Platforms	All

attribute [name] *string*

Synopsis	Enter the **attribute** list instance
Context	debug router *string* radius servers attribute *string*
Tree	attribute
Max. instances	10
Introduced	22.5.R1
Platforms	All

[**name**] *string*

Synopsis	Attribute filter name
Context	debug router *string* radius servers attribute *string*
Tree	attribute
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

extended-type *number*

Synopsis	RADIUS attribute extended type
Context	debug router *string* radius servers attribute *string* extended-type *number*
Tree	extended-type
Range	1 to 255
Introduced	22.5.R1
Platforms	All

transaction *boolean*

Synopsis	Debug request and response transaction
Context	debug router *string* radius servers attribute *string* transaction *boolean*
Tree	transaction

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	22.5.R1
Platforms	All

type *number*

Synopsis	RADIUS attribute type
Context	debug router *string* radius servers attribute *string* type *number*
Tree	type
Range	1 to 255
Notes	This element is mandatory.
Introduced	22.5.R1
Platforms	All

value

Synopsis	Enter the **value** context
Context	debug router *string* radius servers attribute *string* value
Tree	value
Introduced	22.5.R1
Platforms	All

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Attribute value specified as an IP address
Context	debug router *string* radius servers attribute *string* value address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Notes	The following elements are part of a choice: **address**, **hex**, **integer**, **prefix**, or **string**.
Introduced	22.5.R1
Platforms	All

hex *hex-string*

Synopsis	Attribute value specified as a hexadecimal string

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug router *string* radius servers attribute *string* value hex *hex-string*
Tree	hex
String length	1 to 253
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a choice: **address**, **hex**, **integer**, **prefix**, or **string**.
Introduced	22.5.R1
Platforms	All

integer *number*

Synopsis	Attribute value specified as an integer
Context	debug router *string* radius servers attribute *string* value integer *number*
Tree	integer
Max. range	0 to 4294967295
Notes	The following elements are part of a choice: **address**, **hex**, **integer**, **prefix**, or **string**.
Introduced	22.5.R1
Platforms	All

prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	Attribute value specified as an IP prefix
Context	debug router *string* radius servers attribute *string* value prefix *(ipv4-prefix | ipv6-prefix)*
Tree	prefix
Notes	The following elements are part of a choice: **address**, **hex**, **integer**, **prefix**, or **string**.
Introduced	22.5.R1
Platforms	All

string *string*

Synopsis	Attribute value specified as a string
Context	debug router *string* radius servers attribute *string* value string *string*
Tree	string
String length	1 to 253
Notes	The following elements are part of a choice: **address**, **hex**, **integer**, **prefix**, or **string**.

all-packets

Synopsis	Enable the **all-packets** context
Context	debug router *string* srrp packet all-packets
Tree	all-packets
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface [interface-name] *interface-name*

Synopsis	Add a list entry for **interface**
Context	debug router *string* srrp packet interface *interface-name*
Tree	interface
Max. instances	10
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**interface-name**] *interface-name*

Synopsis	Interface name
Context	debug router *string* srrp packet interface *interface-name*
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vrrp

Synopsis	Enter the **vrrp** context
Context	debug router *string* vrrp
Tree	vrrp
Introduced	22.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

events

Synopsis	Enter the **events** context
Context	debug router *string* vrrp events
Tree	events
Description	Commands in this context enable debugging for VRRP events and state changes.
Introduced	22.10.R1
Platforms	All

all-events

Synopsis	Enable the **all-events** context
Context	debug router *string* vrrp events all-events
Tree	all-events
Introduced	22.10.R1
Platforms	All

interface [interface-name] *interface-name*

Synopsis	Enter the **interface** list instance
Context	debug router *string* vrrp events interface *interface-name*
Tree	interface
Introduced	22.10.R1
Platforms	All

[**interface-name**] *interface-name*

Synopsis	Interface name
Context	debug router *string* vrrp events interface *interface-name*
Tree	interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

mac [address] *mac-unicast-address-no-zero*

Synopsis	Add a list entry for **mac**
Context	debug service ies *service-name* arp-host mac *mac-unicast-address-no-zero*
Tree	mac
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *mac-unicast-address-no-zero*

Synopsis	MAC address of the ARP host to debug
Context	debug service ies *service-name* arp-host mac *mac-unicast-address-no-zero*
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	ARP host packets present in the debug output
Context	debug service ies *service-name* arp-host mode *keyword*
Tree	mode
Options	dropped-only – Display dropped packets only egress-ingress-and-dropped – Display egress, ingress, and dropped packets
Default	dropped-only
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	debug service ies *service-name* arp-host sap *sap*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	sap
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID of the ARP host to debug
Context	debug service ies *service-name* arp-host sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-connectivity-verify

Synopsis	Enable the **host-connectivity-verify** context
Context	debug service ies *service-name* host-connectivity-verify
Tree	host-connectivity-verify
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip [address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Add a list entry for **ip**
Context	debug service ies *service-name* host-connectivity-verify ip *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ip
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Tree	sap
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID for SHCV debugging
Context	debug service ies *service-name* host-connectivity-verify sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

igmp-host-tracking

Synopsis	Enable the **igmp-host-tracking** context
Context	debug service ies *service-name* igmp-host-tracking
Tree	igmp-host-tracking
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the debug output
Context	debug service ies *service-name* igmp-host-tracking detail-level *keyword*
Tree	detail-level
Options	low – Low detail level output for debugging medium – Medium detail level output for debugging high – High detail level output for debugging
Default	medium
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host [address] *ipv4-unicast-address*

Synopsis	Add a list entry for **host**
Context	debug service ies *service-name* igmp-host-tracking host *ipv4-unicast-address*
Tree	host
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *ipv4-unicast-address*

Synopsis	Host IP address for IGMP host tracking debugging
Context	debug service ies *service-name* igmp-host-tracking host *ipv4-unicast-address*
Tree	host
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	IGMP host tracking packets in debug output
Context	debug service ies *service-name* igmp-host-tracking mode *keyword*
Tree	mode
Options	dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	dropped-only
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	debug service ies *service-name* igmp-host-tracking sap *sap*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	sap
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID for IGMP host tracking debugging
Context	debug service ies *service-name* igmp-host-tracking sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

one-time-http-redirection

Synopsis	Enable the **one-time-http-redirection** context
Context	debug service ies *service-name* one-time-http-redirection
Tree	one-time-http-redirection
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip [address] *ipv4-unicast-address*

Synopsis	Add a list entry for **ip**
Context	debug service ies *service-name* one-time-http-redirection ip *ipv4-unicast-address*
Tree	ip
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**address**] *ipv4-unicast-address*

Synopsis	Host IP address for one-time HTTP redirection debugging
Context	debug service ies *service-name* one-time-http-redirection ip *ipv4-unicast-address*
Tree	ip
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac [address] *mac-unicast-address-no-zero*

Synopsis	Add a list entry for **mac**
Context	debug service ies *service-name* one-time-http-redirection mac *mac-unicast-address-no-zero*
Tree	mac
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *mac-unicast-address-no-zero*

Synopsis	Host MAC address for one-time HTTP redirection debug
Context	debug service ies *service-name* one-time-http-redirection mac *mac-unicast-address-no-zero*
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug service ies *service-name* one-time-http-redirection sap *sap*
Tree	sap
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID for one-time HTTP redirection debugging
Context	debug service ies *service-name* one-time-http-redirection sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp

Synopsis	Enable the **ppp** context
Context	debug service ies *service-name* ppp
Tree	ppp
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id [id] *string*

Synopsis	Add a list entry for **circuit-id**
Context	debug service ies *service-name* ppp circuit-id *string*
Tree	circuit-id
Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**id**] *string*

Synopsis	Circuit ID of the PPPoE session to debug
Context	debug service ies *service-name* ppp circuit-id *string*
Tree	circuit-id
String length	1 to 255
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

events

Synopsis	Enable the **events** context
Context	debug service ies *service-name* ppp events
Tree	events
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all events
Context	debug service ies *service-name* ppp events all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-client

Synopsis	Enable the **dhcp-client** context
Context	debug service ies *service-name* ppp events dhcp-client
Tree	dhcp-client
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service ies *service-name* ppp events dhcp-client terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tp

Synopsis	Enable the **l2tp** context
Context	debug service ies *service-name* ppp events l2tp
Tree	l2tp
Description	Commands in this context configure debugging events for L2TP sessions.
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service ies *service-name* ppp events l2tp terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address-assignment

Synopsis	Enable the **local-address-assignment** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug service ies *service-name* ppp events local-address-assignment
Tree	local-address-assignment
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service ies *service-name* ppp events local-address-assignment terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp

Synopsis	Enable the **ppp** context
Context	debug service ies *service-name* ppp events ppp
Tree	ppp
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service ies *service-name* ppp events ppp terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

mac [address] *mac-address*

Synopsis	Add a list entry for **mac**
Context	debug service ies *service-name* ppp mac *mac-address*
Tree	mac
Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *mac-address*

Synopsis	MAC address of the PPPoE session to debug
Context	debug service ies *service-name* ppp mac *mac-address*
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enable the **packets** context
Context	debug service ies *service-name* ppp packets
Tree	packets
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all packets
Context	debug service ies *service-name* ppp packets all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the PPP packet debug output
Context	debug service ies *service-name* ppp packets detail-level *keyword*
Tree	detail-level
Options	low – Low detail level output for debugging medium – Medium detail level output for debugging high – High detail level output for debugging
Default	high
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-client *boolean*

Synopsis	Enable DHCP client packet debugging
Context	debug service ies *service-name* ppp packets dhcp-client *boolean*
Tree	dhcp-client
Default	false
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discovery

Synopsis	Enter the **discovery** context
Context	debug service ies *service-name* ppp packets discovery
Tree	discovery
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

all

Synopsis	Enable PPP debugging for all discovery packets
Context	debug service ies *service-name* ppp packets discovery all
Tree	all
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padi *boolean*

Synopsis	Enable PPP debugging for PADI discovery packets
Context	debug service ies *service-name* ppp packets discovery padi *boolean*
Tree	padi
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pado *boolean*

Synopsis	Enable PPP debugging for PADO discovery packets
Context	debug service ies *service-name* ppp packets discovery pado *boolean*
Tree	pado
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padr *boolean*

Synopsis	Enable PPP debugging for PADR discovery packets
Context	debug service ies *service-name* ppp packets discovery padr *boolean*
Tree	padr

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pads *boolean*

Synopsis	Enable PPP debugging for PADS discovery packets
Context	debug service ies *service-name* ppp packets discovery pads *boolean*
Tree	pads
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padt *boolean*

Synopsis	Enable PPP debugging for PADT discovery packets
Context	debug service ies *service-name* ppp packets discovery padt *boolean*
Tree	padt
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	PPP packets present in the debug output
Context	debug service ies *service-name* ppp packets mode *keyword*
Tree	mode
Options	dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets egress-ingress-and-dropped – Display egress, ingress, and dropped packets
Default	dropped-only
Introduced	23.3.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-session

Synopsis	Enter the **ppp-session** context
Context	debug service ies *service-name* ppp packets ppp-session
Tree	ppp-session
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all PPP session packets
Context	debug service ies *service-name* ppp packets ppp-session all
Tree	all
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

chap *boolean*

Synopsis	Enable PPP debugging for CHAP authentication packets
Context	debug service ies *service-name* ppp packets ppp-session chap *boolean*
Tree	chap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipcp *boolean*

Synopsis	Enable PPP debugging for IPCP NCP packets
Context	debug service ies *service-name* ppp packets ppp-session ipcp *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ipcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6cp *boolean*

Synopsis	Enable PPP debugging for IPv6CP NCP packets
Context	debug service ies *service-name* ppp packets ppp-session ipv6cp *boolean*
Tree	ipv6cp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lcp *boolean*

Synopsis	Enable PPP debugging for LCP link establishment packets
Context	debug service ies *service-name* ppp packets ppp-session lcp *boolean*
Tree	lcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pap *boolean*

Synopsis	Enable PPP debugging for PAP authentication packets
Context	debug service ies *service-name* ppp packets ppp-session pap *boolean*
Tree	pap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id [id] *string*

Synopsis	Add a list entry for **remote-id**
Context	debug service ies *service-name* ppp remote-id *string*
Tree	remote-id
Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *string*

Synopsis	Remote ID of the PPPoE session to debug
Context	debug service ies *service-name* ppp remote-id *string*
Tree	remote-id
String length	1 to 255
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	debug service ies *service-name* ppp sap *sap*
Tree	sap
Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID of the PPPoE session to debug
Context	debug service ies *service-name* ppp sap *sap*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-name [name] *string*

Synopsis	Add a list entry for **user-name**
Context	debug service ies *service-name* ppp user-name *string*
Tree	user-name
Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *string*

Synopsis	Username of the PPPoE session to debug
Context	debug service ies *service-name* ppp user-name *string*
Tree	user-name
Description	This command configures the username of the PPPoE sesssion to debug. Only packets after the PAP or CHAP authentication are logged. If the purpose is to include PPPoE discovery packets in the debug log, configure a MAC filter instead.
String length	1 to 255
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

video-interface [interface-name] *interface-name*

Synopsis	Enter the **video-interface** list instance
Context	debug service ies *service-name* video-interface *interface-name*
Tree	video-interface
Description	Commands in this context configure debugging for video interfaces.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	9
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

[**interface-name**] *interface-name*

Synopsis	Video interface name to debug
Context	debug service ies *service-name* video-interface *interface-name*
Tree	video-interface
String length	1 to 29
Notes	This element is part of a list key.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-server

Synopsis	Enable the **fcc-server** context
Context	debug service ies *service-name* video-interface *interface-name* fcc-server
Tree	fcc-server
Description	Commands in this context configure debugging for the video interface Fast Channel Change (FCC) server.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

client *ipv4-unicast-address*

Synopsis	Client IP address
Context	debug service ies *service-name* video-interface *interface-name* fcc-server client *ipv4-unicast-address*
Tree	client
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

detail-or-error *keyword*

Synopsis	Debug information for the FCC server
Context	debug service ies *service-name* video-interface *interface-name* fcc-server detail-or-error *keyword*
Tree	detail-or-error
Options	detail – Provide details about the FCC packet received error – Capture only error cases
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source-port *number*

Synopsis	Client source port
Context	debug service ies *service-name* video-interface *interface-name* fcc-server source-port *number*
Tree	source-port
Range	0 to 65535
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

packet-rx

Synopsis	Enable the **packet-rx** context
Context	debug service ies *service-name* video-interface *interface-name* packet-rx
Tree	packet-rx
Description	Commands in this context configure the debugging of received Real-time Transport Control Protocol (RTCP) messages.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

client *ipv4-unicast-address*

Synopsis	Client IP address
Context	debug service ies *service-name* video-interface *interface-name* packet-rx client *ipv4-unicast-address*
Tree	client

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-join *boolean*

Synopsis	Enable debugging for FCC joins
Context	debug service ies *service-name* video-interface *interface-name* packet-rx fcc-join *boolean*
Tree	fcc-join
Default	true
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-leave *boolean*

Synopsis	Enable debugging for FCC leaves
Context	debug service ies *service-name* video-interface *interface-name* packet-rx fcc-leave *boolean*
Tree	fcc-leave
Default	true
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

ret-nack *boolean*

Synopsis	Enable debugging for retransmission NACK packets
Context	debug service ies *service-name* video-interface *interface-name* packet-rx ret-nack *boolean*
Tree	ret-nack
Default	true
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

source-port *number*

Synopsis	Client source port
Context	debug service ies *service-name* video-interface *interface-name* packet-rx source-port *number*
Tree	source-port
Range	0 to 65535
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

perfect-stream

Synopsis	Enable the **perfect-stream** context
Context	debug service ies *service-name* video-interface *interface-name* perfect-stream
Tree	perfect-stream
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

zone-channel-name *named-item*

Synopsis	Zone channel name
Context	debug service ies *service-name* video-interface *interface-name* perfect-stream zone-channel-name *named-item*
Tree	zone-channel-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

rt-server

Synopsis	Enable the **rt-server** context
Context	debug service ies *service-name* video-interface *interface-name* rt-server
Tree	rt-server
Description	Commands in this context configure debugging for the Retransmission (RET) server.
Introduced	24.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-s

client *ipv4-unicast-address*

Synopsis	Client IP address
Context	debug service ies *service-name* video-interface *interface-name* rt-server client *ipv4-unicast-address*
Tree	client
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

detail-or-error *keyword*

Synopsis	Debug information for the RT server
Context	debug service ies *service-name* video-interface *interface-name* rt-server detail-or-error *keyword*
Tree	detail-or-error
Options	detail, error
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source-port *number*

Synopsis	Client source port
Context	debug service ies *service-name* video-interface *interface-name* rt-server source-port *number*
Tree	source-port
Range	0 to 65535
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

sg

Synopsis	Enable the **sg** context
Context	debug service ies *service-name* video-interface *interface-name* sg

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	sg
Description	Commands in this context configure channel debugging.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

group *ipv4-multicast-address*

Synopsis	Multicast channel address
Context	debug service ies *service-name* video-interface *interface-name* sg group *ipv4-multicast-address*
Tree	group
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source *ipv4-unicast-address*

Synopsis	Unicast source address
Context	debug service ies *service-name* video-interface *interface-name* sg source *ipv4-unicast-address*
Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

vpls [service-name] *service-name*

Synopsis	Enter the **vpls** list instance
Context	debug service vpls *service-name*
Tree	vpls
Introduced	22.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**service-name**] *service-name*

Synopsis	Administrative service name
Context	debug service vpls *service-name*
Tree	vpls
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

arp-host

Synopsis	Enable the **arp-host** context
Context	debug service vpls *service-name* arp-host
Tree	arp-host
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip [address] *ipv4-unicast-address*

Synopsis	Add a list entry for **ip**
Context	debug service vpls *service-name* arp-host ip *ipv4-unicast-address*
Tree	ip
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *ipv4-unicast-address*

Synopsis	IP address of the ARP host to debug
Context	debug service vpls *service-name* arp-host ip *ipv4-unicast-address*
Tree	ip
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac [address] *mac-unicast-address-no-zero*

Synopsis	Add a list entry for **mac**
Context	debug service vpls *service-name* arp-host mac *mac-unicast-address-no-zero*
Tree	mac
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *mac-unicast-address-no-zero*

Synopsis	MAC address of the ARP host to debug
Context	debug service vpls *service-name* arp-host mac *mac-unicast-address-no-zero*
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	ARP host packets present in the debug output
Context	debug service vpls *service-name* arp-host mode *keyword*
Tree	mode
Options	dropped-only – Display dropped packets only egress-ingress-and-dropped – Display egress, ingress, and dropped packets
Default	dropped-only
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	debug service vpls *service-name* arp-host sap *sap*
Tree	sap
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID of the ARP host to debug
Context	debug service vpls *service-name* arp-host sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp

Synopsis	Enable the **dhcp** context
Context	debug service vpls *service-name* dhcp
Tree	dhcp
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the DHCP debug output
Context	debug service vpls *service-name* dhcp detail-level *keyword*
Tree	detail-level
Options	low – Low detail level output for debugging medium – Medium detail level output for debugging high – High detail level output for debugging

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	medium
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac [address] *mac-unicast-address-no-zero*

Synopsis	Add a list entry for **mac**
Context	debug service vpls *service-name* dhcp mac *mac-unicast-address-no-zero*
Tree	mac
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *mac-unicast-address-no-zero*

Synopsis	MAC address matching client hardware address field
Context	debug service vpls *service-name* dhcp mac *mac-unicast-address-no-zero*
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	DHCP packets present in the debug output
Context	debug service vpls *service-name* dhcp mode *keyword*
Tree	mode
Options	dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets egress-ingress-and-dropped – Display egress, ingress, and dropped packets
Default	dropped-only
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	debug service vpls *service-name* dhcp sap *sap*
Tree	sap
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID for DHCP debugging
Context	debug service vpls *service-name* dhcp sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sdp [sdp-bind-id] *sdp-bind-id*

Synopsis	Add a list entry for **sdp**
Context	debug service vpls *service-name* dhcp sdp *sdp-bind-id*
Tree	sdp
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sdp-bind-id**] *sdp-bind-id*

Synopsis	SDP binding for DHCP debugging
Context	debug service vpls *service-name* dhcp sdp *sdp-bind-id*
Tree	sdp
String length	3 to 16

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String format	'sdp-bind-id' must be sdp-id:vc-id (sdp 1..32767, vc 1..4294967295)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp6

Synopsis	Enable the **dhcp6** context
Context	debug service vpls *service-name* dhcp6
Tree	dhcp6
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the DHCPv6 debug output
Context	debug service vpls *service-name* dhcp6 detail-level *keyword*
Tree	detail-level
Options	low – Low detail level output for debugging medium – Medium detail level output for debugging high – High detail level output for debugging
Default	medium
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac [address] *mac-unicast-address-no-zero*

Synopsis	Add a list entry for **mac**
Context	debug service vpls *service-name* dhcp6 mac *mac-unicast-address-no-zero*
Tree	mac
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**address**] *mac-unicast-address-no-zero*

Synopsis	MAC address matching source MAC address
Context	debug service vpls *service-name* dhcp6 mac *mac-unicast-address-no-zero*
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	DHCPv6 packets present in the debug output
Context	debug service vpls *service-name* dhcp6 mode *keyword*
Tree	mode
Options	dropped-only – Display dropped packets only egress-ingress-and-dropped – Display egress, ingress, and dropped packets
Default	dropped-only
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	debug service vpls *service-name* dhcp6 sap *sap*
Tree	sap
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID for DHCPv6 debugging
Context	debug service vpls *service-name* dhcp6 sap *sap*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sdp [sdp-bind-id] *sdp-bind-id*

Synopsis	Add a list entry for **sdp**
Context	debug service vpls *service-name* dhcp6 sdp *sdp-bind-id*
Tree	sdp
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sdp-bind-id**] *sdp-bind-id*

Synopsis	SDP binding for DHCPv6 debugging
Context	debug service vpls *service-name* dhcp6 sdp *sdp-bind-id*
Tree	sdp
String length	3 to 16
String format	'sdp-bind-id' must be sdp-id:vc-id (sdp 1..32767, vc 1..4294967295)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-connectivity-verify

Synopsis	Enable the **host-connectivity-verify** context
Context	debug service vpls *service-name* host-connectivity-verify
Tree	host-connectivity-verify
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ip [address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Add a list entry for **ip**
Context	debug service vpls *service-name* host-connectivity-verify ip *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ip
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the subscriber host for SHCV debugging
Context	debug service vpls *service-name* host-connectivity-verify ip *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ip
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac [address] *mac-unicast-address-no-zero*

Synopsis	Add a list entry for **mac**
Context	debug service vpls *service-name* host-connectivity-verify mac *mac-unicast-address-no-zero*
Tree	mac
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *mac-unicast-address-no-zero*

Synopsis	MAC address of the subscriber host for SHCV debugging
Context	debug service vpls *service-name* host-connectivity-verify mac *mac-unicast-address-no-zero*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	debug service vpls *service-name* host-connectivity-verify sap *sap*
Tree	sap
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID for SHCV debugging
Context	debug service vpls *service-name* host-connectivity-verify sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

igmp-host-tracking

Synopsis	Enable the **igmp-host-tracking** context
Context	debug service vpls *service-name* igmp-host-tracking
Tree	igmp-host-tracking
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

detail-level *keyword*

Synopsis	Detail level of the debug output
Context	debug service vpls *service-name* igmp-host-tracking detail-level *keyword*
Tree	detail-level
Options	low – Low detail level output for debugging medium – Medium detail level output for debugging high – High detail level output for debugging
Default	medium
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host [address] *ipv4-unicast-address*

Synopsis	Add a list entry for **host**
Context	debug service vpls *service-name* igmp-host-tracking host *ipv4-unicast-address*
Tree	host
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *ipv4-unicast-address*

Synopsis	Host IP address for IGMP host tracking debugging
Context	debug service vpls *service-name* igmp-host-tracking host *ipv4-unicast-address*
Tree	host
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	IGMP host tracking packets in debug output

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug service vpls *service-name* igmp-host-tracking mode *keyword*
Tree	mode
Options	dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets
Default	dropped-only
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	debug service vpls *service-name* igmp-host-tracking sap *sap*
Tree	sap
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP identifier to debug IGMP host tracking
Context	debug service vpls *service-name* igmp-host-tracking sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	26.7.R1

vni *number*

Synopsis	VXLAN Network Identifier of the VXLAN binding
Context	debug service vpls *service-name* pim-snooping events port vni *number*
Tree	vni
Range	1 to 16777215
Notes	The following elements are part of a mandatory choice: **evpn-mpls**, **sap-id**, **sdp-bind-id**, or (**vni** and **vtep**).
Introduced	22.10.R1
Platforms	All

vtep *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the tunnel endpoint
Context	debug service vpls *service-name* pim-snooping events port vtep *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	vtep
Notes	The following elements are part of a mandatory choice: **evpn-mpls**, **sap-id**, **sdp-bind-id**, or (**vni** and **vtep**).
Introduced	22.10.R1
Platforms	All

red

Synopsis	Enable the **red** context
Context	debug service vpls *service-name* pim-snooping events red
Tree	red
Description	Commands in this context enable debugging for PIM messages sent to the standby CPM.
Notes	The following elements are part of a choice: (**adjacency**, **db**, **jp**, **mcs**, **port**, and **red**) or **all**.

discovery

Synopsis	Enter the **discovery** context
Context	debug service vpls *service-name* ppp packets discovery
Tree	discovery
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all discovery packets
Context	debug service vpls *service-name* ppp packets discovery all
Tree	all
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padi *boolean*

Synopsis	Enable PPP debugging for PADI discovery packets
Context	debug service vpls *service-name* ppp packets discovery padi *boolean*
Tree	padi
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pado *boolean*

Synopsis	Enable PPP debugging for PADO discovery packets
Context	debug service vpls *service-name* ppp packets discovery pado *boolean*
Tree	pado
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padr *boolean*

Synopsis	Enable PPP debugging for PADR discovery packets
Context	debug service vpls *service-name* ppp packets discovery padr *boolean*
Tree	padr
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pads *boolean*

Synopsis	Enable PPP debugging for PADS discovery packets
Context	debug service vpls *service-name* ppp packets discovery pads *boolean*
Tree	pads
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padt *boolean*

Synopsis	Enable PPP debugging for PADT discovery packets
Context	debug service vpls *service-name* ppp packets discovery padt *boolean*
Tree	padt
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1

mode *keyword*

Synopsis	PPP packets present in the debug output
Context	debug service vpls *service-name* ppp packets mode *keyword*
Tree	mode
Options	dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets egress-ingress-and-dropped – Display egress, ingress, and dropped packets
Default	dropped-only
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-session

Synopsis	Enter the **ppp-session** context
Context	debug service vpls *service-name* ppp packets ppp-session
Tree	ppp-session
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all PPP session packets
Context	debug service vpls *service-name* ppp packets ppp-session all
Tree	all
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

chap *boolean*

Synopsis	Enable PPP debugging for CHAP authentication packets
Context	debug service vpls *service-name* ppp packets ppp-session chap *boolean*
Tree	chap

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipcp *boolean*

Synopsis	Enable PPP debugging for IPCP NCP packets
Context	debug service vpls *service-name* ppp packets ppp-session ipcp *boolean*
Tree	ipcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6cp *boolean*

Synopsis	Enable PPP debugging for IPv6CP NCP packets
Context	debug service vpls *service-name* ppp packets ppp-session ipv6cp *boolean*
Tree	ipv6cp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lcp *boolean*

Synopsis	Enable PPP debugging for LCP link establishment packets
Context	debug service vpls *service-name* ppp packets ppp-session lcp *boolean*
Tree	lcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

one-time-http-redirection

Synopsis	Enable the **one-time-http-redirection** context
Context	debug service vprn *service-name* one-time-http-redirection
Tree	one-time-http-redirection
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip [address] *ipv4-unicast-address*

Synopsis	Add a list entry for **ip**
Context	debug service vprn *service-name* one-time-http-redirection ip *ipv4-unicast-address*
Tree	ip
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *ipv4-unicast-address*

Synopsis	Host IP address for one-time HTTP redirection debugging
Context	debug service vprn *service-name* one-time-http-redirection ip *ipv4-unicast-address*
Tree	ip
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac [address] *mac-unicast-address-no-zero*

Synopsis	Add a list entry for **mac**
Context	debug service vprn *service-name* one-time-http-redirection mac *mac-unicast-address-no-zero*
Tree	mac

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *mac-unicast-address-no-zero*

Synopsis	Host MAC address for one-time HTTP redirection debug
Context	debug service vprn *service-name* one-time-http-redirection mac *mac-unicast-address-no-zero*
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	debug service vprn *service-name* one-time-http-redirection sap *sap*
Tree	sap
Max. instances	8
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID for one-time HTTP redirection debugging
Context	debug service vprn *service-name* one-time-http-redirection sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

ppp

Synopsis	Enable the **ppp** context
Context	debug service vprn *service-name* ppp
Tree	ppp
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id [id] *string*

Synopsis	Add a list entry for **circuit-id**
Context	debug service vprn *service-name* ppp circuit-id *string*
Tree	circuit-id
Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[id] *string*

Synopsis	Circuit ID of the PPPoE session to debug
Context	debug service vprn *service-name* ppp circuit-id *string*
Tree	circuit-id
String length	1 to 255
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

events

Synopsis	Enable the **events** context
Context	debug service vprn *service-name* ppp events
Tree	events
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

all

Synopsis	Enable PPP debugging for all events
Context	debug service vprn *service-name* ppp events all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-client

Synopsis	Enable the **dhcp-client** context
Context	debug service vprn *service-name* ppp events dhcp-client
Tree	dhcp-client
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service vprn *service-name* ppp events dhcp-client terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tp

Synopsis	Enable the **l2tp** context
Context	debug service vprn *service-name* ppp events l2tp
Tree	l2tp
Description	Commands in this context configure debugging events for L2TP sessions.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service vprn *service-name* ppp events l2tp terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address-assignment

Synopsis	Enable the **local-address-assignment** context
Context	debug service vprn *service-name* ppp events local-address-assignment
Tree	local-address-assignment
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service vprn *service-name* ppp events local-address-assignment terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

ppp

Synopsis	Enable the **ppp** context
Context	debug service vprn *service-name* ppp events ppp
Tree	ppp
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **l2tp**, **local-address-assignment**, and **ppp**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

terminate-only *boolean*

Synopsis	Debug events for ungraceful terminated sessions only
Context	debug service vprn *service-name* ppp events ppp terminate-only *boolean*
Tree	terminate-only
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac [address] *mac-address*

Synopsis	Add a list entry for **mac**
Context	debug service vprn *service-name* ppp mac *mac-address*
Tree	mac
Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**address**] *mac-address*

Synopsis	MAC address of the PPPoE session to debug
Context	debug service vprn *service-name* ppp mac *mac-address*
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enable the **packets** context
Context	debug service vprn *service-name* ppp packets
Tree	packets
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all packets
Context	debug service vprn *service-name* ppp packets all
Tree	all
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the PPP packet debug output
Context	debug service vprn *service-name* ppp packets detail-level *keyword*
Tree	detail-level
Options	low – Low detail level output for debugging medium – Medium detail level output for debugging high – High detail level output for debugging
Default	high
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dhcp-client *boolean*

Synopsis	Enable DHCP client packet debugging
Context	debug service vprn *service-name* ppp packets dhcp-client *boolean*
Tree	dhcp-client
Default	false
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discovery

Synopsis	Enter the **discovery** context
Context	debug service vprn *service-name* ppp packets discovery
Tree	discovery
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all discovery packets
Context	debug service vprn *service-name* ppp packets discovery all
Tree	all
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padi *boolean*

Synopsis	Enable PPP debugging for PADI discovery packets
Context	debug service vprn *service-name* ppp packets discovery padi *boolean*
Tree	padi

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pado *boolean*

Synopsis	Enable PPP debugging for PADO discovery packets
Context	debug service vprn *service-name* ppp packets discovery pado *boolean*
Tree	pado
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padr *boolean*

Synopsis	Enable PPP debugging for PADR discovery packets
Context	debug service vprn *service-name* ppp packets discovery padr *boolean*
Tree	padr
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pads *boolean*

Synopsis	Enable PPP debugging for PADS discovery packets
Context	debug service vprn *service-name* ppp packets discovery pads *boolean*
Tree	pads
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

padt *boolean*

Synopsis	Enable PPP debugging for PADT discovery packets
Context	debug service vprn *service-name* ppp packets discovery padt *boolean*
Tree	padt
Default	false
Notes	The following elements are part of a choice: **all** or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	PPP packets present in the debug output
Context	debug service vprn *service-name* ppp packets mode *keyword*
Tree	mode
Options	dropped-only – Display dropped packets only ingress-and-dropped – Display ingress and dropped packets egress-ingress-and-dropped – Display egress, ingress, and dropped packets
Default	dropped-only
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-session

Synopsis	Enter the **ppp-session** context
Context	debug service vprn *service-name* ppp packets ppp-session
Tree	ppp-session
Notes	The following elements are part of a mandatory choice: **all** or (**dhcp-client**, **discovery**, and **ppp-session**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	Enable PPP debugging for all PPP session packets
Context	debug service vprn *service-name* ppp packets ppp-session all

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	all
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

chap *boolean*

Synopsis	Enable PPP debugging for CHAP authentication packets
Context	debug service vprn *service-name* ppp packets ppp-session chap *boolean*
Tree	chap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipcp *boolean*

Synopsis	Enable PPP debugging for IPCP NCP packets
Context	debug service vprn *service-name* ppp packets ppp-session ipcp *boolean*
Tree	ipcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6cp *boolean*

Synopsis	Enable PPP debugging for IPv6CP NCP packets
Context	debug service vprn *service-name* ppp packets ppp-session ipv6cp *boolean*
Tree	ipv6cp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lcp *boolean*

Synopsis	Enable PPP debugging for LCP link establishment packets
Context	debug service vprn *service-name* ppp packets ppp-session lcp *boolean*
Tree	lcp
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pap *boolean*

Synopsis	Enable PPP debugging for PAP authentication packets
Context	debug service vprn *service-name* ppp packets ppp-session pap *boolean*
Tree	pap
Default	false
Notes	The following elements are part of a choice: **all** or (**chap**, **ipcp**, **ipv6cp**, **lcp**, and **pap**).
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id [id] *string*

Synopsis	Add a list entry for **remote-id**
Context	debug service vprn *service-name* ppp remote-id *string*
Tree	remote-id
Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *string*

Synopsis	Remote ID of the PPPoE session to debug
Context	debug service vprn *service-name* ppp remote-id *string*
Tree	remote-id

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 255
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Add a list entry for **sap**
Context	debug service vprn *service-name* ppp sap *sap*
Tree	sap
Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID of the PPPoE session to debug
Context	debug service vprn *service-name* ppp sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-name [name] *string*

Synopsis	Add a list entry for **user-name**
Context	debug service vprn *service-name* ppp user-name *string*
Tree	user-name
Max. instances	8
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**name**] *string*

Synopsis	Username of the PPPoE session to debug
Context	debug service vprn *service-name* ppp user-name *string*
Tree	user-name
Description	This command configures the username of the PPPoE sesssion to debug. Only packets after the PAP or CHAP authentication are logged. If the purpose is to include PPPoE discovery packets in the debug log, configure a MAC filter instead.
String length	1 to 255
Notes	This element is part of a list key.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

video-interface [interface-name] *interface-name*

Synopsis	Enter the **video-interface** list instance
Context	debug service vprn *service-name* video-interface *interface-name*
Tree	video-interface
Description	Commands in this context configure debugging for video interfaces.
Max. instances	9
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

[**interface-name**] *interface-name*

Synopsis	Video interface name to debug
Context	debug service vprn *service-name* video-interface *interface-name*
Tree	video-interface
String length	1 to 29
Notes	This element is part of a list key.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fcc-server

Synopsis	Enable the **fcc-server** context
Context	debug service vprn *service-name* video-interface *interface-name* fcc-server
Tree	fcc-server
Description	Commands in this context configure debugging for the video interface Fast Channel Change (FCC) server.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

client *ipv4-unicast-address*

Synopsis	Client IP address
Context	debug service vprn *service-name* video-interface *interface-name* fcc-server client *ipv4-unicast-address*
Tree	client
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

detail-or-error *keyword*

Synopsis	Debug information for the FCC server
Context	debug service vprn *service-name* video-interface *interface-name* fcc-server detail-or-error *keyword*
Tree	detail-or-error
Options	detail – Provide details about the FCC packet received error – Capture only error cases
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source-port *number*

Synopsis	Client source port
Context	debug service vprn *service-name* video-interface *interface-name* fcc-server source-port *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	source-port
Range	0 to 65535
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

packet-rx

Synopsis	Enable the **packet-rx** context
Context	debug service vprn *service-name* video-interface *interface-name* packet-rx
Tree	packet-rx
Description	Commands in this context configure the debugging of received Real-time Transport Control Protocol (RTCP) messages.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

client *ipv4-unicast-address*

Synopsis	Client IP address
Context	debug service vprn *service-name* video-interface *interface-name* packet-rx client *ipv4-unicast-address*
Tree	client
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

fcc-join *boolean*

Synopsis	Enable debugging for FCC joins
Context	debug service vprn *service-name* video-interface *interface-name* packet-rx fcc-join *boolean*
Tree	fcc-join
Default	true
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fcc-leave *boolean*

Synopsis	Enable debugging for FCC leaves
Context	debug service vprn *service-name* video-interface *interface-name* packet-rx fcc-leave *boolean*
Tree	fcc-leave
Default	true
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

ret-nack *boolean*

Synopsis	Enable debugging for retransmission NACK packets
Context	debug service vprn *service-name* video-interface *interface-name* packet-rx ret-nack *boolean*
Tree	ret-nack
Default	true
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source-port *number*

Synopsis	Client source port
Context	debug service vprn *service-name* video-interface *interface-name* packet-rx source-port *number*
Tree	source-port
Range	0 to 65535
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

perfect-stream

Synopsis	Enable the **perfect-stream** context
Context	debug service vprn *service-name* video-interface *interface-name* perfect-stream
Tree	perfect-stream
Introduced	24.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-s

zone-channel-name *named-item*

Synopsis	Zone channel name
Context	debug service vprn *service-name* video-interface *interface-name* perfect-stream zone-channel-name *named-item*
Tree	zone-channel-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

rt-server

Synopsis	Enable the **rt-server** context
Context	debug service vprn *service-name* video-interface *interface-name* rt-server
Tree	rt-server
Description	Commands in this context configure debugging for the Retransmission (RET) server.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

client *ipv4-unicast-address*

Synopsis	Client IP address
Context	debug service vprn *service-name* video-interface *interface-name* rt-server client *ipv4-unicast-address*
Tree	client
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

detail-or-error *keyword*

Synopsis	Debug information for the RT server

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug service vprn *service-name* video-interface *interface-name* rt-server detail-or-error *keyword*
Tree	detail-or-error
Options	detail, error
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

source-port *number*

Synopsis	Client source port
Context	debug service vprn *service-name* video-interface *interface-name* rt-server source-port *number*
Tree	source-port
Range	0 to 65535
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

sg

Synopsis	Enable the **sg** context
Context	debug service vprn *service-name* video-interface *interface-name* sg
Tree	sg
Description	Commands in this context configure channel debugging.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

group *ipv4-multicast-address*

Synopsis	Multicast channel address
Context	debug service vprn *service-name* video-interface *interface-name* sg group *ipv4-multicast-address*
Tree	group
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Introduced	24.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-s

source *ipv4-unicast-address*

Synopsis	Unicast source address
Context	debug service vprn *service-name* video-interface *interface-name* sg source *ipv4-unicast-address*
Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

subscriber-mgmt

Synopsis	Enter the **subscriber-mgmt** context
Context	debug subscriber-mgmt
Tree	subscriber-mgmt
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp

Synopsis	Enter the **gtp** context
Context	debug subscriber-mgmt gtp
Tree	gtp
Description	This command enables the context to configure box-wide GTP parameters and profiles.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

events *boolean*

Synopsis	Enable GTP event debugging
Context	debug subscriber-mgmt gtp events *boolean*
Tree	events
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi [imsi-instance] *string*

Synopsis	Add a list entry for **imsi**
Context	debug subscriber-mgmt gtp imsi *string*
Tree	imsi
Max. instances	8
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**imsi-instance**] *string*

Synopsis	IMSI of GTP sessions to debug
Context	debug subscriber-mgmt gtp imsi *string*
Tree	imsi
String length	1 to 15
String format	'imsi-instance' must be decimal digits (1..15 digits)
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enable the **packets** context
Context	debug subscriber-mgmt gtp packets
Tree	packets
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the GTP packet debug output

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug subscriber-mgmt gtp packets detail-level *keyword*
Tree	detail-level
Options	high – High detail level output for debugging low – Low detail level output for debugging
Default	low
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	GTP packets to include in the debug output
Context	debug subscriber-mgmt gtp packets mode *keyword*
Tree	mode
Options	all – Display all packets dropped – Display dropped packets only
Default	dropped
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer [address] *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string*

Synopsis	Enter the **peer** list instance
Context	debug subscriber-mgmt gtp peer *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string*
Tree	peer
Max. instances	8
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**address**] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Remote IP address of the GTP peer
Context	debug subscriber-mgmt gtp peer *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string*
Tree	peer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

router *string*

Synopsis	Router instance where GTP peer packets are expected
Context	debug subscriber-mgmt gtp peer *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string*
Tree	peer
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

udp-port *number*

Synopsis	UDP source (Rx packets) / destination (Tx packets) port
Context	debug subscriber-mgmt gtp peer *(ipv4-address-no-zone | ipv6-address-no-zone)* router *string* udp-port *number*
Tree	udp-port
Description	This command configures the UDP source port of received packets or the UDP destination port of transmitted packets.
Range	0 | 1 to 65535
Default	2123
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-user-db [name] *named-item*

Synopsis	Enter the **local-user-db** list instance
Context	debug subscriber-mgmt local-user-db *named-item*
Tree	local-user-db
Max. instances	127
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**name**] *named-item*

Synopsis	Local user database name
Context	debug subscriber-mgmt local-user-db *named-item*
Tree	local-user-db
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	Level of the local user database debug output
Context	debug subscriber-mgmt local-user-db *named-item* mode *keyword*
Tree	mode
Options	all – Display all lookup events failed – Display failed lookup events
Default	failed
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp

Synopsis	Enter the **pfcp** context
Context	debug subscriber-mgmt pfcp
Tree	pfcp
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

packets

Synopsis	Enable the **packets** context
Context	debug subscriber-mgmt pfcp packets
Tree	packets

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the PFCP packet debug output
Context	debug subscriber-mgmt pfcp packets detail-level *keyword*
Tree	detail-level
Options	high – High detail level output for debugging low – Low detail level output for debugging
Default	low
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mode *keyword*

Synopsis	PFCP packets present in the debug output
Context	debug subscriber-mgmt pfcp packets mode *keyword*
Tree	mode
Options	all – Display all packets dropped – Display dropped packets only failed – Keyword
Default	dropped
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy [name] *external-named-item*

Synopsis	Enter the **sub-ident-policy** list instance
Context	debug subscriber-mgmt sub-ident-policy *external-named-item*
Tree	sub-ident-policy
Max. instances	4
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**name**] *external-named-item*

Synopsis	Name of the subscriber identification policy
Context	debug subscriber-mgmt sub-ident-policy *external-named-item*
Tree	sub-ident-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

script-all-info

Synopsis	All script information
Context	debug subscriber-mgmt sub-ident-policy *external-named-item* script-all-info
Tree	script-all-info
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

script-compile-error

Synopsis	Log information on compile errors
Context	debug subscriber-mgmt sub-ident-policy *external-named-item* script-compile-error
Tree	script-compile-error
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

script-export-variables

Synopsis	Export variables on successful script completion

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	debug subscriber-mgmt sub-ident-policy *external-named-item* script-export-variables
Tree	script-export-variables
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

script-output

Synopsis	Log information generated with script output data
Context	debug subscriber-mgmt sub-ident-policy *external-named-item* script-output
Tree	script-output
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

script-output-on-error

Synopsis	Log information with unsuccessful script output data
Context	debug subscriber-mgmt sub-ident-policy *external-named-item* script-output-on-error
Tree	script-output-on-error
Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

script-runtime-error

Synopsis	Log information on detecting script runtime error
Context	debug subscriber-mgmt sub-ident-policy *external-named-item* script-runtime-error
Tree	script-runtime-error

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **script-all-info** or (**script-compile-error**, **script-export-variables**, **script-output**, **script-output-on-error**, and **script-runtime-error**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vrgw

Synopsis	Enter the **vrgw** context
Context	debug subscriber-mgmt vrgw
Tree	vrgw
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

brg

Synopsis	Enter the **brg** context
Context	debug subscriber-mgmt vrgw brg
Tree	brg
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe-client

Synopsis	Enter the **pppoe-client** context
Context	debug subscriber-mgmt vrgw brg pppoe-client
Tree	pppoe-client
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

brg-id [id] *named-item-64*

Synopsis	Enter the **brg-id** list instance
Context	debug subscriber-mgmt vrgw brg pppoe-client brg-id *named-item-64*
Tree	brg-id

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	32
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *named-item-64*

Synopsis	BRG ID of the session to debug
Context	debug subscriber-mgmt vrgw brg pppoe-client brg-id *named-item-64*
Tree	brg-id
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detail-level *keyword*

Synopsis	Detail level of the debug output
Context	debug subscriber-mgmt vrgw brg pppoe-client brg-id *named-item-64* detail-level *keyword*
Tree	detail-level
Options	low – Low detail level output for debugging medium – Medium detail level output for debugging high – High detail level output for debugging
Default	high
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

direction *keyword*

Synopsis	Direction of the PPPoE packets in the debug output
Context	debug subscriber-mgmt vrgw brg pppoe-client brg-id *named-item-64* direction *keyword*
Tree	direction
Options	ingress, egress, both
Default	both

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discovery

Synopsis	Enter the **discovery** context
Context	debug subscriber-mgmt vrgw brg pppoe-client brg-id *named-item-64* discovery
Tree	discovery
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

all

Synopsis	All discovery packets
Context	debug subscriber-mgmt vrgw brg pppoe-client brg-id *named-item-64* discovery all
Tree	all
Notes	The following elements are part of a choice: **all**, **none**, or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

none

Synopsis	No discovery packets
Context	debug subscriber-mgmt vrgw brg pppoe-client brg-id *named-item-64* discovery none
Tree	none
Notes	The following elements are part of a choice: **all**, **none**, or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padi

Synopsis	PADI packets
Context	debug subscriber-mgmt vrgw brg pppoe-client brg-id *named-item-64* discovery padi
Tree	padi

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **all**, **none**, or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pado

Synopsis	PADO packets
Context	debug subscriber-mgmt vrgw brg pppoe-client brg-id *named-item-64* discovery pado
Tree	pado
Notes	The following elements are part of a choice: **all**, **none**, or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padr

Synopsis	PADR packets
Context	debug subscriber-mgmt vrgw brg pppoe-client brg-id *named-item-64* discovery padr
Tree	padr
Notes	The following elements are part of a choice: **all**, **none**, or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pads

Synopsis	PADS packets
Context	debug subscriber-mgmt vrgw brg pppoe-client brg-id *named-item-64* discovery pads
Tree	pads
Notes	The following elements are part of a choice: **all**, **none**, or (**padi**, **pado**, **padr**, **pads**, and **padt**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-server

Synopsis	Persistence debugging for DHCP and DHCPv6 servers
Context	debug system persistence dhcp-server
Tree	dhcp-server
Notes	The following elements are part of a mandatory choice: **all** or (**ancp**, **application-assurance**, **dhcp-server**, **nat-fwds**, **python-policy-cache**, and **submgt**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nat-fwds

Synopsis	Persistence debugging for NAT port forwarding
Context	debug system persistence nat-fwds
Tree	nat-fwds
Notes	The following elements are part of a mandatory choice: **all** or (**ancp**, **application-assurance**, **dhcp-server**, **nat-fwds**, **python-policy-cache**, and **submgt**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

python-policy-cache

Synopsis	Persistence debugging for Python cache
Context	debug system persistence python-policy-cache
Tree	python-policy-cache
Notes	The following elements are part of a mandatory choice: **all** or (**ancp**, **application-assurance**, **dhcp-server**, **nat-fwds**, **python-policy-cache**, and **submgt**).
Introduced	26.7.R1
Platforms	All

submgt

Synopsis	Persistence debugging for subscriber management
Context	debug system persistence submgt

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	submgt
Notes	The following elements are part of a mandatory choice: **all** or (**ancp**, **application-assurance**, **dhcp-server**, **nat-fwds**, **python-policy-cache**, and **submgt**).
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wlan-gw

Synopsis	Enter the **wlan-gw** context
Context	debug wlan-gw
Tree	wlan-gw
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

group [id] *number*

Synopsis	Enter the **group** list instance
Context	debug wlan-gw group *number*
Tree	group
Max. instances	1
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	WLAN-GW group ID in the system
Context	debug wlan-gw group *number*
Tree	group
Range	1 to 4
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

learn-ap-mac

Synopsis	Enable the **learn-ap-mac** context
Context	debug wlan-gw group *number* learn-ap-mac
Tree	learn-ap-mac
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the remote tunnel endpoint
Context	debug wlan-gw group *number* learn-ap-mac tunnel-remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	tunnel-remote-address
Notes	This element is mandatory.
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

statistic [type] *keyword* name *named-item-64*

Synopsis	Enter the **statistic** list instance
Context	debug wlan-gw group *number* statistic *keyword* name *named-item-64*
Tree	statistic
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[type] *keyword*

Synopsis	Type of statistic to trace
Context	debug wlan-gw group *number* statistic *keyword* name *named-item-64*
Tree	statistic
Options	packet-error – Packet related error host-error – Host related error bd-error – Bridge domain related error forwarding – Number of forwarded packets reassembly – Reassembly related statistic aa – AA related statistic

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	radius – RADIUS related statistic arp – ARP related statistic dhcp4 – DHCP related statistic dhcp6 – DHCPv6 related statistic icmp4 – ICMP related statistic icmp6 – ICMPv6 related statistic
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *named-item-64*

Synopsis	Name of the statistic to trace
Context	debug wlan-gw group *number* statistic *keyword* name *named-item-64*
Tree	statistic
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

capture-packet *boolean*

Synopsis	Set a single packet capture trigger for the statistic
Context	debug wlan-gw group *number* statistic *keyword* name *named-item-64* capture-packet *boolean*
Tree	capture-packet
Default	false
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ue

Synopsis	Enable the **ue** context
Context	debug wlan-gw group *number* ue
Tree	ue
Introduced	22.5.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

bridge-domain *number*

Synopsis	Bridge domain of the UEs to debug
Context	debug wlan-gw group *number* ue bridge-domain *number*
Tree	bridge-domain
Range	1 to 4294967295
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *mac-address*

Synopsis	MAC address of the UE to debug
Context	debug wlan-gw group *number* ue mac-address *mac-address*
Tree	mac-address
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocols

Synopsis	Enable the **protocols** context
Context	debug wlan-gw group *number* ue protocols
Tree	protocols
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arp *boolean*

Synopsis	Enable debugging for the ARP protocol
Context	debug wlan-gw group *number* ue protocols arp *boolean*
Tree	arp
Default	false
Introduced	22.5.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp4 *boolean*

Synopsis	Enable debugging for the DHCP protocol
Context	debug wlan-gw group *number* ue protocols dhcp4 *boolean*
Tree	dhcp4
Default	false
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp6 *boolean*

Synopsis	Enable debugging for the DHCPv6 protocol
Context	debug wlan-gw group *number* ue protocols dhcp6 *boolean*
Tree	dhcp6
Default	false
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp4 *boolean*

Synopsis	Enable debugging for the ICMP protocol
Context	debug wlan-gw group *number* ue protocols icmp4 *boolean*
Tree	icmp4
Default	false
Introduced	22.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp6 *boolean*

Synopsis	Enable debugging for the ICMPv6 protocol
Context	debug wlan-gw group *number* ue protocols icmp6 *boolean*
Tree	icmp6
Default	false

4.14.1 esa command descriptions

esa [esa-id] *number*

Synopsis	Enter the **esa** list instance
Context	**configure** esa *number*
Tree	esa
Description	Commands in this context configure the Extended Services Appliance (ESA) instance.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[**esa-id**] *number*

Synopsis	ESA ID
Context	**configure** esa *number*
Tree	esa
Range	1 to 16
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of the ESA
Context	**configure** esa *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

description *description*

Synopsis	Text description

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** esa *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

host-port [host-port] *port*

Synopsis	Enter the **host-port** list instance
Context	**configure** esa *number* host-port *port*
Tree	host-port
Max. instances	4
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[**host-port**] *port*

Synopsis	Ethernet port associated with the ESA
Context	**configure** esa *number* host-port *port*
Tree	host-port
Description	This command configures an Ethernet port associated with the ESA-VM instance. The port ID must be the same as the port ID associated with the ESA context on which the ESA-VM is configured.
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

crc-monitor

Synopsis	Enter the **crc-monitor** context
Context	**configure** esa *number* host-port *port* crc-monitor
Tree	crc-monitor
Description	Commands in this context configure ESA cyclic redundancy check (CRC) monitoring.
Introduced	24.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

signal-degrade

Synopsis	Enter the **signal-degrade** context
Context	**configure** esa *number* host-port *port* crc-monitor signal-degrade
Tree	signal-degrade
Description	Commands in this context configure the error rate at which to declare the signal degrade (SD) condition on an Ethernet interface. The value represents M*10E-N, a ratio of errored frames over total frames received over W seconds of the sliding window. The CRC errors on the interface are sampled once per second. A default of 10 seconds is used when no additional **window-size** is configured. If you omit the **multiplier** value, the multiplier returns to the default value of 1. **Note**: Crossing the configured SD threshold raises a log event.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

multiplier *number*

Synopsis	SD multiplier
Context	**configure** esa *number* host-port *port* crc-monitor signal-degrade multiplier *number*
Tree	multiplier
Max. range	0 to 4294967295
Default	1
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

threshold *number*

Synopsis	SD threshold
Context	**configure** esa *number* host-port *port* crc-monitor signal-degrade threshold *number*
Tree	threshold
Range	1 to 9
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

signal-failure

Synopsis	Enter the **signal-failure** context
Context	**configure** esa *number* host-port *port* crc-monitor signal-failure
Tree	signal-failure
Description	Commands in this context configure the error rate at which to declare the signal failure (SF) condition on an Ethernet interface. The value represents M*10E-N, errored frames over total frames received over W seconds of the sliding window. The CRC errors on the interface are sampled once per second. A default of 10 seconds is used when no additional **window-size** is configured. If you omit the **multiplier** value, the multiplier returns to the default value of 1. **Note**: Crossing the configured signal failure (SF) threshold causes the router ESA port to enter an operational state of down when the router side detects the SF, or the port is shut down when the ESA detects the SF, which triggers redundancy for all configured ISA groups.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

multiplier *number*

Synopsis	SF multiplier
Context	**configure** esa *number* host-port *port* crc-monitor signal-failure multiplier *number*
Tree	multiplier
Max. range	0 to 4294967295
Default	1
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

threshold *number*

Synopsis	SF threshold
Context	**configure** esa *number* host-port *port* crc-monitor signal-failure threshold *number*
Tree	threshold
Range	1 to 9
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

window-size *number*

Synopsis	Window size of the monitor
Context	**configure** esa *number* host-port *port* crc-monitor window-size *number*
Tree	window-size
Range	10 to 60
Units	seconds
Default	10
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

vm [vm-id] *number*

Synopsis	Enter the **vm** list instance
Context	**configure** esa *number* vm *number*
Tree	vm
Description	Commands in this context configure the ESA-VM instance.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

[**vm-id**] *number*

Synopsis	VM ID
Context	**configure** esa *number* vm *number*
Tree	vm
Range	1 to 4
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of the ESA-VM instance
Context	**configure** esa *number* vm *number* admin-state *keyword*
Tree	admin-state

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the administrative state of the ESA-VM instance. The state affects the operational state of the instance and all entities contained within the instance; however, configuration settings or statistics are not changed, reset, or removed.
Options	enable, disable
Default	disable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

cores *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of CPU physical cores allocated to the ESA-VM
Context	**configure** esa *number* vm *number* cores *number*
Tree	cores
Description	This command specifies the number of CPU physical cores allocated to the ESA-VM instance. If an invalid value is configured for the number of cores, the VM remains in a failed state.
Range	0 to 128
Default	0
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

description *description*

Synopsis	Text description
Context	**configure** esa *number* vm *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

host-port *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Ethernet port associated with the ESA-VM instance
Context	**configure** esa *number* vm *number* host-port *reference*
Tree	host-port
Description	This command configures an Ethernet port associated with the ESA-VM instance. The port ID must be the same as the port ID associated with the ESA context on which the ESA-VM is configured.
Reference	**configure** esa *number* host-port *port*
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

memory *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Amount of memory allocated to the ESA-VM
Context	**configure** esa *number* vm *number* memory *number*
Tree	memory
Range	0 to 256
Units	gigabytes
Default	0
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

vm-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	ESA-VM type

4.15.1 eth-cfm command descriptions

eth-cfm

Synopsis	Enter the **eth-cfm** context
Context	**configure** eth-cfm
Tree	eth-cfm
Description	Commands in this context configure ETH-CFM parameters.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

default-domain

Synopsis	Enter the **default-domain** context
Context	**configure** eth-cfm default-domain
Tree	default-domain
Description	Commands in this context configure MIP creation parameters per index (**bridge-identifier** *bridge-id* **vlan** *vlan-id*) if the MIP creation statement exists as part of the service connection. The MIP creation statement must be present on the connection before any configuration can occur for a MIP under this context. Whether a MIP uses the **default-domain** creation method is determined by the MIP authoritative nature of the **eth-cfm domain association**. The **eth-cfm default-domain** MIP creation is considered only if the **eth-cfm domain association** is not authoritative.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bridge-identifier [bridge-name] *service-name* vlan *(number | keyword)*

Synopsis	Enter the **bridge-identifier** list instance
Context	**configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)*
Tree	bridge-identifier
Description	Commands in this context configure the references required to link the CFM function with the service context, allowing the entry of MIP-specific parameters for the index in the default domain table.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The **info** and **info detail** commands do not display any entries for the instance unless they have previously been accessed. The possible candidates for the instance can be located using the **show eth-cfm default-domain** command.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**bridge-name**] *service-name*

Synopsis Bridge name in the default domain table

Context **configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)*

Tree bridge-identifier

Description This command specifies the bridge name to enter in the default domain associated with the MIP.

String length 1 to 64

String format 'service-name' must contain at least one non-space character

Notes This element is part of a list key.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan *(number | keyword)*

Synopsis VLAN ID for the default domain

Context **configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)*

Tree bridge-identifier

Description This command configures a VLAN ID for the default domain.

Range 1 to 4094

Options none

Notes This element is part of a list key.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

id-permission *keyword*

Synopsis Strategy for the inclusion of Sender ID TLV information

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)* id-permission *keyword*
Tree	id-permission
Description	This command specifies how the Sender ID TLV information is included for installed MEPs and MIPs. The Sender ID TLV is supported for ETH-CCM, ETH-LB, and ETH-LB PDUs.
Options	none, chassis, defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mhf-creation

Synopsis	Enter the **mhf-creation** context
Context	**configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)* mhf-creation
Tree	mhf-creation
Description	Commands in this context configure the MIP method of creation. MIP creation mode and other factors are part of the MIP creation authority (**association** or **default-domain**) logic. The MIP creation algorithm may result in multiple potential MIPs. Only the lowest-level valid MIP is instantiated.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

level *(number | keyword)*

Synopsis	Requested level of the MIP
Context	**configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)* mhf-creation level *(number | keyword)*
Tree	level
Description	This command configures the requested level of the MIP. This is used by the MIP creation algorithm to determine its validity in comparison to other ETH-CFM MIPs and MEPs. If the level is configured as **defer**, the level value is inherited from the global read-only system values.
Range	0 to 7
Options	defer
Default	defer
Introduced	21.5.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mhf-type *keyword*

Synopsis	MIP creation mode
Context	**configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)* mhf-creation mhf-type *keyword*
Tree	mhf-type
Options	none, default, explicit, defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip-ltr-priority *(number | keyword)*

Synopsis	Priority of the Linktrace Response
Context	**configure** eth-cfm default-domain bridge-identifier *service-name* vlan *(number | keyword)* mip-ltr-priority *(number | keyword)*
Tree	mip-ltr-priority
Description	This command allows the operator to set the priority of the Linktrace Response Message (ETH-LTR) from a MIP for this association.
Range	0 to 7
Options	defer
Default	defer
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

domain [md-admin-name] *admin-name*

Synopsis	Enter the **domain** list instance
Context	**configure** eth-cfm domain *admin-name*
Tree	domain
Description	Commands in this context configure CFM domain command options.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**md-admin-name**] *admin-name*

Synopsis	Maintenance Domain (MD) name
Context	**configure** eth-cfm domain *admin-name*
Tree	domain
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

association [ma-admin-name] *admin-name*

Synopsis	Enter the **association** list instance
Context	**configure** eth-cfm domain *admin-name* association *admin-name*
Tree	association
Description	Commands in this context configure the Maintenance Association (MA) for the domain.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**ma-admin-name**] *admin-name*

Synopsis	Domain association name
Context	**configure** eth-cfm domain *admin-name* association *admin-name*
Tree	association
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

auto-mep-discovery *boolean*

Synopsis	Allow remote MEP automatic discovery

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-cfm domain *admin-name* association *admin-name* auto-mep-discovery *boolean*
Tree	auto-mep-discovery
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bridge-identifier [bridge-name] *service-name*

Synopsis	Enter the **bridge-identifier** list instance
Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name*
Tree	bridge-identifier
Description	Commands in this context configure the cross-reference required to link the CFM function with the service context. The link is created when the *bridge-id*, or *bridge-name* matches the *service-id*, or *service-name*, respectively.
Max. instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**bridge-name**] *service-name*

Synopsis	Bridge name that links to the service
Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name*
Tree	bridge-identifier
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

id-permission *keyword*

Synopsis	Strategy for the inclusion of Sender ID TLV information

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name* id-permission *keyword*
Tree	id-permission
Description	This command specifies how the Sender ID TLV information is included for installed MEPs and MIPs. The Sender ID TLV is supported for ETH-CCM, ETH-LB, and ETH-LB PDUs.
Options	none, chassis
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mhf-creation *keyword*

Synopsis	MIP method of creation
Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name* mhf-creation *keyword*
Tree	mhf-creation
Options	none, default, explicit, static
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mip-ltr-priority *number*

Synopsis	Priority of the Linktrace Response Message (ETH-LTR) from a MIP
Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name* mip-ltr-priority *number*
Tree	mip-ltr-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vlan *number*

Synopsis	VLAN ID for the default domain index

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-cfm domain *admin-name* association *admin-name* bridge-identifier *service-name* vlan *number*
Tree	vlan
Range	1 to 4094
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-hold-time

Synopsis	Enter the **ccm-hold-time** context
Context	**configure** eth-cfm domain *admin-name* association *admin-name* ccm-hold-time
Tree	ccm-hold-time
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

down *number*

Synopsis	Additional time before a MEP declares a fault, in CCM timeout conditions
Context	**configure** eth-cfm domain *admin-name* association *admin-name* ccm-hold-time down *number*
Tree	down
Range	1 to 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-interval *keyword*

Synopsis	CCM transmission interval for all MEPs in association
Context	**configure** eth-cfm domain *admin-name* association *admin-name* ccm-interval *keyword*
Tree	ccm-interval
Options	300hz, 10ms, 100ms, 1s, 10s, 60s, 600s
Default	10s
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

facility-id-permission *keyword*

Synopsis	Sender ID TLV information for facility base MEPs
Context	**configure** eth-cfm domain *admin-name* association *admin-name* facility-id-permission *keyword*
Tree	facility-id-permission
Options	none, chassis
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

icc-based *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in ICC-based format
Context	**configure** eth-cfm domain *admin-name* association *admin-name* icc-based *string*
Tree	icc-based
String length	8 to 13
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

integer *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in integer format
Context	**configure** eth-cfm domain *admin-name* association *admin-name* integer *number*
Tree	integer
Range	0 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ma-index *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association (MA) table index
Context	**configure** eth-cfm domain *admin-name* association *admin-name* ma-index *number*
Tree	ma-index
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-mep [mep-id] *number*

Synopsis	Enter the **remote-mep** list instance
Context	**configure** eth-cfm domain *admin-name* association *admin-name* remote-mep *number*
Tree	remote-mep
Description	Commands in this context configure the remote MEP ID. Optionally, the user can configure a unicast MAC address associated with the remote MEP. This unicast value replaces the default Layer 2 class 1 multicast address that is typically associated with ETH-CC packets. **Note:** This command is not supported with subsecond CCM intervals. The unicast address may only be configured when a single remote MEP exists in the association.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**mep-id**] *number*

Synopsis	Remote MEP ID
Context	**configure** eth-cfm domain *admin-name* association *admin-name* remote-mep *number*
Tree	remote-mep

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-mac *mac-unicast-address-no-zero*

Synopsis	Remote MAC Address for transmitting CFM packets to remote MEPs
Context	**configure** eth-cfm domain *admin-name* association *admin-name* remote-mep *number* remote-mac *mac-unicast-address-no-zero*
Tree	remote-mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

string *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Association name in raw ASCII string format
Context	**configure** eth-cfm domain *admin-name* association *admin-name* string *string*
Tree	string
String length	1 to 45
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vid *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Primary VLAN ID for the Maintenance Association name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-cfm domain *admin-name* association *admin-name* vid *number*
Tree	vid
Range	0 to 4094
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vpn-id *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN ID for the Maintenance Association name
Context	**configure** eth-cfm domain *admin-name* association *admin-name* vpn-id *string*
Tree	vpn-id
String length	0 to 15
String format	'vpn-id' must be 6 uppercase hex digits, colon, 8 uppercase hex digits for OUI and VPN index (e.g. AABBCC:11223344)
Notes	The following elements are part of a mandatory choice: **icc-based**, **integer**, **string**, **vid**, or **vpn-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dns *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Domain name like text string derived from a DNS name
Context	**configure** eth-cfm domain *admin-name* dns *string*
Tree	dns
String length	1 to 43
Notes	The following elements are part of a mandatory choice: **dns**, **format**, **mac**, or **name**.
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

format *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance domain name format type
Context	**configure** eth-cfm domain *admin-name* format *keyword*
Tree	format
Options	none
Notes	The following elements are part of a mandatory choice: **dns**, **format**, **mac**, or **name**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

level *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Domain Level (MD Level)
Context	**configure** eth-cfm domain *admin-name* level *number*
Tree	level
Range	0 to 7
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance domain MAC name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-cfm domain *admin-name* mac *string*
Tree	mac
String length	13 to 23
String format	'mac' must be colon-separated hex MAC, a hyphen, then decimal 0-65535 for the 2-octet suffix (e.g. 00:11:22:33:44:55-4095)
Notes	The following elements are part of a mandatory choice: **dns**, **format**, **mac**, or **name**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

md-index *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	The index of the Maintenance Domain (MD)
Context	**configure** eth-cfm domain *admin-name* md-index *number*
Tree	md-index
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

name *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Maintenance Domain name
Context	**configure** eth-cfm domain *admin-name* name *string*
Tree	name
String length	1 to 43
Notes	The following elements are part of a mandatory choice: **dns**, **format**, **mac**, or **name**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

4.16.1 eth-ring command descriptions

eth-ring [ring-index] *number*

Synopsis	Enter the **eth-ring** list instance
Context	**configure** eth-ring *number*
Tree	eth-ring
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**ring-index**] *number*

Synopsis	Ring ID
Context	**configure** eth-ring *number*
Tree	eth-ring
Range	1 to 128
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the Ethernet ring
Context	**configure** eth-ring *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-hold-time

Synopsis	Enter the **ccm-hold-time** context
Context	**configure** eth-ring *number* ccm-hold-time

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ccm-hold-time
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

down *number*

Synopsis	Hold timer for down event dampening
Context	**configure** eth-ring *number* ccm-hold-time down *number*
Tree	down
Range	1 to 5000
Units	centiseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

up *number*

Synopsis	Hold timer for recovery reporting
Context	**configure** eth-ring *number* ccm-hold-time up *number*
Tree	up
Range	0 to 5000
Units	deciseconds
Default	20
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

compatible-version *number*

Synopsis	Compatibility version for the Ethernet ring
Context	**configure** eth-ring *number* compatible-version *number*
Tree	compatible-version
Range	1 to 2
Default	2
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *description-or-empty*

Synopsis	Text description
Context	**configure** eth-ring *number* description *description-or-empty*
Tree	description
String length	0 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

guard-time *number*

Synopsis	Ethernet ring guard time
Context	**configure** eth-ring *number* guard-time *number*
Tree	guard-time
Range	1 to 20
Units	deciseconds
Default	5
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

node-id *mac-address*

Synopsis	MAC address of the RPL link
Context	**configure** eth-ring *number* node-id *mac-address*
Tree	node-id
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

path [path-index] *string*

Synopsis	Enter the **path** list instance
Context	**configure** eth-ring *number* path *string*
Tree	path
Introduced	21.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**path-index**] *string*

Synopsis	Path ID
Context	**configure** eth-ring *number* path *string*
Tree	path
String length	1
String format	'path-index' must be exactly one character, a or b
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the Ethernet ring path
Context	**configure** eth-ring *number* path *string* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *description-or-empty*

Synopsis	Text description
Context	**configure** eth-ring *number* path *string* description *description-or-empty*
Tree	description
String length	0 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

eth-cfm

Synopsis	Enter the **eth-cfm** context
Context	**configure** eth-ring *number* path *string* eth-cfm
Tree	eth-cfm
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*

Synopsis	Enter the **mep** list instance
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

md-admin-name *reference*

Synopsis	Maintenance Domain (MD) name
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Reference	**configure** eth-cfm domain *admin-name*
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ma-admin-name *reference*

Synopsis	Maintenance Association (MA) name
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Reference	**configure** eth-cfm domain *admin-name* association *admin-name*
Notes	This element is part of a list key.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep-id *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alarm-notification

Synopsis	Enter the **alarm-notification** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification
Tree	alarm-notification
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm. Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	21.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-alarm-time *number*
Tree	fng-alarm-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-reset-time *number*
Tree	fng-reset-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm *boolean*

Synopsis	Generate CCM messages
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm *boolean*
Tree	ccm
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-ltm-priority *number*
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-padding-size *number*
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval)** is less than 1 second.
Range	3 to 1500
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

control-mep *boolean*

Synopsis	Enable Ethernet ring control on the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* control-mep *boolean*
Tree	control-mep
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *description*

Synopsis	Text description
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-test

Synopsis	Enable the **eth-test** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the **oam eth-cfm eth-test** command.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test bit-error-threshold *number*
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

test-pattern

Synopsis	Enter the **test-pattern** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern crc-tlv *boolean*
Tree	crc-tlv
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern pattern *keyword*
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

grace

Synopsis	Enter the **grace** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the **eth-ed** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed max-rx-defect-window *number*
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Transmission priority for ETH-ED PDUs

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed priority *number*
Tree	priority
Range	0 to 7
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed rx-eth-ed *boolean*
Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed tx-eth-ed *boolean*
Tree	tx-eth-ed
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the **eth-vsm-grace** context
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace rx-eth-vsm-grace *boolean*
Tree	rx-eth-vsm-grace
Description	When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to **false**, the router disables the Nokia Grace function.
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace tx-eth-vsm-grace *boolean*
Tree	tx-eth-vsm-grace
Description	When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* low-priority-defect *keyword*
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	all-def
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *mac-unicast-address-no-zero*

Synopsis	MAC address of the MEP
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* mac-address *mac-unicast-address-no-zero*
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	**configure** eth-ring *number* path *string* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* one-way-delay-threshold *number*
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-and-raps-tag *port-and-encap*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Port ID and Ring APS tag ID
Context	**configure** eth-ring *number* path *string* port-and-raps-tag *port-and-encap*
Tree	port-and-raps-tag
String length	1 to 45
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rpl-end *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable path as a Ring Protection Link (RPL) end
Context	**configure** eth-ring *number* path *string* rpl-end *boolean*
Tree	rpl-end
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

revert-time *number*

Synopsis	Revert time for the Ethernet ring
Context	**configure** eth-ring *number* revert-time *number*
Tree	revert-time
Range	0 | 60 to 720
Units	seconds
Default	300
Introduced	21.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rpl-node *keyword*

Synopsis	Ring Protection Link (RPL) type for the Ethernet ring
Context	**configure** eth-ring *number* rpl-node *keyword*
Tree	rpl-node
Options	owner, neighbor
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sub-ring

Synopsis	Enter the **sub-ring** context
Context	**configure** eth-ring *number* sub-ring
Tree	sub-ring
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interconnect

Synopsis	Enter the **interconnect** context
Context	**configure** eth-ring *number* sub-ring interconnect
Tree	interconnect
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

propagate-topology-change *boolean*

Synopsis	Propagate topology changes
Context	**configure** eth-ring *number* sub-ring interconnect propagate-topology-change *boolean*
Tree	propagate-topology-change
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Use subject to Terms available at: www.nokia.com/terms.

ring-id *reference*

Synopsis	Ring instance of the connection ring for the sub-ring
Context	**configure** eth-ring *number* sub-ring interconnect ring-id *reference*
Tree	ring-id
Reference	**configure** eth-ring *number*
Notes	The following elements are part of a choice: **ring-id** or **vpls**.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

vpls

Synopsis	Connect sub-ring to VPLS ID that contains sub-ring SAP
Context	**configure** eth-ring *number* sub-ring interconnect vpls
Tree	vpls
Notes	The following elements are part of a choice: **ring-id** or **vpls**.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

type *keyword*

Synopsis	Sub-ring type
Context	**configure** eth-ring *number* sub-ring type *keyword*
Tree	type
Options	virtual-link, non-virtual-link
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

4.17.1 filter command descriptions

filter

Synopsis	Enter the **filter** context
Context	**configure** filter
Tree	filter
Introduced	16.0.R1
Platforms	All

dhcp-filter [filter-id] *number*

Synopsis	Enter the **dhcp-filter** list instance
Context	**configure** filter dhcp-filter *number*
Tree	dhcp-filter
Introduced	16.0.R1
Platforms	All

[**filter-id**] *number*

Synopsis	DHCP filter policy ID
Context	**configure** filter dhcp-filter *number*
Tree	dhcp-filter
Description	This command specifies the DHCP filter policy ID expressed as a decimal integer.
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

default-action

Synopsis	Enable the **default-action** context
Context	**configure** filter dhcp-filter *number* default-action
Tree	default-action

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

bypass-host-creation

Synopsis	Host creation options to bypass
Context	**configure** filter dhcp-filter *number* default-action bypass-host-creation
Tree	bypass-host-creation
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis	DHCP host creation when the filter entry is matched
Context	**configure** filter dhcp-filter *number* default-action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	All

description *description*

Synopsis	Text description
Context	**configure** filter dhcp-filter *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** filter dhcp-filter *number* entry *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	entry
Max. instances	10
Introduced	16.0.R1
Platforms	All

[**entry-id**] *number*

Synopsis	DHCP filter entry ID
Context	**configure** filter dhcp-filter *number* entry *number*
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

action

Synopsis	Enable the **action** context
Context	**configure** filter dhcp-filter *number* entry *number* action
Tree	action
Introduced	16.0.R1
Platforms	All

bypass-host-creation

Synopsis	Host creation options to bypass
Context	**configure** filter dhcp-filter *number* entry *number* action bypass-host-creation
Tree	bypass-host-creation
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

drop

Synopsis	DHCP host creation when the filter entry is matched
Context	**configure** filter dhcp-filter *number* entry *number* action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **bypass-host-creation** or **drop**.
Introduced	16.0.R1
Platforms	All

option

Synopsis	Enable the **option** context
Context	**configure** filter dhcp-filter *number* entry *number* option
Tree	option
Introduced	16.0.R1
Platforms	All

absent

Synopsis	Require the absence of related option
Context	**configure** filter dhcp-filter *number* entry *number* option absent
Tree	absent
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enable the **match** context
Context	**configure** filter dhcp-filter *number* entry *number* option match
Tree	match
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

exact *boolean*

Synopsis	Use an exact match pattern (not partial)
Context	**configure** filter dhcp-filter *number* entry *number* option match exact *boolean*
Tree	exact
Default	false
Introduced	16.0.R1
Platforms	All

hex *string*

Synopsis	Matching pattern for the filtered option
Context	**configure** filter dhcp-filter *number* entry *number* option match hex *string*
Tree	hex
String length	1 to 256
String format	'hex' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a mandatory choice: **hex** or **string**.
Introduced	16.0.R1
Platforms	All

invert *boolean*

Synopsis	Invert (partial) matching criteria
Context	**configure** filter dhcp-filter *number* entry *number* option match invert *boolean*
Tree	invert
Default	false
Introduced	16.0.R1
Platforms	All

string *string*

Synopsis	Matching pattern for the filtered option
Context	**configure** filter dhcp-filter *number* entry *number* option match string *string*
Tree	string
String length	1 to 127

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a mandatory choice: **hex** or **string**.
Introduced	16.0.R1
Platforms	All

number *number*

Synopsis	Number for DHCP or DHCPv6 option to filter on
Context	**configure** filter dhcp-filter *number* entry *number* option number *number*
Tree	number
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

present

Synopsis	Require the presence of related option
Context	**configure** filter dhcp-filter *number* entry *number* option present
Tree	present
Notes	The following elements are part of a mandatory choice: **absent**, **match**, or **present**.
Introduced	16.0.R1
Platforms	All

dhcp6-filter [filter-id] *number*

Synopsis	Enter the **dhcp6-filter** list instance
Context	**configure** filter dhcp6-filter *number*
Tree	dhcp6-filter
Introduced	16.0.R1
Platforms	All

[**filter-id**] *number*

Synopsis	DHCP filter policy ID
Context	**configure** filter dhcp6-filter *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	dhcp6-filter
Description	This command specifies the DHCP filter policy ID expressed as a decimal integer.
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

default-action

Synopsis	Enable the **default-action** context
Context	**configure** filter dhcp6-filter *number* default-action
Tree	default-action
Description	Commands in this context enable the default action for DHCP6 filters when no entries match. The bypass action either bypasses both host authentication and ESM creation completely or bypasses host authentication and creation from a DHCPv6 solicit message. Bypassing the DHCPv6 solicit message can delay the host authentication and creation until the DHCPv6 request message.
Introduced	16.0.R1
Platforms	All

bypass-host-authentication

Synopsis	Host authentication bypass for both NA and PD host
Context	**configure** filter dhcp6-filter *number* default-action bypass-host-authentication
Tree	bypass-host-authentication
Description	This command configures the router to bypass host authentication for both the NA and PD host and should always be used with bypass host creation. The bypass action either bypasses both host authentication and ESM creation completely or bypasses host authentication and creation from a DHCPv6 solicit message. This filter rule is not supported for MSAP and IPoE sessions.
Notes	The following elements are part of a mandatory choice: **bypass-host-authentication**, **bypass-host-creation**, or **drop**.
Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bypass-host-creation

Synopsis	Enable the **bypass-host-creation** context
Context	**configure** filter dhcp6-filter *number* default-action bypass-host-creation
Tree	bypass-host-creation
Notes	The following elements are part of a mandatory choice: **bypass-host-authentication**, **bypass-host-creation**, or **drop**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

na *boolean*

Synopsis	Bypass the DHCPv6 NA host creation
Context	**configure** filter dhcp6-filter *number* default-action bypass-host-creation na *boolean*
Tree	na
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pd *boolean*

Synopsis	Bypass the DHCPv6 PD host creation
Context	**configure** filter dhcp6-filter *number* default-action bypass-host-creation pd *boolean*
Tree	pd
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis	Drop DHCPv6 message (do not process)
Context	**configure** filter dhcp6-filter *number* default-action drop
Tree	drop
Notes	The following elements are part of a mandatory choice: **bypass-host-authentication**, **bypass-host-creation**, or **drop**.

action

Synopsis	Enable the **action** context
Context	**configure** filter dhcp6-filter *number* entry *number* action
Tree	action
Description	Commands in this context enable the action to take on DHCP6 host creation when the filter entry matches. The bypass action either bypasses both host authentication and ESM creation completely or bypasses host authentication and creation from a DHCPv6 solicit message. Bypassing the DHCPv6 solicit message can delay the host authentication and creation until the DHCPv6 request message.
Introduced	16.0.R1
Platforms	All

bypass-host-authentication

Synopsis	Host authentication bypass for both NA and PD host
Context	**configure** filter dhcp6-filter *number* entry *number* action bypass-host-authentication
Tree	bypass-host-authentication
Description	This command configures the router to bypass host authentication for both the NA and PD host and should always be used with bypass host creation. The bypass action either bypasses both host authentication and ESM creation completely or bypasses host authentication and creation from a DHCPv6 solicit message. This filter rule is not supported for MSAP and IPoE sessions.
Notes	The following elements are part of a mandatory choice: **bypass-host-authentication**, **bypass-host-creation**, or **drop**.
Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bypass-host-creation

Synopsis	Enable the **bypass-host-creation** context
Context	**configure** filter dhcp6-filter *number* entry *number* action bypass-host-creation
Tree	bypass-host-creation
Notes	The following elements are part of a mandatory choice: **bypass-host-authentication**, **bypass-host-creation**, or **drop**.

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** filter gre-tunnel-template *named-item* ipv4
Tree	ipv4
Notes	The following elements are part of a choice: **ipv4** or **ipv6**.
Introduced	16.0.R1
Platforms	All

destination-address [address] *ipv4-address*

Synopsis	Add a list entry for **destination-address**
Context	**configure** filter gre-tunnel-template *named-item* ipv4 destination-address *ipv4-address*
Tree	destination-address
Description	This command defines a destination for the GRE IP header used to encapsulate the matching IPv4/IPv6 packet. A single destination address can be specified for an IPv6 **gre-tunnel-template**. Traffic matching the associated IPv4 or IPv6 filter is hashed across any available ECMP or UCMP route next hop available to the destination address. If no destination address is available, then matching traffic follows the configured **pbr-down-action-override** action, if configured. If no **pbr-down-action-override** is configured traffic is discarded.
Max. instances	32
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

code *number*

Synopsis	ICMP code value to match
Context	**configure** filter ip-exception *filter-name* entry *number* match icmp code *number*
Tree	code
Description	This command specifies the ICMP code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.

Range 0 to 255

Introduced 20.10.R1

Platforms VSR

type *number*

Synopsis ICMP type value to match

Context **configure** filter ip-exception *filter-name* entry *number* match icmp type *number*

Tree type

Description This command specifies the ICMP type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values.

An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.

group *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Group ID of FlowSpec routes to embed in the filter
Context	**configure** filter ip-filter *filter-name* embed flowspec offset *number* group *number*
Tree	group
Description	This command specifies the group ID of routes to embed into the filter. Only FlowSpec routes tagged with an interface-set extended community containing this group ID are selected for embedding.
Range	0 to 16383
Introduced	16.0.R1
Platforms	All

router-instance *string*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing instance source of BGP FlowSpec routes
Context	**configure** filter ip-filter *filter-name* embed flowspec offset *number* router-instance *string*
Tree	router-instance
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** filter ip-filter *filter-name* entry *number*
Tree	entry

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context create or edit an IPv4, IPv6, MAC, IP exception filter, or IPv6 exception filter entry. Multiple entries can be created using unique entry ID numbers within the filter. Entries must be sequenced from most to least explicit. An entry may not have any match criteria defined (in which case everything matches) but must have at least the **action** command configured for it to be considered complete. Entries without the **action** command are considered incomplete and hence are rendered inactive.
Introduced	16.0.R1
Platforms	All

[**entry-id**] *number*

Synopsis	ID for a match criteria and the corresponding action
Context	**configure** filter ip-filter *filter-name* entry *number*
Tree	entry
Range	1 to 2097151
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

action

Synopsis	Enable the **action** context
Context	**configure** filter ip-filter *filter-name* entry *number* action
Tree	action
Description	Commands in this context configure a primary (no option specified) or secondary (**secondary** command specified) action to be performed on packets matching this filter entry. An ACL filter entry remains inactive (is not programmed in hardware) until a specific action is configured for that entry. A primary action supports any filter entry action, a secondary action is used for redundancy and defines a redundant Layer 3 PBR action for an Layer 3 PBR primary action or a redundant Layer 2 PBF action for a Layer 2 PBF primary action.
Introduced	16.0.R1
Platforms	All

accept

Synopsis	Accept regular routing to forward a matching packet

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* action accept
Tree	accept
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

accept-when

endpoint *ipv4-unicast-or-zero-address*

Synopsis	SR-TE policy endpoint IPv4 address
Context	**configure** filter ip-filter *filter-name* entry *number* action forward srte-policy endpoint *ipv4-unicast-or-zero-address*
Tree	endpoint
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	All

srv6-policy

Synopsis	Enable the **srv6-policy** context
Context	**configure** filter ip-filter *filter-name* entry *number* action forward srv6-policy
Tree	srv6-policy
Description	Command in this context configure the redirection of packets to an active SRv6 policy.
Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **lsp-container**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	23.7.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS

color *number*

Synopsis	SRv6 policy color
Context	**configure** filter ip-filter *filter-name* entry *number* action forward srv6-policy color *number*
Tree	color
Range	0 to 4294967295
Notes	This element is mandatory.
Introduced	23.7.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

endpoint *ipv6-unicast-or-zero-address*

Synopsis	SRv6 policy endpoint IPv6 address
Context	**configure** filter ip-filter *filter-name* entry *number* action forward srv6-policy endpoint *ipv6-unicast-or-zero-address*
Tree	endpoint
Notes	This element is mandatory.
Introduced	23.7.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS

service-sid *ipv6-unicast-address*

Synopsis	SRv6 service segment identifier
Context	**configure** filter ip-filter *filter-name* entry *number* action forward srv6-policy service-sid *ipv6-unicast-address*
Tree	service-sid
Notes	This element is mandatory.
Introduced	23.7.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS

vprn-target

Synopsis	Enable the **vprn-target** context
Context	**configure** filter ip-filter *filter-name* entry *number* action forward vprn-target
Tree	vprn-target
Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **lsp-container**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	16.0.R1
Platforms	All

adv-prefix *ipv4-prefix*

Synopsis	Advertised IP prefix for target destination
Context	**configure** filter ip-filter *filter-name* entry *number* action forward vprn-target adv-prefix *ipv4-prefix*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	adv-prefix
Introduced	16.0.R1
Platforms	All

bgp-nh *ipv4-address*

Synopsis	Target BGP next hop IP address
Context	**configure** filter ip-filter *filter-name* entry *number* action forward vprn-target bgp-nh *ipv4-address*
Tree	bgp-nh
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'bgp-nh' must be IPv4 unicast (non-zero) in dotted notation
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

lsp *named-item-64*

Synopsis	LSP that is specified to forward a packet matching this entry
Context	**configure** filter ip-filter *filter-name* entry *number* action forward vprn-target lsp *named-item-64*
Tree	lsp
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

vprn *reference*

Synopsis	Routing context used for route lookup
Context	**configure** filter ip-filter *filter-name* entry *number* action forward vprn-target vprn *reference*
Tree	vprn
Reference	**configure** service vprn *service-name*
Notes	This element is mandatory.

Introduced	16.0.R4
Platforms	All

gtp-local-breakout

Synopsis	Break out matching traffic locally from a GTP tunnel for GTP-subscriber-hosts, or forward for other entities
Context	**configure** filter ip-filter *filter-name* entry *number* action gtp-local-breakout
Tree	gtp-local-breakout
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect

Synopsis	Enable the **http-redirect** context
Context	**configure** filter ip-filter *filter-name* entry *number* action http-redirect
Tree	http-redirect
Description	Commands in this context configure the filter entry action for HTTP redirection.
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

allow-override *boolean*

Synopsis	Override the HTTP redirect URL by a RADIUS VSA
Context	**configure** filter ip-filter *filter-name* entry *number* action http-redirect allow-override *boolean*
Tree	allow-override
Description	This command specifies whether the RADIUS VSA can override the configured HTTP redirect URL for this filter entry. When configured to **true**, the RADIUS VSA can override the HTTP redirect URL. When configured to **false**, the HTTP redirect URL is not overriden. This does not apply if the CPF option is specified for the URL.

Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	All

url *(keyword | http-redirect-url)*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	URL used for HTTP redirect action
Context	**configure** filter ip-filter *filter-name* entry *number* action http-redirect url *(keyword | http-redirect-url)*
Tree	url
Description	This command specifies the URL to use for HTTP redirection for this filter entry. A URL can be specified or the CPF option can be used for BNG CUPS ESM sessions only. The following macro substitutions may be used: $URL — request-URI in the HTTP GET request received $MAC — a string that represents the MAC address of the subscriber host $IP — a string that represents the IP address of the subscriber host $SUB — a string that represents the subscriber ID $SAP — a string that represents a SAP ID $SAPDESC — description string configured on the SAP $CID — a string that represents the circuit ID or interface ID of the subscriber host (hexadecimal format) $RID — a string that represents the remote ID of the subscriber host (hexadecimal format)
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Options	from-cpf
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ignore-match

Synopsis	Ignore match criteria for the entry
Context	**configure** filter ip-filter *filter-name* entry *number* action ignore-match
Tree	ignore-match
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

l2-aware-nat-bypass *boolean*

Synopsis	Divert traffic from an L2-Aware NAT subscriber
Context	**configure** filter ip-filter *filter-name* entry *number* action l2-aware-nat-bypass *boolean*
Tree	l2-aware-nat-bypass
Description	When configured to **true**, the filter action selectively diverts traffic from a L2-Aware NAT subscriber away from NAT. This action is only applicable to L2-Aware NAT subscribers and must be configured together with action **accept**. Traffic identified in the match condition bypasses L2-Aware NAT. An example is to bypass NAT for on-net destinations (within the customer network). For selective NAT bypass to take effect, in addition to IP filter configuration, the L2-Aware NAT subscriber must be specifically enabled for selective bypass via the allow-bypass configuration option in the **configure subscriber-mgmt sub-profile nat allow-bypass** context. When configured to **false**, traffic that is not classified for bypass automatically diverts to L2-Aware NAT, unless it is explicitly configured in the IP filter action to be dropped.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat

Synopsis	Enable the **nat** context
Context	**configure** filter ip-filter *filter-name* entry *number* action nat
Tree	nat
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-policy *reference*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT policy name when action is NAT
Context	**configure** filter ip-filter *filter-name* entry *number* action nat nat-policy *reference*
Tree	nat-policy
Reference	**configure** service nat nat-policy *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit

Synopsis	Enable the **rate-limit** context
Context	**configure** filter ip-filter *filter-name* entry *number* action rate-limit
Tree	rate-limit
Description	Commands in this context configure the rate-limit action for traffic that matches this filter entry.
Introduced	16.0.R1
Platforms	All

extracted-traffic

Synopsis	Limit the rate of traffic extracted to the CPM
Context	**configure** filter ip-filter *filter-name* entry *number* action rate-limit extracted-traffic
Tree	extracted-traffic
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

mbs *(number | keyword)*

Synopsis	Maximum burst size

© 2026 Nokia.

Notes	The following elements are part of a choice: **next-hop**, **sap**, **sdp**, or **vprn-target**.
Introduced	21.7.R1
Platforms	All

adv-prefix *ipv4-prefix*

Synopsis	Advertised IP prefix for the target destination
Context	**configure** filter ip-filter *filter-name* entry *number* action secondary forward vprn-target adv-prefix *ipv4-prefix*
Tree	adv-prefix
Introduced	21.7.R1
Platforms	All

bgp-nh *ipv4-address*

Synopsis	Target BGP next hop IP address
Context	**configure** filter ip-filter *filter-name* entry *number* action secondary forward vprn-target bgp-nh *ipv4-address*
Tree	bgp-nh
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'bgp-nh' must be IPv4 unicast (non-zero) in dotted notation
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	All

lsp *named-item-64*

Synopsis	LSP that is specified to forward a packet matching this entry
Context	**configure** filter ip-filter *filter-name* entry *number* action secondary forward vprn-target lsp *named-item-64*
Tree	lsp
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

vprn *reference*

Synopsis	Routing context used for route lookup
Context	**configure** filter ip-filter *filter-name* entry *number* action secondary forward vprn-target vprn *reference*
Tree	vprn
Reference	**configure** service vprn *service-name*
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	All

remark

Synopsis	Enable the **remark** context
Context	**configure** filter ip-filter *filter-name* entry *number* action secondary remark
Tree	remark
Introduced	16.0.R1
Platforms	All

dscp *keyword*

Synopsis	Destination SAP
Context	**configure** filter ip-filter *filter-name* entry *number* action secondary remark dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

tcp-mss-adjust

Synopsis	Adjust MSS option of TCP matching packets to configured value of tcp-mss in router interface context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* action tcp-mss-adjust
Tree	tcp-mss-adjust
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **gtp-local-breakout**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** filter ip-filter *filter-name* entry *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

egress-pbr *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PBR that has an effect when this filter is applied on egress
Context	**configure** filter ip-filter *filter-name* entry *number* egress-pbr *keyword*
Tree	egress-pbr
Options	true, true-with-l4lb
Introduced	16.0.R1
Platforms	All

filter-sample *boolean*

Synopsis	Sample matching traffic if IP interface is set to cflowd ACL mode
Context	**configure** filter ip-filter *filter-name* entry *number* filter-sample *boolean*
Tree	filter-sample
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

interface-sample *boolean*

Synopsis	Sample matching traffic if IP interface is set to cflowd interface mode
Context	**configure** filter ip-filter *filter-name* entry *number* interface-sample *boolean*
Tree	interface-sample
Default	true
Introduced	16.0.R1
Platforms	All

log *reference*

Synopsis	Log that is used for packets matching this entry
Context	**configure** filter ip-filter *filter-name* entry *number* log *reference*
Tree	log
Reference	**configure** filter log *number*
Introduced	16.0.R1
Platforms	All

match

Synopsis	Enter the **match** context
Context	**configure** filter ip-filter *filter-name* entry *number* match
Tree	match
Description	Commands in this context configure match criteria for the filter entry. When the match criteria are satisfied, the action associated with the match criteria is executed.
Introduced	16.0.R1
Platforms	All

destination-class *number*

Synopsis	Destination class as a match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match destination-class *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	destination-class
Description	This command configures the BGP destination class value as a match criterion. Filtering egress traffic on the destination class requires the **destination-class-lookup** command (under the **ingress** context for the service interface) to be enabled (set to **true**).
Range	1 to 255
Introduced	20.7.R1
Platforms	All

dscp *keyword*

Synopsis	DSCP used as an IP filter match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip
Tree	dst-ip
Description	Commands in this context configure a destination address range that is used by filter policy match criteria.
Notes	The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).
Introduced	16.0.R1
Platforms	All

address *(ipv4-prefix-with-host-bits | ipv4-address)*

Synopsis	IPv4 address used as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip address *(ipv4-prefix-with-host-bits | ipv4-address)*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	address
String format	'ipv4-prefix-with-host-bits' must be a.b.c.d/prefix with prefix length 0..32 'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	All

ip-prefix-list *reference*

Synopsis	IPv4 address prefix list used as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** filter match-list ip-prefix-list *named-item*
Max. instances	16
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	All

mask *ipv4-address*

Synopsis	IPv4 address mask used as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-ip mask *ipv4-address*
Tree	mask
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	All

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port
Tree	dst-port

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure match criteria for the destination port.
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

gt *number*

Synopsis	Greater than value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than value as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port lt *number*
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

port-list *reference*

Synopsis	Name of the port list as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Max. instances	16
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, **port-list**, or **range**.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the port range
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port range end *number*
Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start *number*

Synopsis	Lower bound of the port range
Context	**configure** filter ip-filter *filter-name* entry *number* match dst-port range start *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

fragment *keyword*

Synopsis	Match criterion for fragmented packets
Context	**configure** filter ip-filter *filter-name* entry *number* match fragment *keyword*
Tree	fragment
Options	false, true, first-only, non-first-only
Introduced	16.0.R1
Platforms	All

icmp

Synopsis	Enter the **icmp** context
Context	**configure** filter ip-filter *filter-name* entry *number* match icmp
Tree	icmp
Description	Commands in this context configure ICMP values to use as IP filter match criteria.
Introduced	16.0.R1
Platforms	All

code *number*

Synopsis	ICMP code value to match
Context	**configure** filter ip-filter *filter-name* entry *number* match icmp code *number*
Tree	code
Description	This command specifies the ICMP code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	0 to 255
Introduced	16.0.R1
Platforms	All

type *number*

Synopsis	ICMP type value to match
Context	**configure** filter ip-filter *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMP type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

ip

Synopsis	Enter the **ip** context
Context	**configure** filter ip-filter *filter-name* entry *number* match ip
Tree	ip
Notes	The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).
Introduced	21.10.R1
Platforms	All

address *(ipv4-prefix-with-host-bits | ipv4-address)*

Synopsis	IPv4 address used as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match ip address *(ipv4-prefix-with-host-bits | ipv4-address)*
Tree	address
String format	'ipv4-prefix-with-host-bits' must be a.b.c.d/prefix with prefix length 0..32 'ipv4-address' must use only digits and dots (no %zone)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	All

ip-prefix-list *reference*

Synopsis	IPv4 address prefix list used as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** filter match-list ip-prefix-list *named-item*
Max. instances	16
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	All

mask *ipv4-address*

Synopsis	IPv4 address mask used as the match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match ip mask *ipv4-address*
Tree	mask
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	21.10.R1
Platforms	All

ip-option

Synopsis	Enable the **ip-option** context
Context	**configure** filter ip-filter *filter-name* entry *number* match ip-option
Tree	ip-option
Description	Commands in this context configure matching packets with a specific IP option, or a range of IP options, in the first option of the IP header as an IP filter match criterion.
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

mask *number*

Synopsis	Mask used with the IP option value in the packet header
Context	**configure** filter ip-filter *filter-name* entry *number* match ip-option mask *number*
Tree	mask
Description	This command specifies an optional value that can be used when specifying a range of option numbers to use as the match criteria.
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

type *number*

Synopsis	IP option to match
Context	**configure** filter ip-filter *filter-name* entry *number* match ip-option type *number*
Tree	type
Description	This command specifies the 8-bit option type in decimal integer, binary, or hexadecimal format. The mask is applied as an AND to the option byte, and the result is compared with the option value. The decimal value entered for the match should be a combined value of the 8-bit option type field and not only the option number. For example, to match IP packets that contain the Router Alert option (option number = 20), enter the option type of 148 (10010100).
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

multiple-option *boolean*

Synopsis	Match based on presence of multiple options in header
Context	**configure** filter ip-filter *filter-name* entry *number* match multiple-option *boolean*
Tree	multiple-option
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

option-present *boolean*

Synopsis	Match on any IP option present in the packet
Context	**configure** filter ip-filter *filter-name* entry *number* match option-present *boolean*
Tree	option-present
Description	When configured to **true**, the router matches on IP packets that contain any IP option in the IP header. An option field of zero is considered as no option present. When configured to **false**, the router matches on IP packets that do not have an IP option present in the IP header.
Introduced	16.0.R1
Platforms	All

packet-length

Synopsis	Enable the **packet-length** context
Context	**configure** filter ip-filter *filter-name* entry *number* match packet-length
Tree	packet-length
Description	Commands in this context specify the match criterion for the IPv4 packet length. The IPv4 packet length represents the total packet length which includes the IPv4 header and the payload.
Introduced	19.5.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the length
Context	**configure** filter ip-filter *filter-name* entry *number* match packet-length eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **ip-packet-length-list**, **lt**, or **range**.
Introduced	19.5.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

gt *number*

Synopsis	Greater than match criterion for the length
Context	**configure** filter ip-filter *filter-name* entry *number* match packet-length gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **ip-packet-length-list**, **lt**, or **range**.
Introduced	19.5.R1
Platforms	All

ip-packet-length-list *reference*

Synopsis	Packet length list to match
Context	**configure** filter ip-filter *filter-name* entry *number* match packet-length ip-packet-length-list *reference*
Tree	ip-packet-length-list

start *number*

Synopsis	Lower bound of the port range
Context	**configure** filter ip-filter *filter-name* entry *number* match src-port range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

src-route-option *boolean*

Synopsis	Match based on presence of source route option
Context	**configure** filter ip-filter *filter-name* entry *number* match src-route-option *boolean*
Tree	src-route-option
Introduced	16.0.R1
Platforms	All

tcp-established

Synopsis	Use ACK or RST status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-established
Tree	tcp-established
Description	When configured to **true**, a match occurs when the ACK or the RST TCP flag bit is set in the TCP header of an IP packet.
Notes	The following elements are part of a choice: **tcp-established** or **tcp-flags**.
Introduced	22.10.R1
Platforms	All

tcp-flags

Synopsis	Enter the **tcp-flags** context
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags
Tree	tcp-flags
Description	Commands in this context configure the use of TCP flags as the IP filter match.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **tcp-established** or **tcp-flags**.
Introduced	16.0.R1
Platforms	All

ack *boolean*

Synopsis	Use ACK TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags ack *boolean*
Tree	ack
Description	When configured to **true**, a match occurs when the ACK TCP flag bit, defined in RFC 793, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ACK TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

cwr *boolean*

Synopsis	Use CWR TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags cwr *boolean*
Tree	cwr
Description	When configured to **true**, a match occurs when the Congestion Window Reduced (CWR) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the CWR TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

ece *boolean*

Synopsis	Use ECE TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags ece *boolean*
Tree	ece
Description	When configured to **true**, a match occurs when the ECN-Echo (ECE) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, a match occurs when the ECE TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 16.0.R1

Platforms All

fin *boolean*

Synopsis Use FIN TCP bit status in TCP header as match criterion

Context **configure** filter ip-filter *filter-name* entry *number* match tcp-flags fin *boolean*

Tree fin

Description When configured to **true**, a match occurs when the FIN TCP flag bit is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the FIN TCP flag bit, defined in RFC 793, is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 16.0.R1

Platforms All

ns *boolean*

Synopsis Use NS TCP bit status in TCP header as match criterion

Context **configure** filter ip-filter *filter-name* entry *number* match tcp-flags ns *boolean*

Tree ns

Description When configured to **true**, a match occurs when the Nonce Sum (NS) TCP flag bit, defined in RFC 3540, is set in the TCP header of an IP packet.

When configured to **false**, a match occurs when the NS TCP flag bit is not set in the TCP header of an IP packet.

When unconfigured, the system does not use the TCP flag as a match criterion.

Introduced 16.0.R1

Platforms All

psh *boolean*

Synopsis Use PSH TCP bit status in TCP header as match criterion

Context **configure** filter ip-filter *filter-name* entry *number* match tcp-flags psh *boolean*

Tree psh

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, a match occurs when the Push (PSH) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the Push (PSH) TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

rst *boolean*

Synopsis	Use RST TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags rst *boolean*
Tree	rst
Description	When configured to **true**, a match occurs when the RST TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the RST TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

syn *boolean*

Synopsis	Use SYN TCP bit status in TCP header as match criterion
Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags syn *boolean*
Tree	syn
Description	When configured to **true**, a match occurs when the Synchronize (SYN) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the SYN TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

urg *boolean*

Synopsis	Use URG TCP bit status in TCP header as match criterion

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* match tcp-flags urg *boolean*
Tree	urg
Description	When configured to **true**, a match occurs when the Urgent (URG) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the URG TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

ttl

Synopsis	Enable the **ttl** context
Context	**configure** filter ip-filter *filter-name* entry *number* match ttl
Tree	ttl
Introduced	21.10.R1
Platforms	All

eq *number*

Synopsis	Equal to condition match value
Context	**configure** filter ip-filter *filter-name* entry *number* match ttl eq *number*
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	21.10.R1
Platforms	All

gt *number*

Synopsis	Greater than condition match value
Context	**configure** filter ip-filter *filter-name* entry *number* match ttl gt *number*
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	All

lt *number*

Synopsis	Less than condition match value
Context	**configure** filter ip-filter *filter-name* entry *number* match ttl lt *number*
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	21.10.R1
Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** filter ip-filter *filter-name* entry *number* match ttl range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	21.10.R1
Platforms	All

end *number*

Synopsis	Upper bound of the range
Context	**configure** filter ip-filter *filter-name* entry *number* match ttl range end *number*
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

start *number*

Synopsis	Lower bound of the range
Context	**configure** filter ip-filter *filter-name* entry *number* match ttl range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	All

pbr-down-action-override *keyword*

Synopsis	Action when PBR or PBF target for this entry is not available
Context	**configure** filter ip-filter *filter-name* entry *number* pbr-down-action-override *keyword*
Tree	pbr-down-action-override
Options	drop, forward, filter-default-action
Introduced	16.0.R1
Platforms	All

sample-profile *reference*

Synopsis	Cflowd sample profile ID to match packets
Context	**configure** filter ip-filter *filter-name* entry *number* sample-profile *reference*
Tree	sample-profile
Description	This command allows traffic matching an IPv4 or IPv6 filter to be sampled for cflowd processing using a specific sample profile ID. This option is only compatible if the associated interface is configured for interface-based sampling and is only supported for ingress sampling. An IP filter can only specify a single alternate sample profile ID for cflowd sampling, but the ID can be used in multiple entries.
Reference	**configure** cflowd sample-profile *number*
Introduced	20.10.R1
Platforms	All

sticky-dest *(number | keyword)*

Synopsis	Time before action with available PBR or PBF destination and highest priority

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ip-filter *filter-name* entry *number* sticky-dest *(number | keyword)*
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	16.0.R1
Platforms	All

filter-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP filter ID
Context	**configure** filter ip-filter *filter-name* filter-id *number*
Tree	filter-id
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

scope *keyword*

Synopsis	Scope of the filter definition
Context	**configure** filter ip-filter *filter-name* scope *keyword*
Tree	scope
Description	This command configures the filter policy scope. If the scope of the policy is **template** and is applied to one or more services or network interfaces, the scope cannot be changed.
Options	exclusive, template, embedded, system, cpm
Default	template
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.

shared-policer *boolean*

Synopsis	Share policer among active ports in the LAG
Context	**configure** filter ip-filter *filter-name* shared-policer *boolean*
Tree	shared-policer
Description	When configured to **true**, and when the filter policy is configured on a LAG endpoint, the system programs the policer rates in the filter policy per line card FP of the LAG based on the number of active ports in the LAG for each FP. When configured to **false**, and when the filter policy is configured on a LAG endpoint, the system programs the same policer rate on each line card FP of the LAG.
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

subscriber-mgmt

Synopsis	Enter the **subscriber-mgmt** context
Context	**configure** filter ip-filter *filter-name* subscriber-mgmt
Tree	subscriber-mgmt
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-specific-entry

Synopsis	Enter the **host-specific-entry** context
Context	**configure** filter ip-filter *filter-name* subscriber-mgmt host-specific-entry
Tree	host-specific-entry
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

credit-control

Synopsis	Enter the **credit-control** context
Context	**configure** filter ip-filter *filter-name* subscriber-mgmt host-specific-entry credit-control
Tree	credit-control
Introduced	16.0.R1

code *number*

Synopsis	ICMPv6 code value to match
Context	**configure** filter ipv6-exception *filter-name* entry *number* match icmp code *number*
Tree	code

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the ICMPv6 code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	20.10.R1
Platforms	VSR

type *number*

Synopsis	ICMPv6 type value to match
Context	**configure** filter ipv6-exception *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMPv6 type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than condition match value
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when hop-limit lt *number*
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when hop-limit range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the range
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when hop-limit range end *number*
Tree	end

Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start *number*

Synopsis	Lower bound of the range
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when hop-limit range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

pattern

Synopsis	Enable the **pattern** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when pattern
Tree	pattern
Introduced	16.0.R4
Platforms	All

expression *hex-string*

Synopsis	Pattern expression to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when pattern expression *hex-string*
Tree	expression
String length	3 to 18
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

© 2026 Nokia.

mask *hex-string*

Synopsis	Mask for the pattern expression
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when pattern mask *hex-string*
Tree	mask
String length	3 to 18
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b) 'mask' must be 0x-prefixed hex and not all zeros (e.g. 0x1a2b)
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

offset-type *keyword*

Synopsis	Starting point reference for offset value of pattern
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when pattern offset-type *keyword*
Tree	offset-type
Options	layer-3, layer-4, data, dns-qtype
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

offset-value *number*

Synopsis	Offset value for the pattern expression
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when pattern offset-value *number*
Tree	offset-value
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

payload-length

Synopsis	Enable the **payload-length** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when payload-length
Tree	payload-length
Notes	The following elements are part of a choice: **hop-limit** or **payload-length**.
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when payload-length eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

gt *number*

Synopsis	Greater than match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when payload-length gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* action drop-when payload-length lt *number*

Introduced	16.0.R1
Platforms	All

fc *keyword*

Synopsis	FC name to assign to matching packets
Context	**configure** filter ipv6-filter *filter-name* entry *number* action fc *keyword*
Tree	fc
Options	be – Best Effort l2 – Low 2 (best effort) af – Assured Forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited Forwarding (high priority) h1 – High 1 (high priority) nc – Network Control (high priority)
Introduced	16.0.R1
Platforms	All

forward

Synopsis	Enter the **forward** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward
Tree	forward
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

bonding-connection *number*

Synopsis	Connection ID over which packet is forwarded
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward bonding-connection *number*
Tree	bonding-connection
Range	1 to 2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **lsp-container**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gre-tunnel *reference*

Synopsis	GRE tunnel template ID that sets the location where an encapsulated matching packet is transported
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward gre-tunnel *reference*
Tree	gre-tunnel
Reference	**configure** filter gre-tunnel-template *named-item*
Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **lsp-container**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	16.0.R1
Platforms	All

lsp *named-item-64*

Synopsis	LSP that is specified to forward a packet matching this entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward lsp *named-item-64*
Tree	lsp
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **lsp-container**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	16.0.R1
Platforms	All

lsp-container *reference*

Synopsis	LSP container whose members forward matching packets
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward lsp-container *reference*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	lsp-container
Description	This command forwards packets that match the entry using the members of the specified LSP container.
Reference	**configure** router *named-item-64* mpls lsp-container *named-item-64*
Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **lsp-container**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mpls-policy

Synopsis	Enable the **mpls-policy** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward mpls-policy
Tree	mpls-policy
Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **lsp-container**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	19.10.R1
Platforms	All

endpoint *ipv6-unicast-address*

Synopsis	MPLS forwarding policy endpoint IPv6 address
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward mpls-policy endpoint *ipv6-unicast-address*
Tree	endpoint
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	All

next-hop

Synopsis	Enable the **next-hop** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward next-hop
Tree	next-hop

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **lsp-container**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	16.0.R1
Platforms	All

nh-ip

Synopsis	Enable the **nh-ip** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward next-hop nh-ip
Tree	nh-ip
Notes	The following elements are part of a mandatory choice: **nh-ip** or **nh-ip-vrf**.
Introduced	16.0.R1
Platforms	All

address *ipv6-address*

Synopsis	IPv6 address of next hop to forward matching packets
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward next-hop nh-ip address *ipv6-address*
Tree	address
Description	This command specifies the IPv6 address of a direct or indirect next hop to which matching packets are forwarded.
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

indirect *boolean*

Synopsis	Allow next hop to be indirectly reachable
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward next-hop nh-ip indirect *boolean*
Tree	indirect
Default	false
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.

Platforms	7750 SR, 7750 SR-s, 7950 XRS

vprn-target

Synopsis	Enable the **vprn-target** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward vprn-target
Tree	vprn-target
Notes	The following elements are part of a choice: **bonding-connection**, **esi-l2**, **esi-l3**, **gre-tunnel**, **lsp**, **lsp-container**, **mpls-policy**, **next-hop**, **redirect-policy**, **router-instance**, **sap**, **sdp**, **srte-policy**, **srv6-policy**, or **vprn-target**.
Introduced	16.0.R1
Platforms	All

adv-prefix *ipv6-prefix*

Synopsis	Advertised IP prefix for target destination
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward vprn-target adv-prefix *ipv6-prefix*
Tree	adv-prefix
Introduced	16.0.R1
Platforms	All

bgp-nh *ipv4-address*

Synopsis	Target BGP next hop IP address
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward vprn-target bgp-nh *ipv4-address*
Tree	bgp-nh
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'bgp-nh' must be IPv4 unicast (non-zero) in dotted notation
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lsp *named-item-64*

Synopsis	LSP that is specified to forward a packet matching this entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward vprn-target lsp *named-item-64*
Tree	lsp
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

vprn *reference*

Synopsis	Routing context used for route lookup
Context	**configure** filter ipv6-filter *filter-name* entry *number* action forward vprn-target vprn *reference*
Tree	vprn
Reference	**configure** service vprn *service-name*
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

http-redirect

Synopsis	Enable the **http-redirect** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action http-redirect
Tree	http-redirect
Description	Commands in this context configure the filter entry action for HTTP redirection.
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	16.0.R1
Platforms	All

allow-override *boolean*

Synopsis	Override the HTTP redirect URL by a RADIUS VSA

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* action http-redirect allow-override *boolean*
Tree	allow-override
Description	This command specifies whether the RADIUS VSA can override the configured HTTP redirect URL for this filter entry. When configured to **true**, the RADIUS VSA can override the HTTP redirect URL. When configured to **false**, the HTTP redirect URL is not overriden. This does not apply if the CPF option is specified for the URL.
Default	false
Introduced	16.0.R1
Platforms	All

url *(keyword | http-redirect-url)*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	URL used for HTTP redirect action
Context	**configure** filter ipv6-filter *filter-name* entry *number* action http-redirect url *(keyword | http-redirect-url)*
Tree	url
Description	This command specifies the URL to use for HTTP redirection for this filter entry. A URL can be specified or the CPF option can be used for BNG CUPS ESM sessions only. The following macro substitutions may be used: $URL — request-URI in the HTTP GET request received $MAC — a string that represents the MAC address of the subscriber host $IP — a string that represents the IP address of the subscriber host $SUB — a string that represents the subscriber ID $SAP — a string that represents a SAP ID $SAPDESC — description string configured on the SAP $CID — a string that represents the circuit ID or interface ID of the subscriber host (hexadecimal format) $RID — a string that represents the remote ID of the subscriber host (hexadecimal format)

Notes	The following elements are part of a mandatory choice: **firewall-policy** or (**nat-policy** and **nat-type**).
Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-policy *reference*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT policy name when action is NAT
Context	**configure** filter ipv6-filter *filter-name* entry *number* action nat nat-policy *reference*
Tree	nat-policy
Reference	**configure** service nat nat-policy *external-named-item*
Notes	The following elements are part of a mandatory choice: **firewall-policy** or (**nat-policy** and **nat-type**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-type *keyword*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT type to assign when action is NAT
Context	**configure** filter ipv6-filter *filter-name* entry *number* action nat nat-type *keyword*
Tree	nat-type
Options	dslite, nat64
Notes	The following elements are part of a mandatory choice: **firewall-policy** or (**nat-policy** and **nat-type**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit

Synopsis	Enable the **rate-limit** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	rate-limit
Description	Commands in this context configure the rate-limit action for traffic that matches this filter entry.
Introduced	16.0.R1
Platforms	All

extracted-traffic

Synopsis	Limit the rate of traffic extracted to the CPM
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit extracted-traffic
Tree	extracted-traffic
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

hop-limit

Synopsis	Enable the **hop-limit** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit hop-limit
Tree	hop-limit
Notes	The following elements are part of a choice: **hop-limit** or **payload-length**.
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Equal to condition match value
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit hop-limit eq *number*
Tree	eq
Range	0 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

gt *number*

Synopsis	Greater than condition match value
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit hop-limit gt *number*
Tree	gt
Range	0 to 254
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than condition match value
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit hop-limit lt *number*
Tree	lt
Range	1 to 255
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit hop-limit range
Tree	range
Description	This command in this context specify an inclusive range. When range is used, the start of the range (the first value entered) must be smaller than the end of the range (the second value entered).
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the range

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit hop-limit range end *number*
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start *number*

Synopsis	Lower bound of the range
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit hop-limit range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

mbs *(number | keyword)*

Synopsis	Maximum burst size
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit mbs *(number | keyword)*
Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Default	auto
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pattern

Synopsis	Enable the **pattern** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pattern

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	pattern
Introduced	16.0.R4
Platforms	All

expression *hex-string*

Synopsis	Pattern expression to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pattern expression *hex-string*
Tree	expression
String length	3 to 18
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

mask *hex-string*

Synopsis	Mask for the pattern expression
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pattern mask *hex-string*
Tree	mask
String length	3 to 18
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b) 'mask' must be 0x-prefixed hex and not all zeros (e.g. 0x1a2b)
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

offset-type *keyword*

Synopsis	Starting point reference for offset value of pattern
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pattern offset-type *keyword*
Tree	offset-type
Options	layer-3, layer-4, data, dns-qtype

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

offset-value *number*

Synopsis	Offset value for the pattern expression
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pattern offset-value *number*
Tree	offset-value
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

payload-length

Synopsis	Enable the **payload-length** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length
Tree	payload-length
Notes	The following elements are part of a choice: **hop-limit** or **payload-length**.
Introduced	16.0.R1
Platforms	All

eq *number*

Synopsis	Exact match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

gt *number*

Synopsis	Greater than match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length gt *number*
Tree	gt
Range	0 to 65534
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

lt *number*

Synopsis	Less than match criterion for the length
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length lt *number*
Tree	lt
Range	1 to 65535
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length range
Tree	range
Notes	The following elements are part of a mandatory choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the length range
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length range end *number*

© 2026 Nokia.

Tree	end
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

start *number*

Synopsis	Lower bound of the length range
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit payload-length range start *number*
Tree	start
Range	0 to 65534
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

pir *(number | keyword)*

Synopsis	Peak information rate
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pir *(number | keyword)*
Tree	pir
Range	0 to 2000000000
Units	kilobps
Options	max
Notes	The following elements are part of a mandatory choice: **pir**, **policer**, or **pps-pir**.
Introduced	16.0.R1
Platforms	All

policer *named-item*

Synopsis	Policer name to use for rate limiting traffic
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit policer *named-item*
Tree	policer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **pir**, **policer**, or **pps-pir**.
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

pps-pir *(number | keyword)*

Synopsis	Peak information rate
Context	**configure** filter ipv6-filter *filter-name* entry *number* action rate-limit pps-pir *(number | keyword)*
Tree	pps-pir
Range	0 to 100000000
Units	packets per second
Options	max
Notes	The following elements are part of a mandatory choice: **pir**, **policer**, or **pps-pir**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

reassemble

Synopsis	A packet matching the ipv6-filter entry will be forwarded to the packet REASSEMBLE function in the system.
Context	**configure** filter ipv6-filter *filter-name* entry *number* action reassemble
Tree	reassemble
Notes	The following elements are part of a mandatory choice: **accept**, **drop**, **forward**, **http-redirect**, **ignore-match**, **nat**, **reassemble**, or **tcp-mss-adjust**.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

remark

Synopsis	Enable the **remark** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* action remark
Tree	remark
Introduced	16.0.R1

© 2026 Nokia.

ah *boolean*

Synopsis	Match a packet as per the existence of an AH Extension Header
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header ah *boolean*
Tree	ah
Introduced	16.0.R1
Platforms	All

esp *boolean*

Synopsis	Match a packet as per the existence of an Encapsulation security payload extension header
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header esp *boolean*
Tree	esp
Introduced	16.0.R1
Platforms	All

hop-by-hop *boolean*

Synopsis	Match on Hop-by-Hop Options Extension Header existence
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header hop-by-hop *boolean*
Tree	hop-by-hop
Introduced	16.0.R2
Platforms	All

routing-type0 *boolean*

Synopsis	Match a packet as per the existence of a routing Extension Header
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header routing-type0 *boolean*
Tree	routing-type0
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

routing-type4 *boolean*

Synopsis	Match on routing extension header type 4 existence
Context	**configure** filter ipv6-filter *filter-name* entry *number* match extension-header routing-type4 *boolean*
Tree	routing-type4
Description	When configured to **true**, the router filters IPv6 packets that contain a routing extension header type 4 (SRH). When configured to **false**, the router filters IPv6 packets that do not contain a routing extension header type 4 (SRH).
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

flow-label

Synopsis	Enable the **flow-label** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match flow-label
Tree	flow-label
Description	Commands in this context configure the flow label and optional mask match condition.
Introduced	16.0.R1
Platforms	All

mask *number*

Synopsis	Flow label mask for the IPv6 filter entry
Context	**configure** filter ipv6-filter *filter-name* entry *number* match flow-label mask *number*
Tree	mask
Description	This command specifies the IPv6 address mask for the flow label filter entry. This value can be expressed in decimal, hexadecimal, or binary format.
Range	1 to 1048575
Default	1048575
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

value *number*

Synopsis	Flow label as a match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match flow-label value *number*
Tree	value
Description	This command specifies the flow label to use as a match criterion. This value can be expressed in decimal, hexadecimal, or binary format.
Range	0 to 1048575
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

fragment *keyword*

Synopsis	Match criterion for fragmented packages
Context	**configure** filter ipv6-filter *filter-name* entry *number* match fragment *keyword*
Tree	fragment
Options	false, true, first-only, non-first-only
Introduced	16.0.R1
Platforms	All

hop-limit

Synopsis	Enable the **hop-limit** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match hop-limit
Tree	hop-limit
Introduced	21.10.R1
Platforms	All

eq *number*

Synopsis	Equal to condition match value
Context	**configure** filter ipv6-filter *filter-name* entry *number* match hop-limit eq *number*
Tree	eq
Range	0 to 255

© 2026 Nokia.

end *number*

Synopsis	Upper bound of the range
Context	**configure** filter ipv6-filter *filter-name* entry *number* match hop-limit range end *number*
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	All

start *number*

Synopsis	Lower bound of the range
Context	**configure** filter ipv6-filter *filter-name* entry *number* match hop-limit range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	All

icmp

Synopsis	Enter the **icmp** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match icmp
Tree	icmp
Description	Commands in this context configure ICMP values to use as IPv6 filter match criteria.
Introduced	16.0.R1
Platforms	All

code *number*

Synopsis	ICMPv6 code value to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* match icmp code *number*
Tree	code

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the ICMPv6 code value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP code value of 0 match criterion may match non-initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

type *number*

Synopsis	ICMPv6 type value to match
Context	**configure** filter ipv6-filter *filter-name* entry *number* match icmp type *number*
Tree	type
Description	This command specifies the ICMPv6 type value that must be present to match. The system matches on ICMP code or ICMP type, or on both values. An entry containing Layer 4 non-zero match criteria does not match non initial (second, third, and so on) fragments of a fragmented packet because only the first fragment contains the Layer 4 information. Similarly, an entry containing an ICMP type value of 0 match criterion may match non initial fragments when the Layer 4 header is not present in a packet fragment and other match criteria are also met.
Range	0 to 255
Introduced	16.0.R1
Platforms	All

ip

Synopsis	Enter the **ip** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match ip
Tree	ip
Notes	The following elements are part of a choice: **ip** or (**dst-ip** and **src-ip**).

tcp-established

Synopsis	Use ACK or RST status in TCP header as match criterion

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-established
Tree	tcp-established
Description	When configured to **true**, a match occurs when the ACK or the RST TCP flag bit is set in the TCP header of an IP packet.
Notes	The following elements are part of a choice: **tcp-established** or **tcp-flags**.
Introduced	22.10.R1
Platforms	All

tcp-flags

Synopsis	Enter the **tcp-flags** context
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags
Tree	tcp-flags
Description	Commands in this context configure the use of TCP flags as the IP filter match.
Notes	The following elements are part of a choice: **tcp-established** or **tcp-flags**.
Introduced	16.0.R1
Platforms	All

ack *boolean*

Synopsis	Use ACK TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags ack *boolean*
Tree	ack
Description	When configured to **true**, a match occurs when the ACK TCP flag bit, defined in RFC 793, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ACK TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

cwr *boolean*

Synopsis	Use CWR TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags cwr *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	cwr
Description	When configured to **true**, a match occurs when the Congestion Window Reduced (CWR) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the CWR TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

ece *boolean*

Synopsis	Use ECE TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags ece *boolean*
Tree	ece
Description	When configured to **true**, a match occurs when the ECN-Echo (ECE) TCP flag bit, defined in RFC 3168, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the ECE TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

fin *boolean*

Synopsis	Use FIN TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags fin *boolean*
Tree	fin
Description	When configured to **true**, a match occurs when the FIN TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the FIN TCP flag bit, defined in RFC 793, is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

ns *boolean*

Synopsis	Use NS TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags ns *boolean*
Tree	ns
Description	When configured to **true**, a match occurs when the Nonce Sum (NS) TCP flag bit, defined in RFC 3540, is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the NS TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

psh *boolean*

Synopsis	Use PSH TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags psh *boolean*
Tree	psh
Description	When configured to **true**, a match occurs when the Push (PSH) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the Push (PSH) TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

rst *boolean*

Synopsis	Use RST TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags rst *boolean*
Tree	rst
Description	When configured to **true**, a match occurs when the RST TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the RST TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1

Platforms	All

syn *boolean*

Synopsis	Use SYN TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags syn *boolean*
Tree	syn
Description	When configured to **true**, a match occurs when the Synchronize (SYN) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the SYN TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

urg *boolean*

Synopsis	Use URG TCP bit status in TCP header as match criterion
Context	**configure** filter ipv6-filter *filter-name* entry *number* match tcp-flags urg *boolean*
Tree	urg
Description	When configured to **true**, a match occurs when the Urgent (URG) TCP flag bit is set in the TCP header of an IP packet. When configured to **false**, a match occurs when the URG TCP flag bit is not set in the TCP header of an IP packet. When unconfigured, the system does not use the TCP flag as a match criterion.
Introduced	16.0.R1
Platforms	All

pbr-down-action-override *keyword*

Synopsis	Action when PBR or PBF target for this entry is not available
Context	**configure** filter ipv6-filter *filter-name* entry *number* pbr-down-action-override *keyword*
Tree	pbr-down-action-override
Options	drop, forward, filter-default-action
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sample-profile *reference*

Synopsis	Cflowd sample profile ID to match packets
Context	**configure** filter ipv6-filter *filter-name* entry *number* sample-profile *reference*
Tree	sample-profile
Description	This command allows traffic matching an IPv4 or IPv6 filter to be sampled for cflowd processing using a specific sample profile ID. This option is only compatible if the associated interface is configured for interface-based sampling and is only supported for ingress sampling. An IP filter can only specify a single alternate sample profile ID for cflowd sampling, but the ID can be used in multiple entries.
Reference	**configure** cflowd sample-profile *number*
Introduced	20.10.R1
Platforms	All

sticky-dest *(number | keyword)*

Synopsis	Time before action with available PBR or PBF destination and highest priority
Context	**configure** filter ipv6-filter *filter-name* entry *number* sticky-dest *(number | keyword)*
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	16.0.R1
Platforms	All

filter-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IPv6 filter identifier
Context	**configure** filter ipv6-filter *filter-name* filter-id *number*
Tree	filter-id
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

scope *keyword*

Synopsis	Scope of the filter definition
Context	**configure** filter ipv6-filter *filter-name* scope *keyword*
Tree	scope
Description	This command configures the filter policy scope. If the scope of the policy is **template** and is applied to one or more services or network interfaces, the scope cannot be changed.
Options	exclusive, template, embedded, system, cpm
Default	template
Introduced	16.0.R1
Platforms	All

shared-policer *boolean*

Synopsis	Share policer among active ports in the LAG
Context	**configure** filter ipv6-filter *filter-name* shared-policer *boolean*
Tree	shared-policer
Description	When configured to **true**, and when the filter policy is configured on a LAG endpoint, the system programs the policer rates in the filter policy per line card FP of the LAG based on the number of active ports in the LAG for each FP. When configured to **false**, and when the filter policy is configured on a LAG endpoint, the system programs the same policer rate on each line card FP of the LAG.
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

subscriber-mgmt

Synopsis	Enter the **subscriber-mgmt** context
Context	**configure** filter ipv6-filter *filter-name* subscriber-mgmt
Tree	subscriber-mgmt
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

prefix-exclude [ip-prefix] *ipv4-prefix*

Synopsis	Add a list entry for **prefix-exclude**
Context	**configure** filter match-list ip-prefix-list *named-item* prefix-exclude *ipv4-prefix*
Tree	prefix-exclude
Description	Commands in this context exclude IPv4 prefixes from the prefix match list. This command is mutually exclusive with the **apply-path** command.
Max. instances	512
Introduced	16.0.R4
Platforms	All

[**ip-prefix**] *ipv4-prefix*

Synopsis	IPv4 prefix to be added to the prefix list
Context	**configure** filter match-list ip-prefix-list *named-item* prefix-exclude *ipv4-prefix*
Tree	prefix-exclude
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

ipv6-packet-length-list [packet-length-list-name] *named-item*

Synopsis	Enter the **ipv6-packet-length-list** list instance
Context	**configure** filter match-list ipv6-packet-length-list *named-item*
Tree	ipv6-packet-length-list
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**packet-length-list-name**] *named-item*

Synopsis	Name of the packet length list
Context	**configure** filter match-list ipv6-packet-length-list *named-item*
Tree	ipv6-packet-length-list
String length	1 to 32

Tree	range
Range	41 to 65575
Notes	This element is part of a list key.
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6-prefix-list [prefix-list-name] *named-item*

Synopsis	Enter the **ipv6-prefix-list** list instance
Context	**configure** filter match-list ipv6-prefix-list *named-item*
Tree	ipv6-prefix-list

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure a list of IPv6 prefixes for match criteria in ACL and CPM IPv6 filter policies.
Introduced	16.0.R1
Platforms	All

[**prefix-list-name**] *named-item*

Synopsis	IP prefix list name
Context	**configure** filter match-list ipv6-prefix-list *named-item*
Tree	ipv6-prefix-list
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

apply-path

Synopsis	Enter the **apply-path** context
Context	**configure** filter match-list ipv6-prefix-list *named-item* apply-path
Tree	apply-path
Description	Commands in this context configure the autogeneration of address prefixes for IPv6 address prefix match lists.
Introduced	16.0.R1
Platforms	All

bgp-peers [criterion-index] *number*

Synopsis	Enter the **bgp-peers** list instance
Context	**configure** filter match-list ipv6-prefix-list *named-item* apply-path bgp-peers *number*
Tree	bgp-peers
Description	Commands in this context configure the unique index for BGP peers.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**criterion-index**] *number*

Synopsis	Index defining BGP peers for prefix autogeneration
Context	**configure** filter match-list ipv6-prefix-list *named-item* apply-path bgp-peers *number*
Tree	bgp-peers
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

group *regular-expression-not-all-spaces*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Regular expression to match against the base router BGP instance group configuration
Context	**configure** filter match-list ipv6-prefix-list *named-item* apply-path bgp-peers *number* group *regular-expression-not-all-spaces*
Tree	group
String length	1 to 255
String format	'regular-expression-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

neighbor *regular-expression-not-all-spaces*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Regular expression to match against the base router BGP instance neighbor configuration
Context	**configure** filter match-list ipv6-prefix-list *named-item* apply-path bgp-peers *number* neighbor *regular-expression-not-all-spaces*
Tree	neighbor

scope *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Policer scope
Context	**configure** filter policer *named-item* scope *keyword*
Tree	scope
Description	This command configures the scope for the policer object. When the **system** scope is configured, it creates an instance of the policer for each direction immediately after the policer is configured and shares the instance with all filter entries that reference that policer name applied in the same direction. When the **filter** scope is configured, it configures the policer instance to be shared by rate-limit entries that are part of the same filter policy and are applied in the same direction.
Options	filter – Policer shared by entries in same filter policer system – Single policer shared by the system
Default	filter
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

Use subject to Terms available at: www.nokia.com/terms.

Tree	hold-down
Range	0 to 86400
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	All

interval *number*

Synopsis	Time between consecutive requests which are sent to the far end host
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* ping-test interval *number*
Tree	interval
Range	1 to 60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

source-address *(ipv4-address-no-zone \| ipv6-address-no-zone)*

Synopsis	Source address to use in the IP packet of the ping test
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* ping-test source-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	source-address
Introduced	16.0.R4
Platforms	All

timeout *number*

Synopsis	Time required to receive a response from the far end host
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* ping-test timeout *number*
Tree	timeout
Range	1 to 60

Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

priority *number*

Synopsis	Priority for this destination
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* priority *number*
Tree	priority
Range	1 to 255
Default	100
Introduced	16.0.R1
Platforms	All

unicast-rt-test

Synopsis	Enable the **unicast-rt-test** context
Context	**configure** filter redirect-policy *named-item* destination *(ipv4-address-no-zone | ipv6-address-no-zone)* unicast-rt-test
Tree	unicast-rt-test
Introduced	16.0.R1
Platforms	All

notify-dest-change *boolean*

Synopsis	Send notifications when the active destination changes
Context	**configure** filter redirect-policy *named-item* notify-dest-change *boolean*
Tree	notify-dest-change
Description	When configured to **true**, notifications (such as Log and SNMP) are sent when the active destination of a redirect policy changes. No notification is sent when there are no more active destinations (as this scenario is covered by another notification). When configured to **false**, the notification generation is disabled.
Default	false
Introduced	16.0.R4

Platforms	All

router-instance *string*

Synopsis	Routing context to use for route lookup
Context	**configure** filter redirect-policy *named-item* router-instance *string*
Tree	router-instance
Introduced	16.0.R1
Platforms	All

sticky-dest *(number | keyword)*

Synopsis	Time required by system before applying the current best destination as active destination
Context	**configure** filter redirect-policy *named-item* sticky-dest *(number | keyword)*
Tree	sticky-dest
Range	0 to 65535
Units	seconds
Options	no-hold-time-up
Introduced	16.0.R1
Platforms	All

redirect-policy-binding [binding-name] *named-item*

Synopsis	Enter the **redirect-policy-binding** list instance
Context	**configure** filter redirect-policy-binding *named-item*
Tree	redirect-policy-binding
Max. instances	16
Introduced	16.0.R4
Platforms	All

[**binding-name**] *named-item*

Synopsis	Binding name
Context	**configure** filter redirect-policy-binding *named-item*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	redirect-policy-binding
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

binding-operator *keyword*

Synopsis	Logical operator used to obtain the master test result
Context	**configure** filter redirect-policy-binding *named-item* binding-operator *keyword*
Tree	binding-operator
Description	This command configures the logical operator to use with the destinations' test results to obtain the master test result (the redirect policy binding test result).
Options	and, or
Default	and
Introduced	16.0.R4
Platforms	All

redirect-policy [redirect-policy-name] *reference*

Synopsis	Enter the **redirect-policy** list instance
Context	**configure** filter redirect-policy-binding *named-item* redirect-policy *reference*
Tree	redirect-policy
Introduced	16.0.R4
Platforms	All

[**redirect-policy-name**] *reference*

Synopsis	Redirect policy name

4.18.1 fwd-path-ext command descriptions

fwd-path-ext

Synopsis	Enter the **fwd-path-ext** context
Context	**configure** fwd-path-ext
Tree	fwd-path-ext
Description	Commands in this context configure a Forwarding Path Extension (FPE). Some applications that rely on PXC functionality utilize FPE to simplify the configuration of these applications.
Introduced	16.0.R1
Platforms	All

fpe [fpe-id] *number*

Synopsis	Enter the **fpe** list instance
Context	**configure** fwd-path-ext fpe *number*
Tree	fpe
Description	Commands in this context configure the Forwarding Path Extension (FPE), which associates an application with a PXC (a paired set of PXC sub-ports or a paired set of PXC-based LAGs).
Introduced	16.0.R1
Platforms	All

[**fpe-id**] *number*

Synopsis	FPE ID
Context	**configure** fwd-path-ext fpe *number*
Tree	fpe
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

application

Synopsis	Enter the **application** context
Context	**configure** fwd-path-ext fpe *number* application
Tree	application
Description	Commands in this context configure the attributes of the FPE application.
Introduced	16.0.R1
Platforms	All

map-e *boolean*

Synopsis	Associate the MAP-E application with the FPE
Context	**configure** fwd-path-ext fpe *number* application map-e *boolean*
Tree	map-e
Default	false
Introduced	26.10.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

map-t *boolean*

Synopsis	Associates the MAP-T application with the FPE
Context	**configure** fwd-path-ext fpe *number* application map-t *boolean*
Tree	map-t
Description	When configured to **true**, the system associates the MAP-T application with the Forwarding Path Extension (FPE).
Default	false
Introduced	24.10.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s

mvpn-umh-rate-monitoring *boolean*

Synopsis	MVPN UMH Rate Monitoring
Context	**configure** fwd-path-ext fpe *number* application mvpn-umh-rate-monitoring *boolean*
Tree	mvpn-umh-rate-monitoring
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	24.7.R1
Platforms	All

pw-port-extension

Synopsis	Enable the **pw-port-extension** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension
Tree	pw-port-extension
Description	Commands in this context configure the type of the cross-connect required to terminate an external tunnel to an anchored PW port. The system automatically builds the internal infrastructure required to perform the tunnel termination on a PW port. PW ports support the following types of tunnels: • GRE/MPLS PW with SDP of type MPLS or GRE • L2oGRE bridged Ethernet over GRE, where GRE protocol number is 0x6558
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface-a

Synopsis	Enter the **interface-a** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-a
Tree	interface-a
Description	Commands in this context configure the command options for network interface-a of the PW port extension FPE.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

qos

Synopsis	Enter the **qos** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-a qos
Tree	qos
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-a qos network-policy *reference*
Tree	network-policy
Reference	**configure** qos network *network-policy-name*
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interface-b

Synopsis	Enter the **interface-b** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-b
Tree	interface-b
Description	Commands in this context configure command options for network interface-b of the PW port extension FPE.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

qos

Synopsis	Enter the **qos** context
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-b qos
Tree	qos
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	**configure** fwd-path-ext fpe *number* application pw-port-extension interface-b qos network-policy *reference*
Tree	network-policy
Reference	**configure** qos network *network-policy-name*
Introduced	22.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

srv6

Synopsis	Enable the **srv6** context
Context	**configure** fwd-path-ext fpe *number* application srv6
Tree	srv6
Description	Commands in this context configure the SRv6 FPE application used for origination or termination of SRv6 tunnels.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

interface-a

Synopsis	Enter the **interface-a** context
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-a
Tree	interface-a
Description	Commands in this context configure the parameters of network interface-a of the SRv6 FPE.
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-a qos
Tree	qos
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-a qos network-policy *reference*
Tree	network-policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Reference	**configure** qos network *network-policy-name*
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

interface-b

Synopsis	Enter the **interface-b** context
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-b
Tree	interface-b
Description	Commands in this context configure the parameters of network interface-b of the SRv6 FPE.
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

mtu *number*

Synopsis	MTU size of SRv6 origination FPE interface-b
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-b mtu *number*
Tree	mtu
Description	This command configures the Maximum Transfer Unit (MTU) of interface-b of the SRv6 origination FPE. The MTU is used to check if an IPv4 service packet should be fragmented and if an IPv6 service packet should be dropped when tunneled over SRv6. The minimum value is the IPv6 minimum MTU value. The maximum value is set to the maximum Ethernet port MTU (9800) minus 14 bytes for Null Ethernet encapsulation.
Range	0 | 1280 to 9786
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-b qos
Tree	qos
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

network-policy *reference*

Synopsis	Network QoS policy applied to the FPE interface
Context	**configure** fwd-path-ext fpe *number* application srv6 interface-b qos network-policy *reference*
Tree	network-policy
Reference	**configure** qos network *network-policy-name*
Introduced	21.5.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

routed-vpls *boolean*

Synopsis	Enable support for R-VPLS on SRv6 origination FPEs
Context	**configure** fwd-path-ext fpe *number* application srv6 routed-vpls *boolean*
Tree	routed-vpls
Description	When configured to **true**, the router enables the creation of internal SDPs for handling R-VPLS traffic when SRv6 origination is configured for the specified FPE.
Default	false
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

type *keyword*

Synopsis	SRv6 FPE application type
Context	**configure** fwd-path-ext fpe *number* application srv6 type *keyword*
Tree	type
Description	This command specifies if the SRv6 FPE application is used for origination or termination of SRv6 tunnels. A dedicated SRv6 FPE is required for origination and termination of SRv6 tunnels on services and they cannot share the same FPE. A single FPE can be configured for SRv6 origination. One or more FPEs can be configured for SRv6 termination, where a termination SRv6 FPE is assigned one or more configured locators. Transit SRv6 routers do not require SRv6 FPEs.
Options	origination, termination
Introduced	21.5.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

sub-mgmt-extension *boolean*

Synopsis	Enable FPE for subscrber management extensions
Context	**configure** fwd-path-ext fpe *number* application sub-mgmt-extension *boolean*
Tree	sub-mgmt-extension
Description	When configured to **true**, the FPE is used for subscriber management extensions. The FPE can be used for multiple subscriber management applications, but it cannot be used for other applications. When configured to **false**, the FPE is not used for subscriber management extensions.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vxlan

Synopsis	Enable the **vxlan** context
Context	**configure** fwd-path-ext fpe *number* application vxlan
Tree	vxlan
Introduced	22.2.R1
Platforms	All

router-instance *string*

Synopsis	Router instance for VXLAN termination
Context	**configure** fwd-path-ext fpe *number* application vxlan router-instance *string*
Tree	router-instance
Default	Base
Introduced	22.2.R1
Platforms	All

description *description*

Synopsis	Text description
Context	**configure** fwd-path-ext fpe *number* description *description*

Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

multi-path

Synopsis	Enable the **multi-path** context
Context	**configure** fwd-path-ext fpe *number* multi-path
Tree	multi-path
Description	Commands in this context configure a multipath FPE that can contain multiple PXC ports or LAGs of PXC ports.
Notes	The following elements are part of a choice: **multi-path** or **path**.
Introduced	21.10.R1
Platforms	All

path [path-id] *number*

Synopsis	Enter the **path** list instance
Context	**configure** fwd-path-ext fpe *number* multi-path path *number*
Tree	path
Description	Commands in this context configure a multipath FPE forwarding path. A single path in a multipath FPE can contain a single PXC port or a LAG of PXC ports.
Introduced	21.10.R1
Platforms	All

[**path-id**] *number*

Synopsis	Multipath FPE forwarding path ID
Context	**configure** fwd-path-ext fpe *number* multi-path path *number*
Tree	path
Range	1 to 64
Notes	This element is part of a list key.
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

pxc *reference*

Synopsis	Dedicated PXC ID used by the FPE path
Context	**configure** fwd-path-ext fpe *number* multi-path path *number* pxc *reference*
Tree	pxc
Reference	**configure** port-xc pxc *number*
Notes	The following elements are part of a choice: **pxc** or (**xc-lag-a** and **xc-lag-b**).
Introduced	21.10.R1
Platforms	All

xc-lag-a *reference*

Synopsis	PXC LAG identifier dedicated to the FPE path
Context	**configure** fwd-path-ext fpe *number* multi-path path *number* xc-lag-a *reference*
Tree	xc-lag-a
Description	This command specifies the LAG identifier associated with one side of the PXC. The operator can associate **xc-lag-a** with the LAG containing either subports.a or subports.b. The system does not enforce a match between **xc-lag-a** and the LAG ID containing subports.a.
Reference	**configure** lag *lag-interface*
Notes	The following elements are part of a choice: **pxc** or (**xc-lag-a** and **xc-lag-b**).
Introduced	21.10.R1
Platforms	All

xc-lag-b *reference*

Synopsis	PXC LAG identifier dedicated to the FPE path
Context	**configure** fwd-path-ext fpe *number* multi-path path *number* xc-lag-b *reference*
Tree	xc-lag-b
Description	This command specifies the LAG identifier associated with one side of the PXC. The operator can associate **xc-lag-b** with the LAG containing either subports.a or subports.b. The system does not enforce a match between **xc-lag-b** and the LAG ID containing subports.b.
Reference	**configure** lag *lag-interface*

xc-lag-b *reference*

Synopsis	PXC LAG identifier dedicated to the FPE path
Context	**configure** fwd-path-ext fpe *number* path xc-lag-b *reference*
Tree	xc-lag-b
Description	This command specifies the LAG identifier associated with one side of the PXC. The operator can associate **xc-lag-b** with the LAG containing either subports.a or subports.b. The system does not enforce a match between **xc-lag-b** and the LAG ID containing subports.b.
Reference	**configure** lag *lag-interface*
Notes	The following elements are part of a choice: **pxc** or (**xc-lag-a** and **xc-lag-b**).
Introduced	16.0.R4
Platforms	All

sdp-id-range

Synopsis	Enable the **sdp-id-range** context
Context	**configure** fwd-path-ext sdp-id-range
Tree	sdp-id-range
Description	Commands in this context configure the SDP ID range used by the FPE based PW port and VXLAN termination applications. Each configured FPE-based PW port is associated with two internal SDPs (one in each direction) whose IDs are allocated from the configured SDP ID range. When the FPE is associated with VXLAN termination, an internal SDP is allocated from the configured SDP ID range and is used for R-VPLS services that terminate VXLAN IPv6. A spoke SDP per VXLAN IPv6 R-VPLS service is created on that SDP for egress processing of the packets. The SDP ID range cannot be modified if any of its IDs are currently in use.
Introduced	16.0.R1
Platforms	All

end *number*

Synopsis	Upper bound of the SDP ID range
Context	**configure** fwd-path-ext sdp-id-range end *number*
Tree	end
Range	1 to 32767

4.19.1 group-encryption command descriptions

group-encryption

Synopsis	Enter the **group-encryption** context
Context	**configure** group-encryption
Tree	group-encryption
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encryption-keygroup [id] *number*

Synopsis	Enter the **encryption-keygroup** list instance
Context	**configure** group-encryption encryption-keygroup *number*
Tree	encryption-keygroup
Max. instances	127
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Encryption key group ID
Context	**configure** group-encryption encryption-keygroup *number*
Tree	encryption-keygroup
Range	1 to 127
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-outbound-security-association *reference*

Synopsis	SPI to use for egressing packets for the key group
Context	**configure** group-encryption encryption-keygroup *number* active-outbound-security-association *reference*

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication-key *encrypted-leaf-hex*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
Context	**configure** group-encryption encryption-keygroup *number* security-association *number* authentication-key *encrypted-leaf-hex*
Tree	authentication-key
Description	This command specifies the key used for the authentication algorithm in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
String format	'encrypted-leaf-hex' must have clear text in hex with prefix 0x or end with hash/hash2/hash3/custom
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encryption-key *encrypted-leaf-hex*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the encryption algorithm

4.20.1 ipsec command descriptions

ipsec

Synopsis	Enter the **ipsec** context
Context	**configure** ipsec
Tree	ipsec
Description	Commands in this context configure Internet Protocol Security (IPsec) commands.
Introduced	16.0.R4
Platforms	All

cert-profile [name] *named-item*

Synopsis	Enter the **cert-profile** list instance
Context	**configure** ipsec cert-profile *named-item*
Tree	cert-profile
Description	Commands in this context configure the certificate profile.
Max. instances	10200
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Certificate profile name
Context	**configure** ipsec cert-profile *named-item*
Tree	cert-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the certificate profile
Context	**configure** ipsec cert-profile *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** ipsec cert-profile *named-item* entry *number*
Tree	entry
Description	Commands in this context configure the certificate profile entry.
Max. instances	8
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Certificate profile entry ID
Context	**configure** ipsec cert-profile *named-item* entry *number*
Tree	entry
Range	1 to 8
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert *pki-file-name*

Synopsis	File name of the imported certificate for the entry
Context	**configure** ipsec cert-profile *named-item* entry *number* cert *pki-file-name*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	cert
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

compare-chain-include *reference*

Synopsis	CA profile to include in the compare-chain
Context	**configure** ipsec cert-profile *named-item* entry *number* compare-chain-include *reference*
Tree	compare-chain-include
Description	This command specifies the Certificate Authority (CA) that needs to be included in the compare-chain for the entry. This configuration is required in instances where the configured root CA is cross-signed by another CA.
Reference	**configure** system security pki ca-profile *named-item*
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key *pki-file-name*

Synopsis	File name of the imported key used for authentication
Context	**configure** ipsec cert-profile *named-item* entry *number* key *pki-file-name*
Tree	key
String length	1 to 95
String format	'pki-file-name' must not be all spaces 'pki-file-name' must not contain : or / (filename only)
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rsa-signature *keyword*

Synopsis	Signature scheme for the RSA key
Context	**configure** ipsec cert-profile *named-item* entry *number* rsa-signature *keyword*
Tree	rsa-signature
Options	pkcs1, pss

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	pkcs1
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

send-chain

Synopsis	Enter the **send-chain** context
Context	**configure** ipsec cert-profile *named-item* entry *number* send-chain
Tree	send-chain
Description	Commands in this context allow the system to send additional CA certificates to the peer. These additional CA certificates must be in the certificate chain of the certificate specified by the **cert** command in the same entry.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ca-profile *reference*

Synopsis	CA certificate to send to the peer
Context	**configure** ipsec cert-profile *named-item* entry *number* send-chain ca-profile *reference*
Tree	ca-profile
Reference	**configure** system security pki ca-profile *named-item*
Max. instances	7
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-db [name] *named-item*

Synopsis	Enter the **client-db** list instance
Context	**configure** ipsec client-db *named-item*
Tree	client-db
Max. instances	1000
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**name**] *named-item*

Synopsis	IPsec client database name
Context	**configure** ipsec client-db *named-item*
Tree	client-db
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the client database
Context	**configure** ipsec client-db *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client [id] *number*

Synopsis	Enter the **client** list instance
Context	**configure** ipsec client-db *named-item* client *number*
Tree	client
Description	Commands in this context configure the IPsec client entry in the client database.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Client ID
Context	**configure** ipsec client-db *named-item* client *number*
Tree	client

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 8000
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec client action
Context	**configure** ipsec client-db *named-item* client *number* action *keyword*
Tree	action
Options	accept – Accept the IPsec client reject – Reject the IPsec client
Default	accept
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the database client
Context	**configure** ipsec client-db *named-item* client *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **cert** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec client-db *named-item* client *number* cert
Tree	cert
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert-profile *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Certificate Profile name associated with this client
Context	**configure** ipsec client-db *named-item* client *number* cert cert-profile *reference*
Tree	cert-profile
Reference	**configure** ipsec cert-profile *named-item*
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

status-verify

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the **status-verify** context
Context	**configure** ipsec client-db *named-item* client *number* cert status-verify
Tree	status-verify
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-result *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The default result of Certificate Status Verification

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec client-db *named-item* client *number* cert status-verify default-result *keyword*
Tree	default-result
Options	revoked, good
Default	revoked
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The primary method used to verify the peer certificate's revocation status
Context	**configure** ipsec client-db *named-item* client *number* cert status-verify primary *keyword*
Tree	primary
Options	crl, ocsp
Default	crl
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

secondary *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The secondary method used to verify the peer certificate's revocation status
Context	**configure** ipsec client-db *named-item* client *number* cert status-verify secondary *keyword*
Tree	secondary
Options	none, crl, ocsp
Default	none
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trust-anchor-profile *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Trust Anchor Profile name associated with this client
Context	**configure** ipsec client-db *named-item* client *number* cert trust-anchor-profile *reference*
Tree	trust-anchor-profile
Reference	**configure** ipsec trust-anchor-profile *named-item*
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

client-name *named-item*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Client name
Context	**configure** ipsec client-db *named-item* client *number* client-name *named-item*
Tree	client-name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

credential

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **credential** context
Context	**configure** ipsec client-db *named-item* client *number* credential
Tree	credential
Description	Commands in this context authenticate peers.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pre-shared-key *encrypted-leaf-hex-without-prefix*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key used to authenticate peers
Context	**configure** ipsec client-db *named-item* client *number* credential pre-shared-key *encrypted-leaf-hex-without-prefix*
Tree	pre-shared-key
Description	This command specifies the pre-shared key used to authenticate peers in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
String format	'encrypted-leaf-hex-without-prefix' must have clear text in hex without 0x or end with hash/hash2/hash3/custom
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

identification

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **identification** context
Context	**configure** ipsec client-db *named-item* client *number* identification
Tree	identification
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

ipv4-prefix-any *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept any valid IPv4 prefix as a match for the IDi
Context	**configure** ipsec client-db *named-item* client *number* identification idi ipv4-prefix-any *boolean*
Tree	ipv4-prefix-any
Notes	The following elements are part of a mandatory choice: **any**, **fqdn**, **fqdn-suffix**, **ipv4-prefix**, **ipv4-prefix-any**, **ipv6-prefix**, **ipv6-prefix-any**, **regexp**, **rfc822**, or **rfc822-suffix**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-prefix *ipv6-prefix*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 prefix used as the match criteria for the IDi
Context	**configure** ipsec client-db *named-item* client *number* identification idi ipv6-prefix *ipv6-prefix*
Tree	ipv6-prefix
Notes	The following elements are part of a mandatory choice: **any**, **fqdn**, **fqdn-suffix**, **ipv4-prefix**, **ipv4-prefix-any**, **ipv6-prefix**, **ipv6-prefix-any**, **regexp**, **rfc822**, or **rfc822-suffix**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-prefix-any *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accept any valid IPv6 prefix as a match for the IDi
Context	**configure** ipsec client-db *named-item* client *number* identification idi ipv6-prefix-any *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ipv6-prefix-any
Notes	The following elements are part of a mandatory choice: **any**, **fqdn**, **fqdn-suffix**, **ipv4-prefix**, **ipv4-prefix-any**, **ipv6-prefix**, **ipv6-prefix-any**, **regexp**, **rfc822**, or **rfc822-suffix**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

regexp *display-string-or-empty*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Regular expression pattern used to match the IDi
Context	**configure** ipsec client-db *named-item* client *number* identification idi regexp *display-string-or-empty*
Tree	regexp
String length	0 to 255
Notes	The following elements are part of a mandatory choice: **any**, **fqdn**, **fqdn-suffix**, **ipv4-prefix**, **ipv4-prefix-any**, **ipv6-prefix**, **ipv6-prefix-any**, **regexp**, **rfc822**, or **rfc822-suffix**.
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rfc822 *display-string-or-empty*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Email address (RFC 822) used as match criteria for IDi
Context	**configure** ipsec client-db *named-item* client *number* identification idi rfc822 *display-string-or-empty*
Tree	rfc822
String length	0 to 255
Notes	The following elements are part of a mandatory choice: **any**, **fqdn**, **fqdn-suffix**, **ipv4-prefix**, **ipv4-prefix-any**, **ipv6-prefix**, **ipv6-prefix-any**, **regexp**, **rfc822**, or **rfc822-suffix**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-policy [id] *number*

Synopsis	Enter the **ike-policy** list instance
Context	**configure** ipsec ike-policy *number*
Tree	ike-policy
Description	Commands in this context configure an Internet Key Exchange (IKE) policy.
Max. instances	2048
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	IKE policy ID
Context	**configure** ipsec ike-policy *number*
Tree	ike-policy
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** ipsec ike-policy *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dpd

Synopsis	Enable the **dpd** context
Context	**configure** ipsec ike-policy *number* dpd

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	dpd
Description	Commands in this context configure the dead peer detection mechanism.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	DPD interval
Context	**configure** ipsec ike-policy *number* dpd interval *number*
Tree	interval
Description	This command specifies the DPD interval. Because more time is necessary to determine if there is incoming traffic, the actual time needed to bring down the tunnel is larger than the DPD interval multiplied by the value configured for maximum retry attempts.
Range	10 to 300
Units	seconds
Default	30
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-retries *number*

Synopsis	Maximum number of retries before the tunnel is removed
Context	**configure** ipsec ike-policy *number* dpd max-retries *number*
Tree	max-retries
Range	2 to 5
Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reply-only *boolean*

Synopsis	Initiate DPD request for incoming ESP or IKE packets
Context	**configure** ipsec ike-policy *number* dpd reply-only *boolean*
Tree	reply-only

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-transform *reference*

Synopsis	IKE transform instance associated with the IKE policy
Context	**configure** ipsec ike-policy *number* ike-transform *reference*
Tree	ike-transform
Description	This command specifies the IKE transform instance associated with the IKE policy. If multiple IDs are specified, the system selects an IKE transform based on the proposal of the peer. If the system is a tunnel initiator, it uses the configured IKE transform to generate the SA payload.
Reference	**configure** ipsec ike-transform *number*
Max. instances	4
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-version-1

Synopsis	Enable the **ike-version-1** context
Context	**configure** ipsec ike-policy *number* ike-version-1
Tree	ike-version-1
Description	Commands in this context configure the IKE version 1 mode of operation that the IKE policy uses.
Notes	The following elements are part of a choice: **ike-version-1** or **ike-version-2**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auth-method *keyword*

Synopsis	Authentication method used with the IKE policy
Context	**configure** ipsec ike-policy *number* ike-version-1 auth-method *keyword*
Tree	auth-method
Options	psk, plain-psk-xauth

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	psk
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-mode *keyword*

Synopsis	Mode of operation
Context	**configure** ipsec ike-policy *number* ike-version-1 ike-mode *keyword*
Tree	ike-mode
Options	main, aggressive
Default	main
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

own-auth-method *keyword*

Synopsis	Authentication method used with policy on its own side
Context	**configure** ipsec ike-policy *number* ike-version-1 own-auth-method *keyword*
Tree	own-auth-method
Options	symmetric
Default	symmetric
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ph1-responder-delete-notify *boolean*

Synopsis	Send delete notification for IKEv1 phase 1 removal
Context	**configure** ipsec ike-policy *number* ike-version-1 ph1-responder-delete-notify *boolean*
Tree	ph1-responder-delete-notify
Description	When configured to **true**, a delete notification is sent to the peer when deleting an IKEv1 phase 1 SA for which it was the responder. When configured to **false**, no notification is sent.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ike-version-2

Synopsis	Enter the **ike-version-2** context
Context	**configure** ipsec ike-policy *number* ike-version-2
Tree	ike-version-2
Description	Commands in this context configure the IKE version 2 mode of operation that the IKE policy uses.
Notes	The following elements are part of a choice: **ike-version-1** or **ike-version-2**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auth-method *keyword*

Synopsis	Authentication method used with the IKE policy
Context	**configure** ipsec ike-policy *number* ike-version-2 auth-method *keyword*
Tree	auth-method
Options	psk, cert, psk-radius, cert-radius, eap, auto-eap-radius, auto-eap, psk-or-cert
Default	psk
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auto-eap-method *keyword*

Synopsis	Authentication method used for the remote peer
Context	**configure** ipsec ike-policy *number* ike-version-2 auto-eap-method *keyword*
Tree	auto-eap-method
Description	This command specifies the behavior for the IKEv2 remote-access tunnel when the authentication method uses EAP or potentially another method to authenticate the remote peer.
Options	psk, cert, psk-or-cert
Default	cert
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ikev2-fragment

Synopsis	Enable the **ikev2-fragment** context
Context	**configure** ipsec ike-policy *number* ike-version-2 ikev2-fragment
Tree	ikev2-fragment
Description	Commands in this context configure IKEv2 protocol level fragmentation (RFC 7383).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu *number*

Synopsis	Maximum size of the IKEv2 packet
Context	**configure** ipsec ike-policy *number* ike-version-2 ikev2-fragment mtu *number*
Tree	mtu
Range	512 to 9000
Units	octets
Default	1500
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reassembly-timeout *number*

Synopsis	Timeout for reassembly of IKEv2 message fragments
Context	**configure** ipsec ike-policy *number* ike-version-2 ikev2-fragment reassembly-timeout *number*
Tree	reassembly-timeout
Range	1 to 5
Units	seconds
Default	2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

own-auth-method *keyword*

Synopsis	Authentication method for IKE policy on its own side

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ike-policy *number* ike-version-2 own-auth-method *keyword*
Tree	own-auth-method
Options	symmetric, psk, cert, eap-only, follow-peer
Default	symmetric
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

own-auto-eap-method *keyword*

Synopsis	Authentication method used on its own side
Context	**configure** ipsec ike-policy *number* ike-version-2 own-auto-eap-method *keyword*
Tree	own-auto-eap-method
Description	This command specifies the behavior for the IKEv2 remote-access tunnel when the authentication method uses EAP or potentially another method to authenticate the peer.
Options	psk, cert
Default	cert
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppk-required *boolean*

Synopsis	Force the use of PPK
Context	**configure** ipsec ike-policy *number* ike-version-2 ppk-required *boolean*
Tree	ppk-required
Description	When configured to **true**, the router is forced to use PPKs for the IKEv2 key derivation process. When configured to **false**, PPK use is optional, and the router can fall back to derive keys without PPK.
Default	false
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

send-idr-after-eap-success *boolean*

Synopsis	Send IDr payload in last IKE authentication response
Context	**configure** ipsec ike-policy *number* ike-version-2 send-idr-after-eap-success *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	send-idr-after-eap-success
Description	When configured to **true**, the Identification Responder (IDr) payload is added in the last IKE authentication response after an Extensible Authentication Protocol (EAP) Success packet is received. When configured to **false**, the IDr payload is not included in the last IKE.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-lifetime *number*

Synopsis	Lifetime of the Phase 2 IKE key
Context	**configure** ipsec ike-policy *number* ipsec-lifetime *number*
Tree	ipsec-lifetime
Range	1200 to 31536000
Units	seconds
Default	3600
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

limit-init-exchange

Synopsis	Enter the **limit-init-exchange** context
Context	**configure** ipsec ike-policy *number* limit-init-exchange
Tree	limit-init-exchange
Description	Commands in this context limit the number of ongoing IKEv2 initial exchanges per tunnel.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of limiting initial IKE exchanges
Context	**configure** ipsec ike-policy *number* limit-init-exchange admin-state *keyword*
Tree	admin-state
Options	enable, disable

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	enable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reduced-max-exchange-timeout *(number | keyword)*

Synopsis	Maximum timeout for in-progress initial IKE exchange
Context	**configure** ipsec ike-policy *number* limit-init-exchange reduced-max-exchange-timeout *(number | keyword)*
Tree	reduced-max-exchange-timeout
Description	This command configures the maximum timeout for the in-progress initial IKE exchange. If a new IKEv2 IKE_SA_INIT request is received when there is an ongoing IKEv2 initial exchange from the same peer, the timeout value of the existing exchange is set to this specified value. If the **none** option is configured for this command, the timeout value remains unchanged.
Range	2 to 60
Units	seconds
Options	none
Default	2
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lockout

Synopsis	Enable the **lockout** context
Context	**configure** ipsec ike-policy *number* lockout
Tree	lockout
Description	Commands in this context specify the lockout mechanism for the IPsec tunnel. These commands apply only when the system acts as a tunnel responder.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

block *(number | keyword)*

Synopsis	Time a client is blocked for failed authentications
Context	**configure** ipsec ike-policy *number* lockout block *(number | keyword)*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	block
Description	This command configures the time the client is blocked if the number of failed authentications exceeds the configured value within the specified duration.
Range	1 to 1440
Units	minutes
Options	infinite
Default	10
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	Time interval for failed attempts threshold
Context	**configure** ipsec ike-policy *number* lockout duration *number*
Tree	duration
Description	This command specifies the time interval in which the configured failed authentication count must be exceeded to trigger a lockout.
Range	1 to 60
Units	minutes
Default	5
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

failed-attempts *number*

Synopsis	Maximum failed authentications allowed in the duration
Context	**configure** ipsec ike-policy *number* lockout failed-attempts *number*
Tree	failed-attempts
Range	1 to 64
Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-port-per-ip *number*

Synopsis	Maximum number of ports allowed under same IP address
Context	**configure** ipsec ike-policy *number* lockout max-port-per-ip *number*
Tree	max-port-per-ip
Description	This command configures the maximum number of ports allowed under the same IP address. When the threshold is exceeded and the client is locked out, all ports behind the IP address are blocked.
Range	1 to 32000
Default	16
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match-peer-id-to-cert *boolean*

Synopsis	Check IKE peer ID during certificate authentication
Context	**configure** ipsec ike-policy *number* match-peer-id-to-cert *boolean*
Tree	match-peer-id-to-cert
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-traversal

Synopsis	Enable the **nat-traversal** context
Context	**configure** ipsec ike-policy *number* nat-traversal
Tree	nat-traversal
Description	Commands in this context configure the Network Address Translation Traversal (NAT-T) functionality.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

force *boolean*

Synopsis	Enable NAT-T in forced mode
Context	**configure** ipsec ike-policy *number* nat-traversal force *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	force
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

force-keep-alive *boolean*

Synopsis	Continue sending keepalive packets (no expiry)
Context	**configure** ipsec ike-policy *number* nat-traversal force-keep-alive *boolean*
Tree	force-keep-alive
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

keep-alive-interval *number*

Synopsis	Keepalive interval for NAT-T
Context	**configure** ipsec ike-policy *number* nat-traversal keep-alive-interval *number*
Tree	keep-alive-interval
Range	120 to 600
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pfs

Synopsis	Enable the **pfs** context
Context	**configure** ipsec ike-policy *number* pfs
Tree	pfs
Description	Commands in this context configure perfect forward secrecy (PFS) on the IPsec tunnel using the policy. PFS provides for a new key exchange each time the Security Association (SA) key is renegotiated.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dh-group *keyword*

Synopsis	Diffie-Helman group used to calculate session keys
Context	**configure** ipsec ike-policy *number* pfs dh-group *keyword*
Tree	dh-group
Description	This command configures which DH group to use for calculating session keys. More bits provide a higher level of security, but require more processing.
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Default	group-14
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

relay-unsolicited-cfg-attribute

Synopsis	Enter the **relay-unsolicited-cfg-attribute** context
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute
Tree	relay-unsolicited-cfg-attribute
Description	Commands in this context configure attributes returned from the source (such as a RADIUS server) that are returned to the IKEv2 remote-access tunnel client regardless if the client has requested the attribute in the CFG_REQUEST payload.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip4-address *boolean*

Synopsis	Return the IPv4 address from the source to the client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip4-address *boolean*
Tree	internal-ip4-address
Description	When configured to **true**, the system returns the IPv4 address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

internal-ip4-dns *boolean*

Synopsis	Return IPv4 DNS server address from source to client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip4-dns *boolean*
Tree	internal-ip4-dns
Description	When configured to **true**, the system returns the IPv4 DNS server address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip4-netmask *boolean*

Synopsis	Return the IPv4 netmask from the source to the client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip4-netmask *boolean*
Tree	internal-ip4-netmask
Description	When configured to **true**, the system returns the IPv4 netmask from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the netmask in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip6-address *boolean*

Synopsis	Return the IPv6 address from the source to the client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip6-address *boolean*
Tree	internal-ip6-address
Description	When configured to **true**, the system returns the IPv6 address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

internal-ip6-dns *boolean*

Synopsis	Return IPv6 DNS server address from source to client
Context	**configure** ipsec ike-policy *number* relay-unsolicited-cfg-attribute internal-ip6-dns *boolean*
Tree	internal-ip6-dns
Description	When configured to **true**, the system returns the IPv6 DNS server address from the source (such as a RADIUS server) to the IKEv2 remote-access tunnel client regardless if the client has requested the address in the CFG_REQUEST payload.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-transform [id] *number*

Synopsis	Enter the **ike-transform** list instance
Context	**configure** ipsec ike-transform *number*
Tree	ike-transform
Max. instances	4096
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	IKE transform instance ID
Context	**configure** ipsec ike-transform *number*
Tree	ike-transform
Range	1 to 4096
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dh-group *keyword*

Synopsis	Key exchange group to derive IKE_SA and CHILD_SA keys
Context	**configure** ipsec ike-transform *number* dh-group *keyword*
Tree	dh-group
Options	group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Default	group-14
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-auth-algorithm *keyword*

Synopsis	IKE authentication algorithm for IKE transform instance
Context	**configure** ipsec ike-transform *number* ike-auth-algorithm *keyword*
Tree	ike-auth-algorithm
Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Default	sha-256
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-encryption-algorithm *keyword*

Synopsis	IKE encryption algorithm for the IKE transform instance
Context	**configure** ipsec ike-transform *number* ike-encryption-algorithm *keyword*
Tree	ike-encryption-algorithm
Options	des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm16, aes256-gcm8, aes256-gcm16
Default	aes-128
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-prf-algorithm *keyword*

Synopsis	PRF algorithm for the IKE transform instance
Context	**configure** ipsec ike-transform *number* ike-prf-algorithm *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ike-prf-algorithm
Description	This command specifies the pseudo-random function algorithm used for IKE security association. If an encrypted algorithm such as AES-GCM is used for the IKE encryption algorithm, **same-as-auth** cannot be used for the IKE PRF algorithm.
Options	md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, same-as-auth
Default	same-as-auth
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isakmp-lifetime *number*

Synopsis	Phase 1 lifetime for the IKE transform instance
Context	**configure** ipsec ike-transform *number* isakmp-lifetime *number*
Tree	isakmp-lifetime
Range	1200 to 31536000
Units	seconds
Default	86400
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transform [id] *number*

Synopsis	Enter the **ipsec-transform** list instance
Context	**configure** ipsec ipsec-transform *number*
Tree	ipsec-transform
Description	Commands in this context create an IPsec transform policy. IPsec transform policies can be shared. A change to the IPsec transform is allowed at any time. The change does not impact tunnels that have been established until they are renegotiated. If the change is required immediately, the tunnel must be cleared (reset) for force renegotiation.
Max. instances	2048
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**id**] *number*

Synopsis	IPsec transform policy ID
Context	**configure** ipsec ipsec-transform *number*
Tree	ipsec-transform
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esp-auth-algorithm *keyword*

Synopsis	Encapsulating Security Payload (ESP) authentication
Context	**configure** ipsec ipsec-transform *number* esp-auth-algorithm *keyword*
Tree	esp-auth-algorithm
Description	This command specifies the hashing algorithm used for the authentication function. Both ends of a manually configured tunnel must share the same configuration for the IPsec tunnel to enter the operational state.
Options	null, md-5, sha-1, sha-256, sha-384, sha-512, aes-xcbc, auth-encryption
Default	sha-256
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esp-encryption-algorithm *keyword*

Synopsis	Encryption algorithm for the IPsec transform session
Context	**configure** ipsec ipsec-transform *number* esp-encryption-algorithm *keyword*
Tree	esp-encryption-algorithm
Description	This command configures the encryption used for the CHILD_SA. Both ends of a manually configured tunnel must share the same encryption algorithm for the IPsec tunnel to enter the operational state. When AES-GCM or AES-GMAC is configured: • the authentication encryption must be set to **auth-encryption** • the system does not include the authentication algorithm in the ESP proposal of the SA payload • IPsec transform cannot be used for manual keying

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	null, des, des-3, aes-128, aes-192, aes-256, aes128-gcm8, aes128-gcm12, aes128-gcm16, aes192-gcm8, aes192-gcm12, aes192-gcm16, aes256-gcm8, aes256-gcm12, aes256-gcm16, null-aes128-gmac, null-aes192-gmac, null-aes256-gmac
Default	aes-128
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

extended-sequence-number *boolean*

Synopsis	Enable extended sequence numbering support
Context	**configure** ipsec ipsec-transform *number* extended-sequence-number *boolean*
Tree	extended-sequence-number
Description	When configured to **true**, the router supports 64-bit extended sequence numbering. This numbering is used for high throughput CHILD_SA to avoid frequent re-keying caused by sequence numbering wrap around. When configured to **false**, the router only supports 32-bit sequence numbering.
Default	true
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-lifetime *number*

Synopsis	Phase 2 lifetime for the IPsec transform session
Context	**configure** ipsec ipsec-transform *number* ipsec-lifetime *number*
Tree	ipsec-lifetime
Description	This command configures the lifetime of the Phase 2 IKE key. When unconfigured, the value is inherited from the IPsec lifetime configured in the corresponding IKE policy configured for the same IPsec gateway or IPsec tunnel.
Range	1200 to 31536000
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pfs-dh-group *keyword*

Synopsis	Diffie-Hellman group used for PFS compilation

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ipsec-transform *number* pfs-dh-group *keyword*
Tree	pfs-dh-group
Description	This command configures the DH group used for Perfect Forward Secrecy (PFS) compilation during CHILD_SA rekeying. When unconfigured, the value is inherited from the DH group value from the IPsec gateway or IPsec tunnel.
Options	none, group-1, group-2, group-5, group-14, group-15, group-19, group-20, group-21
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transport-mode-profile [name] *named-item*

Synopsis	Enter the **ipsec-transport-mode-profile** list instance
Context	**configure** ipsec ipsec-transport-mode-profile *named-item*
Tree	ipsec-transport-mode-profile
Description	Commands in this context configure IPsec-specific attributes that allow an IP tunnel (for example, GRE) to be protected by using IPsec transport mode.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	IPsec transport mode profile name string
Context	**configure** ipsec ipsec-transport-mode-profile *named-item*
Tree	ipsec-transport-mode-profile
Description	This command specifies the name of the IPsec transport mode profile.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* description *description*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

key-exchange

Synopsis	Enter the **key-exchange** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange
Tree	key-exchange
Description	Commands in this context configure the key exchange used each time the Security Association (SA) key is renegotiated.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dynamic

Synopsis	Enter the **dynamic** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic
Tree	dynamic
Description	Commands in this context configure dynamic keying for the transport mode profile.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

auto-establish *boolean*

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic auto-establish *boolean*
Tree	auto-establish
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

cert

Synopsis	Enter the **cert** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert
Tree	cert
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

cert-profile *reference*

Synopsis	Certificate profile name
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert cert-profile *reference*
Tree	cert-profile
Reference	**configure** ipsec cert-profile *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

status-verify

Synopsis	Enter the **status-verify** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify
Tree	status-verify
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-result *keyword*

Synopsis	Default result for Certificate Status Verification
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify default-result *keyword*
Tree	default-result

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Options	revoked, good
Default	revoked
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify primary *keyword*
Tree	primary
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Options	crl, ocsp
Default	crl
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

secondary *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert status-verify secondary *keyword*
Tree	secondary
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Options	none, crl, ocsp
Default	none
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trust-anchor-profile *reference*

Synopsis	Trust anchor profile name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic cert trust-anchor-profile *reference*
Tree	trust-anchor-profile
Reference	**configure** ipsec trust-anchor-profile *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id

Synopsis	Enter the **id** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id
Tree	id
Description	Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows: • Psk: local tunnel IP address • Cert-auth: subject of the local certificate
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fqdn *fully-qualified-domain-name*

Synopsis	FQDN used as the local ID IKE type
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id fqdn *fully-qualified-domain-name*
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4 *ipv4-unicast-address*

Synopsis	IPv4 as the local ID type
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id ipv4 *ipv4-unicast-address*
Tree	ipv4

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6 *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IPv6 used as the local IKE ID type
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic id ipv6 *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ipv6
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike-policy *reference*

Synopsis	IKE policy ID
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ike-policy *reference*
Tree	ike-policy
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The **ipsec-transport-mode-profile** configuration only supports IKEv2.
Reference	**configure** ipsec ike-policy *number*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transform *reference*

Synopsis	IPsec transform IDs used by the dynamic key
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ipsec-transform *reference*
Tree	ipsec-transform
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	**configure** ipsec ipsec-transform *number*

Max. instances	4
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppk

Synopsis	Enter the **ppk** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ppk
Tree	ppk
Description	Commands in this context configure the PPKs to use for dynamic keying of the IPsec tunnel.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id *reference*

Synopsis	PPK ID
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ppk id *reference*
Tree	id
Reference	**configure** ipsec ppk-list *named-item* ppk *named-item-64*
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

list *reference*

Synopsis	PPK list instance name
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic ppk list *reference*
Tree	list
Reference	**configure** ipsec ppk-list *named-item*
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pre-shared-key *encrypted-leaf*

Synopsis	Pre-shared key for IKE authentication
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* key-exchange dynamic pre-shared-key *encrypted-leaf*
Tree	pre-shared-key
Description	This command specifies the pre-shared key for IKE authentication in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-history-key-records

Synopsis	Enter the **max-history-key-records** context
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* max-history-key-records
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esp *number*

Synopsis	Maximum number of recent records
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* max-history-key-records esp *number*
Tree	esp
Range	1 to 48
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ike *number*

Synopsis	Maximum number of historical IKE key records

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ipsec-transport-mode-profile *named-item* max-history-key-records ike *number*
Tree	ike
Range	1 to 3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

replay-window *number*

Synopsis	Anti-replay window size
Context	**configure** ipsec ipsec-transport-mode-profile *named-item* replay-window *number*
Tree	replay-window
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 | 64 | 128 | 256 | 512
Units	packets
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppk-list [name] *named-item*

Synopsis	Enter the **ppk-list** list instance
Context	**configure** ipsec ppk-list *named-item*
Tree	ppk-list
Description	Commands in this context configure the list of Post-quantum Preshared Keys (PPKs) to use for IKEv2 key derivation, as described in RFC 8784.
Max. instances	128
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	PPK list instance name
Context	**configure** ipsec ppk-list *named-item*
Tree	ppk-list

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppk [ppk-id] *named-item-64*

Synopsis	Enter the **ppk** list instance
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64*
Tree	ppk
Description	Commands in this context configure the attributes for a PPK within the list.
Max. instances	128
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**ppk-id**] *named-item-64*

Synopsis	PPK ID
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64*
Tree	ppk
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value

Synopsis	Enable the **value** context
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64* value
Tree	value
Description	Commands in this context configure the values for the specified PPK.
Introduced	24.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ascii *encrypted-leaf*

Synopsis	PPK value as an ASCII string
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64* value ascii *encrypted-leaf*
Tree	ascii
Description	This command specifies the PPK value as an ASCII string in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Notes	The following elements are part of a mandatory choice: **ascii** or **hex**.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

hex *encrypted-leaf-hex*

Synopsis	PPK value as a hexadecimal string with prefix 0x
Context	**configure** ipsec ppk-list *named-item* ppk *named-item-64* value hex *encrypted-leaf-hex*
Tree	hex
Description	This command specifies the PPK value as a hexadecimal string with prefix 0x in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
String format	'encrypted-leaf-hex' must have clear text in hex with prefix 0x or end with hash/hash2/hash3/custom
Notes	The following elements are part of a mandatory choice: **ascii** or **hex**.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius

Synopsis	Enter the **radius** context
Context	**configure** ipsec radius

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	radius
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-policy [name] *named-item*

Synopsis	Enter the **accounting-policy** list instance
Context	**configure** ipsec radius accounting-policy *named-item*
Tree	accounting-policy
Description	Commands in this context configure RADIUS accounting policies to collect accounting statistics.
Max. instances	100
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RADIUS accounting policy name
Context	**configure** ipsec radius accounting-policy *named-item*
Tree	accounting-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute
Tree	include-radius-attribute
Description	Commands in this context specify the RADIUS attributes that are to be included in the RADIUS Authentication-Request messages.
Introduced	19.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

acct-stats *boolean*

Synopsis	Include accounting attributes in RADIUS packets
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute acct-stats *boolean*
Tree	acct-stats
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute calling-station-id *boolean*
Tree	calling-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ip-addr *boolean*

Synopsis	Include the Framed-IP-Address attribute

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute framed-ip-addr *boolean*
Tree	framed-ip-addr
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

framed-ipv6-prefix *boolean*

Synopsis	Include the Framed-IPv6-Prefix attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute framed-ipv6-prefix *boolean*
Tree	framed-ipv6-prefix
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-addr *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute nas-ip-addr *boolean*
Tree	nas-ip-addr
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	**configure** ipsec radius accounting-policy *named-item* include-radius-attribute nas-port-id *boolean*
Tree	nas-port-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** ipsec radius accounting-policy *named-item* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *named-item*
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

update-interval

Synopsis	Enter the **update-interval** context
Context	**configure** ipsec radius accounting-policy *named-item* update-interval
Tree	update-interval
Description	Commands in this context determine how RADIUS interim-update packets are sent for IKEv2 remote-access tunnels.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

jitter *number*

Synopsis	Jitter interval for sending each interim-update packet
Context	**configure** ipsec radius accounting-policy *named-item* update-interval jitter *number*
Tree	jitter
Description	This command specifies the jitter interval for the RADIUS interim-update packets.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	When unconfigured, the system uses 10% of the update interval value.
Range	0 to 3600
Units	seconds
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Update interval of the RADIUS accounting data
Context	**configure** ipsec radius accounting-policy *named-item* update-interval value *number*
Tree	value
Description	This command configures the update interval of the RADIUS accounting data. If a value of 0 is configured, no intermediate updates are sent.
Range	0 | 5 to 259200
Units	minutes
Default	10
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication-policy [name] *named-item*

Synopsis	Enter the **authentication-policy** list instance
Context	**configure** ipsec radius authentication-policy *named-item*
Tree	authentication-policy
Description	Commands in this context configure the RADIUS authentication policy associated with the IPsec gateway.
Max. instances	100
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RADIUS authentication policy name
Context	**configure** ipsec radius authentication-policy *named-item*
Tree	authentication-policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute
Tree	include-radius-attribute
Description	Commands in this context specify the RADIUS attributes to be included in the RADIUS Authentication-Request messages.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include the Called-Station-Id attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

calling-station-id *boolean*

Synopsis	Include the Calling-Station-Id attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute calling-station-id *boolean*
Tree	calling-station-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

client-cert-subject-key-id *boolean*

Synopsis	Include the Subject Key Identifier
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute client-cert-subject-key-id *boolean*
Tree	client-cert-subject-key-id
Description	When configured to **true**, the Subject Key Identifier of the certificate of the peer is included in the RADIUS Access-Request packet as VSA: Alc-Subject-Key-Identifier. See the *7450 ESS, 7750 SR, 7950 XRS, and VSR RADIUS Attributes Reference Guide* for more information.
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Include the NAS-Identifier attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-ip-addr *boolean*

Synopsis	Include the NAS-IP-Address attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute nas-ip-addr *boolean*
Tree	nas-ip-addr
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

nas-port-id *boolean*

Synopsis	Include the NAS-Port-Id attribute
Context	**configure** ipsec radius authentication-policy *named-item* include-radius-attribute nas-port-id *boolean*
Tree	nas-port-id
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

password *encrypted-leaf*

Synopsis	Password used in RADIUS access requests
Context	**configure** ipsec radius authentication-policy *named-item* password *encrypted-leaf*
Tree	password
Description	This command specifies the password used in RADIUS access requests in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** ipsec radius authentication-policy *named-item* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *named-item*
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

show-ipsec-keys *boolean*

Synopsis	Show IPsec IKE and ESP keys in the output

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec show-ipsec-keys *boolean*
Tree	show-ipsec-keys
Description	When configured to **true**, this command allows IPsec keys to be (optionally) included in the display output of certain **debug** and **admin** commands. When configured to **false**, the key display is disabled.
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

static-sa [name] *named-item*

Synopsis	Enter the **static-sa** list instance
Context	**configure** ipsec static-sa *named-item*
Tree	static-sa
Max. instances	1000
Introduced	16.0.R6
Platforms	All

[**name**] *named-item*

Synopsis	Static SA name
Context	**configure** ipsec static-sa *named-item*
Tree	static-sa
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R6
Platforms	All

authentication

Synopsis	Enable the **authentication** context
Context	**configure** ipsec static-sa *named-item* authentication
Tree	authentication

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R6
Platforms	All

algorithm *keyword*

Synopsis	Authentication algorithm used for an IPsec manual SA
Context	**configure** ipsec static-sa *named-item* authentication algorithm *keyword*
Tree	algorithm
Options	md5, sha1
Notes	This element is mandatory.
Introduced	16.0.R6
Platforms	All

key *encrypted-leaf*

Synopsis	Key used for the authentication algorithm
Context	**configure** ipsec static-sa *named-item* authentication key *encrypted-leaf*
Tree	key
Description	This command specifies the key used for the authentication algorithm in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 110
Notes	This element is mandatory.
Introduced	16.0.R6
Platforms	All

description *named-item*

Synopsis	Text description
Context	**configure** ipsec static-sa *named-item* description *named-item*
Tree	description
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R6

© 2026 Nokia.

Platforms	All

direction *keyword*

Synopsis	Direction to which the static SA entry can be applied
Context	**configure** ipsec static-sa *named-item* direction *keyword*
Tree	direction
Options	inbound, outbound, bidirectional
Default	bidirectional
Introduced	16.0.R6
Platforms	All

protocol *keyword*

Synopsis	IPsec protocol used with the static SA
Context	**configure** ipsec static-sa *named-item* protocol *keyword*
Tree	protocol
Options	ah, esp
Default	esp
Introduced	16.0.R6
Platforms	All

spi *number*

Synopsis	Security Parameter Index (SPI) for the static SA
Context	**configure** ipsec static-sa *named-item* spi *number*
Tree	spi
Description	This command specifies the SPI for the static SA. When the **direction** command is set to **inbound**, the SPI is used to look up the instruction to verify and decrypt the incoming IPsec packets. When the **direction** command is set to **outbound**, the SPI is used in the encoding of the outgoing packets. The remote node can use the SPI to look up the instruction to verify and decrypt the packet. When unconfigured, the static SA cannot be used.
Range	256 to 16383
Introduced	16.0.R6

Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

trust-anchor-profile [name] *named-item*

Synopsis	Enter the **trust-anchor-profile** list instance
Context	**configure** ipsec trust-anchor-profile *named-item*
Tree	trust-anchor-profile
Max. instances	10128
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Trust anchor profile name for IPsec tunnel or gateway
Context	**configure** ipsec trust-anchor-profile *named-item*
Tree	trust-anchor-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

trust-anchor [ca-profile] *reference*

Synopsis	Add a list entry for **trust-anchor**
Context	**configure** ipsec trust-anchor-profile *named-item* trust-anchor *reference*
Tree	trust-anchor
Description	Commands in this context configure a CA profile as a trust anchor CA.
Max. instances	8
Introduced	19.7.R1

[**ca-profile**] *reference*

Synopsis	Name of the CA profile as a trust anchor profile
Context	**configure** ipsec trust-anchor-profile *named-item* trust-anchor *reference*
Tree	trust-anchor
Reference	**configure** system security pki ca-profile *named-item*
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ts-list [name] *named-item*

Synopsis	Enter the **ts-list** list instance
Context	**configure** ipsec ts-list *named-item*
Tree	ts-list
Description	Commands in this context configure Traffic Selector (TS) settings.
Max. instances	32768
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Traffic Selector (TS) list name
Context	**configure** ipsec ts-list *named-item*
Tree	ts-list
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local

Synopsis	Enter the **local** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ts-list *named-item* local
Tree	local
Description	Commands in this context configure a local TS list, a traffic selector, such as TSr, when the system acts as an IKEv2 responder.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

entry [id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** ipsec ts-list *named-item* local entry *number*
Tree	entry
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	TS list entry ID
Context	**configure** ipsec ts-list *named-item* local entry *number*
Tree	entry
Range	1 to 32
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address

Synopsis	Enable the **address** context
Context	**configure** ipsec ts-list *named-item* local entry *number* address
Tree	address
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

prefix *(ipv4-prefix | ipv6-prefix)*

Synopsis	IP prefix for address range in IKEv2 traffic selector
Context	**configure** ipsec ts-list *named-item* local entry *number* address prefix *(ipv4-prefix | ipv6-prefix)*
Tree	prefix
Notes	The following elements are part of a mandatory choice: **prefix** or **range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range

Synopsis	Enable the **range** context
Context	**configure** ipsec ts-list *named-item* local entry *number* address range
Tree	range
Notes	The following elements are part of a mandatory choice: **prefix** or **range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Lower bound of the IP address range for the entry
Context	**configure** ipsec ts-list *named-item* local entry *number* address range begin *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	begin
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Upper bound of the IP address range
Context	**configure** ipsec ts-list *named-item* local entry *number* address range end *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	end
Notes	This element is mandatory.

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol

Synopsis	Enable the **protocol** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol
Tree	protocol
Description	Commands in this context specify the protocol settings for the IKEv2 traffic selector.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

any

Synopsis	Match any protocol ID
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol any
Tree	any
Notes	The following elements are part of a mandatory choice: **any** or **id**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

id

Synopsis	Enable the **id** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id
Tree	id
Notes	The following elements are part of a mandatory choice: **any** or **id**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis	Enter the **icmp** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp
Tree	icmp

Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* local entry *number* protocol id icmp port-range begin-icmp-code *number*
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1

Notes	The following elements are part of a mandatory choice: **any** or **id**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis	Enter the **icmp** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp
Tree	icmp
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp port-range begin-icmp-code *number*
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp port-range begin-icmp-type *number*
Tree	begin-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp port-range end-icmp-code *number*
Tree	end-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp port-range end-icmp-type *number*
Tree	end-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp6

Synopsis	Enter the **icmp6** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp6
Tree	icmp6
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp6 opaque
Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.

© 2026 Nokia.

Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp6 port-range
Tree	port-range
Description	Commands in this context configure port range information for the protocol.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-code *number*

Synopsis	Lower bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp6 port-range begin-icmp-code *number*
Tree	begin-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin-icmp-type *number*

Synopsis	Lower bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp6 port-range begin-icmp-type *number*
Tree	begin-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-code *number*

Synopsis	Upper bound of the ICMP code range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp6 port-range end-icmp-code *number*
Tree	end-icmp-code
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-icmp-type *number*

Synopsis	Upper bound of the ICMP type range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id icmp6 port-range end-icmp-type *number*
Tree	end-icmp-type
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mipv6

Synopsis	Enter the **mipv6** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id mipv6
Tree	mipv6
Notes	The following elements are part of a mandatory choice: **icmp**, **icmp6**, **mipv6**, **protocol-id-with-any-port**, **sctp**, **tcp**, or **udp**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

opaque

Synopsis	Support OPAQUE ports
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id mipv6 opaque

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	opaque
Description	This command allows the protocol ID to be accepted even when the port information is not available.
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id mipv6 port-range
Tree	port-range
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *number*

Synopsis	Lower bound of the port range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id mipv6 port-range begin *number*
Tree	begin
Range	0 to 255
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

port-range

Synopsis	Enable the **port-range** context
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id udp port-range
Tree	port-range
Notes	The following elements are part of a choice: **opaque** or **port-range**.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

begin *number*

Synopsis	Lower bound of the port range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id udp port-range begin *number*
Tree	begin
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

Synopsis	Upper bound of the port range
Context	**configure** ipsec ts-list *named-item* remote entry *number* protocol id udp port-range end *number*
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-template [id] *number*

Synopsis	Enter the **tunnel-template** list instance
Context	**configure** ipsec tunnel-template *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	tunnel-template
Max. instances	2048
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Tunnel template ID
Context	**configure** ipsec tunnel-template *number*
Tree	tunnel-template
Range	1 to 2048
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

clear-df-bit *boolean*

Synopsis	Clear the Do-not-Fragment (DF) bit
Context	**configure** ipsec tunnel-template *number* clear-df-bit *boolean*
Tree	clear-df-bit
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

copy-traffic-class-upon-decapsulation *boolean*

Synopsis	Enable traffic class copy upon decapsulation
Context	**configure** ipsec tunnel-template *number* copy-traffic-class-upon-decapsulation *boolean*
Tree	copy-traffic-class-upon-decapsulation
Description	When configured to **true**, the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private). When configured to **false**, the system does not copy the traffic class from the outer IP packet to the payload IP packet header upon decapsulation.
Default	false

Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** ipsec tunnel-template *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

encapsulated-ip-mtu *number*

Synopsis	Maximum size of the encapsulated tunnel packet
Context	**configure** ipsec tunnel-template *number* encapsulated-ip-mtu *number*
Tree	encapsulated-ip-mtu
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	octets
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp-generation

Synopsis	Enter the **icmp-generation** context
Context	**configure** ipsec tunnel-template *number* icmp-generation
Tree	icmp-generation
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

frag-required

Synopsis	Enter the **frag-required** context
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required
Tree	frag-required
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending ICMP messages
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required admin-state *keyword*
Tree	admin-state
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval for sending ICMP messages
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required interval *number*
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-count *number*

Synopsis	Maximum number of ICMP messages that can be sent
Context	**configure** ipsec tunnel-template *number* icmp-generation frag-required message-count *number*
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp6-generation

Synopsis	Enter the **icmp6-generation** context
Context	**configure** ipsec tunnel-template *number* icmp6-generation
Tree	icmp6-generation
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pkt-too-big

Synopsis	Enter the **pkt-too-big** context
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big
Tree	pkt-too-big
Description	Commands in this context configure values for the ICMPv6 Packet Too Big (PTB) messages. The system sends PTB messages if an IPv6 packet is received on the private side that is larger than 1280 bytes and also exceeds the private MTU of the tunnel.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of Packet Too Big message sends
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Maximum interval during which PTB messages can be sent
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big interval *number*
Tree	interval
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-count *number*

Synopsis	Max ICMPv6 messages that can be sent during interval
Context	**configure** ipsec tunnel-template *number* icmp6-generation pkt-too-big message-count *number*
Tree	message-count
Range	10 to 1000
Default	100
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ignore-default-route *boolean*

Synopsis	Ignore any full range traffic selector in TSi
Context	**configure** ipsec tunnel-template *number* ignore-default-route *boolean*
Tree	ignore-default-route
Description	When configured to **true**, any full range traffic selector is ignored when creating a reverse route. When configured to **false**, no CHILD_SA is created if any full range traffic selector is included in TSi.
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	Maximum size of the IP MTU for the payload packets
Context	**configure** ipsec tunnel-template *number* ip-mtu *number*
Tree	ip-mtu
Range	512 to 9000
Units	octets
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipsec-transform *reference*

Synopsis	IPsec transform ID for the tunnel template
Context	**configure** ipsec tunnel-template *number* ipsec-transform *reference*
Tree	ipsec-transform
Reference	**configure** ipsec ipsec-transform *number*
Max. instances	4
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

pmtu-discovery-aging *number*

Synopsis	Aging out time of the learned path MTU
Context	**configure** ipsec tunnel-template *number* pmtu-discovery-aging *number*
Tree	pmtu-discovery-aging
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ppk-list *reference*

Synopsis	PPK list to use in the tunnel template
Context	**configure** ipsec tunnel-template *number* ppk-list *reference*
Tree	ppk-list
Description	This command specifies the PPK list to use in the tunnel template, which represents a list of PPKs available for the IPsec gateway. The actual PPK to use depends on the tunnel initiator.
Reference	**configure** ipsec ppk-list *named-item*
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

private-tcp-mss-adjust *number*

Synopsis	New TCP MSS value on the private side
Context	**configure** ipsec tunnel-template *number* private-tcp-mss-adjust *number*
Tree	private-tcp-mss-adjust
Description	This command specifies the new (adjusted) TCP MSS value of TCP SYN packets on the private side. When unconfigured, the MSS value is derived from the received TCP SYN packet on the private side.
Range	512 to 9000
Units	octets

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

propagate-pmtu-v4 *boolean*

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	**configure** ipsec tunnel-template *number* propagate-pmtu-v4 *boolean*
Tree	propagate-pmtu-v4
Description	When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

propagate-pmtu-v6 *boolean*

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	**configure** ipsec tunnel-template *number* propagate-pmtu-v6 *boolean*
Tree	propagate-pmtu-v6
Description	When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

public-tcp-mss-adjust *(number | keyword)*

Synopsis	New TCP MSS value on the public side
Context	**configure** ipsec tunnel-template *number* public-tcp-mss-adjust *(number | keyword)*
Tree	public-tcp-mss-adjust
Description	This command specifies the new (adjusted) TCP MSS value for the TCP traffic in an IPsec tunnel which is sent from the public network to the private network. The system can use this value to adjust or insert the MSS option in the TCP SYN packet. When unconfigured, the MSS value is derived from the public MTU and IPsec overhead.
Range	512 to 9000
Units	octets

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	auto
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

replay-window *number*

Synopsis	Anti-replay window size for the tunnel template
Context	**configure** ipsec tunnel-template *number* replay-window *number*
Tree	replay-window
Range	32 | 64 | 128 | 256 | 512
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reverse-route

Synopsis	Enter the **reverse-route** context
Context	**configure** ipsec tunnel-template *number* reverse-route
Tree	reverse-route
Description	Commands in this context configure the dynamic LAN-to-LAN (DL2L) tunnel reverse-route options for the tunnel template.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

metric *number*

Synopsis	Metric used for DL2L tunnel reverse routes
Context	**configure** ipsec tunnel-template *number* reverse-route metric *number*
Tree	metric
Description	This command configures the metric for reverse routes. The system uses the metric when selecting a route to install in the route table.
Range	0 to 65535
Default	0
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

preference *number*

Synopsis	Preference used for DL2L tunnel reverse routes
Context	**configure** ipsec tunnel-template *number* reverse-route preference *number*
Tree	preference
Description	This command specifies the route preference assigned to the DL2L tunnel reverse route. The system uses the preference when selecting a route to install in the route table.
Range	0 to 255
Default	0
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sp-reverse-route *keyword*

Synopsis	Reverse route creation method in private service
Context	**configure** ipsec tunnel-template *number* sp-reverse-route *keyword*
Tree	sp-reverse-route
Description	This command allows the system to automatically create a reverse route based on dynamic LAN-to-LAN tunnel's TSi in private service.
Options	none, use-security-policy
Default	none
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

4.21.1 isa command descriptions

isa

Synopsis	Enter the **isa** context
Context	**configure** isa
Tree	isa
Description	Commands in this context configure the ISA.
Introduced	16.0.R1
Platforms	All

application-assurance-group [aa-group-id] *number*

Synopsis	Enter the **application-assurance-group** list instance
Context	**configure** isa application-assurance-group *number*
Tree	application-assurance-group
Description	Commands in this context configure the application assurance (AA) group.
Max. instances	7
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**aa-group-id**] *number*

Synopsis	AA group identifier
Context	**configure** isa application-assurance-group *number*
Tree	application-assurance-group
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-distribute-traffic-by-ip *boolean*

Synopsis	Allow application assurance to divert traffic

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** isa application-assurance-group *number* aa-sub-distribute-traffic-by-ip *boolean*
Tree	aa-sub-distribute-traffic-by-ip
Description	When configured to **true**, the system diverts traffic on the parent SAP or spoke-SDP to multiple ISAs or ESAs based on the source IP address. This is useful when the bandwidth of a single SAP is larger than the capacity of a single ISA or ESA. This is only supported for the auto-created transit IP subscribers. The traffic is diverted when the hashing is enabled at the AA group level and in the parent SAP application profile.
Default	false
Introduced	24.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

aa-sub-scale *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	AA group sub-scale
Context	**configure** isa application-assurance-group *number* aa-sub-scale *keyword*
Tree	aa-sub-scale
Options	residential, vpn, mobile-gateway, lightweight-internet, residential-8k, residential-16k, residential-32k, residential-64k, vpn-1k, vpn-2k, vpn-4k, vpn-8k, mobile-gateway-1m, mobile-gateway-2m, lightweight-internet-512k, firewall-32
Default	residential
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of this AA group
Context	**configure** isa application-assurance-group *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

backup

Synopsis	Enter the **backup** context
Context	**configure** isa application-assurance-group *number* backup
Tree	backup
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

esa [esa-id] *number* vm *number*

Synopsis	Add a list entry for **esa**
Context	**configure** isa application-assurance-group *number* backup esa *number* vm *number*
Tree	esa
Max. instances	4
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**esa-id**] *number*

Synopsis	ESA ID
Context	**configure** isa application-assurance-group *number* backup esa *number* vm *number*
Tree	esa
Range	1 to 16
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vm *number*

Synopsis	VM ID within the ESA
Context	**configure** isa application-assurance-group *number* backup esa *number* vm *number*
Tree	esa

Range	1 to 4294967295
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

minimum-isa-generation *number*

Synopsis	Minimum ISA generation for this AA group
Context	**configure** isa application-assurance-group *number* minimum-isa-generation *number*
Tree	minimum-isa-generation
Range	1 to 2
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

oper-group *reference*

Synopsis	Operational group identifier
Context	**configure** isa application-assurance-group *number* oper-group *reference*
Tree	oper-group
Description	This command configures the operational group that is associated with an AA group. The operational group state is considered up only if there are enough AA-ESA-VMs available operationally compared to the configured primary ESA-VMs of the AA-group.
Reference	**configure** service oper-group *named-item*
Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

overload-cut-through *boolean*

Synopsis	Enable cut-through of traffic if ISA is in overload
Context	**configure** isa application-assurance-group *number* overload-cut-through *boolean*
Tree	overload-cut-through
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Tree	esa

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Reference	**configure** esa *number* vm *number*
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

drain *boolean*

Synopsis	Redirect subscribers to other ESA VMs
Context	**configure** isa lns-group *number* esa *reference* vm *reference* drain *boolean*
Tree	drain
Description	When configured to **true**, the ESA VM redirects new subscribers to use other ESA VMs. The drain function gracefully redirects subscribers to other ESA VMs and does not allow new subscribers to use the ESA VM. As the existing subscribers terminate their sessions, the ESA VM no longer services any subscribers and can be decommissioned gracefully. When configured to **false**, the ESA VM is set to the normal working operational state and accepts new LNS subscribers.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

mda [mda-id] *slot-mda*

Synopsis	Enter the **mda** list instance
Context	**configure** isa lns-group *number* mda *slot-mda*
Tree	mda
Description	Commands in this context configure an ISA LNS group MDA.
Max. instances	6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**mda-id**] *slot-mda*

Synopsis	MDA ID for the ISA LNS group

Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

icmpv6-reply-on-filtering-and-unknown-sessions *boolean*

Synopsis	Disable response if packet dropped for unknown sessions
Context	**configure** isa nat-group *number* icmpv6-reply-on-filtering-and-unknown-sessions *boolean*
Tree	icmpv6-reply-on-filtering-and-unknown-sessions
Description	When configured to **true**, this command suppresses the ICMPv6 response when a packet is dropped because of an unknown-sessions filtering restriction. By default, IPv6 stateful inbound filtering responds to packets originating from the outside that are dropped because of a **no matching session** or filtering restrictions with an ICMPv6 Destination Unreachable Message (Type 1, Code 1): **Communication with destination administratively prohibited**. These ICMPv6 messages are rate limited.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This command is applicable to all IPv6 traffic arriving from the outside in this NAT group.

Default	false
Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

log

Synopsis	Enter the **log** context
Context	**configure** isa nat-group *number* log
Tree	log
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

periodic-update

Synopsis	Enter the **periodic-update** context
Context	**configure** isa nat-group *number* log periodic-update
Tree	periodic-update
Description	Commands in this context configure periodic updates for NAT logs that include IP address and port block mappings. These logs can be recorded in system memory, local files, SNMP, or syslog. Periodic logging configured under this hierarchy does not impact other forms of NAT logging, such as RADIUS logging or flow logging (for example, IPFIX or syslog).
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval of periodic logs
Context	**configure** isa nat-group *number* log periodic-update interval *number*
Tree	interval
Description	This command configures the interval at which periodic NAT logs are generated. These logs can be recorded in system memory, local files, SNMP, or syslog. The logs document the mapping between the IP address on the inside and the IP address and port blocks on the outside. This command does not affect other types of NAT logging, such as RADIUS logging or flow logging (for example, IPFIX or syslog).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	10 to 1440
Units	minutes
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit *number*

Synopsis	Maximum rate that aggregate logs from ESA-VM are sent
Context	**configure** isa nat-group *number* log periodic-update rate-limit *number*
Tree	rate-limit
Description	This command sets the maximum rate at which the ESA-VM sends NAT log messages to the CPM. This rate is applied per ISA group, ensuring that each ESA-VM receives a proportionate share of the rate based on the total number of ESA-VMs in the group. This rate applies to logs that can be stored in system memory, local files, SNMP, or syslog. The logs capture the mapping between internal IP addresses and external IP addresses, including port blocks. This command applies only to NAT log messages configured using this context. It does not affect other types of NAT logging, such as RADIUS logging or flow-based logging (for example, IPFIX or syslog).
Range	1 to 100000
Units	packets per second
Default	10000
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

suppress-lsn-events *boolean*

Synopsis	Suppress LSN events when RADIUS accounting is enabled
Context	**configure** isa nat-group *number* log suppress-lsn-events *boolean*
Tree	suppress-lsn-events
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

suppress-lsn-sub-blocks-free *boolean*

Synopsis	Suppress LSN Free block and NAT pool block notification

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** isa nat-group *number* log suppress-lsn-sub-blocks-free *boolean*
Tree	suppress-lsn-sub-blocks-free
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mda [mda-id] *slot-mda*

Synopsis	Add a list entry for **mda**
Context	**configure** isa nat-group *number* mda *slot-mda*
Tree	mda
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**mda-id**] *slot-mda*

Synopsis	MDA ID for ISA NAT group
Context	**configure** isa nat-group *number* mda *slot-mda*
Tree	mda
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

monitor-oper-group *reference*

Synopsis	Monitor operational group associated with a NAT group
Context	**configure** isa nat-group *number* monitor-oper-group *reference*
Tree	monitor-oper-group
Description	This command associates a monitor operational group with a NAT group. A NAT group can track the status of another entity through an associated operational group. If the monitored operational group goes down, the NAT group will also transition to the down state.
Reference	**configure** service oper-group *named-item*
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

oper-group *reference*

Synopsis	Association of the oper-group with the NAT group
Context	**configure** isa nat-group *number* oper-group *reference*
Tree	oper-group
Description	This command associates the operational group with a NAT group. The operational group associated with a NAT group is considered up only when the NAT group itself is up. In all other NAT group states, the operational group is marked as down. This includes the degraded state, where the number of active ESA-VMs in the NAT group falls below the configured active threshold limit, in which case the operational group is down.
Reference	**configure** service oper-group *named-item*
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis	RADIUS accounting policy for ISA group
Context	**configure** isa nat-group *number* radius-accounting-policy *reference*

active-mda-limit *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Number of active ESA-VM or ISA members in the NAT group
Context	**configure** isa nat-group *number* redundancy active-mda-limit *number*
Tree	active-mda-limit
Description	This command configures the number of active ESA-VM or ISA members in a NAT group. The system automatically selects which ESA-VMs or ISAs are active. In active/standby (A/S) redundancy mode, the correlation between ESA-VM or ISA members is direct, meaning each ESA-VM or ISA equates to one member. In active/active (A/A) redundancy mode, an individual ESA-VM or ISA may be associated with multiple members. For A/S redundancy, any surplus ESA-VMs or ISAs beyond the configured active threshold automatically transition to standby. These standby units remain idle until an active unit fails, at which point a standby unit takes over, handling traffic from only one failed active unit. This setup allows for the configuration of multiple standby units to provide resilience against several concurrent failures. In A/A redundancy, the combination of this command and the **failed-mda-limit** command guides the distribution of resources among ESA-VMs or ISAs, essentially defining how the members are structured. In both A/S and A/A modes, the system strives to maintain the configured number of active members as outlined by the active MDA limit, drawing from the pool of available spare resources to compensate for any failures. If the actual number of active members drops below this limit because of a lack of available spares, the NAT group status changes to degraded. In this state, traffic intended for the missing ESA-VM or ISA members (up to the active MDA limit) is blackholed. In Layer 2-aware NAT this condition can be circumvented where traffic can bypass NAT altogether and be directly routed within the internal network that may have an alternate path to a backup NAT system. For additional details, see "L2-Aware bypass" in the *7450 ESS, 7750 SR, and VSR Multiservice Integrated Service Adapter and Extended Services Appliance Guide.*
Range	1 to 28
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

inter-chassis

Synopsis	Enable the **inter-chassis** context
Context	**configure** isa nat-group *number* redundancy inter-chassis
Tree	inter-chassis
Notes	The following elements are part of a choice: **inter-chassis** or **intra-chassis**.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flow-timeout-on-switchover *number*

Synopsis	Flow timeout immediately following a switchover
Context	**configure** isa nat-group *number* redundancy inter-chassis flow-timeout-on-switchover *number*
Tree	flow-timeout-on-switchover
Description	This command configures the initial flow timeout on the newly active node for the NAT group after a switchover. The timeout is in effect only if there is no traffic present over the flow; otherwise, the first packet over the flow resets the flow timeout to the originally configured value (under the NAT policy configuration). This command configuration restricts the flow timeout to a portion of the originally configured value.
Range	1 to 50
Units	percent
Default	50
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	IP MTU for ISA-to-ISA communication
Context	**configure** isa nat-group *number* redundancy inter-chassis ip-mtu *number*
Tree	ip-mtu
Description	This command configures the IP MTU size used to transport flow synchronization records between the ISAs. Multiple flow synchronization events can be packed into a single frame up to the IP MTU size.
Range	512 to 9000
Default	1500

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

keepalive

Synopsis	Enter the **keepalive** context
Context	**configure** isa nat-group *number* redundancy inter-chassis keepalive
Tree	keepalive
Description	Commands in this context configure keepalive messages between the CPMs residing on different chassis and are used to detect the presence of the peering node. If the redundant peer connectivity is lost beyond the limit defined by the keepalive messages, each node in the redundant pair transitions to standalone mode. Keepalive messages use UDP transport.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dropcount *number*

Synopsis	Threshold for lost consecutive keepalive messages
Context	**configure** isa nat-group *number* redundancy inter-chassis keepalive dropcount *number*
Tree	dropcount
Description	This command configures the threshold for the number of consecutive keepalive messages that are lost between the redundant nodes before the connection is declared down. When the peer is considered unreachable, each node transitions to standalone mode.
Range	2 to 20
Default	2
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval between two consecutive keepalive messages
Context	**configure** isa nat-group *number* redundancy inter-chassis keepalive interval *number*
Tree	interval

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the interval at which the keepalive messages are periodically sent between the redundant nodes (CPMs) to verify the presence of the peer. If peer connectivity is lost, each node transitions to standalone mode.
Range	2 to 250
Units	deciseconds
Default	30
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-ip-range-start *ipv4-unicast-address*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Starting IP address for ISAs in the NAT group
Context	**configure** isa nat-group *number* redundancy inter-chassis local-ip-range-start *ipv4-unicast-address*
Tree	local-ip-range-start
Description	This command configures the initial IP address for the ISAs in the NAT group. The system automatically assigns consecutive IP addresses for the remaining ISAs. The IP addresses are used to communicate between the ISAs on redundant nodes for the purpose of flow synchronization. The system sends traffic from the member ISA with the initial IP address to the initial IP address from the remote IP range. **Note**: These IP addresses are added to the routing table under the protocol "NAT" within the routing context where they are configured. The user can then export the IP addresses into the network using routing policies to ensure reachability. These IP addresses effectively become routes with no relation to any local interface on the router.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

monitor-oper-group [oper-group] *reference*

Synopsis	Enter the **monitor-oper-group** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** isa nat-group *number* redundancy inter-chassis monitor-oper-group *reference*
Tree	monitor-oper-group
Description	Commands in this context specify monitoring settings for objects in an operational group, such as SAPs, BFD sessions, or VRRP sessions, in order to adjust the overall health of the node in a redundant inter-chassis NAT system. A state change of the objects in the operational group influences the health of a NAT node in a redundant configuration.
Max. instances	4
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**oper-group**] *reference*

preferred *boolean*

Synopsis	Set the preferred activity status for the node
Context	**configure** isa nat-group *number* redundancy inter-chassis preferred *boolean*
Tree	preferred

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the system designates the node in a redundant NAT system with the preferred activity status. The preferred status comes into consideration only when both redundant nodes have equal health values. If the peer traffic-serving node has an equal health value but does not have the preferred designation, a switch of activity occurs to route traffic to the preferred node. The switchover could cause a brief interruption in traffic flow. When configured to **false**, the preferred designation is not set for the node.
Default	false
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-ip-range-start *ipv4-unicast-address*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Starting IP address for ISAs on the remote node
Context	**configure** isa nat-group *number* redundancy inter-chassis remote-ip-range-start *ipv4-unicast-address*
Tree	remote-ip-range-start
Description	This command configures the initial IP address for the ISAs in the NAT group on the remote node. The system automatically assigns consecutive IP addresses for the remaining ISAs. The IP addresses are used to communicate between the ISAs on redundant nodes for the purpose of flow synchronization. The system sends traffic from the member ISA with the initial local IP address to the initial IP address from the remote IP range. **Note**: These IP addresses are added to the routing table under the protocol "NAT" within the routing context where they are configured. The user can then export the IP addresses into the network using routing policies to ensure reachability. These IP addresses effectively become routes with no relation to any local interface on the router.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

replication-threshold *number*

Synopsis	Minimum time to wait before a NAT flow is synchronized
Context	**configure** isa nat-group *number* redundancy inter-chassis replication-threshold *number*
Tree	replication-threshold
Description	This command configures the minimum time to wait before a NAT flow is replicated (synchronized) to the standby node.
Range	0 to 300
Units	seconds
Default	20
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Router instance for the ISA-to-ISA communication
Context	**configure** isa nat-group *number* redundancy inter-chassis router-instance *string*
Tree	router-instance
Description	This command specifies the routing instance through which ISAs on redundant nodes communicate with each other and synchronize their flow state.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sync *boolean*

Synopsis	Synchronize NAT flows between nodes
Context	**configure** isa nat-group *number* redundancy inter-chassis sync *boolean*
Tree	sync
Default	true

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

intra-chassis

Synopsis	Enter the **intra-chassis** context
Context	**configure** isa nat-group *number* redundancy intra-chassis
Tree	intra-chassis
Notes	The following elements are part of a choice: **inter-chassis** or **intra-chassis**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-active

Synopsis	Enter the **active-active** context
Context	**configure** isa nat-group *number* redundancy intra-chassis active-active
Tree	active-active
Notes	The following elements are part of a choice: **active-active**, **active-standby**, or **l2aware-bypass**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

failed-mda-limit *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Maximum failed MDAs allowed in ICR for the NAT group
Context	**configure** isa nat-group *number* redundancy intra-chassis active-active failed-mda-limit *number*
Tree	failed-mda-limit
Description	This command configures the maximum number of supported simultaneous failures in active-active intra-chassis NAT redundancy model. Traffic from the failed ESA-VMs or ISAs is distributed over the remaining ESA-VM or ISA in the system. Memory resources

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

are reserved in every ESA-VM or ISA to accommodate new mappings from the failed ESA-VM or ISA. However, bandwidth is not reserved and each ESA-VM or ISA operates at maximum speed in all conditions (with failure or without the failure).

NAT translations are not preserved across switchovers and consequently they must be reinitiated by the clients.

For this command to take effect, the intra-chassis redundancy must be set to **active-active** mode by using the **configure isa nat-group redundancy intra-chassis active-active** command.

Range	1 to 2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-standby

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Active-standby intra-chassis NAT redundancy model
Context	**configure** isa nat-group *number* redundancy intra-chassis active-standby
Tree	active-standby
Notes	The following elements are part of a choice: **active-active**, **active-standby**, or **l2aware-bypass**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2aware-bypass

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	L2-aware-bypass NAT redundancy model
Context	**configure** isa nat-group *number* redundancy intra-chassis l2aware-bypass

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	l2aware-bypass
Notes	The following elements are part of a choice: **active-active**, **active-standby**, or **l2aware-bypass**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

scaling-profile *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Scaling profile for the NAT group
Context	**configure** isa nat-group *number* scaling-profile *keyword*
Tree	scaling-profile
Description	This command determines profiles for NAT scaling. Lower profile numbers allocate less resources, thus supporting lower scaling. Contact your Nokia representative for more information about NAT scaling figures in each profile.
Options	profile1, profile2, profile3
Default	profile1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-limits

Synopsis	Enter the **session-limits** context
Context	**configure** isa nat-group *number* session-limits

high *number*

Synopsis	Session limit high watermark for each MDA in the group
Context	**configure** isa nat-group *number* session-limits watermarks high *number*
Tree	high
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low *number*

Synopsis	Session limit low watermark for each MDA in the group
Context	**configure** isa nat-group *number* session-limits watermarks low *number*
Tree	low
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-group [id] *number*

Synopsis	Enter the **tunnel-group** list instance
Context	**configure** isa tunnel-group *number*
Tree	tunnel-group
Description	Commands in this context create or edit a tunnel group. A tunnel group is a set of one or more MS-ISAs that support the origination and termination of IPsec and IP/GRE tunnels. On a VSR, the **isa-scale-mode** command must be specified, which defines the maximum number of tunnels on each ISA.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**id**] *number*

Synopsis	Tunnel group ID
Context	**configure** isa tunnel-group *number*
Tree	tunnel-group
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the ISA tunnel group
Context	**configure** isa tunnel-group *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

backup *slot-mda*

Synopsis	IPsec module configured in the slot to the IPsec group
Context	**configure** isa tunnel-group *number* backup *slot-mda*
Tree	backup
Notes	The following elements are part of a choice: **multi-active** or (**backup** and **primary**).

fcc

Synopsis	Enter the **fcc** context
Context	**configure** isa video-group *number* watermark rtcp fcc
Tree	fcc
Description	Commands in this context configure the watermark for FCC.
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-s

action *keyword*

Synopsis	Watermark RTCP FCC action
Context	**configure** isa video-group *number* watermark rtcp fcc action *keyword*
Tree	action
Description	This command configures the FCC action to perform when the threshold per session is reached.
Options	report-only – Logs the session in syslog report-and-suspend – Logs in syslog and drops packets for suspend period
Default	report-only
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-s

max-threshold-per-session *number*

Synopsis	Maximum threshold for each FCC session
Context	**configure** isa video-group *number* watermark rtcp fcc max-threshold-per-session *number*
Tree	max-threshold-per-session
Description	This command configures the maximum threshold that each FCC session can send to the system. After the maximum threshold is reached, the system performs an action configured by the user using the **fcc action** command.
Range	0 | 1 to 25
Default	0
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

suspend-time *number*

Synopsis	FCC time suspension for exceeding the threshold
Context	**configure** isa video-group *number* watermark rtcp fcc suspend-time *number*
Tree	suspend-time
Description	This command configures the time to suspend the subscriber FCC service.
Range	0 to 3600
Units	seconds
Default	0
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-s

ret

Synopsis	Enter the **ret** context
Context	**configure** isa video-group *number* watermark rtcp ret
Tree	ret
Description	Commands in this context configure the watermark for RET.
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-s

action *keyword*

Synopsis	Watermark RTCP RET action
Context	**configure** isa video-group *number* watermark rtcp ret action *keyword*
Tree	action
Description	This command configures the RET action to perform when the threshold per session is reached.
Options	report-only – Logs the session in syslog report-and-suspend – Logs in syslog and drops packets for suspend period
Default	report-only
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-s

wlan-gw-group [id] *number*

Synopsis	Enter the **wlan-gw-group** list instance
Context	**configure** isa wlan-gw-group *number*
Tree	wlan-gw-group
Description	Commands in this context configure a WLAN-gateway group that contains a set of ISAs used in WLAN-gateway functionality. A WLAN-gateway group can also be used where a NAT group is expected. The WLAN-gateway group ID shares the same number space with the NAT group.
Max. instances	1
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	WLAN-GW ISA group ID
Context	**configure** isa wlan-gw-group *number*
Tree	wlan-gw-group
Range	1 to 4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

active-iom-limit *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Number of WLAN-GW IOMs used as active IOMs
Context	**configure** isa wlan-gw-group *number* active-iom-limit *number*
Tree	active-iom-limit
Range	1 to 7

[**mda-id**] *slot-mda*

Synopsis	MDA slot value
Context	**configure** isa wlan-gw-group *number* mda *slot-mda*
Tree	mda
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

nat

Synopsis	Enter the **nat** context
Context	**configure** isa wlan-gw-group *number* nat
Tree	nat
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

log

Synopsis	Enter the **log** context
Context	**configure** isa wlan-gw-group *number* nat log
Tree	log
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

periodic-update

Synopsis	Enter the **periodic-update** context
Context	**configure** isa wlan-gw-group *number* nat log periodic-update
Tree	periodic-update
Description	Commands in this context configure periodic updates for NAT logs that include IP address and port block mappings. These logs can be recorded in system memory, local files, SNMP, or syslog. Periodic logging configured under this hierarchy does not impact other forms of NAT logging, such as RADIUS logging or flow logging (for example, IPFIX or syslog).
Introduced	25.3.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval of periodic logs
Context	**configure** isa wlan-gw-group *number* nat log periodic-update interval *number*
Tree	interval
Description	This command configures the interval at which periodic NAT logs are generated. These logs can be recorded in system memory, local files, SNMP, or syslog. The logs document the mapping between the IP address on the inside and the IP address and port blocks on the outside. This command does not affect other types of NAT logging, such as RADIUS logging or flow logging (for example, IPFIX or syslog).
Range	10 to 1440
Units	minutes
Introduced	25.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit *number*

Synopsis	Maximum rate that aggregate logs from ESA-VM are sent
Context	**configure** isa wlan-gw-group *number* nat log periodic-update rate-limit *number*
Tree	rate-limit
Description	This command sets the maximum rate at which the ESA-VM sends NAT log messages to the CPM. This rate is applied per ISA group, ensuring that each ESA-VM receives a proportionate share of the rate based on the total number of ESA-VMs in the group. This rate applies to logs that can be stored in system memory, local files, SNMP, or syslog. The logs capture the mapping between internal IP addresses and external IP addresses, including port blocks. This command applies only to NAT log messages configured using this context. It does not affect other types of NAT logging, such as RADIUS logging or flow-based logging (for example, IPFIX or syslog).
Range	1 to 100000
Units	packets per second
Default	10000
Introduced	25.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

suppress-lsn-events *boolean*

Synopsis	Suppress LSN events when RADIUS accounting is enabled
Context	**configure** isa wlan-gw-group *number* nat log suppress-lsn-events *boolean*
Tree	suppress-lsn-events
Default	true
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

suppress-lsn-sub-blocks-free *boolean*

Synopsis	Suppress LSN Free block and NAT pool block notification
Context	**configure** isa wlan-gw-group *number* nat log suppress-lsn-sub-blocks-free *boolean*
Tree	suppress-lsn-sub-blocks-free
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lsn *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use Large Scale NAT
Context	**configure** isa wlan-gw-group *number* nat lsn *boolean*
Tree	lsn
Default	true
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Default	profile1
Introduced	20.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s

tunnel-port-policy *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Tunnel port policy for per-tunnel QoS processing
Context	**configure** isa wlan-gw-group *number* tunnel-port-policy *reference*
Tree	tunnel-port-policy
Reference	**configure** port-policy *named-item*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enter the **watermarks** context
Context	**configure** isa wlan-gw-group *number* watermarks
Tree	watermarks
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mark [entity] *keyword*

Synopsis	Enter the **mark** list instance
Context	**configure** isa wlan-gw-group *number* watermarks mark *keyword*

Tree	mark
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**entity**] *keyword*

Synopsis	Entity to be monitored
Context	**configure** isa wlan-gw-group *number* watermarks mark *keyword*
Tree	mark
Options	user-equipment, bridge-domain, radius-proxy-client
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis	High watermark for the WLAN-GW group
Context	**configure** isa wlan-gw-group *number* watermarks mark *keyword* high *number*
Tree	high
Range	1 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

low *number*

Synopsis	Low watermark for the WLAN-GW group
Context	**configure** isa wlan-gw-group *number* watermarks mark *keyword* low *number*
Tree	low
Range	0 to 99
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1

4.22 lag commands

```
configure
   –  lag lag-interface
      –  access
         –  adapt-qos
            –  include-egr-hash-cfg boolean
            –  mode keyword
         –  bandwidth number
         –  booking-factor number
         –  per-fp-egr-queuing boolean
         –  per-fp-ing-queuing boolean
         –  per-fp-sap-instance boolean
      –  adaptive-load-balancing
         –  bandwidth-threshold number
         –  interval number
         –  tolerance number
      –  admin-state keyword
      –  apply-groups reference
      –  apply-groups-exclude reference
      –  bandwidth-threshold
         –  action keyword
         –  cost number
         –  value number
      –  bfd-liveness
         –  ipv4
            –  admin-state keyword
            –  apply-groups reference
            –  apply-groups-exclude reference
            –  bfd-on-distributing-only boolean
            –  local-ip-address ipv4-unicast-address
            –  max-admin-down-time (number | keyword)
            –  max-setup-time (number | keyword)
            –  multiplier number
            –  receive-interval number
            –  remote-ip-address ipv4-unicast-address
            –  transmit-interval number
         –  ipv6
            –  admin-state keyword
            –  apply-groups reference
            –  apply-groups-exclude reference
            –  bfd-on-distributing-only boolean
            –  local-ip-address ipv6-unicast-or-linklocal-address
            –  max-admin-down-time (number | keyword)
            –  max-setup-time (number | keyword)
            –  multiplier number
            –  receive-interval number
            –  remote-ip-address ipv6-unicast-or-linklocal-address
            –  transmit-interval number
         –  soft-reset-extension boolean
      –  description very-long-description
      –  dynamic-cost boolean
      –  efm-member-template
         –  accept-remote-loopback boolean
         –  admin-state keyword
         –  apply-groups reference
         –  apply-groups-exclude reference
         –  discovery
            –  advertise-capabilities
               –  link-monitoring boolean
         –  dying-gasp-tx-on-reset boolean

4.22.1 lag command descriptions

lag [lag-name] *lag-interface*

Synopsis	Enter the **lag** list instance
Context	**configure** lag *lag-interface*
Tree	lag
Description	Commands in this context configure the Link Aggregation Group (LAG) attributes.
Introduced	16.0.R1
Platforms	All

[**lag-name**] *lag-interface*

Synopsis	LAG name
Context	**configure** lag *lag-interface*
Tree	lag
Description	This command configures a LAG name or ID. The LAG name or ID must start with "lag-" followed by the lag name or ID, for example, lag-*newyork-to-boston* or lag-*700*.
String length	1 to 27
String format	'lag-interface' must be lag- followed by number 1-800 or up to 23 chars (e.g. lag-1 or lag-my-lag)
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

access

Synopsis	Enter the **access** context
Context	**configure** lag *lag-interface* access
Tree	access
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

adapt-qos

Synopsis	Enter the **adapt-qos** context
Context	**configure** lag *lag-interface* access adapt-qos
Tree	adapt-qos
Introduced	16.0.R1
Platforms	All

include-egr-hash-cfg *boolean*

Synopsis	Factor egress hashing into buffer and rate distribution
Context	**configure** lag *lag-interface* access adapt-qos include-egr-hash-cfg *boolean*
Tree	include-egr-hash-cfg
Default	false
Introduced	16.0.R1
Platforms	All

mode *keyword*

Synopsis	QoS adaptation mode
Context	**configure** lag *lag-interface* access adapt-qos mode *keyword*
Tree	mode
Options	link, distribute, port-fair
Introduced	16.0.R1
Platforms	All

bandwidth *number*

Synopsis	Administrative bandwidth applied to this LAG
Context	**configure** lag *lag-interface* access bandwidth *number*
Tree	bandwidth
Range	1 to 6400000000
Units	bps
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

booking-factor *number*

Synopsis	Booking factor against the administrative bandwidth
Context	**configure** lag *lag-interface* access booking-factor *number*
Tree	booking-factor
Range	1 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

per-fp-egr-queuing *boolean*

Synopsis	Per FP egress queuing
Context	**configure** lag *lag-interface* access per-fp-egr-queuing *boolean*
Tree	per-fp-egr-queuing
Default	false
Introduced	16.0.R1
Platforms	All

per-fp-ing-queuing *boolean*

Synopsis	Enable ingress queuing per forwarding port
Context	**configure** lag *lag-interface* access per-fp-ing-queuing *boolean*
Tree	per-fp-ing-queuing
Default	false
Introduced	16.0.R1
Platforms	All

per-fp-sap-instance *boolean*

Synopsis	SAP instance allocation on a LAG
Context	**configure** lag *lag-interface* access per-fp-sap-instance *boolean*
Tree	per-fp-sap-instance
Default	false
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

adaptive-load-balancing

Synopsis	Enable the **adaptive-load-balancing** context
Context	**configure** lag *lag-interface* adaptive-load-balancing
Tree	adaptive-load-balancing
Description	Commands in this context configure adaptive load balancing (ALB) between LAG links.
Introduced	20.10.R1
Platforms	All

bandwidth-threshold *number*

Synopsis	Minimum bandwidth for ALB
Context	**configure** lag *lag-interface* adaptive-load-balancing bandwidth-threshold *number*
Tree	bandwidth-threshold
Description	This command defines the minimum bandwidth percentage of the most-loaded LAG port egress. If the bandwidth threshold exceeds the configured minimum, the system performs ALB optimization.
Range	0 to 100
Units	percent
Introduced	22.10.R1
Platforms	All

interval *number*

Synopsis	Statistics polling interval for LAG ports
Context	**configure** lag *lag-interface* adaptive-load-balancing interval *number*
Tree	interval
Range	15 | 30 | 60 | 120
Units	seconds
Default	30
Introduced	21.5.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tolerance *number*

Synopsis	Threshold that triggers link utilization optimization
Context	**configure** lag *lag-interface* adaptive-load-balancing tolerance *number*
Tree	tolerance
Description	This command configures the threshold value that is based on the difference between the most-loaded and least-loaded links in a LAG. When the threshold value is exceeded, the adaptive load balancing operation attempts to optimize traffic distribution between LAG links.
Range	1 to 100
Units	percent
Default	20
Introduced	20.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the LAG
Context	**configure** lag *lag-interface* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

bandwidth-threshold

Synopsis	Enter the **bandwidth-threshold** context
Context	**configure** lag *lag-interface* bandwidth-threshold
Tree	bandwidth-threshold
Description	Commands in this context configure the behavior for the LAG when the number of operational links changes so that the usable bandwidth of the LAG is equal to or below the bandwidth-threshold level.
Introduced	26.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

action *keyword*

Synopsis	Action to be taken when LAG operational state changes
Context	**configure** lag *lag-interface* bandwidth-threshold action *keyword*
Tree	action
Description	This command specifies the action that the system takes if the usable bandwidth of the LAG is at or below the threshold value.
Options	down – Specifies the LAG is brought down at threshold dynamic-cost – Specifies dynamic costing is activated static-cost – Specifies static costing is activated
Default	down
Introduced	26.7.R1
Platforms	All

cost *number*

Synopsis	Static cost of the LAG
Context	**configure** lag *lag-interface* bandwidth-threshold cost *number*
Tree	cost
Description	This command specifies the decimal integer static cost of the LAG.
Range	1 to 16777215
Introduced	26.7.R1
Platforms	All

value *number*

Synopsis	Integer bandwidth threshold value
Context	**configure** lag *lag-interface* bandwidth-threshold value *number*
Tree	value
Description	This command specifies the bandwidth threshold as a percentage of the total bandwidth for the LAG. When the usable bandwidth is equal to or below the threshold, the system invokes the configured action. If the usable bandwidth exceeds the bandwidth threshold, any action taken for being below the threshold value ceases.
Range	1 to 100
Introduced	26.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

bfd-liveness

Synopsis	Enter the **bfd-liveness** context
Context	**configure** lag *lag-interface* bfd-liveness
Tree	bfd-liveness
Description	Commands in this context enable BFD over the associated LAG links.
Introduced	16.0.R1
Platforms	All

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** lag *lag-interface* bfd-liveness ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of micro-BFD session for IP family
Context	**configure** lag *lag-interface* bfd-liveness ipv4 admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

bfd-on-distributing-only *boolean*

Synopsis	Restrict micro-BFD sessions to LACP state distributing
Context	**configure** lag *lag-interface* bfd-liveness ipv4 bfd-on-distributing-only *boolean*
Tree	bfd-on-distributing-only
Default	false
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

local-ip-address *ipv4-unicast-address*

Synopsis	BFD IPv4 source address
Context	**configure** lag *lag-interface* bfd-liveness ipv4 local-ip-address *ipv4-unicast-address*
Tree	local-ip-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	All

max-admin-down-time *(number | keyword)*

Synopsis	Maximum time to forward traffic after micro-BFD is down
Context	**configure** lag *lag-interface* bfd-liveness ipv4 max-admin-down-time *(number | keyword)*
Tree	max-admin-down-time
Range	0 to 3600
Units	seconds
Options	infinite
Default	0
Introduced	16.0.R1
Platforms	All

max-setup-time *(number | keyword)*

Synopsis	Maximum time to forward traffic during micro-BFD setup
Context	**configure** lag *lag-interface* bfd-liveness ipv4 max-setup-time *(number | keyword)*
Tree	max-setup-time
Range	0 to 60000
Units	milliseconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

multiplier *number*

Synopsis	Interval multiplier to detect BFD packets not received
Context	**configure** lag *lag-interface* bfd-liveness ipv4 multiplier *number*
Tree	multiplier
Range	3 to 20
Default	3
Introduced	16.0.R1
Platforms	All

receive-interval *number*

Synopsis	Receive timer for micro-BFD session over the LAG links
Context	**configure** lag *lag-interface* bfd-liveness ipv4 receive-interval *number*
Tree	receive-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

remote-ip-address *ipv4-unicast-address*

Synopsis	BFD IPv4 destination address
Context	**configure** lag *lag-interface* bfd-liveness ipv4 remote-ip-address *ipv4-unicast-address*
Tree	remote-ip-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	All

transmit-interval *number*

Synopsis	Transmit timer for micro-BFD session over the LAG links
Context	**configure** lag *lag-interface* bfd-liveness ipv4 transmit-interval *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** lag *lag-interface* bfd-liveness ipv6
Tree	ipv6
Description	Commands in this context configure the IPv6 encapsulation to use for the micro-BFD (uBFD) session.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of micro-BFD session for IP family
Context	**configure** lag *lag-interface* bfd-liveness ipv6 admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

bfd-on-distributing-only *boolean*

Synopsis	Restrict micro-BFD sessions to LACP state distributing
Context	**configure** lag *lag-interface* bfd-liveness ipv6 bfd-on-distributing-only *boolean*
Tree	bfd-on-distributing-only
Default	false
Introduced	16.0.R1
Platforms	All

local-ip-address *ipv6-unicast-or-linklocal-address*

Synopsis	BFD IPv6 source address
Context	**configure** lag *lag-interface* bfd-liveness ipv6 local-ip-address *ipv6-unicast-or-linklocal-address*
Tree	local-ip-address
Introduced	16.0.R1
Platforms	All

max-admin-down-time *(number | keyword)*

Synopsis	Maximum time to forward traffic after micro-BFD is down
Context	**configure** lag *lag-interface* bfd-liveness ipv6 max-admin-down-time *(number | keyword)*
Tree	max-admin-down-time
Range	0 to 3600
Units	seconds
Options	infinite
Default	0
Introduced	16.0.R1
Platforms	All

max-setup-time *(number | keyword)*

Synopsis	Maximum time to forward traffic during micro-BFD setup
Context	**configure** lag *lag-interface* bfd-liveness ipv6 max-setup-time *(number | keyword)*
Tree	max-setup-time
Range	0 to 60000
Units	milliseconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Interval multiplier to detect BFD packets not received
Context	**configure** lag *lag-interface* bfd-liveness ipv6 multiplier *number*
Tree	multiplier
Range	3 to 20
Default	3
Introduced	16.0.R1
Platforms	All

receive-interval *number*

Synopsis	Receive timer for micro-BFD session over the LAG links
Context	**configure** lag *lag-interface* bfd-liveness ipv6 receive-interval *number*
Tree	receive-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

remote-ip-address *ipv6-unicast-or-linklocal-address*

Synopsis	BFD IPv6 destination address
Context	**configure** lag *lag-interface* bfd-liveness ipv6 remote-ip-address *ipv6-unicast-or-linklocal-address*
Tree	remote-ip-address
Introduced	16.0.R1
Platforms	All

transmit-interval *number*

Synopsis	Transmit timer for micro-BFD session over the LAG links
Context	**configure** lag *lag-interface* bfd-liveness ipv6 transmit-interval *number*
Tree	transmit-interval

© 2026 Nokia.

Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

soft-reset-extension *boolean*

Synopsis	Extend BFD timers during soft reset
Context	**configure** lag *lag-interface* bfd-liveness soft-reset-extension *boolean*
Tree	soft-reset-extension
Default	true
Introduced	16.0.R1
Platforms	All

description *very-long-description*

Synopsis	Text description
Context	**configure** lag *lag-interface* description *very-long-description*
Tree	description
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

dynamic-cost *boolean*

Synopsis	Allow LAG costing using operational aggregate bandwidth
Context	**configure** lag *lag-interface* dynamic-cost *boolean*
Tree	dynamic-cost
Default	false
Introduced	16.0.R1
Platforms	All

efm-member-template

Synopsis	Enter the **efm-member-template** context
Context	**configure** lag *lag-interface* efm-member-template
Tree	efm-member-template
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

accept-remote-loopback *boolean*

Synopsis	Enable reaction to loopback control OAMPDUs
Context	**configure** lag *lag-interface* efm-member-template accept-remote-loopback *boolean*
Tree	accept-remote-loopback
Default	false
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

admin-state *keyword*

Synopsis	Enable/disable EFM OAM operation.
Context	**configure** lag *lag-interface* efm-member-template admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

discovery

Synopsis	Enter the **discovery** context
Context	**configure** lag *lag-interface* efm-member-template discovery
Tree	discovery
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

advertise-capabilities

Synopsis	Enter the **advertise-capabilities** context
Context	**configure** lag *lag-interface* efm-member-template discovery advertise-capabilities
Tree	advertise-capabilities
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

link-monitoring *boolean*

Synopsis	Determine if link monitoring is advertised to a peer
Context	**configure** lag *lag-interface* efm-member-template discovery advertise-capabilities link-monitoring *boolean*
Tree	link-monitoring
Default	true
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

dying-gasp-tx-on-reset *boolean*

Synopsis	Enable EFM OAM dying gasp messages on reset
Context	**configure** lag *lag-interface* efm-member-template dying-gasp-tx-on-reset *boolean*
Tree	dying-gasp-tx-on-reset
Default	true
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

grace-tx *boolean*

Synopsis	Enable EFM OAM grace period messages
Context	**configure** lag *lag-interface* efm-member-template grace-tx *boolean*
Tree	grace-tx
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

grace-vendor-oui *string*

Synopsis	EFM OAM grace vendor OUI
Context	**configure** lag *lag-interface* efm-member-template grace-vendor-oui *string*
Tree	grace-vendor-oui
Default	00:16:4D
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

hold-time *number*

Synopsis	EFM OAM hold time
Context	**configure** lag *lag-interface* efm-member-template hold-time *number*
Tree	hold-time
Range	1 to 50
Units	seconds
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

ignore-efm-state *boolean*

Synopsis	Suppress port operational state changes due to EFM OAM
Context	**configure** lag *lag-interface* efm-member-template ignore-efm-state *boolean*
Tree	ignore-efm-state
Default	false
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

link-monitoring

Synopsis	Enter the **link-monitoring** context
Context	**configure** lag *lag-interface* efm-member-template link-monitoring
Tree	link-monitoring
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

© 2026 Nokia.

admin-state *keyword*

Synopsis	Administrative state of link monitoring on the port
Context	**configure** lag *lag-interface* efm-member-template link-monitoring admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

errored-frame

Synopsis	Enter the **errored-frame** context
Context	**configure** lag *lag-interface* efm-member-template link-monitoring errored-frame
Tree	errored-frame
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

admin-state *keyword*

Synopsis	Administrative state of link monitoring on the port
Context	**configure** lag *lag-interface* efm-member-template link-monitoring errored-frame admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

event-notification *boolean*

Synopsis	Transmit event notification OAMPDUs with TLVs
Context	**configure** lag *lag-interface* efm-member-template link-monitoring errored-frame event-notification *boolean*
Tree	event-notification

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	true
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

sd-threshold *number*

Synopsis	Signal degrade threshold
Context	**configure** lag *lag-interface* efm-member-template link-monitoring errored-frame sd-threshold *number*
Tree	sd-threshold
Range	1 to 1000000
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

sf-threshold *number*

Synopsis	Signal failure threshold
Context	**configure** lag *lag-interface* efm-member-template link-monitoring errored-frame sf-threshold *number*
Tree	sf-threshold
Range	1 to 1000000
Default	1
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

window *number*

Synopsis	Configure the window
Context	**configure** lag *lag-interface* efm-member-template link-monitoring errored-frame window *number*
Tree	window
Range	10 to 600
Units	deciseconds
Default	10
Introduced	26.10.R1

© 2026 Nokia.

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ais

Synopsis	Enable the **ais** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais
Tree	ais
Description	Commands in this context enable the reception of AIS messages.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

client-meg-level *number*

Synopsis	Client MEG level for AIS message generation
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais client-meg-level *number*
Tree	client-meg-level
Description	This command configures the client Maintenance Entity Group (MEG) level to use for AIS message generation. One restriction is that the client MEG level must be higher than the local MEG level. Only the lowest client MEG level is used for facility MEPs.
Range	1 to 7
Max. instances	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.

interface-support *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais interface-support *boolean*
Tree	interface-support
Description	When configured to **true**, the system enables the generation of AIS PDUs based on the associated endpoint state. AIS on Down MEPs triggers and clears based on the operational status of the entity it is configured on. If CCM is configured to **true**, transmission of the AIS PDU is based on either the nonoperational state of the entity or on any CCM defect conditions. AIS generation ceases if both the operational state is up and CCM has no defect conditions. If the MEP is not enabled with CCM, the operational state of the entity is the only consideration, assuming the command is present for the MEP. When configured to **false**, the generation of AIS PDUs is disabled.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

Synopsis	Transmission interval for AIS messages
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais interval *number*
Tree	interval
Range	1 | 60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais low-priority-defect *keyword*
Tree	low-priority-defect

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	all-def – Generate AIS frame for any defect in CCM state machine mac-rem-err-xcon – Generate AIS frame for def-mac-status defect or higher
Default	all-def
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Priority of the AIS messages generated by the node
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais priority *number*
Tree	priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alarm-notification

Synopsis	Enter the **alarm-notification** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification
Tree	alarm-notification
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm. Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-alarm-time *number*
Tree	fng-alarm-time

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-padding-size *number*
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval)** is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-tlv-ignore *keyword*

Synopsis	TLV to ignore on reception
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-tlv-ignore *keyword*
Tree	ccm-tlv-ignore
Description	This command configures the receiving MEP to ignore the specified TLVs in the CCM PDU. The ignored TLVs are reported as absent and have no impact on the MEP state machine. When unconfigured, the MEP processes all the recognized TLVs.
Options	interface-status, port-status
Max. instances	2
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* collect-lmm-stats *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	collect-lmm-stats
Description	When configured to **true**, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings. The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters. When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

csf

Synopsis	Enable the **csf** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* csf
Tree	csf
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* csf multiplier *decimal-number*
Tree	multiplier
Range	0.0 | 2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *description*

Synopsis	Text description

String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-test

Synopsis	Enable the **eth-test** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the **oam eth-cfm eth-test** command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test bit-error-threshold *number*
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the **test-pattern** context
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern crc-tlv *boolean*
Tree	crc-tlv
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern pattern *keyword*
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

facility-fault *boolean*

Synopsis	Allow the facility MEP to generate a network action
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* facility-fault *boolean*
Tree	facility-fault
Description	When configured to **true**, the system facility MEP responds to a fault with a network-actionable function instead of just reporting the defect condition. When configured to **false**, the system monitors transmissions and reports fault conditions.

Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace rx-eth-vsm-grace *boolean*
Tree	rx-eth-vsm-grace
Description	When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to **false**, the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** lag *lag-interface* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace tx-eth-vsm-grace *boolean*
Tree	tx-eth-vsm-grace
Description	When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true

administrative-key *number*

Synopsis	Key to identify the channel group on each LACP port
Context	**configure** lag *lag-interface* lacp administrative-key *number*
Tree	administrative-key
Description	This command configures the administrative key that identifies the channel group on each port configured to use LACP. In an MC-LAG configuration, both redundant nodes must be configured with the same key values. In any other case, the key is only locally significant.
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

fallback

Synopsis	Enable the **fallback** context
Context	**configure** lag *lag-interface* lacp fallback
Tree	fallback
Description	Commands in this context enable LACP fallback. LACP fallback allows one or more designated links of an LACP-controlled LAG to go into forwarding mode if LACP is not yet operational after a configured timeout period. Links capable of forwarding traffic assume the Ethernet and IP characteristics configured for the LAG.
Introduced	24.10.R1
Platforms	All

mode *keyword*

Synopsis	LACP fallback mode
Context	**configure** lag *lag-interface* lacp fallback mode *keyword*
Tree	mode
Description	This command configures the LACP fallback mode. The **static** mode enables a single member to forward traffic during fallback.
Options	static
Notes	This element is mandatory.
Introduced	24.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

timeout *number*

Synopsis	LACP fallback timeout interval
Context	**configure** lag *lag-interface* lacp fallback timeout *number*
Tree	timeout
Description	This command configures the duration after which a link becomes active if no LACP PDUs are received within this timeout period. **Note:** The user must first configure this command to a timeout interval of 90 before the **configure lag lacp-xmit-interval** command can change from **fast** to **slow**.
Range	4 to 3600
Units	seconds
Default	4
Introduced	24.10.R1
Platforms	All

mode *keyword*

Synopsis	Mode in which LACP operates
Context	**configure** lag *lag-interface* lacp mode *keyword*
Tree	mode
Options	passive, active
Default	passive
Introduced	16.0.R1
Platforms	All

system-id *mac-address*

Synopsis	System ID
Context	**configure** lag *lag-interface* lacp system-id *mac-address*
Tree	system-id
Default	00:00:00:00:00:00
Introduced	16.0.R1
Platforms	All

Use subject to Terms available at: www.nokia.com/terms.

notification *boolean*

Synopsis	Enable LLDP notifications
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* notification *boolean*
Tree	notification
Default	false
Introduced	24.7.R1
Platforms	All

port-id-subtype *keyword*

Synopsis	Encoding of the Port ID TLV transmitted to the peer
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* port-id-subtype *keyword*
Tree	port-id-subtype
Description	This command configures how to encode the Port ID TLV transmitted to the peer. The default setting **tx-local** (ifindex value) is required by some versions of the NSP NSM-P to properly build the Layer 2 topology map using LLDP. Changing this value to transmit the ifName (**tx-if-name**) or ifAlias (**tx-if-alias**) in place of the ifIndex (**tx-local**) may affect the ability of the NSP NFM-P to build the Layer 2 topology map using LLDP.
Options	tx-if-alias – Transmit the ifAlias String (subtype 1) tx-if-name – Transmit the ifName string (subtype 5) tx-local – Transmit the interface ifIndex value (subtype 7)
Default	tx-local
Introduced	24.7.R1
Platforms	All

receive *boolean*

Synopsis	Enable LLDP received frame handling
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* receive *boolean*
Tree	receive
Default	false
Introduced	24.7.R1
Platforms	All

© 2026 Nokia.

transmit *boolean*

Synopsis	Enable LLDP transmitted frame handling
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* transmit *boolean*
Tree	transmit
Default	false
Introduced	24.7.R1
Platforms	All

tunnel-nearest-bridge *boolean*

Synopsis	Enable nearest bridge tunneling
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tunnel-nearest-bridge *boolean*
Tree	tunnel-nearest-bridge
Description	When configured to **true**, this command enables nearest bridge tunneling. This command allows LLDP packets received on the port with the destination address of the nearest bridge to be tunneled without being intercepted on the local port. The **dest-mac mac-type nearest-bridge** must be disabled for tunneling to occur. This is applicable to NULL SAP Epipe and VPLS services only. When configured to **false**, nearest bridge tunneling is disabled.
Default	false
Introduced	24.7.R1
Platforms	All

tunnel-nearest-customer *boolean*

Synopsis	Enable nearest customer tunneling
Context	**configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tunnel-nearest-customer *boolean*
Tree	tunnel-nearest-customer
Description	When configured to **true**, the system allows LLDP packets received on the port with the destination address of the nearest customer to be tunneled without being intercepted on the local port. When configured to **false**, the system disables nearest customer tunneling.
Default	true
Introduced	25.3.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms All

tunnel-nearest-non-tpmr *boolean*

Synopsis Enable the nearest non-TPMR tunneling

Context **configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tunnel-nearest-non-tpmr *boolean*

Tree tunnel-nearest-non-tpmr

Description When configured to **true**, the system allows LLDP packets received on the port with the destination address of the nearest non-TPMR to be tunneled without being intercepted on the local port.

When configured to **false**, the system disables nearest non-TPMR tunneling.

Default true

Introduced 25.3.R1

Platforms All

tx-mgmt-address [mgmt-address-system-type] *keyword*

Context **configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-mgmt-address *keyword*

Tree tx-mgmt-address

Introduced 24.7.R1

Platforms All

[**mgmt-address-system-type**] *keyword*

Synopsis Management address to transmit

Context **configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-mgmt-address *keyword*

Tree tx-mgmt-address

Description This command configures the management address to transmit. The user can choose to send the following addresses, or any combination of these:

- system IPv4 address
- system IPv6 address
- out-of-band IPv4 address
- out-of-band IPv6 address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The system address is sent only once. The address must be configured for the specific version of the protocol to send the management address.

Options
oob – Transmit out-of-band IPv4 address for active CPM
system – Transmit the system IP address
system-ipv6 – Transmit the system IPv6 address
oob-ipv6 – Transmit the out-of-band IPv6 address for active CPM

Notes This element is part of a list key.

tx-tlvs

Synopsis Enter the **tx-tlvs** context

Context **configure** lag *lag-interface* lldp-member-template dest-mac *keyword* tx-tlvs

Tree tx-tlvs

Description Commands in this context configure which LLDP TLVs to transmit. The TX TLVs, defined as a bitmap, include the basic set of LLDP TLVs whose transmission is allowed on the local LLDP agent by network management. Each bit in the bitmap corresponds to a TLV type associated with a specific optional TLV. Organizationally-specific TLVs are excluded from this bitmap.

There is no bit reserved for the management address TLV type because transmission of management address TLVs are controlled by another object.

Introduced 24.7.R1

4.23.1 li command descriptions

li

Synopsis	Configure lawful intercept
Context	li
Tree	li
Introduced	19.10.R1
Platforms	All

li-dest [service-name] *service-name*

Synopsis	Enter the **li-dest** list instance
Context	li li-dest *service-name*
Tree	li-dest
Description	Commands in this context configure a service that is intended for lawful intercerpt. The service allows lawful interception of packets sent remotely (over the core of the network) to a configured IP destination.
Introduced	26.10.R1
Platforms	All

[**service-name**] *service-name*

Synopsis	Name of the LI mirror destination service
Context	li li-dest *service-name*
Tree	li-dest
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	26.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Enable/disable mirror service.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	li li-dest *service-name* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	26.10.R1
Platforms	All

description *description*

Synopsis	Specifies the description for this entry.
Context	li li-dest *service-name* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	26.10.R1
Platforms	All

encap

Synopsis	Enter the **encap** context
Context	li li-dest *service-name* encap
Tree	encap
Description	Commands in this context configure encapsulation options for the mirrored traffic. **Note:** Only Layer 3 encapsulation of type **ip-udp-shim** can be specified for the lawful intercept destination.
Introduced	26.10.R1
Platforms	All

layer-3-encap

Synopsis	Enable the **layer-3-encap** context
Context	li li-dest *service-name* encap layer-3-encap
Tree	layer-3-encap
Description	Commands in this context configure the format of the routable encapsulation to add to each copied packet. Layer 3 encapsulation takes precedence over Ethernet encapsulation configuration in an LI source.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	26.10.R1
Platforms	All

direction-bit *boolean*

Synopsis	Use highest bit to indicate mirrored traffic direction
Context	li li-dest *service-name* encap layer-3-encap direction-bit *boolean*
Tree	direction-bit
Description	When configured to **true**, the router steals one bit from the intercept ID in the LI shim and uses it to indicate the direction of traffic flow for an LI session. An LI mediation gateway can use a direction bit to distinguish between the two directions of traffic flow for an LI session when both directions share a common LI destination, intercept ID, and session ID. When configured to **true**, the MHV (2-bit MHV) in the LI shim is set to binary 01, and the next bit after the MHV is set to 0 for ingress traffic and 1 for egress traffic. For NAT-based LI, ingress means the traffic is arriving at the node from the subscriber host (applies to the 7450 ESS and 7750 SR).
Default	false
Introduced	26.10.R1
Platforms	All

gateway

Synopsis	Enable the **gateway** context
Context	li li-dest *service-name* encap layer-3-encap gateway
Tree	gateway
Description	Commands in this context configure the command options to send the mirrored packets to a remote destination gateway.
Introduced	26.10.R1
Platforms	All

ip-address

Synopsis	Enter the **ip-address** context
Context	li li-dest *service-name* encap layer-3-encap gateway ip-address
Tree	ip-address
Introduced	26.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

destination *ipv4-unicast-address*

Synopsis	IPv4 destination address for the gateway
Context	li li-dest *service-name* encap layer-3-encap gateway ip-address destination *ipv4-unicast-address*
Tree	destination
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	26.10.R1
Platforms	All

source *ipv4-unicast-address*

Synopsis	IPv4 source address for the gateway
Context	li li-dest *service-name* encap layer-3-encap gateway ip-address source *ipv4-unicast-address*
Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	26.10.R1
Platforms	All

udp-port

Synopsis	Enter the **udp-port** context
Context	li li-dest *service-name* encap layer-3-encap gateway udp-port
Tree	udp-port
Description	Commands in this context configure the source and destination UDP ports to use in the UDP header part of the routable LI encapsulation.
Introduced	26.10.R1
Platforms	All

destination *number*

Synopsis	UDP destination port used with this gateway
Context	li li-dest *service-name* encap layer-3-encap gateway udp-port destination *number*
Tree	destination

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the UDP destination port to be used with this gateway. **Note:** This command is only valid if the header type of the Layer 3 encapsulation is **ip-udp-shim**.
Range	0 | 1 to 65535
Default	0
Introduced	26.10.R1
Platforms	All

source *number*

Synopsis	UDP source port used with this gateway
Context	li li-dest *service-name* encap layer-3-encap gateway udp-port source *number*
Tree	source
Description	This command configures the UDP source port to be used with this gateway. **Note:** This command is only valid if the header type of the Layer 3 encapsulation is **ip-udp-shim**.
Range	0 | 1 to 65535
Default	0
Introduced	26.10.R1
Platforms	All

header-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Header type of the Layer 3 encapsulation
Context	li li-dest *service-name* encap layer-3-encap header-type *keyword*
Tree	header-type
Description	This command configures the header type of the Layer 3 encapsulation. ip-udp-shim: Specifies that the type of Layer 3 encapsulation is an IPv4 header, UDP header, and an LI shim header is added to the lawful intercepted packets. ip-gre: Specifies that the type of Layer 3 encapsulation is an IPv4 header and a GRE header is added to the mirrored packets. This encapsulation type is only supported with **mirror-type ip-only**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	ip-udp-shim-sampled: Specifies that the type of Layer 3 encapsulation is an IPv4 header, UDP header, and a mirror shim header is added to the mirrored packets providing direction, mirror type, filter action, interface type, and interface value.
Options	ip-udp-shim – Add IPv4, UDP, LI shim headers ip-gre – Add IPv4 and GRE headers ip-udp-shim-sampled – Add IPv4 header, UDP header, mirror shim header
Notes	This element is mandatory.
Introduced	26.10.R1
Platforms	All

router-instance *router-instance*

Synopsis	Virtual router instance
Context	li li-dest *service-name* encap layer-3-encap router-instance *router-instance*
Tree	router-instance
String length	1 to 64
Default	Base
Introduced	26.10.R1
Platforms	All

service-id *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service identifier
Context	li li-dest *service-name* service-id *number*
Tree	service-id
Range	1 to 2147483647
Introduced	26.10.R1
Platforms	All

entry [li-entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	li li-filter li-ip-filter *named-item* entry *number*
Tree	entry
Description	Commands in this context configure an entry for the LI filter. Multiple entries can be created using unique entry ID numbers within the filter. An entry in an LI filter always has an implicit action of “forward”. LI filter entries can be used as LI source entries. The entry numbers for LI filters serve only as keys for managing the entries (deleting entries, and so on). The order of the LI filter entries is not guaranteed to match the entry numbers and the software may reorder entries. Operators must therefore use LI entries in such a way that their relative order is not important. Entries removed from the filter are immediately removed from all services or network ports where the associated filter is applied.

outer-tag *number*

Synopsis	Outer tag for the QinQ SAP for filter match
Context	li li-filter li-mac-filter *named-item* entry *number* match outer-tag *number*
Tree	outer-tag
Description	This command configures the outer-tag to match on and must be used in conjunction with match criteria SAP in order for the entry match to activate. The match criteria SAP must be an exact match with the QinQ configured on the Epipe or VPLS service (for example 1/1/1:1.*, where the outer tag (C-tag) must be "*"). This feature mandates the provisioning of an associated **outer-tag** (example, 1), to be able to match on the QinQ packet. This example would perform LI on 1/1/1:1.1 on a 1/1/1:1.* SAP.
Range	1 to 4094
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sap *sap*

Synopsis	QinQ SAP for filter match
Context	li li-filter li-mac-filter *named-item* entry *number* match sap *sap*
Tree	sap
Description	This command specifies the QinQ SAP to match from the Epipe or VPLS service, where the S-tag must be a value and the outer tag (C-tag) must be of type *. This filter match is used in conjunction with match criteria **outer-tag**, where the **outer-tag** must also be provisioned for the entry match on the QinQ packet to activate.

intercept-id *number*

Synopsis	Intercept ID of the traffic flow
Context	li li-source *service-name* li-ip-filter *reference* entry *reference* intercept-id *number*
Tree	intercept-id
Description	This command configures the intercept ID that is inserted into the packet header for all mirrrored packets of the associated LI source entry. This intercept ID can be used (for example by a downstream LI gateway) to identify the particular LI session to which the packet belongs. For LI source entries, when the **configure mirror mirror-dest encap layer-3-encap header-type** command is configured with **ip-udp-shim** routable encap, an intercept-id field (as part of the routable encap) is always present in the mirrored packets. If there is no intercept ID configured for an LI source entry, the default value is inserted. When the mirror service is configured with **ip-gre** routable encap under the **header-type** command, no intercept ID is inserted and none should be specified against the LI source entries.

Context	li li-source *service-name* port *mirror-source-port-lag-key* ingress *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ingress
Description	When configured to **true**, the router allows lawful intercept on ingress traffic. This command configures packets that ingress the SAP to be mirrored. Ingress packets are mirrored to the mirror destination before ingress packet modification.
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sap [sap-id] *sap*

Synopsis	Enter the **sap** list instance
Context	li li-source *service-name* sap *sap*
Tree	sap
Description	Commands in this context create a service access point (SAP) within an LI configuration. The specified SAP must define a FastE, GigE, or XGigE, or XGigE access port with a dot1q, null, or q-in-q encapsulation type.
Introduced	19.10.R1
Platforms	All

[**sap-id**] *sap*

Synopsis	SAP ID
Context	li li-source *service-name* sap *sap*
Tree	sap
Description	This command specifies the physical port identifier portion of the SAP definition.
String length	1 to 45
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

egress *boolean*

Synopsis	Perform lawful intercept on egress traffic
Context	li li-source *service-name* sap *sap* egress *boolean*
Tree	egress

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router allows lawful intercept on egress traffic. This command configures packets that egress the SAP to be mirrored. Egress packets are mirrored to the mirror destination after egress packet modification.
Default	false
Introduced	19.10.R1
Platforms	All

ingress *boolean*

Synopsis	Perform lawful intercept on ingress traffic
Context	li li-source *service-name* sap *sap* ingress *boolean*
Tree	ingress
Description	When configured to **true**, the router allows lawful intercept on ingress traffic. This command configures packets that ingress the SAP to be mirrored. Ingress packets are mirrored to the mirror destination before ingress packet modification.
Default	false
Introduced	19.10.R1
Platforms	All

intercept-id *number*

Synopsis	Intercept ID of the traffic flow
Context	li li-source *service-name* sap *sap* intercept-id *number*
Tree	intercept-id
Description	This command configures the intercept ID that is inserted into the packet header for all mirrrored packets of the associated LI source entry. This intercept ID can be used (for example by a downstream LI gateway) to identify the particular LI session to which the packet belongs. For LI source entries, when the **configure mirror mirror-dest encap layer-3-encap header-type** command is configured with **ip-udp-shim** routable encap, an intercept-id field (as part of the routable encap) is always present in the mirrored packets. If there is no intercept ID configured for an LI source entry, the default value is inserted. When the mirror service is configured with **ip-gre** routable encap under the **header-type** command, no intercept ID is inserted and none should be specified against the LI source entries.
Range	1 to 1073741823
Introduced	19.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

session-id *number*

Synopsis	Session ID of the traffic flow
Context	li li-source *service-name* sap *sap* session-id *number*
Tree	session-id
Description	This command configures the session ID that is inserted into the packet header for all mirrored packets of the associated LI source entry. This session ID can be used (for example by a downstream LI gateway) to identify the particular LI session to which the packet belongs. The session ID is only valid and used for mirror services that are configured with **ip-udp-shim** routable encap under the **configure mirror mirror-dest encap layer-3-encap header-type** command. For all types of LI source entries, when the mirror service is configured with **ip-udp-shim** routable encap, a session ID field (as part of the routable encap) is always present in the mirrored packets. If no session ID is configured for an LI source entry, the default value is inserted. When a mirror service is configured with **ip-gre** routable encap under the header-type command, no session ID is inserted and none is specified against the LI source entries.
Range	1 to 4294967295
Introduced	19.10.R1
Platforms	All

subscriber [subscriber-id] *subscriber-id*

Synopsis	Enter the **subscriber** list instance
Context	li li-source *service-name* subscriber *subscriber-id*
Tree	subscriber
Description	Commands in this context add hosts of a subscriber to a mirroring service.
Introduced	19.10.R1
Platforms	All

[**subscriber-id**] *subscriber-id*

Synopsis	Subscriber ID
Context	li li-source *service-name* subscriber *subscriber-id*
Tree	subscriber
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character

© 2026 Nokia.

egress *boolean*

Synopsis	Perform lawful intercept on egress traffic
Context	li li-source *service-name* subscriber *subscriber-id* egress *boolean*
Tree	egress
Description	When configured to **true**, the router allows lawful intercept on egress traffic. This command configures packets that egress the SAP to be mirrored. Egress packets are mirrored to the mirror destination after egress packet modification.
Default	false
Introduced	19.10.R1
Platforms	All

fc *keyword*

Synopsis	Forwarding classes to be mirrored
Context	li li-source *service-name* subscriber *subscriber-id* fc *keyword*
Tree	fc
Description	This command specifies the name of the forwarding class with which to associate LI traffic. The forwarding class name must already be defined within the system. If the FC name is not already defined, an error is returned and this command has no effect. If the FC name is defined, the forwarding class associated with the FC name overrides the default forwarding class.
Options	be, l2, af, l1, h2, ef, h1, nc
Max. instances	8
Introduced	19.10.R1
Platforms	All

host-type *keyword*

Synopsis	Subscriber host type to be monitored
Context	li li-source *service-name* subscriber *subscriber-id* host-type *keyword*
Tree	host-type

ip-address *ipv4-address*

Synopsis	IP address of the subscriber
Context	li li-source *service-name* subscriber *subscriber-id* ip-address *ipv4-address*
Tree	ip-address
Description	This command specifies the service IP address (system IP address) of the remote device sending LI traffic. If 0.0.0.0 is specified, any remote router is allowed to send to this service.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**ip-address**, **mac-address**, and **sap-id**) or **sla-profile**.
Introduced	19.10.R1
Platforms	All

ip-family *keyword*

Synopsis	IP family for LI
Context	li li-source *service-name* subscriber *subscriber-id* ip-family *keyword*
Tree	ip-family
Description	This command specifies the IP family for LI.
Options	ipv4, ipv6
Introduced	19.10.R1
Platforms	All

mac-address *mac-address*

Synopsis	The source MAC address
Context	li li-source *service-name* subscriber *subscriber-id* mac-address *mac-address*
Tree	mac-address
Description	This command specifies a MAC address when defining a static host. Multiple static hosts may be configured with the same MAC address because each definition is distinguished by a unique IP address.
Notes	The following elements are part of a choice: (**ip-address**, **mac-address**, and **sap-id**) or **sla-profile**.
Introduced	19.10.R1

© 2026 Nokia.

send-using-vprn *service-name*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPRN to use to send SNMP notifications
Context	li log log-id *li-log-name* destination snmp send-using-vprn *service-name*
Tree	send-using-vprn
Description	This command configures lawful intercept (LI) SNMP notifications to transmit in a VPRN. This configuration is useful when doing management of LI via a VPRN. The specified VPRN service must exist. After an LI log is configured using this command, the VPRN service cannot be deleted without removing the LI log ID. When this command is configured, an LI log ID uses the snmp-trap-group configured for the VPRN. When unconfigured, the outgoing routing instance of LI SNMP notifications is determined by the **configure log route-preference** command, and the LI log ID uses the snmp-trap-group configured in the main system log configuration.
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Introduced	23.10.R1
Platforms	All

Context	li nat use-outside-ip-address *boolean*
Tree	use-outside-ip-address
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

radius

Synopsis	Enter the **radius** context
Context	li radius
Tree	radius
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mirror-dest-template *reference*

Synopsis	RADIUS triggered mirror destination template
Context	li radius mirror-dest-template *reference*
Tree	mirror-dest-template
Reference	li mirror-dest-template *named-item*
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sci

Synopsis	Enter the **sci** context
Context	li sci
Tree	sci
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp-li-shared-key *encrypted-leaf*

Synopsis	Key used to encrypt and decrypt exchanged LI PFCP IEs
Context	li sci pfcp-li-shared-key *encrypted-leaf*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	pfcp-li-shared-key
Description	This command configures the shared secret key that the SR OS uses in its role as a user plane (UP) to the MAG-c. The UP uses the shared secret key to encrypt and decrypt the LI PFCP IEs it exchanges with the MAG-c. The SR OS UP and the MAG-c must use matching secret keys. The system only accepts a secret key configured as a printable string. This command accepts a cleartext format of 1 to 128 characters or a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 254
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

x-interfaces

Synopsis	Enter the **x-interfaces** context
Context	li x-interfaces
Tree	x-interfaces
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

admin-state *keyword*

Synopsis	Administrative state of the x-interfaces
Context	li x-interfaces admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

correlation-id

Synopsis	Enter the **correlation-id** context
Context	li x-interfaces correlation-id
Tree	correlation-id

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ipoe *keyword*

Synopsis	RADIUS accounting ID type for subscriber correlation
Context	li x-interfaces correlation-id ipoe *keyword*
Tree	ipoe
Options	radius-host-acct-id, radius-queue-acct-id, radius-session-acct-id
Default	radius-host-acct-id
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

pppoe *keyword*

Synopsis	RADIUS accounting ID type for subscriber correlation
Context	li x-interfaces correlation-id pppoe *keyword*
Tree	pppoe
Options	radius-host-acct-id, radius-queue-acct-id, radius-session-acct-id
Default	radius-host-acct-id
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

ine-identifier *named-item*

Synopsis	Intercepting Network Element (INE) ID
Context	li x-interfaces ine-identifier *named-item*
Tree	ine-identifier
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lic [name] *named-item*

Synopsis	Enter the **lic** list instance
Context	li x-interfaces lic *named-item*
Tree	lic
Max. instances	18
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

[**name**] *named-item*

Synopsis	LIC name
Context	li x-interfaces lic *named-item*
Tree	lic
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

authentication

Synopsis	Enter the **authentication** context
Context	li x-interfaces lic *named-item* authentication
Tree	authentication
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

password *li-static-encrypted-leaf-hex*

Synopsis	Password for the X1 and X2 interfaces
Context	li x-interfaces lic *named-item* authentication password *li-static-encrypted-leaf-hex*
Tree	password
Description	This command specifies the password for X1 and X2 interfaces.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This command accepts a cleartext format of 32 hex nibbles with a single prefix of 0x (for example 0x0102030405060708090a0b0c0d0e0f01) or a protected format.

The specific format is indicated by the **hash** or **hash3** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.

The output is always in a protected format.

String length	1 to 102
String format	'li-static-encrypted-leaf-hex' must have clear text in hex with prefix 0x or end with hash2/hash3
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

private-ki *li-static-encrypted-leaf*

Synopsis	Private Ki string for the X1 and X2 interfaces
Context	li x-interfaces lic *named-item* authentication private-ki *li-static-encrypted-leaf*
Tree	private-ki
Description	This command specifies the private key for X1 and X2 interfaces. This command accepts a cleartext format of 32 hex nibbles with a single prefix of 0x (for example, 0x0102030405060708090a0b0c0d0e0f01) or a protected format. The specific format is indicated by the **hash** or **hash3** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information. The output is always in a protected format.
String length	1 to 102
Introduced	21.5.R1
Platforms	7750 SR-1, 7750 SR-7/12/12e

sequence-group *li-static-encrypted-leaf*

Synopsis	Sequence group for the X1 and X2 interfaces
Context	li x-interfaces lic *named-item* authentication sequence-group *li-static-encrypted-leaf*
Tree	sequence-group
Description	This command specifies the sequence group for X1 and X2 interfaces. This command accepts a cleartext value of 2 to 4294967295 or a protected format. The specific format is indicated by the **hash** or **hash3** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.

4.24.1 log command descriptions

log

Synopsis	Enter the **log** context
Context	**configure** log
Tree	log
Introduced	16.0.R1
Platforms	All

accounting-policy [policy-id] *number*

Synopsis	Enter the **accounting-policy** list instance
Context	**configure** log accounting-policy *number*
Tree	accounting-policy
Introduced	16.0.R1
Platforms	All

[**policy-id**] *number*

Synopsis	Accounting policy unique ID
Context	**configure** log accounting-policy *number*
Tree	accounting-policy
Range	1 to 99
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the accounting policy
Context	**configure** log accounting-policy *number* admin-state *keyword*
Tree	admin-state
Description	This command controls the administrative state of the accounting policy.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When an accounting policy is disabled, no accounting data is written to the destination log ID. Counters in the billing data reflect totals, and not increments. When the policy is re-enabled, the counters include the data collected during the period the policy was administratively disabled.

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

align *boolean*

Synopsis	Align statistics collection interval to absolute time
Context	**configure** log accounting-policy *number* align *boolean*
Tree	align
Description	When the **align** command is configured to **true**, statistics collection is aligned to the nearest interval within an hour. Statistics are generated when the absolute time can be divided by the collection-interval value, after which the collection interval continues. For example, if the interval is set to 15 minutes and the current time is 15:03, the statistics are collected at 15:15, 15:30, 15:45, 16:00, 16:15, and so on. This supports synchronized statistics intervals and collection across multiple nodes in the network. When the **align** command is configured to **false**, statistics collection occurs immediately after the configuration has been committed. For example, if the interval is set to 15 minutes and the current time is 15:03, the statistics are collected at 15:03, 15:18, 15:33, 15:48, 16:03, and so on.
Default	false
Introduced	19.10.R1
Platforms	All

collection-interval *number*

Synopsis	Accounting collection interval
Context	**configure** log accounting-policy *number* collection-interval *number*
Tree	collection-interval
Range	1 to 120
Units	minutes
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

custom-record

Synopsis	Enter the **custom-record** context
Context	**configure** log accounting-policy *number* custom-record
Tree	custom-record
Introduced	16.0.R1
Platforms	All

aa-specific

Synopsis	Enter the **aa-specific** context
Context	**configure** log accounting-policy *number* custom-record aa-specific
Tree	aa-specific
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-attributes

Synopsis	Enter the **aa-sub-attributes** context
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-attributes
Tree	aa-sub-attributes
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

app-profile *boolean*

Synopsis	Include application profile to be exported
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-attributes app-profile *boolean*
Tree	app-profile
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

app-service-options *boolean*

Synopsis	Include application service options
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-attributes app-service-options *boolean*
Tree	app-service-options
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aa-sub-counters

Synopsis	Enter the **aa-sub-counters** context
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters
Tree	aa-sub-counters
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

long-duration-flow-count *boolean*

Synopsis	Include the long duration flow count
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters long-duration-flow-count *boolean*
Tree	long-duration-flow-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

medium-duration-flow-count *boolean*

Synopsis	Include the medium duration flow
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters medium-duration-flow-count *boolean*
Tree	medium-duration-flow-count
Default	false
Introduced	21.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

short-duration-flow-count *boolean*

Synopsis	Include the short duration flow count
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters short-duration-flow-count *boolean*
Tree	short-duration-flow-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

total-flow-duration *boolean*

Synopsis	Include the total flow duration count
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters total-flow-duration *boolean*
Tree	total-flow-duration
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

total-flows-completed-count *boolean*

Synopsis	Include the total of completed flows count
Context	**configure** log accounting-policy *number* custom-record aa-specific aa-sub-counters total-flows-completed-count *boolean*
Tree	total-flows-completed-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

from-aa-sub-counters

Synopsis	Enter the **from-aa-sub-counters** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters
Tree	from-aa-sub-counters
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-active-count *boolean*

Synopsis	Include the active flows
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters flows-active-count *boolean*
Tree	flows-active-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-admitted-count *boolean*

Synopsis	Include the admitted flows
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters flows-admitted-count *boolean*
Tree	flows-admitted-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-denied-count *boolean*

Synopsis	Include the denied flows
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters flows-denied-count *boolean*
Tree	flows-denied-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

forwarding-class *boolean*

Synopsis	Include forwarding class
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters forwarding-class *boolean*
Tree	forwarding-class
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-octet-count *boolean*

Synopsis	Include maximum throughput as measured in octet count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters max-throughput-octet-count *boolean*
Tree	max-throughput-octet-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-packet-count *boolean*

Synopsis	Include maximum throughput as measured in packet count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters max-throughput-packet-count *boolean*
Tree	max-throughput-packet-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-throughput-timestamp *boolean*

Synopsis	Include timestamp of the maximum throughput
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters max-throughput-timestamp *boolean*
Tree	max-throughput-timestamp

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

octets-admitted-count *boolean*

Synopsis	Include the admitted octets count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters octets-admitted-count *boolean*
Tree	octets-admitted-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

octets-denied-count *boolean*

Synopsis	Include the denied octets count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters octets-denied-count *boolean*
Tree	octets-denied-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets-admitted-count *boolean*

Synopsis	Include the admitted packets count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters packets-admitted-count *boolean*
Tree	packets-admitted-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

packets-denied-count *boolean*

Synopsis	Include the denied packets count
Context	**configure** log accounting-policy *number* custom-record aa-specific from-aa-sub-counters packets-denied-count *boolean*
Tree	packets-denied-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

to-aa-sub-counters

Synopsis	Enter the **to-aa-sub-counters** context
Context	**configure** log accounting-policy *number* custom-record aa-specific to-aa-sub-counters
Tree	to-aa-sub-counters
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-active-count *boolean*

Synopsis	Include the active flows
Context	**configure** log accounting-policy *number* custom-record aa-specific to-aa-sub-counters flows-active-count *boolean*
Tree	flows-active-count
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flows-admitted-count *boolean*

Synopsis	Include the admitted flows
Context	**configure** log accounting-policy *number* custom-record aa-specific to-aa-sub-counters flows-admitted-count *boolean*

Synopsis	Accounting policy record type
Context	**configure** log accounting-policy *number* record *keyword*
Tree	record
Description	This command adds the accounting record type to the accounting policy that is forwarded to the configured accounting file. A record name can only be used in one accounting policy. To obtain a list of all record types that can be configured, use the **show log accounting-records** command. To configure an accounting policy for access ports, select a service record (for example, service-ingress-octets). To change the record name to another service record, configure the new record name with this command. When configuring an accounting policy for network ports, select a network record. To change the record name to another network record, configure the new record name with this command. **Note:** AA, video, and subscriber records are not applicable to the 7950 XRS.
Options	service-ingress-octets, service-egress-octets, service-ingress-packets, service-egress-packets, network-ingress-octets, network-egress-octets, network-ingress-packets, network-egress-packets, compact-service-ingress-octets, combined-service-ingress, combined-network-ing-egr-octets, combined-service-ing-egr-octets, complete-service-ingress-egress, combined-sdp-ingress-egress, complete-sdp-ingress-egress, complete-subscriber-ingress-egress, aa-protocol, aa-application, aa-app-group, aa-subscriber-protocol, aa-subscriber-application, custom-record-subscriber, custom-record-service, custom-record-aa-sub, queue-group-octets, queue-group-packets, combined-queue-group, combined-mpls-lsp-ingress, combined-mpls-lsp-egress, combined-ldp-lsp-egress, saa, video, aa-performance, complete-ethernet-port, extended-service-ingress-egress, complete-network-ing-egr, aa-partition, complete-pm, aa-admit-deny, network-interface-ingress-octets, network-interface-egress-octets, network-interface-ingress-packets, network-interface-egress-packets, combined-network-interface-ingress, combined-network-interface-egress, complete-network-interface-ing-egr, access-egress-octets, access-egress-packets, combined-access-egress, combined-network-egress, complete-service-activation-test, combined-mpls-srte-egress, combined-sr-policy-egress
Introduced	16.0.R1
Platforms	All

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger adp event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	16.0.R1
Platforms	7450 ESS-7, 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-7, 7750 SR-1e, 7750 SR-2e, 7750 SR-s

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger application-assurance event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

Reference	**configure** log filter *log-filter-name*

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger bier event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	19.5.R1

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger chassis event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger dynsvc event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	16.0.R1
Platforms	All

Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger isis event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger li event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	16.0.R1
Platforms	All

Context	**configure** log event-trigger mgmt-core event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger pcap event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	16.0.R1

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger radius event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	16.0.R1
Platforms	All

Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger system event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.
Reference	**configure** log filter *log-filter-name*
Introduced	16.0.R1

filter *reference*

Synopsis	Log filter for EHS event trigger entry
Context	**configure** log event-trigger vrtr event *keyword* entry *number* filter *reference*
Tree	filter
Description	This command configures the log filter to be used for this trigger entry. The log filter defines the matching criteria that must be met for the log event to trigger the handler execution. The log filter is applied to the log event and, if the filtering decision results in a forward action, the handler is triggered. It is typically unnecessary to configure match criteria for the application or number in the log filter used for EHS because the particular filter is only applied for a specific log event application and number, as configured under the **configure log event-trigger** context.

format *keyword*

Synopsis	Format used to output messages in the file
Context	**configure** log file *file-policy-name* format *keyword*
Tree	format
Description	This command configures the output format of the log events in the file. Changing the format immediately affects the next log event written to the currently open log file. The **standard** option uses the standard SR OS log event format. The sequence number is the first field of each event. The **rfc5424** option uses an RFC 5424 syslog format with the system name as the HOSTNAME. The PRI value is the first field of each event, and the log-prefix is empty.
Options	standard – Use the standard SR OS log event format rfc5424 – Use an RFC 5424 syslog format

accounting-files-total-size *number*

Synopsis	Per CF total accounting file storage limit
Context	**configure** log file-storage-control accounting-files-total-size *number*
Tree	accounting-files-total-size
Description	This command configures the limit for the total space that all accounting files can occupy on each storage device on the active CPM. When this threshold is reached, new accounting files are no longer created in the \act-collect directory of the storage device until SR OS removes older accounting files from the \act directory and the occupancy is below the limit. Currently open, in-progress accounting files in the \act-collect directory are not affected by this limit and are completed. When unconfigured, there is no specific limit for the total size of all accounting files. Only accounting files in the \act directory with system generated names (including no file extension) are applicable toward the total size limit. If a user manually adds or deletes accounting files from the \act directory, the size of the files is not taken into account for up to 1 hour. The configured total size limit is not validated against the actual size of the installed storage devices. If the configured limit is larger than the installed compact flash (CF) device, the limit is never reached.
Range	50 to 4194304
Units	megabytes
Introduced	23.3.R1
Platforms	All

log-files-total-size *number*

Synopsis	Per CF total log file storage limit
Context	**configure** log file-storage-control log-files-total-size *number*
Tree	log-files-total-size
Description	This command configures the limit for the total space that all log files can occupy on each storage device on the active CPM. When this threshold is reached, log events are no longer written to the files in the \log directory until SR OS removes older log files and the occupancy is below the limit. When unconfigured, there is no specific limit for the total size of all log files. Only log files in the \log directory with system generated names (including no file extension) are applicable toward the total size limit. If a user manually adds or deletes log files from the \log directory, the size of the files is not taken into account for up to 1 hour.

Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	**configure** log log-events ip event *keyword* specific-throttle-limit *number*
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** log log-events ip event *keyword* throttle *boolean*
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	16.0.R1
Platforms	All

ipsec event *keyword*

Synopsis	Enter the **ipsec** list instance
Context	**configure** log log-events ipsec event *keyword*
Tree	ipsec
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

event *keyword*

Synopsis	Log event as a trigger for one or more EHS handlers
Context	**configure** log log-events ipsec event *keyword*
Tree	ipsec
Options	tIPsecRUTnlFailToCreate, tIPsecRUSAFailToAddRoute, tIPsecBfdIntfSessStateChgd, tIPsecRadAcctPlcyFailure, tIPSecTrustAnchorPrfOprChg, tIPsecTunnelEncapIpMtuTooSmall, tIPsecRuTnlEncapIpMtuTooSmall, tmnxSecNotifCmptedCertHashChngd, tmnxSecNotifCmptedCertChnChngd, tmnxSecNotifSendChnNotInCmptChn, tmnxIPsecTunnelOperStateChange, tmnxIPsecGWOperStateChange, tIPsecRUTnlRemoved, tIPsecTunnelProtocolFailed
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	**configure** log log-events ipsec event *keyword* generate *boolean*
Tree	generate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	**configure** log log-events ipsec event *keyword* repeat *boolean*
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

severity *keyword*

Synopsis	Severity level associated with event type
Context	**configure** log log-events ipsec event *keyword* severity *keyword*
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	**configure** log log-events ipsec event *keyword* specific-throttle *boolean*
Tree	specific-throttle
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	**configure** log log-events ipsec event *keyword* specific-throttle-interval *number*
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	**configure** log log-events mpls event *keyword* specific-throttle-interval *number*
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	**configure** log log-events mpls event *keyword* specific-throttle-limit *number*
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	**configure** log log-events mpls event *keyword* throttle *boolean*
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	16.0.R1
Platforms	All

mpls-tp event *keyword*

Synopsis	Enter the **mpls-tp** list instance

generate *boolean*

Synopsis	Generate log events when the event occurs
Context	**configure** log log-events wlan-gw event *keyword* generate *boolean*
Tree	generate
Introduced	16.0.R1
Platforms	All

repeat *boolean*

Synopsis	Repeat the log event until the condition is cleared
Context	**configure** log log-events wlan-gw event *keyword* repeat *boolean*
Tree	repeat
Default	false
Introduced	16.0.R4
Platforms	All

severity *keyword*

Synopsis	Severity level associated with event type
Context	**configure** log log-events wlan-gw event *keyword* severity *keyword*
Tree	severity
Options	cleared, indeterminate, critical, major, minor, warning
Introduced	16.0.R1
Platforms	All

specific-throttle *boolean*

Synopsis	Use parameters to throttle the specific event
Context	**configure** log log-events wlan-gw event *keyword* specific-throttle *boolean*
Tree	specific-throttle
Introduced	16.0.R1
Platforms	All

specific-throttle-interval *number*

Synopsis	Duration of the event specific throttling interval
Context	**configure** log log-events wlan-gw event *keyword* specific-throttle-interval *number*
Tree	specific-throttle-interval
Description	This command specifies the number of seconds that the specific throttling intervals lasts.
Range	1 to 1200
Introduced	16.0.R1
Platforms	All

specific-throttle-limit *number*

Synopsis	Throttle limit within which events can be logged
Context	**configure** log log-events wlan-gw event *keyword* specific-throttle-limit *number*
Tree	specific-throttle-limit
Range	1 to 20000
Introduced	16.0.R1
Platforms	All

throttle *boolean*

Synopsis	Throttle log events of this type
Context	**configure** log log-events wlan-gw event *keyword* throttle *boolean*
Tree	throttle
Description	This command specifies whether events of this type are throttled. By default, event throttling is on for most event types.
Introduced	16.0.R1
Platforms	All

wpp event *keyword*

Synopsis	Enter the **wpp** list instance
Context	**configure** log log-events wpp event *keyword*
Tree	wpp
Introduced	16.0.R1
