured for the RADIUS client to work. The system IP address must only be configured if the source address is not specified. When this command reverts to its default, the source address is determined at the moment the request is sent. This address is also used in the **nas-ip-address** command in the **configure aaa radius isa-policy accounting include-attributes** and **configure aaa radius isa-policy authentication include-attributes** contexts as it is set to the system IP address if no source address was given.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	RADIUS accounting server response timeout
Context	**configure** application-assurance radius-accounting-policy *named-item* radius-accounting-server timeout *number*
Tree	timeout
Range	1 to 90
Units	seconds
Default	5
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

significant-change *number*

Synopsis	Change delta for RADIUS accounting record updates
Context	**configure** application-assurance radius-accounting-policy *named-item* significant-change *number*
Tree	significant-change
Description	This command configures the number of changes required to generate the record.
Range	1
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

usage-alert-thresholds

Synopsis	Enter the **usage-alert-thresholds** context
Context	**configure** application-assurance usage-alert-thresholds
Tree	usage-alert-thresholds
Description	Commands in this context configure the AA performance monitoring alerts.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bit-rate-high-wmark *(number | keyword)*

Synopsis	High watermark for bit rate alarms
Context	**configure** application-assurance usage-alert-thresholds bit-rate-high-wmark *(number | keyword)*
Tree	bit-rate-high-wmark
Description	This command configures the high watermark for bit rate alarms. The value must be larger than or equal to the low watermark value.
Range	1 to 100000
Units	megabps
Options	max
Default	max
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bit-rate-low-wmark *number*

Synopsis	Low watermark for bit rate alarms
Context	**configure** application-assurance usage-alert-thresholds bit-rate-low-wmark *number*
Tree	bit-rate-low-wmark
Description	This command configures the utilization of the flow records on the ISA-AA group when the full alarm is cleared by the agent.
Range	0 to 99999
Default	0

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

datapath-cpu-high-wmark *(number | keyword)*

Synopsis	High watermark for datapath CPU alarms
Context	**configure** application-assurance usage-alert-thresholds datapath-cpu-high-wmark *(number | keyword)*
Tree	datapath-cpu-high-wmark
Description	This command configures the system-wide high watermark threshold as a percentage of the per-ISA datapath core CPU utilization, where an alarm is raised by the agent. CPU usage is the average usage across all datapath cores.
Range	0 to 100
Units	percent
Options	max
Default	95
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

datapath-cpu-low-wmark *number*

Synopsis	Low watermark for datapath CPU alarms
Context	**configure** application-assurance usage-alert-thresholds datapath-cpu-low-wmark *number*
Tree	datapath-cpu-low-wmark
Description	This command configures the system-wide low watermark threshold as a percentage of the per-ISA datapath core CPU utilization, where an alarm is raised by the agent. CPU usage is the average usage across all datapath cores.
Range	0 to 100
Units	percent
Default	90
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

flow-setup-rate-high-wmark *(number | keyword)*

Synopsis	High watermark for flow setup rate
Context	**configure** application-assurance usage-alert-thresholds flow-setup-rate-high-wmark *(number | keyword)*
Tree	flow-setup-rate-high-wmark
Description	This command configures the system-wide high watermark threshold for per-ISA throughput in packets/second when an alarm is raised by the agent. The value must be larger than or equal to the **packet-rate-low-wmark** value.
Range	1 to 2000000
Options	max
Default	max
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-setup-rate-low-wmark *number*

Synopsis	Low watermark for flow setup rate
Context	**configure** application-assurance usage-alert-thresholds flow-setup-rate-low-wmark *number*
Tree	flow-setup-rate-low-wmark
Description	This command configures the flow setup rate on the ISA-AA when a flow setup alarm is raised by the agent.
Range	0 to 1999999
Default	0
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-table-high-wmark *number*

Synopsis	Flow table high watermark
Context	**configure** application-assurance usage-alert-thresholds flow-table-high-wmark *number*
Tree	flow-table-high-wmark
Description	This command configures the system-wide high watermark threshold as a percentage of the flow table size for the per-ISA utilization of the flow records when a full alarm is raised by the agent.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	0 to 100
Units	percent
Default	95
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-table-low-wmark *number*

Synopsis	Flow table low watermark
Context	**configure** application-assurance usage-alert-thresholds flow-table-low-wmark *number*
Tree	flow-table-low-wmark
Description	This command configures the system-wide low watermark threshold as a percentage of the flow table size for per-ISA.
Range	0 to 100
Units	percent
Default	90
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packet-rate-high-wmark *(number | keyword)*

Synopsis	Packet rate high watermark
Context	**configure** application-assurance usage-alert-thresholds packet-rate-high-wmark *(number | keyword)*
Tree	packet-rate-high-wmark
Description	This command configures the packet rate on the ISA-AA when a packet rate alarm is raised by the agent.
Range	1 to 148809524
Options	max
Default	max
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

4.4.1 aps command descriptions

aps [group-id] *number*

Synopsis	Enter the **aps** list instance
Context	**configure** aps *number*
Tree	aps
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

[**group-id**] *number*

Synopsis	APS group ID
Context	**configure** aps *number*
Tree	aps
Range	1 to 128
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

advertise-interval *number*

Synopsis	Time between subsequent advertisement messages
Context	**configure** aps *number* advertise-interval *number*
Tree	advertise-interval
Range	10 to 650
Units	deciseconds
Default	10
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

annexb

Synopsis	Enable the **annexb** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aps *number* annexb
Tree	annexb
Notes	The following elements are part of a choice: **annexb** or (**neighbor**, **protect-circuit**, **revert**, and **working-circuit**).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

wait-to-restore-time *number*

Synopsis	Annex B mode operation wait to restore time
Context	**configure** aps *number* annexb wait-to-restore-time *number*
Tree	wait-to-restore-time
Description	This command specifies the delay after which the newly active section becomes the primary section after a switchover from the primary section to the secondary section occurs and the switch request clears normally.
Range	0 to 3600
Units	seconds
Default	300
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

working-circuit *reference*

Synopsis	Working circuit port for the APS group
Context	**configure** aps *number* annexb working-circuit *reference*
Tree	working-circuit
Reference	**configure** port *port*
Max. instances	2
Notes	This element is ordered by the user.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

hold-time *number*

Synopsis	Time to wait for an advertisement packet

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** aps *number* hold-time *number*
Tree	hold-time
Range	10 to 650
Units	deciseconds
Default	30
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

neighbor *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Neighbor IP address for multi-chassis APS
Context	**configure** aps *number* neighbor *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	neighbor
Notes	The following elements are part of a choice: **annexb** or (**neighbor**, **protect-circuit**, **revert**, and **working-circuit**).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

protect-circuit *reference*

Synopsis	Protection circuit port for the APS group
Context	**configure** aps *number* protect-circuit *reference*
Tree	protect-circuit
Reference	**configure** port *port*
Notes	The following elements are part of a choice: **annexb** or (**neighbor**, **protect-circuit**, **revert**, and **working-circuit**).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

revert

Synopsis	Enable the **revert** context
Context	**configure** aps *number* revert
Tree	revert

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **annexb** or (**neighbor**, **protect-circuit**, **revert**, and **working-circuit**).
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

time *number*

Synopsis	Wait time before switching back to the working circuit
Context	**configure** aps *number* revert time *number*
Tree	time
Range	0 | 60 to 3600
Units	seconds
Default	300
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

switching-mode *keyword*

Synopsis	Switching mode for the APS port
Context	**configure** aps *number* switching-mode *keyword*
Tree	switching-mode
Options	uni-directional, bi-directional
Default	bi-directional
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

working-circuit *reference*

Synopsis	Working circuit port for the APS group
Context	**configure** aps *number* working-circuit *reference*
Tree	working-circuit
Reference	**configure** port *port*
Notes	The following elements are part of a choice: **annexb** or (**neighbor**, **protect-circuit**, **revert**, and **working-circuit**).
Introduced	20.10.R1

4.7.1 bof command descriptions

bof

Synopsis	Configure system boot options
Context	bof
Tree	bof
Description	This command creates or edits the boot option file (BOF) for the specified local storage device. A BOF file specifies where the system searches for runtime images, configuration files, and other operational parameters during system initialization. BOF parameters can be modified. Changes can be saved to a specified compact flash. The BOF must be located in the root directory of either an internal or external compact flash local to the system and have the mandatory filename of bof.cfg. When modifications are made to in-memory parameters that are currently in use or operating, the changes are effective immediately. For example, if the IP address of the management port is changed, the change takes place immediately. Only one entry of the BOF configuration command statement can be saved once the statement has been found to be syntactically correct. When opening an existing BOF that is not the BOF used in the most recent boot, a message is issued notifying the user that the parameters will not affect the operation of the node. No default boot option file exists. The router boots with the factory default boot sequence and options.
Introduced	20.10.R1
Platforms	All

auto-boot

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **auto-boot** context
Context	bof auto-boot
Tree	auto-boot
Description	Commands in this context enable the **auto-boot** flag in the BOF and configures the **auto-boot** options for ZTP. When modifying **auto-boot** options using CLI, all required options must be explicitly configured as the default cases will no longer be used.
Introduced	20.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

dhcp

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **dhcp** context
Context	bof auto-boot dhcp
Tree	dhcp
Description	Commands in this context configure the IPv4 DHCP client for OOB management. The OOB management IPv4 can be set using a DHCP server offer.
Notes	The following elements are part of a choice: **dhcp** or **ospf**.
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

client-id *(keyword | hex-string | string)*

Note:
The new value of this element takes effect when the router boots.

Synopsis	DHCP client ID
Context	bof auto-boot dhcp client-id *(keyword | hex-string | string)*
Tree	client-id
Description	This command specifies the client ID for IPv4 Option 61 for auto-discovery. The identifier is opaque and is in string format. By default, this is the chassis serial number.
String length	3 to 118 (*hex-string*) 1 to 58 (*string*)
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Options	use-chassis-mac-address
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

inband

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **inband** context
Context	bof auto-boot dhcp inband
Tree	inband
Description	Commands in this context enable in-band management through an Ethernet port for ZTP. Unless the **vlan-discovery** command is used, the **inband** command disables VLAN discovery.
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

disabled *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Do not use in-band ports
Context	bof auto-boot dhcp inband disabled *boolean*
Tree	disabled
Default	true
Notes	The following elements are part of a choice: **disabled**, **null-encapsulation**, **vlan**, or **vlan-discovery**.
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

null-encapsulation *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use null encapsulation
Context	bof auto-boot dhcp inband null-encapsulation *boolean*
Tree	null-encapsulation

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	true
Notes	The following elements are part of a choice: **disabled**, **null-encapsulation**, **vlan**, or **vlan-discovery**.
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

vlan *number*

Note:
The new value of this element takes effect when the router boots.

Synopsis	In-band VLAN ID
Context	bof auto-boot dhcp inband vlan *number*
Tree	vlan
Range	1 to 4094
Notes	The following elements are part of a choice: **disabled**, **null-encapsulation**, **vlan**, or **vlan-discovery**.
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

vlan-discovery *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use VLAN discovery
Context	bof auto-boot dhcp inband vlan-discovery *boolean*
Tree	vlan-discovery
Default	true
Notes	The following elements are part of a choice: **disabled**, **null-encapsulation**, **vlan**, or **vlan-discovery**.
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

include-user-class *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Include user class in auto boot provisioning
Context	bof auto-boot dhcp include-user-class *boolean*
Tree	include-user-class
Description	When configured to **true**, the router includes Option 77 in DHCP messages.
Default	true
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

ipv4 *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use auto boot with IPv4
Context	bof auto-boot dhcp ipv4 *boolean*
Tree	ipv4
Default	true
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

ipv6 *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use auto boot with IPv6
Context	bof auto-boot dhcp ipv6 *boolean*
Tree	ipv6
Default	true
Introduced	21.2.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

management-port *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use auto boot on the management port
Context	bof auto-boot dhcp management-port *boolean*
Tree	management-port
Description	When configured to **true**, the out-of-band management port is used for ZTP.
Default	true
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

secure *boolean*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Use Secure ZTP for auto-boot
Context	bof auto-boot dhcp secure *boolean*
Tree	secure
Default	false
Introduced	26.10.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se, 7750 SR-2se

ospf

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **ospf** context
Context	bof auto-boot ospf
Tree	ospf

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure OSPF auto-discovery.
Notes	The following elements are part of a choice: **dhcp** or **ospf**.
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

mtu *number*

Note:
The new value of this element takes effect when the router boots.

Synopsis	OSPF MTU
Context	bof auto-boot ospf mtu *number*
Tree	mtu
Range	512 to 9786
Units	bytes
Default	1500
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

neid *hex-string*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Network element ID
Context	bof auto-boot ospf neid *hex-string*
Tree	neid
Description	This command specifies a hexadecimal network element identification string.
String length	3
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

neip-ipv4 *ipv4-unicast-address*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Network element IPv4 address
Context	bof auto-boot ospf neip-ipv4 *ipv4-unicast-address*
Tree	neip-ipv4
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

neip-ipv6 *ipv6-address*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Network element IPv6 address
Context	bof auto-boot ospf neip-ipv6 *ipv6-address*
Tree	neip-ipv6
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

vendor-id *number*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Vendor ID
Context	bof auto-boot ospf vendor-id *number*
Tree	vendor-id
Description	This command specifies the vendor identification number. The number 140 corresponds to "Nokia".
Range	1 to 254

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	140
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

port-mtu *number*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Port MTU setting
Context	bof auto-boot port-mtu *number*
Tree	port-mtu
Range	512 to 9800
Units	bytes
Introduced	21.2.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

timeout *number*

Note:
The new value of this element takes effect when the router boots.

Synopsis	ZTP timeout
Context	bof auto-boot timeout *number*
Tree	timeout
Description	This command configures the Zero Touch Provisioning timeout, which is the total time allowed for the ZTP process to execute successfully. If the ZTP process is unsuccessful (in the case of auto-boot using OSPF, if no OSPF adjacency is found), the node is first rebooted, then the ZTP process is retried.
Range	30 to 1440
Units	minutes
Introduced	22.7.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

© 2026 Nokia.

auto-configure

Synopsis	Enter the **auto-configure** context
Context	bof auto-configure
Tree	auto-configure
Description	Commands in this context autoconfigure the IP address for the BOF. The IPv4 DHCP client, IPv6 DHCP client, and NDP/RA can be configured on the management interface.
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

ipv4

Synopsis	Enter the **ipv4** context
Context	bof auto-configure ipv4
Tree	ipv4
Description	Commands in this context autoconfigure the IPv4 DHCP client.
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

dhcp

Note:
The new value of this element takes effect when the router boots.

Synopsis	Enable the **dhcp** context
Context	bof auto-configure ipv4 dhcp
Tree	dhcp
Description	Commands in this context configure the IPv4 DHCP client for OOB management. The OOB management IPv4 can be set using a DHCP server offer.
Introduced	20.10.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

configuration

Synopsis	Enter the **configuration** context
Context	bof configuration
Tree	configuration
Introduced	20.10.R1
Platforms	All

encrypt *boolean*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Enable encryption of BOF configuration files
Context	bof configuration encrypt *boolean*
Tree	encrypt
Description	When configured to **true**, this command enables encryption of the BOF using AES256 and SHA256. When the BOF is encrypted on the compact flash, it is still reachable using the BOF interactive menu during node startup, and fields can be modified using the BOF interactive menu.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

encryption-key *bof-static-encrypted-leaf*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Secret key for encryption of configuration files
Context	bof configuration encryption-key *bof-static-encrypted-leaf*
Tree	encryption-key
Description	This command creates a key to be used for AES256 encryption of the configuration file. This key is used for all configuration files (primary, secondary, and tertiary).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

After creating or deleting a key, save the configuration file so that it is encrypted with the latest key.

The output of the encryption key is always in a protected format.

Plaintext keys must be 8 to 32 characters in length.

String length	1 to 126
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *hashed-leaf*

Note:
The new value of this element takes effect when the router boots.

Synopsis	Password for boot-time modification of boot options
Context	bof configuration password *hashed-leaf*
Tree	password
Description	This command configures the password to access the BOF interactive menu at startup. If a password is configured, the BOF interactive menu is accessible only when the correct password is entered. If the correct password is not entered in 30 seconds, the node reboots. The output of the password is always in a protected format. This command accepts a cleartext format of 8 to 32 characters or a protected pbkdf2-sha3-512 format.
String length	8 to 136
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

primary-location *bof-cflash-and-url*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Primary configuration location
Context	bof configuration primary-location *bof-cflash-and-url*
Tree	primary-location
String length	1 to 199
Introduced	20.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

secondary-location *bof-cflash-and-url*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Secondary configuration location
Context	bof configuration secondary-location *bof-cflash-and-url*

tertiary-location *bof-cflash-and-url*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Tertiary configuration location
Context	bof configuration tertiary-location *bof-cflash-and-url*
Tree	tertiary-location
Description	This command specifies the name and location of the tertiary configuration file. The system attempts to use the configuration specified in **tertiary-location** if both the primary and secondary configuration files cannot be located. If this file cannot be located, the system boots with the factory default configuration. Note that if an error in the configuration file is encountered, the boot process aborts.
String length	1 to 199
Introduced	20.10.R1
Platforms	All

router [router-name] *named-item-64*

Note:
The new value of this element takes effect when the candidate is committed.

Synopsis	Enter the **router** list instance
Context	bof router *named-item-64*
Tree	router
Description	This command creates a router instance which represents a virtual router in the system. There will always be at least two instances in the system. The Base or transport router and the management router are created when the system is initialized and cannot be deleted.
Max. instances	1
Introduced	20.10.R1
Platforms	All

[**router-name**] *named-item-64*

Synopsis	Administrative router name
Context	bof router *named-item-64*
Tree	router
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character 'router-name' must be 'management'
MD-CLI default	management
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

4.8.1 call-trace command descriptions

call-trace

Synopsis	Enter the **call-trace** context
Context	**configure** call-trace
Tree	call-trace
Description	Commands in this context configure the attributes of the call trace debugging functionality.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

buffering *boolean*

Synopsis	Buffer messages until the trace key is known
Context	**configure** call-trace buffering *boolean*
Tree	buffering
Description	When configured to **true**, the router buffers initial messages for sessions where the trace key is not yet known, for example, a username for a PPP session. When the trace key, for example, a username, indicates a match for a traced session, the router sends the buffered messages immediately. If the key does not match a trace, the router discards the buffered messages. When configured to **false**, the router does not buffer any messages and therefore initial messages may not be traced.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

location [location-type] *keyword*

Synopsis	Enter the **location** list instance
Context	**configure** call-trace location *keyword*
Tree	location
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**location-type**] *keyword*

Synopsis	Compact flash card to be used
Context	**configure** call-trace location *keyword*
Tree	location
Options	cf1, cf2
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of compact flash for log storage
Context	**configure** call-trace location *keyword* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

size-limit *(number | keyword)*

Synopsis	Maximum cumulative size of call trace files on the card
Context	**configure** call-trace location *keyword* size-limit *(number | keyword)*
Tree	size-limit
Range	1 to 65536
Options	unlimited
Default	1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-files-number *number*

Synopsis	Maximum number of files call trace can create
Context	**configure** call-trace max-files-number *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	max-files-number
Range	1 to 1024
Default	200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

primary-cf *keyword*

Synopsis	Primary CF card as local storage location
Context	**configure** call-trace primary-cf *keyword*
Tree	primary-cf
Options	cf1, cf2
Default	cf1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trace-profile [name] *named-item*

Synopsis	Enter the **trace-profile** list instance
Context	**configure** call-trace trace-profile *named-item*
Tree	trace-profile
Description	Commands in this context configure the attributes of the call-trace profile list.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Call trace profile name
Context	**configure** call-trace trace-profile *named-item*
Tree	trace-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

applications

Synopsis	Enter the **applications** context
Context	**configure** call-trace trace-profile *named-item* applications
Tree	applications
Description	Commands in this context configure call trace attributes for the specified application.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connectivity-management *boolean*

Synopsis	Trace messages used for connectivity protocols
Context	**configure** call-trace trace-profile *named-item* applications connectivity-management *boolean*
Tree	connectivity-management
Description	When configured to **true**, this command enables call trace for connectivity protocols, such as DHCP, ARP, and DHCPv6, and events related to connectivity management; for example, migrant or data-triggered host creation, idling, or session timeout. In the CUPS context, this command traces uplink IBCP messages. When configured to **false**, connectivity protocols are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gx *boolean*

Synopsis	Trace Diameter messages used for the Gx application
Context	**configure** call-trace trace-profile *named-item* applications gx *boolean*
Tree	gx
Description	When configured to **true**, this command enables call trace for Diameter messages used for the Gx application. When configured to **false**, Diameter Gx messages are not traced.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

gy *boolean*

Synopsis	Trace Diameter messages used for the Gy application
Context	**configure** call-trace trace-profile *named-item* applications gy *boolean*
Tree	gy
Description	When configured to **true**, this command enables call trace for Diameter messages used for the Gy application. When configured to **false**, Diameter Gy messages are not traced.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ludb *boolean*

Synopsis	Trace local user database lookups
Context	**configure** call-trace trace-profile *named-item* applications ludb *boolean*
Tree	ludb
Description	When configured to **true**, this command enables call trace for Local User Data Base (LUDB) lookups. When configured to **false**, LUDB lookups are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msap *boolean*

Synopsis	Trace MSAP creation events
Context	**configure** call-trace trace-profile *named-item* applications msap *boolean*
Tree	msap
Description	When configured to **true**, this command enables tracing of Managed Service Access Point (MSAP) creation events. When configured to **false**, MSAP create events are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

nasreq *boolean*

Synopsis	Trace Diameter messages used for NASREQ application
Context	**configure** call-trace trace-profile *named-item* applications nasreq *boolean*
Tree	nasreq
Description	When configured to **true**, this command enables call trace for Diameter messages used for the Diameter Network Access Server Requirements (NASREQ) application. When configured to **false**, Diameter NASREQ messages are not traced.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp *boolean*

Synopsis	Trace PFCP messages
Context	**configure** call-trace trace-profile *named-item* applications pfcp *boolean*
Tree	pfcp
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-event *boolean*

Synopsis	Allow tracing for PPP state machine related events
Context	**configure** call-trace trace-profile *named-item* applications ppp-event *boolean*
Tree	ppp-event
Description	When configured to **true**, events related to the PPP state machine are traced. This configuration may result in a large amount of event messages. When configured to **false**, tracing is not activated for PPP state machine events.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python *boolean*

Synopsis	Trace Python script execution
Context	**configure** call-trace trace-profile *named-item* applications python *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	python
Description	When configured to **true**, this command enables tracing of Python script execution. When configured to **false**, Python script execution is not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-acct *boolean*

Synopsis	Trace messages and events for RADIUS-based accounting
Context	**configure** call-trace trace-profile *named-item* applications radius-acct *boolean*
Tree	radius-acct
Description	When configured to **true**, this command enables tracing of messages and events related to RADIUS-based accounting. When configured to **false**, RADIUS-based accounting messages and events are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-auth *boolean*

Synopsis	Trace RADIUS authentication messages and events
Context	**configure** call-trace trace-profile *named-item* applications radius-auth *boolean*
Tree	radius-auth
Description	When configured to **true**, this command enables tracing of messages and events related to RADIUS authentication, including CoA and Disconnect. When configured to **false**, messages and events related to RADIUS authentication are not traced.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description

© 2026 Nokia.

4.9.1 card command descriptions

card [slot-number] *number*

Synopsis	Enter the **card** list instance
Context	**configure** card *number*
Tree	card
Description	Commands in this context cover attributes for specific chassis slots for physical cards. In SR OS, cards cover IOM, IMM, and XCM.
Introduced	16.0.R1
Platforms	All

[**slot-number**] *number*

Synopsis	Slot number within the chassis
Context	**configure** card *number*
Tree	card
Description	This command configures a unique value that identifies the card slot within a chassis in the system.
Range	1 to 20
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the card
Context	**configure** card *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

card-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Card type
Context	**configure** card *number* card-type *keyword*
Tree	card-type
Description	This command adds an IOM, IMM, XCM to the device configuration for the slot. The card type can be pre-provisioned, meaning that the card does not need to be installed in the chassis. A card must be provisioned before any contained object can be configured: MDA, XIOM, XMA, MDA-s, connector, or port. A card can only be provisioned in a slot if the card type is allowed in the slot. An error message is generated if an attempt is made to provision a card type that is not allowed. If a card is inserted that does not match the configured card type for the slot, a log event and facility alarm is raised. The alarm is cleared when the correct card type is installed or the configuration is modified. A log event and facility alarm are raised if an administratively enabled card is removed from the chassis. The alarm is cleared when the correct card type is installed or the configuration is modified. A log event is issued when a card is removed that is administratively disabled. Because IMMs do not have the capability to install separate MDAs, the configuration of the MDAs is automatic. This configuration only includes the default options such as default buffer policies. Commands to manage the MDA remain in the MDA configuration context. Some card hardware can support two different firmware loads. One load includes the base Ethernet functionality, including 10G WAN mode, but does not include 1588 port-based timestamping. The second load includes the base Ethernet functionality and 1588 port-based timestamping, but does not include 10G WAN mode. These are identified as two card types that are the same, except for a "-ptp" suffix to indicate the second loadset. A hard reset of the card occurs when switching between the two provisioned types. An appropriate alarm is raised if a partial or complete card failure is detected. The alarm is cleared when the error condition ceases.
Options	xcm-x20, imm40-10gb-sfp, iom4-e, iom-a, imm-2pac-fp3, iom4-e-hs, imm4-100gb-cfp4, iom-e, iom-v, iom4-e-b, iom-sar-hm, xcm2-x20, iom-1, xcm-14s, imm40-10gb-sfp-ptp, iom-ixr-r6, imm36-100g-qsfp28, imm48-sfp+2-qsfp28, iom5-e, xcm-7s, imm48-sfp++6-qsfp28, xcm-1s, xcm-2s, imm24-sfp++8-sfp28+2-qsfp28, iom-sar-hmc, imm14-10g-sfp++4-1g-tx, iom-ixr-r4, imm6-qsfpdd+48-sfp56, imm32-qsfp28+4-qsfpdd, i48-800g-qsfpdd-1x, imm36-qsfpdd, imm4-1g-tx+20-1g-sfp+6-10g-sfp+, iom-ixr-r6d, xcm2-7s, i24-800g-qsfpdd-1, imm36-800g-qsfpdd, xcm2-14s, i48-400g-qsfpdd-1, i80-200g-sfpdd+12-400g-qsfpdd-1, i40-200g-sfpdd+6-800g-qsfpdd-1, i80-200g-sfpdd+12-800g-qsfpdd-1x, xcm-2se, xcm-14s-b, xcm-7s-b, imm2-qsfpdd+2-qsfp28+24-sfp28, xcmc-2se,

fail-on-error *boolean*

Synopsis Set operational state of the card to Failed upon error

Context **configure** card *number* fail-on-error *boolean*

Tree fail-on-error

Description When configured to **true**, this command controls the behavior of the card when any one of a specific set of card level errors is encountered in the system.

When this command is set to **true**, and any one (or more) of the specific errors is detected, the operational state of the card is set to failed. This failed state persists until the **clear card** command is issued (reset) or the card is removed and reinserted (reseated). If the condition persists after reseating the card, contact Nokia support to investigate more.

Nokia only recommends configuring this command to **true** when the network is designed to be able to route traffic around a failed card (redundant cards, nodes, or other paths exist).

The list of specific errors includes the following:

CHASSIS event ID# 2063 - tmnxEqCardPChipMemoryEvent

CHASSIS event ID# 2076 - tmnxEqCardPChipCamEvent

CHASSIS event ID# 2059 - tmnxEqCardPChipError (for ingress Ethernet only)

CHASSIS event ID# 2098 - tmnxEqCardQChipBufMemoryEvent

CHASSIS event ID# 2099 - tmnxEqCardQChipStatsMemoryEvent

CHASSIS event ID# 2101 - tmnxEqCardQChipIntMemoryEvent

CHASSIS event ID# 2103 - tmnxEqCardChipIfCellEvent

On platforms with integrated CPM and IOM, IMM, or XCM, the node is rebooted if this command is set to **true** and one of the card level errors is encountered. The tmnx EqCardPChipError is only considered as a trigger for this command for ingress FCS errors (not egress FCS errors).

Note: On the detection of the event or error in the system, the reporting of the event (logs) and the fail-on-error behavior of the card are independent. Log event control configuration determines whether the events are reported in logs (or SNMP traps, and so on) and the fail-on-error configuration determines the behavior of the card. This implies that the card can be configured to fail-on-error even if the events are suppressed (some may be suppressed in the system by default). To facilitate post-failure analysis, Nokia recommends reporting the specific events or errors and that **configure log log-events** be enabled when this command is set to **true**.

egress

Synopsis	Enter the **egress** context
Context	**configure** card *number* fp *number* egress
Tree	egress
Introduced	16.0.R1
Platforms	All

hs-fixed-high-thresh-delta *number*

Synopsis	High threshold delta on the forwarding plane
Context	**configure** card *number* fp *number* egress hs-fixed-high-thresh-delta *number*
Tree	hs-fixed-high-thresh-delta
Description	This command specifies the egress aggregate shaper high burst limit threshold delta for this HSQ IOM FP. An aggregate rate can be applied to each egress HSQ queue group, HS secondary shaper, and (for subscribers configured with HS SLA expanded mode) primary shaper that manages the maximum burst limit over a specified shaping rate. Each aggregate shaper supports two thresholds that are used in conjunction with the low burst class setting. The system uses the lowest value attainable for each low threshold aggregate burst limit without causing shaper under run conditions. The high burst limit threshold is determined by adding the configured value of this command to the aggregate low burst limit threshold value. An operator must set this configured value to at least two times the maximum frame size to prevent lower threshold class forwarding from also affecting the higher threshold classes when forwarding larger packet sizes. An insufficiently high threshold delta defeats the intended purpose of mapping classes to the higher threshold.
Range	0 to 65536
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-pool-policy *reference*

Synopsis	HS pool policy
Context	**configure** card *number* fp *number* egress hs-pool-policy *reference*
Tree	hs-pool-policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the HS pool policy for the FP. An HS pool policy contains the required parameters to create and size root and mid-tier buffer pools on an HSQ IOM, and applies a slope policy to each. A single HS pool policy is supported per port FP. This command is only applicable to the HSQ IOM (iom4-e-hs) and fails if configured on other card types.
Reference	**configure** qos hs-pool-policy *named-item*
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

wred-queue-control

Synopsis	Enter the **wred-queue-control** context
Context	**configure** card *number* fp *number* egress wred-queue-control
Tree	wred-queue-control
Description	Commands in this context configure the aggregate Weighted Random Early Detection (WRED) queue options for all WRED queues on an egress forwarding plane.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the WRED queue control function
Context	**configure** card *number* fp *number* egress wred-queue-control admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1

Description	This command defines the percentage of buffers to set aside for WRED queue buffer pools.
Range	0.01 to 99.99
Units	percent
Default	25.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reserved-cbs *decimal-number*

Synopsis	Buffers for queues operating within CBS thresholds
Context	**configure** card *number* fp *number* egress wred-queue-control reserved-cbs *decimal-number*
Tree	reserved-cbs
Description	This command specifies the percentage of buffers within the WRED mega-pool to set aside for WRED queues operating within the configured CBS thresholds. The forwarding plane protects against WRED queue buffer starvation by setting aside a portion of the buffers within the WRED mega-pool. This threshold defines when a WRED queue requests buffers from the reserved portion of the WRED mega-pool and when it starts requesting buffers from the shared portion of the mega-pool. With proper oversubscription provisioning, a seldom active queue is not denied a buffer from the mega-pool when the shared portion of the mega-pool is congested.
Range	0.01 to 99.99
Units	percent
Default	25.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fp-resource-policy *reference*

WARNING:
Modifying this element resets the associated cards/XIOMs/MDAs for the new value to take effect. On the 7750 SR-1, the configuration must be saved and the router must be rebooted for the new value to take effect.

Synopsis	Resource policy to manage resources on the FP
Context	**configure** card *number* fp *number* fp-resource-policy *reference*
Tree	fp-resource-policy
Description	This command configures an FP resource policy used to manage resources on a forwarding plane that is FP4-based and later. The system creates a default policy that applies to all FP4 and later FPs. If an FP resource policy is removed from an FP, the system automatically applies the default policy to that FP. The system prevents the modification or deletion of the default policy, and the deletion of any user-created policy that is applied to an FP.
Reference	**configure** qos fp-resource-policy *fp-resource-policy-name*
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

hi-bw-mcast-src

Synopsis	Enable the **hi-bw-mcast-src** context
Context	**configure** card *number* fp *number* hi-bw-mcast-src
Tree	hi-bw-mcast-src
Description	Commands in this context configure the attributes to designate the FP as a high-bandwidth IP multicast source, expecting the ingress traffic to include high-bandwidth IP multicast traffic. When configured, the system attempts to allocate a dedicated multicast switch fabric plane (MSFP) to the forwarding plane. When a group is specified, all FPs in the group share the same MSFP.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS

alarm *boolean*

Synopsis	Raise an alarm when multiple traffic taps share a plane
Context	**configure** card *number* fp *number* hi-bw-mcast-src alarm *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	alarm
Description	When configured to **true**, the router generates an event if the MDA must share an MSFP with another MDA in a different group. MDAs within the same group that share an MSFP do not generate an event. Additionally, if a failure occurs during normal operation or resources are removed, the system generates an event if it cannot maintain separation of MSFPs for the MDAs. When configured to **false**, the router does not generate events.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS

default-paths-only *boolean*

Synopsis	Allocate the default paths to dedicated MSFPs
Context	**configure** card *number* fp *number* hi-bw-mcast-src default-paths-only *boolean*
Tree	default-paths-only
Description	When configured to **true**, the system only attempts to allocate the two default paths (one high priority and one low priority) to dedicated MSFPs. When configured to **false**, the default path allocation is disabled.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS

group *number*

Synopsis	Logical MSFP group for the MDA

max-rate *(number | keyword)*

Synopsis Maximum rate override

Context **configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-control-policy overrides max-rate *(number | keyword)*

Tree max-rate

Description This command defines the PIR leaky bucket decrement rate of the parent policer. Each time you apply the policer control policy to a SAP or subscriber instance a parent policer is created. Packets not discarded by the child policer associated with the SAP or subscriber instance are evaluated against the leaky bucket of the parent policer.

For each packet, the system first decrements the bucket by the correct amount based on the decrement rate to derive the current bucket depth. The system compares the current depth to one of two discard thresholds associated with the packet. The first discard threshold is applied if the Fair Information Rate (FIR) leaky bucket of the child policer is in the confirming state. The second discard threshold is applied if the FIR leaky bucket of the child policer is in the exceed state.

Only one of the two thresholds is applied per packet. If the current depth of the parent policer PIR bucket is less than the threshold value, the parent PIR bucket is in the conform state for that particular packet. If the depth is equal to or greater than the applied threshold, the bucket is in the violate state for the packet.

If the result is conform, the bucket depth is increased by the size of the packet (plus or minus the per-packet offset setting in the child policer) and the parent policer does not discard the packet. If the result is violate, the bucket depth is not increased and the parent policer discards the packet. When the parent policer discards a packet, the bucket depth increases (PIR, CIR, and FIR) in the parent policer are canceled. This prevents packets that the parent policer discards from consuming the PIR, CIR, and FIR bandwidth of the child policers.

Range 1 to 2000000000

Description	Commands in this context configure specific overrides to one or more policers created on the SAP through SAP ingress QoS policies.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policer [policer-id] *reference*

Synopsis	Enter the **policer** list instance
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference*
Tree	policer
Description	Commands in this context create, modify, or delete a policer. Policers are created and used in a similar manner to queues. Unlike queues that have dedicated counters, policers allow various stat-mode settings that define the counters to be associated with the policer. Packet byte offset provides a policer with the ability to modify the size of each packet based on a defined number of bytes. All policers must be created within the QoS policies. After a policer is created, it cannot be deleted from the QoS policy unless all forwarding classes mapped to the policer are first moved to other policers or queues. The system allows a policer to be created on a SAP QoS policy regardless of the ability to support policers on objects where the policy is currently applied. The system only scans the current objects for policer support and sufficient resources to create the policer when a forwarding class is first mapped to the policer ID. If the policer cannot be created because one or more instances of the policy do not support policing or have insufficient resources to create the policer, the forwarding class mapping fails.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cbs *(number | keyword)*

Synopsis	CBS tolerance allowed by the policer
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* cbs *(number | keyword)*
Tree	cbs
Description	This command configures the CIR leaky bucket exceed threshold of the policer. If the forwarding rate of the policer is equal to or less than the defined CIR, the CIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the forwarding rate increases beyond the profiling rate, the threshold caps the amount of data allowed to be in-profile above the rate.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs *(number | keyword)*

Synopsis	Maximum burst tolerance allowed by the policer
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* mbs *(number | keyword)*
Tree	mbs
Description	This command configures the PIR leaky bucket violate threshold of the policer. Ingress, trusted in-profile packets and untrusted high priority packets use the high priority violate threshold and trusted out-of-profile. Untrusted low priority packets use the low priority violate threshold. If the offered rate of the policer is equal to or less than the defined rate, the PIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the offered rate increases beyond the metering rate, the threshold caps the amount of data allowed above the rate. The low priority violate threshold provides a smaller burst size for the lower priority traffic associated with the policer. Because all lower priority traffic is discarded at the lower burst tolerance size, the remaining burst tolerance is available for higher priority traffic.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1

packet-byte-offset *number*

Synopsis Packet size adjustment

Context **configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* packet-byte-offset *number*

Tree packet-byte-offset

Description This command modifies the size of each packet handled by the policer by adding or subtracting a number of bytes. The actual packet size is not modified; only the size used to determine the bucket depth impact is changed.

Use this command to add downstream frame encapsulation or remove portions of packet headers.

When child policers add to or subtract from the packet size, the minimum threshold separation value of the parent policer must be modified by the same amount.

Range -32 to 31

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

rate

Synopsis Enter the **rate** context

Context **configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* rate

Tree rate

Description Commands in this context configure the metering and optional profiling rates of the policer.

The metering rate is used by the system to configure the PIR leaky bucket decrement rate and the profiling rate configures the CIR leaky bucket decrement rate. The decrement function empties the bucket; packets applied to the bucket attempt to fill it based on its packet size. If the bucket fills faster than the rate that it empties, the bucket depth eventually reaches its exceeded (CIR) or violate (PIR) threshold.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir *(number | keyword)*

Synopsis CIR for the policer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* rate cir *(number | keyword)*
Tree	cir
Description	This command overrides the default CIR rate of the policer. When the policer is first created, the profiling rate defaults to 0 kb/s. When **max** is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the CIR used is equivalent to maximum.
Range	0 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pir *(number | keyword)*

Synopsis	PIR for the policer
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* rate pir *(number | keyword)*
Tree	pir
Description	This command configures the metering rate of the policer for the PIR leaky bucket. When the policer is first created, the metering rate defaults to max. When **max** is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the PIR used is equivalent to maximum.
Range	1 to 2000000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

stat-mode *keyword*

Synopsis	Stat mode for the policer
Context	**configure** card *number* fp *number* ingress access queue-group *reference* instance-id *number* policer-overrides policer *reference* stat-mode *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	stat-mode
Description	This command specifies the forwarding plane counters that allow offered, output, and discard accounting to occur for the policer.
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

dist-cpu-protection

Synopsis	Enter the **dist-cpu-protection** context
Context	**configure** card *number* fp *number* ingress dist-cpu-protection
Tree	dist-cpu-protection
Description	Commands in this context configure the distributed CPU protection forwarding plane settings.
Introduced	21.2.R1
Platforms	All

dynamic-enforcement-policer-pool *number*

Synopsis	Number of policers reserved as enforcement policers use
Context	**configure** card *number* fp *number* ingress dist-cpu-protection dynamic-enforcement-policer-pool *number*
Tree	dynamic-enforcement-policer-pool
Description	This command reserves a set of policers for use as dynamic enforcement policers for the Distributed CPU Protection (DCP) feature. Policers are allocated from this pool and instantiated as per-object per-protocol dynamic enforcement policers after a local monitor is triggered for an object, such as a SAP or network interface. A change to this configured value automatically clears the high water mark, timestamp, and failed allocation count. If the command is configured to a value below the currently used or allocated number, all dynamic policers are returned to the free pool (and traffic returns to the local monitors).
Range	1000 to 32000
Introduced	21.2.R1
Platforms	All

total-pool-in-use *decimal-number*

Synopsis	Alarm threshold for usage of total buffer pool
Context	**configure** card *number* fp *number* ingress network pool *named-item* monitor-pool-depth alarm-thresholds total-pool-in-use *decimal-number*
Tree	total-pool-in-use
Description	This command configures the total pool in-use threshold. A tmnxTotalPoolUseThresh Excd trap is generated when the total pool usage exceeds this threshold percentage. When the usage returns below the threshold percentage, the tmnxTotalPoolUseThresh NotExcd trap is generated.
Range	0.00 to 100.00
Units	centipercent
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

red-alarm-threshold *number*

Synopsis	Red alarm threshold allowed on oversubscription
Context	**configure** card *number* fp *number* ingress network pool *named-item* red-alarm-threshold *number*
Tree	red-alarm-threshold
Description	This command configures the threshold for the red alarm on oversubscription. If both amber and red alarm thresholds are configured, the red alarm threshold must be equal to or exceed the amber alarm threshold.
Range	1 to 1000
Units	percent
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

resv-cbs

Synopsis	Enter the **resv-cbs** context
Context	**configure** card *number* fp *number* ingress network pool *named-item* resv-cbs
Tree	resv-cbs
Description	Commands in this context specify the pool buffer settings. The commands do not set aside buffers within the buffer pool for CBS reservation. The CBS value per queue only determines the point at which enqueuing packets are subject

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

to a RED slope. CBS oversubscription can result in a queue operating within its CBS configuration and still being unable to enqueue a packet due to unavailable buffers.

Introduced 19.5.R1

Platforms All

amber-alarm-action

Synopsis Enter the **amber-alarm-action** context

Context **configure** card *number* fp *number* ingress network pool *named-item* resv-cbs amber-alarm-action

Tree amber-alarm-action

Description Commands in this context specify settings for the reserved Committed Burst Size (CBS) and step change when the amber alert threshold is exceeded.

The reserved CBS defines the amount of buffer space within the pool that is not considered shared.

Introduced 19.5.R1

Platforms All

max *number*

Synopsis Maximum reserved CBS size of the pool

Context **configure** card *number* fp *number* ingress network pool *named-item* resv-cbs amber-alarm-action max *number*

Tree max

Description This command configures the maximum reserved CBS size of the pool.

To enable adaptive CBS sizing, this command and the **step** command must be configured.

The value for this command must not be more than the **configure card fp ingress network pool resv-cbs cbs** command.

When the **configure card fp ingress network pool resv-cbs cbs** command is set to a value of zero (0), adaptive CBS sizing is disabled.

Range 1 to 100

max-rate *(number | keyword)*

Synopsis	Maximum rate override

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context **configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-control-policy overrides max-rate *(number | keyword)*

Tree max-rate

Description This command defines the PIR leaky bucket decrement rate of the parent policer. Each time you apply the policer control policy to a SAP or subscriber instance a parent policer is created. Packets not discarded by the child policer associated with the SAP or subscriber instance are evaluated against the leaky bucket of the parent policer.

For each packet, the system first decrements the bucket by the correct amount based on the decrement rate to derive the current bucket depth. The system compares the current depth to one of two discard thresholds associated with the packet. The first discard threshold is applied if the Fair Information Rate (FIR) leaky bucket of the child policer is in the confirming state. The second discard threshold is applied if the FIR leaky bucket of the child policer is in the exceed state.

Only one of the two thresholds is applied per packet. If the current depth of the parent policer PIR bucket is less than the threshold value, the parent PIR bucket is in the conform state for that particular packet. If the depth is equal to or greater than the applied threshold, the bucket is in the violate state for the packet.

If the result is conform, the bucket depth is increased by the size of the packet (plus or minus the per-packet offset setting in the child policer) and the parent policer does not discard the packet. If the result is violate, the bucket depth is not increased and the parent policer discards the packet. When the parent policer discards a packet, the bucket depth increases (PIR, CIR, and FIR) in the parent policer are canceled. This prevents packets that the parent policer discards from consuming the PIR, CIR, and FIR bandwidth of the child policers.

Range 1 to 2000000000

Units kilobps

Options max

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

priority-mbs-thresholds

Synopsis Enter the **priority-mbs-thresholds** context

Context **configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-control-policy overrides priority-mbs-thresholds

Tree priority-mbs-thresholds

Description Commands in this context configure settings to derive the shared portion and fair portion for each priority level.

The system uses the shared portion and fair portion values to calculate the discard-unfair and discard-all MBS thresholds that enforce priority-sensitive rate-based discards within the root arbiter parent policer.

Introduced 16.0.R1

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cbs *(number | keyword)*

Synopsis	CBS tolerance allowed by the policer
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* cbs *(number | keyword)*
Tree	cbs
Description	This command configures the CIR leaky bucket exceed threshold of the policer. If the forwarding rate of the policer is equal to or less than the defined CIR, the CIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the forwarding rate increases beyond the profiling rate, the threshold caps the amount of data allowed to be in-profile above the rate.
Range	0 to 268435456
Units	bytes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs *(number | keyword)*

Synopsis	Maximum burst tolerance allowed by the policer
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* mbs *(number | keyword)*
Tree	mbs
Description	This command configures the PIR leaky bucket violate threshold of the policer. Ingress, trusted in-profile packets and untrusted high priority packets use the high priority violate threshold and trusted out-of-profile. Untrusted low priority packets use the low priority violate threshold. If the offered rate of the policer is equal to or less than the defined rate, the PIR bucket depth hovers around the 0 depth, with spikes up to the maximum packet size in the offered load. If the offered rate increases beyond the metering rate, the threshold caps the amount of data allowed above the rate. The low priority violate threshold provides a smaller burst size for the lower priority traffic associated with the policer. Because all lower priority traffic is discarded at the lower burst tolerance size, the remaining burst tolerance is available for higher priority traffic.
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

packet-byte-offset *number*

Synopsis	Packet size adjustment
Context	**configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* packet-byte-offset *number*
Tree	packet-byte-offset
Description	This command modifies the size of each packet handled by the policer by adding or subtracting a number of bytes. The actual packet size is not modified; only the size used to determine the bucket depth impact is changed. Use this command to add downstream frame encapsulation or remove portions of packet headers.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When child policers add to or subtract from the packet size, the minimum threshold separation value of the parent policer must be modified by the same amount.

Range -32 to 31

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

rate

Synopsis Enter the **rate** context

Context **configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* rate

Tree rate

Description Commands in this context configure the metering and optional profiling rates of the policer.

The metering rate is used by the system to configure the PIR leaky bucket decrement rate and the profiling rate configures the CIR leaky bucket decrement rate. The decrement function empties the bucket; packets applied to the bucket attempt to fill it based on its packet size. If the bucket fills faster than the rate that it empties, the bucket depth eventually reaches its exceeded (CIR) or violate (PIR) threshold.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

cir *(number | keyword)*

Synopsis CIR for the policer

Context **configure** card *number* fp *number* ingress network queue-group *reference* instance-id *number* policer-overrides policer *reference* rate cir *(number | keyword)*

Tree cir

Description This command overrides the default CIR rate of the policer.

When the policer is first created, the profiling rate defaults to 0 kb/s.

When **max** is configured, the maximum policer rate used is equal to the maximum capacity of the card that the policer is configured for. If the policer rate is set to a value larger than the maximum rate possible for the card, the CIR used is equivalent to maximum.

Range 0 to 2000000000

Units kilobps

Options max

Introduced 16.0.R1

policy-accounting

Synopsis	Enter the **policy-accounting** context
Context	**configure** card *number* fp *number* ingress policy-accounting
Tree	policy-accounting
Description	Commands in this context configure policy accounting. Use policy accounting to collect statistics about the amount of traffic matching particular routes or to police traffic associated with certain routes as destinations of the traffic.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

classes *number*

Synopsis	Number of accounting classes for the forwarding plane
Context	**configure** card *number* fp *number* ingress policy-accounting classes *number*
Tree	classes
Description	This command specifies the maximum number of source and destination classes that can be instantiated for accounting purposes on the interfaces of a specific card or FP. When unconfigured, resources are not reserved for source or destination classes.
Range	1000 to 128000
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

policers *number*

Synopsis	Number of policer resources for policy accounting
Context	**configure** card *number* fp *number* ingress policy-accounting policers *number*
Tree	policers
Range	1 to 64000

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

ingress-buffer-allocation *decimal-number*

Synopsis	Ingress buffer pool allocation for the forwarding plane
Context	**configure** card *number* fp *number* ingress-buffer-allocation *decimal-number*
Tree	ingress-buffer-allocation
Description	This command configures an ingress buffer allocation for the FP. Ingress buffer allocation applies to user-accessible buffers (total buffers less those reserved for system use). The ingress buffer allocation determines how much of the user-accessible buffers are available for ingress purposes. The remaining buffers are available for egress purposes.
Range	20.00 to 80.00
Units	percent
Default	50.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

init-extract-prio-mode *keyword*

Synopsis	Initial drop priority mode of extracted traffic
Context	**configure** card *number* fp *number* init-extract-prio-mode *keyword*
Tree	init-extract-prio-mode
Description	This command specifies the scheme to select the initial drop priority of extracted control plane traffic. The initial drop priority of extracted packets can be either low or high priority. The drop priority can be altered subsequently by mechanisms such as CPU protection. High priority traffic receives preferential treatment in control plane congestion situations over low priority traffic.
Options	uniform, l3-classify
Default	uniform
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

stable-pool-sizing *boolean*

Synopsis	Enable stable pool sizing for the forwarding plane
Context	**configure** card *number* fp *number* stable-pool-sizing *boolean*
Tree	stable-pool-sizing
Description	When configured to **true**, the router provides a stable buffer pool allocation environment for all default port buffer pools on the forwarding plane. This stable environment is provided at the expense of optimal buffer allocation between the various port buffer pools. When configured to **false**, the router disables stable pool sizing on the forwarding plane. Existing buffer pools are resized according to normal pool sizing behavior.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

level *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	License level of the card
Context	**configure** card *number* level *keyword*
Tree	level
Description	This command configures the license level of the card. New generations of cards include variants controlled by hardware and software licensing. For these cards, the license level must be provisioned in addition to the card type. A card cannot become operational unless the provisioned license level matches the license level of the card installed into the slot.The set of license levels varies by card type. The provisioned level controls aspects related to connector provisioning and the consumption of hardware egress user queues and egress policers. Changes to the provisioned license level may be blocked if configuration exists that would not be permitted with the new target license level. If the license level is not specified, the level is set to the highest license level for that card.

threshold *number*

Synopsis	Threshold value for XPL errors
Context	**configure** card *number* mda *number* egress-xpl threshold *number*
Tree	threshold
Description	This command configures the threshold for XPL errors. If the number of XPL errors exceeds the threshold value defined by the **window** *value* command, the MDA is placed in the failed state.
Range	1 to 1000000
Units	xpl errors
Default	1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

window *number*

Synopsis	Time interval to measure XPL error frequency
Context	**configure** card *number* mda *number* egress-xpl window *number*
Tree	window
Description	This command configures the time interval used to measure the frequency of XPL errors for the fail-on-error feature. If the number of XPL errors exceeds the threshold value in defined by this command, the MDA is placed in the Failed state.
Range	1 to 1440
Units	minutes
Default	60
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

event [type] *keyword*

Synopsis	Enter the **event** list instance
Context	**configure** card *number* mda *number* event *keyword*
Tree	event
Description	Commands in this context allow the user to control the action taken when a specific hardware error event is raised against the target MDA. If no event action has been created for a specific event type, the management plane of the router ignores the hardware errors related to that event type.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The log event raised for any event type (such as soft-error or memory-error) is tmnx EqHwEventDetected.

Introduced 19.7.R1

Platforms All

[**type**] *keyword*

Synopsis MDA event type being monitored

Context **configure** card *number* mda *number* event *keyword*

Tree event

Description This command configures the type of event to be acted upon.

- soft-error — Defines the action to take when soft errors are detected on the MDA.
- internal-frame-loss — Provides system detected frame loss in the traffic transiting the MDA.
- memory-error — Provides the user options to handle MDA memory error events on MDAs. This feature is supported on FP2- and FP3-based Ethernet MDAs and IMMs.
- data-link-error — Provides the user options to handle datapath link errors on an MDA.

Options soft-error, internal-frame-loss, memory-error, datapath-link-error

Notes This element is part of a list key.

Introduced 19.7.R1

Platforms All

action *keyword*

Synopsis Action when a specific hardware error event is raised

Context **configure** card *number* mda *number* event *keyword* action *keyword*

Tree action

Description This command defines the action taken when a specific hardware error event is detected on the target MDA.

When no event action is specified for an event type, the hardware errors related to the event type are ignored by the management plane of the router.

Actions include the following:

- log-only — Pass the log event to log management. No other action is taken.
- reset-mda — Reset the MDA.
- fail-mda — Set the operational state of the MDA to Failed. This Failed state persists until the clear mda command is issued (reset) or the MDA is removed and reinserted (re-seated).

Options	none, log-only, reset, fail
Introduced	19.7.R1
Platforms	All

fail-on-error *boolean*

Synopsis	Set operational state to Failed if an error is detected
Context	**configure** card *number* mda *number* fail-on-error *boolean*
Tree	fail-on-error
Description	When configured to **true**, the fail-on-error feature is enabled on the MDA. When a defined rate of egress or ingress XPL errors occur on an MDA within a specified time interval, the MDA is placed in the Failed state. This can force an APS switchover or traffic to be rerouted. The purpose of this feature is to avoid situations where traffic is forced to use a physical link that suffers from errors but is still technically operational. The feature uses values configured in the **configure card mda egress-xpl** and **configure card mda ingress-xpl** contexts. See "Fail-on-error overview" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Troubleshooting Guide* for more information.
Default	false
Introduced	16.0.R1
Platforms	All

Synopsis	MDA type for the slot
Context	**configure** card *number* mda *number* mda-type *keyword*
Tree	mda-type

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description

This command provisions a specific MDA type to the device configuration for the slot. The MDA can be pre-provisioned and an MDA must be provisioned before connectors or ports can be configured.

A maximum of two MDAs can be provisioned on an IOM or XCM. XMAs are provisioned using MDA commands.

A medium severity alarm is generated if an MDA is inserted that does not match the MDA type configured for the slot. This alarm is cleared when the correct MDA is inserted or the configuration is modified. A high severity alarm is raised when an administratively enabled MDA is removed from the chassis. This alarm is cleared if either the correct MDA type is inserted or the configuration is modified. A low severity alarm is issued if an MDA is removed that is administratively disabled.

An MDA can only be provisioned in a slot if the MDA type is allowed in the MDA slot. An error message is generated when an MDA is provisioned in a slot where it is not allowed.

Some MDA hardware can support two different firmware loads. One load includes the base Ethernet functionality, including 10G WAN mode, but does not include 1588 port-based timestamping. The second load includes the base Ethernet functionality and 1588 port-based timestamping, but does not include 10G WAN mode. These are identified as two MDA types that are the same, except for a "-ptp" suffix to indicate the second loadset. A hard reset of the MDA occurs when switching between the two provisioned types.

An alarm is raised if partial or complete MDA failure is detected. The alarm is cleared when the error condition ceases.

New generations of XMAs include variants controlled through hardware and software licensing. For these XMAs, the license level must be provisioned in addition to the MDA type. An XMA cannot become operational unless the provisioned license level matches the license level of the XMA installed into the slot.

The set of license levels varies by MDA type. The provisioned level controls aspects related to connector provisioning and the consumption of hardware egress queues and egress policers. Changes to the provisioned license level may be blocked if configuration that would not be permitted with the new target license level exists. If the license level is not specified, the level is set to the highest license level for that XMA.

Context	**configure** card *number* power-save *boolean*
Tree	power-save
Description	When configured to **true**, the router enables low-power mode on the card that is not in use.
Default	false
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a8, 7750 SR-2e, 7750 SR-3e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

reset-on-recoverable-error *boolean*

Synopsis	Reset card for fatal memory parity error on a Q-chip
Context	**configure** card *number* reset-on-recoverable-error *boolean*
Tree	reset-on-recoverable-error
Description	When configured to **true**, the card is reset when a fatal memory parity error is detected on a Q-chip of the card, regardless of the setting of the **fail-on-error** configuration for the card. When configured to **false**, the recovery action is taken instead of resetting the card.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e

upgrade [upgrade-index] *number*

Synopsis	Enter the **upgrade** list instance
Context	**configure** card *number* upgrade *number*
Tree	upgrade
Description	Commands in this context assign a license level upgrade to the card, XIOM, or XMA. There can be multiple upgrades applied to a card, XIOM, or XMA. The first upgrade must use index 1, and then next index 2, and so on. Also, when removing upgrades, the largest index must be removed first, and then the next largest removed, and so on. The path indicates the starting level and the new level that will apply due to the upgrade. For example, "cr1200g-cr1600g" can be applied to an XMA that is currently at the cr1200g level and after application of the upgrade, the operational level of the XMA will be cr1600g. There must be an upgrade license available for the path specified. Available upgrades can be checked using the **show licensing entitlements** command.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Some upgrades require a hard reset of the card or MDA to take effect. In general, this is required when the Full Duplex bandwidth is being changed.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-1se

[**upgrade-index**] *number*

virtual-scheduler-adjustment

Synopsis	Enter the **virtual-scheduler-adjustment** context
Context	**configure** card *number* virtual-scheduler-adjustment
Tree	virtual-scheduler-adjustment
Description	Commands in this context configure virtual scheduler options. This is applicable to queues and policiers associated to a scheduler.
Introduced	16.0.R1
Platforms	All

internal-scheduler-weight-mode *keyword*

Synopsis	Internal scheduler weight mode
Context	**configure** card *number* virtual-scheduler-adjustment internal-scheduler-weight-mode *keyword*
Tree	internal-scheduler-weight-mode
Description	This command specifies the internal scheduler (tier 0) weight mode for all ingress queues on a LAG on the card on which it is applied.
Options	auto, force-equal, offered-load, capped-offered-load
Default	auto
Introduced	16.0.R1
Platforms	All

interval

Synopsis	Enter the **interval** context
Context	**configure** card *number* virtual-scheduler-adjustment interval
Tree	interval
Introduced	16.0.R1
Platforms	All

rate-calculation-minimum

Synopsis	Enter the **rate-calculation-minimum** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** card *number* virtual-scheduler-adjustment interval rate-calculation-minimum
Tree	rate-calculation-minimum
Description	Commands in this context override the default minimum time that must elapse before a policer or queue's offered rate can be recalculated. A minimum time between offered rate calculations is enforced to both prevent inaccurate estimation of the offered rate and excessive input to the virtual scheduler process. To smooth out rapidly fluctuating offered rates, the system averages the measured offered rate with a window of previously measured offered traffic statistics and knowledge of the time between the samples.
Introduced	16.0.R1
Platforms	All

fast-queue *decimal-number*

Synopsis	Minimum rate calculation time for fast queues
Context	**configure** card *number* virtual-scheduler-adjustment interval rate-calculation-minimum fast-queue *decimal-number*
Tree	fast-queue
Range	0.01 to 1000.00
Units	percent
Default	100.00
Introduced	16.0.R1
Platforms	All

slow-queue *decimal-number*

Synopsis	Minimum rate calculation time for slow queues
Context	**configure** card *number* virtual-scheduler-adjustment interval rate-calculation-minimum slow-queue *decimal-number*
Tree	slow-queue
Range	0.01 to 1000.00
Units	percent
Default	100.00
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

scheduler-run-minimum *decimal-number*

Synopsis	Minimum time of the scheduler run
Context	**configure** card *number* virtual-scheduler-adjustment interval scheduler-run-minimum *decimal-number*
Tree	scheduler-run-minimum
Description	This command overrides the default minimum time that must elapse before a virtual scheduler can redistribute bandwidth based on changes to the offered rates of member policers or queues. A minimum run interval is enforced to manage the number of batched queue changes before reacting to the changed rates. Because the periodic function of determining policer or queue offered rates is performed sequentially, the interval allows the policer and queue rates to be determined before the bandwidth distribution to the policers and queues.
Range	0.01 to 1000.00
Units	percent
Default	100.00
Introduced	16.0.R1
Platforms	All

task-scheduling *decimal-number*

Synopsis	Task scheduling interval
Context	**configure** card *number* virtual-scheduler-adjustment interval task-scheduling *decimal-number*
Tree	task-scheduling
Description	This command overrides the system default time interval for scheduling the hierarchical virtual scheduler task. By default, the system wakes the virtual scheduler task every 50 ms which is equivalent to five 10 ms timer ticks.
Range	0.01 to 1000.00
Units	percent
Default	100.00
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

slow-queue-threshold-rate *number*

Synopsis	Slow queue threshold rate
Context	**configure** card *number* virtual-scheduler-adjustment slow-queue-threshold-rate *number*
Tree	slow-queue-threshold-rate
Description	This command overrides the system default threshold rate used to place policers and queues in the slow queue category. Slow rate policers and queues use a different minimum rate calculation interval time than fast rate queues. The fast rate threshold is derived by multiplying the adjusted slow rate threshold by a factor of 1.5. Configuring a value of zero (0) forces all policers and queues to be treated as fast rate queues.
Range	0 to 1000000
Units	kilobps
Default	1000
Introduced	16.0.R1
Platforms	All

workload-performance

Synopsis	Enter the **workload-performance** context
Context	**configure** card *number* virtual-scheduler-adjustment workload-performance
Tree	workload-performance
Description	Commands in this context configure the CPU workload distribution for tasks on the system.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

manual

Synopsis	Enter the **manual** context
Context	**configure** card *number* virtual-scheduler-adjustment workload-performance manual
Tree	manual
Description	Commands in this context configure the command options to manually control CPU workload distribution.
Introduced	24.10.R1

level *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	License level of the XIOM
Context	**configure** card *number* xiom *string* level *keyword*
Tree	level
Description	This command provisions the license level of the XIOM, which controls aspects related to connector provisioning and consumption of hardware egress queues and policers. An XIOM only becomes operational if the provisioned license level matches the license level of the card installed into the slot. The set of license levels varies by XIOM type. Changes to the provisioned license level may be blocked if a configuration exists that is not permitted with the new target license level. If the license level is not specified, the level is set to the highest license level for the XIOM.

(configured) for that particular slot. An error message or log event is generated if the wrong MDA type is provisioned or inserted.

Options ms6-200gb-cfp2-dco, ms3-200gb-cfp2-dco, ms16-100gb-sfpdd+4-100gb-qsfp28, ms18-100gb-qsfp28, ms4-400gb-qsfpdd+4-100gb-qsfp28, ms24-10/100gb-sfpdd, ms2-400gb-qsfpdd+2-100gb-qsfp28, ms8-100gb-sfpdd+2-100gb-qsfp28, ms16-sdd+4-qsfp28-b, ms8-sdd+2-qsfp28-b, mse24-200g-sfpdd, mse6-800g-cfp2-dco, mse14-800g+4-400g, m36-800g-qsfpdd, mse6-800g-qsfpdd, m36-400g-qsfp112, ms2-100g-qsfp28+2-800g-qsfpdd, ms8-100g-sfp112+2-800g-qsfpdd, ms24-100g-sfp112

Introduced 20.2.R1

Platforms 7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

power-priority-level *number*

Synopsis Power priority level for the XIOM MDA-s

Context **configure** card *number* xiom *string* mda *number* power-priority-level *number*

Tree power-priority-level

Description This command configures the power-priority level for the XIOM MDA-s.

Consider the following suggestions when configuring the power-priority level:

- The lowest number has the highest priority.
- Use the priority numbers from 1 to 100 for modules that are essential for system operation.
- Use the priority numbers from 101 to 200 for non-essential modules.

Range 1 to 200

Default 150

Introduced 20.2.R1

Platforms 7750 SR-1s, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

xiom-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis XIOM type

Context **configure** card *number* xiom *string* xiom-type *keyword*

Tree xiom-type

Description This command associates the XIOM type with the slot.

The XIOM type can be preprovisioned, which means that the XIOM does not have to be installed in the chassis.

An XIOM must be provisioned before an MDA-s, a connector, or a port can be configured. An XIOM can only be provisioned in a slot that is vacant. After an XIOM is provisioned in the slot, no other XIOM can be provisioned (configured) for the slot.

An XIOM can only be provisioned in a slot if the XIOM type is allowed in the slot. An error message is generated if an attempt is made to provision an XIOM type that is not allowed.

If an XIOM is inserted that does not match the configured XIOM type for the slot, then a log event and a facility alarm are raised. The alarm is cleared when the correct XIOM type is installed or the configuration is modified.

A log event and a facility alarm are raised if an administratively enabled XIOM is removed from the chassis. The alarm is cleared when the correct XIOM type is installed or the configuration is modified. A log event is issued when an XIOM is removed that is administratively disabled.

XIOMs are controlled by hardware and software licensing. In addition to the XIOM type, the license level must be provisioned using the **level** command.

Options iom-s-3.0t, iom-s-1.5t, iom2-se-6.0t, iom2-se-3.0t, x2-s36-800g-qsfpdd-6.0t, x2-s36-400g-qsfp112-3.0t

Introduced 20.2.R1

4.10.1 cflowd command descriptions

cflowd

Synopsis	Enable the **cflowd** context
Context	**configure** cflowd
Tree	cflowd
Introduced	16.0.R1
Platforms	All

active-flow-timeout *number*

Synopsis	Maximum time before an active flow is exported
Context	**configure** cflowd active-flow-timeout *number*
Tree	active-flow-timeout
Description	This command configures the maximum time before an active flow is aged out of the active cache. If an individual flow is active for the configured time, the flow is exported and a new flow is created on the next packet sampled for the flow. This value is set for a flow when the flow is initially created in the active cache table and does not change dynamically.
Range	30 to 36000
Units	seconds
Default	1800
Introduced	20.2.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of cflowd
Context	**configure** cflowd admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

analyze-gre-payload *boolean*

Synopsis	Perform cflowd analysis on the inner IP packet
Context	**configure** cflowd analyze-gre-payload *boolean*
Tree	analyze-gre-payload
Default	false
Introduced	16.0.R1
Platforms	All

analyze-l2tp-traffic *boolean*

Synopsis	Analyze the inner IP header of an L2TP packet
Context	**configure** cflowd analyze-l2tp-traffic *boolean*
Tree	analyze-l2tp-traffic
Description	When configured to **true**, cflowd looks for and analyzes the inner IP header of an L2TPv2 frame. L2TPv2 traffic is identified by either the source or destination UDP port numbering that is set to 1701. When configured to **false**, the analysis is not performed.
Default	false
Introduced	19.10.R1
Platforms	All

analyze-srv6-payload *boolean*

Synopsis	Instruct flow data to be based on inner header
Context	**configure** cflowd analyze-srv6-payload *boolean*
Tree	analyze-srv6-payload
Description	When configured to **true**, the system performs cflowd analysis based on the inner header of the SRv6 encapsulated packet.
Default	false
Introduced	25.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

analyze-v4overv6-traffic *boolean*

Synopsis	Analyze the inner IPv4 packet within an IPv6 packet
Context	**configure** cflowd analyze-v4overv6-traffic *boolean*
Tree	analyze-v4overv6-traffic
Description	When configured to **true**, cflowd looks for and analyzes the inner IPv4 header of IPv4overIPv6 frames that include MAP-E as well as DSLite and SAM traffic. When configured to **false**, the analysis is not performed.
Default	false
Introduced	19.10.R1
Platforms	All

cache-size *number*

Synopsis	Maximum number of active flows in the flow cache table
Context	**configure** cflowd cache-size *number*
Tree	cache-size
Range	1000 to 4000000
Units	flows
Introduced	16.0.R1
Platforms	All

collector [ip-address] *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*

Synopsis	Enter the **collector** list instance
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	collector
Max. instances	8
Introduced	16.0.R1
Platforms	All

[**ip-address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the remote cflowd collector host

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	collector
Description	This command specifies the IP address of the remote cflowd collector host to receive the exported cflowd data.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

port *number*

Synopsis	UDP port number of the remote cflowd collector host
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number*
Tree	collector
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the cflowd collector
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

aggregation

Synopsis	Enter the **aggregation** context
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* aggregation
Tree	aggregation

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

as-matrix *boolean*

Synopsis	Base aggregation data based on AS information
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* aggregation as-matrix *boolean*
Tree	as-matrix
Default	false
Introduced	16.0.R1
Platforms	All

destination-prefix *boolean*

Synopsis	Aggregate data based on destination prefix information
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* aggregation destination-prefix *boolean*
Tree	destination-prefix
Default	false
Introduced	16.0.R1
Platforms	All

protocol-port *boolean*

Synopsis	Aggregate flows based on the IP protocol and ports
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* aggregation protocol-port *boolean*
Tree	protocol-port
Default	false
Introduced	16.0.R1
Platforms	All

raw *boolean*

Synopsis	Export flow data without aggregation

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* aggregation raw *boolean*
Tree	raw
Default	false
Introduced	16.0.R1
Platforms	All

source-destination-prefix *boolean*

Synopsis	Aggregate data based on prefix information
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* aggregation source-destination-prefix *boolean*
Tree	source-destination-prefix
Default	false
Introduced	16.0.R1
Platforms	All

source-prefix *boolean*

Synopsis	Aggregate flows based on the source prefix information
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* aggregation source-prefix *boolean*
Tree	source-prefix
Default	false
Introduced	16.0.R1
Platforms	All

autonomous-system-type *keyword*

Synopsis	Basis of the AS information included in flow data
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* autonomous-system-type *keyword*
Tree	autonomous-system-type
Options	origin, peer
Default	origin
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

description *description*

Synopsis	Text description
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

export-filter

Synopsis	Enter the **export-filter** context
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter
Tree	export-filter
Description	Commands in this context configure the export filters that control which flows are sent to the Cflowd Collector.
Introduced	16.0.R1
Platforms	All

family

Synopsis	Enter the **family** context
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter family
Tree	family
Description	Commands in this context configure the address families for the flow types prevented from going to the associated cflowd collector.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv4 *boolean*

Synopsis	Prevent IPv4 flow data from going to collector
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter family ipv4 *boolean*
Tree	ipv4
Description	When configured to **true**, the router prevents IPv4 flow data from going to the associated cflowd collector. Cflowd collector version 9 or 10 must be configured to filter the IPv4 flow data. When configured to **false**, the router allows IPv4 flow data to go to the associated cflowd collector.
Default	false
Introduced	16.0.R1
Platforms	All

ipv6 *boolean*

Synopsis	Prevent IPv6 flow data from going to collector
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter family ipv6 *boolean*
Tree	ipv6
Description	When configured to **true**, the router prevents IPv6 flow data from going to the associated cflowd collector. Cflowd collector version 9 or 10 must be configured to filter the IPv6 flow data. When configured to **false**, the router allows IPv6 flow data to go to the associated cflowd collector.
Default	false
Introduced	16.0.R1
Platforms	All

l2-ip *boolean*

Synopsis	Prevent Layer 2 IP flow data from going to collector
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter family l2-ip *boolean*
Tree	l2-ip

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router prevents Layer 2 IP flow data from going to the cflowd associated collector. Cflowd collector version 10 must be configured to filter the Layer 2 IP flow data. When configured to **false**, the router allows the Layer 2 IP flow data to go to the associated cflowd collector.
Default	false
Introduced	16.0.R1
Platforms	All

mcast-ipv4 *boolean*

Synopsis	Prevent multicast IPv4 data from going to the collector
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter family mcast-ipv4 *boolean*
Tree	mcast-ipv4
Description	When configured to **true**, the router prevents multicast IPv4 flow data from going to the associated cflowd collector. Cflowd collector version 9 or 10 must be configured to filter the multicast IPv4 flow data. When configured to **false**, the router allows multicast IPv4 flow data to go to the associated cflowd collector.
Default	false
Introduced	16.0.R1
Platforms	All

mcast-ipv6 *boolean*

Synopsis	Prevent multicast IPv6 data from going to collector
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter family mcast-ipv6 *boolean*
Tree	mcast-ipv6
Description	When configured to **true**, the router prevents multicast IPv6 flow data from going to the associated cflowd collector. Cflowd collector version 9 or 10 must be configured to filter multicast IPv6 flow data. When configured to **false**, the router allows multicast IPv6 flow data to go to the associated cflowd collector.
Default	false
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mpls *boolean*

Synopsis	Prevent MPLS flow data from going to collector
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter family mpls *boolean*
Tree	mpls
Description	When configured to **true**, the router prevents MPLS flow data from going to the associated cflowd collector. Cflowd collector version 9 or 10 must be configured to filter MPLS flow data. When configured to **false**, the router allows MPLS flow data to go to the associated cflowd collector.
Default	false
Introduced	16.0.R1
Platforms	All

non-ip *boolean*

Synopsis	Prevent non-IP flow data from going to collector
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter family non-ip *boolean*
Tree	non-ip
Description	When configured to **true**, the router prevents Layer 2 and MPLS carrying non-IP flow data from going to the associated cflowd collector. Collector version 10 must be configured to filter the non-IP address family flow type. When configured to **false**, the router allows Layer 2 and MPLS carrying non-IP flow data to go to the associated cflowd collector.
Default	false
Introduced	24.7.R1
Platforms	All

interface-list

Synopsis	Enter the **interface-list** context
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter interface-list
Tree	interface-list
Description	Commands in this context configure the match conditions for the interface that control which flow data is exported to the associated Cflowd Collector.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	All

router [router-name] *reference* interface-name *reference*

Synopsis	Enter the **router** list instance
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter interface-list router *reference* interface-name *reference*
Tree	router
Description	Commands in this context configure the interface the router uses to send ingress sampled data flows to the associated Cflowd Collector.
Introduced	16.0.R4
Platforms	All

[**router-name**] *reference*

Synopsis	Administrative router name
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter interface-list router *reference* interface-name *reference*
Tree	router
Reference	**configure** router *named-item-64*
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

interface-name *reference*

Synopsis	Name for the router to the service interface or SAP
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter interface-list router *reference* interface-name *reference*
Tree	router
Reference	**configure** router *named-item-64* interface *interface-name*
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

service-name *reference*

Synopsis	Administrative service name
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter interface-list service vprn-network-interface service-name *reference* network-interface-name *reference*
Tree	vprn-network-interface
Reference	**configure** service vprn *service-name*
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

network-interface-name *reference*

Synopsis	Network interface name
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter interface-list service vprn-network-interface service-name *reference* network-interface-name *reference*
Tree	vprn-network-interface
Description	This command specifies the network interface name. Interface names must be unique within the group of defined IP interfaces for the **configure router interface** and **configure service ies interface** commands. An interface name cannot be in the form of an IP address. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes and must start with a letter.
Reference	**configure** service vprn *service-name* network-interface *interface-name*
Notes	This element is part of a list key.

Introduced	16.0.R4
Platforms	All

direction *keyword*

Synopsis	Flow match condition direction for the export filter
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter interface-list service vprn-network-interface service-name *reference* network-interface-name *reference* direction *keyword*
Tree	direction
Description	This command configures the direction of the flows as a match condition for the associated export filter. The router only sends flows that match the specified direction to the associated Cflowd Collector.
Options	ingress, egress, both
Default	both
Introduced	23.10.R1
Platforms	All

router [router-instance] *string*

Synopsis	Add a list entry for **router**
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter router *string*
Tree	router
Description	This command adds an entry to the list of router instances that can send flow data to the associated Cflowd Collector.
Introduced	16.0.R1
Platforms	All

[**router-instance**] *string*

Synopsis	Router instance name
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* export-filter router *string*
Tree	router
Description	This command specifies the router instance name. Only "Base" is supported.
Notes	This element is part of a list key.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

router-instance *string*

Synopsis	Router or service name
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* router-instance *string*
Tree	router-instance
Description	This command specifies the routing instance used to route traffic to the associated collector IP address. The "Base" routing instance is the fallback if no route is found. No fallback mechanism is supported for "Base" and "VPRN".
Default	management
Introduced	16.0.R1
Platforms	All

template-set *keyword*

Synopsis	Templates sent to the collector
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* template-set *keyword*
Tree	template-set
Description	This command specifies the set of templates sent to the collector when using cflowd Version 9 or Version 10.
Options	not-applicable, basic, mpls-ip, l2-ip, mpls-transport, compact, fastpath
Introduced	16.0.R1
Platforms	All

version *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Flow data collector version
Context	**configure** cflowd collector *(ipv4-address-no-zone | ipv6-address-no-zone)* port *number* version *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	version
Range	5 | 8 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

enhanced-distribution *boolean*

Synopsis	Include ingress port ID in hashing algorithm for cflowd
Context	**configure** cflowd enhanced-distribution *boolean*
Tree	enhanced-distribution
Default	false
Introduced	16.0.R1
Platforms	7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

export-mode *keyword*

Synopsis	Export mode for flow data
Context	**configure** cflowd export-mode *keyword*
Tree	export-mode
Options	automatic, manual
Default	automatic
Introduced	16.0.R1
Platforms	All

inactive-flow-timeout *number*

Synopsis	Time without matching packet before flow is inactive
Context	**configure** cflowd inactive-flow-timeout *number*
Tree	inactive-flow-timeout
Description	This command configures the time interval that must elapse without a packet matching a flow before the flow is considered inactive. This value is set for a flow when the flow is initially created in the active cache table and does not change dynamically.
Range	10 to 600

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Default	15
Introduced	20.2.R1
Platforms	All

inband-collector-export-only *boolean*

Synopsis	Export the traffic to all collectors only via in-band interfaces
Context	**configure** cflowd inband-collector-export-only *boolean*
Tree	inband-collector-export-only
Default	false
Introduced	16.0.R1
Platforms	All

overflow *number*

Synopsis	Percentage of entries to remove from Cflowd cache when the maximum number of entries is exceeded
Context	**configure** cflowd overflow *number*
Tree	overflow
Range	1 to 50
Units	percent
Default	1
Introduced	16.0.R1
Platforms	All

sample-profile [profile-id] *number*

Synopsis	Enter the **sample-profile** list instance
Context	**configure** cflowd sample-profile *number*
Tree	sample-profile
Description	Commands in this context create and configure sampling options.
Max. instances	5
Introduced	19.5.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

[**profile-id**] *number*

Synopsis	Sample profile ID
Context	**configure** cflowd sample-profile *number*
Tree	sample-profile
Range	1 to 5
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

export-ie315 *boolean*

Synopsis	Enable reporting on sample packets using IE315 format
Context	**configure** cflowd sample-profile *number* export-ie315 *boolean*
Tree	export-ie315
Default	false
Introduced	25.7.R1
Platforms	All

metering-process *keyword*

Synopsis	Metering process for samples taken
Context	**configure** cflowd sample-profile *number* metering-process *keyword*
Tree	metering-process
Description	This command specifies the type of metering process to use for the samples taken from the associated interfaces.
Options	standard, fp-accelerated
Default	standard
Introduced	21.10.R1
Platforms	7750 SR-7s, 7750 SR-14s, 7950 XRS-20e

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sample-rate *number*

Synopsis	Cflowd sampling rate for sample profile ID
Context	**configure** cflowd sample-profile *number* sample-rate *number*
Tree	sample-rate
Description	This command defines the cflowd sampling rate for the sample profile ID. The sample rate indicates that the associated interface samples 1 in N packets for cflowd analysis. You can only associate one rate profile below 1:256 with a specific IOM, IMM, or XMA.
Range	1 to 60000
Default	1000
Introduced	19.5.R1
Platforms	All

slice-selection *keyword*

Synopsis	Cflowd slice selection for sample profile ID
Context	**configure** cflowd sample-profile *number* slice-selection *keyword*
Tree	slice-selection
Description	This command configures the slice selection method for this sample profile. standard - standard slice selection, 128 bytes extended - extended slice selection, 256 bytes
Options	standard, full, extended
Default	standard
Introduced	25.7.R1
Platforms	All

template-retransmit *number*

Synopsis	Time to resend template information
Context	**configure** cflowd template-retransmit *number*
Tree	template-retransmit
Range	10 to 600
Units	seconds
Default	600

4.13.1 debug command descriptions

debug

Synopsis	Configure application or protocol tracing
Context	debug
Tree	debug
Description	Commands in this context enable detailed debugging information for various protocols and router functions.
Introduced	21.5.R1
Platforms	All

aaa

Synopsis	Enter the **aaa** context
Context	debug aaa
Tree	aaa
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

diameter

Synopsis	Enter the **diameter** context
Context	debug aaa diameter
Tree	diameter
Description	Commands in this context configure Diameter Base parameters.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

application

Synopsis	Enter the **application** context
Context	debug aaa diameter application
Tree	application

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure debugging for Diameter session-aware application messages and application message processing failures, for example, in the case of an unknown Diameter session ID.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failures *boolean*

Synopsis	Debug Diameter application failures
Context	debug aaa diameter application failures *boolean*
Tree	failures
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy [name] *named-item*

Synopsis	Enter the **policy** list instance
Context	debug aaa diameter application policy *named-item*
Tree	policy
Max. instances	32
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Diameter application policy name
Context	debug aaa diameter application policy *named-item*
Tree	policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

failures *boolean*

Synopsis	Debug Diameter application failures
Context	debug aaa diameter application policy *named-item* failures *boolean*
Tree	failures
Default	true
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

messages *boolean*

Synopsis	Debug Diameter application messages
Context	debug aaa diameter application policy *named-item* messages *boolean*
Tree	messages
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

node [origin-host] *diam-fqdn*

Synopsis	Enter the **node** list instance
Context	debug aaa diameter node *diam-fqdn*
Tree	node
Max. instances	32
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**origin-host**] *diam-fqdn*

Synopsis	Origin host of the Diameter node
Context	debug aaa diameter node *diam-fqdn*
Tree	node
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	'diam-fqdn' must be letters, digits, hyphen or dot (e.g. host.example.com)
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failures *boolean*

Synopsis	Debug Diameter node failures
Context	debug aaa diameter node *diam-fqdn* failures *boolean*
Tree	failures
Description	When configured to **true**, the system debugs Diameter node-level failures that occur before the peer is determined. For example, when no route for a message is found in the realm routing table.
Default	true
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer [index] *number*

Synopsis	Enter the **peer** list instance
Context	debug aaa diameter node *diam-fqdn* peer *number*
Tree	peer
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**index**] *number*

Synopsis	Index of the peer in the Diameter node
Context	debug aaa diameter node *diam-fqdn* peer *number*
Tree	peer
Range	1 to 5
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failures *boolean*

Synopsis	Debug Diameter peer failures
Context	debug aaa diameter node *diam-fqdn* peer *number* failures *boolean*
Tree	failures
Default	true
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

messages *boolean*

Synopsis	Debug Diameter peer messages
Context	debug aaa diameter node *diam-fqdn* peer *number* messages *boolean*
Tree	messages
Description	When configured to **true**, the system debugs peer-level messages that are required to bring up, maintain, and tear down a peering connection, for example, Capabilities Exchange and Device Watchdog messages.
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

relayed-messages *boolean*

Synopsis	Debug relayed Diameter messages
Context	debug aaa diameter node *diam-fqdn* relayed-messages *boolean*
Tree	relayed-messages
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

call-trace

Synopsis	Enter the **call-trace** context
Context	debug call-trace
Tree	call-trace

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe

Synopsis	Enter the **ipoe** context
Context	debug call-trace ipoe
Tree	ipoe
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trace [name] *string*

Synopsis	Enter the **trace** list instance
Context	debug call-trace ipoe trace *string*
Tree	trace
Max. instances	50
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Unique trace name
Context	debug call-trace ipoe trace *string*
Tree	trace
String length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Circuit ID of the sessions to trace
Context	debug call-trace ipoe trace *string* circuit-id *string*
Tree	circuit-id
Description	This command configures the circuit ID of the sessions to trace. The circuit ID filter is ignored if it is not part of the IPoE session key.
String length	1 to 255
Notes	The following elements are part of a choice: **circuit-id** or **remote-id**.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MAC address of the sessions to trace
Context	debug call-trace ipoe trace *string* mac *string*
Tree	mac
String length	1 to 17
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-jobs *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maximum number of trace jobs
Context	debug call-trace ipoe trace *string* max-jobs *number*

Introduced	24.3.R1
Platforms	All

auto-crl-update [ca-profile-name] *named-item*

Synopsis	Add a list entry for **auto-crl-update**
Context	debug certificate auto-crl-update *named-item*
Tree	auto-crl-update
Max. instances	128
Introduced	24.3.R1
Platforms	All

[**ca-profile-name**] *named-item*

Synopsis	Certificate Authority (CA) profile name
Context	debug certificate auto-crl-update *named-item*
Tree	auto-crl-update
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	All

cmpv2 [ca-profile-name] *named-item*

Synopsis	Add a list entry for **cmpv2**
Context	debug certificate cmpv2 *named-item*
Tree	cmpv2
Description	This command adds a list entry for a CA profile to debug Certificate Management Protocol version 2 (CMPv2).
Max. instances	128
Introduced	24.3.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**ca-profile-name**] *named-item*

Synopsis	CA profile name
Context	debug certificate cmpv2 *named-item*
Tree	cmpv2
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	All

est [est-profile-name] *named-item*

Synopsis	Add a list entry for **est**
Context	debug certificate est *named-item*
Tree	est
Description	This command adds a list entry for debugging Enrollment over Secure Transport Protocol (EST).
Max. instances	128
Introduced	24.3.R1
Platforms	All

[**est-profile-name**] *named-item*

Synopsis	EST profile name
Context	debug certificate est *named-item*
Tree	est
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	All

© 2026 Nokia.

ocsp [ca-profile-name] *named-item*

Synopsis	Add a list entry for **ocsp**
Context	debug certificate ocsp *named-item*
Tree	ocsp
Description	This command adds a list entry for a CA profile to debug the Online Certificate Status Protocol (OCSP).
Max. instances	128
Introduced	24.3.R1
Platforms	All

[**ca-profile-name**] *named-item*

Synopsis	CA profile name
Context	debug certificate ocsp *named-item*
Tree	ocsp
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	All

ipsec

Synopsis	Enter the **ipsec** context
Context	debug ipsec
Tree	ipsec
Description	Commands in this context configure debugging for IP security (IPsec) functionality.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

certificate [filename] *pki-file-name*

Synopsis	Add a list entry for **certificate**

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug ipsec certificate *pki-file-name*
Tree	certificate
Description	This command adds a list entry for debugging certificate chain computation in the certificate profile.
Max. instances	200
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**filename**] *pki-file-name*

Synopsis	Imported IPsec certificate filename
Context	debug ipsec certificate *pki-file-name*
Tree	certificate
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-db [name] *named-item*

Synopsis	Add a list entry for **client-db**
Context	debug ipsec client-db *named-item*
Tree	client-db
Description	This command adds a list entry for debugging the specified IPsec client database.
Max. instances	1000
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	IPsec client database name
Context	debug ipsec client-db *named-item*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	client-db
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gateway [name] *named-item*

Synopsis	Enter the **gateway** list instance
Context	debug ipsec gateway *named-item*
Tree	gateway
Description	Commands in this context configure debugging for dynamic IPsec tunnels that terminate on the specified IPsec gateway. Specify the tunnel to debug using either its source address or source subnet, by using the **debug ipsec gateway tunnel** command. If a subnet is specified, the system enables debugging for all tunnels with source addresses in the specified subnet.
Max. instances	16
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	IPsec gateway name
Context	debug ipsec gateway *named-item*
Tree	gateway
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

idi [idi-regex] *display-string*

Synopsis	Enter the **idi** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug ipsec gateway *named-item* idi *display-string*
Tree	idi
Description	Commands in this context configure debugging for the specified IDi.
Max. instances	1
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**idi-regex**] *display-string*

Synopsis	Regular expression pattern used to match the peer IDi
Context	debug ipsec gateway *named-item* idi *display-string*
Tree	idi
String length	1 to 255
Notes	This element is part of a list key.
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2tp

Synopsis	Enter the **l2tp** context
Context	debug l2tp
Tree	l2tp
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

predictable-id-assignment *boolean*

Synopsis	Enable predictable tunnel and session ID assignment
Context	debug l2tp predictable-id-assignment *boolean*
Tree	predictable-id-assignment
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lag [lag-name] *lag-interface*

Synopsis	Enter the **lag** list instance
Context	debug lag *lag-interface*
Tree	lag
Description	Commands in this context configure debugging for Link Aggregation Group (LAG).
Introduced	22.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

[**lag-name**] *lag-interface*

Synopsis	LAG name
Context	debug lag *lag-interface*
Tree	lag
Description	This command specifies the LAG name. In model-driven interfaces, the LAG name is used for configuration references and **show** commands. A service provider or administrator can use the defined LAG name to identify and manage LAGs within the SR OS platforms. The LAG name must always start with "lag-".
String length	1 to 27
String format	'lag-interface' must be lag- followed by number 1-800 or up to 23 chars (e.g. lag-1 or lag-my-lag)
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	All

adaptive-loadbalancing *boolean*

Synopsis	Enable debugging for adaptive load balancing
Context	debug lag *lag-interface* adaptive-loadbalancing *boolean*
Tree	adaptive-loadbalancing
Default	false
Introduced	25.10.R1
Platforms	All

bfd *boolean*

Synopsis	Enable debugging for BFD
Context	debug lag *lag-interface* bfd *boolean*
Tree	bfd
Default	false
Introduced	22.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

config *boolean*

Synopsis	Enable debugging for configuration changes
Context	debug lag *lag-interface* config *boolean*
Tree	config
Default	false
Introduced	22.7.R1
Platforms	All

iom-updates *boolean*

Synopsis	Enable debugging for IOM updates
Context	debug lag *lag-interface* iom-updates *boolean*
Tree	iom-updates
Default	false
Introduced	22.7.R1
Platforms	All

lacp-packets *boolean*

Synopsis	Enable debugging for LACP packets
Context	debug lag *lag-interface* lacp-packets *boolean*
Tree	lacp-packets
Default	false
Introduced	22.7.R1
Platforms	All

multi-chassis *boolean*

Synopsis	Enable debugging for multi-chassis LAG
Context	debug lag *lag-interface* multi-chassis *boolean*
Tree	multi-chassis
Default	false

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router *string*

Synopsis	Inside router instance name
Context	debug nat large-scale nat44 subscriber inside-router *string* ip-address *ipv4-unicast-address*
Tree	subscriber
MD-CLI default	Base
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-address *ipv4-unicast-address*

Synopsis	Inside IPv4 address of the NAT44 subscriber
Context	debug nat large-scale nat44 subscriber inside-router *string* ip-address *ipv4-unicast-address*
Tree	subscriber
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat64

Synopsis	Enter the **nat64** context
Context	debug nat large-scale nat64
Tree	nat64
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

subscriber inside-router *string* ipv6-prefix *ipv6-prefix*

Synopsis	Add a list entry for **subscriber**
Context	debug nat large-scale nat64 subscriber inside-router *string* ipv6-prefix *ipv6-prefix*
Tree	subscriber
Max. instances	16
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router *string*

Synopsis	Inside router instance name
Context	debug nat large-scale nat64 subscriber inside-router *string* ipv6-prefix *ipv6-prefix*
Tree	subscriber
MD-CLI default	Base
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-prefix *ipv6-prefix*

Synopsis	NAT64 IPv6 prefix of the subscriber
Context	debug nat large-scale nat64 subscriber inside-router *string* ipv6-prefix *ipv6-prefix*
Tree	subscriber
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-import

Synopsis	Enter the **nat-import** context
Context	debug nat nat-import
Tree	nat-import

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

route [ip-address] *(ipv4-unicast-address | keyword)* inside-router *string*

Synopsis	Add a list entry for **route**
Context	debug nat nat-import route *(ipv4-unicast-address | keyword)* inside-router *string*
Tree	route
Max. instances	32
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**ip-address**] *(ipv4-unicast-address | keyword)*

Synopsis	IPv4 address of imported route, or any
Context	debug nat nat-import route *(ipv4-unicast-address | keyword)* inside-router *string*
Tree	route
Options	any
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router *string*

Synopsis	Router name or VPRN service name, or any
Context	debug nat nat-import route *(ipv4-unicast-address | keyword)* inside-router *string*
Tree	route
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pcp

Synopsis	Enter the **pcp** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug nat pcp
Tree	pcp
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router [router-instance] *string*

Synopsis	Enter the **router** list instance
Context	debug nat pcp router *string*
Tree	router
Max. instances	8
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**router-instance**] *string*

Synopsis	Inside router instance name
Context	debug nat pcp router *string*
Tree	router
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [name] *named-item*

Synopsis	Enter the **server** list instance
Context	debug nat pcp router *string* server *named-item*
Tree	server
Max. instances	8
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**name**] *named-item*

Synopsis	PCP server name
Context	debug nat pcp router *string* server *named-item*
Tree	server
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enter the **packets** context
Context	debug nat pcp router *string* server *named-item* packets
Tree	packets
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

detail *boolean*

Synopsis	Enable the detailed PCP packet debug output
Context	debug nat pcp router *string* server *named-item* packets detail *boolean*
Tree	detail
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Direction of the PCP packet debugging
Context	debug nat pcp router *string* server *named-item* packets direction *keyword*
Tree	direction
Options	ingress – Display ingress packets egress – Display egress packets

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	both – Display ingress and egress packets
Default	ingress
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

python

Synopsis	Enter the **python** context
Context	debug python
Tree	python
Introduced	26.7.R1
Platforms	All

python-script [name] *named-item*

Synopsis	Enter the **python-script** list instance
Context	debug python python-script *named-item*
Tree	python-script
Max. instances	8
Introduced	26.7.R1
Platforms	All

[**name**] *named-item*

Synopsis	Python script name
Context	debug python python-script *named-item*
Tree	python-script
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	All

© 2026 Nokia.

script-all-info

Synopsis	All script information
Context	debug python python-script *named-item* script-all-info
Tree	script-all-info
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	All

script-compile-error

Synopsis	Log information on compile errors
Context	debug python python-script *named-item* script-compile-error
Tree	script-compile-error
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	All

script-export-variables

Synopsis	Export variables on successful script completion
Context	debug python python-script *named-item* script-export-variables
Tree	script-export-variables
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	All

script-output

Synopsis	Log information with script output data
Context	debug python python-script *named-item* script-output

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	script-output
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	All

script-output-on-error

Synopsis	Log information with unsuccessful script output data
Context	debug python python-script *named-item* script-output-on-error
Tree	script-output-on-error
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	All

script-runtime-error

Synopsis	Log information on detecting script runtime error
Context	debug python python-script *named-item* script-runtime-error
Tree	script-runtime-error
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	All

router [router-instance] *string*

Synopsis	Enter the **router** list instance
Context	debug router *string*
Tree	router
Introduced	22.5.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**router-instance**] *string*

Synopsis	Router name or VPRN service name
Context	debug router *string*
Tree	router
MD-CLI default	Base
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

bier

Synopsis	Enter the **bier** context
Context	debug router *string* bier
Tree	bier
Introduced	24.3.R1
Platforms	All

db

Synopsis	Enable the **db** context
Context	debug router *string* bier db
Tree	db
Introduced	24.3.R1
Platforms	All

fib

Synopsis	Enable the **fib** context
Context	debug router *string* bier fib
Tree	fib
Introduced	24.3.R1
Platforms	All

management

Synopsis	Enable the **management** context
Context	debug router *string* bier management
Tree	management
Introduced	24.3.R1
Platforms	All

red

Synopsis	Enable the **red** context
Context	debug router *string* bier red
Tree	red
Introduced	24.3.R1
Platforms	All

rtm

Synopsis	Enable the **rtm** context
Context	debug router *string* bier rtm
Tree	rtm
Introduced	24.3.R1
Platforms	All

template

Synopsis	Enable the **template** context
Context	debug router *string* bier template
Tree	template
Introduced	24.3.R1
Platforms	All

tunnel

Synopsis	Enable the **tunnel** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug router *string* bier tunnel
Tree	tunnel
Introduced	24.3.R1
Platforms	All

dhcp

Synopsis	Enter the **dhcp** context
Context	debug router *string* dhcp
Tree	dhcp
Description	Commands in this context enable DHCP debug for all packets in the specified routing instance or VPRN service, or for specific packets matching the specific MAC addresses, SAP identifiers, or interface names. When a DHCP packet matches a specified filter and is conforming the configured debug mode for that filter, the packet debug is available in the specified detail level. DHCP debug filter criteria are applied in the following order: **1.** MAC address **2.** SAP identifier **3.** interface names **4.** all packets Up to 8 MAC address filters, 8 SAP identifier filters, 4 interface name filters, and 4 all-packet filters can be specified simultaneously across all routing instances and VPRN services.
Introduced	22.10.R1
Platforms	All

all-packets

Synopsis	Enable the **all-packets** context
Context	debug router *string* dhcp all-packets
Tree	all-packets
Introduced	22.10.R1
Platforms	All

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug router *string* dhcp all-packets detail-level *keyword*
Tree	detail-level
Options	high – High detail level output for debugging medium – Medium detail level output for debugging low – Low detail level output for debugging
Default	high
Introduced	22.10.R1
Platforms	All

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	debug router *string* dhcp all-packets mode *keyword*
Tree	mode
Options	egress-ingress-and-dropped – Display egress, ingress, and dropped packets dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	egress-ingress-and-dropped
Introduced	22.10.R1
Platforms	All

interface [interface-name] *interface-name*

Synopsis	Enter the **interface** list instance
Context	debug router *string* dhcp interface *interface-name*
Tree	interface
Introduced	22.10.R1
Platforms	All

[**interface-name**] *interface-name*

Synopsis	Interface name
Context	debug router *string* dhcp interface *interface-name*
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.

[**prefix**] *ipv6-prefix*

Synopsis	IPv6 prefix
Context	debug router *string* dhcp-server dhcpv6 *named-item* lease *ipv6-prefix*
Tree	lease
Notes	This element is part of a list key.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output
Context	debug router *string* dhcp-server dhcpv6 *named-item* lease *ipv6-prefix* detail-level *keyword*
Tree	detail-level
Options	high – High detail level output for debugging medium – Medium detail level output for debugging low – Low detail level output for debugging
Default	medium
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	debug router *string* dhcp-server dhcpv6 *named-item* lease *ipv6-prefix* mode *keyword*
Tree	mode
Options	egress-ingress-and-dropped – Display egress, ingress, and dropped packets dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	dropped-only
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-local-address [address] *ipv6-address*

Synopsis	Enter the **link-local-address** list instance
Context	debug router *string* dhcp-server dhcpv6 *named-item* link-local-address *ipv6-address*
Tree	link-local-address
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *ipv6-address*

Synopsis	Link local address
Context	debug router *string* dhcp-server dhcpv6 *named-item* link-local-address *ipv6-address*
Tree	link-local-address
Notes	This element is part of a list key.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output
Context	debug router *string* dhcp-server dhcpv6 *named-item* link-local-address *ipv6-address* detail-level *keyword*
Tree	detail-level
Options	high – High detail level output for debugging medium – Medium detail level output for debugging low – Low detail level output for debugging
Default	medium
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	debug router *string* dhcp-server dhcpv6 *named-item* link-local-address *ipv6-address* mode *keyword*
Tree	mode

Options	egress-ingress-and-dropped – Display egress, ingress, and dropped packets dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	dropped-only
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp6

Synopsis	Enter the **dhcp6** context
Context	debug router *string* dhcp6
Tree	dhcp6
Description	Commands in this context enable DHCPv6 debugging with optional interface, SAP, and client-identifier match criteria to filter debug output.
Introduced	24.10.R3
Platforms	All

all-packets

Synopsis	Enable the **all-packets** context
Context	debug router *string* dhcp6 all-packets
Tree	all-packets
Introduced	24.10.R3
Platforms	All

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output
Context	debug router *string* dhcp6 all-packets detail-level *keyword*
Tree	detail-level
Options	high – High detail level output for debugging medium – Medium detail level output for debugging low – Low detail level output for debugging
Default	high
Introduced	24.10.R3
Platforms	All

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	debug router *string* dhcp6 all-packets mode *keyword*
Tree	mode
Options	egress-ingress-and-dropped – Display egress, ingress, and dropped packets dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	egress-ingress-and-dropped
Introduced	24.10.R3
Platforms	All

client-identifier

Synopsis	Enter the **client-identifier** context
Context	debug router *string* dhcp6 client-identifier
Tree	client-identifier
Introduced	24.10.R3
Platforms	All

duid [duid] *hex-string*

Synopsis	Enter the **duid** list instance
Context	debug router *string* dhcp6 client-identifier duid *hex-string*
Tree	duid
Introduced	24.10.R3
Platforms	All

[**duid**] *hex-string*

Synopsis	Client DUID to match
Context	debug router *string* dhcp6 client-identifier duid *hex-string*
Tree	duid
String length	1 to 260
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)

© 2026 Nokia.

Notes	This element is part of a list key.
Introduced	24.10.R3
Platforms	All

detail-level *keyword*

Synopsis	Detail level of the DHCPv6 debug output
Context	debug router *string* dhcp6 client-identifier duid *hex-string* detail-level *keyword*
Tree	detail-level
Options	high – High detail level for debugging medium – Medium detail level for debugging low – Low detail level for debugging
Default	high
Introduced	24.10.R3
Platforms	All

mask *hex-string*

Synopsis	Mask for partial client DUID matching
Context	debug router *string* dhcp6 client-identifier duid *hex-string* mask *hex-string*
Tree	mask
String length	1 to 260
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Introduced	24.10.R3
Platforms	All

mode *keyword*

Synopsis	DHCPv6 packets present in the debug output
Context	debug router *string* dhcp6 client-identifier duid *hex-string* mode *keyword*
Tree	mode
Options	egress-ingress-and-dropped – Display ingress, egress, and dropped packets dropped-only – Display ingress, egress, and dropped packets ingress-and-dropped – Display only ingress and dropped packets
Default	egress-ingress-and-dropped
Introduced	24.10.R3

headers *boolean*

Synopsis	Display information associated with packet header only
Context	debug router *string* ip packet interface *interface-name* headers *boolean*
Tree	headers
Default	false
Introduced	23.3.R1
Platforms	All

protocol-id *number*

Synopsis	IP protocol ID to trace
Context	debug router *string* ip packet interface *interface-name* protocol-id *number*
Tree	protocol-id
Range	0 to 255
Introduced	23.3.R1
Platforms	All

route-table

Synopsis	Enable the **route-table** context
Context	debug router *string* ip route-table
Tree	route-table
Introduced	23.3.R1
Platforms	All

all

Synopsis	Allow trace for all route updates
Context	debug router *string* ip route-table all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or **filter**.
Introduced	23.3.R1
Platforms	All

© 2026 Nokia.

filter

Synopsis	Enter the **filter** context
Context	debug router *string* ip route-table filter
Tree	filter
Notes	The following elements are part of a mandatory choice: **all** or **filter**.
Introduced	23.3.R1
Platforms	All

ipv4

Synopsis	Enter the **ipv4** context
Context	debug router *string* ip route-table filter ipv4
Tree	ipv4
Introduced	23.3.R1
Platforms	All

prefix [prefix] *ipv4-prefix*

Synopsis	Enter the **prefix** list instance
Context	debug router *string* ip route-table filter ipv4 prefix *ipv4-prefix*
Tree	prefix
Max. instances	1
Introduced	23.3.R1
Platforms	All

[**prefix**] *ipv4-prefix*

Synopsis	IPv4 prefix
Context	debug router *string* ip route-table filter ipv4 prefix *ipv4-prefix*
Tree	prefix
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

longest-prefix-match *boolean*

Synopsis	Allow match for greatest prefix values
Context	debug router *string* ip route-table filter ipv4 prefix *ipv4-prefix* longest-prefix-match *boolean*
Tree	longest-prefix-match
Default	false
Introduced	23.3.R1
Platforms	All

ipv6

Synopsis	Enter the **ipv6** context
Context	debug router *string* ip route-table filter ipv6
Tree	ipv6
Introduced	23.3.R1
Platforms	All

prefix [prefix] *ipv6-prefix*

Synopsis	Enter the **prefix** list instance
Context	debug router *string* ip route-table filter ipv6 prefix *ipv6-prefix*
Tree	prefix
Max. instances	1
Introduced	23.3.R1
Platforms	All

[**prefix**] *ipv6-prefix*

Synopsis	IPv6 prefix
Context	debug router *string* ip route-table filter ipv6 prefix *ipv6-prefix*
Tree	prefix
Notes	This element is part of a list key.
Introduced	23.3.R1

Platforms	All

longest-prefix-match *boolean*

Synopsis	Allow match for greatest prefix values
Context	debug router *string* ip route-table filter ipv6 prefix *ipv6-prefix* longest-prefix-match *boolean*
Tree	longest-prefix-match
Default	false
Introduced	23.3.R1
Platforms	All

tunnel-table

Synopsis	Enable the **tunnel-table** context
Context	debug router *string* ip tunnel-table
Tree	tunnel-table
Introduced	23.3.R1
Platforms	All

all

Synopsis	Allow trace for all tunnel updates
Context	debug router *string* ip tunnel-table all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or **filter**.
Introduced	23.3.R1
Platforms	All

filter

Synopsis	Enter the **filter** context
Context	debug router *string* ip tunnel-table filter
Tree	filter
Notes	The following elements are part of a mandatory choice: **all** or **filter**.

state-recovery *boolean*

Synopsis	Enable L2TP LAC state recovery event debugging
Context	debug router *string* l2tp assignment-id *string* events lac state-recovery *boolean*
Tree	state-recovery
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

state-recovery-failed *boolean*

Synopsis	Enable L2TP LAC state recovery failed event debugging
Context	debug router *string* l2tp assignment-id *string* events lac state-recovery-failed *boolean*
Tree	state-recovery-failed
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lns

Synopsis	Enter the **lns** context
Context	debug router *string* l2tp assignment-id *string* events lns
Tree	lns
Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, and **stop-control-connection-notification**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp

Synopsis	Enable the **ppp** context
Context	debug router *string* l2tp assignment-id *string* events lns ppp
Tree	ppp
Introduced	23.7.R1

© 2026 Nokia.

Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

attempted-tunnels *boolean*

Synopsis	Enable debugging for attempted LNS tunnels
Context	debug router *string* l2tp events session-setup attempted-tunnels *boolean*
Tree	attempted-tunnels
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

skipped-tunnels *boolean*

Synopsis	Enable debugging for skipped LNS tunnels
Context	debug router *string* l2tp events session-setup skipped-tunnels *boolean*
Tree	skipped-tunnels
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stop-control-connection-notification *boolean*

Synopsis	Enable L2TP StopCCN event debugging
Context	debug router *string* l2tp events stop-control-connection-notification *boolean*
Tree	stop-control-connection-notification
Default	false
Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, **session-setup**, and **stop-control-connection-notification**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group [tunnel-group-name] *named-item-64*

Synopsis	Enter the **group** list instance
Context	debug router *string* l2tp group *named-item-64*
Tree	group
Max. instances	8
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**tunnel-group-name**] *named-item-64*

Synopsis	Tunnel group name of the L2TP tunnel to debug
Context	debug router *string* l2tp group *named-item-64*
Tree	group
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

events

Synopsis	Enable the **events** context
Context	debug router *string* l2tp group *named-item-64* events
Tree	events
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable debugging for all events
Context	debug router *string* l2tp group *named-item-64* events all
Tree	all

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, **session-setup**, and **stop-control-connection-notification**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

call-disconnect-notification *boolean*

Synopsis	Enable L2TP CDN event debugging
Context	debug router *string* l2tp group *named-item-64* events call-disconnect-notification *boolean*
Tree	call-disconnect-notification
Default	false
Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, **session-setup**, and **stop-control-connection-notification**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

finite-state-machine *boolean*

Synopsis	Enable L2TP FSM event debugging
Context	debug router *string* l2tp group *named-item-64* events finite-state-machine *boolean*
Tree	finite-state-machine
Default	false
Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, **session-setup**, and **stop-control-connection-notification**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac

Synopsis	Enter the **lac** context
Context	debug router *string* l2tp group *named-item-64* events lac
Tree	lac

© 2026 Nokia.

Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, **session-setup**, and **stop-control-connection-notification**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

state-recovery *boolean*

Synopsis	Enable L2TP LAC state recovery event debugging
Context	debug router *string* l2tp group *named-item-64* events lac state-recovery *boolean*
Tree	state-recovery
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

state-recovery-failed *boolean*

Synopsis	Enable L2TP LAC state recovery failed event debugging
Context	debug router *string* l2tp group *named-item-64* events lac state-recovery-failed *boolean*
Tree	state-recovery-failed
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lns

Synopsis	Enter the **lns** context
Context	debug router *string* l2tp group *named-item-64* events lns
Tree	lns
Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, **session-setup**, and **stop-control-connection-notification**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp

Synopsis	Enable the **ppp** context
Context	debug router *string* l2tp group *named-item-64* events lns ppp
Tree	ppp
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungracefully terminated sessions only
Context	debug router *string* l2tp group *named-item-64* events lns ppp terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-setup

Synopsis	Enter the **session-setup** context
Context	debug router *string* l2tp group *named-item-64* events session-setup
Tree	session-setup
Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, **session-setup**, and **stop-control-connection-notification**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

attempted-tunnels *boolean*

Synopsis	Enable debugging for attempted LNS tunnels
Context	debug router *string* l2tp group *named-item-64* events session-setup attempted-tunnels *boolean*
Tree	attempted-tunnels
Default	false
Introduced	23.7.R1

© 2026 Nokia.

ppp

Synopsis	Enter the **ppp** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug router *string* l2tp ip-peer *(ipv4-address-no-zone | ipv6-address-no-zone)* packets lns ppp
Tree	ppp
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all PPP session packets
Context	debug router *string* l2tp ip-peer *(ipv4-address-no-zone | ipv6-address-no-zone)* packets lns ppp all
Tree	all
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

chap *boolean*

Synopsis	Enable PPP debugging for CHAP authentication packets
Context	debug router *string* l2tp ip-peer *(ipv4-address-no-zone | ipv6-address-no-zone)* packets lns ppp chap *boolean*
Tree	chap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipcp *boolean*

Synopsis	Enable PPP debugging for IPCP NCP packets
Context	debug router *string* l2tp ip-peer *(ipv4-address-no-zone | ipv6-address-no-zone)* packets lns ppp ipcp *boolean*
Tree	ipcp
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6cp *boolean*

Synopsis	Enable PPP debugging for IPv6CP NCP packets
Context	debug router *string* l2tp ip-peer *(ipv4-address-no-zone | ipv6-address-no-zone)* packets lns ppp ipv6cp *boolean*
Tree	ipv6cp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lcp *boolean*

Synopsis	Enable PPP debugging for LCP link establishment packets
Context	debug router *string* l2tp ip-peer *(ipv4-address-no-zone | ipv6-address-no-zone)* packets lns ppp lcp *boolean*
Tree	lcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other *boolean*

Synopsis	Enable other PPP protocol packet debugging
Context	debug router *string* l2tp ip-peer *(ipv4-address-no-zone | ipv6-address-no-zone)* packets lns ppp other *boolean*
Tree	other
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pap *boolean*

Synopsis	Enable PPP debugging for PAP authentication packets
Context	debug router *string* l2tp ip-peer *(ipv4-address-no-zone* | *ipv6-address-no-zone)* packets lns ppp pap *boolean*
Tree	pap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enable the **packets** context
Context	debug router *string* l2tp packets
Tree	packets
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable debugging for all session packets
Context	debug router *string* l2tp packets all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or (**l2tp** and **lns**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

detail-level *keyword*

Synopsis	Detail level of the L2TP packet debug output
Context	debug router *string* l2tp packets detail-level *keyword*
Tree	detail-level
Options	low – Low detail level output for debugging high – High detail level output for debugging
Default	low
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Direction of the L2TP packet debugging
Context	debug router *string* l2tp packets direction *keyword*
Tree	direction
Options	ingress – Display ingress packets egress – Display egress packets both – Display ingress and egress packets
Default	both
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tp *boolean*

Synopsis	Enable L2TP packet debugging
Context	debug router *string* l2tp packets l2tp *boolean*
Tree	l2tp
Default	false
Notes	The following elements are part of a mandatory choice: **all** or (**l2tp** and **lns**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lns

Synopsis	Enter the **lns** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug router *string* l2tp packets lns
Tree	lns
Notes	The following elements are part of a mandatory choice: **all** or (**l2tp** and **lns**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-client *boolean*

Synopsis	Enable DHCP client packet debugging
Context	debug router *string* l2tp packets lns dhcp-client *boolean*
Tree	dhcp-client
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp

Synopsis	Enter the **ppp** context
Context	debug router *string* l2tp packets lns ppp
Tree	ppp
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all PPP session packets
Context	debug router *string* l2tp packets lns ppp all
Tree	all
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

chap *boolean*

Synopsis	Enable PPP debugging for CHAP authentication packets
Context	debug router *string* l2tp packets lns ppp chap *boolean*
Tree	chap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipcp *boolean*

Synopsis	Enable PPP debugging for IPCP NCP packets
Context	debug router *string* l2tp packets lns ppp ipcp *boolean*
Tree	ipcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6cp *boolean*

Synopsis	Enable PPP debugging for IPv6CP NCP packets
Context	debug router *string* l2tp packets lns ppp ipv6cp *boolean*
Tree	ipv6cp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lcp *boolean*

Synopsis	Enable PPP debugging for LCP link establishment packets
Context	debug router *string* l2tp packets lns ppp lcp *boolean*
Tree	lcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other *boolean*

Synopsis	Enable other PPP protocol packet debugging
Context	debug router *string* l2tp packets lns ppp other *boolean*
Tree	other
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pap *boolean*

Synopsis	Enable PPP debugging for PAP authentication packets
Context	debug router *string* l2tp packets lns ppp pap *boolean*
Tree	pap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, **other**, and **pap**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tunnel [connection-id] *number*

Synopsis	Enter the **tunnel** list instance
Context	debug router *string* l2tp tunnel *number*
Tree	tunnel
Max. instances	8
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**connection-id**] *number*

Synopsis	Local control connection ID of the L2TP tunnel to debug
Context	debug router *string* l2tp tunnel *number*
Tree	tunnel
Max. range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

events

Synopsis	Enable the **events** context
Context	debug router *string* l2tp tunnel *number* events
Tree	events
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable debugging for all events
Context	debug router *string* l2tp tunnel *number* events all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, and **stop-control-connection-notification**).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

call-disconnect-notification *boolean*

Synopsis	Enable L2TP CDN event debugging
Context	debug router *string* l2tp tunnel *number* events call-disconnect-notification *boolean*
Tree	call-disconnect-notification
Default	false
Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, and **stop-control-connection-notification**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

finite-state-machine *boolean*

Synopsis	Enable L2TP FSM event debugging
Context	debug router *string* l2tp tunnel *number* events finite-state-machine *boolean*
Tree	finite-state-machine
Default	false
Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, and **stop-control-connection-notification**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac

Synopsis	Enter the **lac** context
Context	debug router *string* l2tp tunnel *number* events lac
Tree	lac
Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, and **stop-control-connection-notification**).
Introduced	23.7.R1

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

state-recovery *boolean*

Synopsis	Enable L2TP LAC state recovery event debugging
Context	debug router *string* l2tp tunnel *number* events lac state-recovery *boolean*
Tree	state-recovery
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

state-recovery-failed *boolean*

Synopsis	Enable L2TP LAC state recovery failed event debugging
Context	debug router *string* l2tp tunnel *number* events lac state-recovery-failed *boolean*
Tree	state-recovery-failed
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lns

Synopsis	Enter the **lns** context
Context	debug router *string* l2tp tunnel *number* events lns
Tree	lns
Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, and **stop-control-connection-notification**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp

Synopsis	Enable the **ppp** context
Context	debug router *string* l2tp tunnel *number* events lns ppp
Tree	ppp

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungracefully terminated sessions only
Context	debug router *string* l2tp tunnel *number* events lns ppp terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stop-control-connection-notification *boolean*

Synopsis	Enable L2TP StopCCN event debugging
Context	debug router *string* l2tp tunnel *number* events stop-control-connection-notification *boolean*
Tree	stop-control-connection-notification
Default	false
Notes	The following elements are part of a mandatory choice: **all** or (**call-disconnect-notification**, **finite-state-machine**, **lac**, **lns**, and **stop-control-connection-notification**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enable the **packets** context
Context	debug router *string* l2tp tunnel *number* packets
Tree	packets
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable debugging for all session packets

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug router *string* l2tp tunnel *number* packets all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or (**l2tp** and **lns**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the L2TP packet debug output
Context	debug router *string* l2tp tunnel *number* packets detail-level *keyword*
Tree	detail-level
Options	low – Low detail level output for debugging high – High detail level output for debugging
Default	low
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Direction of the L2TP packet debugging
Context	debug router *string* l2tp tunnel *number* packets direction *keyword*
Tree	direction
Options	ingress – Display ingress packets egress – Display egress packets both – Display ingress and egress packets
Default	both
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tp *boolean*

Synopsis	Enable L2TP packet debugging
Context	debug router *string* l2tp tunnel *number* packets l2tp *boolean*
Tree	l2tp
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **all** or (**l2tp** and **lns**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lns

Synopsis	Enter the **lns** context
Context	debug router *string* l2tp tunnel *number* packets lns
Tree	lns
Notes	The following elements are part of a mandatory choice: **all** or (**l2tp** and **lns**).
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-client *boolean*

Synopsis	Enable DHCP client packet debugging
Context	debug router *string* l2tp tunnel *number* packets lns dhcp-client *boolean*
Tree	dhcp-client
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp

Synopsis	Enter the **ppp** context
Context	debug router *string* l2tp tunnel *number* packets lns ppp
Tree	ppp
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all PPP session packets
Context	debug router *string* l2tp tunnel *number* packets lns ppp all
Tree	all

Tree	group-interface-name
String length	1 to 32
Notes	The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-ip-address *ipv6-address*

Synopsis	Address of the host to trace
Context	debug router *string* mld packet host-ip-address *ipv6-address*
Tree	host-ip-address
Notes	The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.
Introduced	22.10.R2
Platforms	All

ingress *boolean*

Synopsis	Enable tracing for received packets
Context	debug router *string* mld packet ingress *boolean*
Tree	ingress
Default	true
Introduced	22.10.R1
Platforms	All

interface-ip-address *ipv6-address*

Synopsis	Source address of the packet to trace
Context	debug router *string* mld packet interface-ip-address *ipv6-address*
Tree	interface-ip-address
Notes	The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.
Introduced	22.10.R2
Platforms	All

interface-name *interface-name*

Synopsis	Interface name
Context	debug router *string* mld packet interface-name *interface-name*
Tree	interface-name
String length	1 to 32
Notes	The following elements are part of a choice: **all-origins**, **group-interface-name**, **host-ip-address**, **interface-ip-address**, or **interface-name**.
Introduced	22.10.R1
Platforms	All

type *keyword*

Synopsis	Packet type
Context	debug router *string* mld packet type *keyword*
Tree	type
Options	all – All MLD packets query – MLD Query packets v1-report – MLD version 1 Report packets v2-report – MLD version 2 Report packets
Default	all
Introduced	22.10.R1
Platforms	All

msdp

Synopsis	Enter the **msdp** context
Context	debug router *string* msdp
Tree	msdp
Description	Commands in this context configure debugging for the Multicast Source Discovery Protocol (MSDP).
Introduced	22.10.R1
Platforms	All

packet

Synopsis	Enable the **packet** context
Context	debug router *string* msdp packet
Tree	packet
Introduced	22.10.R1
Platforms	All

all-packet-types

Synopsis	Enable MSDP debugging for all packets
Context	debug router *string* msdp packet all-packet-types
Tree	all-packet-types
Notes	The following elements are part of a choice: **all-packet-types** or **packet-types**.
Introduced	22.10.R1
Platforms	All

packet-types

Synopsis	Enter the **packet-types** context
Context	debug router *string* msdp packet packet-types
Tree	packet-types
Notes	The following elements are part of a choice: **all-packet-types** or **packet-types**.
Introduced	22.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

keep-alive

Synopsis	Enable the **keep-alive** context
Context	debug router *string* msdp packet packet-types keep-alive
Tree	keep-alive
Introduced	22.10.R1
Platforms	All

peer-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Peer address used to trace packets
Context	debug router *string* msdp packet packet-types keep-alive peer-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	peer-address
Introduced	22.10.R1
Platforms	All

sa-request

Synopsis	Enable the **sa-request** context
Context	debug router *string* msdp packet packet-types sa-request
Tree	sa-request
Introduced	22.10.R1
Platforms	All

peer-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Peer address used to trace packets
Context	debug router *string* msdp packet packet-types sa-request peer-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	peer-address
Introduced	22.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sa-response

Synopsis	Enable the **sa-response** context
Context	debug router *string* msdp packet packet-types sa-response
Tree	sa-response
Introduced	22.10.R1
Platforms	All

peer-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Peer address used to trace packets
Context	debug router *string* msdp packet packet-types sa-response peer-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	peer-address
Introduced	22.10.R1
Platforms	All

source-active

Synopsis	Enable the **source-active** context
Context	debug router *string* msdp packet packet-types source-active
Tree	source-active
Introduced	22.10.R1
Platforms	All

peer-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Peer address used to trace packets
Context	debug router *string* msdp packet packet-types source-active peer-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	peer-address
Introduced	22.10.R1
Platforms	All

pim

Synopsis	Enable the **pim** context
Context	debug router *string* msdp pim
Tree	pim
Description	Commands in this context enable MSDP PIM debugging.
Introduced	22.10.R1
Platforms	All

group-address *ipv4-multicast-address*

Synopsis	IP multicast group address used to trace events
Context	debug router *string* msdp pim group-address *ipv4-multicast-address*
Tree	group-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Introduced	22.10.R1
Platforms	All

rtm

Synopsis	Enable the **rtm** context
Context	debug router *string* msdp rtm
Tree	rtm
Description	Commands in this context enable MSDP route table manager (RTM) debugging.
Introduced	22.10.R1
Platforms	All

rp-address *ipv4-address*

Synopsis	IP multicast RP address used to trace events
Context	debug router *string* msdp rtm rp-address *ipv4-address*
Tree	rp-address
String format	'ipv4-address' must use only digits and dots (no %zone)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	22.10.R1
Platforms	All

sa-db

Synopsis	Enable the **sa-db** context
Context	debug router *string* msdp sa-db
Tree	sa-db
Description	Commands in this context enable MSDP source-active database debugging.
Introduced	22.10.R1
Platforms	All

group-address *ipv4-multicast-address*

Synopsis	IP multicast group address used to trace events
Context	debug router *string* msdp sa-db group-address *ipv4-multicast-address*
Tree	group-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Introduced	22.10.R1
Platforms	All

rp-address *ipv4-address*

Synopsis	IP multicast RP address used to trace events
Context	debug router *string* msdp sa-db rp-address *ipv4-address*
Tree	rp-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	22.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

source-address *ipv4-address*

Synopsis	Source address used to trace events
Context	debug router *string* msdp sa-db source-address *ipv4-address*
Tree	source-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	22.10.R1
Platforms	All

mtrace

Synopsis	Enter the **mtrace** context
Context	debug router *string* mtrace
Tree	mtrace
Introduced	22.10.R1
Platforms	All

miscellaneous

Synopsis	Enable the **miscellaneous** context
Context	debug router *string* mtrace miscellaneous
Tree	miscellaneous
Introduced	22.10.R1
Platforms	All

packet

Synopsis	Enable the **packet** context
Context	debug router *string* mtrace packet
Tree	packet
Introduced	22.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

all-packet-types

Synopsis	Enable debugging for all packets
Context	debug router *string* mtrace packet all-packet-types
Tree	all-packet-types
Notes	The following elements are part of a choice: **all-packet-types** or **packet-types**.
Introduced	22.10.R1
Platforms	All

packet-types

Synopsis	Enter the **packet-types** context
Context	debug router *string* mtrace packet packet-types
Tree	packet-types
Notes	The following elements are part of a choice: **all-packet-types** or **packet-types**.
Introduced	22.10.R1
Platforms	All

query *boolean*

Synopsis	Debug query packets
Context	debug router *string* mtrace packet packet-types query *boolean*
Tree	query
Default	false
Introduced	22.10.R1
Platforms	All

request *boolean*

Synopsis	Debug request packets
Context	debug router *string* mtrace packet packet-types request *boolean*
Tree	request
Default	false
Introduced	22.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

response *boolean*

Synopsis	Debug response packets
Context	debug router *string* mtrace packet packet-types response *boolean*
Tree	response
Default	false
Introduced	22.10.R1
Platforms	All

mtrace2

Synopsis	Enter the **mtrace2** context
Context	debug router *string* mtrace2
Tree	mtrace2
Introduced	22.10.R1
Platforms	All

miscellaneous

Synopsis	Enable the **miscellaneous** context
Context	debug router *string* mtrace2 miscellaneous
Tree	miscellaneous
Introduced	22.10.R1
Platforms	All

packet

Synopsis	Enable the **packet** context
Context	debug router *string* mtrace2 packet
Tree	packet
Introduced	22.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

all-packet-types

Synopsis	Enable debugging for all packets
Context	debug router *string* mtrace2 packet all-packet-types
Tree	all-packet-types
Notes	The following elements are part of a choice: **all-packet-types** or **packet-types**.
Introduced	22.10.R1
Platforms	All

packet-types

Synopsis	Enter the **packet-types** context
Context	debug router *string* mtrace2 packet packet-types
Tree	packet-types
Notes	The following elements are part of a choice: **all-packet-types** or **packet-types**.
Introduced	22.10.R1
Platforms	All

query *boolean*

Synopsis	Debug query packets
Context	debug router *string* mtrace2 packet packet-types query *boolean*
Tree	query
Default	false
Introduced	22.10.R1
Platforms	All

request *boolean*

Synopsis	Debug request packets
