fpe *reference*

Synopsis	FPE ID for LAG interface of redundant monitoring IOMs

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* mvpn provider-tunnel inclusive umh-rate-monitoring fpe *reference*
Tree	fpe
Description	This command configures a Forwarding Path Extension (FPE) for the LAG interface when using two monitoring IOMs for redundancy. A PXC port can be created on each IOM and added as a member to a per-link hashing LAG bundle. The FPE is used to create the interface on the LAG bundle with its own Martian IP address. On ingress to the Upstream Multicast Hop (UMH) IOMs, the P-Multicast Service Interfaces (PMSIs) traffic is forwarded to the active LAG IOM and, if there is a failure on the active LAG IOM, the PMSIs traffic is forwarded to the standby IOM.
Reference	**configure** fwd-path-ext fpe *number*
Introduced	24.7.R1
Platforms	All

revertive-timer *number*

Synopsis	Time until switch to primary UMH after timer expiration
Context	**configure** service vprn *service-name* mvpn provider-tunnel inclusive umh-rate-monitoring revertive-timer *number*
Tree	revertive-timer
Description	This command configures the router to switch over from the standby to the primary UMH after expiration of the timer. A value of 0 causes the revert to occur immediately. **Note:** When this command is not configured, the UMH behaves in non-revertive mode and after switching from active UMH to standby, it remains on standby.
Range	0 to 3600
Units	seconds
Introduced	21.5.R1
Platforms	All

traffic-threshold *number*

Synopsis	Traffic rate threshold for primary UMH
Context	**configure** service vprn *service-name* mvpn provider-tunnel inclusive umh-rate-monitoring traffic-threshold *number*
Tree	traffic-threshold
Description	This command configures the rate of traffic threshold for the primary UMH. UMH traffic that falls below this threshold switches to the standby UMH.

Context	**configure** service vprn *service-name* mvpn provider-tunnel selective umh-rate-monitoring group *(ipv4-prefix | ipv6-prefix)* source *(ipv4-prefix | ipv6-prefix)* fpe *reference*
Tree	fpe
Description	This command configures a Forwarding Path Extension (FPE) for the LAG interface when using two monitoring IOMs for redundancy. A PXC port can be created on each

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

IOM and added as a member to a per-link hashing LAG bundle. The FPE is used to create the interface on the LAG bundle with its own Martian IP address. On ingress to the Upstream Multicast Hop (UMH) IOMs, the P-Multicast Service Interfaces (PMSIs) traffic is forwarded to the active LAG IOM and, if there is a failure on the active LAG IOM, the PMSIs traffic is forwarded to the standby IOM.

Reference **configure** fwd-path-ext fpe *number*

Introduced 24.7.R1

Platforms All

revertive-timer *number*

Synopsis Time until switch to primary UMH after timer expiration

Context **configure** service vprn *service-name* mvpn provider-tunnel selective umh-rate-monitoring group *(ipv4-prefix | ipv6-prefix)* source *(ipv4-prefix | ipv6-prefix)* revertive-timer *number*

Tree revertive-timer

Description This command configures the router to switch over from the standby to the primary UMH after expiration of the timer.

A value of 0 causes the revert to occur immediately.

Note: When this command is not configured, the UMH behaves in non-revertive mode and after switching from active UMH to standby, it remains on standby.

Range 0 to 3600

Units seconds

Introduced 21.5.R1

Platforms All

traffic-threshold *number*

Synopsis Traffic rate threshold for primary UMH

Context **configure** service vprn *service-name* mvpn provider-tunnel selective umh-rate-monitoring group *(ipv4-prefix | ipv6-prefix)* source *(ipv4-prefix | ipv6-prefix)* traffic-threshold *number*

Tree traffic-threshold

Description This command configures the rate of traffic threshold for the primary UMH. UMH traffic that falls below this threshold switches to the standby UMH.

Range 1 to 4294967294

Units kilobps

Introduced 26.3.R1

Tree	address-map

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context map inside IPv6 addresses of deterministic DS-Lite subscribers to the outside IPv4 addresses in a NAT pool. This context is only applicable to deterministic DS-Lite with a single ESA-VM in a NAT-group. The number of subscribers per outside IP address is flexible and not restricted to a discrete range governed by the 2^n rule.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**from**] *ipv6-prefix*

Synopsis	Lower bound of IPv6 address of inside IPv6 NAT range
Context	**configure** service vprn *service-name* nat inside large-scale dual-stack-lite deterministic address-map *ipv6-prefix* to *ipv6-prefix* nat-policy *reference*
Tree	address-map
Description	This command specifies the starting IPv6 address or IPv6 prefix for a DS-Lite subscriber or B4 element on the inside IPv6 address range.
Notes	This element is part of a list key.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

to *ipv6-prefix*

Synopsis	Upper bound of IPv6 address of inside IPv6 NAT range
Context	**configure** service vprn *service-name* nat inside large-scale dual-stack-lite deterministic address-map *ipv6-prefix* to *ipv6-prefix* nat-policy *reference*
Tree	address-map
Description	This command specifies the ending IPv6 address or IPv6 prefix for a DS-Lite subscriber or B4 element on the inside IPv6 address range.
Notes	This element is part of a list key.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Options	fragment-ipv6, fragment-ipv6-unless-ipv4-df-set
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

min-first-fragment-size-rx *number*

Synopsis	Minimum MTU size for upstream packets
Context	**configure** service vprn *service-name* nat inside large-scale dual-stack-lite endpoint *ipv6-address* min-first-fragment-size-rx *number*
Tree	min-first-fragment-size-rx
Description	This command configures the minimum MTU size for the first fragment in the upstream direction. This command can be used to enable processing of first IPv6 fragments smaller than 1280 bytes. RFC 8200 recommends the minimum MTU in IPv6 be 1280 bytes which allows fragmentation only for packets that are larger than 1280 bytes. If a first fragment is smaller than 1280 bytes, DS-lite implementation in the SR OS, by default, drops the first fragment.
Range	512 to 1280
Default	1280
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reassembly *boolean*

Synopsis	Reassembly of IPv6 payload datagrams
Context	**configure** service vprn *service-name* nat inside large-scale dual-stack-lite endpoint *ipv6-address* reassembly *boolean*
Tree	reassembly
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

selector-mappings

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the **selector-mappings** context
Context	**configure** service vprn *service-name* nat inside large-scale nat44 deterministic prefix-map *ipv4-unicast-prefix* nat-policy *reference* selector-mappings
Tree	selector-mappings
Description	Commands in this context configure deterministic NAT mappings via selector bits. This command enables deterministic NAT mappings based on the IP address and port selector bits derived from the host portion of the configured prefix. The selector bits (for both IP address and port) fully occupy the available host bit space.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When this context is enabled, the source IP addresses are interleaved across the outside IP addresses. The stride between these interleaved source addresses that are mapped to the same outside IP address is determined by the configured selector bits.

Deterministic port blocks can be assigned in either ascending (forward) or descending (reverse) order.

This behavior contrasts with the legacy sequential-fill mapping, where source IP addresses are mapped sequentially to each outside IP address until it is fully used, before moving to the next. In the legacy mode, deterministic port block allocation is only supported in ascending (forward) order.

Deleting this context disables selector-based mappings and reverts the configuration to the legacy sequential-fill mode.

Introduced 26.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

port-selector-length *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Port selector length for deterministic prefix mapping

Context **configure** service vprn *service-name* nat inside large-scale nat44 deterministic prefix-map *ipv4-unicast-prefix* nat-policy *reference* selector-mappings port-selector-length *number*

Tree port-selector-length

Description This command configures the number of bits in the host portion of the prefix that are used to select the deterministic port block assigned to each subscriber (source IPv4 address). These bits are referred to as P-bits (for ports), and they are positioned immediately following the prefix part of the source IPv4 address.

For more information, see "Parameterized deterministic NAT44 mapping" in the *7450 ESS, 7750 SR, and VSR Multiservice ISA and ESA Guide*.

This selection mechanism defines how port blocks are allocated and supports two allocation orders:

- ascending (forward) - port blocks assigned in increasing order
- descending (reverse) - port blocks assigned in decreasing order

The number of configured P-bits determines the number of subscribers per outside IP address, according to the following formula:

subscribers per outside IP = 2^p

The value of 2^p must correspond to the subscriber-limit command option configured in the associated NAT pool.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The bits immediately following the port selector bits are the IP address selector bits. They select the outside IP address for a specified source IP address. These bits are referred to as O-bits (for *outside* address selection).

Such a selection mechanism (based on the selector bits) enables interleaving of source IP addresses across the available outside IP addresses. The stride, that is, the distance between consecutive source IP addresses mapped to the same outside IP is determined by the formula:

stride = 2°

For example, if o = 10, then the stride between source IP addresses mapped to the same outside IP address is 1024.

hash-mask

Synopsis	Enable the **hash-mask** context
Context	**configure** service vprn *service-name* nat inside large-scale nat44 hash-mask
Tree	hash-mask
Description	Commands in this context configure deterministic NAT with mappings based on selector bits. This command must be configured only when the selector bits under the deterministic prefix are used for mappings. By default, the hash mask is disabled, which means that all bits in the source IP address are eligible for hashing. The hash mask identifies the range between the port selector bits in the source IP address that are ignored in hashing. These bits are between the smallest and largest deterministic prefix length within a specific inside routing context plus the port selector bits length configured under the prefix with the largest prefix length. By masking source IP address bits in this way, traffic for a specific source IP address is steered to the ESA-VM with the corresponding (pre-mapped) outside IP address.
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

max-selector-end-prefix-length *number*

Synopsis	Maximum prefix and port selector length for hash mask
Context	**configure** service vprn *service-name* nat inside large-scale nat44 hash-mask max-selector-end-prefix-length *number*
Tree	max-selector-end-prefix-length
Description	This command configures the longest prefix length among all prefixes configured within an inside routing context and its port selector bits length for deterministic NAT based on selector bits. Together with the shortest prefix, this command defines the range of bits excluded from the ingress hashing function. This exclusion is required to ensure that ingress traffic on the inside is distributed across ESA-VMs in such a way that packets with a given source IP address are directed to the ESA-VM hosting the corresponding outside IP address (as pre-mapped in deterministic NAT).
Range	0 to 31
Default	0
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

© 2026 Nokia.

min-prefix-length *number*

Synopsis	Minimum prefix length for hash mask
Context	**configure** service vprn *service-name* nat inside large-scale nat44 hash-mask min-prefix-length *number*
Tree	min-prefix-length
Description	This command configures the shortest prefix length among all prefixes configured within an inside routing context for deterministic NAT based on selector bits. Together with the longest prefix and its associated port-selector bits length, this command defines the range of bits excluded from the ingress hashing function. This exclusion is required to ensure that ingress traffic on the inside is distributed across ESA-VMs in such a way that packets with a specific source IP address are directed to the ESA-VM hosting the corresponding outside IP address (as pre-mapped in deterministic NAT).
Range	0 to 31
Default	0
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

max-subscriber-limit *number*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Ingress hashing for load distribution across ESA-VMs
Context	**configure** service vprn *service-name* nat inside large-scale nat44 max-subscriber-limit *number*
Tree	max-subscriber-limit
Description	This command configures the maximum number of classic LSN subscribers within a consecutive range of IP addresses that are processed by the same ESA-VM. It directly defines the granularity of upstream traffic distribution across ESA-VMs within the scope of an inside routing context. The ingress hashing mechanism used for traffic distribution is based on source IPv4 addresses or prefixes. For more information, see "Parameterized deterministic NAT44 mapping" in the *7450 ESS, 7750 SR, and VSR Multiservice ISA and ESA Guide*. A more granular distribution is achieved when traffic is distributed by individual IPv4 addresses, while a less granular distribution occurs when traffic is distributed by IPv4 prefixes, the size of which is determined by the configured prefix length. The /32 and /24 prefix examples are as follows:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- A prefix length of /32 distributes individual IPv4 addresses across multiple ESA-VMs within an ESA-VM group.
- A prefix length of /24 distributes subscribers in groups of 256 addresses (/24) across ESA-VMs

The prefix length used for distribution is derived as follows.

prefix length = 32 - n

Where:

n = log 2 (max-subscriber-limit)

or

max-subscriber-limit = 2^n

For example, when traffic distribution is based on individual IPv4 addresses (/32), n = 0, and therefore, max-subscriber-limit = 1

This is the default value and is recommended for non-deterministic and non-DNAT-only configurations.

This indirect relationship between this command and the prefix length originates from deterministic NAT, where the command was first introduced.

- In classic deterministic NAT (non-selector-mapping), this command must be configured to match the largest subscriber-limit value among all deterministic NAT pools referenced by the same inside routing context. This ensures consistent prefix-length computation for ingress hashing and correct route segmentation on the outside.
- In deterministic NAT with selector-based mappings, set this command according to the required aggregation level of NAT pool routes installed in the outside routing context.

The primary use of this command is in deterministic NAT and Destination NAT without Source NAT (DNAT-only).

In these cases, it also determines the number and prefix length of NAT pool routes installed in the outside routing context, ensuring that downstream (return) traffic is steered to the correct ESA-VM.

In DNAT-only configurations, where source IP addresses are not translated and remain visible in the outside routing context, this command affects the aggregation of source routes in the outside routing table.

For this command, the following configuration rules must be observed:

- The command must be configured before any deterministic NAT prefix is defined.
- This command can only be modified when no deterministic prefixes are currently configured under deterministic NAT.

Range	1 | 2 | 4 | 8 | 16 | 32 | 64 | 128 | 256 | 512 | 1024 | 2048 | 4096 | 8192 | 16384 | 32768 | 65536

nat-import *reference*

Synopsis	Import BGP-VPN routes in NAT inside routing context
Context	**configure** service vprn *service-name* nat inside large-scale nat44 nat-import *reference*
Tree	nat-import
Description	This command references an import policy to determine the routes that should be installed in the routing table as NAT routes, which are used to steer traffic to NAT. A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route is associated with a NAT policy that maps traffic destined into a NAT pool and outside routing context. If the NAT policy is not explicitly configured in the import route-policy, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context. All BGP-VPN routes that are destined to be imported into NAT inside routing context must be configured with action-type accept in the route policy.
Reference	**configure** policy-options policy-statement *named-item-64*
Max. instances	5
Notes	This element is ordered by the user.
Introduced	21.5.R1

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Prefix length used for ingress traffic load balancing
Context	**configure** service vprn *service-name* nat inside large-scale nat66 hash-prefix-length *number*
Tree	hash-prefix-length
Description	This command configures the router to control how IPv6 subscriber traffic subject to IPv6 large scale stateful inbound filtering is distributed across ESA-VMs on ingress. By default, ingress hashing is performed per subscriber, providing the most granular distribution. In cases such as IPv6 large scale stateful inbound filtering where the source IPv6 address is not translated, per-subscriber hashing results in individual subscriber routes being created in the outside routing context. These routes ensure that return (downstream) traffic is directed to the correct ESA-VM that maintains the state of the subscriber. To prevent excessive route entries, this command allows grouping subscribers into larger IPv6 sub-prefixes. In this mode, traffic is load-balanced across ESA-VMs at the prefix level, instead of per subscriber, so that aggregated routes are installed in the outside routing context instead of individual subscriber routes. In other words, this command optimizes the outside routing table by reducing route granularity, trading fine-grained hashing for a more scalable route distribution. Subscriber grouping is derived from the main prefix configured within the firewall domain. See the following commands for more information:
Range	32 to 64 | 128
Default	56
Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber-prefix-length *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Prefix length under which resources are aggregated
Context	**configure** service vprn *service-name* nat inside large-scale nat66 subscriber-prefix-length *number*
Tree	subscriber-prefix-length

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the router to enable the aggregation of watermarks and other scaling limits, such as session limits. The IPv6 large scale stateful inbound filtering does not translate IP addresses or ports, but it can maintain these parameters per prefix. For example, in a bridged home environment where multiple IPv6 addresses are exposed, resource control can be applied per home (for example, /64) prefix instead of per individual IPv6 address.
Range	32 to 64 | 128
Default	128
Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

redundancy

Synopsis	Enter the **redundancy** context
Context	**configure** service vprn *service-name* nat inside large-scale redundancy

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer *ipv4-unicast-address*

Synopsis	IP address of the NAT redundancy peer for this virtual router instance
Context	**configure** service vprn *service-name* nat inside large-scale redundancy peer *ipv4-unicast-address*
Tree	peer
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer6 *ipv6-unicast-address*

Synopsis	IPv6 address of NAT redundancy peer for VR instance
Context	**configure** service vprn *service-name* nat inside large-scale redundancy peer6 *ipv6-unicast-address*
Tree	peer6
Description	This command configures the IPv6 address of the NAT redundancy peer. The configured peer6 address is an IPv6 address configured under an interface on the

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

peering NAT64 node (active or standby). This IPv6 interface address is advertised via routing on the inside in order to attract traffic from the standby to the active NAT64 node.

Under normal circumstances, the NAT64 prefix is advertised only from the active NAT64 node. Consequently, upstream traffic for NAT64 is attracted to the active NAT64 node. The NAT action in the IPv6 filter on the active NAT64 node forwards traffic to the local MS-ISA where the NAT64 function is performed. However, in that case, that upstream traffic arrives on the standby NAT64 node, the NAT action in the IPv6 filter forwards traffic to the peer6 address (active NAT64 node).

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

prefix [ip-prefix] *ipv6-unicast-prefix*

Synopsis	Enter the **prefix** list instance
Context	**configure** service vprn *service-name* nat outside domain *named-item* prefix *ipv6-unicast-prefix*
Tree	prefix
Description	Commands in this context configure the source IP prefix of the subscribers. This command is required for large scale stateful filtering scenarios where there is no address translation involved. The configured prefix represents the source IPv6 prefix for traffic originating from the inside network, where subscribers within this prefix are protected by the firewall. This prefix serves two main purposes: • to perform hashing of the ingress traffic on the inside. Subscribers can be grouped into subprefixes derived from the main configured prefix. The group size (or subprefix) is determined by the **hash-prefix-length** command under one of the following contexts (**configure service vprn nat inside large-scale-nat66** and **configure router nat inside large-scale-nat66**) • to allow return (downstream) traffic to be routed to the correct ESA-VM, where the session state of the subscriber is maintained, the prefix or its subprefixes are also included in the outside routing context. The **route-limit** command sets the upper limit for the maximum number of subprefixes that can be installed in the routing table on the outside.
Max. instances	8192

Synopsis	Outside IP address allocation mode for a NAT subscriber
Context	**configure** service vprn *service-name* nat outside pool *named-item* address-pooling *keyword*
Tree	address-pooling
Description	This command configures address pooling which defines a relationship between the NAT subscriber and its outside IP address(es). The behavior in NAT, as defined in RFC 7857, strongly recommends that the NAT subscribers be mapped to a single outside IP address. If this outside IP address runs out of ports, no new ports for the subscriber are allocated. This behavior is called paired address pooling. The alternative behavior is arbitrary address pooling, where a NAT subscriber is mapped to multiple IP addresses when the current outside IP address runs out of ports. This way, the subscriber becomes associated with multiple outside IP addresses. While this results in better resource utilization in NAT, it may negatively affect the behavior of some applications.
Options	paired, arbitrary
Default	paired
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

exclude [start-address] *ipv4-unicast-address* end-address *ipv4-unicast-address*

Synopsis	Add a list entry for **exclude**
Context	**configure** service vprn *service-name* nat outside pool *named-item* address-range *ipv4-unicast-address* end *ipv4-unicast-address* exclude *ipv4-unicast-address* end-address *ipv4-unicast-address*
Tree	exclude
Description	Commands in this context exclude the specified range of IPv4 addresses from the NAT pool without impacting the traffic associated with the remaining addresses. Excluded IP addresses are withdrawn from the routing table, ensuring that downstream traffic destined for them does not reach the ESA-VM. Instead, such traffic is dropped at the forwarding plane level. This approach offloads drop processing from the ESA-VM, which significantly improves system performance by reducing CPU overhead related to packet drops. While exclusion of IPv4 addresses from the NAT pool may introduce some routing churn (for example, remicroneting), the user can aggregate NAT routes to limit the impact to the local node. If routing changes are allowed to propagate upstream, the benefit is that unwanted traffic is dropped earlier at an upstream router, thereby reducing the load on the downstream network. IPv4 addresses excluded from the NAT pool using this command are returned to the pool when this command is deleted. The following applies when an address is excluded: • All NAT sessions associated with that public IP are removed. • Any static port-forward actions tied to that address transition to the **down** state. • Subscribers mapped to the excluded public IP can be reassigned to a new NAT address. This command is supported for non-deterministic LSN44, NAT64 and DS-Lite.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp-echo-reply *boolean*

Synopsis	Allow NAT pool IP addresses to respond to ICMP PINGs
Context	**configure** service vprn *service-name* nat outside pool *named-item* icmp-echo-reply *boolean*
Tree	icmp-echo-reply
Description	This command allows IP addresses in the NAT pool to respond to ICMP Echo requests (PINGs). The configuration can be toggled while the pool is in use. In L2-aware NAT when port-block-extensions is disabled, the reply from an outside IP address is generated only when this IP address has at least one host (binding) behind it. In L2-aware NAT when port-block-extensions is enabled, the reply from an outside IP address is generated regardless if a binding is present. In LSN, the reply from an outside IP address is generated regardless if a binding is present.

default-host

Synopsis	Enable the **default-host** context
Context	**configure** service vprn *service-name* nat outside pool *named-item* l2-aware default-host
Tree	default-host
Description	Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated. Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis. The rate of redirected unknown traffic can be restricted by configuration.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router-instance *string*

Synopsis	Router instance of the DMZ
Context	**configure** service vprn *service-name* nat outside pool *named-item* l2-aware default-host inside-router-instance *string*
Tree	inside-router-instance
Description	This command configures the router instance on the inside where the default DMZ host resides.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-address *ipv4-unicast-address*

Synopsis	IP address of the default DMZ host
Context	**configure** service vprn *service-name* nat outside pool *named-item* l2-aware default-host ip-address *ipv4-unicast-address*
Tree	ip-address
Description	This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit *number*

Synopsis	Rate limit for unknown traffic sent to default DMZ host
Context	**configure** service vprn *service-name* nat outside pool *named-item* l2-aware default-host rate-limit *number*
Tree	rate-limit
Description	This command configures the rate limit of the unknown traffic sent to the default DMZ host. Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM.
Range	1 to 10000
Units	megabps
Default	10
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of L2-Aware NAT subscribers per outside address
Context	**configure** service vprn *service-name* nat outside pool *named-item* l2-aware port-block-extension subscriber-limit *number*
Tree	subscriber-limit
Description	When port-block extensions for the L2-Aware subscribers are enabled, the port space for an outside IP address is divided into the following:

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- well-known port (this is a fixed and permanently allocated block of ports for all NAT types)
- static port-forwarding range (if enabled by configuration)
- port range allocated for initial port blocks of each L2-Aware subscriber
- port range allocated for extended port blocks for the remainder after the three previous port ranges

The number of L2-Aware NAT subscribers per an outside IP address multiplied by the size of the initial port-block size determines the size of the port range reserved for initial port-blocks of each subscriber.

The lower boundary of the extended port range is determined by adding the upper boundary of the configured port forwarding range and the size of the port range allocated for initial port blocks.

Range	2 to 2000
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Tree	default-host
Description	Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated. Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The rate of redirected unknown traffic can be restricted by configuration.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router-instance *string*

Synopsis Router instance of the DMZ

Context **configure** service vprn *service-name* nat outside pool *named-item* large-scale default-host inside-router-instance *string*

Tree inside-router-instance

Description This command configures the router instance on the inside where the default DMZ host resides.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-address *ipv4-unicast-address*

Synopsis IP address of the default DMZ host

Context **configure** service vprn *service-name* nat outside pool *named-item* large-scale default-host ip-address *ipv4-unicast-address*

Tree ip-address

Description This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host.

String format 'ipv4-address' must use only digits and dots (no %zone)
'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit *number*

Synopsis Rate limit for unknown traffic sent to default DMZ host

Context **configure** service vprn *service-name* nat outside pool *named-item* large-scale default-host rate-limit *number*

Tree rate-limit

Description This command configures the rate limit of the unknown traffic sent to the default DMZ host.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM.
Range	1 to 10000
Units	megabps
Default	10
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

deterministic

Synopsis	Enter the **deterministic** context
Context	**configure** service vprn *service-name* nat outside pool *named-item* large-scale deterministic
Tree	deterministic
Introduced	16.0.R1

watermarks

Synopsis	Enable the **watermarks** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* nat outside pool *named-item* large-scale deterministic watermarks
Tree	watermarks
Description	Commands in this context monitor extended (dynamic) port-block utilization per outside IP in a NAT pool in deterministic LSN. High and low thresholds are configured in percentages of total available extended port-blocks per outside IP in a pool. Both values represent extended port-block utilization or occupancy per outside IP in a pool. For the system to generate those events, the NAT event instance of **tmnxNatPlMember ExtBlockUsageHigh** must be configured in the **configure log log-events** context with **generate** set to **true**.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis	High watermark percentage
Context	**configure** service vprn *service-name* nat outside pool *named-item* large-scale deterministic watermarks high *number*
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low *number*

Synopsis	Low watermark percentage
Context	**configure** service vprn *service-name* nat outside pool *named-item* large-scale deterministic watermarks low *number*
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent

Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

flexible-port-allocation

Synopsis	Enter the **flexible-port-allocation** context
Context	**configure** service vprn *service-name* nat outside pool *named-item* large-scale flexible-port-allocation
Tree	flexible-port-allocation
Description	Commands in this context enable LSN44 pool behavior where a subscriber allocates ports individually instead of through port blocks. The port block concept is removed for this application. Static port forwards can be interleaved with dynamically-allocated ports. Port logging in disabled when this application is enabled. A subscriber limit that is the maximum number of subscribers per outside IP address is not supported for this application.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

free-port-limit

Synopsis	Enter the **free-port-limit** context
Context	**configure** service vprn *service-name* nat outside pool *named-item* large-scale flexible-port-allocation free-port-limit
Tree	free-port-limit
Description	Commands in this context configure the minimal number of ports per protocol and per outside IP address in an LSN44 pool with flexible port allocations that must be free to map new subscribers to the outside IP address. This limit avoids rapid port depletion for new subscribers in paired pooling mode, or unnecessary toggling between external IP addresses for existing subscribers in arbitrary pooling mode.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp *number*

monitor-oper-group *reference*

Synopsis	Monitor operational group associated with a NAT pool
Context	**configure** service vprn *service-name* nat outside pool *named-item* monitor-oper-group *reference*
Tree	monitor-oper-group
Description	This command configures an operational group monitored by a NAT pool. Although a NAT pool lacks its own operational state, it can track the status of another entity via the operational group associated with that entity. When an operational group monitored by a NAT pool transitions to the down state, the route of the pool is withdrawn from the routing table. In effect, when the monitored operational group goes down, the NAT pool becomes unreachable. Deterministic NAT is where NAT policy selection is defined in a deterministic prefix or address map. In this case, internal destination prefixes or filter entries not explicitly assigned a NAT policy are withdrawn from the routing and forwarding tables only if all NAT pools referenced by all NAT policies in the deterministic configuration become inactive. In other words, all monitored operational groups are down.
Reference	**configure** service oper-group *named-item*
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-group *reference*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

WARNING:

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dynamic-block-reservation *boolean*

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Reserve dynamic block for subscriber
Context	**configure** service vprn *service-name* nat outside pool *named-item* port-forwarding dynamic-block-reservation *boolean*
Tree	dynamic-block-reservation
Description	When configured to **true**, the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged. The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released. Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address. When configured to **false**, dynamic port blocks are not reserved when the first port forward for the subscriber is created.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

range-end *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	End of the wildcard range for port forwards
Context	**configure** service vprn *service-name* nat outside pool *named-item* port-forwarding range-end *number*
Tree	range-end
Description	This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the **range-start** command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool. If unconfigured, the **range-end** implicit value is set to 1023, that represents the end of the well-known port range that is always enabled. Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.
Range	0 | 1023 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range-start *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Start of the wildcard range for port forwards
Context	**configure** service vprn *service-name* nat outside pool *named-item* port-forwarding range-start *number*
Tree	range-start
Description	This command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the **range-end** command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool. Port 0 is always excluded from the port forwarding range.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Port forwards are supported only in pools in Network Address and Port Translation (NAPT) mode. Pools in 1:1 mode do not support configured port forwards.

Range	0 | 1 | 1025 to 65535
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Port block size for NAT subscribers
Context	**configure** service vprn *service-name* nat outside pool *named-item* port-reservation port-blocks *number*
Tree	port-blocks
Description	In CGN, this command specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block. For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the **l2-aware port-block-extension** hierarchy in the NAT pool.
Range	0 to 64512
Notes	The following elements are part of a choice: **port-blocks** or **ports**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Size of the port block for NAT subscribers
Context	**configure** service vprn *service-name* nat outside pool *named-item* port-reservation ports *number*
Tree	ports
Description	For carrier-grade NAT (CGN), this command specifies the size of port blocks for NAT subscribers in the NAT pool. For Layer 2 aware NAT, this command specifies the size of the initial port block of a subscriber in the pool. Additional port blocks (extended port blocks) for the Layer 2 aware subscriber must be explicitly enabled under the **l2-aware port-block-extension** hierarchy in the NAT pool. This command does not affect the size of extended port blocks. For deterministic pools, the port range begins with zero. However, for non-deterministic pools, the port range begins with one.
Range	0 to 64512
Notes	The following elements are part of a choice: **port-blocks** or **ports**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ingress-stats *boolean*

Synopsis	Collect ingress statistics
Context	**configure** service vprn *service-name* network-interface *interface-name* ingress-stats *boolean*
Tree	ingress-stats

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, ingress interface IP statistics are collected for the associated interface. This command is only applicable to IP statistics, and not to uRPF statistics. The following statistics are collected: • IPv4 offered packets • IPv4 offered octets • IPv6 offered packets • IPv6 offered octets **Note:** Octet statistics for IPv4 and IPv6 at IP interfaces include the Layer 2 frame overhead. When configured to **false** ingress interface IP statistics are not collected for the associated interface. The "in-packets" statistics field in the **statistics** command output is always 0.
Default	false
Introduced	16.0.R1
Platforms	All

ip-mtu *number*

Synopsis	IP MTU applied to outgoing packets
Context	**configure** service vprn *service-name* network-interface *interface-name* ip-mtu *number*
Tree	ip-mtu
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.
Range	512 to 9786
Units	bytes
Introduced	16.0.R1
Platforms	All

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** service vprn *service-name* network-interface *interface-name* ipv4
Tree	ipv4
Description	Commands in this context configure the IPv4 command options for the interface.
Introduced	16.0.R1
Platforms	All

Platforms	All

lag

Synopsis	Enter the **lag** context
Context	**configure** service vprn *service-name* network-interface *interface-name* lag
Tree	lag
Introduced	16.0.R1
Platforms	All

link-map-profile *number*

Synopsis	LAG link map profile for a SAP or network interface
Context	**configure** service vprn *service-name* network-interface *interface-name* lag link-map-profile *number*
Tree	link-map-profile
Description	This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration. If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.
Range	1 to 64

load-balancing

Synopsis	Enter the **load-balancing** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* network-interface *interface-name* load-balancing
Tree	load-balancing
Introduced	16.0.R1
Platforms	All

flow-label-load-balancing *boolean*

Synopsis	Enable flow label load balancing
Context	**configure** service vprn *service-name* network-interface *interface-name* load-balancing flow-label-load-balancing *boolean*
Tree	flow-label-load-balancing
Description	When configured to **true**, the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface. When configured to **false**, the router disables load balancing in ECMP and LAG.
Default	false
Introduced	21.5.R1
Platforms	All

ip-load-balancing *keyword*

Synopsis	IP load-balancing algorithm
Context	**configure** service vprn *service-name* network-interface *interface-name* load-balancing ip-load-balancing *keyword*
Tree	ip-load-balancing
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the **l4-load-balancing** command is enabled, this command also includes the source or destination port in the hash inputs.
Options	both, destination, source, inner-ip
Default	both
Introduced	16.0.R3
Platforms	All

lsr-load-balancing *keyword*

authentication-keychain *reference*

Synopsis	Keychain used to authenticate broadcast messages
Context	**configure** service vprn *service-name* ntp broadcast *reference* authentication-keychain *reference*
Tree	authentication-keychain
Description	This command configures the keychain used to authenticate messages sent by this node. The keychain infrastructure is queried using this keychain name to get the youngest key used for generating the authentication value for the message. When an NTP packet is received by this node, the keychain infrastructure is queried using the keychain name and the key ID extracted from the received message to get the key used to perform the authentication check. If authentication does not pass, the packet is rejected. Keychain entries also have a direction. The key ID and authentication keychain are mutually exclusive. When neither one is set, for example, the key ID has a value of '0' and the value of this command is empty, no authentication is performed.
Reference	**configure** system security keychains keychain *named-item*
Notes	The following elements are part of a choice: **authentication-keychain** or **key-id**.

strict *boolean*

Synopsis	Enable BFD strict mode
Context	**configure** service vprn *service-name* ospf *number* area *ipv4-address* interface *interface-name* bfd-liveness strict *boolean*
Tree	strict
Description	When configured to **true**, the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to **true**, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set. During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	23.3.R1
Platforms	All

strict-mode-holddown *number*

Synopsis	Adjacency up time delay after BFD session establishment
Context	**configure** service vprn *service-name* ospf *number* area *ipv4-address* interface *interface-name* bfd-liveness strict-mode-holddown *number*
Tree	strict-mode-holddown
Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	23.3.R1
Platforms	All

conditional-advertise-prefix *reference*

Synopsis	Policy to conditionally advertise interface prefixes
Context	**configure** service vprn *service-name* ospf *number* area *ipv4-address* interface *interface-name* conditional-advertise-prefix *reference*
Tree	conditional-advertise-prefix
Description	This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met. The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.
Reference	**configure** policy-options policy-statement *named-item-64*
Introduced	25.10.R1
Platforms	All

interface-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	**configure** service vprn *service-name* ospf *number* area *ipv4-address* interface *interface-name* interface-type *keyword*
Tree	interface-type
Description	This command specifies the interface type. **broadcast** - Broadcast network To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet. **non-broadcast** - Non-broadcast network **point-to-point** - Point-to-point link

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Set the interface type of an Ethernet link to **point-to-point** to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.

p2mp-nbma - Point-to-multipoint on a link without broadcast or multicast support

No designated router or backup designated router is elected on this type of interface and all OSPF neighbors connect through individual point-to-point links. Only VPRN and IES services interfaces support this interface type.

secondary - Multiple secondary adjacencies allowed

A **secondary** interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.

Options	broadcast, non-broadcast, point-to-point, secondary, p2mp-nbma
Introduced	16.0.R1
Platforms	All

load-balancing-weight *number*

Synopsis	Load-balancing weight
Context	**configure** service vprn *service-name* ospf *number* area *ipv4-address* interface *interface-name* load-balancing-weight *number*
Tree	load-balancing-weight
Range	1 to 4294967295
Introduced	20.2.R1
Platforms	All

loopfree-alternate

Synopsis	Enter the **loopfree-alternate** context
Context	**configure** service vprn *service-name* ospf *number* area *ipv4-address* interface *interface-name* loopfree-alternate
Tree	loopfree-alternate
Introduced	16.0.R3
Platforms	All

exclude *boolean*

Synopsis	Enable fast reroute at OSPF primary interface level

Range	0 to 2147483647
Default	0
Introduced	16.0.R1
Platforms	All

external-preference *number*

Synopsis	Preference for OSPF external routes
Context	**configure** service vprn *service-name* ospf *number* external-preference *number*
Tree	external-preference
Range	1 to 255
Default	150
Introduced	16.0.R1
Platforms	All

graceful-restart

Synopsis	Enable the **graceful-restart** context
Context	**configure** service vprn *service-name* ospf *number* graceful-restart
Tree	graceful-restart
Description	Commands in this context enable OSPF graceful restart (GR) to minimize service interruption. When the control plane of a GR-capable router fails or restarts, the neighboring routers (GR helpers) temporarily preserve OSPF forwarding information. Traffic continues to be forwarded to the restarting router using the last-known forwarding tables. If the control plane of the restarting router becomes operationally and administratively up within the grace period, the restarting router resumes normal OSPF operation. If the grace period expires, the restarting router is presumed inactive and the OSPF topology is recalculated to route traffic around the failure.
Introduced	16.0.R1
Platforms	All

helper-mode *boolean*

Synopsis	Enable graceful restart helper for OSPF
Context	**configure** service vprn *service-name* ospf *number* graceful-restart helper-mode *boolean*
Tree	helper-mode

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the router operates in OSPF graceful restart helper mode and assists restarting neighbors by maintaining adjacencies and forwarding state during their graceful restart interval. When configured to **false**, the router does not provide helper support and does not preserve adjacency or forwarding state for neighbors performing a graceful restart.
Default	true
Introduced	16.0.R1
Platforms	All

helper-resync-timeout *number*

Synopsis	Maximum resynchronization period
Context	**configure** service vprn *service-name* ospf *number* graceful-restart helper-resync-timeout *number*
Tree	helper-resync-timeout
Description	This command configures the maximum resynchronization period. If the resynchronization takes longer than the configured value, the graceful restart process stops, and the OSPF neighbor session falls back to the ExStart state for normal adjacency establishment.
Range	120 to 900
Units	seconds
Default	120
Introduced	26.3.R1
Platforms	All

protocol

Synopsis	Enter the **protocol** context
Context	**configure** service vprn *service-name* ospf *number* graceful-restart protocol
Tree	protocol
Description	Commands in this context configure which RFC is used for OSPF graceful restart signaling. If both protocols are enabled, the OSPF interface automatically uses the method indicated by the first received graceful restart signaling packet on that interface.
Introduced	26.3.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lls-restart-signaling *boolean*

Synopsis	Enable LLS restart signaling protocol
Context	**configure** service vprn *service-name* ospf *number* graceful-restart protocol lls-restart-signaling *boolean*
Tree	lls-restart-signaling
Description	When configured to **true**, the system enables support for RFC 4811 and RFC 4812. When configured to **false**, the system disables support for RFC 4811 and RFC 4812.
Default	false
Introduced	26.3.R1
Platforms	All

standard *boolean*

Synopsis	Enable standard protocol for restart signaling
Context	**configure** service vprn *service-name* ospf *number* graceful-restart protocol standard *boolean*
Tree	standard
Description	When configured to **true**, the system enables support for RFC 3623. When configured to **false**, the system disables support for RFC 3623.
Default	true
Introduced	26.3.R1
Platforms	All

strict-lsa-checking *boolean*

Synopsis	Perform strict LSA checking during graceful restart
Context	**configure** service vprn *service-name* ospf *number* graceful-restart strict-lsa-checking *boolean*
Tree	strict-lsa-checking
Default	true
Introduced	16.0.R1
Platforms	All

ignore-dn-bit *boolean*

Synopsis	Ignore the DN bit for OSPF LSA packets for the instance
Context	**configure** service vprn *service-name* ospf *number* ignore-dn-bit *boolean*
Tree	ignore-dn-bit
Default	false
Introduced	16.0.R1
Platforms	All

import-policy *reference*

Synopsis	Import policy names for routes from IGP to route table
Context	**configure** service vprn *service-name* ospf *number* import-policy *reference*
Tree	import-policy
Reference	**configure** policy-options policy-statement *named-item-64*
Max. instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

loopfree-alternate

Synopsis	Enable the **loopfree-alternate** context
Context	**configure** service vprn *service-name* ospf *number* loopfree-alternate
Tree	loopfree-alternate
Description	Commands in this context enable Loop-Free Alternate (LFA) computation by SPF under the IS-IS routing protocol level or under the OSPF routing protocol instance. When this command is enabled, it instructs the IGP SPF to attempt to pre-compute both a primary next hop and an LFA next hop for every learned prefix. IS-IS computes the primary SPF first and then computes the LFA SPF. The LFA backup next hop is only available after the LFA SPF is completed. When found, the LFA next hop is populated into the routing table along with the primary next hop for the prefix.
Introduced	16.0.R1
Platforms	All

exclude

Synopsis	Enter the **exclude** context
Context	**configure** service vprn *service-name* ospf *number* loopfree-alternate exclude
Tree	exclude
Introduced	16.0.R3
Platforms	All

prefix-policy *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	**configure** service vprn *service-name* ospf *number* loopfree-alternate exclude prefix-policy *reference*
Tree	prefix-policy
Description	This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation. An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.
Reference	**configure** policy-options policy-statement *named-item-64*
Max. instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R3
Platforms	All

max-ecmp-routes *number*

Synopsis	Maximum ECMP value for the OSPF instance
Context	**configure** service vprn *service-name* ospf *number* max-ecmp-routes *number*
Tree	max-ecmp-routes
Description	This command configures the OSPFv2 or OSPFv3 instance maximum ECMP value, which sets the maximum number of IP and tunnel ECMP next hops for an IPv4 prefix of an OSPFv2 or OSPFv3 route. **Note:** LDP-over-RSVP using LSP endpoint remains limited to a maximum of 64 tunnel next hops. CLI enforces that enabling **ldp-over-rsvp** under an IGP instance restricts the range of this command leaf in that same IGP instance to 64. Conversely, increasing the range of this command leaf to a value higher than 64 in an IGP instance results in blocking the enabling of the **ldp-over-rsvp** leaf in that same IGP instance.

remain-down-on-failure *boolean*

Synopsis	Force adjacency down on failure until session returns
Context	**configure** service vprn *service-name* ospf3 *number* area *ipv4-address* interface *interface-name* bfd-liveness remain-down-on-failure *boolean*
Tree	remain-down-on-failure
Default	false
Introduced	16.0.R1
Platforms	All

strict *boolean*

Synopsis	Enable BFD strict mode
Context	**configure** service vprn *service-name* ospf3 *number* area *ipv4-address* interface *interface-name* bfd-liveness strict *boolean*
Tree	strict
Description	When configured to **true**, the system uses BFD strict-mode. BFD strict-mode mandates that an active BFD session must exist between the OSPF neighbors before establishing a full adjacency. When configured to **true**, the router uses Link-Local Signaling (LLS) with the B-flag set to instruct the OSPF neighbors that BFD must be enabled on the link. BFD strict-mode requires both sides to have the B-flag set. During OSPFv3 BFD strict-mode operations, the router advertises the local interface IPv4 address TLV using LLS, but the SR OS router continues to use IPv6-based BFD sessions for both the IPv4 and IPv6 address families.
Default	false
Introduced	23.3.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

strict-mode-holddown *number*

Synopsis	Adjacency up time delay after BFD session establishment
Context	**configure** service vprn *service-name* ospf3 *number* area *ipv4-address* interface *interface-name* bfd-liveness strict-mode-holddown *number*
Tree	strict-mode-holddown
Description	This command configures a delay timer before bringing up the OSPF adjacency after the BFD session establishment. Holddown helps mitigate potential routing churn when BFD sessions are unstable. The holddown timer is reset when a BFD session operationally toggles.
Range	1 to 600
Units	seconds
Introduced	23.3.R1
Platforms	All

conditional-advertise-prefix *reference*

Synopsis	Policy to conditionally advertise interface prefixes
Context	**configure** service vprn *service-name* ospf3 *number* area *ipv4-address* interface *interface-name* conditional-advertise-prefix *reference*
Tree	conditional-advertise-prefix
Description	This command specifies the policy that allows IS-IS, OSPF, and OSPFv3 to selectively advertise system or loopback interface prefixes (including associated SIDs and SRv6 locators) only when conditions defined in the route policy are met. The route policy evaluates the presence or absence of specific routes in the routing table, typically using constructs like route-exists. If the policy evaluates to accept, the interface prefix is advertised; if not, the prefix is suppressed.
Reference	**configure** policy-options policy-statement *named-item-64*
Introduced	25.10.R1
Platforms	All

dead-interval *number*

Synopsis	OSPF wait time for Hellos before neighbor declared down
Context	**configure** service vprn *service-name* ospf3 *number* area *ipv4-address* interface *interface-name* dead-interval *number*

interface-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	**configure** service vprn *service-name* ospf3 *number* area *ipv4-address* interface *interface-name* interface-type *keyword*
Tree	interface-type
Description	This command specifies the interface type.

broadcast - Broadcast network

To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet.

non-broadcast - Non-broadcast network

point-to-point - Point-to-point link

Set the interface type of an Ethernet link to **point-to-point** to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.

p2mp-nbma - Point-to-multipoint on a link without broadcast or multicast support

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

No designated router or backup designated router is elected on this type of interface and all OSPF neighbors connect through individual point-to-point links. Only VPRN and IES services interfaces support this interface type.

secondary - Multiple secondary adjacencies allowed

A **secondary** interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.

Options	broadcast, non-broadcast, point-to-point, secondary, p2mp-nbma
Introduced	16.0.R1

graceful-restart

Synopsis	Enable the **graceful-restart** context
Context	**configure** service vprn *service-name* ospf3 *number* graceful-restart
Tree	graceful-restart
Description	Commands in this context enable OSPF graceful restart (GR) to minimize service interruption. When the control plane of a GR-capable router fails or restarts, the neighboring routers (GR helpers) temporarily preserve OSPF forwarding information. Traffic continues to be forwarded to the restarting router using the last-known forwarding tables. If the control plane of the restarting router becomes operationally and administratively up within the grace period, the restarting router resumes normal OSPF operation. If the grace

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

period expires, the restarting router is presumed inactive and the OSPF topology is recalculated to route traffic around the failure.

Introduced 16.0.R1

Platforms All

helper-mode *boolean*

Synopsis Enable graceful restart helper for OSPF

Context **configure** service vprn *service-name* ospf3 *number* graceful-restart helper-mode *boolean*

Tree helper-mode

Description When configured to **true**, the router operates in OSPF graceful restart helper mode and assists restarting neighbors by maintaining adjacencies and forwarding state during their graceful restart interval.

When configured to **false**, the router does not provide helper support and does not preserve adjacency or forwarding state for neighbors performing a graceful restart.

Default true

Introduced 16.0.R1

Platforms All

strict-lsa-checking *boolean*

Synopsis Perform strict LSA checking during graceful restart

Context **configure** service vprn *service-name* ospf3 *number* graceful-restart strict-lsa-checking *boolean*

Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

loopfree-alternate

Synopsis	Enable the **loopfree-alternate** context
Context	**configure** service vprn *service-name* ospf3 *number* loopfree-alternate
Tree	loopfree-alternate
Description	Commands in this context enable Loop-Free Alternate (LFA) computation by SPF under the IS-IS routing protocol level or under the OSPF routing protocol instance. When this command is enabled, it instructs the IGP SPF to attempt to pre-compute both a primary next hop and an LFA next hop for every learned prefix. IS-IS computes the primary SPF first and then computes the LFA SPF. The LFA backup next hop is only available after the LFA SPF is completed. When found, the LFA next hop is populated into the routing table along with the primary next hop for the prefix.
Introduced	16.0.R1
Platforms	All

exclude

Synopsis	Enter the **exclude** context
Context	**configure** service vprn *service-name* ospf3 *number* loopfree-alternate exclude

prefix-policy *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	**configure** service vprn *service-name* ospf3 *number* loopfree-alternate exclude prefix-policy *reference*
Tree	prefix-policy
Description	This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation. An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.
Reference	**configure** policy-options policy-statement *named-item-64*
Max. instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R3
Platforms	All

max-ecmp-routes *number*

Synopsis	Maximum ECMP value for the OSPF instance
Context	**configure** service vprn *service-name* ospf3 *number* max-ecmp-routes *number*
Tree	max-ecmp-routes
Description	This command configures the OSPFv2 or OSPFv3 instance maximum ECMP value, which sets the maximum number of IP and tunnel ECMP next hops for an IPv4 prefix of an OSPFv2 or OSPFv3 route. **Note:** LDP-over-RSVP using LSP endpoint remains limited to a maximum of 64 tunnel next hops. CLI enforces that enabling **ldp-over-rsvp** under an IGP instance restricts the range of this command leaf in that same IGP instance to 64. Conversely, increasing the range of this command leaf to a value higher than 64 in an IGP instance results in blocking the enabling of the **ldp-over-rsvp** leaf in that same IGP instance.
Range	1 to 128
Default	64
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

Context	**configure** service vprn *service-name* ospf3 *number* multicast-import *boolean*
Tree	multicast-import
Default	false
Introduced	16.0.R1
Platforms	All

overload *boolean*

Synopsis	Change local router state to appear overloaded
Context	**configure** service vprn *service-name* ospf3 *number* overload *boolean*
Tree	overload
Default	false
Introduced	16.0.R1
Platforms	All

overload-include-ext-1 *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	**configure** service vprn *service-name* ospf3 *number* overload-include-ext-1 *boolean*
Tree	overload-include-ext-1
Default	false
Introduced	19.7.R1
Platforms	All

overload-include-ext-2 *boolean*

Synopsis	Advertise routes with maximum metric value for overload
Context	**configure** service vprn *service-name* ospf3 *number* overload-include-ext-2 *boolean*
Tree	overload-include-ext-2
Default	false
Introduced	16.0.R1
Platforms	All

overload-include-stub *boolean*

Synopsis	Advertise all stub interfaces with max metric value
Context	**configure** service vprn *service-name* ospf3 *number* overload-include-stub *boolean*
Tree	overload-include-stub
Default	false
Introduced	16.0.R1
Platforms	All

overload-on-boot

Synopsis	Enable the **overload-on-boot** context
Context	**configure** service vprn *service-name* ospf3 *number* overload-on-boot
Tree	overload-on-boot
Introduced	16.0.R1
Platforms	All

timeout *number*

Synopsis	Time during which the router operates in overload state before reestablishing normal operations
Context	**configure** service vprn *service-name* ospf3 *number* overload-on-boot timeout *number*
Tree	timeout
Range	60 to 1800
Units	seconds
Introduced	16.0.R1
Platforms	All

preference *number*

Synopsis	Preference for OSPF internal routes
Context	**configure** service vprn *service-name* ospf3 *number* preference *number*
Tree	preference
Range	1 to 255
Default	10

max-lsa-count *number*

Synopsis	Max number of LSAs one router can advertise
Context	**configure** service vprn *service-name* ospf3 *number* rtr-adv-lsa-limit max-lsa-count *number*
Tree	max-lsa-count
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

overload-timeout *(number | keyword)*

Synopsis	Maximum time in overload after LSA limit is reached
Context	**configure** service vprn *service-name* ospf3 *number* rtr-adv-lsa-limit overload-timeout *(number | keyword)*
Tree	overload-timeout
Range	1 to 1800
Units	seconds
Options	forever
Default	forever
Introduced	16.0.R1
Platforms	All

warning-threshold *number*

Synopsis	Percentage of the max LSA count that causes a warning
Context	**configure** service vprn *service-name* ospf3 *number* rtr-adv-lsa-limit warning-threshold *number*
Tree	warning-threshold
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R1
Platforms	All

Use subject to Terms available at: www.nokia.com/terms.

suppress-dn-bit *boolean*

Synopsis	Suppress the DN bit setting for OSPF LSA packets
Context	**configure** service vprn *service-name* ospf3 *number* suppress-dn-bit *boolean*
Tree	suppress-dn-bit
Default	false
Introduced	16.0.R1
Platforms	All

timers

Synopsis	Enter the **timers** context
Context	**configure** service vprn *service-name* ospf3 *number* timers
Tree	timers
Introduced	16.0.R1
Platforms	All

incremental-spf-wait *number*

Synopsis	Delay time before an incremental SPF calculation starts
Context	**configure** service vprn *service-name* ospf3 *number* timers incremental-spf-wait *number*
Tree	incremental-spf-wait
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

lsa-accumulate *number*

Synopsis	Delay to gather LSAs before advertising to neighbors
Context	**configure** service vprn *service-name* ospf3 *number* timers lsa-accumulate *number*
Tree	lsa-accumulate
Range	0 to 1000
Units	milliseconds

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	1000
Introduced	16.0.R1
Platforms	All

lsa-arrival *number*

Synopsis	Min delay between receipt of same LSAs from neighbors
Context	**configure** service vprn *service-name* ospf3 *number* timers lsa-arrival *number*
Tree	lsa-arrival
Range	0 to 600000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

lsa-generate

Synopsis	Enter the **lsa-generate** context
Context	**configure** service vprn *service-name* ospf3 *number* timers lsa-generate
Tree	lsa-generate
Introduced	16.0.R1
Platforms	All

lsa-initial-wait *number*

Synopsis	First wait period between OSPF LSA generation
Context	**configure** service vprn *service-name* ospf3 *number* timers lsa-generate lsa-initial-wait *number*
Tree	lsa-initial-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	16.0.R1
Platforms	All

Use subject to Terms available at: www.nokia.com/terms.

lsa-second-wait *number*

Synopsis	Hold time between the first and second LSA generation
Context	**configure** service vprn *service-name* ospf3 *number* timers lsa-generate lsa-second-wait *number*
Tree	lsa-second-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	16.0.R1
Platforms	All

max-lsa-wait *number*

Synopsis	Max time between two LSAs being generated
Context	**configure** service vprn *service-name* ospf3 *number* timers lsa-generate max-lsa-wait *number*
Tree	max-lsa-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	16.0.R1
Platforms	All

redistribute-delay *number*

Synopsis	Hold down timer for external routes into OSPF
Context	**configure** service vprn *service-name* ospf3 *number* timers redistribute-delay *number*
Tree	redistribute-delay
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

spf-wait

Synopsis	Enter the **spf-wait** context
Context	**configure** service vprn *service-name* ospf3 *number* timers spf-wait
Tree	spf-wait
Introduced	16.0.R1
Platforms	All

spf-initial-wait *number*

Synopsis	Initial SPF calculation delay after a topology change
Context	**configure** service vprn *service-name* ospf3 *number* timers spf-wait spf-initial-wait *number*
Tree	spf-initial-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

spf-max-wait *number*

Synopsis	Max interval between two consecutive SPF calculations
Context	**configure** service vprn *service-name* ospf3 *number* timers spf-wait spf-max-wait *number*
Tree	spf-max-wait
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	16.0.R1
Platforms	All

spf-second-wait *number*

Synopsis	Hold time between the first and second SPF calculation

© 2026 Nokia.

Context	**configure** service vprn *service-name* ospf3 *number* timers spf-wait spf-second-wait *number*
Tree	spf-second-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

unicast-import *boolean*

Synopsis	Submit routes into the unicast Route Table Manager
Context	**configure** service vprn *service-name* ospf3 *number* unicast-import *boolean*
Tree	unicast-import
Default	true
Introduced	16.0.R1
Platforms	All

pcp

Synopsis	Enter the **pcp** context
Context	**configure** service vprn *service-name* pcp
Tree	pcp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [name] *named-item*

Synopsis	Enter the **server** list instance
Context	**configure** service vprn *service-name* pcp server *named-item*
Tree	server
Max. instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**name**] *named-item*

Synopsis	PCP server name
Context	**configure** service vprn *service-name* pcp server *named-item*
Tree	server
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the PCP server
Context	**configure** service vprn *service-name* pcp server *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** service vprn *service-name* pcp server *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dual-stack-lite-address *ipv6-unicast-address*

Synopsis	Inside Dual Stack Lite AFTR address

© 2026 Nokia.

number-down [number-lag-port-down] *number*

Synopsis	Enter the **number-down** list instance
Context	**configure** service vprn *service-name* pim interface *interface-name* mcac mc-constraints number-down *number*
Tree	number-down
Introduced	16.0.R1
Platforms	All

[**number-lag-port-down**] *number*

Synopsis	Number of ports that are down in this LAG link
Context	**configure** service vprn *service-name* pim interface *interface-name* mcac mc-constraints number-down *number*
Tree	number-down
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

level *number*

Synopsis	Level ID to associate with number of down LAG ports
Context	**configure** service vprn *service-name* pim interface *interface-name* mcac mc-constraints number-down *number* level *number*
Tree	level
Description	This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority.
Range	1 to 8
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.

use-lag-port-weight *boolean*

Synopsis	Use LAG port weight in calculating MCAC constraints
Context	**configure** service vprn *service-name* pim interface *interface-name* mcac mc-constraints use-lag-port-weight *boolean*
Tree	use-lag-port-weight
Description	When configured to **true**, port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.
Default	false
Introduced	16.0.R1
Platforms	All

policy *reference*

Synopsis	Multicast CAC policy name
Context	**configure** service vprn *service-name* pim interface *interface-name* mcac policy *reference*
Tree	policy
Description	This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment. Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode. If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect. Hierarchical MCAC (HMCAC) is supported on two levels simultaneously: • subscriber level and redirected interface when redirection is configured • subscriber level and group-interface level when redirection is unconfigured In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).
Reference	**configure** mcac policy *string*
Introduced	16.0.R1
Platforms	All

source-ip-udp

Synopsis	Key to consist of the source IP address and source UDP port of the RADIUS message
Context	**configure** service vprn *service-name* radius proxy *named-item* load-balance-key source-ip-udp
Tree	source-ip-udp
Notes	The following elements are part of a choice: (**attribute-1**, **attribute-2**, **attribute-3**, **attribute-4**, and **attribute-5**) or **source-ip-udp**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

purpose *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Purpose of the RADIUS proxy
Context	**configure** service vprn *service-name* radius proxy *named-item* purpose *keyword*
Tree	purpose
Options	accounting, authentication, accounting-authentication
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy
Context	**configure** service vprn *service-name* radius proxy *named-item* python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

require-message-authenticator *boolean*

Synopsis	Require Message-Authenticator in Access-Request
Context	**configure** service vprn *service-name* radius proxy *named-item* require-message-authenticator *boolean*
Tree	require-message-authenticator
Description	When configured to **true**, the RADIUS proxy silently drops Access-Requests received from the RADIUS client without a Message-Authenticator attribute. This command is ignored when configured for a distributed RADIUS proxy running on ISA/ESA.
Default	false
Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

secret *encrypted-leaf*

Synopsis	Format of the secret key to access the RADIUS proxy server
Context	**configure** service vprn *service-name* radius proxy *named-item* secret *encrypted-leaf*
Tree	secret
Description	This command specifies the secret key to access the RADIUS proxy server in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

send-accounting-response *boolean*

Synopsis	Allow RADIUS proxy server to respond to Accounting-Response messages
Context	**configure** service vprn *service-name* radius proxy *named-item* send-accounting-response *boolean*
Tree	send-accounting-response
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

wlan-gw

Synopsis	Enter the **wlan-gw** context
Context	**configure** service vprn *service-name* radius proxy *named-item* wlan-gw
Tree	wlan-gw
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

add-attributes

Synopsis	Enter the **add-attributes** context
Context	**configure** service vprn *service-name* radius proxy *named-item* wlan-gw add-attributes
Tree	add-attributes
Description	Commands in this context define attributes to be added to proxied messages.
Introduced	26.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

proxy-source-ip-address *boolean*

Synopsis	Adds proxy source IP or IPv6 address for RADIUS
Context	**configure** service vprn *service-name* radius proxy *named-item* wlan-gw add-attributes proxy-source-ip-address *boolean*
Tree	proxy-source-ip-address
Description	When configured to **true**, the router adds the Alc-Proxy-Source-IP-Address, the Alc-Proxy-Source-IPv6-Address VSAs, or both to proxied RADIUS messages.
Default	false
Introduced	26.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

address *ipv4-unicast-address*

Synopsis	IPv4 address of the distributed RADIUS proxy server
Context	**configure** service vprn *service-name* radius proxy *named-item* wlan-gw address *ipv4-unicast-address*
Tree	address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the IPv4 address of the distributed RADIUS proxy server for use by the access points.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *ipv6-unicast-without-local-address*

Synopsis	IPv6 address of the distributed RADIUS proxy server
Context	**configure** service vprn *service-name* radius proxy *named-item* wlan-gw ipv6-address *ipv6-unicast-without-local-address*
Tree	ipv6-address
Description	This command configures the IPv6 address of the distributed RADIUS proxy server for use by the access points.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	ISA WLAN gateway group
Context	**configure** service vprn *service-name* radius proxy *named-item* wlan-gw-group *reference*
Tree	wlan-gw-group
Reference	**configure** isa wlan-gw-group *number*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [name] *named-item*

Synopsis	Enter the **server** list instance
Context	**configure** service vprn *service-name* radius server *named-item*
Tree	server

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	External RADIUS server name
Context	**configure** service vprn *service-name* radius server *named-item*
Tree	server
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accept-coa *boolean*

Synopsis	Process Change of Authorization (CoA) messages
Context	**configure** service vprn *service-name* radius server *named-item* accept-coa *boolean*
Tree	accept-coa
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-port *number*

Synopsis	UDP port number of the RADIUS for accounting events
Context	**configure** service vprn *service-name* radius server *named-item* acct-port *number*
Tree	acct-port
Range	1 to 65535
Default	1813
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the RADIUS server
Context	**configure** service vprn *service-name* radius server *named-item* address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auth-port *number*

Synopsis	UDP port number of the RADIUS to be used as match criteria
Context	**configure** service vprn *service-name* radius server *named-item* auth-port *number*
Tree	auth-port
Range	1 to 65535
Default	1812
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** service vprn *service-name* radius server *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

insert-message-authenticator *boolean*

Synopsis	Insert Message-Authenticator in Access-Request
Context	**configure** service vprn *service-name* radius server *named-item* insert-message-authenticator *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	insert-message-authenticator
Description	When configured to **true**, the router inserts a Message-Authenticator attribute as the first attribute in Access-Request messages.
Default	false
Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pending-requests-limit *number*

Synopsis	Limit of the number for pending RADIUS requests
Context	**configure** service vprn *service-name* radius server *named-item* pending-requests-limit *number*
Tree	pending-requests-limit
Range	1 to 4096
Default	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python script policy to modify CoA messages
Context	**configure** service vprn *service-name* radius server *named-item* python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

require-message-authenticator *boolean*

Synopsis	Require Message-Authenticator in Access-Request reply
Context	**configure** service vprn *service-name* radius server *named-item* require-message-authenticator *boolean*
Tree	require-message-authenticator
Description	When configured to **true**, the router silently drops responses to Access-Requests without a Message-Authenticator attribute.
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

secret *encrypted-leaf*

Synopsis	Secret key associated with this RADIUS server
Context	**configure** service vprn *service-name* radius server *named-item* secret *encrypted-leaf*
Tree	secret
Description	This command specifies the secret key associated with this RADIUS server in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tls-client-profile *reference*

Synopsis	Use the TLS client profile for RADIUS over TLS
Context	**configure** service vprn *service-name* radius server *named-item* tls-client-profile *reference*
Tree	tls-client-profile
Description	When configured, the router uses the TLS client profile to encrypt RADIUS communication and RADIUS messages are sent using TLS.
Reference	**configure** system security tls client-tls-profile *named-item*
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reassembly

Synopsis	Enable the **reassembly** context
Context	**configure** service vprn *service-name* reassembly
Tree	reassembly
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-group *number*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group (including WLAN Gateway group) that executes the reassembly
Context	**configure** service vprn *service-name* reassembly nat-group *number*
Tree	nat-group
Max. range	0 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

to-base-network *boolean*

Synopsis	Allow reassembled traffic sent to network interface
Context	**configure** service vprn *service-name* reassembly to-base-network *boolean*
Tree	to-base-network
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

redundant-interface [interface-name] *interface-name*

Synopsis	Enter the **redundant-interface** list instance
Context	**configure** service vprn *service-name* redundant-interface *interface-name*
Tree	redundant-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**interface-name**] *interface-name*

Synopsis	Interface name
Context	**configure** service vprn *service-name* redundant-interface *interface-name*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	redundant-interface
String length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the interface
Context	**configure** service vprn *service-name* redundant-interface *interface-name* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *very-long-description*

Synopsis	Text description
Context	**configure** service vprn *service-name* redundant-interface *interface-name* description *very-long-description*
Tree	description
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time

Synopsis	Enter the **hold-time** context
Context	**configure** service vprn *service-name* redundant-interface *interface-name* hold-time
Tree	hold-time
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** service vprn *service-name* redundant-interface *interface-name* hold-time ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

down

Synopsis	Enter the **down** context
Context	**configure** service vprn *service-name* redundant-interface *interface-name* hold-time ipv4 down
Tree	down
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	**configure** service vprn *service-name* redundant-interface *interface-name* hold-time ipv4 down init-only *boolean*
Tree	init-only
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Down hold time for the IP interface

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* redundant-interface *interface-name* hold-time ipv4 down seconds *number*
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

up

Synopsis	Enter the **up** context
Context	**configure** service vprn *service-name* redundant-interface *interface-name* hold-time ipv4 up
Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Up hold time for the IP interface
Context	**configure** service vprn *service-name* redundant-interface *interface-name* hold-time ipv4 up seconds *number*
Tree	seconds
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	IP MTU applied to outgoing packets
Context	**configure** service vprn *service-name* redundant-interface *interface-name* ip-mtu *number*
Tree	ip-mtu

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.
Range	512 to 9786
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** service vprn *service-name* redundant-interface *interface-name* ipv4
Tree	ipv4
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

primary

Synopsis	Enable the **primary** context
Context	**configure** service vprn *service-name* redundant-interface *interface-name* ipv4 primary
Tree	primary
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address *ipv4-unicast-address*

Synopsis	IPv4 address to be assigned to the interface
Context	**configure** service vprn *service-name* redundant-interface *interface-name* ipv4 primary address *ipv4-unicast-address*
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	**configure** service vprn *service-name* redundant-interface *interface-name* ipv4 primary prefix-length *number*
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-ip *ipv4-unicast-address*

Synopsis	Remote IP address for the interface
Context	**configure** service vprn *service-name* redundant-interface *interface-name* ipv4 primary remote-ip *ipv4-unicast-address*
Tree	remote-ip
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enable the **ipv6** context
Context	**configure** service vprn *service-name* redundant-interface *interface-name* ipv6
Tree	ipv6
Description	Commands in this context configure IPv6 addresses on this interface.
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address [ipv6-address] *ipv6-address*

Synopsis	Enter the **address** list instance
Context	**configure** service vprn *service-name* redundant-interface *interface-name* ipv6 address *ipv6-address*

Tree	address
Max. instances	1
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ipv6-address**] *ipv6-address*

Synopsis	IPv6 address assigned to the interface
Context	**configure** service vprn *service-name* redundant-interface *interface-name* ipv6 address *ipv6-address*
Tree	address
Notes	This element is part of a list key.
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duplicate-address-detection *boolean*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable Duplicate Address Detection
Context	**configure** service vprn *service-name* redundant-interface *interface-name* ipv6 address *ipv6-address* duplicate-address-detection *boolean*
Tree	duplicate-address-detection
Description	When configured to **true**, the router enables Duplicate Address Detection (DAD). When configured to **false**, the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

eui-64 *boolean*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Form IPv6 address from prefix and 64-bit interface ID
Context	**configure** service vprn *service-name* redundant-interface *interface-name* ipv6 address *ipv6-address* eui-64 *boolean*
Tree	eui-64
Description	When configured to **true**, the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.
Default	false
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-length *number*

Synopsis	IPv6 address prefix length
Context	**configure** service vprn *service-name* redundant-interface *interface-name* ipv6 address *ipv6-address* prefix-length *number*
Tree	prefix-length
Range	4 to 128
Notes	This element is mandatory.
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

spoke-sdp [sdp-bind-id] *sdp-bind-id*

Synopsis	Enter the **spoke-sdp** list instance
Context	**configure** service vprn *service-name* redundant-interface *interface-name* spoke-sdp *sdp-bind-id*
Tree	spoke-sdp
Max. instances	1
Introduced	16.0.R1

authentication-key *encrypted-leaf*

Synopsis	Authentication password passed between RIP neighbors

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* rip authentication-key *encrypted-leaf*
Tree	authentication-key
Description	This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes. The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed. When unconfigured, this command removes the authentication password from the configuration and disables authentication. This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 102
Introduced	16.0.R4
Platforms	All

authentication-type *keyword*

Synopsis	Authentication type used between RIP neighbors
Context	**configure** service vprn *service-name* rip authentication-type *keyword*
Tree	authentication-type
Description	This command sets the type of authentication to be used between RIP neighbors. The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed. When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.
Options	none, password, md5, md20
Default	none
Introduced	16.0.R4
Platforms	All

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	**configure** service vprn *service-name* rip bfd-liveness *boolean*
Tree	bfd-liveness
Description	When configured to **true**, this command enables BFD to control the state of the associated protocol adjacency.

© 2026 Nokia.

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	**configure** service vprn *service-name* rip group *named-item* neighbor *interface-name* split-horizon *boolean*
Tree	split-horizon
Description	When configured to **true**, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity). When configured to **false**. this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.
Introduced	16.0.R4
Platforms	All

timers

Synopsis	Enable the **timers** context
Context	**configure** service vprn *service-name* rip group *named-item* neighbor *interface-name* timers
Tree	timers
Introduced	16.0.R4
Platforms	All

flush *number*

Synopsis	RIP flush timer
Context	**configure** service vprn *service-name* rip group *named-item* neighbor *interface-name* timers flush *number*
Tree	flush
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

timeout *number*

Synopsis	RIP timeout timer
Context	**configure** service vprn *service-name* rip group *named-item* neighbor *interface-name* timers timeout *number*
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4

Platforms	All

update *number*

Synopsis	Timer that controls the frequency of updates
Context	**configure** service vprn *service-name* rip group *named-item* neighbor *interface-name* timers update *number*
Tree	update
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

unicast-address [address] *ipv4-unicast-address*

Synopsis	Add a list entry for **unicast-address**
Context	**configure** service vprn *service-name* rip group *named-item* neighbor *interface-name* unicast-address *ipv4-unicast-address*
Tree	unicast-address
Introduced	16.0.R4
Platforms	All

[**address**] *ipv4-unicast-address*

Synopsis	Unicast IPv6 address for the neighbor
Context	**configure** service vprn *service-name* rip group *named-item* neighbor *interface-name* unicast-address *ipv4-unicast-address*
Tree	unicast-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

preference *number*

Synopsis	Route preference
Context	**configure** service vprn *service-name* rip group *named-item* preference *number*
Tree	preference
Range	1 to 255
Introduced	16.0.R4
Platforms	All

receive *keyword*

Synopsis	Accepted version on received packets
Context	**configure** service vprn *service-name* rip group *named-item* receive *keyword*
Tree	receive
Options	version-1, version-2, both, none
Introduced	16.0.R4
Platforms	All

send *keyword*

Synopsis	RIP version and method used to send RIP updates
Context	**configure** service vprn *service-name* rip group *named-item* send *keyword*
Tree	send
Options	none, version-1, broadcast, multicast
Introduced	16.0.R4
Platforms	All

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	**configure** service vprn *service-name* rip group *named-item* split-horizon *boolean*
Tree	split-horizon
Description	When configured to **true**, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**. this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.

Introduced 16.0.R4

Platforms All

Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

timeout *number*

Synopsis	RIP timeout timer
Context	**configure** service vprn *service-name* ripng group *named-item* timers timeout *number*
Tree	timeout
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

update *number*

Synopsis	Timer that controls the frequency of updates

send *keyword*

Synopsis	RIPng version and method used to send RIPng updates
Context	**configure** service vprn *service-name* ripng send *keyword*
Tree	send
Options	none, ripng
Default	ripng
Introduced	16.0.R4
Platforms	All

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	**configure** service vprn *service-name* ripng split-horizon *boolean*
Tree	split-horizon
Description	When configured to **true**, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity). When configured to **false**, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.
Default	true
Introduced	16.0.R4
Platforms	All

timers

Synopsis	Enable the **timers** context
Context	**configure** service vprn *service-name* ripng timers
Tree	timers
Introduced	16.0.R4
Platforms	All

Platforms	All

community [community-string] *encrypted-leaf*

Synopsis	Enter the **community** list instance
Context	**configure** service vprn *service-name* snmp community *encrypted-leaf*
Tree	community
Description	Commands in this context set the SNMP community names to be used with the associated VPRN instance. These VPRN community names are used to associate SNMP v1/v2c requests with a particular VPRN context and to return a reply that contains VPRN-specific data or limit SNMP access to data in a specific VPRN instance. VPRN SNMP communities configured with an access permission of 'r' are automatically associated with the default access group "snmp-vprn-ro" and the “vprn-view” view (read only). VPRN SNMP communities configured with an access permission of 'rw' are automatically associated with the default access group "snmp-vprn” and the “vprn-view” view (read/write). The community in an SNMP v1/v2 request determines the SNMP context (that is, the VPRN number for accessing SNMP tables) and not the VPRN of the incoming interface on which the request was received. For example, when an SNMP request arrives on VPRN 5 interface “ringo” with a destination IP address equal to the “ringo” interface, but the community in the SNMP request is the community configured against VPRN 101, the SNMP request is processed using the VPRN 101 context. (the response contains information about VPRN 101). Nokia recommends avoiding the use of a simple series of VPRN SNMP community values that are similar to each other (for example, avoid my-vprncomm-1, my-vprn-comm-2, and so on).
Introduced	16.0.R5
Platforms	All

[**community-string**] *encrypted-leaf*

static-routes

Synopsis	Enter the **static-routes** context
Context	**configure** service vprn *service-name* static-routes
Tree	static-routes
Introduced	16.0.R1
Platforms	All

hold-down

Synopsis	Enable the **hold-down** context
Context	**configure** service vprn *service-name* static-routes hold-down
Tree	hold-down
Description	Commands in this context enable the hold-down time feature globally for static routes in the system. The static route hold-down time is a mechanism to protect from rapid, fluctuating state changes of static routes resulting from issues with reachability because of link flap. The commands in this context apply to all static routes in the VPRN and the base router instance in which this hold-down time is configured in.
Introduced	16.0.R1
Platforms	All

initial *number*

Synopsis	Value for the initial hold-down time
Context	**configure** service vprn *service-name* static-routes hold-down initial *number*
Tree	initial
Description	This command specifies the initial value of the hold-down time globally for static routes in the system. When a static route is ready to become active, it remains inactive for the hold-down time before activating the static-route. If, during this hold-down period, the static route becomes inactive again because of factors such as interface failure, the hold-down timer is reset, effectively postponing the activation of the route until the next opportunity.
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-value *number*

Synopsis	Maximum value of the hold-down time
Context	**configure** service vprn *service-name* static-routes hold-down max-value *number*
Tree	max-value
Description	This command specifies the maximum value of the hold-down time globally for static routes in the system.
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Multiplier of the previous hold-down time
Context	**configure** service vprn *service-name* static-routes hold-down multiplier *number*
Tree	multiplier
Description	This command specifies the multiplier value by which the previous hold-down time is multiplied to calculate the new one. This value applies globally for static routes in the system.
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

route [ip-prefix] *(ipv4-prefix | ipv6-prefix)* route-type *keyword*

Synopsis	Enter the **route** list instance
Context	**configure** service vprn *service-name* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword*
Tree	route
Description	Commands in this context create a static route entry. A prefix and netmask must be specified. After the static route context for the specified prefix and netmask has been created, additional options associated with the static route or routes may be specified through the inclusion of additional static route commands. IPv6 static routes are not supported on the 7450 ESS except in mixed mode.

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

backup-tag *number*

Synopsis	Static route backup tag
Context	**configure** service vprn *service-name* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* backup-tag *number*
Tree	backup-tag
Description	This command associates a 4-byte backup route tag with the static route when the backup next-hop functionality is activated. The tag value is used in route policies to control distribution of the static route into other protocols when the backup next-hop function is activated for the associated static route. The tag specified at this level of the static route causes the tag values that are configured under the **next-hop**, **black-hole**, and **indirect** contexts of the static route to be ignored.

router-instance *string*

Synopsis	Router instance used for matching prefix list
Context	**configure** service vprn *service-name* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* blackhole prefix-list router-instance *string*
Tree	router-instance
Description	This command configures the router instance used for matching against the prefix list. If the conditional static route is configured in a VPRN and the router instance is configured as "Base", the activation of the static route is dependent on the existence of routes in the Base router and the evaluation of the prefix list and flag is done in that context. By default there is no configured value for this command option, and the conditional static route is dependent on the existence of routes in the same router instance as the static route itself, subject to the details of the prefix list and the flag setting. Entries in a referenced prefix list that are not match type 'exact' are interpreted as though they are 'exact'.
Introduced	24.7.R1
Platforms	All

tag *number*

Synopsis	Static route tag
Context	**configure** service vprn *service-name* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* blackhole tag *number*
Tree	tag
Description	This command associates a 4-byte route-tag with the static route. The tag value can be used in route policies to control distribution of the static route into other protocols. If a tag is specified at the prefix level of the static route entry, this command is ignored.
Range	1 to 4294967295
Introduced	16.0.R1

Platforms	All

follow

Synopsis	Enable the **follow** context
Context	**configure** service vprn *service-name* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* follow
Tree	follow
Description	Commands in this context enable follow behaviour. When a static route is enabled for follow behavior, the static route is installed into the FIB only for purposes of classifying matched packets to a source class and destination class. The forwarding of packets matching the static route prefix follows the same forwarding as the longest matching non-follow route. For example, if the static route configured for follow is 1.1.1.1/32 and the longest matching route for this prefix that is not the static route itself is a BGP-IPVPN route for 1.1.1.0/24, the /32 static route is programmed to follow the forwarding of the BGP-IPVPN route. This command is useful in solutions that use source class and destination class, for example the **configure service vprn bgp-ipvpn segment-routing-v6 flex-algo-class-forwarding** solution. Consider the following with static routes using the follow command: • They can only be added to a VPRN, not the Base router • They must have prefix-length 32 if the prefix is IPv4 • They must have prefix-length 128 if the prefix is IPv6 • They are not used to forward CPM originated traffic

© 2026 Nokia.

cpe-check [address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Enter the **cpe-check** list instance
Context	**configure** service vprn *service-name* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* indirect *(ipv4-address-no-zone | ipv6-address-no-zone)* cpe-check *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	cpe-check
Description	When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device. This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route. **Note**: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of **cpe-ping**, the node paces these minor events.

cpe-check [address] *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Enter the **cpe-check** list instance
Context	**configure** service vprn *service-name* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* interface *interface-name* cpe-check *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	cpe-check
Description	When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device. This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route. **Note**: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of **cpe-ping**, the node paces these minor events.
Max. instances	1
Introduced	16.0.R1

backup-next-hop

Synopsis	Enter the **backup-next-hop** context
Context	**configure** service vprn *service-name* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* next-hop *(ipv4-address-with-zone | ipv6-address-with-zone)* backup-next-hop
Tree	backup-next-hop
Description	Commands in this context configure static route entry fast failover.
Introduced	21.2.R1
Platforms	All

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Backup next-hop IP address
Context	**configure** service vprn *service-name* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* next-hop *(ipv4-address-with-zone | ipv6-address-with-zone)* backup-next-hop address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Description	This command specifies the backup IP forwarding address that is used for static route Fast ReRoute (FRR). The configured address, if reachable, acts as pre-installed backup forwarding information that can be used when the primary IP next-hop suddenly fails. The configured backup next-hop IP address can be directly or indirectly connected (using an IGP or tunnel) to the node. The backup next-hop forwarding information or the Next-hop Label Forwarding Entry (NHLFE) tunnel forwarding information from the IP Routing Table Manager (RTM) is used to preconfigure an IP fast-reroute backup path. One backup next-hop address can protect a single primary static route entry next-hop address without ECMP and it is only activated when the primary next-hop has no active ECMP. The configured IP address can be either on the network or the access side.
Introduced	21.2.R1
Platforms	All

bfd-liveness *boolean*

Synopsis	Use Bidirectional Forwarding Detection on this static route
Context	**configure** service vprn *service-name* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* next-hop *(ipv4-address-with-zone | ipv6-address-with-zone)* bfd-liveness *boolean*
Tree	bfd-liveness

Default	false
Introduced	16.0.R1
Platforms	All

community *community*

Synopsis	Community ID associated with the static route
Context	**configure** service vprn *service-name* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* next-hop *(ipv4-address-with-zone | ipv6-address-with-zone)* community *community*
Tree	community
Description	This command associates one BGP community (standard, extended, or large) with a next hop of the static route. This community can be matched in route policies and automatically added to BGP routes that are created from the static route. If at least one community is specified at the prefix level of the static route entry, this command is ignored.
String length	1 to 72
Introduced	16.0.R1
Platforms	All

router-instance *string*

Synopsis	Router instance used for matching prefix list
Context	**configure** service vprn *service-name* static-routes route *(ipv4-prefix | ipv6-prefix)* route-type *keyword* next-hop *(ipv4-address-with-zone | ipv6-address-with-zone)* prefix-list router-instance *string*
Tree	router-instance
Description	This command configures the router instance used for matching against the prefix list. If the conditional static route is configured in a VPRN and the router instance is configured as "Base", the activation of the static route is dependent on the existence of routes in the Base router and the evaluation of the prefix list and flag is done in that context. By default there is no configured value for this command option, and the conditional static route is dependent on the existence of routes in the same router instance as the static route itself, subject to the details of the prefix list and the flag setting. Entries in a referenced prefix list that are not match type 'exact' are interpreted as though they are 'exact'.
Introduced	24.7.R1
Platforms	All

direction *keyword*

Synopsis	Direction of traffic for cflowd sampling
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* cflowd-parameters sampling *keyword* direction *keyword*
Tree	direction
Description	This command configures the direction in which sampling occurs on the associated IP interfaces.
Options	ingress-only, egress-only, both
Default	ingress-only
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sample-profile *(keyword | number)*

Synopsis	Sample profile ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* cflowd-parameters sampling *keyword* sample-profile *(keyword | number)*
Tree	sample-profile
Description	This command defines the sampling rate profile associated with this interface.
Max. range	0 to 4294967295
Options	1
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

type *keyword*

Synopsis	Type of cflowd analysis
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* cflowd-parameters sampling *keyword* type *keyword*
Tree	type
Description	This command configures the cflowd sampling type on the associated IP interface.
Options	acl, interface
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

data-trigger

Synopsis	Enter the **data-trigger** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* data-trigger
Tree	data-trigger
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accept-ipv6-link-local-address *boolean*

Synopsis	Enable IPv6 Link Local Address to start authentication
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* data-trigger accept-ipv6-link-local-address *boolean*
Tree	accept-ipv6-link-local-address
Description	When configured to **true**, the system triggers authentication of the subscriber based on an IPv6 packet with a source IP Link Local Address (LLA). The authentication trigger only occurs if the anti-spoof is type nh-mac. If the anti-spoof is not nh-mac, the packet with an IPv6 LLA is ignored. When configured to **false**, the system ignores all IPv6 packets with a LLA as a source IP address.
Default	false
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of data-triggered host creation
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* data-trigger admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *very-long-description*

Synopsis	Text description
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* description *very-long-description*
Tree	description
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dynamic-routes-track-srrp

Synopsis	Enable the **dynamic-routes-track-srrp** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* dynamic-routes-track-srrp
Tree	dynamic-routes-track-srrp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis	Time before route state updated after SRRP transition
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* dynamic-routes-track-srrp hold-time *number*

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 bfd echo-receive *number*
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 bfd multiplier *number*
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padded-size *number*

Synopsis	BFD payload padded size
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 bfd padded-size *number*
Tree	padded-size
Description	This command configures the padded BFD message size.
Range	0 | 52 to 1512

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gi-address *ipv4-unicast-address*

Synopsis	GI address for the DHCP relay
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp gi-address *ipv4-unicast-address*
Tree	gi-address
Description	This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay. By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-populate

Synopsis	Enter the **lease-populate** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp lease-populate
Tree	lease-populate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2-header

Synopsis	Enable the **l2-header** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp lease-populate l2-header
Tree	l2-header
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac *mac-unicast-address*

Synopsis	IEEE address used in anti-spoofing entries for the SAP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp lease-populate l2-header mac *mac-unicast-address*
Tree	mac
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-leases *number*

Synopsis	Maximum number of DHCPv4 leases
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp lease-populate max-leases *number*
Tree	max-leases
Range	1 to 511999
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

match-circuit-id *boolean*

Synopsis	Enable Option 82 circuit ID on relayed DHCP packets
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp match-circuit-id *boolean*
Tree	match-circuit-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

offer-selection

Synopsis	Enter the **offer-selection** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp offer-selection
Tree	offer-selection

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac

Synopsis	Enter the **client-mac** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp offer-selection client-mac
Tree	client-mac
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp offer-selection client-mac discover-delay *number*
Tree	discover-delay
Description	This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-address *keyword*

Synopsis	Designated client MAC addresses for Offer selection
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp offer-selection client-mac mac-address *keyword*
Tree	mac-address
Description	This command specifies the client MAC addresses for which the Discover delay applies.
Options	odd, even
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp offer-selection discover-delay *number*
Tree	discover-delay
Description	This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [ipv4-address] *ipv4-unicast-address*

Synopsis	Enter the **server** list instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp offer-selection server *ipv4-unicast-address*
Tree	server
Max. instances	8
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ipv4-address**] *ipv4-unicast-address*

Synopsis	IP address of the DHCP server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp offer-selection server *ipv4-unicast-address*
Tree	server
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp offer-selection server *ipv4-unicast-address* discover-delay *number*
Tree	discover-delay
Description	This command configures the time to delay DHCP Discover messages sent to the server.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option-82

Synopsis	Enter the **option-82** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82
Tree	option-82
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 action *keyword*
Tree	action
Options	replace, drop, keep
Default	keep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

circuit-id

Synopsis	Enter the **circuit-id** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 circuit-id
Tree	circuit-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 circuit-id ascii-tuple
Tree	ascii-tuple
Notes	The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ifindex

Synopsis	Use the interface index for the circuit ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 circuit-id ifindex
Tree	ifindex
Notes	The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

none

Synopsis	Do not include the circuit ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 circuit-id none
Tree	none

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id

Synopsis	Use the SAP ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 circuit-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 circuit-id vlan-ascii-tuple
Tree	vlan-ascii-tuple
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id

Synopsis	Enter the **remote-id** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 remote-id
Tree	remote-id

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the remote ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 remote-id ascii-string *string-not-all-spaces*
Tree	ascii-string
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **ascii-string**, **mac**, or **none**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac

Synopsis	Use the MAC address for the remote ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 remote-id mac
Tree	mac
Notes	The following elements are part of a choice: **ascii-string**, **mac**, or **none**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

none

Synopsis	Do not include the remote ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 remote-id none
Tree	none
Notes	The following elements are part of a choice: **ascii-string**, **mac**, or **none**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor-specific-option

Synopsis	Enter the **vendor-specific-option** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 vendor-specific-option
Tree	vendor-specific-option
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 vendor-specific-option client-mac-address *boolean*
Tree	client-mac-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pool-name *boolean*

Synopsis	Send the pool name in the VSO
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 vendor-specific-option pool-name *boolean*
Tree	pool-name
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp option-82 vendor-specific-option sap-id *boolean*

© 2026 Nokia.

proxy-server

Synopsis	Enter the **proxy-server** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp proxy-server admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

emulated-server *ipv4-unicast-address*

Synopsis	IP address used as DHCP server address in SAP context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp proxy-server emulated-server *ipv4-unicast-address*
Tree	emulated-server
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-time

Synopsis	Enter the **lease-time** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp proxy-server lease-time
Tree	lease-time

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp proxy-server lease-time radius-override *boolean*
Tree	radius-override
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	DHCP lease time
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp proxy-server lease-time value *number*
Tree	value
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy name
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp python-policy *reference*
Tree	python-policy
Description	This command associates a Python policy name with the interface.
Reference	**configure** python python-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

relay-proxy

Synopsis	Enable the **relay-proxy** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp relay-proxy
Tree	relay-proxy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-forcerenew-without-lease *boolean*

Synopsis	Allow DHCPv4 FORCERENEW messages without lease state
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp relay-proxy allow-forcerenew-without-lease *boolean*
Tree	allow-forcerenew-without-lease
Default	false
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

release-update-src-ip *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp relay-proxy release-update-src-ip *boolean*
Tree	release-update-src-ip
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

siaddr-override *ipv4-unicast-address*

Synopsis	DHCP server IP address for address hiding function
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp relay-proxy siaddr-override *ipv4-unicast-address*
Tree	siaddr-override
String format	'ipv4-address' must use only digits and dots (no %zone)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

release-include-gi-address *boolean*

Synopsis	Include gateway IP address in DHCP Release messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp release-include-gi-address *boolean*
Tree	release-include-gi-address
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *ipv4-unicast-address*

Synopsis	IP addresses for DHCP server requests
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp server *ipv4-unicast-address*
Tree	server
Description	This command configures a list of servers that this interface forwards requests to. The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

src-ip-addr *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp src-ip-addr *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	src-ip-addr
Options	auto, gi-address
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trusted *boolean*

Synopsis	Relay untrusted packets
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 dhcp trusted *boolean*
Tree	trusted
Description	When configured to **true**, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request. A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit. This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

seconds *number*

Synopsis	Time used to limit the number of TTL expired messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 icmp ttl-expired seconds *number*
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-matching-address *boolean*

Synopsis	Use the subscriber interface address as source address
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 icmp ttl-expired use-matching-address *boolean*
Tree	use-matching-address
Description	When configured to **true**, the system uses a matching subscriber interface address as the source address of the ICMP TTL expired message. For matching to occur, the source address of the offending packet must be in the same subnet of the subscriber interface address. When configured to **false**, the system uses the first configured address.
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

unreachables

Synopsis	Enter the **unreachables** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 icmp unreachables
Tree	unreachables
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	16.0.R1

ignore-df-bit *boolean*

Synopsis	Ignore DF bit in the IPv4 header when fragmenting
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 ignore-df-bit *boolean*
Tree	ignore-df-bit
Description	When configured to **true**, fragmentation is applied according to the applicable egress MTU instead of the DF bit for frames egressing the WLAN-GW group. The DF bit is reset for frames that are fragmented. When configured to **false**, the router fragments a packet larger than the MTU if the DF bit is set to 0 and drops the packet if the DF bit is set to 1.
Default	false
Introduced	20.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

neighbor-discovery

Synopsis	Enter the **neighbor-discovery** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 neighbor-discovery
Tree	neighbor-discovery
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-proxy-arp *boolean*

Synopsis	Enable local proxy ARP on interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv4 neighbor-discovery local-proxy-arp *boolean*
Tree	local-proxy-arp
Description	When configured to **true**, the router enables local proxy ARP on the interface. When configured to **false**, the router does not respond to ARP requests for addresses on the same subnet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id

Synopsis	Use SAP ID in interface ID option in relay packet
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 option interface-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string-not-all-spaces*

Synopsis	String for interface ID option in DHCPv6 relay packet
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 option interface-id string *string-not-all-spaces*
Tree	string
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis	Send remote ID option in the DHCPv6 relay packet
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 option remote-id *boolean*
Tree	remote-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

override-slaac *boolean*

Synopsis	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 override-slaac *boolean*
Tree	override-slaac
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pd-managed-route

Synopsis	Enable the **pd-managed-route** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 pd-managed-route
Tree	pd-managed-route
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-hop *keyword*

Synopsis	Next hop type
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 pd-managed-route next-hop *keyword*
Tree	next-hop
Options	ipv4, ipv6
Default	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis	Enter the **proxy-server** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	proxy-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 proxy server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server client-applications dhcp *boolean*
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ppp *boolean*

Synopsis	Allow PPPoE clients to use DHCP relay functionality
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server client-applications ppp *boolean*
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *(number | keyword)*

Synopsis	Time for prefix to remain preferred on this interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rebind-timer *number*

Synopsis	Rebind timer (T2) for this interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server rebind-timer *number*
Tree	rebind-timer
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

renew-timer *number*

Synopsis	Renew timer (T1)
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server renew-timer *number*
Tree	renew-timer
Range	0 to 604800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server-id

Synopsis	Enter the **server-id** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server server-id
Tree	server-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en-ascii *string-not-all-spaces*

Synopsis	Vendor-assigned ID based on Enterprise Number (DUID-EN)
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server server-id duid-en-ascii *string-not-all-spaces*
Tree	duid-en-ascii
String length	1 to 58
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **duid-en-ascii**, **duid-en-hex**, or **duid-ll**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

duid-en-hex *string*

Synopsis	DUID system ID in hexadecimal format
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server server-id duid-en-hex *string*
Tree	duid-en-hex
String length	1 to 118
Notes	The following elements are part of a choice: **duid-en-ascii**, **duid-en-hex**, or **duid-ll**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-ll

Synopsis	Use link-layer address (DUID-LL) as DUID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server server-id duid-ll
Tree	duid-ll
Notes	The following elements are part of a choice: **duid-en-ascii**, **duid-en-hex**, or **duid-ll**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *(number | keyword)*

Synopsis	Time for prefix to remain valid on this interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 proxy-server valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

python-policy *reference*

Synopsis	Python policy
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

relay

Synopsis	Enter the **relay** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay
Tree	relay
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

advertise-selection

Synopsis	Enter the **advertise-selection** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection
Tree	advertise-selection

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac

Synopsis	Enter the **client-mac** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection client-mac
Tree	client-mac
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-address *keyword*

Synopsis	Designated client MAC addresses for Advertise selection
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection client-mac mac-address *keyword*
Tree	mac-address
Options	odd, even
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the **preference-option** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection client-mac preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection client-mac preference-option value *number*
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection client-mac solicit-delay *number*
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages sent from the designated client MAC addresses.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the **preference-option** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection preference-option value *number*
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [ipv6-address] *ipv6-address*

Synopsis	Enter the **server** list instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection server *ipv6-address*
Tree	server
Max. instances	8
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ipv6-address**] *ipv6-address*

Synopsis	IP address of the DHCPv6 server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection server *ipv6-address*
Tree	server
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the **preference-option** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection server *ipv6-address* preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection server *ipv6-address* preference-option value *number*
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection server *ipv6-address* solicit-delay *number*
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages sent to the server.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay advertise-selection solicit-delay *number*
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages. The delay is applied to DHCPv6 Solicit messages for which no overriding value is configured in the **server** instance or the **client-mac** context.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-reconfigure-without-lease *boolean*

Synopsis	Allow DHCPv6 Reconfigure messages without lease state
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay allow-reconfigure-without-lease *boolean*
Tree	allow-reconfigure-without-lease
Default	false
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay client-applications dhcp *boolean*
Tree	dhcp
Default	true

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Allow the PPP application to use DHCP relay functionality
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay client-applications ppp *boolean*
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-split

Synopsis	Enter the **lease-split** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay lease-split
Tree	lease-split
Description	Commands in this context configure DHCPv6 lease split. DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following: • the renew time T1 committed by the server (long renew time) • half of the preferred lifetime committed by the server when T1 committed by the server equals zero

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 lease split
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay lease-split admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *number*

Synopsis	DHCPv6 lease split valid lifetime (short lease time)
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay lease-split valid-lifetime *number*
Tree	valid-lifetime
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-address *ipv6-address*

Synopsis	Link address for the DHCPv6 relay messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay link-address *ipv6-address*
Tree	link-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

server *ipv6-address-with-zone*

Synopsis	DHCP6 server(s) to which the DHCP6 requests are forwarded
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay server *ipv6-address-with-zone*
Tree	server
String format	'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id
Max. instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-address *ipv6-unicast-address*

Synopsis	Source IPv6 address for the DHCPv6 relay messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 relay source-address *ipv6-unicast-address*
Tree	source-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

snooping

Synopsis	Enter the **snooping** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 snooping
Tree	snooping
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 snooping
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 snooping admin-state *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

user-db *reference*

Synopsis	Local user database used for authentication
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 user-db *reference*
Tree	user-db
Reference	**configure** subscriber-mgmt local-user-db *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-ident *keyword*

Synopsis	DHCP6 user identification for this interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 dhcp6 user-ident *keyword*
Tree	user-ident
Options	mac, mac-interface-id
Default	mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-bridged-mode *boolean*

Synopsis	Enable IPv6 IPoE bridged mode
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 ipoe-bridged-mode *boolean*
Tree	ipoe-bridged-mode
Default	false
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

neighbor-discovery

Synopsis	Enter the **neighbor-discovery** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 neighbor-discovery
Tree	neighbor-discovery
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dad-snooping *boolean*

Synopsis	Populate table via duplicate address detection packets
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 neighbor-discovery dad-snooping *boolean*
Tree	dad-snooping
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

neighbor-limit *number*

Synopsis	Maximum neighbor entries learned per SLAAC host
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 neighbor-discovery neighbor-limit *number*
Tree	neighbor-limit
Range	1 to 128
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qos-route-lookup *keyword*

Synopsis	QoS route lookup

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 qos-route-lookup *keyword*
Tree	qos-route-lookup
Options	destination
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

router-advertisements

Synopsis	Enter the **router-advertisements** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements
Tree	router-advertisements
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of router advertisements
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-mcast *keyword*

Synopsis	Protocol with forced multicast
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements force-mcast *keyword*
Tree	force-mcast
Options	ip, ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-advertisement-interval *number*

Synopsis	Maximum advertisement interval
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements max-advertisement-interval *number*
Tree	max-advertisement-interval
Range	900 to 1800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-advertisement-interval *number*

Synopsis	Minimum advertisement interval
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements min-advertisement-interval *number*
Tree	min-advertisement-interval
Range	900 to 1350
Units	seconds
Default	900
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

options

Synopsis	Enter the **options** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements options
Tree	options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

current-hop-limit *number*

Synopsis	Hop limit to be advertised

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements options current-hop-limit *number*
Tree	current-hop-limit
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dns

Synopsis	Enter the **dns** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements options dns
Tree	dns
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-rdnss *boolean*

Synopsis	Include the RDNSS server option 25
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements options dns include-rdnss *boolean*
Tree	include-rdnss
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rdnss-lifetime *(number | keyword)*

Synopsis	Maximum time for the RDNSS address to remain valid
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements options dns rdnss-lifetime *(number | keyword)*
Tree	rdnss-lifetime
Range	900 to 3600
Units	seconds

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-configuration *boolean*

Synopsis	Managed address configuration flag
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements options managed-configuration *boolean*
Tree	managed-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mtu *(number | keyword)*

Synopsis	Advertised MTU value
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements options mtu *(number | keyword)*
Tree	mtu
Range	1280 to 9212
Units	bytes
Options	not-included
Default	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other-stateful-configuration *boolean*

Synopsis	Other stateful configuration flag
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements options other-stateful-configuration *boolean*
Tree	other-stateful-configuration

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reachable-time *number*

Synopsis	Reachable time for advertisements
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements options reachable-time *number*
Tree	reachable-time
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retransmit-timer *number*

Synopsis	Retransmit time in router advertisements from interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements options retransmit-timer *number*
Tree	retransmit-timer
Range	0 to 1800000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-lifetime *(number | keyword)*

Synopsis	Router lifetime
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements options router-lifetime *(number | keyword)*
Tree	router-lifetime
Range	2700 to 9000

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Options	no-default-router
Default	4500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-options

Synopsis	Enter the **prefix-options** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements prefix-options
Tree	prefix-options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

autonomous *boolean*

Synopsis	Value of the autonomous flag
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements prefix-options autonomous *boolean*
Tree	autonomous
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-link *boolean*

Synopsis	Assign the prefix to an interface on the specified link
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements prefix-options on-link *boolean*
Tree	on-link
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

preferred-lifetime *(number | keyword)*

Synopsis	Time for a prefix to remain preferred
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements prefix-options preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	3600
	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *(number | keyword)*

Synopsis	Time for a prefix to remain valid
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-advertisements prefix-options valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	86400
	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-solicit

Synopsis	Enter the **router-solicit** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-solicit
Tree	router-solicit

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of router-solicit authentication
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-solicit admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

inactivity-timer *(number | keyword)*

Synopsis	Time before an inactive host is removed
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-solicit inactivity-timer *(number | keyword)*
Tree	inactivity-timer
Range	1 to 31536000
Units	seconds
Options	infinite
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-auth-interval *number*

Synopsis	Minimum time between successive authentication attempts
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* ipv6 router-solicit min-auth-interval *number*
Tree	min-auth-interval
Range	1 to 360000
Units	seconds
Default	300

local-address-assignment

Synopsis	Enter the **local-address-assignment** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* local-address-assignment
Tree	local-address-assignment
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of Local Address Assignment
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* local-address-assignment admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* local-address-assignment ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* local-address-assignment ipv4 client-applications
Tree	client-applications
Introduced	16.0.R1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-auth-policy *reference*

Synopsis	RADIUS authentication policy
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* radius-auth-policy *reference*
Tree	radius-auth-policy
Reference	**configure** subscriber-mgmt radius-authentication-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redundant-interface *reference*

Synopsis	Redundant interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* redundant-interface *reference*
Tree	redundant-interface
Reference	**configure** service vprn *service-name* redundant-interface *interface-name*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [sap-id] *sap*

Synopsis	Enter the **sap** list instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap*
Tree	sap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**sap-id**] *sap*

Synopsis	SAP ID

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap*
Tree	sap
String length	1 to 45
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-policy *reference*

Synopsis	Accounting policy
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* accounting-policy *reference*
Tree	accounting-policy
Reference	**configure** log accounting-policy *number*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the SAP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

anti-spoof *keyword*

Synopsis	Type of anti-spoof filtering
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* anti-spoof *keyword*
Tree	anti-spoof
Options	source-ip-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr

cpu-protection

Synopsis	Enter the **cpu-protection** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* cpu-protection
Tree	cpu-protection
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

eth-cfm-monitoring

Synopsis	Enable the **eth-cfm-monitoring** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* cpu-protection eth-cfm-monitoring
Tree	eth-cfm-monitoring
Notes	The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

aggregate

Synopsis	Apply rate limit to the sum of the per peer packet rates
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* cpu-protection eth-cfm-monitoring aggregate
Tree	aggregate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* cpu-protection eth-cfm-monitoring car
Tree	car
Introduced	16.0.R1

Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

ip-src-monitoring

Synopsis	Enable IP source monitoring for CPU protection
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* cpu-protection ip-src-monitoring
Tree	ip-src-monitoring
Notes	The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* cpu-protection mac-monitoring
Tree	mac-monitoring
Notes	The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

policy-id *reference*

Synopsis	CPM protection policy
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* cpu-protection policy-id *reference*
Tree	policy-id
Reference	**configure** system security cpu-protection policy *number*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

default-host

Synopsis	Enter the **default-host** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* default-host
Tree	default-host
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

ipv4 [address] *reference* prefix-length *number*

Synopsis	Enter the **ipv4** list instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* default-host ipv4 *reference* prefix-length *number*
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

[**address**] *reference*

Synopsis	IPv4 default host address
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* default-host ipv4 *reference* prefix-length *number*
Tree	ipv4
Reference	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 address *ipv4-unicast-address*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* default-host ipv4 *reference* prefix-length *number*
Tree	ipv4
Range	0 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1

Tree	collect-lmm-fc-stats
Description	Commands in this context configure per forwarding class (FC) LMM information collection. The commands **fc-in-profile** and **fc** in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively. This command and the **collect-lmm-stats** command are mutually exclusive when there is entity resource contention.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

fc *keyword*

Synopsis	Forwarding class name for profile-unaware counter

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm collect-lmm-fc-stats fc *keyword*
Tree	fc
Description	This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter. An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the **fc-in-profile** command under the **collect-lmm-fc-stats** context. When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.
Options	be, l2, af, l1, h2, ef, h1, nc
Max. instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

fc-in-profile *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm collect-lmm-fc-stats fc-in-profile *keyword*
Tree	fc-in-profile
Description	This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter. An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the **fc** command under the **collect-lmm-fc-stats** context. When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.
Options	be, l2, af, l1, h2, ef, h1, nc
Max. instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

collect-lmm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm collect-lmm-stats *boolean*
Tree	collect-lmm-stats
Description	When configured to **true**, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings. The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters. When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*

Synopsis	Enter the **mep** list instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

md-admin-name *reference*

Synopsis	Maintenance Domain (MD) name
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Reference	**configure** eth-cfm domain *admin-name*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ma-admin-name *reference*

Synopsis	Maintenance Association (MA) name
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Reference	**configure** eth-cfm domain *admin-name* association *admin-name*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

mep-id *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number*
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ais *boolean*

Synopsis	Enable the generation and the reception of AIS messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ais *boolean*
Tree	ais
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

alarm-notification

Synopsis	Enter the **alarm-notification** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification
Tree	alarm-notification
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm. Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-alarm-time *number*
Tree	fng-alarm-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* alarm-notification fng-reset-time *number*
Tree	fng-reset-time
Range	250 | 500 | 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

ccm *boolean*

Synopsis	Generate CCM messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm *boolean*
Tree	ccm
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-ltm-priority *number*
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* ccm-padding-size *number*
Tree	ccm-padding-size
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval)** is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

csf

Synopsis	Enable the **csf** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* csf
Tree	csf
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* csf multiplier *decimal-number*
Tree	multiplier
Range	0.0 | 2.0 to 30.0
Default	3.5
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

description *description*

Synopsis	Text description
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

eth-test

Synopsis	Enable the **eth-test** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the **oam eth-cfm eth-test** command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test bit-error-threshold *number*
Tree	bit-error-threshold
Range	0 to 11840
Units	bit errors
Default	1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

test-pattern

Synopsis	Enter the **test-pattern** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern crc-tlv *boolean*
Tree	crc-tlv
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* eth-test test-pattern pattern *keyword*
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros

Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* fault-propagation *keyword*
Tree	fault-propagation
Options	use-if-status-tlv – Use the interface TLV suspend-ccm – Suspend continuity check messages
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

grace

Synopsis	Enter the **grace** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

eth-ed

Synopsis	Enter the **eth-ed** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed max-rx-defect-window *number*
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed priority *number*
Tree	priority
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

rx-eth-ed *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed rx-eth-ed *boolean*
Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tx-eth-ed *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-ed tx-eth-ed *boolean*
Tree	tx-eth-ed

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

eth-vsm-grace

Synopsis	Enter the **eth-vsm-grace** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace rx-eth-vsm-grace *boolean*
Tree	rx-eth-vsm-grace
Description	When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to **false**, the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* grace eth-vsm-grace tx-eth-vsm-grace *boolean*
Tree	tx-eth-vsm-grace
Description	When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

low-priority-defect *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* low-priority-defect *keyword*
Tree	low-priority-defect
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm mep md-admin-name *reference* ma-admin-name *reference* mep-id *number* one-way-delay-threshold *number*

Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

squelch-ingress-levels *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* eth-cfm squelch-ingress-levels *number*
Tree	squelch-ingress-levels
Description	This command defines the levels of the ETH-CFM packets that are silently discarded. At ingress, ETH-CFM packets that meet the following conditions are silently discarded: • The packet is ingressing into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. • The packet level matches the configured levels. All ETH-CFM packets ingressing to the SAP or SDP binding that match the configured levels are dropped without regard for other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option. The list of levels must be a complete contiguous list from 0 up to the highest level that is to be dropped.
Range	0 to 7
Max. instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

fwd-wholesale

Synopsis	Enter the **fwd-wholesale** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* fwd-wholesale

Tree	scheduler-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	Scheduler policy name
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* ingress qos scheduler-policy policy-name *reference*
Tree	policy-name
Reference	**configure** qos scheduler-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lag

Synopsis	Enter the **lag** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* lag
Tree	lag
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-map-profile *number*

Synopsis	LAG link map profile for a SAP or network interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* lag link-map-profile *number*
Tree	link-map-profile
Description	This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration. If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.
Range	1 to 64
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

per-link-hash

Synopsis	Enter the **per-link-hash** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* lag per-link-hash
Tree	per-link-hash
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

class *number*

Synopsis	Class used on LAG egress using weighted per-link-hash
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* lag per-link-hash class *number*
Tree	class
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

weight *number*

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* lag per-link-hash weight *number*
Tree	weight
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

monitor-oper-group *reference*

Synopsis	Monitor operational group

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rip-policy *reference*

Synopsis	RIP policy name
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv4 *ipv4-unicast-address* mac *mac-unicast-address* rip-policy *reference*
Tree	rip-policy
Reference	**configure** subscriber-mgmt rip-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv

Synopsis	Enter the **shcv** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv4 *ipv4-unicast-address* mac *mac-unicast-address* shcv
Tree	shcv
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	SLA profile name
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv4 *ipv4-unicast-address* mac *mac-unicast-address* sla-profile *reference*
Tree	sla-profile
Reference	**configure** subscriber-mgmt sla-profile *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Sub-profile name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv4 *ipv4-unicast-address* mac *mac-unicast-address* sub-profile *reference*
Tree	sub-profile
Reference	**configure** subscriber-mgmt sub-profile *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis	Enter the **subscriber-id** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv4 *ipv4-unicast-address* mac *mac-unicast-address* subscriber-id
Tree	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *subscriber-id*

Synopsis	Subscriber identification
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv4 *ipv4-unicast-address* mac *mac-unicast-address* subscriber-id string *subscriber-id*
Tree	string
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **string** or **use-sap-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-sap-id

Synopsis	Use the SAP id as subscriber ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv4 *ipv4-unicast-address* mac *mac-unicast-address* subscriber-id use-sap-id

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	use-sap-id
Notes	The following elements are part of a choice: **string** or **use-sap-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6 [prefix] *ipv6-unicast-prefix* mac *mac-unicast-address*

Synopsis	Enter the **ipv6** list instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address*
Tree	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**prefix**] *ipv6-unicast-prefix*

Synopsis	IPv6 prefix
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address*
Tree	ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac *mac-unicast-address*

Synopsis	MAC address
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address*
Tree	ipv6
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
MD-CLI default	00:00:00:00:00:00
Notes	This element is part of a list key.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the static host
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp-string *ancp-string*

Synopsis	ANCP string
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* ancp-string *ancp-string*
Tree	ancp-string
String length	1 to 63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile

Synopsis	Enter the **app-profile** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* app-profile
Tree	app-profile
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

profile *reference*

Synopsis	Application profile used by the static host
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* app-profile profile *reference*
Tree	profile
Reference	**configure** application-assurance group *number* partition *number* policy app-profile *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

scope *keyword*

Synopsis	Scope of the static host application profile
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* app-profile scope *keyword*
Tree	scope
Options	subscriber, mac
Default	subscriber
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

int-dest-id *int-dest-id*

Synopsis	Intermediate destination ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* int-dest-id *int-dest-id*
Tree	int-dest-id
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mac-linking *ipv4-unicast-address*

Synopsis	IPv6 host linked with IPv4 host via learned MAC address
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* mac-linking *ipv4-unicast-address*
Tree	mac-linking
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-route [ipv6-prefix] *ipv6-unicast-prefix*

Synopsis	Enter the **managed-route** list instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix*
Tree	managed-route
Description	Commands in this context configure managed route parameters.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ipv6-prefix**] *ipv6-unicast-prefix*

Synopsis	Managed route prefix associated with IPv6 static host
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix*
Tree	managed-route
Description	This command configures the managed route prefix. The prefix length must be in the range of 1 to 128.
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

cpe-check

Synopsis	Enable the **cpe-check** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix* cpe-check
Tree	cpe-check
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the target CPE device
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix* cpe-check destination-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	destination-ip-address
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drop-count *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix* cpe-check drop-count *number*
Tree	drop-count
Range	1 to 255
Default	3
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

failed-action

Synopsis	Enter the **failed-action** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix* cpe-check failed-action
Tree	failed-action
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

metric *number*

Synopsis	Metric associated with the provisioned managed route
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix* cpe-check failed-action metric *number*
Tree	metric
Max. range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: (**metric**, **preference**, and **tag**) or **withdraw**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis	Preference associated to the provisioned managed route
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix* cpe-check failed-action preference *number*
Tree	preference
Range	0 to 255
Notes	The following elements are part of a choice: (**metric**, **preference**, and **tag**) or **withdraw**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tag *number*

Synopsis	Route tag used if CPE check fails
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix* cpe-check failed-action tag *number*
Tree	tag
Max. range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: (**metric**, **preference**, and **tag**) or **withdraw**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

withdraw *boolean*

Synopsis	Withdraw the route when the CPE check fails
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix* cpe-check failed-action withdraw *boolean*
Tree	withdraw
Default	false
Notes	The following elements are part of a choice: (**metric**, **preference**, and **tag**) or **withdraw**.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix* cpe-check interval *number*
Tree	interval
Range	1 to 255
Units	seconds
Default	1
Introduced	22.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

log *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix* cpe-check log *boolean*
Tree	log
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padding-size *number*

Synopsis	Padding size for CPE connectivity checks
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix* cpe-check padding-size *number*
Tree	padding-size
Range	0 to 16384
Units	bytes
Default	56
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Source IP address used in the ICMP messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* managed-route *ipv6-unicast-prefix* cpe-check source-ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	source-ip-address
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

sla-profile *reference*

Synopsis	SLA profile name
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* sla-profile *reference*
Tree	sla-profile
Reference	**configure** subscriber-mgmt sla-profile *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Sub-profile name
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* sub-profile *reference*
Tree	sub-profile
Reference	**configure** subscriber-mgmt sub-profile *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis	Enter the **subscriber-id** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* subscriber-id
Tree	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *subscriber-id*

Synopsis	Subscriber identification

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* subscriber-id string *subscriber-id*
Tree	string
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **string** or **use-sap-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-sap-id

Synopsis	Use the SAP id as subscriber ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host ipv6 *ipv6-unicast-prefix* mac *mac-unicast-address* subscriber-id use-sap-id
Tree	use-sap-id
Notes	The following elements are part of a choice: **string** or **use-sap-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-learning

Synopsis	Enter the **mac-learning** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host mac-learning
Tree	mac-learning
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

data-triggered *boolean*

Synopsis	Enable learning of MAC addresses from data packets
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host mac-learning data-triggered *boolean*
Tree	data-triggered
Default	false

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

single-mac *boolean*

Synopsis	Enforce single MAC address and subscriber for the SAP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* static-host mac-learning single-mac *boolean*
Tree	single-mac
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-sla-mgmt

Synopsis	Enter the **sub-sla-mgmt** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt
Tree	sub-sla-mgmt
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of SAP subscriber management
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis	Enter the **defaults** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt defaults
Tree	defaults
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Default application profile name for this SAP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt defaults app-profile *reference*
Tree	app-profile
Reference	**configure** application-assurance group *number* partition *number* policy app-profile *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

int-dest-id

Synopsis	Enter the **int-dest-id** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt defaults int-dest-id
Tree	int-dest-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *int-dest-id*

Synopsis	Use the configured string
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt defaults int-dest-id string *int-dest-id*
Tree	string
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **string** or **top-q-tag**.
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

top-q-tag

Synopsis	Use the top Q-tag of this SAP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt defaults int-dest-id top-q-tag
Tree	top-q-tag
Notes	The following elements are part of a choice: **string** or **top-q-tag**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	Default SLA profile for hosts on this SAP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt defaults sla-profile *reference*
Tree	sla-profile
Reference	**configure** subscriber-mgmt sla-profile *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Default subscriber profile for the SAP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt defaults sub-profile *reference*
Tree	sub-profile
Reference	**configure** subscriber-mgmt sub-profile *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis	Enter the **subscriber-id** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt defaults subscriber-id
Tree	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-id

Synopsis	Use auto-generated subscriber identification string
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt defaults subscriber-id auto-id
Tree	auto-id
Notes	The following elements are part of a choice: **auto-id**, **sap-id**, or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id

Synopsis	Use SAP ID as default subscriber identification string
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt defaults subscriber-id sap-id
Tree	sap-id
Notes	The following elements are part of a choice: **auto-id**, **sap-id**, or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *subscriber-id*

Synopsis	Default subscriber identification string for the SAP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt defaults subscriber-id string *subscriber-id*
Tree	string
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **auto-id**, **sap-id**, or **string**.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

single-sub-parameters

Synopsis	Enter the **single-sub-parameters** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt single-sub-parameters
Tree	single-sub-parameters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

non-sub-traffic

Synopsis	Enable the **non-sub-traffic** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt single-sub-parameters non-sub-traffic
Tree	non-sub-traffic
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile *reference*

Synopsis	Application profile name for all non-subscriber traffic
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt single-sub-parameters non-sub-traffic app-profile *reference*
Tree	app-profile
Reference	**configure** application-assurance group *number* partition *number* policy app-profile *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	SLA profile applicable for all non-subscriber traffic

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt single-sub-parameters non-sub-traffic sla-profile *reference*
Tree	sla-profile
Reference	**configure** subscriber-mgmt sla-profile *external-named-item*
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Subscriber profile all non-subscriber traffic
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt single-sub-parameters non-sub-traffic sub-profile *reference*
Tree	sub-profile
Reference	**configure** subscriber-mgmt sub-profile *external-named-item*
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id *subscriber-id*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Subscriber ID applied for all non-subscriber traffic
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt single-sub-parameters non-sub-traffic subscriber-id *subscriber-id*
Tree	subscriber-id
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

profiled-traffic-only *boolean*

Synopsis	Include all traffic in subscriber profile
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt single-sub-parameters profiled-traffic-only *boolean*
Tree	profiled-traffic-only
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy *reference*

Synopsis	Subscriber identification policy used on this SAP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt sub-ident-policy *reference*
Tree	sub-ident-policy
Reference	**configure** subscriber-mgmt sub-ident-policy *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-limit *(keyword | number)*

Synopsis	Maximum number of subscribers on this SAP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap *sap* sub-sla-mgmt subscriber-limit *(keyword | number)*
Tree	subscriber-limit
Range	1 to 131071
Options	no-limit
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-parameters

Synopsis	Enter the **sap-parameters** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap-parameters
Tree	sap-parameters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

anti-spoof *keyword*

Synopsis	Anti-spoof type of the SAP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap-parameters anti-spoof *keyword*
Tree	anti-spoof
Options	ip-mac, nh-mac
Default	ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap-parameters description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-sla-mgmt

Synopsis	Enter the **sub-sla-mgmt** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* sap-parameters sub-sla-mgmt
Tree	sub-sla-mgmt
Introduced	16.0.R1

group-name *reference*

Synopsis	Operational group name
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* srrp *number* monitor-oper-group group-name *reference*
Tree	group-name
Reference	**configure** service oper-group *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

priority-step *number*

Synopsis	Step value to change priority of SRRP instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* srrp *number* monitor-oper-group priority-step *number*
Tree	priority-step
Range	1 to 10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

one-garp-per-sap *boolean*

Synopsis	Send one gratuitous ARP to each SAP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* srrp *number* one-garp-per-sap *boolean*
Tree	one-garp-per-sap
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

oper-group *reference*

Synopsis	Operational group associated with an SRRP instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* srrp *number* oper-group *reference*
Tree	oper-group

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures an operational group in an SRRP instance. The state of an operational group under SRRP instance is up when the SRRP instance is in a Master state, and down for any other SRRP state.
Reference	**configure** service oper-group *named-item*
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy *reference*

Synopsis	VRRP priority control policy associated with the SRRP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* srrp *number* policy *reference*
Tree	policy
Reference	**configure** vrrp policy *number*
Max. instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preempt *boolean*

Synopsis	Allow the SRRP instance to override an existing master
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* srrp *number* preempt *boolean*
Tree	preempt
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

priority *number*

Synopsis	Priority for this interface at this level
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* srrp *number* priority *number*
Tree	priority

© 2026 Nokia.

Range	1 to 254
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

send-fib-population-packets *keyword*

Synopsis	Mode used to send FIB population packets on switchover
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* srrp *number* send-fib-population-packets *keyword*
Tree	send-fib-population-packets
Options	all, outer-tag-only
Default	all
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suppress-aa-sub *boolean*

Synopsis	Enable application assurance suppression for ESM subscribers
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* suppress-aa-sub *boolean*
Tree	suppress-aa-sub
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tos-marking-state *keyword*

Synopsis	TOS marking state
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* tos-marking-state *keyword*
Tree	tos-marking-state
Options	trusted, untrusted
Default	trusted
Introduced	16.0.R1

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

delay-auth *boolean*

Synopsis	Delay AP-MAC until after ARP/ND authentication response
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw learn-ap-mac delay-auth *boolean*
Tree	delay-auth
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mcs-peer

Synopsis	Enable the **mcs-peer** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw mcs-peer
Tree	mcs-peer
Description	Commands in this context configure a multi-chassis synchronization peer.
Introduced	23.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

address *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the MCS peer
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw mcs-peer address *reference*
Tree	address
Description	This command configures the IPv4 address or the global IPv6 unicast address for a multi-chassis synchronization peer.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Reference	**configure** redundancy multi-chassis peer *(ipv4-address-no-zone | ipv6-address-no-zone)*
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

sync-tag *named-item*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag shared by MCS peers
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw mcs-peer sync-tag *named-item*
Tree	sync-tag
Description	This command configures the synchronization tag for synchronization of ESM and the tunnel state for ESM over soft-GRE with an MCS peer.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mobility

Synopsis	Enter the **mobility** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw mobility
Tree	mobility
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

Range	160 to 10240
Units	bytes
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-egress-qos

Synopsis	Enter the **tunnel-egress-qos** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw tunnel-egress-qos
Tree	tunnel-egress-qos
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of egress QoS for WLAN-GW tunnels
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw tunnel-egress-qos admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

agg-rate-limit *(number | keyword)*

Synopsis	HQoS aggregate rate limit
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw tunnel-egress-qos agg-rate-limit *(number | keyword)*
Tree	agg-rate-limit
Range	1 to 100000000
Options	max

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	max
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

granularity *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Granularity of the egress shaping for WLAN Gateway
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw tunnel-egress-qos granularity *keyword*
Tree	granularity
Options	per-tunnel – Applied to each tunnel per-retailer – Applied to each retailer Mobile Network Operator's fraction of the tunnel payload
Default	per-tunnel
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hold-time *(number | keyword)*

Synopsis	Minimum time to hold egress shaping resources
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw tunnel-egress-qos hold-time *(number | keyword)*
Tree	hold-time
Range	1 to 86400
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

multi-client-only *boolean*

Synopsis	Allow shaping for tunnel traffic for multiple UEs

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw tunnel-egress-qos multi-client-only *boolean*
Tree	multi-client-only
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

qos *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress QoS policy linked with each interface tunnel
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw tunnel-egress-qos qos *reference*
Tree	qos
Reference	**configure** qos sap-egress *qos-policy-name*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler-policy *reference*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress scheduler policy linked with each tunnel
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw tunnel-egress-qos scheduler-policy *reference*
Tree	scheduler-policy
Reference	**configure** qos scheduler-policy *named-item*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tunnel-encaps

Synopsis	Enter the **tunnel-encaps** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw tunnel-encaps
Tree	tunnel-encaps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

learn-l2tp-cookie *(keyword | hex-string)*

Synopsis	System that learns the cookie from L2TP tunnels terminating on this interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw tunnel-encaps learn-l2tp-cookie *(keyword | hex-string)*
Tree	learn-l2tp-cookie
String length	6
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Options	never – Never interpret the cookie always – Interpret cookie regardless of first two octets value
Default	never
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-range [range] *string*

Synopsis	Enter the **vlan-range** list instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string*
Tree	vlan-range
Description	Commands in this context configure the VLAN-to-retail-map command options to map dot1q tags to the retail service ID. The Wi-Fi AP inserts a dot1q tag in the Layer 2 frame within the GRE tunnel to indicate the retail service provider for the subscriber.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**range**] *string*

Synopsis	VLAN tag range
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string*
Tree	vlan-range
String format	'range' must be VLAN tag, range low..high, or unmatched
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication

Synopsis	Enter the **authentication** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* authentication
Tree	authentication
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis	Minimum time UE held down after failed authentication
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* authentication hold-time *number*
Tree	hold-time
Range	0 to 3600
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

local

Synopsis	Enable the **local** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* authentication local
Tree	local
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

coa-policy *reference*

Synopsis	RADIUS ISA policy applied to CoA or disconnect messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* authentication local coa-policy *reference*
Tree	coa-policy
Reference	**configure** aaa radius isa-policy *named-item*
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-ue-state *keyword*

Synopsis	UE state accepted for immediate authentication
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* authentication local default-ue-state *keyword*
Tree	default-ue-state
Options	portal – Portal redirect UE using the http-redirect-policy dsm – DSM UE using DSM parameters
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

on-control-plane *boolean*

Synopsis	Allow authentication on first control plane packet
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* authentication on-control-plane *boolean*
Tree	on-control-plane

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy *reference*

Synopsis	RADIUS policy for authentication
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* authentication policy *reference*
Tree	policy
Reference	**configure** aaa radius isa-policy *named-item*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-mismatch-timeout *number*

Synopsis	Timeout if packet received with a non-matching VLAN tag
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* authentication vlan-mismatch-timeout *number*
Tree	vlan-mismatch-timeout
Range	5 to 60
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

data-triggered-ue-creation

Synopsis	Enter the **data-triggered-ue-creation** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* data-triggered-ue-creation
Tree	data-triggered-ue-creation
Description	Commands in this context configure data-triggered subscriber creation for Wi-Fi subscribers. Data-triggered UE creation only works upon receipt of TCP and UDP packets.
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of data-triggered UE creation
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* data-triggered-ue-creation admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arp *boolean*

Synopsis	Authenticate ARP packets received from an unknown UE
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* data-triggered-ue-creation arp *boolean*
Tree	arp
Default	false
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

create-proxy-cache-entry

Synopsis	Enter the **create-proxy-cache-entry** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* data-triggered-ue-creation create-proxy-cache-entry
Tree	create-proxy-cache-entry
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mac-format *mac-specification*

Synopsis	MAC address format
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* data-triggered-ue-creation create-proxy-cache-entry mac-format *mac-specification*
Tree	mac-format
String length	2 to 7
String format	'mac-specification' must be ab:, XY-, mmmm. or xx (e.g. ab: for 00:0c:f1:99:85:b8)
Default	aa:
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis	Enable the **proxy-server** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* data-triggered-ue-creation create-proxy-cache-entry proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

name *named-item*

Synopsis	RADIUS Proxy server name
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* data-triggered-ue-creation create-proxy-cache-entry proxy-server name *named-item*
Tree	name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

router-instance *string*

Synopsis	Router instance of the RADIUS proxy server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* data-triggered-ue-creation create-proxy-cache-entry proxy-server router-instance *string*
Tree	router-instance
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ospf *boolean*

Synopsis	Authenticate OSPF packets received from an unknown UE
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* data-triggered-ue-creation ospf *boolean*
Tree	ospf
Description	When configured to **true**, the system triggers UE authentication based on OSPFv2 or OSPFv3 packets. These packets are used with the dynamic VPLS service.
Default	false
Introduced	23.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp4

Synopsis	Enter the **dhcp4** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp4
Tree	dhcp4
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCPv4

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp4 admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dns *ipv4-unicast-address*

Synopsis	DNS servers signaled in DHCP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp4 dns *ipv4-unicast-address*
Tree	dns
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2-aware-ip-address *(ipv4-unicast-address | keyword)*

Synopsis	L2-Aware NAT inside IP address
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp4 l2-aware-ip-address *(ipv4-unicast-address | keyword)*
Tree	l2-aware-ip-address
Options	from-pool – IP address allocated from a pool
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lease-time

Synopsis	Enter the **lease-time** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp4 lease-time
Tree	lease-time
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

active *number*

Synopsis	Lease time an authenticated user
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp4 lease-time active *number*
Tree	active
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial *number*

Synopsis	Lease time for migrant user (unauthenticated)
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp4 lease-time initial *number*
Tree	initial
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

nbns *ipv4-unicast-address*

Synopsis	NetBIOS servers signaled in DHCP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp4 nbns *ipv4-unicast-address*
Tree	nbns

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp6

Synopsis	Enter the **dhcp6** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp6
Tree	dhcp6
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the protocol
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp6 admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime

Synopsis	Enter the **preferred-lifetime** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp6 preferred-lifetime
Tree	preferred-lifetime
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

active *number*

Synopsis	Preferred signaled lifetime after full authentication
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp6 preferred-lifetime active *number*
Tree	active
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

initial *number*

Synopsis	Signaled preferred lifetime after full authentication
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp6 preferred-lifetime initial *number*
Tree	initial
Range	300 to 3600
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime

Synopsis	Enter the **valid-lifetime** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dhcp6 valid-lifetime
Tree	valid-lifetime
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

captive-portal-api-url *one-time-http-redirect-url*

Synopsis	Captive portal URL
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm captive-portal-api-url *one-time-http-redirect-url*
Tree	captive-portal-api-url
Description	This command specifies a URL for an RFC 8908 captive portal API server that is included in DHCP, RA, and DHCPv6 messages as described in RFC 8910. This command supports the same macro substitutions as the **configure subscriber-mgmt http-redirect-policy url** command. This command is mutually exclusive with the **one-time-redirect** and **send-unrestricted-portal-url** commands in the same context. When unconfigured, the WLAN-GW populates the URL in DHCP, RA, and DHCPv6 messages based on whether redirect is applied and the value of the **one-time-redirect** command.
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	24.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dynamic-policer

Synopsis	Enter the **dynamic-policer** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm dynamic-policer
Tree	dynamic-policer
Description	Commands in this context configure the properties of the dynamically installed policers.
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

cir-adaptation-rule *keyword*

Synopsis	CIR adaptation rule for dynamically installed policers
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm dynamic-policer cir-adaptation-rule *keyword*
Tree	cir-adaptation-rule
Description	This command configures the CIR adaptation rule for dynamically installed policers. **Note:** For operational efficiency, the operational rate of a policer cannot match every value in the configurable range. This configuration defines a rule that must be followed when mapping a configured rate to an operational rate. min: The system chooses the first operational value greater than or equal to the configured rate. max: The system chooses the first operational value less than or equal to the configured rate. closest: The system chooses the operational value closest to the configured value, lower or higher.
Options	max – At maximum, the configured rate min – At minimum, the configured rate closest – Closest rate to the configured value
Default	closest
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

pir-adaptation-rule *keyword*

Synopsis	PIR adaptation rule for dynamically installed policers

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm dynamic-policer pir-adaptation-rule *keyword*
Tree	pir-adaptation-rule
Description	This command configures the PIR adaptation rule for dynamically installed policers. **Note:** For operational efficiency, the operational rate of a policer cannot match every value in the configurable range. This configuration defines a rule that must be followed when mapping a configured rate to an operational rate. min: The system chooses the first operational value greater than or equal to the configured rate. max: The system chooses the first operational value less than or equal to the configured rate. closest: The system chooses the operational value closest to the configured value, lower or higher.
Options	max – At maximum, the configured rate min – At minimum, the configured rate closest – Closest rate to the configured value
Default	closest
Introduced	26.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis	Enter the **egress** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm egress
Tree	egress
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *reference*

Synopsis	Policer for egress traffic
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm egress policer *reference*
Tree	policer
Reference	**configure** subscriber-mgmt isa-policer *named-item*
Introduced	16.0.R1

© 2026 Nokia.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis	Enter the **ingress** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm ingress
Tree	ingress
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-filter *reference*

Synopsis	Filter for ingress traffic
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm ingress ip-filter *reference*
Tree	ip-filter
Reference	**configure** subscriber-mgmt isa-filter *named-item*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *reference*

Synopsis	Policer for ingress traffic
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm ingress policer *reference*
Tree	policer
Reference	**configure** subscriber-mgmt isa-policer *named-item*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

soft-quota-exhausted-filter *reference*

Synopsis	Filter applied when soft volume quota is reached
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm ingress soft-quota-exhausted-filter *reference*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	soft-quota-exhausted-filter
Description	This command applies a filter when a soft volume quota is reached. The filter replaces the currently applied filter (which can be preconfigured using the **ip-filter** command in the **configure service vprn subscriber-interface group-interface wlan-gw vlan-range dsm ingress ip-filter** context or be set using a RADIUS CoA message) for the UE upon quota exhaustion. If the quota is extended using a RADIUS CoA message, the filter is automatically reverted. Configuration changes apply only to new DSM UEs and not to existing UEs.
Reference	**configure** subscriber-mgmt isa-filter *named-item*
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

one-time-redirect

Synopsis	Enter the **one-time-redirect** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm one-time-redirect
Tree	one-time-redirect
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

port *number*

Synopsis	Destination port of packets for HTTP redirect
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm one-time-redirect port *number*
Tree	port
Range	1 to 65535
Default	80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

url *one-time-http-redirect-url*

Synopsis	URL for redirected HTTP protocol packets
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm one-time-redirect url *one-time-http-redirect-url*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	url
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

send-unrestricted-portal-url *boolean*

Synopsis	Send an indicator if no captive portal is enabled
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm send-unrestricted-portal-url *boolean*
Tree	send-unrestricted-portal-url
Description	When configured to **true**, the router sends the special URL indicator urn:ietf:params:capport:unrestricted in DHCP, DHCPv6, and RA messages, to indicate to the client that no captive portal is enabled. This allows the client to disable all portal detection logic, thereby optimizing the user experience.
Default	false
Introduced	24.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

volume-quota-direction *keyword*

Synopsis	Volume quota direction for WLAN GW
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dsm volume-quota-direction *keyword*
Tree	volume-quota-direction
Description	This command specifies the direction that volume quotas are applied. Configuration changes apply only to new DSM UEs and not to existing UEs.
Options	both – Both directions ingress – Ingress direction (upstream) egress – Egress direction (downstream)
Default	both
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dynamic-service *boolean*

Synopsis	Dynamically assign WLAN-GW subscriber to a VPLS service
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* dynamic-service *boolean*
Tree	dynamic-service
Description	When configured to **true**, the WLAN-GW subscriber is dynamically assigned to a VPLS service, based on RADIUS authentication reply attributes. This feature is used in conjunction with the **configure service vpls wlan-gw wlan-gw-group** command. See "Dynamic VPLS service" in the *7450 ESS, 7750 SR, and VSR Triple Play Service Delivery Architecture Guide* for more information about the dynamic VPLS service feature.
Default	false
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

extension [extension-range] *string*

Synopsis	Add a list entry for **extension**
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* extension *string*
Tree	extension
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**extension-range**] *string*

Synopsis	VLAN tag range used for matching
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* extension *string*
Tree	extension
Description	This command configures the additional VLAN range that is used for matching. Any traffic within the extension range is considered part of the same VLAN range for purposes of intra-SSID mobility.
String format	'extension-range' must be VLAN tag or low..high range
Notes	This element is part of a list key.
Introduced	21.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect-policy *reference*

Synopsis	Default HTTP redirect policy for portal authentication
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* http-redirect-policy *reference*
Tree	http-redirect-policy
Reference	**configure** subscriber-mgmt http-redirect-policy *named-item*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

idle-timeout-action *keyword*

Synopsis	Action to perform when the idle timeout expires
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* idle-timeout-action *keyword*
Tree	idle-timeout-action
Options	remove, shcv
Default	remove
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2-service

Synopsis	Enable the **l2-service** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* group-interface *interface-name* wlan-gw vlan-range *string* l2-service
Tree	l2-service
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

gratuitous-router-advertisement *boolean*

Synopsis	Send unsolicited router advertisement after DHCP setup
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipoe-linking gratuitous-router-advertisement *boolean*
Tree	gratuitous-router-advertisement
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-session

Synopsis	Enter the **ipoe-session** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipoe-session
Tree	ipoe-session
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-limit *number*

Synopsis	Maximum number of sessions on this group interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipoe-session session-limit *number*
Tree	session-limit
Range	1 to 500000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4
Tree	ipv4
Description	Commands in this context configure the IPv4 command options for the interface.
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address [ipv4-address] *ipv4-unicast-address*

Synopsis	Enter the **address** list instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 address *ipv4-unicast-address*
Tree	address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ipv4-address**] *ipv4-unicast-address*

Synopsis	IP address associated with the subscriber subnet
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 address *ipv4-unicast-address*
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gateway *ipv4-unicast-address*

Synopsis	Gateway IP address within the subnet for SRRP routing
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 address *ipv4-unicast-address* gateway *ipv4-unicast-address*
Tree	gateway
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

holdup-time *number*

Synopsis	Wait time before accepting new state attribute

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 address *ipv4-unicast-address* holdup-time *number*
Tree	holdup-time
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

populate-host-routes *boolean*

Synopsis	Populate subscriber host routes in local FIB
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 address *ipv4-unicast-address* populate-host-routes *boolean*
Tree	populate-host-routes
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 address *ipv4-unicast-address* prefix-length *number*
Tree	prefix-length
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-srrp *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 address *ipv4-unicast-address* track-srrp *number*
Tree	track-srrp
Range	1 to 4294967295

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-unmatching-subnets *boolean*

Synopsis	Allow subscriber hosts without a matching subnet
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 allow-unmatching-subnets *boolean*
Tree	allow-unmatching-subnets
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

arp-host

Synopsis	Enter the **arp-host** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 arp-host
Tree	arp-host
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of ARP hosts
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 arp-host admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-limit *number*

Synopsis	Maximum number of ARP hosts
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 arp-host host-limit *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	host-limit
Range	1 to 524287
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bfd

Synopsis	Enter the **bfd** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 bfd
Tree	bfd
Description	Commands in this context configure the BFD sessions that control the state of ESM dynamic BGP peers.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 bfd admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 bfd echo-receive *number*
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 bfd multiplier *number*
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padded-size *number*

Synopsis	BFD payload padded size
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 bfd padded-size *number*
Tree	padded-size
Description	This command configures the padded BFD message size.
Range	0 | 52 to 1512
Units	bytes
Default	0
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

receive *number*

Synopsis	Receive interval
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 bfd receive *number*
Tree	receive
Range	10 to 100000
Units	milliseconds
Default	100

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

transmit-interval *number*

Synopsis	Transmit interval
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 bfd transmit-interval *number*
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Local termination point for the BFD session
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 bfd type *keyword*
Tree	type
Options	cpm-np – Terminate on the CPM network processor auto – Terminate on the system-selected termination point fp – Terminate on the forwarding plane
Default	auto
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

default-dns *ipv4-unicast-address*

Synopsis	Default DNS server addresses
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 default-dns *ipv4-unicast-address*
Tree	default-dns
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)

Max. instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp

Synopsis	Enter the **dhcp** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp
Tree	dhcp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCP
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp admin-state *keyword*
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp client-applications dhcp *boolean*
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Enable PPPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp client-applications ppp *boolean*
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gi-address *ipv4-unicast-address*

Synopsis	GI address for the DHCP relay
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp gi-address *ipv4-unicast-address*
Tree	gi-address
Description	This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.

String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-populate

Synopsis	Enter the **lease-populate** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp lease-populate
Tree	lease-populate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-leases *number*

Synopsis	Maximum number of DHCPv4 leases
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp lease-populate max-leases *number*
Tree	max-leases
Range	0 to 511999
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

offer-selection

Synopsis	Enter the **offer-selection** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp offer-selection
Tree	offer-selection
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

client-mac

Synopsis	Enter the **client-mac** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp offer-selection client-mac
Tree	client-mac
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp offer-selection client-mac discover-delay *number*
Tree	discover-delay
Description	This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-address *keyword*

Synopsis	Designated client MAC addresses for Offer selection
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp offer-selection client-mac mac-address *keyword*
Tree	mac-address
Description	This command specifies the client MAC addresses for which the Discover delay applies.
Options	odd, even
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp offer-selection discover-delay *number*
Tree	discover-delay
Description	This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [ipv4-address] *ipv4-unicast-address*

Synopsis	Enter the **server** list instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp offer-selection server *ipv4-unicast-address*
Tree	server
Max. instances	8
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ipv4-address**] *ipv4-unicast-address*

Synopsis	IP address of the DHCP server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp offer-selection server *ipv4-unicast-address*
Tree	server
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp offer-selection server *ipv4-unicast-address* discover-delay *number*
Tree	discover-delay
Description	This command configures the time to delay DHCP Discover messages sent to the server.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option-82

Synopsis	Enter the **option-82** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp option-82
Tree	option-82
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor-specific-option

Synopsis	Enter the **vendor-specific-option** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp option-82 vendor-specific-option
Tree	vendor-specific-option
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp option-82 vendor-specific-option client-mac-address *boolean*
Tree	client-mac-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp option-82 vendor-specific-option sap-id *boolean*
Tree	sap-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-id *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp option-82 vendor-specific-option service-id *boolean*
Tree	service-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string-not-all-spaces*

Synopsis	User-defined ASCII string for the VSO
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv4 dhcp option-82 vendor-specific-option string *string-not-all-spaces*
Tree	string

© 2026 Nokia.

bfd

Synopsis	Enter the **bfd** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 bfd
Tree	bfd
Description	Commands in this context configure the attributes of the BFD sessions that control the state of ESM dynamic BGP peers.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 bfd admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 bfd echo-receive *number*
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 bfd multiplier *number*
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padded-size *number*

Synopsis	BFD payload padded size
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 bfd padded-size *number*
Tree	padded-size
Description	This command configures the padded BFD message size.
Range	0 | 52 to 1512
Units	bytes
Default	0
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

receive *number*

Synopsis	Receive interval
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 bfd receive *number*
Tree	receive
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

transmit-interval *number*

Synopsis	Transmit interval
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 bfd transmit-interval *number*
Tree	transmit-interval
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Local termination point for the BFD session
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 bfd type *keyword*
Tree	type
Options	cpm-np – Terminate on the CPM network processor auto – Terminate on the system-selected termination point fp – Terminate on the forwarding plane
Default	auto
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

default-dns *ipv6-unicast-address*

Synopsis	Default DNS server addresses
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 default-dns *ipv6-unicast-address*
Tree	default-dns
Max. instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

delegated-prefix-length *(number | keyword)*

Synopsis	IPv6 delegated prefix length
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 delegated-prefix-length *(number | keyword)*
Tree	delegated-prefix-length
Range	48 to 64
Options	variable
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp6

Synopsis	Enter the **dhcp6** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6
Tree	dhcp6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-client-id-change *boolean*

Synopsis	Allow changes to the client ID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 allow-client-id-change *boolean*
Tree	allow-client-id-change
Default	false
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

override-slaac *boolean*

Synopsis	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 override-slaac *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	override-slaac
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pd-managed-route

Synopsis	Enable the **pd-managed-route** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 pd-managed-route
Tree	pd-managed-route
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-hop *keyword*

Synopsis	Next hop type
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 pd-managed-route next-hop *keyword*
Tree	next-hop
Options	ipv4, ipv6
Default	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis	Enter the **proxy-server** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 proxy server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server client-applications dhcp *boolean*
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Allow PPPoE clients to use DHCP relay functionality
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server client-applications ppp *boolean*
Tree	ppp

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *(number | keyword)*

Synopsis	Time for prefix to remain preferred on this interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rebind-timer *number*

Synopsis	Rebind timer (T2) for this interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server rebind-timer *number*
Tree	rebind-timer
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

renew-timer *number*

Synopsis	Renew timer (T1)
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server renew-timer *number*
Tree	renew-timer
Range	0 to 604800

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server-id

Synopsis	Enter the **server-id** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server server-id
Tree	server-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en-ascii *string-not-all-spaces*

Synopsis	Vendor-assigned ID based on Enterprise Number (DUID-EN)
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server server-id duid-en-ascii *string-not-all-spaces*
Tree	duid-en-ascii
String length	1 to 58
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **duid-en-ascii**, **duid-en-hex**, or **duid-ll**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en-hex *string*

Synopsis	DUID system ID in hexadecimal format
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server server-id duid-en-hex *string*
Tree	duid-en-hex
String length	1 to 118
Notes	The following elements are part of a choice: **duid-en-ascii**, **duid-en-hex**, or **duid-ll**.
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-ll

Synopsis	Use link-layer address (DUID-LL) as DUID
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server server-id duid-ll
Tree	duid-ll
Notes	The following elements are part of a choice: **duid-en-ascii**, **duid-en-hex**, or **duid-ll**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *(number | keyword)*

Synopsis	Time for prefix to remain valid on this interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 proxy-server valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

relay

Synopsis	Enter the **relay** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay
Tree	relay
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

advertise-selection

Synopsis	Enter the **advertise-selection** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection
Tree	advertise-selection
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac

Synopsis	Enter the **client-mac** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection client-mac
Tree	client-mac
Notes	The following elements are part of a choice: **client-mac** or **server**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-address *keyword*

Synopsis	Designated client MAC addresses for Advertise selection
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection client-mac mac-address *keyword*
Tree	mac-address
Options	odd, even
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the **preference-option** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection client-mac preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection client-mac preference-option value *number*
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection client-mac solicit-delay *number*
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages sent from the designated client MAC addresses.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the **preference-option** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection preference-option value *number*
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

server [ipv6-address] *ipv6-address*

Synopsis	Enter the **server** list instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection server *ipv6-address*
Tree	server
Max. instances	8
Notes	The following elements are part of a choice: **client-mac** or **server**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ipv6-address**] *ipv6-address*

Synopsis	IP address of the DHCPv6 server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection server *ipv6-address*
Tree	server
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis	Enter the **preference-option** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection server *ipv6-address* preference-option
Tree	preference-option
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection server *ipv6-address* preference-option value *number*
Tree	value
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection server *ipv6-address* solicit-delay *number*
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages sent to the server.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay advertise-selection solicit-delay *number*
Tree	solicit-delay
Description	This command configures the time to delay DHCPv6 Solicit messages. The delay is applied to DHCPv6 Solicit messages for which no overriding value is configured in the **server** instance or the **client-mac** context.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis	Enter the **client-applications** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay client-applications
Tree	client-applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay client-applications dhcp *boolean*
Tree	dhcp
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis	Allow PPPoE clients to use DHCP relay functionality
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay client-applications ppp *boolean*
Tree	ppp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

lease-split

Synopsis	Enter the **lease-split** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay lease-split
Tree	lease-split
Description	Commands in this context configure DHCPv6 lease split. DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following: • the renew time T1 committed by the server (long renew time) • half of the preferred lifetime committed by the server when T1 committed by the server equals zero
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of DHCPv6 lease split
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay lease-split admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *number*

Synopsis	DHCPv6 lease split valid lifetime (short lease time)
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay lease-split valid-lifetime *number*
Tree	valid-lifetime
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	21.2.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-address *ipv6-address*

Synopsis	Link address for the DHCPv6 relay messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay link-address *ipv6-address*
Tree	link-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *ipv6-address-with-zone*

Synopsis	DHCP6 server(s) to which the DHCP6 requests are forwarded
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay server *ipv6-address-with-zone*
Tree	server
String format	'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id
Max. instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-address *ipv6-unicast-address*

Synopsis	Source IPv6 address for the DHCPv6 relay messages
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 dhcp6 relay source-address *ipv6-unicast-address*
Tree	source-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-bridged-mode *boolean*

Synopsis	Enable IPv6 IPoE bridged mode

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 ipoe-bridged-mode *boolean*
Tree	ipoe-bridged-mode
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-local-address

Synopsis	Enter the **link-local-address** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 link-local-address
Tree	link-local-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address *ipv6-address*

Synopsis	IPv6 link local address
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 link-local-address address *ipv6-address*
Tree	address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix [ipv6-prefix] *ipv6-prefix*

Synopsis	Enter the **prefix** list instance
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 prefix *ipv6-prefix*
Tree	prefix
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

[**ipv6-prefix**] *ipv6-prefix*

Synopsis	IPv6 address for a router interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 prefix *ipv6-prefix*
Tree	prefix
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

holdup-time *number*

Synopsis	Time to wait before route accepts new state attribute
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 prefix *ipv6-prefix* holdup-time *number*
Tree	holdup-time
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-type *keyword*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Host type for subscriber interface prefixes
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 prefix *ipv6-prefix* host-type *keyword*
Tree	host-type
Options	pd – IPv6 ESM hosts for DHCPv6 prefix-delegation wan – ESM hosts for DHCPv6 addresses or by WAN interface pd-wan – Both prefix-delegation and ESM hosts
Default	pd
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

track-srrp *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 prefix *ipv6-prefix* track-srrp *number*
Tree	track-srrp
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-advertisements

Synopsis	Enter the **router-advertisements** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements
Tree	router-advertisements
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of router advertisements
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-mcast *keyword*

Synopsis	Protocol with forced multicast
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements force-mcast *keyword*
Tree	force-mcast

© 2026 Nokia.

Options	ip, ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-advertisement-interval *number*

Synopsis	Maximum advertisement interval
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements max-advertisement-interval *number*
Tree	max-advertisement-interval
Range	900 to 1800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-advertisement-interval *number*

Synopsis	Minimum advertisement interval
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements min-advertisement-interval *number*
Tree	min-advertisement-interval
Range	900 to 1350
Units	seconds
Default	900
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

options

Synopsis	Enter the **options** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements options
Tree	options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

current-hop-limit *number*

Synopsis	Hop limit to be advertised
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements options current-hop-limit *number*
Tree	current-hop-limit
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dns

Synopsis	Enter the **dns** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements options dns
Tree	dns
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-rdnss *boolean*

Synopsis	Include the RDNSS server option 25
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements options dns include-rdnss *boolean*
Tree	include-rdnss
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rdnss-lifetime *(number | keyword)*

Synopsis	Maximum time for the RDNSS address to remain valid
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements options dns rdnss-lifetime *(number | keyword)*
Tree	rdnss-lifetime

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	900 to 3600
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-configuration *boolean*

Synopsis	Managed address configuration flag
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements options managed-configuration *boolean*
Tree	managed-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mtu *(number | keyword)*

Synopsis	Advertised MTU value
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements options mtu *(number | keyword)*
Tree	mtu
Range	1280 to 9212
Units	bytes
Options	not-included
Default	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other-stateful-configuration *boolean*

Synopsis	Other stateful configuration flag
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements options other-stateful-configuration *boolean*
Tree	other-stateful-configuration

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reachable-time *number*

Synopsis	Reachable time for advertisements
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements options reachable-time *number*
Tree	reachable-time
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retransmit-timer *number*

Synopsis	Retransmit time in router advertisements from interface
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements options retransmit-timer *number*
Tree	retransmit-timer
Range	0 to 1800000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-lifetime *(number | keyword)*

Synopsis	Router lifetime
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements options router-lifetime *(number | keyword)*
Tree	router-lifetime
Range	2700 to 9000
Units	seconds

© 2026 Nokia.

Options	no-default-router
Default	4500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-options

Synopsis	Enter the **prefix-options** context
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements prefix-options
Tree	prefix-options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

autonomous *boolean*

Synopsis	Value of the autonomous flag
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements prefix-options autonomous *boolean*
Tree	autonomous
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-link *boolean*

Synopsis	Assign the prefix to an interface on the specified link
Context	**configure** service vprn *service-name* subscriber-interface *interface-name* ipv6 router-advertisements prefix-options on-link *boolean*
Tree	on-link
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

routed-subnet-transparent-forward *boolean*

Synopsis	Transparently forward DHCPv4 from CPE LAN over IPoE
Context	**configure** service vprn *service-name* subscriber-mgmt dhcpv4 routed-subnet-transparent-forward *boolean*
Tree	routed-subnet-transparent-forward
Description	When configured to **true**, the router transparently forwards DHCPv4 packets received on a subscriber interface with a source IP in a routed subnet that is associated with a routed IPoE session or host. Supported routed subnets are: • RADIUS and NASREQ framed routes • routes learned via an ESM dynamic BGP peer • managed routes that are associated with a static IPv4 host When configured to **false**, the system disables transparent forwarding of DHCPv4 packets.
Default	false
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multi-chassis-shunt-id *number*

Synopsis	Shunt ID for a pair of resilient nodes
Context	**configure** service vprn *service-name* subscriber-mgmt multi-chassis-shunt-id *number*
Tree	multi-chassis-shunt-id
Description	This command configures the shunt ID that is used to shunt downstream traffic from a standby node to an active node. Because this ID identifies the traffic service on the standby node, the same ID must be configured per service on each node. This configuration is required for inter-BNG-UP resiliency shunting, but not for non-BNG-UP shunting. However, when configured, it is also used for shunting non-BNG-UP sessions in the same service.
Range	1 to 8191
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

up-resiliency

Synopsis	Enter the **up-resiliency** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-mgmt up-resiliency
Tree	up-resiliency
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

monitor-oper-group [oper-group] *reference*

Synopsis	Enter the **monitor-oper-group** list instance
Context	**configure** service vprn *service-name* subscriber-mgmt up-resiliency monitor-oper-group *reference*
Tree	monitor-oper-group
Description	Commands in this context define parameters to derive the service health based on monitored operational groups. The BNG-UP sends the health value to the MAG-c. The MAG-c uses the value to determine the need for a BNG-UP status change (active or standby). **Note:** The following is only applicable for the **configure service vpls capture-sap** context. If the configured groups are not the same for all capture SAPs sharing the same underlying port or LAG, the configuration of a Layer 2 access ID alias is required, or else the system chooses arbitrarily one set of configured groups.
Max. instances	2
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**oper-group**] *reference*

Synopsis	Operational group name
Context	**configure** service vprn *service-name* subscriber-mgmt up-resiliency monitor-oper-group *reference*
Tree	monitor-oper-group
Reference	**configure** service oper-group *named-item*
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

health-drop *number*

Synopsis	Number subtracted from the health value per failure

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** service vprn *service-name* subscriber-mgmt up-resiliency monitor-oper-group *reference* health-drop *number*
Tree	health-drop
Description	This command configures the drop in the health value for every operational group member failure. Every failure of an operational group member decreases the base health value to a possible minimum of 0.
Range	1 to 100
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ttl-propagate

Synopsis	Enter the **ttl-propagate** context
Context	**configure** service vprn *service-name* ttl-propagate
Tree	ttl-propagate
Introduced	16.0.R1
Platforms	All

local *keyword*

Synopsis	Local TTL propagation control for the VPRN
Context	**configure** service vprn *service-name* ttl-propagate local *keyword*
Tree	local
Description	This command specifies the local TTL propagation control for the VPRN and overrides the global configuration of the TTL propagation for locally generated packets that are forwarded over MPLS LSPs in a given VPRN service context.
Options	none, all, vc-only, use-base
Default	use-base
Introduced	16.0.R1
Platforms	All

transit *keyword*

Synopsis	Transit TTL propagation control for the VPRN
Context	**configure** service vprn *service-name* ttl-propagate transit *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	transit
Description	This command overrides the global configuration of the TTL propagation for in transit packets that are forwarded over MPLS LSPs in a given VPRN service context.
Options	none, all, vc-only, use-base
Default	use-base
Introduced	16.0.R1
Platforms	All

twamp-light

Synopsis	Enter the **twamp-light** context
Context	**configure** service vprn *service-name* twamp-light
Tree	twamp-light
Description	Commands in this context configure TWAMP Light parameters.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reflector

Synopsis	Enable the **reflector** context
Context	**configure** service vprn *service-name* twamp-light reflector
Tree	reflector
Description	Commands in this context configure TWAMP Light session reflector options and enable TWAMP Light functionality.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the TWAMP Light reflector
Context	**configure** service vprn *service-name* twamp-light reflector admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-ipv6-udp-checksum-zero *boolean*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	**configure** service vprn *service-name* twamp-light reflector allow-ipv6-udp-checksum-zero *boolean*
Tree	allow-ipv6-udp-checksum-zero
Description	When configured to **true**, the router processes IPv6 packets that arrive with a UDP checksum of zero. The destination UDP ports that are registered as TWAMP Test packets as part of this template allow this behavior. When configured to **false**, the router discards IPv6 packets that arrive with a UDP checksum of zero.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *description*

Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *description*

Synopsis	Text description
Context	**configure** service vprn *service-name* twamp-light reflector prefix *(ipv4-prefix | ipv6-prefix)* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

type *keyword*

Synopsis	Processing behavior type for the reflector
Context	**configure** service vprn *service-name* twamp-light reflector type *keyword*
Tree	type
Description	This command configures the processing behavior of the TWAMP Light reflector. When the value is **twamp-light** the reflector does not check the received PDU as a traditional base TWAMP Light packet without TLV processing. When the value is **stamp**,

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

the reflector attempts to find and process supported STAMP TLVs that follow the base STAMP packet.

In mixed environments where different types of Session-Senders may be targeting a common TWAMP Light reflector, set the value to **stamp**. When the reflector is operating in **stamp** mode, the primary parsing is based on STAMP, checking and processing known TLVs, or determining if the arriving PDU is a TWAMP Light PDU. A Session-Sender launching a TWAMP Light-based packet must use all zeros padding pattern when the pad size is non zero.

Options	stamp – Reflector finds and processes supported STAMP TLVs twamp-light – Reflector does not check received PDU
Default	twamp-light
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

udp-port *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

source-vtep *reference*

Synopsis VXLAN source termination end point

Context **configure** service vprn *service-name* vxlan source-vtep *reference*

Tree source-vtep

Description This command enables the router to use the configured IPv4 address as the tunnel source IP address (source VTEP) when originating VXLAN-encapsulated packets for this VPRN service. This command does modify the next hop of the EVPN IFL routes advertised for the VPRN service.

When unconfigured, the system uses the IPv4 address as the VTEP source.

Reference **configure** service system vxlan tunnel-termination *(ipv4-address-no-zone | ipv6-address-no-zone)*

Introduced 24.10.R1

Platforms 7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s

4.44.1 subscriber-mgmt command descriptions

subscriber-mgmt

Synopsis	Enter the **subscriber-mgmt** context
Context	**configure** subscriber-mgmt
Tree	subscriber-mgmt
Description	Commands in this context configure subscriber management attributes, policies, and profiles.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accu-stats-policy [name] *named-item*

Synopsis	Enter the **accu-stats-policy** list instance
Context	**configure** subscriber-mgmt accu-stats-policy *named-item*
Tree	accu-stats-policy
Description	Commands in this context configure a storage policy for cumulative statistics for subscribers. The policy defines the direction for the policer or the queue to be stored. The policy stores subscriber statistics even if the subscriber session has ended. The subscriber statistics can be viewed even if the subscriber is offline. When the subscriber session ends, the statistics are added to the past statistics stored in memory so that all previous session statistics are accumulated. The accumulated statistics are not persistent; they are only stored in memory and reset to zero when the chassis reboots.
Max. instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Policy name
Context	**configure** subscriber-mgmt accu-stats-policy *named-item*
Tree	accu-stats-policy
String length	1 to 32

Tree	ingress
Options	queue, policer
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

id *number*

Synopsis	Queue or policer ID
Context	**configure** subscriber-mgmt accu-stats-policy *named-item* ingress *keyword* id *number*
Tree	ingress

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alternate-profile-threshold

Synopsis	Enter the **alternate-profile-threshold** context
Context	**configure** subscriber-mgmt alternate-profile-threshold
Tree	alternate-profile-threshold
Description	Commands in this context specify thresholds that determine when an alternate subscriber-management profile is used instead of the original profile. The alternate profile is configured under the original profile, for example using the **alternate-sub-profile** command in the **configure subscriber-management sub-profile** context and the **alternate-sla-profile** command in the **configure subscriber-management sla-profile** context.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-count *number*

Synopsis	Subscriber threshold to trigger alternate profile
Context	**configure** subscriber-mgmt alternate-profile-threshold subscriber-count *number*
Tree	subscriber-count
Description	This command configures the subscriber-count threshold. The system classifies every new subscriber either as "alternate" or "non-alternate". By default, the system classifies new subscribers as non-alternate. When the number of non-alternate subscribers reaches the configured subscriber-count threshold, the system classifies new subscribers as alternate. When the number of subscribers is set to 0, the threshold is disabled.
Range	0 to 500000
Default	0
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp

Synopsis	Enter the **ancp** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt ancp
Tree	ancp
Description	Commands in this context configure Access Node Control Protocol (ANCP) settings.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp-policy [name] *named-item*

Synopsis	Enter the **ancp-policy** list instance
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item*
Tree	ancp-policy
Description	Commands in this context configure the specified ANCP policy, which can be associated with either an ANCP string (static) or a subscriber-profile (dynamic), and define the behavior of hosts belonging to these profiles. ANCP policies control rates and subscribers based on port-up/port-down messages from the access node. When configured, the node stops SHCV to a host that is part of a port that is down (by port-down message). When a port-up message is received for the port that was down, the node initiates the SHCV process immediately to verify connectivity. When ANCP is used with ESM, all hosts of a subscriber are updated with the ANCP string last associated with the subscriber.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Policy name
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item*
Tree	ancp-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

egress

Synopsis	Enter the **egress** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress
Tree	egress
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-adjustment *number*

Synopsis	Rate adjustment for the scheduler
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-adjustment *number*
Tree	rate-adjustment
Description	This command configures the rate adjustment for the scheduler. This setting is used when the rate returned by the DSLAM is calculated with a different encapsulation than the SR node. The node adjusts the rate by the percentage specified as: DSLAM_RATE * (adjustment rate)/100 — (rate reduction)
Range	1 to 200
Units	percent
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-modify

Synopsis	Enter the **rate-modify** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-modify
Tree	rate-modify
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

agg-rate

Synopsis	Maximum total rate for all subscriber egress queues
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-modify agg-rate

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	agg-rate
Description	This command specifies the maximum total rate for all subscriber egress queues for each subscriber associated with the policy.
Notes	The following elements are part of a choice: **agg-rate** or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scheduler *named-item*

Synopsis	Scheduler to be applied for rate modification
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-modify scheduler *named-item*
Tree	scheduler
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **agg-rate** or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-monitor

Synopsis	Enter the **rate-monitor** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-monitor
Tree	rate-monitor
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alarm *boolean*

Synopsis	Generate SNMP notification when monitor event is raised
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-monitor alarm *boolean*
Tree	alarm
Description	When configured to **true**, the system generates an alarm (trap) to the management system including the rate, the ANCP policy name, and the ANCP string when the monitored rate is below the configured rate.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, no alarm is generated.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate *number*

Synopsis	Rate below which the system generates an event
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-monitor rate *number*
Tree	rate
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-reduction *number*

Synopsis	Constant rate reduction to specified DSLAM rate
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* egress rate-reduction *number*
Tree	rate-reduction
Description	This command configures a constant rate reduction to the rate specified by the DSLAM. This setting is used if the node must adjust the rate to a value that is offset (for example by a fixed multicast dedicated bandwidth) compared to the total available on the DSLAM. The rate is calculated as: DSLAM_RATE * (adjustment rate)/100 — (rate reduction)
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis	Enter the **ingress** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress
Tree	ingress

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-adjustment *number*

Synopsis	Rate adjustment for the scheduler
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress rate-adjustment *number*
Tree	rate-adjustment
Description	This command configures the rate adjustment for the scheduler. This setting is used when the rate returned by the DSLAM is calculated with a different encapsulation than the SR node. The node adjusts the rate by the percentage specified as: DSLAM_RATE * (adjustment rate)/100 — (rate reduction)
Range	1 to 200
Units	percent
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-modify

Synopsis	Enter the **rate-modify** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress rate-modify
Tree	rate-modify
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scheduler *named-item*

Synopsis	Scheduler to be applied for rate modification
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress rate-modify scheduler *named-item*
Tree	scheduler
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-monitor

Synopsis	Enter the **rate-monitor** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress rate-monitor
Tree	rate-monitor
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alarm *boolean*

Synopsis	Generate SNMP notification when monitor event is raised
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress rate-monitor alarm *boolean*
Tree	alarm
Description	When configured to **true**, the system generates an alarm (trap) to the management system including the rate, the ANCP policy name, and the ANCP string when the monitored rate is below the configured rate. When configured to **false**, no alarm is generated.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate *number*

Synopsis	Rate below which the system generates an event
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress rate-monitor rate *number*
Tree	rate
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rate-reduction *number*

Synopsis	Constant rate reduction to specified DSLAM rate
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* ingress rate-reduction *number*
Tree	rate-reduction
Description	This command configures a constant rate reduction to the rate specified by the DSLAM. This setting is used if the node must adjust the rate to a value that is offset (for example by a fixed multicast dedicated bandwidth) compared to the total available on the DSLAM. The rate is calculated as: DSLAM_RATE * (adjustment rate)/100 — (rate reduction)
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

port-down

Synopsis	Enter the **port-down** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* port-down
Tree	port-down
Description	Commands in this context configure the actions taken on port-down.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suspend-shcv

Synopsis	Enable the **suspend-shcv** context
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* port-down suspend-shcv
Tree	suspend-shcv
Description	Commands in this context specify the configuration to suspend SHCV for the hosts defined with the ANCP policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

alarm *boolean*

Synopsis	Send an alarm before suspending SHCV
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* port-down suspend-shcv alarm *boolean*
Tree	alarm
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis	Time that SHCV is suspended
Context	**configure** subscriber-mgmt ancp ancp-policy *named-item* port-down suspend-shcv hold-time *number*
Tree	hold-time
Description	This command configures the time that the node suspends SHCV. When unconfigured, SHCV is suspended until a port-up message is received.
Range	1 to 7200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp-static-map

Synopsis	Enter the **ancp-static-map** context
Context	**configure** subscriber-mgmt ancp ancp-static-map
Tree	ancp-static-map
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multi-service-site-entry [ancp-string] *ancp-string* customer-name *reference* customer-site-name *reference*

Synopsis	Enter the **multi-service-site-entry** list instance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt ancp ancp-static-map multi-service-site-entry *ancp-string* customer-name *reference* customer-site-name *reference*
Tree	multi-service-site-entry
Description	Commands in this context configure the ANCP key mapping (usually the circuit ID of the DSLAM port) to a customer, site, and scheduler name when Multi-Service site (MSS) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**ancp-string**] *ancp-string*

Synopsis	ANCP string
Context	**configure** subscriber-mgmt ancp ancp-static-map multi-service-site-entry *ancp-string* customer-name *reference* customer-site-name *reference*
Tree	multi-service-site-entry
String length	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

customer-name *reference*

Synopsis	Customer ID
Context	**configure** subscriber-mgmt ancp ancp-static-map multi-service-site-entry *ancp-string* customer-name *reference* customer-site-name *reference*
Tree	multi-service-site-entry
Reference	**configure** service customer *customer-name*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

customer-site-name *reference*

Synopsis	Service customer multi-service site name
Context	**configure** subscriber-mgmt ancp ancp-static-map multi-service-site-entry *ancp-string* customer-name *reference* customer-site-name *reference*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	multi-service-site-entry
Reference	**configure** service customer *customer-name* multi-service-site *named-item*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

priority [id] *number*

Synopsis	Enter the **priority** list instance
Context	**configure** subscriber-mgmt authentication-origin overrides priority *number*
Tree	priority
Description	Commands in this context arrange the relative order of authentication priorities.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Authentication origin priority override
Context	**configure** subscriber-mgmt authentication-origin overrides priority *number*
Tree	priority
Description	This command configures the insert position of the authentication origin priority override.
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source *keyword*

Synopsis	Source of authentication priority
Context	**configure** subscriber-mgmt authentication-origin overrides priority *number* source *keyword*
Tree	source
Description	This command specifies the prioritization of authentication sources.
Options	python, diameter-gx, ludb, radius, diameter-nasreq, gtp, dhcp, local-address-assignment, pfcp, config
Notes	This element is mandatory.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

auto-sub-id

Synopsis	Enter the **auto-sub-id** context
Context	**configure** subscriber-mgmt auto-sub-id
Tree	auto-sub-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

implicit-generation *boolean*

Synopsis	Generate implicitly a subscriber ID when not provided
Context	**configure** subscriber-mgmt auto-sub-id implicit-generation *boolean*
Tree	implicit-generation
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-key *keyword*

Synopsis	Auto-generated subscriber ID key1 for IPoE hosts
Context	**configure** subscriber-mgmt auto-sub-id ipoe-key *keyword*
Tree	ipoe-key
Options	mac, sap-id, circuit-id, remote-id, dual-stack-remote-id, service-name
Max. instances	4
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-key *keyword*

Synopsis	Auto-generated subscriber identifier key1 for PPP hosts
Context	**configure** subscriber-mgmt auto-sub-id ppp-key *keyword*
Tree	ppp-key
Options	mac, sap-id, circuit-id, remote-id, session-id

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bgp-peering-policy [name] *named-item*

Synopsis	Enter the **bgp-peering-policy** list instance
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item*
Tree	bgp-peering-policy
Max. instances	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	BGP peer policy name
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item*
Tree	bgp-peering-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

advertise-inactive *boolean*

Synopsis	Advertise inactive BGP routes to other BGP peers
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* advertise-inactive *boolean*
Tree	advertise-inactive
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

aggregator-id-zero *boolean*

Synopsis	Add router ID to BGP aggregator path attribute
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* aggregator-id-zero *boolean*
Tree	aggregator-id-zero
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

as-override *boolean*

Synopsis	Replace the peer ASN with the local ASN in AS Path
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* as-override *boolean*
Tree	as-override
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

asn-4-byte *boolean*

Synopsis	Enable the use of 4-byte ASNs
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* asn-4-byte *boolean*
Tree	asn-4-byte
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-key *encrypted-leaf*

Synopsis	BGP authentication key for all peers
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* authentication-key *encrypted-leaf*
Tree	authentication-key
Description	This command specifies the BGP authentication key for all peers in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 422
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-keychain *reference*

Synopsis	Keychain name used for the TCP session
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* authentication-keychain *reference*
Tree	authentication-keychain
Reference	**configure** system security keychains keychain *named-item*
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* bfd-liveness *boolean*
Tree	bfd-liveness
Description	When configured to **true**, this command enables the use of Bi-directional Forwarding Detection (BFD) to control the state of an ESM dynamic BGP peer that is set up with the BGP peering policy. The parameters used for the BFD session are configured in the BFD context of the group interface or retail subscriber interface. When configured to **false**, this command disables the use of BFD for new ESM dynamic BGP peers that are set up with the BGP peering policy.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-reflect *boolean*

Synopsis	Enable client reflection of routes to all client peers
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* client-reflect *boolean*
Tree	client-reflect
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

cluster *ipv4-address*

Synopsis	Cluster ID for route reflector server
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* cluster *ipv4-address*
Tree	cluster
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* connect-retry *number*
Tree	connect-retry
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

damping *boolean*

Synopsis	Use BGP route damping for learned routes
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* damping *boolean*
Tree	damping
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

export *reference*

Synopsis	Export route policies to control advertised routes
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* export *reference*
Tree	export
Reference	**configure** policy-options policy-statement *named-item-64*
Max. instances	15
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

family

Synopsis	Enter the **family** context
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* family
Tree	family
Description	Commands in this context specify the BGP address families supported by the ESM dynamic BGP peers. When no address family is configured, the IPv4 address family is supported on BGPv4 peers and the IPv6 address family is supported on BGPv6 peers.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4 *boolean*

Synopsis	Advertise MP-BGP support for the IPv4 address family
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* family ipv4 *boolean*
Tree	ipv4
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the IPv6 address family
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* family ipv6 *boolean*
Tree	ipv6
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fast-external-failover *boolean*

Synopsis	Enable BGP fast external failover
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* fast-external-failover *boolean*
Tree	fast-external-failover
Introduced	16.0.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis	BGP hold time before closing connection
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* hold-time *number*
Tree	hold-time
Range	0 | 3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

import *reference*

Synopsis	Import route policies to control advertised routes
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* import *reference*
Tree	import
Reference	**configure** policy-options policy-statement *named-item-64*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	15
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

keepalive *number*

Synopsis	BGP keepalive timer
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* keepalive *number*
Tree	keepalive
Range	0 to 21845
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	Local IP address used when communicating with BGP peers
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-as

Synopsis	Enter the **local-as** context
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* local-as
Tree	local-as
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

as-number *number*

Synopsis	AS number to be advertised to peer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* local-as as-number *number*
Tree	as-number
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

private *boolean*

Synopsis	Hide local AS number in paths learned from peering
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* local-as private *boolean*
Tree	private
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-preference *number*

Synopsis	Local preference for incoming routes if not specified
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* local-preference *number*
Tree	local-preference
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

loop-detect *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* loop-detect *keyword*
Tree	loop-detect
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

med-out *(number | keyword)*

Synopsis	Multi-Exit Discriminator (MED) advertising
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* med-out *(number | keyword)*
Tree	med-out
Max. range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-route-advertisement *number*

Synopsis	Minimum interval for prefix to be advertised to a peer
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* min-route-advertisement *number*
Tree	min-route-advertisement
Range	1 to 255
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multihop *number*

Synopsis	TTL value entered in IP header of packets sent to peer
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* multihop *number*
Tree	multihop
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-hop-self *boolean*

Synopsis	Set net hop path attribute to self when advertising
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* next-hop-self *boolean*
Tree	next-hop-self

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

passive *boolean*

Synopsis	Wait passively for BGP peer to connect
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* passive *boolean*
Tree	passive
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer-as *number*

Synopsis	AS number for remote peer
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* peer-as *number*
Tree	peer-as
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis	Route preference for routes learned via configured peer
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* preference *number*
Tree	preference
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-limits [family] *keyword*

Synopsis	Enter the **prefix-limits** list instance
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword*
Tree	prefix-limits

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context limit the number of BGP routes per address family received from a BGP peer and define the actions when crossing the configured maximum.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**family**] *keyword*

Synopsis	Address family to which the limit applies
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword*
Tree	prefix-limits
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout *number*

Synopsis	Time BGP peering remains idle before reconnecting
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword* idle-timeout *number*
Tree	idle-timeout
Description	This command configures the time in minutes before a BGP peer is automatically re-established after reaching the prefix limit. When unconfigured, the BGP peer stays down until the operator performs a reset. This command and **log-only** cannot be configured simultaneously.
Range	1 to 1024
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

log-only *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	**configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword* log-only *boolean*
Tree	log-only
Description	When configured to **true**, the router disables the BGP session from being taken down upon reaching the prefix limit. Instead, only a warning message is sent when the limit is

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

reached. A warning message is also sent when the configured threshold percentage of the limit is reached.

This command and **idle-timeout** cannot be configured simultaneously.

When configured to **false**, the router generates a log event and takes the BGP session down upon reaching the prefix limit.

Default false

Introduced 23.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum *number*

Synopsis Maximum number of routes to be learned from a peer

Context **configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword* maximum *number*

Tree maximum

Description This command configures the maximum number of BGP routes of the specified address family that can be received from a peer before administrative action is taken.

When **log-only** is unconfigured, the BGP session is taken down whenever the limit of any family is exceeded even if the limits of the other family has not been exceeded.

Range 1 to 4294967295

Notes This element is mandatory.

Introduced 23.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

post-import *boolean*

Synopsis Apply limit only to routes accepted by import policies

Context **configure** subscriber-mgmt bgp-peering-policy *named-item* prefix-limits *keyword* post-import *boolean*

Tree post-import

Description When configured to **true**, the system limits the number of routes that are accepted by import policies. Routes rejected by import policies are not counted against the configured limit.

When configured to **false**, the system limits the number of routes to all routes received from the peer.

Default false

Introduced 23.7.R1

Max. instances	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**category-map-name**] *named-item*

Synopsis	Category map name
Context	**configure** subscriber-mgmt category-map *named-item*
Tree	category-map
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

activity-threshold *number*

Synopsis	Threshold to determine whether an activity is ongoing
Context	**configure** subscriber-mgmt category-map *named-item* activity-threshold *number*
Tree	activity-threshold
Range	1 to 100000000
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Tree	default-credit
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

time *number*

Synopsis	Default time credit
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* default-credit time *number*
Tree	time
Range	1 to 4294967295
Units	seconds
Notes	The following elements are part of a choice: **time** or **volume**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

volume

Synopsis	Enable the **volume** context
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* default-credit volume
Tree	volume
Notes	The following elements are part of a choice: **time** or **volume**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

unit *keyword*

Synopsis	Unit for the default volume credit
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* default-credit volume unit *keyword*
Tree	unit
Options	bytes, kilobytes, megabytes, gigabytes
Default	bytes
Introduced	16.0.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-filter

Synopsis	Enter the **ip-filter** context
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level egress ip-filter
Tree	ip-filter
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

entry [id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level egress ip-filter entry *number*
Tree	entry
Max. instances	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	IP filter entry ID
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level egress ip-filter entry *number*
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the **action** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level egress ip-filter entry *number* action
Tree	action
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drop

Synopsis	Packets matching the filter entry are dropped
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level egress ip-filter entry *number* action drop
Tree	drop
Notes	The following elements are part of a choice: **drop**, **forward**, or **http-redirect**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

forward

Synopsis	Packets matching the filter entry are forwarded
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level egress ip-filter entry *number* action forward
Tree	forward
Notes	The following elements are part of a choice: **drop**, **forward**, or **http-redirect**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

http-redirect

Synopsis	Enable the **http-redirect** context
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level egress ip-filter entry *number* action http-redirect
Tree	http-redirect
Notes	The following elements are part of a choice: **drop**, **forward**, or **http-redirect**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	IP filter entry ID
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level egress ipv6-filter entry *number*
Tree	entry
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the **action** context
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level egress ipv6-filter entry *number* action
Tree	action
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drop

Synopsis	Packets matching the filter entry are dropped
Context	**configure** subscriber-mgmt category-map *named-item* category *named-item* exhausted-credit-service-level egress ipv6-filter entry *number* action drop
Tree	drop
Notes	The following elements are part of a choice: **drop** or **forward**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

forward

Synopsis	Packets matching the filter entry are forwarded

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin *keyword*

Synopsis	Format of the Subscription-Id-Data AVP
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx avp-subscription-id origin *keyword*
Tree	origin
Options	subscriber-id, circuit-id, imsi, msisdn, imei, dual-stack-remote-id, mac, username, nas-port-id
Default	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Format of the Subscription-Id-Type AVP
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx avp-subscription-id type *keyword*
Tree	type
Options	e164, imsi, nai, private
Default	private
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ccrt-replay

Synopsis	Enable the **ccrt-replay** context
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx ccrt-replay
Tree	ccrt-replay
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Time between consecutive CCR-T replay attempts

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx ccrt-replay interval *number*
Tree	interval
Range	60 to 86400
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-lifetime *number*

Synopsis	Maximum time that CCR-t messages are replayed
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx ccrt-replay max-lifetime *number*
Tree	max-lifetime
Description	This command specifies the maximum time that CCR-t messages for Diameter Gx sessions that belong to the Diameter application policy are replayed.
Range	1 to 24
Units	hours
Default	24
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

credit-mcs-interval *number*

Synopsis	Volume syncing interval for usage monitoring
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx credit-mcs-interval *number*
Tree	credit-mcs-interval
Description	This command configures the MCS interval at which the accounting data of subscriber hosts is updated.
Range	5 to 60
Units	minutes
Default	10
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

destination-realm-learning *boolean*

Synopsis	Learn the destination realm from the incoming messages
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx destination-realm-learning *boolean*
Tree	destination-realm-learning
Description	When configured to **true**, destination realm learning is enabled on the application level. The destination realm is a mandatory configuration parameter used in outgoing Credit Control Request messages (CCR). The configured destination realm is always used in the initial request (CCR-I) message. The consecutive request message of a Gx session can use the destination realm learned from the replies. When configured to **false**, destination realm learning is disabled and the configured destination realm is used in outgoing request messages.
Default	true
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

features

Synopsis	Enter the **features** context
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx features
Tree	features
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

extended-bandwidth *boolean*

Synopsis	Negotiate support for extended bandwidth AVPs
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx features extended-bandwidth *boolean*
Tree	extended-bandwidth
Description	When configured to **true**, negotiation occurs for the support of extended AVPs that are capable of supporting bandwidth values greater than (2^32 –1) b/s. The extended AVPs allow bitrates in kb/s and are as follows: • Extended-GBR-DL (AVP code 2850) • Extended-GBR-UL (AVP code 2851) • Extended-Max-Requested-BW-DL (AVP code 554) • Extended-Max-Requested-BW-UL (AVP code 555)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- Extended-APN-AMBR-DL (AVP code 2848)
- Extended-APN-AMBR-UL (AVP code 2849)

When configured to **false**, the extended AVPs are not supported.

Default	false
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-avp

Synopsis	Enter the **include-avp** context
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp
Tree	include-avp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

an-gw-address *boolean*

Synopsis	Include the IP address of this gateway
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp an-gw-address *boolean*
Tree	an-gw-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

apn-ambr *boolean*

Synopsis	Include the APN aggregate maximum bitrate
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp apn-ambr *boolean*
Tree	apn-ambr
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

called-station-id *boolean*

Synopsis	Include the called station ID
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

calling-station-id

Synopsis	Enable the **calling-station-id** context
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp calling-station-id
Tree	calling-station-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Format of the Calling-Station-ID AVP
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp calling-station-id type *keyword*
Tree	type
Options	sap-string, mac, sap-id, remote-id, llid
Default	sap-string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-can-type *boolean*

Synopsis	Include the IP CAN type
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp ip-can-type *boolean*
Tree	ip-can-type

© 2026 Nokia.

Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp rat-type *boolean*
Tree	rat-type
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sgsn-mcc-mnc *boolean*

Synopsis	Include the 3GPP-SGSN-MCC-MNC AVP
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp sgsn-mcc-mnc *boolean*
Tree	sgsn-mcc-mnc
Description	When configured to **true**, this command enables the inclusion of the 3GPP-SGSN-MCC-MNC AVP, which contains the MCC and MNC as configured under **configure subscriber-mgmt gtp serving-network**.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

supported-features *boolean*

Synopsis	Include the supported features
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp supported-features *boolean*
Tree	supported-features
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-equipment-info

Synopsis	Enable the **user-equipment-info** context
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp user-equipment-info
Tree	user-equipment-info
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Information for User-Equipment-Info attribute
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp user-equipment-info type *keyword*
Tree	type
Options	imeisv, mac, eui64, modified-eui64
Default	mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-location-info *boolean*

Synopsis	Include the 3GPP-User-Location-Information AVP
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx include-avp user-location-info *boolean*
Tree	user-location-info

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command enables the inclusion of the 3GPP-User-Location-Information AVP as signaled in the incoming GTP setup message.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-format *mac-specification*

Synopsis	MAC address format
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx mac-format *mac-specification*
Tree	mac-format
String length	2 to 7
String format	'mac-specification' must be ab:, XY-, mmmm. or xx (e.g. ab: for 00:0c:f1:99:85:b8)
Default	aa:
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

report-ip-address-event *boolean*

Synopsis	Enable CCR-u messages on IP address allocation events
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx report-ip-address-event *boolean*
Tree	report-ip-address-event
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-qos-mapping

Synopsis	Enter the **three-gpp-qos-mapping** context
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx three-gpp-qos-mapping
Tree	three-gpp-qos-mapping
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

Use subject to Terms available at: www.nokia.com/terms.

apn-ambr-dl

Synopsis	Enter the **apn-ambr-dl** context
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx three-gpp-qos-mapping apn-ambr-dl
Tree	apn-ambr-dl
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

aggregate-rate

Synopsis	Map to an aggregate rate
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx three-gpp-qos-mapping apn-ambr-dl aggregate-rate
Tree	aggregate-rate
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **hs-sla-agg-rate**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *named-item*

Synopsis	Arbiter name to be overridden
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx three-gpp-qos-mapping apn-ambr-dl arbiter *named-item*
Tree	arbiter
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **hs-sla-agg-rate**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hs-sla-agg-rate

Synopsis	Map to an HS SLA aggregate rate

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx three-gpp-qos-mapping apn-ambr-dl hs-sla-agg-rate
Tree	hs-sla-agg-rate
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **hs-sla-agg-rate**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ignore-override

Synopsis	no override on apn-ambr-dl
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx three-gpp-qos-mapping apn-ambr-dl ignore-override
Tree	ignore-override
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **hs-sla-agg-rate**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	Policer ID to be overidden
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx three-gpp-qos-mapping apn-ambr-dl policer *number*
Tree	policer
Range	1 to 63
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **hs-sla-agg-rate**, **ignore-override**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue *number*

Synopsis	Queue ID to be overridden
Context	**configure** subscriber-mgmt diameter-gx-policy *named-item* gx three-gpp-qos-mapping apn-ambr-dl queue *number*
Tree	queue

© 2026 Nokia.

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gy

Synopsis	Enter the **gy** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy
Tree	gy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

avp-subscription-id

Synopsis	Enter the **avp-subscription-id** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy avp-subscription-id
Tree	avp-subscription-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin *keyword*

Synopsis	Origin for the Subscription-Id-Data AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy avp-subscription-id origin *keyword*
Tree	origin
Options	subscriber-id, circuit-id, imsi, msisdn, imei, dual-stack-remote-id, mac, username, nas-port-id
Default	subscriber-id
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Origin for the Subscription-Id-Type AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy avp-subscription-id type *keyword*
Tree	type
Options	e164, imsi, nai, private
Default	private
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ccrt-replay

Synopsis	Enable the **ccrt-replay** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy ccrt-replay
Tree	ccrt-replay
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Interval at which CCR-t messages are replayed
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy ccrt-replay interval *number*
Tree	interval
Description	This command specifies the interval at which CCR-t messages for Diameter Gy sessions that belong to the Diameter application policy are replayed, until a valid CCA-t response is received or until the configured maximum lifetime period expires.
Range	60 to 86400
Default	3600
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

max-lifetime *number*

Synopsis	Maximum time that CCR-t messages are replayed
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy ccrt-replay max-lifetime *number*
Tree	max-lifetime
Description	This command specifies the maximum period of time that CCR-t messages for Diameter Gy sessions that belong to the Diameter application policy are replayed.
Range	1 to 24
Units	hours
Default	24
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-realm-learning *boolean*

Synopsis	Learn the destination realm from the incoming messages
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy destination-realm-learning *boolean*
Tree	destination-realm-learning
Description	When configured to **true**, destination realm learning is enabled on the application level. The destination realm is a mandatory configuration parameter used in outgoing Credit Control Request messages (CCR). The configured destination realm is always used in the initial request (CCR-I) message. The consecutive request message of a Gy session can use the destination realm learned from the replies. When configured to **false**, destination realm learning is disabled and the configured destination realm is used in outgoing request messages.
Default	true
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

extended-failure-handling

Synopsis	Enter the **extended-failure-handling** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy extended-failure-handling
Tree	extended-failure-handling

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of Extended Failure Handling
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy extended-failure-handling admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-credit

Synopsis	Enter the **interim-credit** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy extended-failure-handling interim-credit
Tree	interim-credit
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-attempts *(number | keyword)*

Synopsis	Attempts to retry setting up a session to the OCS
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy extended-failure-handling interim-credit max-attempts *(number | keyword)*
Tree	max-attempts
Range	1 to 4294967295
Options	infinite
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

pdp-context-type *boolean*

Synopsis	Include the DCCA PDP-Context-Type AVP Parameter
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp pdp-context-type *boolean*
Tree	pdp-context-type
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ps-information *boolean*

Synopsis	Enable reporting of AVPs in grouped PS-Information AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp ps-information *boolean*
Tree	ps-information
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-context-id

Synopsis	Enable the **service-context-id** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp service-context-id
Tree	service-context-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

id *string-not-all-spaces*

Synopsis	Name for the service context ID AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp service-context-id id *string-not-all-spaces*
Tree	id
String length	1 to 32

© 2026 Nokia.

String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-charging-characteristics *boolean*

Synopsis	DCCA 3GPP charging characteristics AVP parameter
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp three-gpp-charging-characteristics *boolean*
Tree	three-gpp-charging-characteristics
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-charging-id *keyword*

Synopsis	DCCA 3GPP charging ID AVP parameter
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp three-gpp-charging-id *keyword*
Tree	three-gpp-charging-id
Options	false, auto, esm-info, id
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-ggsn-ipv4-address *boolean*

Synopsis	Include the 3GPP-GGSN Address in Diameter Gy messages
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp three-gpp-ggsn-ipv4-address *boolean*
Tree	three-gpp-ggsn-ipv4-address
Description	When configured to **true**, this command includes the 3GPP GGSN Address AVP in the Diameter Gy messages. The value is set to the source IPv4 address that is used for outgoing diameter messages.
Default	true

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-ggsn-ipv6-address *boolean*

Synopsis	Include the 3GPP-GGSN-Ipv6 address
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp three-gpp-ggsn-ipv6-address *boolean*
Tree	three-gpp-ggsn-ipv6-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-gprs-negotiated-qos-profile *boolean*

Synopsis	Include the 3GPP GPRS-QoS-Negotiated-Profile AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp three-gpp-gprs-negotiated-qos-profile *boolean*
Tree	three-gpp-gprs-negotiated-qos-profile
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-imsi *keyword*

Synopsis	Origin of the information to send in the IMSI AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp three-gpp-imsi *keyword*
Tree	three-gpp-imsi
Options	false, subscriber-id, circuit-id, imsi
Default	subscriber-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

three-gpp-nsapi *boolean*

Synopsis	Include the 3GPP-NSAPI
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp three-gpp-nsapi *boolean*
Tree	three-gpp-nsapi
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-rat-type

Synopsis	Enable the **three-gpp-rat-type** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp three-gpp-rat-type
Tree	three-gpp-rat-type
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *number*

Synopsis	Value for 3GPP-RAT-Type AVP
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp three-gpp-rat-type type *number*
Tree	type
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-selection-mode *boolean*

Synopsis	DCCA 3GPP selection mode AVP parameter
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp three-gpp-selection-mode *boolean*
Tree	three-gpp-selection-mode

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-session-stop-indicator *boolean*

Synopsis	DCCA 3GPP session stop indicator AVP parameter
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp three-gpp-session-stop-indicator *boolean*
Tree	three-gpp-session-stop-indicator
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

three-gpp-user-location-info *boolean*

Synopsis	DCCA 3GPP session stop indicator AVP parameter
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp three-gpp-user-location-info *boolean*
Tree	three-gpp-user-location-info
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-equipment-info-type

Synopsis	Enable the **user-equipment-info-type** context
Context	**configure** subscriber-mgmt diameter-gy-policy *named-item* gy include-avp user-equipment-info-type
Tree	user-equipment-info-type
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Information to include in User-Equipment-Info attribute

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-location-info *boolean*

Synopsis	Include the 3GPP-User-Location-Information AVP
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq include-avp user-location-info *boolean*
Tree	user-location-info
Description	When configured to **true**, this command enables the inclusion of the 3GPP-User-Location-Information AVP as signaled in the incoming GTP setup message.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-format *mac-specification*

Synopsis	MAC address format
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq mac-format *mac-specification*
Tree	mac-format
String length	2 to 7
String format	'mac-specification' must be ab:, XY-, mmmm. or xx (e.g. ab: for 00:0c:f1:99:85:b8)
Default	aa:
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *encrypted-leaf*

Synopsis	AA-request password
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq password *encrypted-leaf*
Tree	password
Description	This command specifies the AA-request password in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-name

Synopsis	Enter the **user-name** context
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq user-name
Tree	user-name
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

domain-name *string*

Synopsis	Domain name
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq user-name domain-name *string*
Tree	domain-name
String length	1 to 128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

format *keyword*

Synopsis	Format type for username
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq user-name format *keyword*
Tree	format
Options	mac, circuit-id, tuple, ascii-converted-circuit-id, ascii-converted-tuple, dhcp-client-vendor-opts, mac-giaddr, nas-port-id
Default	mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

operation *keyword*

Synopsis	Operation to perform
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* nasreq user-name operation *keyword*
Tree	operation
Options	append, strip, replace, default
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

node

Synopsis	Enter the **node** context
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* node

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	node
Notes	The following elements are part of a choice: **node** or **peer-policy**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destination-realm *string*

Synopsis	Destination-Realm AVP used by the Diameter peer policy
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* node destination-realm *string*
Tree	destination-realm
String length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

origin-host *reference*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Origin-Host AVP used by the Diameter policy
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* node origin-host *reference*
Tree	origin-host
Reference	**configure** aaa diameter node *diam-fqdn*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-failure

Synopsis	Enter the **on-failure** context
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* on-failure
Tree	on-failure
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

failover *boolean*

Synopsis	Session peer failover
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* on-failure failover *boolean*
Tree	failover
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

handling *keyword*

Synopsis	Session peer failure handling
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* on-failure handling *keyword*
Tree	handling
Options	terminate, continue, retry-and-terminate
Default	terminate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tx-timer *number*

Synopsis	Maximum wait time for a pending session request
Context	**configure** subscriber-mgmt diameter-nasreq-policy *named-item* tx-timer *number*
Tree	tx-timer
Range	10 to 1000
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

explicit-subscriber-map

Synopsis	Enter the **explicit-subscriber-map** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt explicit-subscriber-map
Tree	explicit-subscriber-map
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

entry [subscriber-id] *subscriber-id*

Synopsis	Enter the **entry** list instance
Context	**configure** subscriber-mgmt explicit-subscriber-map entry *subscriber-id*
Tree	entry
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**subscriber-id**] *subscriber-id*

Synopsis	Subscriber Identification string
Context	**configure** subscriber-mgmt explicit-subscriber-map entry *subscriber-id*
Tree	entry
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

alias *string*

Synopsis	Alias for subscriber identification string
Context	**configure** subscriber-mgmt explicit-subscriber-map entry *subscriber-id* alias *string*
Tree	alias
String length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

app-profile *reference*

Synopsis	Application profile name
Context	**configure** subscriber-mgmt explicit-subscriber-map entry *subscriber-id* app-profile *reference*
Tree	app-profile
Reference	**configure** application-assurance group *number* partition *number* policy app-profile *named-item*
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis	SLA profile name
Context	**configure** subscriber-mgmt explicit-subscriber-map entry *subscriber-id* sla-profile *reference*
Tree	sla-profile
Reference	**configure** subscriber-mgmt sla-profile *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis	Subscriber profile name
Context	**configure** subscriber-mgmt explicit-subscriber-map entry *subscriber-id* sub-profile *reference*
Tree	sub-profile
Reference	**configure** subscriber-mgmt sub-profile *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface-statistics

Synopsis	Enter the **group-interface-statistics** context
Context	**configure** subscriber-mgmt group-interface-statistics
Tree	group-interface-statistics

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state for statistics collection
Context	**configure** subscriber-mgmt group-interface-statistics admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface-template [name] *named-item*

Synopsis	Enter the **group-interface-template** list instance
Context	**configure** subscriber-mgmt group-interface-template *named-item*
Tree	group-interface-template
Description	Commands in this context configure a template for automatically-generated group interfaces that is used when creating CUPS sessions. A template with the name "default" is used when no other instance is created, however, the "default" template must be explicitly provisioned.
Max. instances	256
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Identifies this group interface template template
Context	**configure** subscriber-mgmt group-interface-template *named-item*
Tree	group-interface-template
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	20.5.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt group-interface-template *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis	IP MTU applied to outgoing packets
Context	**configure** subscriber-mgmt group-interface-template *named-item* ip-mtu *number*
Tree	ip-mtu
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.
Range	512 to 9786
Units	bytes
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4

Synopsis	Enter the **ipv4** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4
Tree	ipv4
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis	Enter the **icmp** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp
Tree	icmp
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp mask-reply *boolean*
Tree	mask-reply
Default	true
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

param-problem

Synopsis	Enter the **param-problem** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp param-problem
Tree	param-problem
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp param-problem admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

number *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp param-problem number *number*
Tree	number
Range	10 to 1000
Default	100
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp param-problem seconds *number*
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redirects

Synopsis	Enter the **redirects** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp redirects
Tree	redirects
Description	Commands in this context configure the settings for ICMP redirect messages generated by the interface. The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp redirects admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp redirects number *number*
Tree	number
Range	10 to 1000
Default	100
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp redirects seconds *number*
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ttl-expired

Synopsis	Enter the **ttl-expired** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp ttl-expired
Tree	ttl-expired
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending TTL expired messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp ttl-expired admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of TTL expired messages to send
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp ttl-expired number *number*
Tree	number
Range	10 to 2000
Default	100
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis	Time used to limit the number of TTL expired messages

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp ttl-expired seconds *number*
Tree	seconds
Range	1 to 60
Units	seconds
Default	10
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

unreachables

Synopsis	Enter the **unreachables** context
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp unreachables
Tree	unreachables
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	**configure** subscriber-mgmt group-interface-template *named-item* ipv4 icmp unreachables admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis	Maximum number of unreachable messages to send

data *boolean*

Synopsis	Sample and forward data packets
Context	**configure** subscriber-mgmt group-interface-template *named-item* trigger-packet data *boolean*
Tree	data
Description	When configured to **true**, the router processes data-trigger packets on dynamic SAPs. Data-trigger packets must also be enabled on the capture SAP.
Default	false
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp

Synopsis	Enter the **gtp** context
Context	**configure** subscriber-mgmt gtp
Tree	gtp
Description	This command enables the context to configure box-wide GTP parameters and profiles.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

apn-policy [name] *named-item*

Synopsis	Enter the **apn-policy** list instance
Context	**configure** subscriber-mgmt gtp apn-policy *named-item*
Tree	apn-policy
Max. instances	128
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	APN policy name for a new incoming GTP connection
Context	**configure** subscriber-mgmt gtp apn-policy *named-item*
Tree	apn-policy

apn [apn-name] *string*

Synopsis	Enter the **apn** list instance
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string*
Tree	apn
Max. instances	1024
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**apn-name**] *string*

Synopsis	GTP APN name
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string*
Tree	apn
String length	1 to 80
String format	'apn' must match APN format (e.g. internet.mnc123.mcc456.gprs)
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ambr-qos-mapping

Synopsis	Enter the **ambr-qos-mapping** context
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping
Tree	ambr-qos-mapping
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

downlink

Synopsis	Enable the **downlink** context
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping downlink
Tree	downlink
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

aggregate-rate

Synopsis	Map the downlink APN-AMBR rate to an aggregate rate
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping downlink aggregate-rate
Tree	aggregate-rate
Notes	The following elements are part of a mandatory choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *named-item*

Synopsis	Name of arbiter to be overridden
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping downlink arbiter *named-item*
Tree	arbiter
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	ID of policer to be overridden

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping downlink policer *number*
Tree	policer
Range	1 to 63
Notes	The following elements are part of a mandatory choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue *number*

Synopsis	Map the downlink APN-AMBR rate to a queue PIR override
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping downlink queue *number*
Tree	queue
Range	1 to 8
Notes	The following elements are part of a mandatory choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler *named-item*

Synopsis	Name of the scheduler to be overridden
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping downlink scheduler *named-item*
Tree	scheduler
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

uplink

Synopsis	Enable the **uplink** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping uplink
Tree	uplink
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *named-item*

Synopsis	Name of arbiter to be overridden
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping uplink arbiter *named-item*
Tree	arbiter
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	Map the uplink APN-AMBR rate to a policer PIR override
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping uplink policer *number*
Tree	policer
Range	1 to 63
Notes	The following elements are part of a mandatory choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue *number*

Synopsis	Map the uplink APN-AMBR rate to a queue PIR override
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping uplink queue *number*
Tree	queue

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 32
Notes	The following elements are part of a mandatory choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

scheduler *named-item*

Synopsis	Name of scheduler to be overridden
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* ambr-qos-mapping uplink scheduler *named-item*
Tree	scheduler
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	16.0.R7
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis	Enter the **defaults** context
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* defaults
Tree	defaults
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

group-interface

Synopsis	Enable the **group-interface** context
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* defaults group-interface
Tree	group-interface
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

name *interface-name*

Synopsis	Group interface name
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* defaults group-interface name *interface-name*
Tree	name
String length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

svc-name *service-name*

Synopsis	Service name where the group interface resides
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* defaults group-interface svc-name *service-name*
Tree	svc-name
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

diameter-nasreq-policy *reference*

Synopsis	NASREQ authentication policy name
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* diameter-nasreq-policy *reference*
Tree	diameter-nasreq-policy
Reference	**configure** subscriber-mgmt diameter-nasreq-policy *named-item*
Notes	The following elements are part of a choice: **diameter-nasreq-policy**, **radius-auth-policy**, or **user-db**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

radius-auth-policy *reference*

Synopsis	RADIUS authentication policy name
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* radius-auth-policy *reference*
Tree	radius-auth-policy
Reference	**configure** subscriber-mgmt radius-authentication-policy *named-item*
Notes	The following elements are part of a choice: **diameter-nasreq-policy**, **radius-auth-policy**, or **user-db**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

skip-gtp-ipv4-allocation *boolean*

Synopsis	defer IPv4 address allocation to DHCP
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* skip-gtp-ipv4-allocation *boolean*
Tree	skip-gtp-ipv4-allocation
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

Synopsis	Local user database name
Context	**configure** subscriber-mgmt gtp apn-policy *named-item* apn *string* user-db *reference*
Tree	user-db
Reference	**configure** subscriber-mgmt local-user-db *named-item*
Notes	The following elements are part of a choice: **diameter-nasreq-policy**, **radius-auth-policy**, or **user-db**.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-u-ipv6-checksum *keyword*

Synopsis	UDP checksum for GTP-u packets transmitted over IPv6

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt gtp gtp-u-ipv6-checksum *keyword*
Tree	gtp-u-ipv6-checksum
Description	This command enables the calculation and insertion of a UDP checksum into the GTP-u tunneled traffic over IPv6 transport toward the RAN for 4G and 5G fixed-wireless access.
Options	false, true
Default	false
Introduced	24.10.R3
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-held-uplink-sessions *number*

Synopsis	Maximum GTP sessions held while UE is disconnected
Context	**configure** subscriber-mgmt gtp max-held-uplink-sessions *number*
Tree	max-held-uplink-sessions
Range	0 to 500000
Default	2000
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer-profile [name] *named-item*

Synopsis	Enter the **peer-profile** list instance
Context	**configure** subscriber-mgmt gtp peer-profile *named-item*
Tree	peer-profile
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Peer profile name
Context	**configure** subscriber-mgmt gtp peer-profile *named-item*
Tree	peer-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

interface-type *keyword*

Synopsis	3GPP interface type for connections toward this peer
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* interface-type *keyword*
Tree	interface-type
Options	gn, s2a, s2b, s11
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-ttl *number*

Synopsis	IP header TTL value for GTP control messages
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* ip-ttl *number*
Tree	ip-ttl
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

keep-alive

Synopsis	Enter the **keep-alive** context
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* keep-alive
Tree	keep-alive
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of GTP-C echo request messages
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* keep-alive admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Frequency for sending keepalives
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* keep-alive interval *number*
Tree	interval
Range	60 to 180
Units	seconds
Default	60
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

retry-count *number*

Synopsis	Time between echo retries toward the same peer
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* keep-alive retry-count *number*
Tree	retry-count

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 15
Default	4
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Timeout after which echo request is deemed unanswered
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* keep-alive timeout *number*
Tree	timeout
Range	1 to 20
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

message-retransmit

Synopsis	Enter the **message-retransmit** context
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* message-retransmit
Tree	message-retransmit
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

retry-count *number*

Synopsis	Maximum unanswered retries before message deemed failed
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* message-retransmit retry-count *number*
Tree	retry-count
Range	1 to 8
Default	3
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

timeout *number*

Synopsis	Timeout after which a message is considered unanswered
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* message-retransmit timeout *number*
Tree	timeout
Range	1 to 30
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy for MGW profile packets sent or received
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *named-item*
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

s11

Synopsis	Enter the **s11** context
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11
Tree	s11
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

change-reporting-action *(number | keyword)*

Synopsis	Value of change reporting action IE sends to the peer
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 change-reporting-action *(number | keyword)*
Tree	change-reporting-action

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the value of the change reporting action IE sends to the peer in applicable messages. The peer needs to indicate support first using the appropriate flag in the indication IE. This can be overridden by AAA, if AAA explicitly request notification changes for either ECGI, TAI or both. If AAA does not request any notification changes or only the generic location changes, the configured value is used. When unconfigured, this command indicates that the IE is not sent, unless specified by AAA.
Range	0 to 255
Options	cgi-sai, rai, tai, ecgi, cgi-sai-rai, tai-ecgi
Introduced	16.0.R5
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

end-marker-count *number*

Synopsis	Number of GTP-U end marker packets that are sent
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 end-marker-count *number*
Tree	end-marker-count
Description	This command specifies the number of end marker packets that are sent when it is certain no more packets will be sent over the corresponding GTP-U tunnel, such as after a completed mobility event.
Range	0 to 5
Default	1
Introduced	16.0.R5
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4-mtu *number*

Synopsis	IPv4-MTU PCO sent in S11 GTP messages
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 ipv4-mtu *number*
Tree	ipv4-mtu
Range	512 to 9000
Default	1400
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

qos

Synopsis	Enter the **qos** context
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 qos
Tree	qos
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ambr

Synopsis	Enter the **ambr** context
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 qos ambr
Tree	ambr
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

down-link *number*

Synopsis	Downlink Aggregated Maximum Bit Rate (AMBR)
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 qos ambr down-link *number*
Tree	down-link
Range	0 to 10000000
Units	kilobps
Default	20000
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

up-link *number*

Synopsis	Uplink Aggregated Maximum Bit Rate (AMBR)
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 qos ambr up-link *number*
Tree	up-link
Range	0 to 10000000
Units	kilobps

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	10000
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arp *number*

Synopsis	Allocation or retention priority
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 qos arp *number*
Tree	arp
Range	1 to 15
Default	1
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

down-link

Synopsis	Enter the **down-link** context
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 qos down-link
Tree	down-link
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gbr *number*

Synopsis	Guaranteed Bit Rate (GBR)
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* s11 qos down-link gbr *number*
Tree	gbr
Range	0 to 100000
Units	kilobps
Default	0
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

rat-type *(number | keyword)*

Synopsis	Default Radio Access Type (RAT) signaled in GTP setup
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* uplink rat-type *(number | keyword)*
Tree	rat-type
Description	This command configures the default Radio Access Technology (RAT) type signaled during GTP setup. RAT identifies the underlying physical connection method for a radio-based communication network. This can be overridden by RADIUS.
Range	0 to 255
Options	utran, geran, wlan, gan, hspa, eutran, virtual
Default	wlan
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

report-wlan-location *boolean*

Synopsis	Report WLAN or cellular location of UE during setup
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* uplink report-wlan-location *boolean*
Tree	report-wlan-location
Description	When configured to **true**, this command enables reporting of the WLAN location or cellular location of the UE in the signaling interface (S2a or Gn) between the WLAN GW and the mobile gateway (PGW or GGSN). When configured to **false**, this command disables location reporting.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-hold-time *(number | keyword)*

Synopsis	Time to hold a GTP session after its UE is disconnected
Context	**configure** subscriber-mgmt gtp peer-profile *named-item* uplink session-hold-time *(number | keyword)*
Tree	session-hold-time

© 2026 Nokia.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

agg-rate

Synopsis	Maximum total rate for all subscriber egress queues

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt host-tracking-policy *named-item* egress-rate-modify agg-rate
Tree	agg-rate
Description	This command specifies the maximum total rate for all subscriber egress queues for each subscriber associated with the policy.
Notes	The following elements are part of a choice: **agg-rate** or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scheduler *named-item*

Synopsis	Scheduler to be applied for rate modification
Context	**configure** subscriber-mgmt host-tracking-policy *named-item* egress-rate-modify scheduler *named-item*
Tree	scheduler
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **agg-rate** or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

http-redirect-policy [name] *named-item*

Synopsis	Enter the **http-redirect-policy** list instance
Context	**configure** subscriber-mgmt http-redirect-policy *named-item*
Tree	http-redirect-policy
Max. instances	16
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

url *http-redirect-url*

Synopsis	HTTP URL to which the matching traffic is redirected
Context	**configure** subscriber-mgmt http-redirect-policy *named-item* url *http-redirect-url*
Tree	url
Description	This command configures the HTTP redirect URL to which the matching traffic is redirected. Use the following variables to insert subscriber session data in the URL: • $URL (Request-URI in the HTTP GET Request received) • $MAC (a string that represents the MAC address of the subscriber host) • $IP (a string that represents the IP address of the subscriber host) • $NASIP (a string that represents the RADIUS IP address of the ISA/ESA-VM)
String length	1 to 255
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

idle-timeout-policy [name] *named-item*

Synopsis	Enter the **idle-timeout-policy** list instance
Context	**configure** subscriber-mgmt idle-timeout-policy *named-item*
Tree	idle-timeout-policy
Description	Commands in this context configure the policy that defines the queues and policers to monitor for idle time. The activity-threshold defines the rate below which the subscriber session is considered idle. After the idle timeout, idle sessions are terminated or a connectivity check is performed. The idle-timeout policy must be associated with an SLA profile to become active.
Max. instances	255
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Idle timeout policy name
Context	**configure** subscriber-mgmt idle-timeout-policy *named-item*
Tree	idle-timeout-policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action taken after the idle timeout is reached
Context	**configure** subscriber-mgmt idle-timeout-policy *named-item* action *keyword*
Tree	action
Description	This command specifies the action that is executed when the idle timeout is reached. The action is performed for all hosts and sessions associated with the SLA profile instance. When the **terminate** action is configured, the subscriber session is terminated from the system. For PPP sessions, a terminate request is sent. For IPoE sessions, a DHCP release to the server is sent. When the **shcv** action is configured for IPoE only, the system performs a host connectivity verification and terminates unresponsive subscriber sessions. For responsive subscriber sessions, the idle timeout period is reset.
Options	terminate – Delete the subscriber session from the system shcv – Perform verification and terminate unresponsive session
Default	terminate
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

activity-threshold *number*

Synopsis	Rate below which idle time starts
Context	**configure** subscriber-mgmt idle-timeout-policy *named-item* activity-threshold *number*
Tree	activity-threshold
Description	This command configures the threshold to determine activity. For data rates below the activity threshold, the subscriber session is considered idle. The data rate is the aggregate rate of all monitored ingress and egress policers and queues.
Range	1 to 100000000
Units	kilobps

[**group-address**] *ipv4-multicast-address*

Synopsis	Group address of static IGMP multicast channel
Context	**configure** subscriber-mgmt igmp-policy *named-item* static group *ipv4-multicast-address*
Tree	group
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id) 'ipv4-multicast-address' must be in 224.0.0.0-239.255.255.255 range with valid dotted-quad form
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source [source-address] *ipv4-unicast-address*

Synopsis	Add a list entry for **source**
Context	**configure** subscriber-mgmt igmp-policy *named-item* static group *ipv4-multicast-address* source *ipv4-unicast-address*
Tree	source
Notes	The following elements are part of a mandatory choice: **source** or **starg**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**source-address**] *ipv4-unicast-address*

Synopsis	Source IP address of multicast channel sending data
Context	**configure** subscriber-mgmt igmp-policy *named-item* static group *ipv4-multicast-address* source *ipv4-unicast-address*
Tree	source
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

svc-path

Synopsis	Enable the **svc-path** context
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *named-item* entry *number* action *keyword* insert-nsh svc-path
Tree	svc-path
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

path-id *number*

Synopsis	Path ID in the base part of NSH
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *named-item* entry *number* action *keyword* insert-nsh svc-path path-id *number*
Tree	path-id
Range	1 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

svc-index *number*

Synopsis	Service index inserted in the base part of NSH
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *named-item* entry *number* action *keyword* insert-nsh svc-path svc-index *number*
Tree	svc-index
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

foreign-ip *(ipv4-unicast-prefix | ipv4-unicast-address)*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Foreign IP address or prefix for match criterion
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *named-item* entry *number* match foreign-ip *(ipv4-unicast-prefix | ipv4-unicast-address)*
Tree	foreign-ip
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

foreign-port *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Foreign TCP or UDP port as the match criterion
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *named-item* entry *number* match foreign-port *number*
Tree	foreign-port
Range	1 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

protocol *keyword*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP protocol to match the VAS filter
Context	**configure** subscriber-mgmt isa-service-chaining vas-filter *named-item* entry *number* match protocol *keyword*
Tree	protocol
Options	tcp-udp – TCP and UDP none – Matching disabled by the IP protocol

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	icmp – ICMP tcp – TCP udp – UDP
Default	none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-user-db [name] *named-item*

Synopsis	Enter the **local-user-db** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item*
Tree	local-user-db
Max. instances	127
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Local user database name
Context	**configure** subscriber-mgmt local-user-db *named-item*
Tree	local-user-db
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the local user database
Context	**configure** subscriber-mgmt local-user-db *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1

Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification
Tree	host-identification
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id

Synopsis	Enter the **circuit-id** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification circuit-id
Tree	circuit-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Circuit ID as ASCII string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification circuit-id ascii-string *string*
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a choice: **ascii-string** or **hex-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Circuit ID as hexadecimal string

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification circuit-id hex-string *hex-string*
Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a choice: **ascii-string** or **hex-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

derived-id *display-string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Derived ID string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification derived-id *display-string*
Tree	derived-id
String length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-en

Synopsis	Enter the **duid-en** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification duid-en
Tree	duid-en
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Synopsis	Client ID of type duid-en as a hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification duid-en hex-string *hex-string*
Tree	hex-string
Description	This command configures the hexadecimal value for use in matching against the concatenation of the enterprise number and identifier fields of the DHCPv6 option CLIENTID (1) with DUID type = 2 (assigned by the vendor based on the enterprise number) in the DHCPv6 client message.
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-ll-llt *mac-unicast-address-no-zero*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address of the Client ID type duid-ll or duid-llt
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification duid-ll-llt *mac-unicast-address-no-zero*
Tree	duid-ll-llt
Description	This command configures the value for use in matching against the link-layer address field of the DHCPv6 option CLIENTID (1) with DUID type = 3 (based on the link-layer address) or DUID type = 1 (based on the link-layer address plus time) and hardware type = 1 (Ethernet) in the DHCPv6 client message. For DUID type = 1, the time field is ignored.
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

encap-tag-range

Synopsis	Enable the **encap-tag-range** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* host-identification encap-tag-range
Tree	encap-tag-range
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

from *atm-or-vlan-encap*

force-relay *boolean*

Synopsis	DHCPv4 promotion for data-triggered ESM hosts.
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 force-relay *boolean*
Tree	force-relay
Default	false
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gi-address *ipv4-unicast-address*

Synopsis	GI addresses based on the host entry in the LUDB
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 gi-address *ipv4-unicast-address*
Tree	gi-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option [number] *(number | keyword)*

Synopsis	Enter the **option** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)*
Tree	option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCP option to send identification strings to client
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)*
Tree	option
Range	1 to 254

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string-not-all-spaces*

Synopsis	DHCP option specified as an ASCII string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)* ascii-string *string-not-all-spaces*
Tree	ascii-string
String length	1 to 127
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	DHCP option as time duration
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)* duration *number*
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Remove DHCP option configuration
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)* empty

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)* hex-string *hex-string*
Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-address *ipv4-address*

Synopsis	DHCP option as a list of IPv4 addresses
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)* ipv4-address *ipv4-address*
Tree	ipv4-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**. This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

netbios-node-type *keyword*

Synopsis	DHCP option as NetBIOS node type
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 option *(number | keyword)* netbios-node-type *keyword*
Tree	netbios-node-type
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *ipv4-unicast-address*

WARNING:
This element is deprecated and will be removed in a future release.

Synopsis	IPv4 address of the DHCP server
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 server *ipv4-unicast-address*
Tree	server
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Deprecated	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

servers *ipv4-unicast-address*

Synopsis	DHCPv4 servers where DHCPv4 requests are forwarded
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv4 servers *ipv4-unicast-address*
Tree	servers
Description	This command configures the DHCPv4 servers where DHCPv4 requests are forwarded. The configured DHCP server IPv4 address must reference one of the addresses configured under the DHCP context of an IES/VPRN subscriber or group interface.
String format	'ipv4-address' must use only digits and dots (no %zone)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	8
Notes	This element is ordered by the user.
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6
Tree	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address *ipv6-unicast-address*

Synopsis	Fixed IPv6 address of the host
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 address *ipv6-unicast-address*
Tree	address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address-pool *named-item*

Synopsis	IPv6 address pool name
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 address-pool *named-item*
Tree	address-pool
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Default	false
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

link-address *ipv6-unicast-address*

Synopsis	Link address used for prefix selection at DHCP server
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 link-address *ipv6-unicast-address*
Tree	link-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option [number] *(number | keyword)*

Synopsis	Enter the **option** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 option *(number | keyword)*
Tree	option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCPv6 option number or keyword
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 option *(number | keyword)*
Tree	option
Range	1 to 254
Options	dns-server – DNS server IPv6 address boot-file-url – DHCPv6 option BOOTFILE_URL value boot-file-param – DHCPv6 option BOOTFILE_PARAM value
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string-not-all-spaces*

Synopsis	DHCP option sepcified as ASCII string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 option *(number | keyword)* ascii-string *string-not-all-spaces*
Tree	ascii-string
String length	1 to 127
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **ascii-string**, **hex-string**, or **ipv6-address**.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 option *(number | keyword)* hex-string *hex-string*
Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a mandatory choice: **ascii-string**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *ipv6-address*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 option *(number | keyword)* ipv6-address *ipv6-address*
Tree	ipv6-address
Max. instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **hex-string**, or **ipv6-address**. This element is ordered by the user.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-advertisement-policy *named-item*

Synopsis	IPv6 router advertisement policy
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 router-advertisement-policy *named-item*
Tree	router-advertisement-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server *ipv6-unicast-address*

WARNING:
This element is deprecated and will be removed in a future release.

Synopsis	IPv6 address of the DHCP server
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 server *ipv6-unicast-address*
Tree	server
Introduced	16.0.R1
Deprecated	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

servers *ipv6-unicast-address*

Synopsis	DHCPv6 servers where DHCPv6 requests are forwarded
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 servers *ipv6-unicast-address*
Tree	servers
Description	This command configures the DHCPv6 servers where DHCPv6 requests are forwarded. The configured DHCP server IPv6 address must reference one of the addresses configured under the DHCP context of an IES/VPRN subscriber or group interface.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	8
Notes	This element is ordered by the user.
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

slaac-prefix *ipv6-unicast-prefix*

Synopsis	IPv6 SLAAC prefix of this host
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 slaac-prefix *ipv6-unicast-prefix*
Tree	slaac-prefix
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

slaac-prefix-pool *named-item*

Synopsis	IPv6 SLAAC prefix pool of this host
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 slaac-prefix-pool *named-item*
Tree	slaac-prefix-pool
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timers

Synopsis	Enter the **timers** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 timers
Tree	timers
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

preferred-lifetime *(number | keyword)*

Synopsis	Time for a lease to remain preferred
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 timers preferred-lifetime *(number | keyword)*
Tree	preferred-lifetime
Range	300 to 315446399
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rebind *number*

Synopsis	Rebind timer (T2)
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 timers rebind *number*
Tree	rebind
Range	0 to 1209600
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

renew *number*

Synopsis	Renew timer (T1)
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 timers renew *number*
Tree	renew
Range	0 to 604800
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

valid-lifetime *(number | keyword)*

Synopsis	Time for a lease to remain valid
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* ipv6 timers valid-lifetime *(number | keyword)*
Tree	valid-lifetime
Range	300 to 315446399
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

match-radius-proxy-cache

Synopsis	Enter the **match-radius-proxy-cache** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache
Tree	match-radius-proxy-cache
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fail-action *keyword*

Synopsis	Action when no match is found
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache fail-action *keyword*
Tree	fail-action
Options	continue, drop
Default	drop
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-format *mac-specification*

Synopsis	MAC address format

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache mac-format *mac-specification*
Tree	mac-format
String length	2 to 7
String format	'mac-specification' must be ab:, XY-, mmmm. or xx (e.g. ab: for 00:0c:f1:99:85:b8)
Default	aa:
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis	Enter the **match** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache match
Tree	match
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Match circuit ID in DHCP Option 82
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache match circuit-id *boolean*
Tree	circuit-id
Notes	The following elements are part of a choice: **circuit-id**, (**ipv4-option** and **ipv6-option**), **mac**, or **remote-id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-option *number*

Synopsis	DHCP option number
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* match-radius-proxy-cache match ipv4-option *number*
Tree	ipv4-option
Range	1 to 254

Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv4-option *(number | keyword)* hex-string *hex-string*
Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-address *ipv4-address*

Synopsis	DHCP option as a list of IPv4 addresses
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv4-option *(number | keyword)* ipv4-address *ipv4-address*
Tree	ipv4-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**. This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

netbios-node-type *keyword*

Synopsis	DHCP option as NetBIOS node type
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv4-option *(number* | *keyword)* netbios-node-type *keyword*
Tree	netbios-node-type
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-option [number] *(number* | *keyword)*

Synopsis	Enter the **ipv6-option** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv6-option *(number* | *keyword)*
Tree	ipv6-option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number* | *keyword)*

Synopsis	DHCP option to send as identification string
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv6-option *(number* | *keyword)*
Tree	ipv6-option
Range	1 to 65535
Options	dns-server, domain-name
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string-not-all-spaces*

Synopsis	DHCP option specified as an ASCII string

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv6-option *(number | keyword)* ascii-string *string-not-all-spaces*
Tree	ascii-string
String length	1 to 127
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-string *string*

Synopsis	DHCP option specified as a domain name
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv6-option *(number | keyword)* domain-string *string*
Tree	domain-string
String length	1 to 127
String format	'domain-string' must be a DNS-style label sequence (RFC 1035)
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Empty DHCP option
Context	**configure** subscriber-mgmt local-user-db *named-item* ipoe host *named-item* to-client-options ipv6-option *(number | keyword)* empty
Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **domain-string**, **empty**, **hex-string**, or **ipv6-address**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

use-sap-id

Synopsis	Use SAP ID of the PPPoE session as the circuit ID
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* access-loop-information circuit-id use-sap-id
Tree	use-sap-id
Notes	The following elements are part of a mandatory choice: **ascii-string**, **sap-id**, or **use-sap-id**.
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id

Synopsis	Enable the **remote-id** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* access-loop-information remote-id
Tree	remote-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

Synopsis	String format for the remote ID
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* access-loop-information remote-id ascii-string *string*
Tree	ascii-string
String length	1 to 63
Notes	The following elements are part of a mandatory choice: **ascii-string**, **mac**, or **use-mac-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-mac-address

Synopsis	Use MAC address of the PPPoE session as the remote ID
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* access-loop-information remote-id use-mac-address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	use-mac-address
Notes	The following elements are part of a mandatory choice: **ascii-string**, **mac**, or **use-mac-address**.
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the host
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication

Synopsis	Enter the **authentication** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* authentication
Tree	authentication
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gx-policy *named-item*

Synopsis	Diameter application policy
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* authentication gx-policy *named-item*
Tree	gx-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

nasreq-auth-policy *named-item*

Synopsis	Diameter NASREQ application policy for authentication
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* authentication nasreq-auth-policy *named-item*
Tree	nasreq-auth-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

padi-auth-policy *named-item*

Synopsis	Authentication policy name
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* authentication padi-auth-policy *named-item*
Tree	padi-auth-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pre-auth-policy *named-item*

Synopsis	Pre-authentication policy of this host
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* authentication pre-auth-policy *named-item*
Tree	pre-auth-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-auth-policy *named-item*

Synopsis	Host authentication policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* authentication radius-auth-policy *named-item*
Tree	radius-auth-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *named-item*

Synopsis	Local user DB to use for PPP PAP/CHAP authentication
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* authentication user-db *named-item*
Tree	user-db
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-identification

Synopsis	Enter the **host-identification** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* host-identification
Tree	host-identification
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id

Synopsis	Enter the **circuit-id** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* host-identification circuit-id
Tree	circuit-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Circuit ID as ASCII string
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* host-identification circuit-id ascii-string *string*
Tree	ascii-string
String length	1 to 127
Notes	The following elements are part of a choice: **ascii-string** or **hex-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Circuit ID as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* host-identification circuit-id hex-string *hex-string*
Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a choice: **ascii-string** or **hex-string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

derived-id *display-string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Derived ID string

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* host-identification derived-id *display-string*
Tree	derived-id
String length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

encap-tag-range

Synopsis	Enable the **encap-tag-range** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* host-identification encap-tag-range
Tree	encap-tag-range
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

from *atm-or-vlan-encap*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Start tag
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* host-identification encap-tag-range from *atm-or-vlan-encap*
Tree	from
String length	1 to 11
String format	'atm-or-vlan-encap' must be ATM VPI/VCI or VLAN encap format
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

to *atm-or-vlan-encap*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Tree	gi-address
Options	subnet-scope, pool-scope
Notes	The following elements are part of a choice: **gi-address**, (**ip-address** and **prefix-length**), **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-address *ipv4-unicast-address*

Synopsis	Fixed IPv4 address of the host
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 address ip-address *ipv4-unicast-address*
Tree	ip-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: **gi-address**, (**ip-address** and **prefix-length**), **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

pool

Synopsis	Enable the **pool** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 address pool
Tree	pool
Notes	The following elements are part of a choice: **gi-address**, (**ip-address** and **prefix-length**), **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delimiter *string*

Synopsis	Delimiter separating primary and secondary pool names
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 address pool delimiter *string*
Tree	delimiter
String length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

primary *named-item*

Synopsis	Primary pool name
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 address pool primary *named-item*
Tree	primary
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

secondary *named-item*

Synopsis	Secondary pool name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 address pool secondary *named-item*
Tree	secondary
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-length *number*

Synopsis	IPv4 host address prefix length
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 address prefix-length *number*
Tree	prefix-length
Range	1 to 32
Default	32
Notes	The following elements are part of a choice: **gi-address**, (**ip-address** and **prefix-length**), **pool**, or **use-pool-from-client**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-pool-from-client

Synopsis	Enable the **use-pool-from-client** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 address use-pool-from-client
Tree	use-pool-from-client
Notes	The following elements are part of a choice: **gi-address**, (**ip-address** and **prefix-length**), **pool**, or **use-pool-from-client**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delimiter *string*

Synopsis	Delimiter character to combine primary and secondary pool names
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 address use-pool-from-client delimiter *string*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	delimiter
String length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-df-bit *boolean*

Synopsis	Ignore the DF bit in the IPv4 header when fragmenting
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 ignore-df-bit *boolean*
Tree	ignore-df-bit
Description	When configured to **true**, the router ignores the DF bit in the IPv4 header for frames egressing the subscriber interface. The frames are fragmented according the applicable egress MTU. The DF bit is reset for frames that are fragmented. This command applies to PPPoE PTA and L2TP LNS frames only. It is not applicable for L2TP LAC frames. When configured to **false**, the router does not ignore the DF bit in the IPv4 header for frames egressing the subscriber interface.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option [number] *(number | keyword)*

Synopsis	Enter the **option** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 option *(number | keyword)*
Tree	option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCP option to send identification strings to client
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 option *(number | keyword)*
Tree	option

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string-not-all-spaces*

Synopsis	DHCP option specified as an ASCII string
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 option *(number | keyword)* ascii-string *string-not-all-spaces*
Tree	ascii-string
String length	1 to 127
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	DHCP option as time duration
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 option *(number | keyword)* duration *number*
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Remove DHCP option configuration

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 option *(number | keyword)* empty
Tree	empty
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 option *(number | keyword)* hex-string *hex-string*
Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-address *ipv4-address*

Synopsis	DHCP option as a list of IPv4 addresses
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 option *(number | keyword)* ipv4-address *ipv4-address*
Tree	ipv4-address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Max. instances	4
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**. This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

netbios-node-type *keyword*

Synopsis	DHCP option as NetBIOS node type
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv4 option *(number | keyword)* netbios-node-type *keyword*
Tree	netbios-node-type
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6
Tree	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address *ipv6-unicast-address*

Synopsis	Fixed IPv6 address of the host
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 address *ipv6-unicast-address*
Tree	address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address-pool *named-item*

Synopsis	IPv6 address pool name
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 address-pool *named-item*
Tree	address-pool
String length	1 to 32

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delegated-prefix *ipv6-unicast-prefix*

Synopsis	IPv6 delegated prefix of this host
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 delegated-prefix *ipv6-unicast-prefix*
Tree	delegated-prefix
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delegated-prefix-length *number*

Synopsis	Delegated prefix length
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 delegated-prefix-length *number*
Tree	delegated-prefix-length
Range	48 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delegated-prefix-pool *named-item*

Synopsis	Delegated prefix pool
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 delegated-prefix-pool *named-item*
Tree	delegated-prefix-pool
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-ipv6cp *boolean*

Synopsis	Force IPv6 control protocol
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 force-ipv6cp *boolean*
Tree	force-ipv6cp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option [number] *(number | keyword)*

Synopsis	Enter the **option** list instance
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 option *(number | keyword)*
Tree	option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number**] *(number | keyword)*

Synopsis	DHCPv6 option
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 option *(number | keyword)*
Tree	option
Range	23
Options	dns-server
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *hex-string*

Synopsis	DHCP option specified as hexadecimal string
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 option *(number | keyword)* hex-string *hex-string*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	hex-string
String length	1 to 256
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Notes	The following elements are part of a mandatory choice: **hex-string** or **ipv6-address**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *ipv6-address*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 option *(number | keyword)* ipv6-address *ipv6-address*
Tree	ipv6-address
Max. instances	4
Notes	The following elements are part of a mandatory choice: **hex-string** or **ipv6-address**. This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-advertisement-policy *named-item*

Synopsis	IPv6 router advertisement policy
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 router-advertisement-policy *named-item*
Tree	router-advertisement-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

slaac-prefix *ipv6-unicast-prefix*

Synopsis	IPv6 SLAAC prefix of this host
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ipv6 slaac-prefix *ipv6-unicast-prefix*

l2tp

Synopsis	Enter the **l2tp** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* l2tp
Tree	l2tp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group

Synopsis	Enable the **group** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* l2tp group
Tree	group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *string*

Synopsis	L2TP tunnel group name
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* l2tp group name *string*
Tree	name
String length	1 to 63
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-id *number*

Synopsis	Service ID for the L2TP tunnel group
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* l2tp group service-id *number*
Tree	service-id
Range	1 to 2147483647
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac-fragmentation *keyword*

Synopsis	L2TP LAC fragmentation override
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* l2tp lac-fragmentation *keyword*
Tree	lac-fragmentation
Description	This command configures the router or virtual L2TP LAC fragmentation override.
Options	deny – Deny packet fragmentation for L2TP sessions permit – Permit packet fragmentation for L2TP sessions
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lns-interface

Synopsis	Enable the **lns-interface** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* lns-interface
Tree	lns-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *named-item*

Synopsis	IP interface name
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* lns-interface name *named-item*
Tree	name
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	16.0.R1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pado-delay *number*

Synopsis	Delay timeout before sending a PADO
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* pado-delay *number*
Tree	pado-delay
Range	1 to 30
Units	deciseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password

Synopsis	Enter the **password** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* password
Tree	password
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

chap *encrypted-leaf*

Synopsis	CHAP protocol
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* password chap *encrypted-leaf*
Tree	chap
Description	This command specifies the CHAP protocol in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Notes	The following elements are part of a choice: **chap**, **ignore**, or **pap**.
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore

Synopsis	Ignore the PAP and CHAP passwords
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* password ignore
Tree	ignore
Notes	The following elements are part of a choice: **chap**, **ignore**, or **pap**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pap *encrypted-leaf*

Synopsis	PAP for the password
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* password pap *encrypted-leaf*
Tree	pap
Description	This command specifies the PAP for the password in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Notes	The following elements are part of a choice: **chap**, **ignore**, or **pap**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-policy-parameters

Synopsis	Enter the **ppp-policy-parameters** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ppp-policy-parameters
Tree	ppp-policy-parameters
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

keepalive

Synopsis	Enable the **keepalive** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ppp-policy-parameters keepalive
Tree	keepalive
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-up-multiplier *number*

Synopsis	PPP LCP keepalive hold up multiplier override
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ppp-policy-parameters keepalive hold-up-multiplier *number*
Tree	hold-up-multiplier
Description	This command configures the number of LCP echo replies that can be missed before the PPP session is brought down and overrides the value configured in the **configure subscriber-mgmt ppp-policy** context for PPPoE PTA sessions or in the **configure l2tp group** context for L2TP LNS sessions.
Range	1 to 5
Default	3
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	PPP LCP keepalive interval override
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ppp-policy-parameters keepalive interval *number*
Tree	interval
Description	This command configures the time interval in seconds at which LCP echo requests are transmitted for the PPP session and overrides the value configured in the **configure subscriber-mgmt ppp-policy** context for PPPoE PTA sessions or the **configure l2tp group** context for L2TP LNS sessions.
Range	4 to 300
Units	seconds
Default	30

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-sessions-per-mac *number*

Synopsis	Maximum number of sessions per MAC address
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* ppp-policy-parameters max-sessions-per-mac *number*
Tree	max-sessions-per-mac
Description	This command sets the maximum PPP sessions that can be opened for a specified MAC address.
Range	1 to 8191
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy

Synopsis	Enter the **radius-accounting-policy** context
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* radius-accounting-policy
Tree	radius-accounting-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duplicate *named-item*

Synopsis	RADIUS accounting policy for generating duplicate accounting information
Context	**configure** subscriber-mgmt local-user-db *named-item* ppp host *named-item* radius-accounting-policy duplicate *named-item*
Tree	duplicate
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

sticky-msaps *boolean*

Synopsis	Prevent MSAPs from being deleted
Context	**configure** subscriber-mgmt msap-policy *named-item* sticky-msaps *boolean*
Tree	sticky-msaps
Description	When configured to **true**, MSAPs associated with the specified MSAP policy are not removed unless a manual **clear** command is issued. This feature is useful if historical statistics records on MSAPs need to be retained. It can also reduce host creation time because the MSAP is already created. When configured to **false**, MSAPs can be automatically removed when a host creation fails or when a subscriber is no longer associated with the MSAP, for example, when a subscriber ends the session.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sticky-msaps-idle-timeout *number*

Synopsis	Timeout used for sticky MSAPs
Context	**configure** subscriber-mgmt msap-policy *named-item* sticky-msaps-idle-timeout *number*
Tree	sticky-msaps-idle-timeout
Description	This command configures the timeout interval which determines when idle sticky MSAPs can be removed. By default, MSAPs are deleted shortly after the subscriber session ends. The system is prevented from automatically deleting sticky MSAPs after the session ends, allowing for a faster subsequent subscriber connection without MSAP creation; however, sticky MSAPs require SAP resources. The configuration of this command allows for the removal of sticky MSAPs that are idle for the specified time period. When unconfigured, no timeout interval is applied.
Range	5 to 604800
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

profiled-traffic-only *boolean*

Synopsis	Apply only profiled traffic for an MSAP
Context	**configure** subscriber-mgmt msap-policy *named-item* sub-sla-mgmt single-sub-parameters profiled-traffic-only *boolean*
Tree	profiled-traffic-only
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy *reference*

Synopsis	Configure subscriber identification policy
Context	**configure** subscriber-mgmt msap-policy *named-item* sub-sla-mgmt sub-ident-policy *reference*
Tree	sub-ident-policy
Reference	**configure** subscriber-mgmt sub-ident-policy *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-limit *(keyword | number)*

Synopsis	Maximum subscribers on this SAP
Context	**configure** subscriber-mgmt msap-policy *named-item* sub-sla-mgmt subscriber-limit *(keyword | number)*
Tree	subscriber-limit
Range	1 to 131071
Options	no-limit
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

vpls-only-sap-parameters

Synopsis	Enter the **vpls-only-sap-parameters** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters
Tree	vpls-only-sap-parameters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

arp-host

Synopsis	Enter the **arp-host** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters arp-host
Tree	arp-host
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-limit *number*

Synopsis	Maximum number of ARP hosts
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters arp-host host-limit *number*
Tree	host-limit
Range	1 to 131071
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-auth-interval *number*

Synopsis	Minimum authentication interval
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters arp-host min-auth-interval *number*
Tree	min-auth-interval
Range	1 to 6000
Units	minutes

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	15
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

arp-reply-agent *keyword*

Synopsis	Enable arp-reply-agent function
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters arp-reply-agent *keyword*
Tree	arp-reply-agent
Options	true, with-subscr-ident
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp

Synopsis	Enter the **dhcp** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp
Tree	dhcp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-populate *number*

Synopsis	Maximum number of DHCPv4 leases per managed SAP
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp lease-populate *number*
Tree	lease-populate
Range	1 to 131071
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option-82

Synopsis	Enter the **option-82** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp option-82
Tree	option-82
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	DHCP relay forwarding policy action
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp option-82 action *keyword*
Tree	action
Options	replace, drop, keep
Default	keep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *keyword*

Synopsis	Circuit ID suboption of the IPOE relay
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp option-82 circuit-id *keyword*
Tree	circuit-id
Options	none, ascii-tuple, vlan-ascii-tuple
Default	ascii-tuple
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id

Synopsis	Enter the **remote-id** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp option-82 remote-id
Tree	remote-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

mac

Synopsis	MAC address of the remote end encoded in the sub-option
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp option-82 remote-id mac
Tree	mac
Notes	The following elements are part of a choice: **mac** or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *named-item*

Synopsis	String to encode in the suboption
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp option-82 remote-id string *named-item*
Tree	string
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **mac** or **string**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor-specific-option

Synopsis	Enter the **vendor-specific-option** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp option-82 vendor-specific-option
Tree	vendor-specific-option
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac-address *boolean*

Synopsis	Send MAC address in Nokia vendor-specific sub-option
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp option-82 vendor-specific-option client-mac-address *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	client-mac-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id *boolean*

Synopsis	Send SAP ID in the Nokia vendor-specific sub-option
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp option-82 vendor-specific-option sap-id *boolean*
Tree	sap-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service-id *boolean*

Synopsis	Send service ID in the Nokia vendor-specific sub-option
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp option-82 vendor-specific-option service-id *boolean*
Tree	service-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string-not-all-spaces*

Synopsis	String in the sub-option of the DHCP relay packet
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp option-82 vendor-specific-option string *string-not-all-spaces*
Tree	string
Description	This command specifies the string in the Nokia vendor-specific sub-option of the DHCP relay packet.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

system-id *boolean*

Synopsis	Send system ID in the Nokia vendor-specific sub-option
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp option-82 vendor-specific-option system-id *boolean*
Tree	system-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis	Enter the **proxy-server** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp proxy-server
Tree	proxy-server
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp proxy-server admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

emulated-server *ipv4-unicast-address*

Synopsis	IP address used as DHCP server address in SAP context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp proxy-server emulated-server *ipv4-unicast-address*
Tree	emulated-server
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-time

Synopsis	Enter the **lease-time** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp proxy-server lease-time
Tree	lease-time
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp proxy-server lease-time radius-override *boolean*
Tree	radius-override
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis	DHCP lease time
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters dhcp proxy-server lease-time value *number*
Tree	value
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis	Enter the **egress** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters egress
Tree	egress
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters egress qos
Tree	qos
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	QoS policy ID or name to associate with the MSAPs
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters egress qos policy-name *reference*
Tree	policy-name
Reference	**configure** qos sap-egress *qos-policy-name*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

igmp-snooping

Synopsis	Enter the **igmp-snooping** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping
Tree	igmp-snooping
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping fast-leave *boolean*
Tree	fast-leave
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping import-policy *reference*
Tree	import-policy
Reference	**configure** policy-options policy-statement *named-item-64*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-groups *(keyword | number)*

Synopsis	Maximum number of multicast groups
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping maximum-number-groups *(keyword | number)*
Tree	maximum-number-groups
Range	1 to 16000
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

mcac

Synopsis	Enter the **mcac** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping mcac
Tree	mcac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bandwidth

Synopsis	Enter the **bandwidth** context
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping mcac bandwidth
Tree	bandwidth
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mandatory *(number | keyword)*

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping mcac bandwidth mandatory *(number | keyword)*
Tree	mandatory
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

total *(number | keyword)*

Synopsis	Maximum allowed bandwidth
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping mcac bandwidth total *(number | keyword)*
Tree	total

© 2026 Nokia.

[**level-id**] *number*

Synopsis	Bandwidth level ID for an MCAC constraint
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping mcac mc-constraints level *number*
Tree	level
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bandwidth *number*

Synopsis	Bandwidth available for this level
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping mcac mc-constraints level *number* bandwidth *number*
Tree	bandwidth
Max. range	0 to 4294967295
Units	kilobps
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number-down [number-lag-port-down] *number*

Synopsis	Enter the **number-down** list instance
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping mcac mc-constraints number-down *number*
Tree	number-down
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**number-lag-port-down**] *number*

Synopsis	Number of lag ports down

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping mcac mc-constraints number-down *number*
Tree	number-down
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

level *number*

Synopsis	Level to be associated with this number of lag ports that are down
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping mcac mc-constraints number-down *number* level *number*
Tree	level
Range	1 to 8
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-lag-port-weight *boolean*

Synopsis	Use LAG port weight to calculate MCAC constraints
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping mcac mc-constraints use-lag-port-weight *boolean*
Tree	use-lag-port-weight
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy *reference*

Synopsis	Multicast CAC policy name
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters igmp-snooping mcac policy *reference*
Tree	policy
Reference	**configure** mcac policy *string*

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	QoS policy ID or name to associate with the MSAPs
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters ingress qos policy-name *reference*
Tree	policy-name
Reference	**configure** qos sap-ingress *qos-policy-name*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

queuing-type *keyword*

Synopsis	Queuing type
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters ingress qos queuing-type *keyword*
Tree	queuing-type
Options	multipoint-shared, service
Default	multipoint-shared
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-da-hashing *boolean*

Synopsis	Include hashing on MAC DA ISO subscriber ID
Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters mac-da-hashing *boolean*
Tree	mac-da-hashing
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

split-horizon-group *named-item*

Synopsis	Name of the split horizon group for the MSAP

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt msap-policy *named-item* vpls-only-sap-parameters split-horizon-group *named-item*
Tree	split-horizon-group
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp

Synopsis	Enter the **pfcp** context
Context	**configure** subscriber-mgmt pfcp
Tree	pfcp
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

association [name] *named-item*

Synopsis	Enter the **association** list instance
Context	**configure** subscriber-mgmt pfcp association *named-item*
Tree	association
Description	Commands in this context configure a PFCP association towards a BNG CUPS CPF.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	PFCP association name
Context	**configure** subscriber-mgmt pfcp association *named-item*
Tree	association
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

admin-state *keyword*

Synopsis	Administrative state of the PFCP association
Context	**configure** subscriber-mgmt pfcp association *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

association-release-timeout *(keyword | number)*

Synopsis	Time to wait for a response to a release request
Context	**configure** subscriber-mgmt pfcp association *named-item* association-release-timeout *(keyword | number)*
Tree	association-release-timeout
Description	This command configures the time to wait to clean up the PFCP association after it has been disabled. After administratively disabling a PFCP association, the system requests a shutdown to the BNG CPF. If the BNG CPF does not gracefully remove the association before expiry of the timer, the full association and all related sessions are forcefully removed. The PFCP protocol encoding does not allow the full range of configured values. The system automatically rounds up the configured value to the nearest value allowed by the protocol. For more information about the protocol encoding, see 3GPP TS 29.244 8.2.78.1.
Range	30 to 3600
Units	seconds
Options	none
Default	3600
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bfd-expedited-path-down *boolean*

Synopsis	Track BFD sessions to expedite PFCP path down detection
Context	**configure** subscriber-mgmt pfcp association *named-item* bfd-expedited-path-down *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	bfd-expedited-path-down
Description	When configured to **true**, the system tracks BFD sessions to expedite PFCP path down detection on BFD down events. This requires the configuration of **path-restoration-time**.
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-calltrace-profile *named-item*

Synopsis	Default profile when the CP-provided profile is unknown
Context	**configure** subscriber-mgmt pfcp association *named-item* default-calltrace-profile *named-item*
Tree	default-calltrace-profile
Description	This command configures the default call-trace profile that the BNG-UP uses if the CP enables call trace for a session, but the signaled profile is not known on the BNG-UP. If no default is configured and the CP enables call trace with an unknown profile, no trace is started.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt pfcp association *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

heartbeat

Synopsis	Enter the **heartbeat** context
Context	**configure** subscriber-mgmt pfcp association *named-item* heartbeat

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	heartbeat
Description	Commands in this context configure the parameters for transmitting PFCP Heartbeat Request messages to a PFCP peer.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Time between two successful heartbeat request messages
Context	**configure** subscriber-mgmt pfcp association *named-item* heartbeat interval *number*
Tree	interval
Range	1 to 180
Units	seconds
Default	60
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retries *number*

Synopsis	Number of retries after the heartbeat timeout expires
Context	**configure** subscriber-mgmt pfcp association *named-item* heartbeat retries *number*
Tree	retries
Description	This command configures the number of times the same Heartbeat Request is sent before the PFCP path to the peer is considered down.
Range	0 to 30
Default	4
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Time the system waits for a heartbeat response message
Context	**configure** subscriber-mgmt pfcp association *named-item* heartbeat timeout *number*
Tree	timeout

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the timeout after which a Heartbeat Request is considered unanswered.
Range	1 to 20
Units	seconds
Default	5
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface

Synopsis	Enter the **interface** context
Context	**configure** subscriber-mgmt pfcp association *named-item* interface
Tree	interface
Description	Commands in this context configure the interface from which PFCP messages will be sent and on which PFCP messages will be received.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *interface-name*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface to use for the association
Context	**configure** subscriber-mgmt pfcp association *named-item* interface name *interface-name*
Tree	name
String length	1 to 32
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

© 2026 Nokia.

Synopsis	Router context for the PFCP association
Context	**configure** subscriber-mgmt pfcp association *named-item* interface router-instance *string*
Tree	router-instance
Description	This command configures the name of the interface, along with its routing instance, used as binding interface for PFCP.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nat

Synopsis	Enter the **nat** context
Context	**configure** subscriber-mgmt pfcp association *named-item* nat
Tree	nat
Description	Commands in this context configure NAT or WLAN-GW groups for BNG CUPS PFCP association.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-group *reference*

Synopsis	NAT group used for CUPS NAT functionality
Context	**configure** subscriber-mgmt pfcp association *named-item* nat nat-group *reference*
Tree	nat-group
Reference	**configure** isa nat-group *number*
Notes	The following elements are part of a choice: **nat-group** or **wlan-gw-group**.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group *reference*

Synopsis	WLAN gateway group used for CUPS NAT functionality
Context	**configure** subscriber-mgmt pfcp association *named-item* nat wlan-gw-group *reference*
Tree	wlan-gw-group
Reference	**configure** isa wlan-gw-group *number*
Notes	The following elements are part of a choice: **nat-group** or **wlan-gw-group**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

node-id

Synopsis	Enter the **node-id** context
Context	**configure** subscriber-mgmt pfcp association *named-item* node-id
Tree	node-id
Description	Commands in this context configure the UPF Node Identifier as sent in PFCP. It can either be configured to use the linked interface source IP or a preconfigured FQDN.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fqdn *fully-qualified-domain-name*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN that identifies the local system for PFCP
Context	**configure** subscriber-mgmt pfcp association *named-item* node-id fqdn *fully-qualified-domain-name*
Tree	fqdn
String length	1 to 255
Notes	The following elements are part of a choice: **fqdn** or **use-ip-address**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-ip-address

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use the IP address of interface for the association
Context	**configure** subscriber-mgmt pfcp association *named-item* node-id use-ip-address
Tree	use-ip-address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured, the binding interface address is used as identification of the local system for PFCP.
Notes	The following elements are part of a choice: **fqdn** or **use-ip-address**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

oper-group *reference*

Synopsis	Operational group to tie to the PFCP association
Context	**configure** subscriber-mgmt pfcp association *named-item* oper-group *reference*
Tree	oper-group
Description	This command sets the operational group state to up if the PFCP association is up and one or more PFCP paths are up. Otherwise, this command configures the operational group to down.
Reference	**configure** service oper-group *named-item*
Introduced	26.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

path-restoration-time *number*

Synopsis	Time to wait before declaring the path down
Context	**configure** subscriber-mgmt pfcp association *named-item* path-restoration-time *number*
Tree	path-restoration-time
Description	This command configures the time for which sessions are kept after a PFCP path failure is detected. If the path recovers without a restart before this time expires, the sessions are kept. Otherwise, they are removed.
Range	1 to 11520
Units	minutes
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer

Synopsis	Enter the **peer** context
Context	**configure** subscriber-mgmt pfcp association *named-item* peer
Tree	peer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PFCP peer IP address
Context	**configure** subscriber-mgmt pfcp association *named-item* peer ip-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ip-address
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

node-id

Synopsis	Enter the **node-id** context
Context	**configure** subscriber-mgmt pfcp association *named-item* peer node-id
Tree	node-id
Description	Commands in this context configure the method used to identify the peer Node ID used to match incoming PFCP messages to the configured PFCP association.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fully-qualified-domain-name *fully-qualified-domain-name*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN used to identify the Node ID
Context	**configure** subscriber-mgmt pfcp association *named-item* peer node-id fully-qualified-domain-name *fully-qualified-domain-name*
Tree	fully-qualified-domain-name
Description	This command configures the FQDN that identifies the peer Node ID used to match incoming PFCP messages to the PFCP association.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 255
String format	'fully-qualified-domain-name' must consist of lowercase alphanumeric characters, '-', or '_', separated by dots
Notes	The following elements are part of a choice: **fully-qualified-domain-name** or **use-ip-address**.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-ip-address

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use the configured peer IP address to match the Node ID
Context	**configure** subscriber-mgmt pfcp association *named-item* peer node-id use-ip-address
Tree	use-ip-address
Description	When this command is specified, the system uses the configured peer IP address to identify the peer Node ID used to match incoming PFCP messages to the PFCP association. This configuration is ignored if only one association is configured.
Notes	The following elements are part of a choice: **fully-qualified-domain-name** or **use-ip-address**.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy to process PFCP messages
Context	**configure** subscriber-mgmt pfcp association *named-item* python-policy *reference*
Tree	python-policy
Reference	**configure** python python-policy *named-item*
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tx

Synopsis	Enter the **tx** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt pfcp association *named-item* tx
Tree	tx
Description	Commands in this context configure how PFCP messages are sent.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retries *number*

Synopsis	Number of retries
Context	**configure** subscriber-mgmt pfcp association *named-item* tx retries *number*
Tree	retries
Description	This command configures the number of times a message is retried before it is considered lost, also known as N1.
Range	0 to 7
Default	3
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Retransmission timer
Context	**configure** subscriber-mgmt pfcp association *named-item* tx timeout *number*
Tree	timeout
Description	This command configures the time after which a message is considered unanswered, also known as T1.
Range	1 to 30
Units	seconds
Default	1
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ttl *number*

Synopsis	TTL value in the IP header of egress PFCP packets
Context	**configure** subscriber-mgmt pfcp association *named-item* tx ttl *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ttl
Range	1 to 255
Default	255
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pim-policy [name] *named-item*

Synopsis	Enter the **pim-policy** list instance
Context	**configure** subscriber-mgmt pim-policy *named-item*
Tree	pim-policy
Max. instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Policy name
Context	**configure** subscriber-mgmt pim-policy *named-item*
Tree	pim-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt pim-policy *named-item* description *description*

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-policy [name] *named-item*

Synopsis	Enter the **ppp-policy** list instance
Context	**configure** subscriber-mgmt ppp-policy *named-item*
Tree	ppp-policy
Max. instances	256
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	PPP policy name
Context	**configure** subscriber-mgmt ppp-policy *named-item*
Tree	ppp-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-same-circuit-id-for-dhcp *boolean*

Synopsis	Enable support for IPv4 address allocation on a SAP
Context	**configure** subscriber-mgmt ppp-policy *named-item* allow-same-circuit-id-for-dhcp *boolean*
Tree	allow-same-circuit-id-for-dhcp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cookies *boolean*

Synopsis	Enable use of cookies

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt ppp-policy *named-item* cookies *boolean*
Tree	cookies
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-pap-password *encrypted-leaf*

Synopsis	Default PAP password when no password from PPP client
Context	**configure** subscriber-mgmt ppp-policy *named-item* default-pap-password *encrypted-leaf*
Tree	default-pap-password
Description	This command specifies the default PAP password in a protected format when there is no password from PPP client. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-user-name *string-not-all-spaces*

Synopsis	Default username used for authentication
Context	**configure** subscriber-mgmt ppp-policy *named-item* default-user-name *string-not-all-spaces*
Tree	default-user-name
Description	This command configures the default username for authentication when not provided in PAP/CHAP authentication (no Name field in CHAP Response message or Peer0Id-Length=0 in PAP Authenticate-Request). The PPP session terminates when no username is provided in the PAP/CHAP authentication and no default username is configured.
String length	1 to 253
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-ppp-mtu-gt-1492 *boolean*

Synopsis	Enable PPPoE MRU negotiations greater than 1492 bytes
Context	**configure** subscriber-mgmt ppp-policy *named-item* force-ppp-mtu-gt-1492 *boolean*
Tree	force-ppp-mtu-gt-1492
Description	When configured to **true**, this command enables PPPoE MRU negotiations greater than 1492 bytes without the need to receive a “PPP-Max-Payload” tag in PADI/PADR from the client as defined in RFC 4638, *Accommodating a Maximum Transit Unit/ Maximum Receive Unit (MTU/MRU) Greater Than 1492 in the Point-to-Point Protocol over Ethernet (PPPoE)*. When configured to **false**, this command disables PPPoE MRU negotiations greater than 1492 bytes.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipcp-subnet-negotiation *boolean*

Synopsis	Allow IPCP subnet negotiation for PPPoE hosts
Context	**configure** subscriber-mgmt ppp-policy *named-item* ipcp-subnet-negotiation *boolean*
Tree	ipcp-subnet-negotiation
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

keepalive

Synopsis	Enter the **keepalive** context
Context	**configure** subscriber-mgmt ppp-policy *named-item* keepalive
Tree	keepalive
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-up-multiplier *number*

Synopsis	PPP keepalive multiplier
Context	**configure** subscriber-mgmt ppp-policy *named-item* keepalive hold-up-multiplier *number*
Tree	hold-up-multiplier
Range	1 to 5
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	PPP keepalive interval
Context	**configure** subscriber-mgmt ppp-policy *named-item* keepalive interval *number*
Tree	interval
Range	4 to 300
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lcp-ignore-identifier *boolean*

Synopsis	Ignore identifier values in the LCP Echo Reply
Context	**configure** subscriber-mgmt ppp-policy *named-item* lcp-ignore-identifier *boolean*
Tree	lcp-ignore-identifier

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, BNG ignores the Identifier field of the Echo-Reply message and keeps the PPP session up. When configured to **false**, BNG does not ignore the identifier value, discards any incorrect messages, and the PPP session terminates because of the echo timeout.
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lcp-ignore-magic-numbers *boolean*

Synopsis	Ignore LCP peer magic number mismatch
Context	**configure** subscriber-mgmt ppp-policy *named-item* lcp-ignore-magic-numbers *boolean*
Tree	lcp-ignore-magic-numbers
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-sessions-per-cid

Synopsis	Enable the **max-sessions-per-cid** context
Context	**configure** subscriber-mgmt ppp-policy *named-item* max-sessions-per-cid
Tree	max-sessions-per-cid
Description	Commands in this context specify the configuration settings for PPPoE sessions based on the Agent Circuit ID. When this context is configured, the limit for PPPoE sessions per Agent Circuit ID must be configured. The limit does not apply to sessions without an Agent Circuit ID; however, sessions without an Agent Circuit ID can only be established when the **allow-sessions-without-cid** command is configured to **true**. When this context is unconfigured, no limit is placed on the number of PPPoE sessions with the same Agent Circuit ID on the same SAP or MSAP and PPPoE sessions with or without an Agent Circuit ID can be established.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

allow-sessions-without-cid *boolean*

Synopsis	Allow PPPoE sessions without an Agent Circuit ID

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt ppp-policy *named-item* max-sessions-per-cid allow-sessions-without-cid *boolean*
Tree	allow-sessions-without-cid
Description	When configured to **true**, PPPoE sessions without an Agent Circuit ID can be established on a SAP. The limit configured for the maximum number of sessions allowed per Agent Circuit ID does not apply to these sessions. When configured to **false**, PPPoE sessions without an Agent Circuit ID are denied. The command is valid only when a limit is configured for the maximum sessions per Agent Circuit ID on a SAP.
Default	false
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

limit *number*

Synopsis	Maximum sessions per Agent Circuit ID and per SAP
Context	**configure** subscriber-mgmt ppp-policy *named-item* max-sessions-per-cid limit *number*
Tree	limit
Description	This command configures the maximum number of PPPoE sessions that can be active with the same Agent Circuit ID on the same SAP or MSAP. This limit is enforced in the discovery phase, prior to PAP or CHAP authentication, based on the Agent Circuit ID sub-option present in the vendor-specific PPPoE access loop identification tag added in PADI and PADR messages by a PPPoE intermediate agent. PPPoE sessions without an Agent Circuit ID are not subject to the configured limit; however, sessions without an Agent Circuit ID can only be established when the **allow-sessions-without-cid** command is configured to **true**.
Range	1 to 8190
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-sessions-per-mac *number*

Synopsis	Maximum number of sessions per MAC address
Context	**configure** subscriber-mgmt ppp-policy *named-item* max-sessions-per-mac *number*
Tree	max-sessions-per-mac
Description	This command sets the maximum PPP sessions that can be opened for a specified MAC address.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

To enable IPv4 address allocation using the internal DHCPv4 client for multiple PPPoE sessions on a single SAP and having the same MAC address and circuit-ID, the optional CLI parameter **allow-same-circuit-id-for-dhcp** should be added. The SR OS local DHCP server detects the additional vendor-specific options inserted by the internal DHCPv4 client and use an extended unique key for lease allocation.

Range	1 to 8191
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mlppp

Synopsis	Enter the **mlppp** context
Context	**configure** subscriber-mgmt ppp-policy *named-item* mlppp
Tree	mlppp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

accept-mrru *boolean*

Synopsis	Accept multilink MRRU LCP option
Context	**configure** subscriber-mgmt ppp-policy *named-item* mlppp accept-mrru *boolean*
Tree	accept-mrru
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

endpoint

Synopsis	Enter the **endpoint** context
Context	**configure** subscriber-mgmt ppp-policy *named-item* mlppp endpoint
Tree	endpoint

Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy [name] *named-item*

Synopsis	Enter the **radius-accounting-policy** list instance
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item*
Tree	radius-accounting-policy
Max. instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RADIUS-based accounting policy name
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item*
Tree	radius-accounting-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-tunnel-connection-fmt *ascii-specification*

Synopsis	String sent in the accounting message
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* acct-tunnel-connection-fmt *ascii-specification*
Tree	acct-tunnel-connection-fmt
String length	1 to 253
Default	%n
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

custom-record

Synopsis	Enter the **custom-record** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record
Tree	custom-record
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

queue [id] *number*

Synopsis	Enter the **queue** list instance
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record queue *number*
Tree	queue
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**id**] *number*

Synopsis	Queue ID for which counters are collected in the record
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record queue *number*
Tree	queue
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

e-counters

Synopsis	Enter the **e-counters** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record queue *number* e-counters
Tree	e-counters
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

low-packets-offered-count *boolean*

Synopsis	Include the low packets offered count
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record ref-queue i-counters low-packets-offered-count *boolean*
Tree	low-packets-offered-count
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

out-profile-octets-forwarded-count *boolean*

Synopsis	Include the out-of-profile octets forwarded count
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record ref-queue i-counters out-profile-octets-forwarded-count *boolean*
Tree	out-profile-octets-forwarded-count
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

out-profile-packets-forwarded-count *boolean*

Synopsis	Include the out-of-profile packets forwarded count
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record ref-queue i-counters out-profile-packets-forwarded-count *boolean*
Tree	out-profile-packets-forwarded-count

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

uncoloured-octets-offered-count *boolean*

Synopsis	Include the uncolored octets offered count
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record ref-queue i-counters uncoloured-octets-offered-count *boolean*
Tree	uncoloured-octets-offered-count
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

uncoloured-packets-offered-count *boolean*

Synopsis	Include the uncolored packets offered count
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record ref-queue i-counters uncoloured-packets-offered-count *boolean*
Tree	uncoloured-packets-offered-count
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

id *reference*

Synopsis	Queue ID
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record ref-queue id *reference*
Tree	id
Reference	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record queue *number*
Notes	The following elements are part of a choice: **all** or **id**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

significant-change *number*

Synopsis	Significant change required to generate the record
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* custom-record significant-change *number*
Tree	significant-change
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delay-start-time *number*

Synopsis	Accounting start delay
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* delay-start-time *number*
Tree	delay-start-time
Range	1 to 10
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-accounting

Synopsis	Enter the **host-accounting** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* host-accounting
Tree	host-accounting

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of per-host accounting
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* host-accounting admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-update *boolean*

Synopsis	Allow interim-update accounting messages to be sent
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* host-accounting interim-update *boolean*
Tree	interim-update
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute
Tree	include-radius-attribute
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access-loop-options *boolean*

Synopsis	Include access loop information

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute access-loop-options *boolean*
Tree	access-loop-options
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-authentic *boolean*

Synopsis	Enable generation of the acct-authentic RADIUS attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute acct-authentic *boolean*
Tree	acct-authentic
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-delay-time *boolean*

Synopsis	Include the acct-delay-time RADIUS attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute acct-delay-time *boolean*
Tree	acct-delay-time
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-triggered-reason *boolean*

Synopsis	Include Alc-Acct-Triggered-Reason attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute acct-triggered-reason *boolean*
Tree	acct-triggered-reason
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

all-authorized-session-addresses *boolean*

Synopsis	Include all address/prefix attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute all-authorized-session-addresses *boolean*
Tree	all-authorized-session-addresses
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

apn *boolean*

Synopsis	Enable inclusion of the APN attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute apn *boolean*
Tree	apn
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

bearer-fteid *boolean*

Synopsis	Include bearer-fteid attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute bearer-fteid *boolean*
Tree	bearer-fteid
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

bonding-active-connections *boolean*

Synopsis	Include the RADIUS Alc-Bonding-Active-Connection VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute bonding-active-connections *boolean*
Tree	bonding-active-connections

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bonding-id *boolean*

Synopsis	Include the Alc-Bonding-Id VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute bonding-id *boolean*
Tree	bonding-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

brg-num-active-sessions *boolean*

Synopsis	Include the RADIUS Alc-BRG-Num-Active-Sessions VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute brg-num-active-sessions *boolean*
Tree	brg-num-active-sessions
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

called-station-id *boolean*

Synopsis	Include called-station-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute called-station-id *boolean*
Tree	called-station-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

calling-station-id

Synopsis	Enable the **calling-station-id** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute calling-station-id
Tree	calling-station-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Format of the Calling-Station-ID attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute calling-station-id type *keyword*
Tree	type
Options	sap-string, mac, sap-id, remote-id, llid
Default	sap-string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

circuit-id *boolean*

Synopsis	Include circuit-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute circuit-id *boolean*
Tree	circuit-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delegated-ipv6-prefix *boolean*

Synopsis	Include delegated-ipv6-prefix attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute delegated-ipv6-prefix *boolean*
Tree	delegated-ipv6-prefix

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

detailed-acct-attributes *boolean*

Synopsis	Include more detailed accounting attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute detailed-acct-attributes *boolean*
Tree	detailed-acct-attributes
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp-vendor-class-id *boolean*

Synopsis	Include the RADIUS Alc-DHCP-Vendor-Class-Id VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute dhcp-vendor-class-id *boolean*
Tree	dhcp-vendor-class-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

error-code *boolean*

Synopsis	Include detailed error codes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute error-code *boolean*
Tree	error-code
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

firewall-info *boolean*

Synopsis	Include the Firewall Information VSA in AAA protocols
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute firewall-info *boolean*
Tree	firewall-info
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-interface-id *boolean*

Synopsis	Include framed-interface-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute framed-interface-id *boolean*
Tree	framed-interface-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-ip-address *boolean*

Synopsis	Include framed-ip-address attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute framed-ip-address *boolean*
Tree	framed-ip-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-ip-netmask *boolean*

Synopsis	Include framed-ip-netmask attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute framed-ip-netmask *boolean*
Tree	framed-ip-netmask

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-ipv6-prefix *boolean*

Synopsis	Include framed-ipv6-prefix attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute framed-ipv6-prefix *boolean*
Tree	framed-ipv6-prefix
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-ipv6-route *boolean*

Synopsis	Include framed-ipv6-route attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute framed-ipv6-route *boolean*
Tree	framed-ipv6-route
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

framed-route *boolean*

Synopsis	Include framed-route attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute framed-route *boolean*
Tree	framed-route
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

imei *boolean*

Synopsis	Enable inclusion of the IMEI attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute imei *boolean*
Tree	imei
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

imsi *boolean*

Synopsis	Include the IMSI attribute for FWA sessions
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute imsi *boolean*
Tree	imsi
Default	false
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *boolean*

Synopsis	Include the IPv6 address attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute ipv6-address *boolean*
Tree	ipv6-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac-fragmentation *boolean*

Synopsis	Include the L2TP LAC fragmentation attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute lac-fragmentation *boolean*
Tree	lac-fragmentation

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext-bridge-id *boolean*

Synopsis	Include Alc-Bridge-Id in RADIUS accounting packets
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute lanext-bridge-id *boolean*
Tree	lanext-bridge-id
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext-device-type *boolean*

Synopsis	Include Alc-HLE-Device-type in accounting packets
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute lanext-device-type *boolean*
Tree	lanext-device-type
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext-route-distinguisher *boolean*

Synopsis	Include route distinguisher (Alc-RD) in RADIUS packets
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute lanext-route-distinguisher *boolean*
Tree	lanext-route-distinguisher
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

lanext-route-target *boolean*

Synopsis	Include route target (Alc-RT) in RADIUS packets
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute lanext-route-target *boolean*
Tree	lanext-route-target
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

lanext-vni *boolean*

Synopsis	Enable inclusion of the lanext-vni attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute lanext-vni *boolean*
Tree	lanext-vni
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *boolean*

Synopsis	Include the client MAC address in the RADIUS message
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute mac-address *boolean*
Tree	mac-address
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msisdn *boolean*

Synopsis	Enable inclusion of the MSISDN in AAA protocols
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute msisdn *boolean*
Tree	msisdn

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Enable inclusion of the NAS-Identifier attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port

Synopsis	Enable the **nas-port** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-port
Tree	nas-port
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bit-spec *binary-specification*

Synopsis	RADIUS NAS-Port attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-port bit-spec *binary-specification*
Tree	bit-spec
String length	1 to 255
String format	'bit-spec' must be 0/1 or *N(s|m|p|o|i|v|c)
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

nas-port-id

Synopsis	Enable the **nas-port-id** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-port-id
Tree	nas-port-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-string *string*

Synopsis	String to be prefixed to the NAS-Port-Id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-port-id prefix-string *string*
Tree	prefix-string
String length	1 to 8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix *keyword*

Synopsis	String to be suffixed to the NAS-Port-Id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-port-id suffix *keyword*
Tree	suffix
Options	circuit-id, remote-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port-type

Synopsis	Enable the **nas-port-type** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-port-type
Tree	nas-port-type
Introduced	16.0.R1

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *(keyword | number)*

Synopsis	Value for RADIUS NAS-Port-Type attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nas-port-type type *(keyword | number)*
Tree	type
Range	0 to 255
Options	rfc-aligned
Default	rfc-aligned
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nat-port-range *boolean*

Synopsis	Include NAT port range attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute nat-port-range *boolean*
Tree	nat-port-range
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

network-instance-id *boolean*

Synopsis	Include the network instance ID attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute network-instance-id *boolean*
Tree	network-instance-id
Default	false
Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

network-instance-name *boolean*

Synopsis	Include the network instance name attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute network-instance-name *boolean*
Tree	network-instance-name
Default	false
Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rat-type *boolean*

Synopsis	Include the RAT Type attribute for FWA sessions
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute rat-type *boolean*
Tree	rat-type
Description	When configured to **true**, the router includes the 3GPP-RAT-Type attribute in RADIUS accounting for Fixed Wireless Access sessions. Its value is taken from the RAT Type IE that is included in the GTP-c Create Session Request. This command is not applicable to GTP uplink.
Default	false
Introduced	25.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis	Include remote-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute remote-id *boolean*
Tree	remote-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile *boolean*

Synopsis	Include sla-profile attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute sla-profile *boolean*
Tree	sla-profile
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

spi-sharing-id *boolean*

Synopsis	Include spi-sharing-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute spi-sharing-id *boolean*
Tree	spi-sharing-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

std-acct-attributes *boolean*

Synopsis	Include standard accounting attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute std-acct-attributes *boolean*
Tree	std-acct-attributes
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

steering-profile *boolean*

Synopsis	Include the RADIUS Alc-Steering-Profile VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute steering-profile *boolean*
Tree	steering-profile

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *boolean*

Synopsis	Include sub-profile attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute sub-profile *boolean*
Tree	sub-profile
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id *boolean*

Synopsis	Include subscriber-id attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute subscriber-id *boolean*
Tree	subscriber-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel-client-attrs *boolean*

Synopsis	Enable inclusion of tunnel-client attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute tunnel-client-attrs *boolean*
Tree	tunnel-client-attrs
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel-server-attrs *boolean*

Synopsis	Enable inclusion of tunnel-server attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute tunnel-server-attrs *boolean*
Tree	tunnel-server-attrs
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

uli *boolean*

Synopsis	Generate the ULI RADIUS attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute uli *boolean*
Tree	uli
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-name *boolean*

Synopsis	Include the user-name attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute user-name *boolean*
Tree	user-name
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

v6-aggregate-stats *boolean*

Synopsis	Report IPv6 aggregated forwarded octet and packet counters
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute v6-aggregate-stats *boolean*
Tree	v6-aggregate-stats

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wifi-num-attached-ues *boolean*

Synopsis	Include the RADIUS Alc-Num-Attached-UEs VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute wifi-num-attached-ues *boolean*
Tree	wifi-num-attached-ues
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wifi-rssi *boolean*

Synopsis	Include 802.11 received signal strength indicator
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute wifi-rssi *boolean*
Tree	wifi-rssi
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wifi-ssid-vlan *boolean*

Synopsis	Include per-SSID VLAN ID in the Alc-Wlan-SSID-VLAN VSA
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute wifi-ssid-vlan *boolean*
Tree	wifi-ssid-vlan
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

xconnect-tunnel-home-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Home-Ipv6 attribute
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* include-radius-attribute xconnect-tunnel-home-address *boolean*
Tree	xconnect-tunnel-home-address
Default	false
Introduced	16.0.R3
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mcs-interval

Synopsis	Enter the **mcs-interval** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* mcs-interval
Tree	mcs-interval
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *(keyword | number)*

Synopsis	MCS synchronization interval of usage counters
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* mcs-interval interval *(keyword | number)*
Tree	interval
Description	This command specifies the interval at which the active BNG in a dual-homed deployment synchronizes subscriber accounting data using MCS to the standby BNG. The MCS interval is a statically configured value or equal to the configured RADIUS accounting update-interval.
Range	5 to 60
Units	minutes
Options	none, use-update-interval
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

queue-instance-accounting

Synopsis	Enter the **queue-instance-accounting** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* queue-instance-accounting
Tree	queue-instance-accounting
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of per-queue instance accounting
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* queue-instance-accounting admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-update *boolean*

Synopsis	Send accounting messages for the queue instance
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* queue-instance-accounting interim-update *boolean*
Tree	interim-update
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* radius-server-policy *reference*
Tree	radius-server-policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Reference	**configure** aaa radius server-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-accounting

Synopsis	Enter the **session-accounting** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* session-accounting
Tree	session-accounting
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of per-session accounting
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* session-accounting admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-update *boolean*

Synopsis	Allow host updates
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* session-accounting host-update *boolean*
Tree	host-update
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-update *boolean*

Synopsis	Allow interim-update accounting messages to be sent

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* session-accounting interim-update *boolean*
Tree	interim-update
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-id-format *keyword*

Synopsis	Format used in accounting session ID attributes
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* session-id-format *keyword*
Tree	session-id-format
Options	description, number
Default	description
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

triggered-updates

Synopsis	Enter the **triggered-updates** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates
Tree	triggered-updates
Description	Commands in this context configure non-periodic accounting updates that are triggered by specific events.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp-change

Synopsis	Enter the **gtp-change** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-change
Tree	gtp-change
Description	Commands in this context configure which GTP-related changes trigger an interim accounting update.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This command is mutually exclusive with the legacy **gtp-mobility** command, which triggers interim accounting updates for all changes.

Notes The following elements are part of a choice: **gtp-change** or **gtp-mobility**.

Introduced 23.3.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

s1-release *boolean*

Synopsis Send an IU for S1 release (idle) procedure

Context **configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-change s1-release *boolean*

Tree s1-release

Default false

Introduced 23.3.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

service-request *boolean*

Synopsis Send an IU for service request (reactivation) procedure

Context **configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-change service-request *boolean*

Tree service-request

Default false

Introduced 23.3.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

teidc-change *boolean*

Synopsis Send an IU when GTP-C TEIDs are changed

Context **configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-change teidc-change *boolean*

Tree teidc-change

Description When configured to **true**, the router sends an interim accounting update when GTP-C TEIDs are changed. Changes to GTP-C TEIDs typically indicate an MME change.

Default false

Introduced 23.3.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

teidu-change *boolean*

Synopsis	Send an IU when GTP-U TEIDs are changed
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-change teidu-change *boolean*
Tree	teidu-change
Description	When configured to **true**, the router sends an interim accounting update when GTP-U TEIDs are changed. This update typically happens during mobility, idling, or service request procedures
Default	false
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

uli-change *boolean*

Synopsis	Send an IU when a user location change is detected
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-change uli-change *boolean*
Tree	uli-change
Default	false
Introduced	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-mobility *boolean*

WARNING:
This element is deprecated and will be removed in a future release.

Synopsis	Send updates for mobility events
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* triggered-updates gtp-mobility *boolean*
Tree	gtp-mobility
Default	false
Notes	The following elements are part of a choice: **gtp-change** or **gtp-mobility**.
Introduced	16.0.R5

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Deprecated	23.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

update-interval

Synopsis	Enter the **update-interval** context
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* update-interval
Tree	update-interval
Description	Commands in this context configure the attributes of the intermediate update interval.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Intermediate update interval
Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* update-interval interval *number*
Tree	interval
Description	This command specifies the interval at which accounting data of subscriber hosts is updated in a RADIUS Accounting Interim-Update message. When specifying the accounting mode in the RADIUS accounting policy, the interim-update command for subscriber hosts must be set to true in one of the following context: • **configure subscriber-mgmt radius-accounting-policy host-accounting** • **configure subscriber-mgmt radius-accounting-policy queue-instance-accounting** • **configure subscriber-mgmt radiuis-accounting-policy session-accounting** A RADIUS-specified interim interval (attribute [85] Acct-Interim-Interval) overrides the CLI configured value.
Range	5 to 259200
Units	minutes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

jitter *(keyword | number)*

Synopsis	Maximum random delay for intermediate update interval

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-accounting-policy *named-item* update-interval jitter *(keyword | number)*
Tree	jitter
Description	This command specifies the absolute maximum random delay introduced on the update interval between two accounting interim update messages. The effective maximum random delay value is the minimum of the configured absolute jitter value and 10% of the configured update-interval. A value of zero sends the accounting interim update message without introducing an additional random delay.
Range	0 to 3600
Units	seconds
Options	auto
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-authentication-policy [name] *named-item*

Synopsis	Enter the **radius-authentication-policy** list instance
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item*
Tree	radius-authentication-policy
Max. instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RADIUS authentication policy name
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item*
Tree	radius-authentication-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fallback

Synopsis	Enter the **fallback** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* fallback
Tree	fallback
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action

Synopsis	Enter the **action** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* fallback action
Tree	action
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accept

Synopsis	Automatically accept all authentication requests
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* fallback action accept
Tree	accept
Notes	The following elements are part of a choice: **accept** or **user-db**.
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *named-item*

Synopsis	Local user database used to authenticate to the server
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* fallback action user-db *named-item*
Tree	user-db
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **accept** or **user-db**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-probing *boolean*

Synopsis	Enable force probing
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* fallback force-probing *boolean*
Tree	force-probing
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-radius-attribute

Synopsis	Enter the **include-radius-attribute** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute
Tree	include-radius-attribute
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access-loop-options *boolean*

Synopsis	Include access loop information

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute access-loop-options *boolean*
Tree	access-loop-options
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-session-id

Synopsis	Enable the **acct-session-id** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute acct-session-id
Tree	acct-session-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Format of the accounting session ID attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute acct-session-id type *keyword*
Tree	type
Options	host, session
Default	host
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

apn *boolean*

Synopsis	Enable inclusion of the APN attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute apn *boolean*
Tree	apn
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

msisdn *boolean*

Synopsis	Enable inclusion of the MSISDN in AAA protocols
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute msisdn *boolean*
Tree	msisdn
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

nas-identifier *boolean*

Synopsis	Enable inclusion of the NAS-Identifier attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-identifier *boolean*
Tree	nas-identifier
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port

Synopsis	Enable the **nas-port** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port
Tree	nas-port
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bit-spec *binary-specification*

Synopsis	RADIUS NAS-Port attribute

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port bit-spec *binary-specification*
Tree	bit-spec
String length	1 to 255
String format	'bit-spec' must be 0/1 or *N(s|m|p|o|i|v|c)
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port-id

Synopsis	Enable the **nas-port-id** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port-id
Tree	nas-port-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-string *string*

Synopsis	String to be prefixed to the NAS-Port-Id attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port-id prefix-string *string*
Tree	prefix-string
String length	1 to 8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suffix *keyword*

Synopsis	String to be suffixed to the NAS-Port-Id attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port-id suffix *keyword*
Tree	suffix
Options	circuit-id, remote-id
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nas-port-type

Synopsis	Enable the **nas-port-type** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port-type
Tree	nas-port-type
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *(keyword | number)*

Synopsis	Value for RADIUS NAS-Port-Type attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute nas-port-type type *(keyword | number)*
Tree	type
Range	0 to 255
Options	rfc-aligned
Default	rfc-aligned
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe-service-name *boolean*

Synopsis	Generate the pppoe-service-name RADIUS attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute pppoe-service-name *boolean*
Tree	pppoe-service-name
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rat-type *boolean*

Synopsis	Generate the RAT type RADIUS attribute

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute rat-type *boolean*
Tree	rat-type
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-id *boolean*

Synopsis	Include remote-id attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute remote-id *boolean*
Tree	remote-id
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-session-index *boolean*

Synopsis	Generate the per-SAP unique session index
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute sap-session-index *boolean*
Tree	sap-session-index
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel-server-attrs *boolean*

Synopsis	Enable inclusion of tunnel-server attributes
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute tunnel-server-attrs *boolean*
Tree	tunnel-server-attrs
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

uli *boolean*

Synopsis	Generate the ULI RADIUS attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute uli *boolean*
Tree	uli
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wifi-num-attached-ues *boolean*

Synopsis	Include the RADIUS Alc-Num-Attached-UEs VSA
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute wifi-num-attached-ues *boolean*
Tree	wifi-num-attached-ues
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wifi-ssid-vlan *boolean*

Synopsis	Include per-SSID VLAN ID in the Alc-Wlan-SSID-VLAN VSA
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute wifi-ssid-vlan *boolean*
Tree	wifi-ssid-vlan
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect-tunnel-home-address *boolean*

Synopsis	Include the Alc-Xconnect-Tunnel-Home-Ipv6 attribute
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* include-radius-attribute xconnect-tunnel-home-address *boolean*
Tree	xconnect-tunnel-home-address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R5
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

password *encrypted-leaf*

Synopsis	RADIUS request password
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* password *encrypted-leaf*
Tree	password
Description	This command specifies the RADIUS request password in a protected format. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp-user-name

Synopsis	Enter the **ppp-user-name** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* ppp-user-name
Tree	ppp-user-name
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-name *string*

Synopsis	Domain name
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* ppp-user-name domain-name *string*
Tree	domain-name
String length	1 to 128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

domain-operation *keyword*

Synopsis	Operation to perform on the PAP or CHAP username
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* ppp-user-name domain-operation *keyword*
Tree	domain-operation
Description	This command specifies the operation to perform on the PAP or CHAP username. When unconfigured, there is no operation and the PAP or CHAP username is not changed.
Options	append, strip, replace, default
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe-access-method *keyword*

Synopsis	PPPoE access method
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* pppoe-access-method *keyword*
Tree	pppoe-access-method
Options	none, padi, pap-chap
Default	padi
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-server-policy *reference*

Synopsis	Referenced RADIUS server policy
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* radius-server-policy *reference*
Tree	radius-server-policy
Reference	**configure** aaa radius server-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

re-authentication *boolean*

Synopsis	Enable re-authentication on IPOE renewal
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* re-authentication *boolean*
Tree	re-authentication
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

send-acct-stop-on-fail

Synopsis	Enter the **send-acct-stop-on-fail** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* send-acct-stop-on-fail
Tree	send-acct-stop-on-fail
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-accept-failure *boolean*

Synopsis	Send an accounting stop message when a failure occurs
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* send-acct-stop-on-fail on-accept-failure *boolean*
Tree	on-accept-failure
Description	When configured to **true**, the system sends an accounting stop message when a failure occurs after the reception of a RADIUS Access-Accept message (such as a duplicate IP address).
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-reject *boolean*

Synopsis	Send an accounting stop message for Access-Reject
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* send-acct-stop-on-fail on-reject *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	on-reject
Description	When configured to **true**, the system sends an accounting stop message when an Access-Reject message is received.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-request-failure *boolean*

Synopsis	Send an accounting stop message for failures
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* send-acct-stop-on-fail on-request-failure *boolean*
Tree	on-request-failure
Description	When configured to **true**, the system sends an accounting stop message when a RADIUS Access-Request message cannot be sent (for example, there is no server configured, or timeout).
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-name

Synopsis	Enter the **user-name** context
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* user-name
Tree	user-name
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-name *string*

Synopsis	Domain name
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* user-name domain-name *string*
Tree	domain-name
String length	1 to 128
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

domain-operation *keyword*

Synopsis	Operation to perform on the username
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* user-name domain-operation *keyword*
Tree	domain-operation
Description	This command specifies the operation to perform on the username. When unconfigured, there is no operation and the username is not changed.
Options	append, strip, replace, default
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

format *keyword*

Synopsis	User name format in the RADIUS message
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* user-name format *keyword*
Tree	format
Options	mac, circuit-id, tuple, ascii-converted-circuit-id, ascii-converted-tuple, dhcp-client-vendor-opts, mac-giaddr, ppp-user-name
Default	mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp-format *keyword*

Synopsis	Username format used for FWA sessions
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* user-name gtp-format *keyword*
Tree	gtp-format
Description	This command specifies the username format to use for FWA sessions. If a PAP message is present in the PCO IE of the Create Session request, the system uses that for authentication instead of the format specified for this command. If you specify a format that includes APN, the separator is an @ character; for example, msisdn@apn.
Options	imsi, imsi-apn, msisdn, msisdn-apn

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	imsi
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-format *mac-specification*

Synopsis	MAC address format when contacting a RADIUS server
Context	**configure** subscriber-mgmt radius-authentication-policy *named-item* user-name mac-format *mac-specification*
Tree	mac-format
String length	2 to 7
String format	'mac-specification' must be ab:, XY-, mmmm. or xx (e.g. ab: for 00:0c:f1:99:85:b8)
Default	aa:
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rip-policy [name] *named-item*

Synopsis	Enter the **rip-policy** list instance
Context	**configure** subscriber-mgmt rip-policy *named-item*
Tree	rip-policy
Max. instances	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	RIP policy name
Context	**configure** subscriber-mgmt rip-policy *named-item*
Tree	rip-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1

© 2026 Nokia.

router-advertisement-policy [name] *external-named-item*

Synopsis	Enter the **router-advertisement-policy** list instance
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item*
Tree	router-advertisement-policy
Max. instances	16
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *external-named-item*

Synopsis	Router advertisement policy name
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item*
Tree	router-advertisement-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-mcast *keyword*

Synopsis	Protocol with forced multicast
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* force-mcast *keyword*
Tree	force-mcast
Options	ip, ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-advertisement-interval *number*

Synopsis	Maximum advertisement interval
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* max-advertisement-interval *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	max-advertisement-interval
Range	900 to 1800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-advertisement-interval *number*

Synopsis	Minimum advertisement interval
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* min-advertisement-interval *number*
Tree	min-advertisement-interval
Range	900 to 1350
Units	seconds
Default	900
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

options

Synopsis	Enter the **options** context
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options
Tree	options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

current-hop-limit *number*

Synopsis	Hop limit to be advertised
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options current-hop-limit *number*
Tree	current-hop-limit
Range	0 to 255
Default	64

© 2026 Nokia.

managed-configuration *boolean*

Synopsis	Managed address configuration flag
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options managed-configuration *boolean*
Tree	managed-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mtu *(number | keyword)*

Synopsis	Advertised MTU value
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options mtu *(number | keyword)*
Tree	mtu
Range	1280 to 9212
Units	bytes
Options	not-included
Default	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other-stateful-configuration *boolean*

Synopsis	Other stateful configuration flag
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options other-stateful-configuration *boolean*
Tree	other-stateful-configuration
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reachable-time *number*

Synopsis	Reachable time for advertisements

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options reachable-time *number*
Tree	reachable-time
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retransmit-timer *number*

Synopsis	Retransmit time in router advertisements from interface
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options retransmit-timer *number*
Tree	retransmit-timer
Range	0 to 1800000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-lifetime *(number | keyword)*

Synopsis	Router lifetime
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* options router-lifetime *(number | keyword)*
Tree	router-lifetime
Range	2700 to 9000
Units	seconds
Options	no-default-router
Default	4500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-options

Synopsis	Enter the **prefix-options** context
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options
Tree	prefix-options
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stateful

Synopsis	Enter the **stateful** context
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options stateful
Tree	stateful
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-lifetimes *boolean*

Synopsis	Use automatic lifetimes for stateful prefixes
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options stateful auto-lifetimes *boolean*
Tree	auto-lifetimes
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

on-link *boolean*

Synopsis	Assign the prefix to an interface on the specified link
Context	**configure** subscriber-mgmt router-advertisement-policy *external-named-item* prefix-options stateful on-link *boolean*
Tree	on-link
Default	true
Introduced	16.0.R1

Default	86400
	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-template [name] *named-item*

Synopsis	Enter the **sap-template** list instance
Context	**configure** subscriber-mgmt sap-template *named-item*
Tree	sap-template
Description	Commands in this context configure a template for automatically-generated subscriber SAPs that is used when creating CUPS sessions. A template with name "default" is used when no other instance is created, however, the "default" template must be explicitly provisioned.
Max. instances	256
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	SAP template name
Context	**configure** subscriber-mgmt sap-template *named-item*
Tree	sap-template
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cpu-protection

Synopsis	Enter the **cpu-protection** context
Context	**configure** subscriber-mgmt sap-template *named-item* cpu-protection
Tree	cpu-protection
Introduced	20.5.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

ip-src-monitoring

Synopsis	Apply CPU protection policy on IP sources
Context	**configure** subscriber-mgmt sap-template *named-item* cpu-protection ip-src-monitoring
Tree	ip-src-monitoring
Notes	The following elements are part of a choice: **ip-src-monitoring** or **mac-monitoring**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

mac-monitoring

Synopsis	Apply CPU protection policy on MAC sources
Context	**configure** subscriber-mgmt sap-template *named-item* cpu-protection mac-monitoring
Tree	mac-monitoring
Notes	The following elements are part of a choice: **ip-src-monitoring** or **mac-monitoring**.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

policy-id *reference*

Synopsis	CPU protection policy ID
Context	**configure** subscriber-mgmt sap-template *named-item* cpu-protection policy-id *reference*
Tree	policy-id
Reference	**configure** system security cpu-protection policy *number*
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt sap-template *named-item* description *description*
Tree	description
String length	1 to 80

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dist-cpu-protection *reference*

Synopsis	Distributed CPU protection policy name
Context	**configure** subscriber-mgmt sap-template *named-item* dist-cpu-protection *reference*
Tree	dist-cpu-protection
Reference	**configure** system security dist-cpu-protection policy *named-item*
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time *(number | keyword)*

Synopsis	Time to hold a SAP after last PFCP session is removed
Context	**configure** subscriber-mgmt sap-template *named-item* hold-time *(number | keyword)*
Tree	hold-time
Description	This command configures the time for which an SAP will be kept after the last session has been removed. Idle SAPs can be forcefully removed by the command **clear subscriber-mgmt sap-template template-name idle-saps**.
Range	0 | 30 to 2592000
Units	seconds
Options	infinite
Default	30
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv-policy [name] *external-named-item*

Synopsis	Enter the **shcv-policy** list instance
Context	**configure** subscriber-mgmt shcv-policy *external-named-item*
Tree	shcv-policy
Max. instances	64
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *external-named-item*

Synopsis	SHCV policy name
Context	**configure** subscriber-mgmt shcv-policy *external-named-item*
Tree	shcv-policy
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

layer-3

Synopsis	Enter the **layer-3** context
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* layer-3
Tree	layer-3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-ip-origin *keyword*

Synopsis	Source IP address to be used for SHCV messages

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt shcv-policy *external-named-item* layer-3 source-ip-origin *keyword*
Tree	source-ip-origin
Options	interface – IP address of the interface vrrp – Primary IP address of the VRRP
Default	interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

unnumbered-source-ip *ipv4-unicast-address*

Synopsis	Source IPv4 address for unnumbered subscriber hosts
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* layer-3 unnumbered-source-ip *ipv4-unicast-address*
Tree	unnumbered-source-ip
Description	This command configures the source IPv4 address (also known as the sender IP address) used in SHCV ARP requests for unnumbered hosts. When unconfigured, 0.0.0.0 is used as the source IPv4 address in SHCV ARP requests.
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

periodic

Synopsis	Enter the **periodic** context
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* periodic
Tree	periodic
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

action *keyword*

Synopsis	Action when periodic connectivity verification fails
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* periodic action *keyword*
Tree	action
Options	alarm, remove

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	alarm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of periodic connectivity check
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* periodic admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	Time interval which all known sources are verified
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* periodic interval *number*
Tree	interval
Description	This command specifies the time interval which all known sources are verified. The actual rate is dependent on the number of known hosts and intervals.
Range	1 to 6000
Units	minutes
Default	30
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retry-count *number*

Synopsis	Number of retransmissions in connectivity verification
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* periodic retry-count *number*
Tree	retry-count
Range	1 to 29

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis	Timeout before connectivity verification retransmitted
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* periodic timeout *number*
Tree	timeout
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

trigger

Synopsis	Enter the **trigger** context
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* trigger
Tree	trigger
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-limit-exceeded

Synopsis	Enter the **host-limit-exceeded** context
Context	**configure** subscriber-mgmt shcv-policy *external-named-item* trigger host-limit-exceeded
Tree	host-limit-exceeded
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of trigger for host-limit exceeded

© 2026 Nokia.

[**name**] *external-named-item*

Synopsis	SLA profile name
Context	**configure** subscriber-mgmt sla-profile *external-named-item*
Tree	sla-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

aggregate-qos-statistics

Synopsis	Enter the **aggregate-qos-statistics** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* aggregate-qos-statistics
Tree	aggregate-qos-statistics
Description	Commands in this context configure how aggregate QoS statistics are calculated.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis	Enter the **egress** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* aggregate-qos-statistics egress
Tree	egress
Description	Commands in this context configure which types of egress QoS object statistics are used to calculate the total egress aggregate statistics. This can include static queues and policers that are configured in a QoS SAP-egress policy, and dynamic queues and policers that are created on demand, according to the session needs.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policers

Synopsis	Enter the **policers** context

control

Synopsis	Enter the **control** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* control
Tree	control
Description	Commands in this context determine which sessions can use the SLA profile. By default, only sessions set up by the local system can use the SLA profile, but the SLA profile can also be enabled for sessions set up by a BNG CUPS Control Plane Function (CPF).
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cups *boolean*

Synopsis	Allow the CUPS control plane to use the profile
Context	**configure** subscriber-mgmt sla-profile *external-named-item* control cups *boolean*
Tree	cups
Description	When configured to **true**, the profile can be used by sessions set up by a BNG CUPS Control Plane Function (CPF).
Default	false
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local *boolean*

Synopsis	Allow the local control plane to use the profile
Context	**configure** subscriber-mgmt sla-profile *external-named-item* control local *boolean*
Tree	local
Description	When configured to **true**, the profile can be used by sessions set up by the local system.
Default	true
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.

egress

Synopsis	Enter the **egress** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* custom-statistics-group *named-item* egress
Tree	egress
Description	Commands in this context configure which types of egress QoS object statistics are used to calculate the custom statistics. This can include static queues and policers that are configured in a QoS SAP egress policy, and dynamic queues and policers that are created on demand, according to the needs of the session.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policers

Synopsis	Enter the **policers** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* custom-statistics-group *named-item* egress policers
Tree	policers
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

none

Synopsis	Ignore all dynamic and static policers for this group
Context	**configure** subscriber-mgmt sla-profile *external-named-item* custom-statistics-group *named-item* egress policers none
Tree	none
Notes	The following elements are part of a choice: **none** or **policer**.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policer *reference*

Synopsis	Static policer ID to include for custom statistics
Context	**configure** subscriber-mgmt sla-profile *external-named-item* custom-statistics-group *named-item* egress policers policer *reference*

Tree	policer
Reference	**configure** qos sap-egress *qos-policy-name* policer *number*
Max. instances	63
Notes	The following elements are part of a choice: **none** or **policer**.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

def-instance-sharing *keyword*

Synopsis	Default SPI sharing method for IPoE and PPPoE sessions
Context	**configure** subscriber-mgmt sla-profile *external-named-item* def-instance-sharing *keyword*
Tree	def-instance-sharing
Description	This command configures the default SLA Profile Instance (SPI) sharing method used for IPoE and PPPoE sessions from the same subscriber, associated with the same SLA profile, and active on the same SAP. The default SPI sharing method can be overwritten per session at initial authentication or mid-session.
Options	per-sap – IPoE and PPP sessions share an SPI per-session – IPoE and PPP sessions obtain a dedicated SPI per session
Default	per-sap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt sla-profile *external-named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Tree	avg-frame-overhead
Description	This command configures overrides for the average frame overhead. The overrides supersede the average frame overhead configuration under the queue. For a full description of this command, see the **configure qos network-queue queue avg-frame-overhead** and **configure qos sap-egress queue avg-frame-overhead** contexts.
Range	0.00 to 100.00
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cbs *(number | keyword)*

Synopsis	CBS
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference* cbs *(number | keyword)*
Tree	cbs
Range	0 to 2097151
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

high-prio-only *(number | keyword)*

Synopsis	High priority burst size
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos sap-egress overrides queue *reference* high-prio-only *(number | keyword)*
Tree	high-prio-only
Range	0 to 100
Units	percent
Options	auto

Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos scheduler-policy overrides scheduler *reference* rate pir *(number | keyword)*
Tree	pir
Range	1 to 3200000000
Units	kilobps
Options	max
Default	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy-name *reference*

Synopsis	Scheduler policy name
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos scheduler-policy policy-name *reference*
Tree	policy-name
Reference	**configure** qos scheduler-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-ingress-l2tp-dscp *boolean*

Synopsis	Use outer L2TP header for LAC sessions
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress qos use-ingress-l2tp-dscp *boolean*
Tree	use-ingress-l2tp-dscp
Description	When configured to **true**, egress classification is based on the outer L2TP header DSCP instead of the inner IP header for LAC sessions. This command is ignored for non-LAC sessions.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

report-rate

Synopsis	Enter the **report-rate** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress report-rate
Tree	report-rate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

agg-rate

Synopsis	Report the aggregate rate
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress report-rate agg-rate
Tree	agg-rate
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	Report the rate of the specified policer
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress report-rate policer *number*
Tree	policer
Range	1 to 63
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe-actual-rate

Synopsis	Report rate from the DSL characteristics PPPoE tags
Context	**configure** subscriber-mgmt sla-profile *external-named-item* egress report-rate pppoe-actual-rate
Tree	pppoe-actual-rate
Notes	The following elements are part of a choice: **agg-rate**, **policer**, **pppoe-actual-rate**, **rfc5515-actual-rate**, or **scheduler**.
Introduced	16.0.R1

idle-timeout-policy *reference*

Synopsis	Idle timeout policy for this SLA profile
Context	**configure** subscriber-mgmt sla-profile *external-named-item* idle-timeout-policy *reference*
Tree	idle-timeout-policy
Description	This command configures the idle timeout for this SLA profile. An idle-timeout policy defines the idle timeout parameters that apply to subscriber sessions using this SLA profile.
Reference	**configure** subscriber-mgmt idle-timeout-policy *named-item*
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis	Enter the **ingress** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* ingress
Tree	ingress
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-filter *reference*

Synopsis	IPv4 filter policy name
Context	**configure** subscriber-mgmt sla-profile *external-named-item* ingress ip-filter *reference*
Tree	ip-filter
Reference	**configure** filter ip-filter *filter-name*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-filter *reference*

Synopsis	IPv6 filter policy name
Context	**configure** subscriber-mgmt sla-profile *external-named-item* ingress ipv6-filter *reference*
Tree	ipv6-filter

© 2026 Nokia.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-filter *reference*

Synopsis	IPv4 filter policy name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sla-profile *external-named-item* one-time-http-redirection ip-filter *reference*
Tree	ip-filter
Reference	**configure** filter ip-filter *filter-name*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pfcp-mappings

Synopsis	Enter the **pfcp-mappings** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings
Tree	pfcp-mappings
Description	Commands in this context configure the mapping of packet forwarding control protocol (PFCP) QoS IEs (such as QoS enforcement rule (QER) GBR/MBR IEs), to local QoS overrides (such as queue and policer rates).
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

session-qer

Synopsis	Enter the **session-qer** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer
Tree	session-qer
Description	Commands in this context configure the mapping of the PFCP session QER rate to the local QoS rate. If a signaled PFCP QER rate applies to all data-plane rules, it is interpreted as the session QER rate and is mapped to the QoS overrides in the configuration. Examples of such QER rates are APN-AMBR for 4G FWA sessions and session-AMBR for 5G FWA sessions. A QER that contains a QER correlation ID does not use the QER mapping because it is assumed not to be a per-session construct.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

downlink

Synopsis	Enter the **downlink** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer downlink
Tree	downlink
Description	Commands in this context configure the downlink MBR/GBR to QoS override mapping.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

aggregate-rate

Synopsis	Map MBR/GBR to a rate override for the aggregate rate
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer downlink aggregate-rate
Tree	aggregate-rate
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

arbiter *named-item*

Synopsis	Arbiter target of MBR/GBR override
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer downlink arbiter *named-item*
Tree	arbiter
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *number*

Synopsis	Policer target of MBR/GBR override
Context	**configure** subscriber-mgmt sla-profile *external-named-item* pfcp-mappings session-qer downlink policer *number*
Tree	policer

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	1 to 8
Notes	The following elements are part of a choice: **aggregate-rate**, **arbiter**, **policer**, **queue**, or **scheduler**.
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

queue *number*

overall *number*

Synopsis	Maximum number of subscriber sessions
Context	**configure** subscriber-mgmt sla-profile *external-named-item* session-limits overall *number*
Tree	overall
Range	0 to 131071
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe

Synopsis	Enter the **pppoe** context
Context	**configure** subscriber-mgmt sla-profile *external-named-item* session-limits pppoe
Tree	pppoe
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac *number*

Synopsis	Maximum number of PPPoE L2TP LAC sessions
Context	**configure** subscriber-mgmt sla-profile *external-named-item* session-limits pppoe lac *number*
Tree	lac
Description	This command configures the maximum number of PPPoE L2TP LAC sessions per SLA profile instance.
Range	0 to 131071

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local *number*

Synopsis	Maximum number of PPPoE local terminated sessions
Context	**configure** subscriber-mgmt sla-profile *external-named-item* session-limits pppoe local *number*
Tree	local
Description	This command configures the maximum number of PPPoE local terminated sessions (PTA) per SLA profile instance.
Range	0 to 131071
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

overall *number*

Synopsis	Maximum number of PPPoE sessions
Context	**configure** subscriber-mgmt sla-profile *external-named-item* session-limits pppoe overall *number*
Tree	overall
Description	This command configures the maximum number of PPPoE sessions per SLA profile instance.
Range	0 to 131071
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

steering-profile [name] *named-item*

Synopsis	Enter the **steering-profile** list instance
Context	**configure** subscriber-mgmt steering-profile *named-item*
Tree	steering-profile
Max. instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	Steering profile name
Context	**configure** subscriber-mgmt steering-profile *named-item*
Tree	steering-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

access

Synopsis	Enter the **access** context
Context	**configure** subscriber-mgmt steering-profile *named-item* access
Tree	access
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router instance to be used as an access VAS router
Context	**configure** subscriber-mgmt steering-profile *named-item* access router-instance *string*
Tree	router-instance
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *description*

Synopsis	Text description
Context	**configure** subscriber-mgmt steering-profile *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

network

Synopsis	Enter the **network** context
Context	**configure** subscriber-mgmt steering-profile *named-item* network
Tree	network
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-hop *ipv4-unicast-address*

Synopsis	Next-hop IP address used for network next-hop
Context	**configure** subscriber-mgmt steering-profile *named-item* network next-hop *ipv4-unicast-address*
Tree	next-hop
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router instance to be used as an access VAS router
Context	**configure** subscriber-mgmt steering-profile *named-item* network router-instance *string*
Tree	router-instance
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy [name] *external-named-item*

Synopsis	Enter the **sub-ident-policy** list instance
Context	**configure** subscriber-mgmt sub-ident-policy *external-named-item*
Tree	sub-ident-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lag-per-link-hash

Synopsis	Enter the **lag-per-link-hash** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress lag-per-link-hash
Tree	lag-per-link-hash
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

class *number*

Synopsis	Class used to select a LAG link
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress lag-per-link-hash class *number*
Tree	class
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

weight *number*

Synopsis	Weight associated with SAP when selecting a LAG link
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress lag-per-link-hash weight *number*
Tree	weight
Range	1 to 1024
Default	1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qos

Synopsis	Enter the **qos** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos
Tree	qos
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

agg-rate

Synopsis	Enter the **agg-rate** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos agg-rate
Tree	agg-rate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

adaptation-rule *keyword*

Synopsis	Adaptation rule for operational PIR value of subscriber
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos agg-rate adaptation-rule *keyword*
Tree	adaptation-rule
Description	This command configures the adaptation rule for the PIR value of the subscriber aggregate rate. This rule determines which configured value is adapted to **oper-agg-rate** based on hardware capabilities.
Options	max – At maximum, the configured rate min – At minimum, the configured rate closest – Closest rate to the configured value
Default	closest
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

burst-limit *(number | keyword)*

Synopsis	Burst limit of the subscriber aggregate rate
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos agg-rate burst-limit *(number | keyword)*
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	21.7.R1
Platforms	7750 SR-1, 7750 SR-1 (FP5), 7750 SR-s

min-resv-bw *number*

Synopsis	Reserved minimum total rate of all egress queues
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos agg-rate min-resv-bw *number*
Tree	min-resv-bw
Range	0 to 800000000
Units	kilobps
Default	1
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

queue-frame-based-accounting *boolean*

Synopsis	Use frame-based accounting to evaluate rate limit
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos agg-rate queue-frame-based-accounting *boolean*
Tree	queue-frame-based-accounting
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

rate *number*

Synopsis	Maximum total rate of all egress queues
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos agg-rate rate *number*
Tree	rate
Range	1 to 800000000
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

encap-offset

Synopsis	Enable the **encap-offset** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos encap-offset
Tree	encap-offset
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Offset type
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos encap-offset type *keyword*
Tree	type
Options	pppoa-llc, pppoa-null, pppoeoa-llc, pppoeoa-llc-fcs, pppoeoa-llc-tagged, pppoeoa-llc-tagged-fcs, pppoeoa-null, pppoeoa-null-fcs, pppoeoa-null-tagged, pppoeoa-null-tagged-fcs, ipoa-llc, ipoa-null, ipoeoa-llc, ipoeoa-llc-fcs, ipoeoa-llc-tagged, ipoeoa-llc-tagged-fcs, ipoeoa-null, ipoeoa-null-fcs, ipoeoa-null-tagged, ipoeoa-null-tagged-fcs, pppoe, pppoe-tagged, ipoe, ipoe-tagged
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hs-agg-rate *number*

Synopsis	Maximum rate for single egress HS queues

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos hs-agg-rate *number*
Tree	hs-agg-rate
Range	1 to 100000000
Units	kilobps
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

hs-low-burst-max-class *number*

Synopsis	Scheduling classes to map the low burst limit threshold
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos hs-low-burst-max-class *number*
Tree	hs-low-burst-max-class
Range	1 to 6
Default	6
Introduced	16.0.R4
Platforms	7750 SR-7/12/12e

hs-min-resv-bw *number*

Synopsis	Reserved minimum total rate of all egress queues
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos hs-min-resv-bw *number*
Tree	hs-min-resv-bw
Range	0 to 100000000
Units	kilobps
Default	1
Introduced	19.10.R1
Platforms	7750 SR-7/12/12e

policer-control-policy

Synopsis	Enter the **policer-control-policy** context
Context	**configure** subscriber-mgmt sub-profile *external-named-item* egress qos policer-control-policy

Context	**configure** subscriber-mgmt sub-profile *external-named-item* sub-mcac-policy *reference*
Tree	sub-mcac-policy
Reference	**configure** subscriber-mgmt sub-mcac-policy *named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

upnp-policy *reference*

Synopsis	UPnP policy for the subscriber profile
Context	**configure** subscriber-mgmt sub-profile *external-named-item* upnp-policy *reference*
Tree	upnp-policy
Description	This command specifies the Universal Plug 'n Play policy (UPnP) IGD service for the subscriber profile. All ESM hosts of the subscriber can use the UPnP protocol to create port mapping. This feature only supports L2-Aware NAT hosts. The UPnP parameters are defined in the referenced UPnP policy configured in the **configure service upnp** context.
Reference	**configure** service upnp policy *external-named-item*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

volume-stats-type *keyword*

Synopsis	Include non-IP headers in the accounting statistics
Context	**configure** subscriber-mgmt sub-profile *external-named-item* volume-stats-type *keyword*
Tree	volume-stats-type
Options	l2, ip
Default	l2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vport-hashing *boolean*

Synopsis	Include LAG hashing on Vport

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt sub-profile *external-named-item* vport-hashing *boolean*
Tree	vport-hashing
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-interface-statistics

Synopsis	Enter the **subscriber-interface-statistics** context
Context	**configure** subscriber-mgmt subscriber-interface-statistics
Tree	subscriber-interface-statistics
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state for statistics collection
Context	**configure** subscriber-mgmt subscriber-interface-statistics admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

svlan-statistics

Synopsis	Enter the **svlan-statistics** context
Context	**configure** subscriber-mgmt svlan-statistics
Tree	svlan-statistics
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of statistics collection

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt svlan-statistics admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

system-behavior

Synopsis	Enter the **system-behavior** context
Context	**configure** subscriber-mgmt system-behavior
Tree	system-behavior
Description	Commands in this context configure the attributes of system-wide subscriber management behavior.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

legacy-dns-nbns *boolean*

Synopsis	Restrict authentication origins for name servers
Context	**configure** subscriber-mgmt system-behavior legacy-dns-nbns *boolean*
Tree	legacy-dns-nbns
Description	When configured to **true**, this command enables legacy DNS NBNS behavior, which restricts the supported default extended authentication origins for DNS and NBNS name servers. The main differences include: • only support DHCP server as origin for DHCP relay: IPoE DHCPv4/DHCPv6 and PPPoE DHCPv6 • Local Address Assignment (LAA) is highest priority origin: IPoE and PPPoE SLAAC DNSv6 and PPPoE DNSv4 • no default DNS for IPoE DHCPv4 proxy When configured to **false**, this command reverts to the recommended default extended DNS and NBNS name server origin priorities.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

up-resiliency

Synopsis	Enter the **up-resiliency** context
Context	**configure** subscriber-mgmt up-resiliency
Tree	up-resiliency
Description	Commands in this context configure the inter-UPF resiliency in a CUPS system.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

fate-sharing-group-template [name] *named-item*

Synopsis	Enter the **fate-sharing-group-template** list instance
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item*
Tree	fate-sharing-group-template
Description	Commands in this context configure resiliency parameters per FSG.
Max. instances	256
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	FSG template ID
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item*
Tree	fate-sharing-group-template
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character 'identifier' must not start with _ (reserved for internal use)
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gratuitous-arp *keyword*

Synopsis	Granularity for sending GARP packets on switchover
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* gratuitous-arp *keyword*
Tree	gratuitous-arp
Options	one-per-outer-tag – Send a single Gratuitous ARP for all q-in-q SAPs sharing the same outer tag on any one of those SAP one-per-sap – Send a single Gratuitous ARP per SAP
Default	one-per-sap
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

path-restoration-state *keyword*

Synopsis	Method for managing FSGs during headless mode
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* path-restoration-state *keyword*
Tree	path-restoration-state
Description	This command configures how the BNG-UP manages the state of active FSGs, if the BNG-UP becomes headless (PFCP path is in restoration/headless). The BNG-UP can always move all active FSGs to standby, or decide whether to move them to standby based on a series of heuristic tests. If any test indicates that the BNG-UP cannot forward traffic for the FSG, or if another BNG-UP becomes active, the BNG-UP moves the FSG to standby. This only applies to active FSGs; the BNG-UP never makes a standby FSG active without CPF intervention.
Options	standby – Always change FSG state to standby auto – Change FSG state based on a series of heuristic tests
Default	auto

Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redundant-interface

Synopsis	Enter the **redundant-interface** context
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* redundant-interface
Tree	redundant-interface
Description	Commands in this context configure downstream traffic shunting from a standby BNG-UP to an active BNG-UP. Downstream traffic that is received for standby sessions is sent over the redundant interface to the active BNG-UP. This requires the configuration of the **multi-chassis-shunt-id** in the service that receives the session traffic.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

name *interface-name*

Synopsis	Redundant interface name
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* redundant-interface name *interface-name*
Tree	name
Description	This command configures the name of the redundant interface. It must exist in the service that contains the redundant interface.
String length	1 to 32
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

service *service-name*

Synopsis	Service that contains the redundant interface
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* redundant-interface service *service-name*
Tree	service
Description	This command configures the service that contains the redundant interface. It can be different from the service where the session traffic is terminated.
String length	1 to 64

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String format	'service-name' must contain at least one non-space character
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

uplink-forwarding-while-standby *boolean*

Synopsis	Allows a standby BNG-UP to forward packets
Context	**configure** subscriber-mgmt up-resiliency fate-sharing-group-template *named-item* uplink-forwarding-while-standby *boolean*
Tree	uplink-forwarding-while-standby
Description	This command allows a standby BNG-UP to forward uplink traffic. To prevent the possibility of packet replication towards the network, this command should only be enabled if the access network is provisioned not to replicate unicast packets to the BNG-UP.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vrgw

Synopsis	Enter the **vrgw** context
Context	**configure** subscriber-mgmt vrgw
Tree	vrgw
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

brg-profile [brg-profile-name] *named-item*

Synopsis	Enter the **brg-profile** list instance
Context	**configure** subscriber-mgmt vrgw brg-profile *named-item*
Tree	brg-profile
Max. instances	16
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2tp *boolean*

Synopsis	Controls whether the query returns Soft L2TPv3 tunnels
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* encapsulation l2tp *boolean*
Tree	l2tp
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vxlan *boolean*

Synopsis	Controls whether the query returns VXLAN tunnels
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* encapsulation vxlan *boolean*
Tree	vxlan
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2

Synopsis	Enter the **l2** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l2
Tree	l2
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

inner-vlan *number*

Synopsis	Value to match the Layer 2 access point of the tunnel
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l2 inner-vlan *number*
Tree	inner-vlan
Range	0 to 4095

© 2026 Nokia.

Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

outer-vlan *number*

Synopsis	Layer 2 access point matching with a specified S-VLAN
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l2 outer-vlan *number*
Tree	outer-vlan
Range	0 to 4095
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

sap *sap*

Synopsis	Value to match the L2-AP Access Point of the tunnel
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l2 sap *sap*
Tree	sap
String length	1 to 45
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l3

Synopsis	Enter the **l3** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l3
Tree	l3
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

address-type *keyword*

Synopsis	Address type to match
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l3 address-type *keyword*
Tree	address-type
Options	ipv4, ipv6

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address as local endpoint to match
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l3 local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address as remote endpoint to match
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l3 remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	remote-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router instance to match
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* l3 router-instance *string*
Tree	router-instance
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ues

Synopsis	Enter the **ues** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues
Tree	ues
Description	Commands in this context filter tunnels based on the properties of UEs that are currently active on the tunnel.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-user-group *named-item-or-empty*

Synopsis	Name of the custom user group
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues custom-user-group *named-item-or-empty*
Tree	custom-user-group
Description	This command specifies to use a custom user group as a filter. A user equipment (UE) can be assigned up to four custom user groups during RADIUS authentication using the Alc-Wlan-Custom-User-Group attribute.
String length	0 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	24.3.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

maximum *number*

Synopsis	Maximum number of UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues maximum *number*
Tree	maximum
Max. range	0 to 4294967295
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

minimum *number*

Synopsis	Minimum number of UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues minimum *number*
Tree	minimum
Max. range	0 to 4294967295
Default	1
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

state

Synopsis	Enable the **state** context
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues state
Tree	state
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

cross-connect *boolean*

Synopsis	Match on tunnels with cross-connect UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues state cross-connect *boolean*
Tree	cross-connect
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dsm *boolean*

Synopsis	Match on DSM UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues state dsm *boolean*
Tree	dsm
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

esm *boolean*

Synopsis	Match on ESM UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues state esm *boolean*
Tree	esm
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

l2 *boolean*

Synopsis	Match on tunnels with L2W UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues state l2 *boolean*
Tree	l2
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

migrant *boolean*

Synopsis	Match on tunnels with migrant UEs
Context	**configure** subscriber-mgmt wlan-gw queries tunnel *named-item* ues state migrant *boolean*
Tree	migrant
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ue [name] *named-item*

Synopsis	Enter the **ue** list instance
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item*
Tree	ue
Description	Commands in this context query for WLAN Gateway UEs where the filter criteria over WLAN-GW UEs are defined. The query can be used to retrieve the state of the UEs matching the configured criteria.
Max. instances	1024
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

[**name**] *named-item*

Synopsis	UE query name
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	ue
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

address

Synopsis	Enter the **address** context
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* address
Tree	address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp6-na *ipv6-unicast-without-local-address*

Synopsis	DHCPv6 IA-NA address to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* address dhcp6-na *ipv6-unicast-without-local-address*
Tree	dhcp6-na
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv4 *ipv4-unicast-address*

Synopsis	IPv4 address to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* address ipv4 *ipv4-unicast-address*
Tree	ipv4
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

slaac *ipv6-unicast-without-local-address*

Synopsis	SLAAC prefix to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* address slaac *ipv6-unicast-without-local-address*
Tree	slaac
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

type *keyword*

Synopsis	Address type to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* address type *keyword*
Tree	type
Options	ipv4 – Any IPv4 address ipv6 – Any IPv6 address ipv4-only – IPv4 address only ipv6-only – IPv6 address only ipv4v6 – IPv4 and IPv6 address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

bridge-domain *number*

Synopsis	Bridge Domain to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* bridge-domain *number*
Tree	bridge-domain
Range	0 to 4294967294
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

connection-state

Synopsis	Enable the **connection-state** context
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state
Tree	connection-state
Introduced	19.5.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

already-signed-in *boolean*

Synopsis	Enable matching on UEs that are already signed in
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state already-signed-in *boolean*
Tree	already-signed-in
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

authorized-only *boolean*

Synopsis	Enable matching on UEs in an authorized state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state authorized-only *boolean*
Tree	authorized-only
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

cross-connect *boolean*

Synopsis	Enable matching on cross-connected UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state cross-connect *boolean*
Tree	cross-connect
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

data-triggered *boolean*

Synopsis	Enable matching on UEs in a data-triggered state

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state data-triggered *boolean*
Tree	data-triggered
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

delete-pending *boolean*

Synopsis	Enable matching on UEs in a delete-pending state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state delete-pending *boolean*
Tree	delete-pending
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dhcp-triggered *boolean*

Synopsis	Enable matching on UEs in DHCP-triggered state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state dhcp-triggered *boolean*
Tree	dhcp-triggered
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

dsm *boolean*

Synopsis	Controls whether the query returns UEs in DSM state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state dsm *boolean*
Tree	dsm
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

esm *boolean*

Synopsis	Controls whether the query returns UEs in ESM state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state esm *boolean*
Tree	esm
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp-authorized *boolean*

Synopsis	Enable matching on UEs in GTP-authorized state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state gtp-authorized *boolean*
Tree	gtp-authorized
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-assigned *boolean*

Synopsis	Match on UEs in an IP-assigned state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state ip-assigned *boolean*
Tree	ip-assigned
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-assigned-authorized *boolean*

Synopsis	Match on UEs in an IP-assigned and authorized state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state ip-assigned-authorized *boolean*
Tree	ip-assigned-authorized

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2 *boolean*

Synopsis	Match on Layer-2 wholesale state for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state l2 *boolean*
Tree	l2
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

portal *boolean*

Synopsis	Controls whether the query returns UEs in portal state
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* connection-state portal *boolean*
Tree	portal
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

custom-user-group *named-item-or-empty*

Synopsis	Name of the custom user group
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* custom-user-group *named-item-or-empty*
Tree	custom-user-group
Description	This command specifies to use a custom user group as a filter. A user equipment (UE) can be assigned up to four custom user groups during RADIUS authentication using the Alc-Wlan-Custom-User-Group attribute.
String length	0 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	24.3.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-address *mac-address*

Synopsis	MAC address to use for matching on UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* mac-address *mac-address*
Tree	mac-address
String format	'ieee-address' must be 6 hex byte pairs with ':' or '-' (e.g. 00:11:22:33:44:55)
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

soft-quota-exhausted *boolean*

Synopsis	Send interim update message when the quota is reached
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* soft-quota-exhausted *boolean*
Tree	soft-quota-exhausted
Default	false
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel

Synopsis	Enter the **tunnel** context
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* tunnel
Tree	tunnel
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

encapsulation *keyword*

Synopsis	Tunnel type to match for active UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* tunnel encapsulation *keyword*
Tree	encapsulation
Options	gre, l2tp, l2, vxlan

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address as local tunnel endpoint to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* tunnel local-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	local-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address as remote tunnel endpoint to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* tunnel remote-address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	remote-address
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

router-instance *string*

Synopsis	Router instance of tunnels to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* tunnel router-instance *string*
Tree	router-instance
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan *number*

Synopsis	VLAN tag within the tunnel to match for UEs
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* vlan *number*
Tree	vlan
Range	0 to 4095

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group

Synopsis	Enable the **wlan-gw-group** context
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* wlan-gw-group
Tree	wlan-gw-group
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

id *number*

Synopsis	WLAN-GW ISA group ID
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* wlan-gw-group id *number*
Tree	id
Range	1 to 4
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

member *number*

Synopsis	The member of the WLAN-GW ISA group
Context	**configure** subscriber-mgmt wlan-gw queries ue *named-item* wlan-gw-group member *number*
Tree	member
Range	1 to 1024
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

virtual-chassis-identifier *string-not-all-spaces*

Synopsis	WLAN Gateway virtual chassis ID or dual homing key
Context	**configure** subscriber-mgmt wlan-gw virtual-chassis-identifier *string-not-all-spaces*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	virtual-chassis-identifier
String length	1 to 16
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

4.45.1 system command descriptions

system

Synopsis	Enter the **system** context
Context	**configure** system
Tree	system
Description	Commands in this context enable the configuration of general system level functions and router management protocols.
Introduced	16.0.R1
Platforms	All

alarm-contact-in-power *boolean*

Synopsis	Power the output pin on the CPM alarm interface port
Context	**configure** system alarm-contact-in-power *boolean*
Tree	alarm-contact-in-power
Default	false
Introduced	16.0.R1
Platforms	7750 SR-a

alarm-contact-input [input-pin-number] *number*

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-a

admin-state *keyword*

Synopsis	Administrative state of the alarm contact input
Context	**configure** system alarm-contact-input *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR-a

clear-message *description*

Synopsis	Text message sent in the log event when an alarm clears
Context	**configure** system alarm-contact-input *number* clear-message *description*
Tree	clear-message
Description	This command configures a text message to be included in the log event that is sent when the system clears an alarm. The system generates the default "Alarm Input Cleared" message if no message is configured. The **clear-message** string is included in the log event when the pin changes to the normal state.
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Default	Alarm Input Cleared
Introduced	16.0.R1
Platforms	7750 SR-a

description *long-description*

Synopsis	Text description
Context	**configure** system alarm-contact-input *number* description *long-description*
Tree	description
String length	1 to 160

String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7750 SR-a

normal-state *keyword*

Synopsis	Normal state associated with the alarm contact input
Context	**configure** system alarm-contact-input *number* normal-state *keyword*
Tree	normal-state
Options	open, closed
Default	open
Introduced	16.0.R1
Platforms	7750 SR-a

trigger-message *description*

Synopsis	Text message sent in the log event when input changes
Context	**configure** system alarm-contact-input *number* trigger-message *description*
Tree	trigger-message
Description	This command configures a text message to be included in the log event that is sent when the system generates an alarm. The system generates the default message "Alarm Input Triggered" if no message is configured. This command's message string is included in the log event when the pin changes from the normal state.
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Default	Alarm Input Triggered
Introduced	16.0.R1
Platforms	7750 SR-a

alarms

Synopsis	Enter the **alarms** context
Context	**configure** system alarms
Tree	alarms
Introduced	16.0.R4

Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the system alarm
Context	**configure** system alarms admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

max-cleared *number*

Synopsis	Maximum number of cleared alarms
Context	**configure** system alarms max-cleared *number*
Tree	max-cleared
Range	0 to 500
Default	500
Introduced	16.0.R4
Platforms	All

allow-boot-license-violations *boolean*

Synopsis	Allow boot license violations in boot-up configuration
Context	**configure** system allow-boot-license-violations *boolean*
Tree	allow-boot-license-violations
Default	true
Introduced	16.0.R4
Platforms	All

boot-bad-exec *url*

Synopsis	CLI script file to execute following a failed boot
Context	**configure** system boot-bad-exec *url*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	boot-bad-exec
Description	This command configures the name of the CLI script file to be run following the failure of a boot configuration. **Note**: This command has no effect in model-driven mode.
String length	1 to 180
Introduced	16.0.R1
Platforms	All

boot-good-exec *url*

Synopsis	CLI script file to execute following successful boot
Context	**configure** system boot-good-exec *url*
Tree	boot-good-exec
Description	This command configures a URL for a CLI script to **exec** following the success of a boot configuration. **Related Commands** **exec** - This command executes the contents of a text file as if they were CLI commands entered at the console.
String length	1 to 180
Introduced	16.0.R1
Platforms	All

central-frequency-clock

Synopsis	Enter the **central-frequency-clock** context
Context	**configure** system central-frequency-clock
Tree	central-frequency-clock
Description	Commands in this context configure synchronous interface timing.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bits

Synopsis	Enter the **bits** context
Context	**configure** system central-frequency-clock bits
Tree	bits

ql-minimum *keyword*

Synopsis	Minimum signal QL for system timing module
Context	**configure** system central-frequency-clock ql-minimum *keyword*
Tree	ql-minimum
Description	This command configures the minimum acceptable QL value for a signal to be considered for selection by the system timing module.
Options	unused – Not used prs – SONET Primary Reference Source traceable stu – SONET Synchronous Traceability Unknown st2 – SONET Stratum 2 traceable tnc – SONET Transit Node Clock traceable st3e – SONET Stratum 3E traceable st3 – SONET Stratum 3 traceable prc – SDH Primary Reference Clock traceable ssua – SDH primary level Synchronization Supply Unit traceable ssub – SDH second Level Synchronization Supply Unit traceable sec – SDH Synchronous Equipment Clock traceable eec1 – SDH Ethernet Equipment Clock eec2 – SONET Ethernet Equipment Clock eprtc – Enhanced Primary Reference Time Clock prtc – Primary Reference Time Clock eprc – Enhanced Primary Reference Clock eeec – Enhanced Ethernet Equipment Clock
Default	unused
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ql-selection *boolean*

Synopsis	Consider QL in system and BITS output timing
Context	**configure** system central-frequency-clock ql-selection *boolean*
Tree	ql-selection
Description	When configured to **true**, the router considers the QL when selecting the system timing reference and BITS output timing reference. The QL is conveyed via the SSM or forced using the **ql-override** command.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ref-order

Synopsis	Enter the **ref-order** context
Context	**configure** system central-frequency-clock ref-order
Tree	ref-order
Description	Commands in this context specify the priority order of the synchronous equipment timing subsystem**.** If a reference source is disabled, this command defines the next reference source for the clock. If all reference sources are disabled, clocking is derived from a local oscillator. If a timing reference is linked to a source port that is operationally down, the port is no longer a qualified, valid reference.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fifth *keyword*

Synopsis	Fifth preferred timing reference source
Context	**configure** system central-frequency-clock ref-order fifth *keyword*
Tree	fifth
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

first *keyword*

Synopsis	First preferred timing reference source
Context	**configure** system central-frequency-clock ref-order first *keyword*
Tree	first
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fourth *keyword*

Synopsis	Fourth preferred timing reference source
Context	**configure** system central-frequency-clock ref-order fourth *keyword*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	fourth
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

second *keyword*

Synopsis	Second preferred timing reference source
Context	**configure** system central-frequency-clock ref-order second *keyword*
Tree	second
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sixth *keyword*

Synopsis	Sixth preferred timing reference source
Context	**configure** system central-frequency-clock ref-order sixth *keyword*
Tree	sixth
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	22.10.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se, 7750 SR-2se

third *keyword*

Synopsis	Third preferred timing reference source
Context	**configure** system central-frequency-clock ref-order third *keyword*
Tree	third
Options	ref1, ref2, bits, ptp, none, synce, gnss
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ref1

Synopsis	Enter the **ref1** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system central-frequency-clock ref1
Tree	ref1
Description	Commands in this context configure the first timing reference.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the first timing reference
Context	**configure** system central-frequency-clock ref1 admin-state *keyword*

Default	unused
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

source-port *port*

Synopsis	Source port for the first timing reference
Context	**configure** system central-frequency-clock ref1 source-port *port*
Tree	source-port
Description	This command configures the source port for timing reference **ref1**. If the port is unavailable or the link is down, the reference sources are reevaluated according to the reference order configured in the **ref-order** command. In addition to physical ports on the 7750 SR, T1 or E1 channels on a channelized OC3/OC12/STM1/STM4 CES port can be specified if they are using adaptive timing. There are platform-based restrictions on the location for the source port locations or source bits for **ref1**. See the *7450 ESS, 7750 SR, 7950 XRS, and VSR Basic System Configuration Guide* for more information.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ref2

Synopsis	Enter the **ref2** context
Context	**configure** system central-frequency-clock ref2
Tree	ref2
Description	Commands in this context configure the second timing reference.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the second timing reference

grace-tx *boolean*

Synopsis	Send Grace TLVs for soft reset graceful recovery events
Context	**configure** system efm-oam grace-tx *boolean*
Tree	grace-tx
Description	When configured to **true**, the system sends the Nokia Vendor specific Grace TLV in the information PDU after an ISSU or a soft reset. The Grace TLV informs a remote peer to ignore the negotiated interval and multiplier and instead use the new timeout interval. By default, the command is disabled at the system level and enabled at the port level. Both the system and port level must be enabled to support grace on a specific port. When configured to **true**, the EFM-OAM protocol does not enter a non-operational state when both nodes acknowledge the grace function. This feature minimizes service interruption by giving the restarting router time to become operationally and administratively up within the grace period. The peer receiving the Grace TLV must be able to parse and process the vendor-specific messaging. Do not configure grace if the Nokia Vendor Specific Grace TLV is not supported on the remote peer. When configured to **false**, the Nokia Vendor Specific Grace TLV is not sent.
Default	false
Introduced	16.0.R1
Platforms	All

eth-cfm

Synopsis	Enter the **eth-cfm** context
Context	**configure** system eth-cfm
Tree	eth-cfm
Introduced	16.0.R1

mc-lag

Synopsis	Enter the **mc-lag** context
Context	**configure** system eth-cfm redundancy mc-lag
Tree	mc-lag
Description	Commands in this context configure the MC-LAG specific ETH-CFM redundancy options.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

propagate-hold-time *(number | keyword)*

Synopsis	Delay timer value for the fault propagation
Context	**configure** system eth-cfm redundancy mc-lag propagate-hold-time *(number | keyword)*
Tree	propagate-hold-time
Description	This command configures the delay for fault propagation because of port or MC-LAG state changes. This provides the amount of time for system stabilization during a port state change that may be protected by MC-LAG.
Range	1 to 60
Units	seconds
Options	none
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

standby-mep *boolean*

Synopsis	Allow standby MC-LAG MEPs to act administratively down
Context	**configure** system eth-cfm redundancy mc-lag standby-mep *boolean*
Tree	standby-mep
Description	This command, which is system wide, configures MEPs to track the state of MC-LAG. This allows MEPs on the standby MC-LAG to act administratively down.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.

inactivity-timer *number*

Synopsis	SLR inactivity timer to maintain the stale test data
Context	**configure** system eth-cfm slm inactivity-timer *number*
Tree	inactivity-timer
Description	This command configures the time that the responder keeps a test active. If the time between packets exceeds this value within a test, the responder marks the previous test as complete. It treats any new packets from a peer with the same test ID, source MAC, and MEP-ID as a new test responding with the sequence number one.
Range	10 to 100
Units	seconds
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fan-control

Synopsis	Enter the **fan-control** context
Context	**configure** system fan-control
Tree	fan-control
Description	Commands in this context configure the speed of the router fans. **Caution**: Only use commands in this context with authorized direction from Nokia technical support.
Introduced	23.7.R1
Platforms	7750 SR-1 (FP5), 7750 SR-1se

cooling-profile *keyword*

Synopsis	Cooling profile used to determine fan speeds
Context	**configure** system fan-control cooling-profile *keyword*
Tree	cooling-profile
Description	This command configures the cooling profile used to determine the fan speed. Nokia recommends that the default setting be used unless aggressive cooling is explicitly required.
Options	default, aggressive
Default	default

urls *cflash-url*

Synopsis	Locations of compiled proto file
Context	**configure** system grpc custom-proto *named-item* urls *cflash-url*
Tree	urls
String length	1 to 200
String format	'cflash-url' must start with cf1-4, optional slot A-D, then path (e.g. cf1:/path or cf1-A:/path) 'cflash-url' must have each path segment at most 99 characters
Max. instances	3
Notes	This element is ordered by the user.
Introduced	26.3.R1
Platforms	All

delay-on-boot *number*

Synopsis	Delay for gRPC connections after system boot
Context	**configure** system grpc delay-on-boot *number*
Tree	delay-on-boot
Description	This command configures the delay timer for gRPC connections. When the timer expires, gRPC becomes operational and connections are accepted. This delay prevents automation from managing the system while it is still converging. When no delay is configured, connections are accepted after the system boots and gRPC becomes operational.

grpc-tunnel

Synopsis	Enter the **grpc-tunnel** context
Context	**configure** system grpc-tunnel
Tree	grpc-tunnel
Introduced	22.2.R1
Platforms	All

delay-on-boot *number*

Synopsis	Delay for gRPC tunnels after system boot
Context	**configure** system grpc-tunnel delay-on-boot *number*
Tree	delay-on-boot
Description	This command configures the delay timer for gRPC tunnels. When the timer expires, gRPC tunnels become operational and connections are accepted. This delay prevents the system from trying to initiate gRPC tunnels while it is still converging. When no delay is configured, gRPC tunnels are initiated after the system boots and gRPC becomes operational.
Range	1 to 3600
Units	seconds

target-type

Synopsis	Enter the **target-type** context
Context	**configure** system grpc-tunnel tunnel *named-item* handler *named-item* target-type
Tree	target-type
Introduced	22.2.R1
Platforms	All

custom-type *string*

Synopsis	Custom string for target type
Context	**configure** system grpc-tunnel tunnel *named-item* handler *named-item* target-type custom-type *string*
Tree	custom-type
Description	This command configures a custom string for the target type. This string can correspond to specific values used by the gRPC tunnel protocol, such as GNMI_GNOI or SSH. If a custom string is defined, the gRPC tunnel client must specify the string to request a session for that handler. The string must be unique within a tunnel.
String length	1 to 64
String format	'custom-type' must contain only uppercase letters, digits or underscores
Notes	The following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.
Introduced	22.2.R1
Platforms	All

grpc-server

Synopsis	Target type set to GNMI_GNOI
Context	**configure** system grpc-tunnel tunnel *named-item* handler *named-item* target-type grpc-server
Tree	grpc-server
Description	When configured, this command assigns the gRPC server as a handler for all tunnels sessions. At the gRPC tunnel protocol level, this corresponds to a value of GNMI_GNOI.
Notes	The following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.
Introduced	22.2.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

ssh-server

Synopsis	Target type is SSH
Context	**configure** system grpc-tunnel tunnel *named-item* handler *named-item* target-type ssh-server
Tree	ssh-server
Description	When configured, this command assigns the SSH server as a handler for all tunnels sessions. At the gRPC tunnel protocol level, this corresponds to a value of SSH.
Notes	The following elements are part of a choice: **custom-type**, **grpc-server**, or **ssh-server**.
Introduced	22.2.R1
Platforms	All

target-name

Synopsis	Enter the **target-name** context
Context	**configure** system grpc-tunnel tunnel *named-item* target-name

Introduced	22.2.R1
Platforms	All

custom-string *named-item-64*

Synopsis	Custom target name
Context	**configure** system grpc-tunnel tunnel *named-item* target-name custom-string *named-item-64*
Tree	custom-string
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **custom-string**, **node-name**, or **user-agent**.
Introduced	22.2.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

node-name

Synopsis	Set the node name as target name
Context	**configure** system grpc-tunnel tunnel *named-item* target-name node-name
Tree	node-name
Description	When configured, this command uses the node name as the target name. The node name is configured by the **configure system name** command.
Notes	The following elements are part of a choice: **custom-string**, **node-name**, or **user-agent**.
Introduced	22.2.R1
Platforms	All

user-agent

Synopsis	Set the user agent as the target name
Context	**configure** system grpc-tunnel tunnel *named-item* target-name user-agent
Tree	user-agent
Description	When configured, this command uses the user agent as the target name. The agent is a string consisting of *node-name*:*vendor*:*model*:*software-version*.
Notes	The following elements are part of a choice: **custom-string**, **node-name**, or **user-agent**.
Introduced	22.2.R1
Platforms	All

icmp-vse *boolean*

Synopsis	Enable vendor-specific extensions to ICMP
Context	**configure** system icmp-vse *boolean*
Tree	icmp-vse
Default	false
Introduced	16.0.R1
Platforms	All

ip

Synopsis	Enter the **ip** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system ip
Tree	ip
Description	Commands in this context configure system-wide IP router options.
Introduced	16.0.R1
Platforms	All

allow-qinq-network-interface *boolean*

Synopsis	Allow QinQ encapsulation for network interfaces
Context	**configure** system ip allow-qinq-network-interface *boolean*
Tree	allow-qinq-network-interface
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

buffer-unresolved-packets *boolean*

Synopsis	Buffer unresolved packets during ARP
Context	**configure** system ip buffer-unresolved-packets *boolean*
Tree	buffer-unresolved-packets
Description	When configured to **true**, the system buffers IPv4 and IPv6 packets waiting for the address resolution process (ARP) or neighbor discovery (ND) reply. When configured to **false**, the system discards packets during the address resolution process. The system discards IPv4 and IPv6 traffic needing a destination resolution that is buffered while waiting for a response to avoid any potential of out-of-order delivery of packets to the resolved destination. As a result, after the ARP or ND entry is populated, the system delivers only newly received packets in order.
Default	true
Introduced	24.10.R1
Platforms	All

enforce-unique-if-index *boolean*

Synopsis	Force creation of globally unique IP interface indexes
Context	**configure** system ip enforce-unique-if-index *boolean*
Tree	enforce-unique-if-index

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	16.0.R1
Platforms	All

forward-6in4 *boolean*

Synopsis	Allow forwarding of IPv6 over IPv4 to system IP address
Context	**configure** system ip forward-6in4 *boolean*
Tree	forward-6in4
Default	false
Introduced	19.10.R1
Platforms	All

forward-ip-over-gre *boolean*

Synopsis	Allow forwarding of IP over GRE to system IP address
Context	**configure** system ip forward-ip-over-gre *boolean*
Tree	forward-ip-over-gre
Default	false
Introduced	19.10.R1
Platforms	All

ipv6-eh *keyword*

Synopsis	Number of IPv6 extension headers parsed in line cards
Context	**configure** system ip ipv6-eh *keyword*
Tree	ipv6-eh
Options	max, limited
Default	max
Introduced	20.5.R1
Platforms	All

mpls

Synopsis	Enter the **mpls** context

© 2026 Nokia.

eler-enh-load-balancing *boolean*

Synopsis Use eLER load balancing based on outer MPLS label stack

Context **configure** system load-balancing eler-enh-load-balancing *boolean*

Tree eler-enh-load-balancing

Description When configured to **true**, the system acting as the eLER load-balances non-IP traffic ingressing at the network interface based on the outer MPLS label stack. The eLER load-balances the incoming traffic using one of the following options:

- the entropy label if EL/ELI is present
- the hash label (BoS) if the hash label is present in the MPLS label stack

If both the hash label and EL/ELI are present, the eLER load-balances the incoming traffic using the hash label in the MPLS label stack.

Enhanced load balancing is operational only in cards using FP4 or higher. For cards with FP3 or lower, this command is available in the CLI but has no effect when configured.

When configured to **false**, the system acting as the eLER does not load-balance based on the outer MPLS label stack.

The 7450 ESS, 7750 SR, 7950 XRS, and VSR do not support use of the entropy label and hash label at the same time. Consequently, both these labels may only be present in the same packet at the same time if the packet is received from a third-party device in the network.

Default false

Introduced 24.7.R1

Platforms All

l2tp-load-balancing *boolean*

Context	**configure** system load-balancing l4-load-balancing *boolean*
Tree	l4-load-balancing
Introduced	16.0.R1
Platforms	All

lsr-load-balancing *keyword*

Synopsis	Algorithm for system-wide LSR load balancing
Context	**configure** system load-balancing lsr-load-balancing *keyword*
Tree	lsr-load-balancing
Description	This command configures system-wide LSR load balancing. Hashing can be enabled on the label stack, IP header, or both. The hashing can be at an LSR for spraying labeled IP packets over multiple equal-cost paths, or over multiple links of a LAG group. The LSR hash routine operates on the label stack and the IP header, if a packet is IPv4. An LSR considers a packet to be IPv4 if the first nibble following the bottom of the label stack is 4. The hash on the label stack and IPv4 and IPv6 headers can be enabled or disabled at the system level or incoming network IP interface level. **lbl-ip-l4-teid** - Specifies that the hashing applies as follows for Layer 2 and Layer 3 encapsulated traffic: • If an IPv4 or IPv6 header is found immediately after the MPLS label stack, the hashing includes label stack, source and destination IP addresses, TCP/UDP port numbers, and, if present, TEID values. • If an IPv4 or IPv6 header is not found immediately after the MPLS label stack, the data plane searches for a valid Ethertype value for the IPv4 and IPv6 payload. If a valid Ethertype value is found and an IP header follows the Ethernet header, hashing includes the source and destination IP addresses, TCP/UDP port numbers, and, if present, TEID values. **eth-encap-ip** - Specifies that the hash algorithm parses down the label stack and after it reaches the bottom, the stack assumes the Ethernet II non-tagged, dot1q, or QinQ header follows. At the expected Ethertype offset location, the algorithm checks whether the value present is IPv4/IPv6 (0x0800/0x86DD). If the check passes, the hash algorithm checks the first nibble at the expected IP header location for IPv4/IPv6 (0x0100/0x0110). If the secondary check passes, the algorithm performs the hash using the IP SA/DA fields in the expected IP header. If any of the checks fail, the label-stack hash is performed.
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid, lbl-eth-ip-l4-teid, lbl-ip-or-teid
Introduced	16.0.R1

login-scripts

Synopsis	Enter the **login-scripts** context
Context	**configure** system login-control login-scripts
Tree	login-scripts
Description	Commands in this context configure CLI scripts that execute when a user (authenticated via any method including local user database, TACACS+, or RADIUS) first logs into a CLI session.
Introduced	16.0.R1
Platforms	All

global-script *string-not-all-spaces*

Synopsis	URL of the global CLI login script
Context	**configure** system login-control login-scripts global-script *string-not-all-spaces*
Tree	global-script
Description	This command specifies a common CLI script that executes when any user logs into a CLI session. This login exec script is executed when any user (authenticated by any means including local user database, TACACS+, or RADIUS) opens a CLI session. This allows a user, for example, to define a common set of CLI aliases that are made available on the router for all users. This global login exec script is executed before any user-specific login exec files that may be configured. This CLI script executes in the context of the user who opens the CLI session. Any commands in the script that the user is not authorized to execute will fail.
String length	1 to 180
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

per-user-script

Synopsis	Enter the **per-user-script** context
Context	**configure** system login-control login-scripts per-user-script
Tree	per-user-script
Description	Commands in this context allow users to define their own login scripts that can be executed each time they first login to a CLI session. The command executes the script "*file-url / username / file-name*" when the user *username* logs into a CLI session (authenticated by any means including local user database, TACACS+, or RADIUS).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

For example:

per-user user-directory "cf1:/local/users" file-name "login-script.txt"

would search for the following script when user "admin" logs in and authenticates via RADIUS:

cf1:/local/users/admin/login-script.txt

The per user login script is executed after any global script executes and before any login-exec script configured against a local user is executed. This allows users, for example, who are authenticated via TACACS+ or RADIUS to define their own login scripts.

This CLI script executes in the context of the user who opens the CLI session. Any commands in the script that the user is not authorized to execute will fail.

Introduced	16.0.R1
Platforms	All

file-name *filename*

Synopsis	File name of the per-user login script
Context	**configure** system login-control login-scripts per-user-script file-name *filename*
Tree	file-name
Description	This command specifies the name of the file (located in the **configure system login-control login-scripts per-user-script user-directory** directory) including the extension.
String length	1 to 180
String format	'filename' must not contain / or \\ (no path separators) 'filename' must not be all spaces
Introduced	16.0.R1
Platforms	All

user-directory *string-not-all-spaces*

Synopsis	Directory name of user-defined login script
Context	**configure** system login-control login-scripts per-user-script user-directory *string-not-all-spaces*
Tree	user-directory
String length	1 to 180
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

motd

Synopsis	Enter the **motd** context
Context	**configure** system login-control motd
Tree	motd
Description	Commands in this context configure the message of the day that is displayed after a successful login. (none)
Introduced	16.0.R1
Platforms	All

text *string-not-all-spaces*

Synopsis	Message of the day displayed after a succesfull login
Context	**configure** system login-control motd text *string-not-all-spaces*
Tree	text
String length	1 to 900
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **text** or **url**.
Introduced	16.0.R1
Platforms	All

url *string-not-all-spaces*

Synopsis	Location of the message of the day
Context	**configure** system login-control motd url *string-not-all-spaces*
Tree	url
String length	1 to 180
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	The following elements are part of a choice: **text** or **url**.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

pre-login-message

Synopsis	Enter the **pre-login-message** context
Context	**configure** system login-control pre-login-message
Tree	pre-login-message
Description	Commands in this context configure a message to display before logging in to the router. Only one message can be configured. If a new pre-login message is configured, the new message overwrites the previous message. The pre-login message is displayed on both active and standby CPMs.
Introduced	16.0.R1
Platforms	All

message *string-not-all-spaces*

Synopsis	Pre-login message displayed before the login prompt
Context	**configure** system login-control pre-login-message message *string-not-all-spaces*
Tree	message
Description	This command configures the pre-login message. Any printable, 7-bit ASCII characters can be used. If the string contains special characters (#, $, spaces, and so on), the entire string must be enclosed within double quotes. Some special characters can be used to format the message text. Use the newline () character to create multiline messages. A newline () character in the message moves to the beginning of the next line by sending ASCII/UTF-8 characters 0xA (LF) and 0xD (CR) to the client terminal. A carriage return (\r) character in the message sends the ASCII/UTF-8 character 0xD (CR) to the client terminal.
String length	1 to 900
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

name *boolean*

Synopsis	Display the system name after the pre-login message
Context	**configure** system login-control pre-login-message name *boolean*
Tree	name
Description	When configured to **true**, the system displays a space followed by the system name after the pre-login message before the login prompt.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the system only displays the configured pre-login message and the login prompt.

Default	false
Introduced	16.0.R1
Platforms	All

ssh

Synopsis	Enter the **ssh** context
Context	**configure** system login-control ssh
Tree	ssh
Description	Commands in this context configure the SSH command options.
Introduced	16.0.R1

classic-cli

Synopsis	Enter the **classic-cli** context
Context	**configure** system management-interface cli classic-cli
Tree	classic-cli
Description	Commands in this context configure the classic CLI management interface.
Introduced	16.0.R1
Platforms	All

allow-immediate *boolean*

Synopsis	Allow writable access in classic CLI configure branch
Context	**configure** system management-interface cli classic-cli allow-immediate *boolean*
Tree	allow-immediate
Description	When configured to **true**, this command enables write access in the classic CLI configuration branch without having to use the classic CLI **candidate edit** functionality. When configured to **false**, this command blocks write access and configuration changes in the classic CLI configuration branch, and the classic CLI configuration branch is read-only. This enforces using the classic CLI **candidate edit** functionality, including **candidate commit**, to modify the router configuration, instead of allowing immediate line-by-line configuration changes.
Default	true
Introduced	16.0.R1
Platforms	All

rollback

Synopsis	Enter the **rollback** context
Context	**configure** system management-interface cli classic-cli rollback
Tree	rollback
Description	Commands in this context control classic CLI configuration rollback functionality, such as the maximum number of rollback checkpoints the system maintains. Configuration rollback allows the operator to revert to previous router configuration states while minimizing impacts to services.
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.

minimum-available-memory *number*

Synopsis	Minimum memory requirement to run a Python interpreter
Context	**configure** system management-interface cli md-cli environment python minimum-available-memory *number*
Tree	minimum-available-memory
Range	5 to 50
Units	percent
Introduced	21.10.R1
Platforms	All

timeout *number*

Synopsis	Maximum run time before a Python application is stopped
Context	**configure** system management-interface cli md-cli environment python timeout *number*
Tree	timeout
Range	30 to 86400
Units	seconds
Default	3600
Introduced	21.10.R1
Platforms	All

time-display *keyword*

Synopsis	Time zone to display time
Context	**configure** system management-interface cli md-cli environment time-display *keyword*
Tree	time-display
Description	This command configures the time zone for a timestamp displayed in outputs, such as event logs and **show** commands for the current CLI session. In event logs, the selected time is used to control the timestamps in the CLI output of **show log log-id** and in YANG state in the /state/log/log-id branch (for logs such as session, cli, memory, SNMP, and NETCONF). Also see the **configure log log-id time-format** command.
Options	local, utc
Default	local
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

time-format *keyword*

Synopsis	Format to display the date and time
Context	**configure** system management-interface cli md-cli environment time-format *keyword*
Tree	time-format
Description	This command specifies the format of the time display in the prompt, configuration, state, and certain **show** command output in the current CLI session.
Options	iso-8601, rfc-1123, rfc-3339
Default	rfc-3339
Introduced	20.5.R1
Platforms	All

commit-history *number*

Synopsis	Number of commit history IDs to store
Context	**configure** system management-interface commit-history *number*
Tree	commit-history
Description	This command sets the number of IDs to store in the commit history. Setting the value to 0 disables the commit history.
Range	0 to 200
Default	50
Introduced	21.10.R1
Platforms	All

commit-management

Synopsis	Enter the **commit-management** context
Context	**configure** system management-interface commit-management
Tree	commit-management
Introduced	25.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

python-scripts

Synopsis	Enter the **python-scripts** context
Context	**configure** system management-interface commit-management python-scripts
Tree	python-scripts
Introduced	25.10.R1
Platforms	All

gnmi-trigger *boolean*

Synopsis	Trigger commit scripts from gNMI
Context	**configure** system management-interface commit-management python-scripts gnmi-trigger *boolean*
Tree	gnmi-trigger
Default	true
Introduced	25.10.R1
Platforms	All

md-cli-trigger *boolean*

Synopsis	Trigger commit scripts from the MD-CLI
Context	**configure** system management-interface commit-management python-scripts md-cli-trigger *boolean*
Tree	md-cli-trigger
Default	true
Introduced	25.10.R1
Platforms	All

netconf-trigger *boolean*

Synopsis	Trigger commit scripts from NETCONF
Context	**configure** system management-interface commit-management python-scripts netconf-trigger *boolean*
Tree	netconf-trigger
Default	true
Introduced	25.10.R1

Context	**configure** system management-interface commit-management python-scripts post-commit-python-script *reference*
Tree	post-commit-python-script
Reference	**configure** python python-script *named-item*
Introduced	25.10.R1
Platforms	All

pre-commit-python-script *reference*

Synopsis	Python script to use for the pre-commit script
Context	**configure** system management-interface commit-management python-scripts pre-commit-python-script *reference*
Tree	pre-commit-python-script
Reference	**configure** python python-script *named-item*
Introduced	25.10.R1
Platforms	All

configuration-mode *keyword*

Synopsis	Management interfaces allowed to edit the configuration
Context	**configure** system management-interface configuration-mode *keyword*
Tree	configuration-mode
Description	This command controls which of the classic or model-driven management interfaces can modify the configuration of the router. Any management interface can be used in any configuration mode (to gather state information or perform operations, for example), but only specific management interfaces (CLI, NETCONF, and so on) are allowed to edit the configuration of the router in different modes. For example, only classic CLI and SNMP can be used to edit the configuration when in classic mode.
Options	classic, model-driven, mixed
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

configuration-save

Synopsis	Enter the **configuration-save** context
Context	**configure** system management-interface configuration-save
Tree	configuration-save
Description	Commands in this context configure the attributes for saved configuration files.
Introduced	16.0.R1
Platforms	All

configuration-backups *number*

Synopsis	Maximum number of configuration versions maintained
Context	**configure** system management-interface configuration-save configuration-backups *number*
Tree	configuration-backups
Description	This command configures the maximum number of saved configuration file versions the router maintains. When the configuration is saved, configuration file names are appended with a numeric extension. Each subsequent configuration save creates a new configuration file version with an incremented numeric extension until the maximum count is reached, after which the next configuration save overwrites the oldest file version. Each persistent index file is updated at the same time as the associated configuration file. The system synchronizes the active and standby CPM for all configurations and their associated persistent index files.
Range	1 to 200
Default	50
Introduced	16.0.R1
Platforms	All

incremental-saves *boolean*

Synopsis	Use incremental saved configuration files
Context	**configure** system management-interface configuration-save incremental-saves *boolean*
Tree	incremental-saves
Description	When configured to **true**, the system saves each commit to the **configure** configuration region in a separate incremental saved configuration file, which allows for faster commits, instead of saving a complete saved configuration file each time.

capabilities

Synopsis	Enter the **capabilities** context
Context	**configure** system management-interface netconf capabilities
Tree	capabilities
Description	Commands in this context configure explicit capabilities for the NETCONF server.
Introduced	16.0.R1
Platforms	All

candidate *boolean*

Synopsis	Allow the NETCONF server to access candidate datastore
Context	**configure** system management-interface netconf capabilities candidate *boolean*
Tree	candidate
Description	When configured to **true**, this command allows the SR OS NETCONF server to access the candidate configuration datastore. Configuring this command to **true** also enables using **commit** and **discard-changes**. When **configure system management-interface configuration-mode** is set to **classic**, the candidate capability is disabled, even if this command is configured to **true**. When configured to **false**, this command disables the SR OS NETCONF server from accessing the candidate datastore. If the candidate is disabled, requests that reference the candidate datastore return an error, and when a NETCONF client establishes a new session, the candidate capability is not advertised in the SR OS NETCONF Hello message.
Default	true
Introduced	16.0.R1
Platforms	All

listen

Synopsis	Enter the **listen** context
Context	**configure** system management-interface netconf listen

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	listen
Introduced	24.3.R1

admin-state *keyword*

Synopsis	Administrative state of NETCONF server in listen mode
Context	**configure** system management-interface netconf listen admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	24.3.R1
Platforms	All

delay-on-boot *number*

Synopsis	Delay before NETCONF server is operational after boot
Context	**configure** system management-interface netconf listen delay-on-boot *number*
Tree	delay-on-boot
Description	This command configures the delay timer for NETCONF connections. When the timer expires, NETCONF becomes operational and connections are accepted. This delay prevents automation from managing the system while it is still converging. When no delay is configured, connections are accepted after the system boots and NETCONF becomes operational.
Range	1 to 3600
Units	seconds
Introduced	24.3.R1
Platforms	All

idle-timeout *number*

Synopsis	NETCONF idle timeout for sessions
Context	**configure** system management-interface netconf listen idle-timeout *number*
Tree	idle-timeout
Description	This command configures the idle timeout for sessions. If no messages are received during the configured idle timeout period, the session is terminated.

Range	1 to 10080
Units	minutes
Introduced	26.3.R1
Platforms	All

port *number*

Synopsis	Port on which NETCONF server listens for connections
Context	**configure** system management-interface netconf listen port *number*
Tree	port
Description	This command specifies the port on which the SR OS NETCONF server listens for new connections. One port can be configured for NETCONF management. The configured port applies to both non-VPRN and VPRN management. New NETCONF connections are able to use the configured port. For NETCONF connections not using VPRN management, active NETCONF connections are not disconnected if the connection port changes. For NETCONF connections are not disconnected if the connection port changes. For NETCONF connections using VPRN management, active NETCONF connections are disconnected if the connection port changes.
Range	22 | 830 | 1024 to 49151
Introduced	24.3.R1
Platforms	All

tls-server-profile *reference*

Context	**configure** system management-interface netconf tls-client-identity default-client
Tree	default-client
Description	Commands in this context configure the default NETCONF client identity used when the client fingerprint does not match any entry in the database.
Introduced	26.7.R1
Platforms	All

user-name *reference*

Synopsis	Default username to use when no fingerprint matches
Context	**configure** system management-interface netconf tls-client-identity default-client user-name *reference*
Tree	user-name
Reference	**configure** system security user-params local-user user *named-item*
Introduced	26.7.R1
Platforms	All

operations

Synopsis	Enter the **operations** context
Context	**configure** system management-interface operations
Tree	operations
Description	Commands in this context configure parameters associated with operational commands in model-driven interfaces.
Introduced	21.5.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

global-timeouts

Synopsis	Enter the **global-timeouts** context
Context	**configure** system management-interface operations global-timeouts
Tree	global-timeouts
Description	Commands in this context configure system timeout parameters for operational commands. Timeout parameters provide default system-level control for various types of operational commands in model-driven interfaces. The timeout values are used when specific execution and retention timeouts are not requested for a specific operation.
Introduced	21.5.R1
Platforms	All

asynchronous-execution *(number | keyword)*

Synopsis	Timeout for asynchronous operation execution
Context	**configure** system management-interface operations global-timeouts asynchronous-execution *(number | keyword)*
Tree	asynchronous-execution
Description	This command configures the period of time that operations launched as “asynchronous” are allowed to execute before being automatically stopped by the SR OS. An asynchronous operation is not deleted from the system when it is stopped. See the **asynchronous-retention** command. If a specific execution timeout is not included in the request for a particular asynchronous operation, this system-level timeout applies. **Note**: This execution timeout is part of the general global operations infrastructure and is separate and independent from any operation-specific timeouts (for example, the **ping** operation also has its own timeout parameter).
Range	1 to 604800
Units	seconds
Options	never
Default	3600
Introduced	21.5.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

asynchronous-retention *(number | keyword)*

Synopsis	Timeout for asynchronous operation data retention
Context	**configure** system management-interface operations global-timeouts asynchronous-retention *(number | keyword)*
Tree	asynchronous-retention
Description	This command configures the period of time that data related to operations launched as “asynchronous” is retained in the system. After the retention timeout expires, all information related to the operation is deleted, including any status information and result data. If a specific retention timeout is not included in the request for a particular asynchronous operation, this system-level timeout applies.
Range	1 to 604800
Units	seconds
Options	never
Default	86400
Introduced	21.5.R1
Platforms	All

synchronous-execution *(number | keyword)*

Synopsis	Timeout for synchronous operation execution
Context	**configure** system management-interface operations global-timeouts synchronous-execution *(number | keyword)*
Tree	synchronous-execution
Description	This command configures the period of time that operations launched as “'synchronous” (the default method for all operations) are allowed to execute before they are automatically stopped, and their associated data is deleted. If a specific execution timeout is not included in the request for a particular synchronous operation, this system-level timeout applies. **Note**: This execution timeout is part of the general global operations infrastructure and is separate and independent from any operation-specific timeouts (for example, the **ping** operation also has its own timeout parameter). **Caution**: If this command is set with a specific time value, MD-CLI operations are subject to the timeout and are interrupted if they execute longer than the time value. This situation can arise because the timeout also applies to operations requested in the MD-CLI interface (for example, **ping**, **file dir**, and so on).
Range	1 to 604800
Units	seconds

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	never
Default	never
Introduced	21.5.R1
Platforms	All

schema-path *url*

Synopsis	Schema path URL
Context	**configure** system management-interface schema-path *url*
Tree	schema-path
Description	This command specifies the schema path where the SR OS YANG modules can be placed by the user before using a <get-schema> request. Nokia recommends that the URL string not exceed 135 characters for the <get-schema> request to work correctly with all schema files. If this command is not configured, the software upgrade process manages the YANG schema files to ensure the schema files are synchronized with the software image on both the primary and standby CPM.
String length	1 to 180
Introduced	16.0.R4
Platforms	All

snmp

Synopsis	Enter the **snmp** context
Context	**configure** system management-interface snmp
Tree	snmp
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the SNMP agent
Context	**configure** system management-interface snmp admin-state *keyword*
Tree	admin-state
Description	This command administratively enables or disables SNMP agent operations. Disabling SNMP does not prevent the agent from sending SNMP notifications to configured SNMP trap destinations.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

In classic and mixed configuration mode, the agent is administratively disabled in the event of a reboot when the processing of the configuration file fails to complete or when an SNMP persistent index file fails while the **bof system persistent-indices** command is set to **true**. This prevents an SNMP-based management system from accessing and possibly synchronizing with a partially booted or incomplete network element. This auto-disable behavior is not applicable to model-driven configuration mode.

Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

engine-id *engine-id-as-string*

Synopsis	SNMP engine ID that identifies the SNMPv3 node
Context	**configure** system management-interface snmp engine-id *engine-id-as-string*
Tree	engine-id
Description	This command sets the SNMP engine ID that uniquely identifies the SNMPv3 node. If unconfigured, the system uses an engine ID based on the information from the system backplane. If the SNMP engine ID is changed, the current configuration must be saved and a reboot must be executed. Otherwise, the previously configured SNMP communities and logger trap-target notify communities will not be valid for the new engine ID. **Note:** Changing the SNMP engine ID invalidates all SNMPv3 MD5 and SHA security digest keys, which may render the node unmanageable. When replacing a chassis, configure the new router to use the same engine ID as the previous router. This preserves SNMPv3 security keys and allows management stations to use their existing authentication keys for the new router. Ensure that the engine ID of each router is unique. A management domain can only maintain one instance of a specific engine ID.
String length	10 to 64
String format	'engine-id-as-string' must be hexadecimal digits only (length 10..64)
Introduced	16.0.R1
Platforms	All

general-port *number*

Synopsis	Port number used to send general SNMP messages
Context	**configure** system management-interface snmp general-port *number*
Tree	general-port

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the port number used to receive SNMP request messages and send replies. For the port used for SNMP notifications, configure the **configure log snmp-trap-group trap-target port** command.
Range	0 | 1 to 65535
Default	161
Introduced	16.0.R1
Platforms	All

max-bulk-duration *number*

Synopsis	Maximum process duration before responses are returned
Context	**configure** system management-interface snmp max-bulk-duration *number*
Tree	max-bulk-duration
Description	This command sets the maximum duration to process an SNMP request before bulk responses are returned to avoid a timeout on the management system when a lot of information is returned in the response.
Range	100 to 5000
Units	milliseconds
Introduced	23.3.R1
Platforms	All

packet-size *number*

Synopsis	Maximum SNMP packet size generated by the node
Context	**configure** system management-interface snmp packet-size *number*
Tree	packet-size
Range	484 to 9216
Default	1500
Introduced	16.0.R1
Platforms	All

streaming

Synopsis	Enter the **streaming** context
Context	**configure** system management-interface snmp streaming

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	streaming
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of SNMP streaming
Context	**configure** system management-interface snmp streaming admin-state *keyword*
Tree	admin-state
Description	This command enables or disables the proprietary SNMP request and response bundling as well as the TCP-based transport mechanism for optimizing network management of the router nodes. In higher latency networks, synchronizing router MIBs from network management using streaming takes less time than synchronizing using classic SNMP UDP requests. Streaming operates on TCP port 1491 and runs over IPv4 or IPv6.
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

transport *keyword*

Synopsis	Transport protocol used by the SNMP agent
Context	**configure** system management-interface snmp transport *keyword*
Tree	transport
Options	udp – UDP only tcp – TCP only both – TCP and UDP
Default	udp
Introduced	24.10.R1
Platforms	All

yang-modules

Synopsis	Enter the **yang-modules** context
Context	**configure** system management-interface yang-modules
Tree	yang-modules

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context determine the system support of the Nokia YANG models. The settings affect the data sent in a NETCONF <hello>, data populated in the RFC 6022 /netconf-state/schemas list, data returned in a <get-schema> request, and data populated in the RFC 8525 /yang-library. See "NETCONF monitoring" and "YANG library" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
Introduced	16.0.R1
Platforms	All

nmda

Synopsis	Enter the **nmda** context
Context	**configure** system management-interface yang-modules nmda
Tree	nmda
Description	Commands in this context configure the attributes for the Network Management Datastores Architecture (NMDA).
Introduced	21.7.R1
Platforms	All

nmda-support *boolean*

Synopsis	Advertise NMDA support over NETCONF
Context	**configure** system management-interface yang-modules nmda nmda-support *boolean*
Tree	nmda-support
Description	When configured to **true**, this command enables the advertisement of NMDA support over NETCONF through the use of YANG library 1.1. When configured to **false**, this command disables NMDA advertisement over NETCONF and YANG library 1.0 is used.
Default	false
Introduced	21.7.R1
Platforms	All

nokia-combined-modules *boolean*

Synopsis	Support access to combined Nokia YANG models
Context	**configure** system management-interface yang-modules nokia-combined-modules *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	nokia-combined-modules
Description	When configured to **true**, the system supports the combined Nokia YANG files for both configuration and state data in the NETCONF server. When the system is operating in classic configuration mode, attempts to access (read or write) the configuration using the Nokia configuration modules or namespace via NETCONF result in errors, even if this command is set to **true**. When configured to **false**, access to the combined Nokia YANG files is not supported. This command and the **nokia-submodules** command cannot both be set to **true** at the same time.
Default	true
Introduced	16.0.R4
Platforms	All

nokia-submodules *boolean*

Synopsis	Support submodule-based packaging of Nokia YANG models
Context	**configure** system management-interface yang-modules nokia-submodules *boolean*
Tree	nokia-submodules
Description	When configured to **true**, the system supports the alternative submodule-based packaging of the Nokia YANG files for both configuration and state data in the NETCONF server. When the system is operating in classic configuration mode, attempts to access (read or write) the configuration using the Nokia configuration modules or namespace via NETCONF result in errors, even if this command is set to **true**. When configured to **false**, access to the submodule-based packaging of the Nokia YANG files is not supported. This command and the **nokia-combined-module**s command cannot both be set to **true** at the same time.
Default	false
Introduced	21.2.R1
Platforms	All

openconfig-modules *boolean*

Synopsis	Support access to OpenConfig YANG models
Context	**configure** system management-interface yang-modules openconfig-modules *boolean*
Tree	openconfig-modules

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command allows access to OpenConfig YANG models in all model-driven interfaces.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

shared-model-management *boolean*

Synopsis	Allow multiple models to configure the same elements
Context	**configure** system management-interface yang-modules shared-model-management *boolean*
Tree	shared-model-management
Description	When configured to **true**, the router allows Nokia and third-party models to configure the same elements in model-driven interfaces. When configured to **false**, only one model can be used to configure the same element.
Default	true
Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

name *named-item-64*

Synopsis	Administrative name assigned to the system
Context	**configure** system name *named-item-64*
Tree	name
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

network-element-discovery

ospf-dynamic-hostnames *boolean*

Synopsis	Process received OSPF dynamic hostname information
Context	**configure** system ospf-dynamic-hostnames *boolean*
Tree	ospf-dynamic-hostnames
Description	When configured to **true**, OSPF dynamic hostnames are enabled. The router receiving the new dynamic hostname within the OSPF Router Information (RI) LSA is instructed to process the received dynamic hostname information. When configured to **false**, dynamic hostname information is not processed.
Default	false
Introduced	20.2.R1
Platforms	All

persistence

Synopsis	Enter the **persistence** context
Context	**configure** system persistence
Tree	persistence
Description	Commands in this context configure persistence on the system. The persistence feature enables the system to retain state information learned through DHCP snooping across reboots. This information includes data such as the IP address and MAC binding information, lease-length information, and ingress SAP information (required for VPLS snooping to identify the ingress interface). If persistence is enabled when there are no DHCP relay or snooping commands enabled, the system creates an empty file.
Introduced	16.0.R1
Platforms	All

alternate-profile [name] *named-item-64*

Synopsis	Enter the **alternate-profile** list instance
Context	**configure** system ptp alternate-profile *named-item-64*
Tree	alternate-profile
Description	Commands in this context create an alternate profile configuration for use in PTP messaging. The alternate profile can be used at the edge of a network to provide PTP time or frequency distribution outward to external PTP clocks. The alternate profile cannot be deleted if it is configured as the profile under a PTP port.
Max. instances	6
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**name**] *named-item-64*

Synopsis	Alternate profile name
Context	**configure** system ptp alternate-profile *named-item-64*
Tree	alternate-profile
Description	This command configures an alternate profile name. The strings "Primary" and "primary" cannot be used for the alternate-profile name.
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the alternate PTP profile

domain *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PTP domain
Context	**configure** system ptp domain *number*
Tree	domain
Description	This command configures the PTP domain. The default and valid range of the domain depend on the configured PTP profile. • IEEE 1588-2008 - domain range of 0 to 255 (default 0) • G.8265.1 - domain range of 0 to 255 (default 4) • G.8275.1 - domain range of 24 to 43 (default 24) • G.8275.2 - domain range of 0 to 255 (default 44) • IEC/IEEE 61850-9-3 - domain range of 0 to 255 (default 0) • C37.238 - domain range of 0 to 255 (default 254)

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The **iec-61850-9-3** and **c37dot238-2017** options are not supported on the 7750 SR, 7450 ESS, and 7950 XRS.

Range	0 to 255
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

local-priority *number*

Synopsis	PTP clock local priority
Context	**configure** system ptp local-priority *number*
Tree	local-priority
Description	This command configures the local priority used to choose between PTP time Transmitters in the best timeTransmitter clock algorithm (BTCA). This setting applies when the PTP profile is either configured for G.8275.1 or G.8275.2 and is ignored for any other profile. For G.8275.1 or G.8275.2, this command configures the localPriority command option associated with the local clock (**ptp** context). See the ITU-T G.8275.1 or G.8275.2 standard for detailed information.
Range	1 to 255
Default	128
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

log-announce-interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Announce message interval in log form
Context	**configure** system ptp log-announce-interval *number*
Tree	log-announce-interval
Description	This command configures the Announce message interval used for both unicast and multicast messages. For unicast messages, the Announce message interval is requested during unicast negotiation to any peer. This controls the Announce message rate sent from remote peers to the local node. It does not affect the announce message rate that may be sent from the local node to remote peers. Remote peers may request an Announce message rate within the acceptable grant range.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

For multicast messages used on PTP Ethernet ports, this command specifies the message interval used for Announce messages transmitted by the local node.

This value also defines the interval between executions of the BTCA within the node.

To minimize BTCA-driven reconfigurations, IEEE recommends that the Announce interval should be consistent across the entire 1588 network.

Range	-3 to 4
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-steps-removed *number*

Synopsis	Threshold for steps removed in Announce messages
Context	**configure** system ptp max-steps-removed *number*
Tree	max-steps-removed
Description	This command configures a maximum limit for the stepsRemoved field in PTP Announce messages. When a user configures a value for the maximum steps removed, the PTP clock disqualifies and drops any incoming Announce messages where the stepsRemoved field in the PTP header is equal to or greater than the configured maximum steps removed value. This command effectively limits the maximum number of hops a potential parent clock can be from the GM clock. This command is crucial for maintaining the integrity and performance of the PTP synchronized network by preventing clocks that are too far removed from the GM from being selected as parent clocks.
Range	1 to 255
Default	255
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

network-type *keyword*

Synopsis	PTP network type
Context	**configure** system ptp network-type *keyword*
Tree	network-type
Description	This command configures the codeset to be used for the encoding of QL values into PTP clockClass values and vice versa when the profile is configured for G.8265.1 or G.8275.2. This setting only applies to the range of values observed in the clockClass values transmitted out of the node in Announce messages. The router supports the reception of any valid value in Table 1/G.8265.1 and Table2/G.8275.2.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	sonet, sdh
Default	sdh
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port [port-id] *reference*

Synopsis	Enter the **port** list instance
Context	**configure** system ptp port *reference*
Tree	port
Description	Commands in this context configure PTP over Ethernet on the physical port. The PTP process transmits and receives PTP messages through the port using Ethernet encapsulation (as opposed to UDP/IPv4 encapsulation). Frames are transmitted with no VLAN tags, even if the port is configured for dot1q or qinq modes for encap-type. The received frames from the external PTP clock must also be untagged. Two reserved multicast addresses are allocated for PTP messages (see Annex F IEEE Std 1588-2008). Either address can be configured for the PTP messages sent through the port. A PTP port cannot be created if the PTP profile is configured for G.8265.1. If the port supports 1588 port-based timestamping, Synchronous Ethernet must be enabled on the MDA when PTP over Ethernet is enabled. De-provisioning of the card or MDA containing the specified port is not permitted while the port is configured within PTP. Changing the encapsulation or the port type of the Ethernet port is not permitted when PTP Ethernet Multicast operation is configured on the port. To allocate an Ethernet satellite client port as a PTP port, the Ethernet satellite must first be enabled for the transparent clock function. For more information, see the **configure satellite ethernet-satellite ptp-tc** command. The SyncE/1588 ports of the CPM and CCMs can be specified as PTP ports. These use the ‘A/3’ and ‘B/3’ designation and both must be specified as two PTP ports if both are used. The active CPM sends and receives messages on both ports if they are specified and enabled.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**port-id**] *reference*

Synopsis	Ethernet PTP port ID
Context	**configure** system ptp port *reference*

© 2026 Nokia.

Tree	port
Reference	**configure** port *port*
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *mac-address*

Synopsis	Destination MAC address of the transmitted PTP messages
Context	**configure** system ptp port *reference* address *mac-address*
Tree	address
Description	This command specifies the destination MAC address of the transmitted PTP messages. IEEE Std 1588-2008 Annex F defines two reserved addresses for 1588 messages, which include: • **01-1B-19-00-00-00** — all except the peer delay mechanism messages • **01-80-C2-00-00-0E** — peer delay mechanism messages Both addresses are supported for reception, independent of the address configured by this command.
Default	01:1B:19:00:00:00
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the PTP port
Context	**configure** system ptp port *reference* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alternate-profile *reference*

Synopsis	Alternate profile for the PTP port
Context	**configure** system ptp port *reference* alternate-profile *reference*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	alternate-profile
Description	This command creates the alternate profile that is used in communications with the port or peer. If no alternate profile is specified, the primary profile is used.
Reference	**configure** system ptp alternate-profile *named-item-64*
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delay-resp-receipt-timeout *number*

Synopsis	Number of Delay_Resp intervals before PTSF-LOTM
Context	**configure** system ptp port *reference* delay-resp-receipt-timeout *number*
Tree	delay-resp-receipt-timeout
Description	This command configures the number of Delay_Resp message intervals that can pass without receiving a message from a neighbor before the router declares the PTSF-LOTM condition for that neighbor. A neighbor in this condition is excluded from the BTCA. The condition clears when Delay_Resp message reception resumes. This command applies only to PTP profiles that support the PTSF-LOTM condition.
Range	3 to 65535
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

local-priority *number*

Synopsis	PTP port local priority
Context	**configure** system ptp port *reference* local-priority *number*
Tree	local-priority
Description	This command configures the local priority used to choose between PTP time Transmitters in the best timeTransmitter clock algorithm (BTCA). This setting applies when the PTP profile is either configured for G.8275.1 or G.8275.2 and is ignored for any other profile. For G.8275.1 or G.8275.2, this command configures the localPriority parameter associated with the Announce messages received from the external clocks (**ptp port** context). See G.8275.1 or G.8275.2 for detailed information.
Range	1 to 255
Default	128
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

log-delay-interval *number*

Synopsis	Minimum interval for Delay_Req messages in log form
Context	**configure** system ptp port *reference* log-delay-interval *number*
Tree	log-delay-interval
Description	This command configures the minimum interval used for multicast Delay_Req messages for the port. For ports in a slave state, the interval is used, unless the parent port indicates a longer interval. For a port in master state, the interval is advertised to external slave ports as the minimum acceptable interval for Delay_Req messages from the slave ports. The router supports the 1588 standard requirement for a port in slave state to check the logMessageInterval field of received multicast Delay_Resp messages. If the value of the logMessageInterval field of the messages is greater than the value configured locally for the generation of Delay_Req messages, the slave must use the longer interval for the generation of Delay_Req messages. The interval value is specified as the logarithm to the base 2.
Range	-6 to 0
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

log-sync-interval *number*

Synopsis	Interval for transmission of Sync messages in log form
Context	**configure** system ptp port *reference* log-sync-interval *number*
Tree	log-sync-interval
Description	This command configures the interval used for Sync messages transmitted by the local node when the port is in master state. The interval value is specified as the logarithm to the base 2.
Range	-6 to 0
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

master-only *boolean*

Synopsis	Restrict the local port to master state
Context	**configure** system ptp port *reference* master-only *boolean*
Tree	master-only

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, the local port is restricted to master state only, ensuring that the system does not obtain synchronization from attached external devices. This command is supported only when the PTP profile is set for G.8275.1 or G.8275.2.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

monitor-receiver *boolean*

Synopsis	Enable the PTP port as a monitor-receiver
Context	**configure** system ptp port *reference* monitor-receiver *boolean*
Tree	monitor-receiver
Description	When configured to **true**, the router enables the PTP port as a monitorReceiver for PTP. When not in TimeReceiver mode, the PTP port runs a time-recovery engine for PTP monitoring. This object is supported only when the PTP profile is set to G.8275.1 or G.8275.2. When configured to **false**, monitoring is disabled.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

monitor-sender *boolean*

Synopsis	Enable the PTP port as a monitor-sender
Context	**configure** system ptp port *reference* monitor-sender *boolean*
Tree	monitor-sender
Description	When configured to **true**, the router enables the PTP port as a monitorSender for PTP. When not in TimeTransmitter mode, the PTP port sends Announce, Sync, and Delay_Resp messages with the alternateMasterFlag set to TRUE for PTP monitoring at the remote clock. This object is supported only when the PTP profile is set to G.8275.1 or G.8275.2. When configured to **false**, monitoring is disabled.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

not-master *boolean*

Synopsis	Block PTP port from entering the timeTransmitter state
Context	**configure** system ptp port *reference* not-master *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	not-master
Description	When configured to **true**, the router blocks the port from entering the timeTransmitter state.
Default	false
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sync-receipt-timeout *number*

Synopsis	Number of Sync intervals before PTSF-LOTM
Context	**configure** system ptp port *reference* sync-receipt-timeout *number*
Tree	sync-receipt-timeout
Description	This command configures the number of Sync message intervals, including the Follow_Up messages of a two-step clock, that can pass without receiving a message from a neighbor before the router declares the PTSF-LOTM condition for that neighbor. A neighbor in this condition is excluded from the BTCA. The condition clears when Sync message reception resumes. This command applies only to PTP profiles that support the PTSF-LOTM condition.
Range	3 to 65535
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority1 *number*

Synopsis	Priority1 of the local clock
Context	**configure** system ptp priority1 *number*
Tree	priority1
Description	This command configures the priority1 parameter of the local clock. The setting is used when the profile is configured for IEEE 1588-2008. This value is used by the Best Master Clock Algorithm to determine which clock should provide timing for the network and is advertised in Announce messages.
Range	0 to 255
Default	128
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PTP profile
Context	**configure** system ptp profile *keyword*
Tree	profile
Description	This command configures the profile to be used for the internal PTP clock. It defines the Best timeTransmitter Clock Algorithm (BTCA) behavior. Profile changes may affect the settings of other configuration elements, such as the clock type and default settings for the delay interval, announce interval, and the Sync interval. The following clock types are supported for the indicated profiles: • G.8265.1: slave only, master only • IEEE 1588 2008: slave only, master only, boundary • G.8275.1: slave only, boundary, master only (master only, only if the platform includes an embedded GNSS receiver) • G.8275.2: slave only, boundary, master only (master only, only if the platform includes an embedded GNSS receiver)

- IEC/IEEE 61850-9-3: slave only, master only, boundary
- C37.238: slave only, master only, boundary

The **iec-61850-9-3-2016** and **c37dot238-2017** options are not supported on the 7750 SR, 7450 ESS, and 7950 XRS.

Options
g8265dot1-2010 – ITU-T G.8265.1 specification
ieee1588-2008 – 2008 version of IEEE 1588 standard
g8275dot1-2014 – 2014 version of ITU-T G.8275.1 specification
g8275dot2-2016 – 2016 version of ITU-T G.8275.2 specification
iec-61850-9-3-2016 – 2016 version of IEC/IEEE 61850-9-3 standard
c37dot238-2017 – 2017 version of C37.238 specification

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ptsf

Synopsis Enter the **ptsf** context

Context **configure** system ptp ptsf

Tree ptsf

Description Commands in this context configure the attributes of Packet Timing Signal Fail (PTSF).

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

monitor-ptsf-unusable

Synopsis Enter the **monitor-ptsf-unusable** context

Context **configure** system ptp ptsf monitor-ptsf-unusable

Tree monitor-ptsf-unusable

Description Commands in this context configure monitoring of neighbor clocks for the PTSF-unusable state (condition) when the profile is set to g8275dot1-2014.

When administratively enabled, the local clock monitors the noise level of PTP event messages between external neighbor PTP ports and the local clock. If it detects a high variation in the network path between the external neighbor port and the local port, it considers the neighbor port unusable. Announce messages from the neighbor are discarded and excluded from the BTCA and the port cannot be selected as the parent clock. The unusable condition must be manually cleared.

When administratively disabled, the monitor PTSF function of the PTP clock clears PTSF-unusable states from all neighbor PTP ports. If no PTP messages are received from a neighbor for 15 minutes, the neighbor information is purged and the PTSF-unusable state is cleared.

Introduced 21.7.R1

delay-resp-receipt-timeout *number*

Synopsis	Number of Delay_Resp intervals before PTSF-LOTM
Context	**configure** system ptp router *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)* delay-resp-receipt-timeout *number*
Tree	delay-resp-receipt-timeout
Description	This command configures the number of Delay_Resp message intervals that can pass without receiving a message from this peer before the router declares the PTSF-LOTM condition for the peer. A peer in this condition is excluded from the BTCA. The condition clears when Delay_Resp message reception resumes. This command applies only to PTP profiles that support the PTSF-LOTM condition.
Range	3 to 65535
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

local-priority *number*

Synopsis	PTP peer local priority
Context	**configure** system ptp router *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)* local-priority *number*
Tree	local-priority
Description	This command configures the local priority for the peer, which is used to choose between PTP timeTransmitters in the best timeTransmitter clock algorithm (BTCA). This setting applies when the PTP profile is configured for G.8265.1, G.8275.1, or G.8275.2 and is ignored for any other profile. For G.8265.1, this command configures the priority used to choose between time Transmitter clocks with the same quality (see G.8265.1 for more details). For G.8275.1 or G.8275.2, this command configures the localPriority parameter associated with the Announce messages received from the external clocks (**ptp router peer** context). See G.8275.1 or G.8275.2 for detailed information.
Range	1 to 255
Default	128
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

log-sync-interval *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PTP peer interval for Sync messages in log form
Context	**configure** system ptp router *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)* log-sync-interval *number*
Tree	log-sync-interval
Description	This command configures the message interval used for Sync and Delay_Resp messages that are requested during unicast negotiation to the peer. The setting controls messages sent from remote peers to the local node but the packet rate from the local node to remote peers is not affected. Remote peers may request a packet rate within the acceptable range. The interval value is specified as the logarithm to the base 2.
Range	-6 to 0
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

monitor-receiver *boolean*

Synopsis	Enable the PTP peer as a monitor-receiver
Context	**configure** system ptp router *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)* monitor-receiver *boolean*
Tree	monitor-receiver
Description	When configured to **true**, the router enables the PTP peer as a monitorReceiver for PTP. When not in TimeReceiver mode, the PTP port runs a time-recovery engine for PTP monitoring. This object is only supported when the PTP profile is set to G.8275.1 or G.8275.2. When configured to **false**, monitoring is disabled.
Introduced	24.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

not-master *boolean*

Synopsis	Block PTP port from entering the timeTransmitter state
Context	**configure** system ptp router *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)* not-master *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	not-master
Description	When configured to **true**, the router blocks the port associated with the peer from entering the timeTransmitter state.
Default	false
Introduced	25.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sync-receipt-timeout *number*

Synopsis	Number of Sync intervals before PTSF-LOTM
Context	**configure** system ptp router *string* peer *(ipv4-address-no-zone | ipv6-address-no-zone)* sync-receipt-timeout *number*
Tree	sync-receipt-timeout
Description	This command configures the number of Sync message intervals, including the Follow_Up messages of a two-step clock, that can pass without receiving a message from this peer before the router declares the PTSF-LOTM condition for the peer. A peer in this condition is excluded from the BTCA. The condition clears when Sync message reception resumes. This command applies only to PTP profiles that support the PTSF-LOTM condition.
Range	3 to 65535
Introduced	26.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

peer-limit *number*

Synopsis	Number of discovered peers allowed for routing instance
Context	**configure** system ptp router *string* peer-limit *number*
Tree	peer-limit
Description	This command specifies the maximum number of discovered peers permitted within the routing instance. This ensures that a routing instance does not consume all the possible discovered peers and prevents the routing instance from blocking discovered peers in other routing instances. The sum of all peer limit values for all routing instances cannot exceed the maximum number of discovered peers supported by the system.
Range	0 to 1600
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

tx-path-trace *boolean*

Synopsis	Include PATH TRACE TLV in Announce messages
Context	**configure** system ptp tx-path-trace *boolean*
Tree	tx-path-trace
Default	false
Introduced	25.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-while-sync-uncertain *boolean*

Synopsis	Send Announce messages while clock is unsynchronized
Context	**configure** system ptp tx-while-sync-uncertain *boolean*
Tree	tx-while-sync-uncertain
Description	When configured to **true**, the local PTP clock transmits Announce messages to downstream clocks to indicate it has not yet stabilized on the recovered synchronization source (upstream clocks or GM clock). While the PTP clock is unsynchronized, the Sync Uncertain state is true. When configured to **false**, the local PTP clock does not send Announce messages to downstream clocks to indicate it is not synchronized to a valid timing source. If the Sync Uncertain state of the clock is true while this command is configured to **false**, unicast negotiation grant requests are not granted and current grants are canceled.
Default	true
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

within-holdover-spec-timer *number*

Synopsis	Duration for local clock to specify the holdover state
Context	**configure** system ptp within-holdover-spec-timer *number*
Tree	within-holdover-spec-timer
Description	This command configures the duration for which the local clock sets its clock class to a value that indicates it is in holdover, within specification, following the loss of the primary reference time source.
Range	0 to 3600
Units	seconds
Default	600

© 2026 Nokia.

combined-max-sessions *number*

Synopsis	Maximum number of concurrent SSH and Telnet sessions
Context	**configure** system security aaa local-profiles profile *named-item* combined-max-sessions *number*
Tree	combined-max-sessions
Range	0 to 50
Introduced	16.0.R1
Platforms	All

default-action *keyword*

Synopsis	Action for non-matching entry
Context	**configure** system security aaa local-profiles profile *named-item* default-action *keyword*
Tree	default-action
Description	This command specifies the default action to be applied when no match conditions are met in the list of **profile entry match** commands. It does not apply to other parts of the profile such as **grpc rpc-authorization** or **netconf base-op-authorization**. When a user is a member of multiple profiles, profiles are evaluated in the order that they are configured. Evaluation stops if there is a match, or when the default action

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

of the profile is **deny-all**, **permit-all**, or **read-only-all**. When the profile default action is none and if no match conditions are met in the profile, the next profile is evaluated. When the default action of the last profile is none and no explicit match is found, the command is denied.

Options	deny-all – Deny access to all commands permit-all – Allow access to all commands none – No action; evaluate the next profile read-only-all – Allow read-only access to all commands
Default	none
Introduced	16.0.R1
Platforms	All

entry [entry-id] *number*

output-authorization

Synopsis	Enter the **output-authorization** context
Context	**configure** system security aaa management-interface output-authorization
Tree	output-authorization
Description	Commands in this context configure output authorization for model-driven interfaces and telemetry. When output authorization is performed, commands that display configuration or state output must authorize every element in the output. If a remote AAA server is configured, there may be delays in displaying output while the output is authorized. The remote AAA server may receive a large volume of authorization requests when substantial output displays are needed, such as for system configuration details. Input to edit the configuration is always authorized, and is not affected by commands in this context.
Introduced	20.10.R1
Platforms	All

md-interfaces *boolean*

Synopsis	Authorize output in model-driven interfaces
Context	**configure** system security aaa management-interface output-authorization md-interfaces *boolean*
Tree	md-interfaces
Description	When configured to **true**, output is authorized for the following: • MD-CLI **info** and **compare** commands • MD-CLI command completion of list key values • NETCONF <get> and <get-config> RPC

address *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IP address of the RADIUS server
Context	**configure** system security aaa remote-servers radius server *number* address *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

authenticator *keyword*

Synopsis	Authenticator hash algorithm for the RADIUS server
Context	**configure** system security aaa remote-servers radius server *number* authenticator *keyword*
Tree	authenticator
Description	This command specifies the hash algorithm used to authenticate RADIUS Access-Request, Access-Accept, Access-Reject, Access-Challenge, Accounting-Request, and Accounting-Response packets.
Options	md5, sm3
Default	md5
Introduced	22.10.R1
Platforms	All

secret *encrypted-leaf*

Synopsis	Secret key for RADIUS over UDP
Context	**configure** system security aaa remote-servers radius server *number* secret *encrypted-leaf*
Tree	secret
Description	This command specifies the secret key and enables RADIUS over UDP for the RADIUS server. The specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

tls-client-profile *reference*

Synopsis	TLS profile for RADIUS over TLS
Context	**configure** system security aaa remote-servers radius server *number* tls-client-profile *reference*
Tree	tls-client-profile
Description	This command pecifies the TLS profile and enables RADIUS over TLS for the RADIUS server. When a TLS profile is assigned to a RADIUS server, the communication automatically switches from UDP to TCP, if a secret key is also configured. When a TLS profile is removed from a RADIUS server, the communication automatically switches from TCP to UDP, if a secret key is also configured. In both cases, the server is not recreated internally, so statistics are preserved.
Reference	**configure** system security tls client-tls-profile *named-item*
Introduced	21.10.R1
Platforms	All

server-retry *number*

Synopsis	Number of attempts to retry contacting RADIUS server
Context	**configure** system security aaa remote-servers radius server-retry *number*
Tree	server-retry
Range	1 to 10
Default	3
Introduced	16.0.R1
Platforms	All

server-timeout *number*

Synopsis	Time to wait for a response from the RADIUS server
Context	**configure** system security aaa remote-servers radius server-timeout *number*
Tree	server-timeout
Range	1 to 90
Units	seconds
Default	3

© 2026 Nokia.

Introduced	16.0.R1
Platforms	All

use-default-template *boolean*

Synopsis	Apply the RADIUS default user template to RADIUS user
Context	**configure** system security aaa remote-servers radius use-default-template *boolean*
Tree	use-default-template
Default	false
Introduced	16.0.R1
Platforms	All

tacplus

Synopsis	Enter the **tacplus** context
Context	**configure** system security aaa remote-servers tacplus
Tree	tacplus
Description	Commands in this context configure TACACS+ at the system level.
Introduced	16.0.R1
Platforms	All

accounting

Synopsis	Enable the **accounting** context
Context	**configure** system security aaa remote-servers tacplus accounting
Tree	accounting
Introduced	16.0.R1
Platforms	All

record-type *keyword*

Synopsis	Type of accounting record packet sent to TACACS+ server
Context	**configure** system security aaa remote-servers tacplus accounting record-type *keyword*
Tree	record-type
Options	start-stop, stop-only

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	stop-only
Introduced	16.0.R1
Platforms	All

admin-control

Synopsis	Enter the **admin-control** context
Context	**configure** system security aaa remote-servers tacplus admin-control
Tree	admin-control
Introduced	16.0.R1
Platforms	All

tacplus-map-to-priv-lvl *number*

Synopsis	Interactive authentication from node to TACACS+ server
Context	**configure** system security aaa remote-servers tacplus admin-control tacplus-map-to-priv-lvl *number*
Tree	tacplus-map-to-priv-lvl
Range	0 to 15
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the TACACS+ protocol
Context	**configure** system security aaa remote-servers tacplus admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

authorization

Synopsis	Enable the **authorization** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security aaa remote-servers tacplus authorization
Tree	authorization
Introduced	16.0.R1
Platforms	All

request-format

Synopsis	Enter the **request-format** context
Context	**configure** system security aaa remote-servers tacplus authorization request-format
Tree	request-format
Description	Commands in this context configure access operations that are sent to the TACACS+ server during authorization.
Introduced	21.10.R3
Platforms	All

access-operation-cmd *keyword*

Synopsis	Access operations sent in authorization requests
Context	**configure** system security aaa remote-servers tacplus authorization request-format access-operation-cmd *keyword*
Tree	access-operation-cmd
Description	This command sends an operation argument in authorization requests. In model-driven interfaces, this command configures the system to send the operation in the cmd argument, and the path in the cmd-args argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces.
Options	delete
Max. instances	1
Introduced	21.10.R3
Platforms	All

use-priv-lvl *boolean*

Synopsis	Allow privilege level mapping
Context	**configure** system security aaa remote-servers tacplus authorization use-priv-lvl *boolean*
Tree	use-priv-lvl

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	When configured to **true**, this command automatically performs a single authorization request to the TACACS+ server for cmd* (all commands) immediately after login, and then uses the local profile associated (via the **priv-lvl-map**) with the priv-lvl returned by the TACACS+ server for all subsequent authorization (except **enable-admin**). After the initial authorization for cmd*, no further authorization requests are sent to the TACACS+ server (except **enable-admin**). When configured to **false**, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the **tacplus use-default-template** setting is enabled).
Default	false
Introduced	16.0.R1
Platforms	All

ignore-unknown-mandatory-vsas *boolean*

Synopsis	Ignore unknown mandatory VSAs and fail authentication
Context	**configure** system security aaa remote-servers tacplus ignore-unknown-mandatory-vsas *boolean*
Tree	ignore-unknown-mandatory-vsas
Description	When configured to **true**, the system ignores unknown mandatory VSAs and authentication succeeds. When configured to **false**, the system ignores unknown mandatory VSAs received in a reply from the TACACS+ server. Authentication fails and the user is disconnected because the system cannot process a mandatory VSA that is unknown.
Default	false
Introduced	25.3.R1
Platforms	All

interactive-authentication *boolean*

Synopsis	Allows TACACS+ interactive authentication
Context	**configure** system security aaa remote-servers tacplus interactive-authentication *boolean*
Tree	interactive-authentication
Default	false
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

priv-lvl-map

String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

home-directory *cflash-without-slot-url*

Synopsis	User local home directory based on the template
Context	**configure** system security aaa user-template *keyword* home-directory *cflash-without-slot-url*
Tree	home-directory
Description	This command configures the home directory of the user for file access. Files can be accessed locally by CLI **file** commands and output modifiers such as **>** (file redirect), or remotely via FTP and SCP. If the home directory does not exist, a warning message is displayed when the user logs in. When **restricted-to-home** is configured, file access is denied unless the **home-directory** is configured and the directory is created by an administrator.
String length	1 to 200
String format	'cflash-without-slot-url' must be cf1-4: followed by path (e.g. cf1:/path)
Introduced	16.0.R1
Platforms	All

profile *named-item*

Synopsis	User profile based on the template
Context	**configure** system security aaa user-template *keyword* profile *named-item*
Tree	profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	'profile' must not contain spaces
Introduced	16.0.R1
Platforms	All

restricted-to-home *boolean*

Synopsis	Restrict file access to the home directory of the user
Context	**configure** system security aaa user-template *keyword* restricted-to-home *boolean*
Tree	restricted-to-home
Description	When configured to **true**, the router denies the user from accessing files outside of their local home directory. Files can be accessed locally by CLI file commands and output modifiers such as **>** (file redirect). The system denies all configuration save operations (such as **admin save**) via any management interface (such as CLI and NETCONF) unless **save-when-restricted** is enabled. File access is denied unless a home directory is configured and the directory is created by an administrator. When configured to **false**, the router permits the user to access all files on the system and to remote files.
Default	true
Introduced	16.0.R1
Platforms	All

save-when-restricted *boolean*

Synopsis	Save configurations when the user is restricted to home
Context	**configure** system security aaa user-template *keyword* save-when-restricted *boolean*
Tree	save-when-restricted
Description	When configured to **true**, the system permits configuration save operations for all configuration regions (such as bof and configure) via any management interface (such as CLI and NETCONF) even if **restricted-to-home** is enabled. The configuration for each region can be saved with **admin save** CLI commands or when committed over NETCONF and gRPC. When configured to **false**, the system denies saving the configuration when **restricted-to-home** is enabled, unless the home directory of the user includes the location of the saved configuration file.
Default	true
Introduced	22.10.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

cli-script

Synopsis	Enter the **cli-script** context
Context	**configure** system security cli-script
Tree	cli-script
Introduced	16.0.R1
Platforms	All

authorization

Synopsis	Enter the **authorization** context
Context	**configure** system security cli-script authorization
Tree	authorization
Introduced	16.0.R1
Platforms	All

cron

Synopsis	Enter the **cron** context
Context	**configure** system security cli-script authorization cron
Tree	cron
Description	Commands in this context configure authorization for the cron job scheduler.
Introduced	16.0.R1
Platforms	All

cli-user *reference*

Synopsis	User profile name for CLI command script authorization
Context	**configure** system security cli-script authorization cron cli-user *reference*
Tree	cli-user
Reference	**configure** system security user-params local-user user *named-item*
Introduced	16.0.R1
Platforms	All

event-handler

Synopsis	Enter the **event-handler** context
Context	**configure** system security cli-script authorization event-handler
Tree	event-handler
Description	Commands in this context configure authorization for the Event Handling System (EHS). EHS allows user-controlled programmatic exception handling by allowing a CLI script to be executed upon the detection of a log event.
Introduced	16.0.R1
Platforms	All

cli-user *reference*

Synopsis	User profile name for CLI command script authorization
Context	**configure** system security cli-script authorization event-handler cli-user *reference*
Tree	cli-user
Reference	**configure** system security user-params local-user user *named-item*
Introduced	16.0.R1
Platforms	All

console-login *boolean*

Synopsis	Enable logins on the serial console port of the CPM
Context	**configure** system security console-login *boolean*
Tree	console-login
Description	When configured to **true**, the system enables logins on the serial console port of the active CPM. When configured to **false**, the system disables logins on the serial console port of the active CPM. Boot messages and the **pre-login-message**, if configured, are displayed, but the login prompt is not displayed. **Note:** In-band or out-of-band management access must be configured before console logins are disabled so that users can log in to the system.
Default	true
Introduced	25.10.R3
Platforms	All

cpm-filter

Synopsis	Enter the **cpm-filter** context
Context	**configure** system security cpm-filter
Tree	cpm-filter
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

default-action *keyword*

Synopsis	Action for packets that do not match any filter entries
Context	**configure** system security cpm-filter default-action *keyword*
Tree	default-action
Options	drop, accept
Default	accept
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip-filter

Synopsis	Enter the **ip-filter** context
Context	**configure** system security cpm-filter ip-filter
Tree	ip-filter
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the CPM filter
Context	**configure** system security cpm-filter ip-filter admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security cpm-filter ip-filter entry *number*
Tree	entry
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**entry-id**] *number*

Synopsis	Filter entry ID
Context	**configure** system security cpm-filter ip-filter entry *number*
Tree	entry
Range	1 to 131072
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

action

Synopsis	Enter the **action** context
Context	**configure** system security cpm-filter ip-filter entry *number* action
Tree	action
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

accept

Synopsis	Forward matching packets
Context	**configure** system security cpm-filter ip-filter entry *number* action accept
Tree	accept
Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.

Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

start *number*

Synopsis	Lower bound of the port number to match
Context	**configure** system security cpm-filter ip-filter entry *number* match dst-port range start *number*
Tree	start
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fragment *keyword*

Synopsis	Match criterion based on presence of fragmented packets
Context	**configure** system security cpm-filter ip-filter entry *number* match fragment *keyword*
Tree	fragment
Description	This command specifies the match criterion based on the existence or absence of fragmented IP packets. Matching on fragmented IPv4 packets occurs when all packets have either the MF (more fragment) bit set or have the Fragment Offset field of the IP header set to a non-zero value. For IPv6, the existence of the IPv6 Fragmentation Extension Header results in a fragmented packet match. Matching on non-fragmented IPv4 packets occurs when all packets have the MF bit set to zero and the Fragment Offset field is also set to zero. For IPv6, the absence of an IPv6 Fragmentation Extension Header results in a non-fragmented packet match.
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

icmp

Synopsis	Enter the **icmp** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpm-filter ip-filter entry *number* match icmp
Tree	icmp
Introduced	16.0.R1

src-ip

Synopsis	Enter the **src-ip** context
Context	**configure** system security cpm-filter ip-filter entry *number* match src-ip
Tree	src-ip
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *(ipv4-prefix-with-host-bits | ipv4-address)*

Synopsis	IPv4 address used as the match criterion

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpm-filter ip-filter entry *number* match src-ip address *(ipv4-prefix-with-host-bits | ipv4-address)*
Tree	address
String format	'ipv4-prefix-with-host-bits' must be a.b.c.d/prefix with prefix length 0..32 'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip-prefix-list *reference*

Synopsis	IPv4 address prefix list used as match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match src-ip ip-prefix-list *reference*
Tree	ip-prefix-list
Reference	**configure** filter match-list ip-prefix-list *named-item*
Max. instances	16
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *ipv4-address*

Synopsis	IPv4 address mask used as the match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match src-ip mask *ipv4-address*
Tree	mask
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

src-port

Synopsis	Enter the **src-port** context
Context	**configure** system security cpm-filter ip-filter entry *number* match src-port
Tree	src-port
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eq *number*

Synopsis	Port number as the match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match src-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Port mask as the match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match src-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-list *reference*

Synopsis	Port list as the match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match src-port port-list *reference*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Max. instances	16
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enable the **range** context
Context	**configure** system security cpm-filter ip-filter entry *number* match src-port range
Tree	range
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

end *number*

Synopsis	Upper bound of the port number to match
Context	**configure** system security cpm-filter ip-filter entry *number* match src-port range end *number*
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

start *number*

Synopsis	Lower bound of the port number to match
Context	**configure** system security cpm-filter ip-filter entry *number* match src-port range start *number*
Tree	start
Range	0 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tcp-flags

Synopsis	Enter the **tcp-flags** context
Context	**configure** system security cpm-filter ip-filter entry *number* match tcp-flags
Tree	tcp-flags
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ack *boolean*

Synopsis	ACK bit in TCP header control bits as match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match tcp-flags ack *boolean*
Tree	ack
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

syn *boolean*

Synopsis	SYN bit in TCP header control bits as match criterion
Context	**configure** system security cpm-filter ip-filter entry *number* match tcp-flags syn *boolean*
Tree	syn
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6-filter

Synopsis	Enter the **ipv6-filter** context
Context	**configure** system security cpm-filter ipv6-filter
Tree	ipv6-filter
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.

admin-state *keyword*

Synopsis	Administrative state of the CPM filter
Context	**configure** system security cpm-filter ipv6-filter admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security cpm-filter ipv6-filter entry *number*
Tree	entry
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**entry-id**] *number*

Synopsis	Filter entry ID
Context	**configure** system security cpm-filter ipv6-filter entry *number*
Tree	entry
Range	1 to 131072
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

action

Synopsis	Enter the **action** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* action
Tree	action
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

accept

Synopsis	Forward matching packets
Context	**configure** system security cpm-filter ipv6-filter entry *number* action accept
Tree	accept
Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

default

Synopsis	Use default action for matching packets
Context	**configure** system security cpm-filter ipv6-filter entry *number* action default
Tree	default
Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis	Drop matching packets
Context	**configure** system security cpm-filter ipv6-filter entry *number* action drop
Tree	drop
Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

queue *reference*

Synopsis	Forward matching packets to the CPM hardware queue
Context	**configure** system security cpm-filter ipv6-filter entry *number* action queue *reference*
Tree	queue
Reference	**configure** system security cpm-queue queue *number*
Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *description*

Synopsis	Text description
Context	**configure** system security cpm-filter ipv6-filter entry *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

log *reference*

Synopsis	Log ID where matching packets are entered
Context	**configure** system security cpm-filter ipv6-filter entry *number* log *reference*
Tree	log
Reference	**configure** filter log *number*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

match

Synopsis	Enter the **match** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match
Tree	match
Description	Commands in this context specify match criteria for the entry. When the match criteria have been satisfied, the action associated with the entry is executed. If more than one match criterion is configured, all criteria must be met before the action associated with the entry is executed.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

dscp *keyword*

Synopsis	DSCP used as the match criterion on the packet
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dst-ip

Synopsis	Enter the **dst-ip** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-ip
Tree	dst-ip
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *(ipv6-prefix-with-host-bits | ipv6-address)*

Synopsis	IPv6 address used as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-ip address *(ipv6-prefix-with-host-bits | ipv6-address)*
Tree	address
String format	'ipv6-prefix-with-host-bits' must be IPv6 address/prefix with length 0..128 'ipv6-prefix-with-host-bits' must be IPv6 address/prefix with length 0..128
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-ip ipv6-prefix-list *reference*
Tree	ipv6-prefix-list
Reference	**configure** filter match-list ipv6-prefix-list *named-item*
Max. instances	16
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *ipv6-address*

Synopsis	IPv6 address mask used as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-ip mask *ipv6-address*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dst-port

Synopsis	Enter the **dst-port** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port
Tree	dst-port
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eq *number*

Synopsis	Port number as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port eq *number*
Tree	eq
Range	0 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Port mask as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-list *reference*

Synopsis	Port list as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Max. instances	16
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enable the **range** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port range
Tree	range
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

end *number*

Synopsis	Upper bound of the port number to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port range end *number*
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

start *number*

Synopsis	Lower bound of the port number to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match dst-port range start *number*
Tree	start
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

extension-header

Synopsis	Enter the **extension-header** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match extension-header
Tree	extension-header
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hop-by-hop *boolean*

Synopsis	Match on existence of Hop-By-Hop Options Header

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpm-filter ipv6-filter entry *number* match extension-header hop-by-hop *boolean*
Tree	hop-by-hop
Description	When configured to **true**, a match occurs when the Hop-by-Hop Options Extension Header is present. When configured to **false**, a match occurs when the Hop-by-Hop Options Extension Header is not present.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

flow-label *number*

Synopsis	Flow label in the IPv6 header as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match flow-label *number*
Tree	flow-label
Range	0 to 1048575
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fragment *keyword*

Synopsis	Match criterion based on presence of fragmented packets
Context	**configure** system security cpm-filter ipv6-filter entry *number* match fragment *keyword*
Tree	fragment
Description	This command specifies the match criterion based on the existence or absence of fragmented IP packets. Matching on fragmented IPv4 packets occurs when all packets have either the MF (more fragment) bit set or have the Fragment Offset field of the IP header set to a non-zero value. For IPv6, the existence of the IPv6 Fragmentation Extension Header results in a fragmented packet match. Matching on non-fragmented IPv4 packets occurs when all packets have the MF bit set to zero and the Fragment Offset field is also set to zero. For IPv6, the absence of an IPv6 Fragmentation Extension Header results in a non-fragmented packet match.
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

icmp

Synopsis	Enter the **icmp** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match icmp
Tree	icmp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

code *number*

Synopsis	ICMP code as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match icmp code *number*
Tree	code
Range	0 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

type *number*

Synopsis	ICMP type as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match icmp type *number*
Tree	type
Range	0 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

next-header *(number | keyword)*

Synopsis	IP protocol to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match next-header *(number | keyword)*
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp

© 2026 Nokia.

port-list *reference*

Synopsis	Port list as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Max. instances	16
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

range

Synopsis	Enable the **range** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match port range
Tree	range
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

end *number*

Synopsis	Upper bound of the port number to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match port range end *number*
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

start *number*

Synopsis	Lower bound of the port number to match

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpm-filter ipv6-filter entry *number* match port range start *number*
Tree	start
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

router-instance *named-item-64*

Synopsis	Router instance as the match criteria
Context	**configure** system security cpm-filter ipv6-filter entry *number* match router-instance *named-item-64*
Tree	router-instance
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

src-ip

Synopsis	Enter the **src-ip** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-ip
Tree	src-ip
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *(ipv6-prefix-with-host-bits | ipv6-address)*

Synopsis	IPv6 address used as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-ip address *(ipv6-prefix-with-host-bits | ipv6-address)*
Tree	address
String format	'ipv6-prefix-with-host-bits' must be IPv6 address/prefix with length 0..128 'ipv6-prefix-with-host-bits' must be IPv6 address/prefix with length 0..128
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6-prefix-list *reference*

Synopsis	IPv6 address prefix list used as match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-ip ipv6-prefix-list *reference*
Tree	ipv6-prefix-list
Reference	**configure** filter match-list ipv6-prefix-list *named-item*
Max. instances	16
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *ipv6-address*

Synopsis	IPv6 address mask used as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-ip mask *ipv6-address*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

src-port

Synopsis	Enter the **src-port** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port
Tree	src-port
Notes	The following elements are part of a choice: **port** or (**dst-port** and **src-port**).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.

eq *number*

Synopsis	Port number as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port eq *number*
Tree	eq
Range	0 to 65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Port mask as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-list *reference*

Synopsis	Port list as the match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port port-list *reference*
Tree	port-list
Reference	**configure** filter match-list port-list *named-item*
Max. instances	16
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

range

Synopsis	Enable the **range** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port range
Tree	range
Notes	The following elements are part of a choice: (**eq** and **mask**), **port-list**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

end *number*

Synopsis	Upper bound of the port number to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port range end *number*
Tree	end
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

start *number*

Synopsis	Lower bound of the port number to match
Context	**configure** system security cpm-filter ipv6-filter entry *number* match src-port range start *number*
Tree	start
Range	0 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tcp-flags

Synopsis	Enter the **tcp-flags** context
Context	**configure** system security cpm-filter ipv6-filter entry *number* match tcp-flags

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	tcp-flags
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ack *boolean*

Synopsis	ACK bit in TCP header control bits as match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match tcp-flags ack *boolean*
Tree	ack
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

syn *boolean*

Synopsis	SYN bit in TCP header control bits as match criterion
Context	**configure** system security cpm-filter ipv6-filter entry *number* match tcp-flags syn *boolean*
Tree	syn
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-filter

Synopsis	Enter the **mac-filter** context
Context	**configure** system security cpm-filter mac-filter
Tree	mac-filter
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the CPM filter
Context	**configure** system security cpm-filter mac-filter admin-state *keyword*
Tree	admin-state
Options	enable, disable

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security cpm-filter mac-filter entry *number*
Tree	entry
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**entry-id**] *number*

Synopsis	Filter entry ID
Context	**configure** system security cpm-filter mac-filter entry *number*
Tree	entry
Range	1 to 131072
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

action

Synopsis	Enter the **action** context
Context	**configure** system security cpm-filter mac-filter entry *number* action
Tree	action
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

accept

Synopsis	Forward matching packets
Context	**configure** system security cpm-filter mac-filter entry *number* action accept
Tree	accept

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

default

Synopsis	Use default action for matching packets
Context	**configure** system security cpm-filter mac-filter entry *number* action default
Tree	default
Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

drop

Synopsis	Drop matching packets
Context	**configure** system security cpm-filter mac-filter entry *number* action drop
Tree	drop
Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

queue *reference*

Synopsis	Forward matching packets to the CPM hardware queue
Context	**configure** system security cpm-filter mac-filter entry *number* action queue *reference*
Tree	queue
Reference	**configure** system security cpm-queue queue *number*
Notes	The following elements are part of a choice: **accept**, **default**, **drop**, or **queue**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *description*

Synopsis	Text description

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpm-filter mac-filter entry *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

log *reference*

Synopsis	Log ID where matching packets are entered
Context	**configure** system security cpm-filter mac-filter entry *number* log *reference*
Tree	log
Reference	**configure** filter log *number*
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

match

Synopsis	Enter the **match** context
Context	**configure** system security cpm-filter mac-filter entry *number* match
Tree	match
Description	Commands in this context specify match criteria for the entry. When the match criteria have been satisfied, the action associated with the entry is executed. If more than one match criterion is configured, all criteria must be met before the action associated with the entry is executed.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-opcode

Synopsis	Enter the **cfm-opcode** context
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode
Tree	cfm-opcode
Description	Commands in this context specify match criteria based on the CFM opcode.
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eq *number*

Synopsis	Equal to comparison operator for the CFM opcode
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode eq *number*
Tree	eq
Range	0 to 255
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

gt *number*

Synopsis	Greater than comparison operator for the CFM opcode
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode gt *number*
Tree	gt
Range	0 to 254
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lt *number*

Synopsis	Less than comparison operator for the CFM opcode
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode lt *number*
Tree	lt
Range	1 to 255
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

range

Synopsis	Enable the **range** context
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

end *number*

Synopsis	Upper bound of the Opcode range to match
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode range end *number*
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

start *number*

Synopsis	Lower bound of the OpCode range to match
Context	**configure** system security cpm-filter mac-filter entry *number* match cfm-opcode range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dst-mac

Synopsis	Enable the **dst-mac** context
Context	**configure** system security cpm-filter mac-filter entry *number* match dst-mac

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	dst-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *mac-address*

Synopsis	MAC address used as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match dst-mac address *mac-address*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *mac-address*

Synopsis	MAC address mask as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match dst-mac mask *mac-address*
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

etype *etype-value*

Synopsis	Ethernet type as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match etype *etype-value*
Tree	etype
Description	This command specifies an Ethernet type II Ethertype value to be used as a MAC filter match criterion. The Ethernet type field is used by the Ethernet version-II frames and does not apply to IEEE 802.3 Ethernet frames.
String length	5 to 6
String format	'etype-value' must be 0x0600-0xFFFF (e-type range)
Introduced	16.0.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

frame-type *keyword*

Synopsis	MAC frame type as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match frame-type *keyword*
Tree	frame-type
Options	802dot2-llc, ethernet-ii
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

llc-dsap

Synopsis	Enable the **llc-dsap** context
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-dsap
Tree	llc-dsap
Description	Commands in this context specify match criteria based on the Destination Service Access Point (DSAP).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dsap *number*

Synopsis	8-bit DSAP as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-dsap dsap *number*
Tree	dsap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Mask for DSAP value as the match criterion

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security cpm-filter mac-filter entry *number* match llc-dsap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

llc-ssap

Synopsis	Enable the **llc-ssap** context
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-ssap
Tree	llc-ssap
Description	Commands in this context specify match criteria based on the Source Service Access Point (SSAP).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *number*

Synopsis	Mask for SSAP value as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-ssap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ssap *number*

Synopsis	8-bit SSAP as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match llc-ssap ssap *number*
Tree	ssap
Range	0 to 255

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

service *reference*

Synopsis	Service ID used as the match condition
Context	**configure** system security cpm-filter mac-filter entry *number* match service *reference*
Tree	service
Reference	**configure** service vpls *service-name*
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

src-mac

Synopsis	Enable the **src-mac** context
Context	**configure** system security cpm-filter mac-filter entry *number* match src-mac
Tree	src-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

address *mac-address*

Synopsis	MAC address used as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match src-mac address *mac-address*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mask *mac-address*

Synopsis	MAC address mask as the match criterion
Context	**configure** system security cpm-filter mac-filter entry *number* match src-mac mask *mac-address*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cpm-queue

Synopsis	Enter the **cpm-queue** context
Context	**configure** system security cpm-queue
Tree	cpm-queue
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

queue [queue-id] *number*

Synopsis	Enter the **queue** list instance
Context	**configure** system security cpm-queue queue *number*
Tree	queue
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**queue-id**] *number*

Synopsis	CPM queue ID
Context	**configure** system security cpm-queue queue *number*
Tree	queue
Range	33 to 2000
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cbs *number*

Synopsis	Buffer size that can be drawn from queue buffer pool
Context	**configure** system security cpm-queue queue *number* cbs *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	cbs
Description	This command specifies the amount of buffer that can be drawn from the reserved buffer portion of the buffer pool of the queue.
Range	0 to 131072
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mbs *number*

Synopsis	Maximum queue depth to which the queue can grow
Context	**configure** system security cpm-queue queue *number* mbs *number*
Tree	mbs
Range	0 to 131072
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rate

Synopsis	Enter the **rate** context
Context	**configure** system security cpm-queue queue *number* rate
Tree	rate
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir *(number | keyword)*

Synopsis	Amount of bandwidth committed to the queue
Context	**configure** system security cpm-queue queue *number* rate cir *(number | keyword)*
Tree	cir

igmp *boolean*

Synopsis	Include extracted IGMP packets for IP source monitoring
Context	**configure** system security cpu-protection ip-src-monitoring included-protocols igmp *boolean*
Tree	igmp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

link-specific-rate *(number | keyword)*

Synopsis	Packet arrival rate limit for link level protocols
Context	**configure** system security cpu-protection link-specific-rate *(number | keyword)*
Tree	link-specific-rate
Description	This command configures a link-specific rate for CPU protection. The limit is applied to all ports within the system. The CPU receives no more than the configured packet rate for all link level protocols, such as LACP, from any one port. The measurement is cleared each second and is based on the ingress port.
Range	1 to 65535
Units	packets per second
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

per-source-rate *(number | keyword)*

Synopsis	Per-source packet arrival rate limit
Context	**configure** system security cpu-protection policy *number* per-source-rate *(number | keyword)*
Tree	per-source-rate
Description	This command configures the per-source packet arrival rate limit. A source is defined as a unique combination of SAP and MAC source address or SAP and source IP address. The CPU receives no more than the specified packet rate from each source. The measurement is cleared every second. This configuration is applicable only if the policy is assigned to an interface (such as SAPs, subscriber interfaces, and spoke SDPs), and MAC monitoring or IP source monitoring is specified in the CPU protection configuration of the interface.
Range	1 to 65534
Units	packets per second
Options	max
Default	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

protocol-protection

Synopsis	Enable the **protocol-protection** context
Context	**configure** system security cpu-protection protocol-protection
Tree	protocol-protection
Description	When enabled, the network processor on the CPM discards all packets received for protocols that are not configured on the interface. This action helps to mitigate DoS attacks by filtering invalid control traffic before it ingresses the CPU. For example, if IS-IS is not configured on an interface, protocol protection discards any IS-IS packets received on the interface. Commands in this context further define the action when the context is enabled.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

allow-sham-links *boolean*

hold-down *(keyword | number)*

Synopsis	Hold down behavior
Context	**configure** system security dist-cpu-protection policy *named-item* protocol *keyword* dynamic-parameters exceed-action hold-down *(keyword | number)*
Tree	hold-down
Description	This command specifies the behavior when the system detects that an enforcement policer has marked or discarded one or more packets and there is no action specified for the scenario when the rates are exceeded. The hold time condition is cleared after the specified time has expired. The detection time (the minimum time that the policer remains allocated) begins after the hold down is complete. The hold down behavior is not applicable to a local monitoring policer. An indefinite hold down behavior must be cleared using the **tools perform security dist-cpu-protection release-hold-down** command.
Range	1 to 10080
Units	seconds
Options	indefinite, none
Default	none
Introduced	16.0.R1
Platforms	All

log-events *keyword*

Synopsis	Control of log events creation for status and activity
Context	**configure** system security dist-cpu-protection policy *named-item* protocol *keyword* dynamic-parameters log-events *keyword*
Tree	log-events
Description	This command controls the creation of log events related to the status and activity of the local monitoring policer.
Options	false, true, verbose
Default	true
Introduced	16.0.R1
Platforms	All

rate

Synopsis	Enter the **rate** context

© 2026 Nokia.

authentication-key *encrypted-leaf*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Authentication key used by the encryption algorithm

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security keychains keychain *named-item* bidirectional entry *number* authentication-key *encrypted-leaf*
Tree	authentication-key
Description	This command configures the authentication key used by the encryption algorithm to sign and authenticate the protocol packet. If the algorithm is based on AES and the specified key is not the exact length required by the associated algorithm, the following steps are taken, depending on the protocol: • For protocols using TCP-AO (BGP, LDP, and PCEP), the key is processed as described in RFC 4615. All key lengths are valid. • For all other protocols (OSPF, IS-IS, RSVP, NTP, and MACsec), if the key is shorter than the required length, the key is padded with zeros; if it is longer, it is truncated. For algorithms based on AES-128, the required key length is 16 bytes. For algorithms based on AES-256, the required key length is 32 bytes. In all other cases, all key lengths are valid and the specified key is not padded nor truncated. This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.

Introduced	25.10.R1
Platforms	All

entry [keychain-entry-index] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security keychains keychain *named-item* macsec entry *number*
Tree	entry
Description	Commands in this context configure a specific key entry in the keychain. Entries are defined by an entry ID. Each MACsec key entry creates a dedicated MKA for that key entry. MKA uses the key entry's CAK and its encryption algorithm to secure the SAK between peers. The MACsec key entry with an ID of 0 can be configured with a tolerance of forever and can be used as a backup key entry. If at the begin time of any key entry there is a problem with establishing MKA, the keychain may fallback to the backup key entry.
Introduced	25.10.R1
Platforms	All

cak *encrypted-leaf-hex-without-prefix*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	CAK used by the encryption algorithm
Context	**configure** system security keychains keychain *named-item* macsec entry *number* cak *encrypted-leaf-hex-without-prefix*
Tree	cak
Description	This command configures the CAK to be used by the encryption algorithm. Up to 32 hexadecimal characters can be used for the cleartext key when the encryption algorithm is **aes-128-cmac-128**. Up to 64 hexadecimal characters can be used when the encryption algorithm is **aes-256-cmac-256**. This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 126
String format	'encrypted-leaf-hex-without-prefix' must have clear text in hex without 0x or end with hash/hash2/hash3/custom
Notes	This element is mandatory.
Introduced	25.10.R1
Platforms	All

router-instance *string*

Synopsis	Router instance as the match criterion
Context	**configure** system security management-access-filter ip-filter entry *number* match router-instance *string*
Tree	router-instance
Introduced	16.0.R4
Platforms	All

src-ip

Synopsis	Enter the **src-ip** context
Context	**configure** system security management-access-filter ip-filter entry *number* match src-ip
Tree	src-ip
Description	Commands in this context specify match criteria based on the source IP address.
Introduced	16.0.R4
Platforms	All

address *(ipv4-prefix | ipv4-address)*

Synopsis	IP address or IP prefix as the match criterion
Context	**configure** system security management-access-filter ip-filter entry *number* match src-ip address *(ipv4-prefix | ipv4-address)*
Tree	address
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R4
Platforms	All

ip-prefix-list *reference*

Synopsis	IP prefix list as the match criterion
Context	**configure** system security management-access-filter ip-filter entry *number* match src-ip ip-prefix-list *reference*
Tree	ip-prefix-list

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Reference	**configure** filter match-list ip-prefix-list *named-item*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	20.7.R1
Platforms	All

mask *ipv4-address*

Synopsis	IP address mask as the match criterion
Context	**configure** system security management-access-filter ip-filter entry *number* match src-ip mask *ipv4-address*
Tree	mask
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: (**address** and **mask**) or **ip-prefix-list**.
Introduced	16.0.R4
Platforms	All

src-port

Synopsis	Enable the **src-port** context
Context	**configure** system security management-access-filter ip-filter entry *number* match src-port
Tree	src-port
Introduced	21.7.R1
Platforms	All

mask *number*

Synopsis	IP address mask as the match criterion
Context	**configure** system security management-access-filter ip-filter entry *number* match src-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Introduced	21.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

port *number*

Synopsis	TCP or UDP port number as the match criterion
Context	**configure** system security management-access-filter ip-filter entry *number* match src-port port *number*
Tree	port
Range	1 to 65535
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	All

ipv6-filter

Synopsis	Enter the **ipv6-filter** context
Context	**configure** system security management-access-filter ipv6-filter
Tree	ipv6-filter
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of management-access filters
Context	**configure** system security management-access-filter ipv6-filter admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

default-action *keyword*

Synopsis	Default action for the management access filter
Context	**configure** system security management-access-filter ipv6-filter default-action *keyword*
Tree	default-action

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command specifies the default action for management access in the absence of a specific management access filter match.
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	16.0.R4
Platforms	All

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security management-access-filter ipv6-filter entry *number*
Tree	entry
Introduced	16.0.R4
Platforms	All

[**entry-id**] *number*

Synopsis	Entry ID to identify the match criteria and the action
Context	**configure** system security management-access-filter ipv6-filter entry *number*
Tree	entry
Description	This command specifies the entry ID to identify the match criteria and the corresponding action. It is recommended that entries are numbered in staggered increments. This allows users to insert a new entry in an existing policy without having to renumber the existing entries.
Range	1 to 9999
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

action *keyword*

Synopsis	Action associated with the management access filter
Context	**configure** system security management-access-filter ipv6-filter entry *number* action *keyword*
Tree	action
Description	This command specifies the action associated with the management access filter match criteria entry.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	If the packet does not meet any of the match criteria, the configured default action is applied.
Options	ignore-match, accept, drop, reject
Default	ignore-match
Introduced	16.0.R4
Platforms	All

description *description*

Synopsis	Text description
Context	**configure** system security management-access-filter ipv6-filter entry *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R4
Platforms	All

log-events *boolean*

Synopsis	Enable match logging
Context	**configure** system security management-access-filter ipv6-filter entry *number* log-events *boolean*
Tree	log-events
Description	When configured to **true**, this command enables match logging. When enabled, matches on the entry cause the Security event mafEntryMatch to be raised. When configured to **false**, match logging is disabled.
Default	false
Introduced	16.0.R4
Platforms	All

match

Synopsis	Enter the **match** context
Context	**configure** system security management-access-filter ipv6-filter entry *number* match
Tree	match

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context specify match criteria for the entry.
Introduced	16.0.R4
Platforms	All

dst-port

Synopsis	Enable the **dst-port** context
Context	**configure** system security management-access-filter ipv6-filter entry *number* match dst-port
Tree	dst-port
Description	Commands in this context specify match criteria based on the destination port.
Introduced	16.0.R4
Platforms	All

mask *number*

Synopsis	IP address mask as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match dst-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Introduced	16.0.R4
Platforms	All

port *number*

Synopsis	TCP or UDP port number as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match dst-port port *number*
Tree	port
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

flow-label *number*

Synopsis	Flow identifier used to discriminate traffic flows
Context	**configure** system security management-access-filter ipv6-filter entry *number* match flow-label *number*
Tree	flow-label
Range	0 to 1048575
Introduced	16.0.R4
Platforms	All

mgmt-port

Synopsis	Enter the **mgmt-port** context
Context	**configure** system security management-access-filter ipv6-filter entry *number* match mgmt-port
Tree	mgmt-port
Description	Commands in this context specify match criteria based on the Ethernet port.
Introduced	16.0.R4
Platforms	All

cpm

Synopsis	Match any traffic received on any Ethernet port
Context	**configure** system security management-access-filter ipv6-filter entry *number* match mgmt-port cpm
Tree	cpm
Notes	The following elements are part of a choice: **cpm**, (**lag** and **lag-id**), or **port-id**.
Introduced	16.0.R4
Platforms	All

lag *lag-interface*

Synopsis	LAG ID as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match mgmt-port lag *lag-interface*
Tree	lag

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 27
String format	'lag-interface' must be lag- followed by number 1-800 or up to 23 chars (e.g. lag-1 or lag-my-lag)
Notes	The following elements are part of a choice: **cpm**, (**lag** and **lag-id**), or **port-id**.
Introduced	21.2.R1
Platforms	All

port-id *port*

Synopsis	Port ID as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match mgmt-port port-id *port*
Tree	port-id
Notes	The following elements are part of a choice: **cpm**, (**lag** and **lag-id**), or **port-id**.
Introduced	16.0.R4
Platforms	All

next-header *(number | keyword)*

Synopsis	IP protocol to match
Context	**configure** system security management-access-filter ipv6-filter entry *number* match next-header *(number | keyword)*
Tree	next-header
Range	0 to 255
Options	tcp-udp, icmp, igmp, ip, tcp, egp, igp, udp, rdp, ipv6, ipv6-route, ipv6-frag, idrp, rsvp, gre, ipv6-icmp, ipv6-no-nxt, ipv6-opts, iso-ip, eigrp, ospf-igp, ether-ip, encap, pnni, pim, vrrp, l2tp, stp, ptp, isis, crtp, crudp, sctp
Introduced	16.0.R4
Platforms	All

router-instance *string*

Synopsis	Router instance as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match router-instance *string*
Tree	router-instance
Introduced	16.0.R4

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

src-ip

Synopsis	Enter the **src-ip** context
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-ip
Tree	src-ip
Description	Commands in this context specify match criteria based on the source port.
Introduced	16.0.R4
Platforms	All

address *(ipv6-prefix | ipv6-address)*

Synopsis	IPv6 address or IPv6 prefix to match
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-ip address *(ipv6-prefix | ipv6-address)*
Tree	address
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R4
Platforms	All

ipv6-prefix-list *reference*

Synopsis	IPv6 prefix list as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-ip ipv6-prefix-list *reference*
Tree	ipv6-prefix-list
Reference	**configure** filter match-list ipv6-prefix-list *named-item*
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	20.7.R1
Platforms	All

mask *ipv6-address*

Synopsis	IP address mask as the match criterion

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-ip mask *ipv6-address*
Tree	mask
Notes	The following elements are part of a choice: (**address** and **mask**) or **ipv6-prefix-list**.
Introduced	16.0.R4
Platforms	All

src-port

Synopsis	Enable the **src-port** context
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-port
Tree	src-port
Description	Commands in this context specify match criteria based on the source port.
Introduced	21.7.R1
Platforms	All

mask *number*

Synopsis	IP address mask as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-port mask *number*
Tree	mask
Range	1 to 65535
Default	65535
Introduced	21.7.R1
Platforms	All

port *number*

Synopsis	TCP or UDP port number as the match criterion
Context	**configure** system security management-access-filter ipv6-filter entry *number* match src-port port *number*
Tree	port
Range	1 to 65535
Notes	This element is mandatory.

Introduced	21.7.R1
Platforms	All

mac-filter

Synopsis	Enter the **mac-filter** context
Context	**configure** system security management-access-filter mac-filter
Tree	mac-filter
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of management access MAC filter
Context	**configure** system security management-access-filter mac-filter admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

default-action *keyword*

Synopsis	Default action for the management access filter
Context	**configure** system security management-access-filter mac-filter default-action *keyword*
Tree	default-action
Description	This command specifies the default action for management access in the absence of a specific management access filter match.
Options	ignore-match, accept, drop
Default	ignore-match
Introduced	16.0.R4
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

entry [entry-id] *number*

Synopsis	Enter the **entry** list instance
Context	**configure** system security management-access-filter mac-filter entry *number*
Tree	entry
Introduced	16.0.R4
Platforms	All

[**entry-id**] *number*

Synopsis	Entry ID to identify the match criteria and the action
Context	**configure** system security management-access-filter mac-filter entry *number*
Tree	entry
Description	This command specifies the entry ID to identify the match criteria and the corresponding action. It is recommended that entries are numbered in staggered increments. This allows users to insert a new entry in an existing policy without having to renumber the existing entries.
Range	1 to 9999
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

action *keyword*

Synopsis	Action associated with the management access filter
Context	**configure** system security management-access-filter mac-filter entry *number* action *keyword*
Tree	action
Description	This command specifies the action associated with the management access filter match criteria entry. If the packet does not meet any of the match criteria, the configured default action is applied.
Options	ignore-match, accept, drop
Default	ignore-match
Introduced	16.0.R4
Platforms	All

© 2026 Nokia.

description *description*

Synopsis	Text description
Context	**configure** system security management-access-filter mac-filter entry *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R4
Platforms	All

log-events *boolean*

Synopsis	Enable match logging
Context	**configure** system security management-access-filter mac-filter entry *number* log-events *boolean*
Tree	log-events
Description	When configured to **true**, this command enables match logging. When enabled, matches on the entry cause the Security event mafEntryMatch to be raised. When configured to **false**, match logging is disabled.
Default	false
Introduced	16.0.R4
Platforms	All

match

Synopsis	Enter the **match** context
Context	**configure** system security management-access-filter mac-filter entry *number* match
Tree	match
Description	Commands in this context specify match criteria for the entry.
Introduced	16.0.R4
Platforms	All

cfm-opcode

Synopsis	Enter the **cfm-opcode** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode
Tree	cfm-opcode
Description	Commands in this context specify match criteria based on the CFM opcode.
Introduced	16.0.R4
Platforms	All

eq *number*

Synopsis	Equal to comparison operator for the CFM opcode
Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode eq *number*
Tree	eq
Range	0 to 255
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R4
Platforms	All

gt *number*

Synopsis	Greater than comparison operator for the CFM opcode
Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode gt *number*
Tree	gt
Range	0 to 254
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R4
Platforms	All

lt *number*

Synopsis	Less than comparison operator for the CFM opcode
Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode lt *number*
Tree	lt
Range	1 to 255

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R4
Platforms	All

range

Synopsis	Enable the **range** context
Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode range
Tree	range
Notes	The following elements are part of a choice: **eq**, **gt**, **lt**, or **range**.
Introduced	16.0.R4
Platforms	All

end *number*

Synopsis	Upper bound of the range for the OpCode to match
Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode range end *number*
Tree	end
Range	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

start *number*

Synopsis	Lower bound of the range for the OpCode to match
Context	**configure** system security management-access-filter mac-filter entry *number* match cfm-opcode range start *number*
Tree	start
Range	0 to 254
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

© 2026 Nokia.

dot1p

Synopsis	Enable the **dot1p** context
Context	**configure** system security management-access-filter mac-filter entry *number* match dot1p
Tree	dot1p
Description	Commands in this context specify match criteria based on the IEEE 802.1p value.
Introduced	16.0.R4
Platforms	All

mask *number*

Synopsis	3-bit mask as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match dot1p mask *number*
Tree	mask
Range	1 to 7
Default	7
Introduced	16.0.R4
Platforms	All

priority *number*

Synopsis	IEEE 802.1p value as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match dot1p priority *number*
Tree	priority
Range	0 to 7
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

dst-mac

Synopsis	Enable the **dst-mac** context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security management-access-filter mac-filter entry *number* match dst-mac
Tree	dst-mac
Description	Commands in this context specify match criteria based on the destination MAC.
Introduced	16.0.R4
Platforms	All

address *mac-address*

Synopsis	MAC address used as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match dst-mac address *mac-address*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

mask *mac-address*

Synopsis	MAC address mask as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match dst-mac mask *mac-address*
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R4
Platforms	All

etype *etype-value*

Synopsis	Ethernet type II Ethertype value as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match etype *etype-value*
Tree	etype
Description	This command specifies an Ethernet type II Ethertype value to be used as a MAC filter match criterion. The Ethernet type field is used by the Ethernet version-II frames and does not apply to IEEE 802.3 Ethernet frames.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	5 to 6
String format	'etype-value' must be 0x0600-0xFFFF (e-type range)
Introduced	16.0.R4
Platforms	All

frame-type *keyword*

Synopsis	MAC frame type as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match frame-type *keyword*
Tree	frame-type
Options	802dot3, 802dot2-llc, 802dot2-snap, ethernet-ii, 802dot1-ag
Default	802dot3
Introduced	16.0.R4
Platforms	All

llc-dsap

Synopsis	Enable the **llc-dsap** context
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-dsap
Tree	llc-dsap
Description	Commands in this context specify match criteria based on the Destination Service Access Point (DSAP).
Introduced	16.0.R4
Platforms	All

dsap *number*

Synopsis	8-bit DSAP as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-dsap dsap *number*
Tree	dsap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	All

mask *number*

Synopsis	Mask for DSAP value as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-dsap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R4
Platforms	All

llc-ssap

Synopsis	Enable the **llc-ssap** context
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-ssap
Tree	llc-ssap
Description	Commands in this context specify match criteria based on the Source Service Access Point (SSAP).
Introduced	16.0.R4
Platforms	All

mask *number*

Synopsis	Mask for SSAP value as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-ssap mask *number*
Tree	mask
Range	1 to 255
Default	255
Introduced	16.0.R4
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

ssap *number*

Synopsis	8-bit SSAP as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match llc-ssap ssap *number*
Tree	ssap
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

service *service-name*

Synopsis	Service ID used as the match condition
Context	**configure** system security management-access-filter mac-filter entry *number* match service *service-name*
Tree	service
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Introduced	16.0.R4
Platforms	All

snap-oui *keyword*

Synopsis	IEEE 802.3 LLC SNAP Ethernet Frame OUI value for match
Context	**configure** system security management-access-filter mac-filter entry *number* match snap-oui *keyword*
Tree	snap-oui
Description	This command specifies the IEEE 802.3 LLC SNAP Ethernet Frame OUI value as the MAC filter match criterion.
Options	zero, non-zero
Introduced	16.0.R4
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

snap-pid *number*

Synopsis	IEEE 802.3 LLC SNAP Ethernet Frame PID as the match
Context	**configure** system security management-access-filter mac-filter entry *number* match snap-pid *number*
Tree	snap-pid
Description	This command specifies an IEEE 802.3 LLC SNAP Ethernet Frame PID value used as the MAC filter match criterion. The SNAP PID match criterion is independent of the OUI field within the SNAP header. Two packets with different 3-byte OUI fields but the same PID field match the same filter entry based on a SNAP PID match criterion.
Range	0 to 65535
Introduced	16.0.R4
Platforms	All

src-mac

Synopsis	Enable the **src-mac** context
Context	**configure** system security management-access-filter mac-filter entry *number* match src-mac
Tree	src-mac
Description	Commands in this context specify match criteria based on the source MAC.
Introduced	16.0.R4
Platforms	All

address *mac-address*

Synopsis	MAC address used as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match src-mac address *mac-address*
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mask *mac-address*

Synopsis	MAC address mask as the match criterion
Context	**configure** system security management-access-filter mac-filter entry *number* match src-mac mask *mac-address*
Tree	mask
Default	ff:ff:ff:ff:ff:ff
Introduced	16.0.R4
Platforms	All

per-peer-queuing *boolean*

Synopsis	Allow CPM hardware queuing per peer
Context	**configure** system security per-peer-queuing *boolean*
Tree	per-peer-queuing
Description	When configured to **true**, the router automatically allocates a separate CPM hardware queue for the peer when a peering session is established. When configured to **false**, a separate CPM hardware queue is not allowed.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pki

Synopsis	Enter the **pki** context
Context	**configure** system security pki
Tree	pki
Introduced	16.0.R1
Platforms	All

ca-profile [ca-profile-name] *named-item*

Synopsis	Enter the **ca-profile** list instance
Context	**configure** system security pki ca-profile *named-item*
Tree	ca-profile
Max. instances	128

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

[**ca-profile-name**] *named-item*

Synopsis	CA profile name
Context	**configure** system security pki ca-profile *named-item*
Tree	ca-profile
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the CA profile
Context	**configure** system security pki ca-profile *named-item* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

auto-crl-update

Synopsis	Enable the **auto-crl-update** context
Context	**configure** system security pki ca-profile *named-item* auto-crl-update
Tree	auto-crl-update
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the automatic CRL update

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security pki ca-profile *named-item* auto-crl-update admin-state *keyword*

Tree	rsa
Notes	The following elements are part of a choice: **dsa**, **ecdsa**, **rsa**, or **same-as-existing-key**.
Introduced	22.10.R1
Platforms	All

key-size *number*

Synopsis	Length of the generated RSA key
Context	**configure** system security pki certificate-update-profile *named-item* rsa key-size *number*
Tree	key-size
Description	This command specifies that the newly generated key is a RSA key with the specified key length in bits.
Range	512 to 8192
Default	2048
Introduced	22.10.R1
Platforms	All

same-as-existing-key

Synopsis	Generate the new key to same type and key length
Context	**configure** system security pki certificate-update-profile *named-item* same-as-existing-key
Tree	same-as-existing-key
Description	When configured, this command specifies that the newly generated key is the same type and key length as the existing key.
Notes	The following elements are part of a choice: **dsa**, **ecdsa**, **rsa**, or **same-as-existing-key**.
Introduced	22.10.R1
Platforms	All

common-name-list [cn-list-name] *named-item*

Synopsis	Enter the **common-name-list** list instance
Context	**configure** system security pki common-name-list *named-item*
Tree	common-name-list

cn-type *keyword*

Synopsis	Common name type
Context	**configure** system security pki common-name-list *named-item* common-name *number* cn-type *keyword*
Tree	cn-type
Options	ip-address, domain-name
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

cn-value *regular-expression-not-all-spaces*

Synopsis	Common name value
Context	**configure** system security pki common-name-list *named-item* common-name *number* cn-value *regular-expression-not-all-spaces*
Tree	cn-value
String length	1 to 255
String format	'regular-expression-not-all-spaces' must contain at least one non-space character
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

crl-expiration-warning

Synopsis	Enter the **crl-expiration-warning** context
Context	**configure** system security pki crl-expiration-warning
Tree	crl-expiration-warning
Introduced	16.0.R1
Platforms	All

hours *number*

Synopsis	Time before system generates CRL expiration warning trap
Context	**configure** system security pki crl-expiration-warning hours *number*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	hours
Range	0 to 8760
Units	hours
Introduced	16.0.R1
Platforms	All

repeat-hours *number*

Synopsis	Time system repeats CRL expiration warning trap
Context	**configure** system security pki crl-expiration-warning repeat-hours *number*
Tree	repeat-hours
Range	0 to 8760
Units	hours
Default	0
Introduced	16.0.R1
Platforms	All

dynamic-ca *boolean*

Synopsis	Enable the dynamic sub-CA support for IPsec
Context	**configure** system security pki dynamic-ca *boolean*
Tree	dynamic-ca
Description	When configured to **true**, the system may authenticate the IPsec peer using a certificate without provisioning the peer's sub-CAs locally, if the peer sends sub-CA certificates during IKEv2 exchanges.
Default	false
Introduced	25.3.R1
Platforms	All

est-profile [name] *named-item*

Synopsis	Enter the **est-profile** list instance
Context	**configure** system security pki est-profile *named-item*
Tree	est-profile
Description	Commands in this context configure an Enrollment over Secure Transport (EST) profile.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Max. instances	128
Introduced	21.10.R1
Platforms	All

[**name**] *named-item*

Synopsis	Enrollment over Secured Transport profile name
Context	**configure** system security pki est-profile *named-item*
Tree	est-profile
Description	This command configures the EST profile name.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

check-id-kp-cmcra-only *boolean*

Synopsis	Check id-kp-cmcra in the EST certificate
Context	**configure** system security pki est-profile *named-item* check-id-kp-cmcra-only *boolean*
Tree	check-id-kp-cmcra-only
Default	false
Introduced	21.10.R1
Platforms	All

client-tls-profile *named-item*

Synopsis	TLS client profile assigned to applications
Context	**configure** system security pki est-profile *named-item* client-tls-profile *named-item*
Tree	client-tls-profile
Description	This command specifies the TLS client profile to be assigned to applications for encryption. The profile creates the TLS connection to the EST server.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character

server

Synopsis	Enter the **server** context
Context	**configure** system security pki est-profile *named-item* server
Tree	server
Description	Commands in this context configure EST server parameters.
Introduced	21.10.R1
Platforms	All

fqdn *fully-qualified-domain-name*

Synopsis	Fully Qualified Domain Name (FQDN) of the EST server
Context	**configure** system security pki est-profile *named-item* server fqdn *fully-qualified-domain-name*
Tree	fqdn
Description	This command specifies to use the FQDN of the EST server.
String length	1 to 255
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	All

ipv4 *ipv4-unicast-address*

Synopsis	IPv4 address of the EST server
Context	**configure** system security pki est-profile *named-item* server ipv4 *ipv4-unicast-address*
Tree	ipv4
String format	'ipv4-address' must use only digits and dots (no %zone) 'ipv4-address' must be a.b.c.d with each octet 0-255 (no zone-id)
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	All

ipv6 *(ipv4-address-no-zone | ipv6-address-no-zone)*

Synopsis	IPv6 address of the EST server

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** system security pki est-profile *named-item* server ipv6 *(ipv4-address-no-zone | ipv6-address-no-zone)*
Tree	ipv6
Notes	The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.
Introduced	21.10.R1
Platforms	All

path

Synopsis	Enter the **path** context
Context	**configure** system security pki est-profile *named-item* server path
Tree	path
Description	Commands in this context configure URL paths for EST request messages.
Introduced	26.3.R1
Platforms	All

cacerts *string*

Synopsis	Server path to request CA certificates
Context	**configure** system security pki est-profile *named-item* server path cacerts *string*
Tree	cacerts
String length	1 to 255
String format	'cacerts' must start with / (e.g. /path)
Introduced	26.3.R1
Platforms	All

simpleenroll *string*

Synopsis	Server path to request simple certificate enrollment
Context	**configure** system security pki est-profile *named-item* server path simpleenroll *string*
Tree	simpleenroll
String length	1 to 255
String format	'simpleenroll' must start with / (e.g. /path)
Introduced	26.3.R1
Platforms	All

© 2026 Nokia.

simplereenroll *string*

Synopsis	Server path for the reenrollment of clients
Context	**configure** system security pki est-profile *named-item* server path simplereenroll *string*
Tree	simplereenroll
String length	1 to 255
String format	'simplereenroll' must start with / (e.g. /path)
Introduced	26.3.R1
Platforms	All

port *number*

Synopsis	Port number of the EST server
Context	**configure** system security pki est-profile *named-item* server port *number*
Tree	port
Range	1 to 65535
Default	443
Introduced	21.10.R1
Platforms	All

transmission-profile *named-item*

Synopsis	Transmission profile name for EST
Context	**configure** system security pki est-profile *named-item* transmission-profile *named-item*
Tree	transmission-profile
Description	This command associates a file transmission profile to the EST profile. The transmission profile defines transport parameters for protocol such as HTTP, include routing instance, source address, timeout value, and so on.
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	21.10.R1
Platforms	All

source-address

Synopsis	Enter the **source-address** context
Context	**configure** system security source-address
Tree	source-address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description Commands in this context configure the IP source address that is used in all unsolicited packets sent by the specified applications.

This configuration applies to packets transmitted in-band (for example, a network port on an IOM) and does not apply to packets transmitted out-of-band on the management interface on the CPM Ethernet port. Packets transmitted using the CPM Ethernet port use the address of the CPM Ethernet port as the IP source address in the packet.

When a source address is specified for the PTP application, the port-based 1588 hardware timestamping assist function is applied to PTP packets matching the IPv4 address of the router interface used to ingress the SR/ESS or IP address specified in this command. If the IP address is removed, the port-based 1588 hardware timestamping assist function is only applied to PTP packets matching the IPv4 address of the router interface.

Introduced 16.0.R1

admin-password *hashed-leaf*

Synopsis	Administrative password for the enable command
Context	**configure** system security system-passwords admin-password *hashed-leaf*
Tree	admin-password
Description	This command allows a user with administrative permissions to configure a password that enables a user to become an administrator. This password is valid only for one session. When enabled, no authorization to TACACS + or RADIUS is performed and the user is locally regarded as an administrative user. If the **admin-password** is configured in the **configure system security system-passwords admin-password** context, any user can enter the special mode by entering the **enable** command. **enable** is in the default profile. By default, all users are given access to this command. After the **enable** command is entered, the user is prompted for a password. If the password matches, the user is given unrestricted access to all commands. The minimum length of the password is determined by the **minimum-length** command. The complexity requirements for the password are determined by the **complexity** command. **Note:** This command applies to a local user, in addition to users on RADIUS, TACACS, and LDAP. (none)

Reference	**configure** system security pki ca-profile *named-item*
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

client-cipher-list [client-cipher-list-name] *named-item*

Synopsis	Enter the **client-cipher-list** list instance
Context	**configure** system security tls client-cipher-list *named-item*
Tree	client-cipher-list
Description	Commands in this context create a cipher list the client sends to the server in the client Hello message. It consists of a list of ciphers supported and preferred by SR OS for use in the TLS session. The server matches this client list against the server cipher list. The most preferred cipher found in both lists is chosen.
Max. instances	16
Introduced	16.0.R1
Platforms	All

[**client-cipher-list-name**] *named-item*

Synopsis	Client cipher list name
Context	**configure** system security tls client-cipher-list *named-item*
Tree	client-cipher-list
String length	1 to 32
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

tls12-cipher [index] *number*

Synopsis	Enter the **tls12-cipher** list instance
Context	**configure** system security tls client-cipher-list *named-item* tls12-cipher *number*
Tree	tls12-cipher

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	Commands in this context configure the cipher suite that is negotiated by the server and client.
Introduced	22.2.R1
Platforms	All

[**index**] *number*

Synopsis	Index of the cipher
Context	**configure** system security tls client-cipher-list *named-item* tls12-cipher *number*
Tree	tls12-cipher
Description	This command configures the index number of the cipher. The index number provides the location of the cipher in the negotiation list; the lower index numbers are higher in the list, and the higher index numbers are lower in the list.
Range	1 to 255
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	All

status-verify

Synopsis	Enter the **status-verify** context
Context	**configure** system security tls client-tls-profile *named-item* status-verify
Tree	status-verify
Description	Commands in this context configure certificate revocation status verification options for the end-entity certificate in a TLS client.
Introduced	23.7.R1
Platforms	All

default-result *keyword*

Synopsis	Default result of certificate status verification
Context	**configure** system security tls client-tls-profile *named-item* status-verify default-result *keyword*
Tree	default-result
Description	This command configures the default result of the entity certificate verification in the TLS client profile. This command overwrites the EE certificate revocation verification for the TLS client profile. By default the router checks the certification revocation status, but if this command is set to **good**, the end-entity certificate revocation status is overwritten and a good revocation status is returned for the EE certificate. If this command is set to **revoked**, the router returns the actual revocation status of the end-entity certificate.

status-verify

Synopsis	Enter the **status-verify** context
Context	**configure** system security tls server-tls-profile *named-item* status-verify
Tree	status-verify
Description	Commands in this context configure certificate revocation status verification options for the end-entity certificate in a TLS server.
Introduced	23.7.R1
Platforms	All

default-result *keyword*

Synopsis	Default result of certificate status verification
Context	**configure** system security tls server-tls-profile *named-item* status-verify default-result *keyword*
Tree	default-result
Description	This command configures the default result of the entity certificate verification in the TLS server profile. This command overwrites the EE certificate revocation verification for the TLS server profile. By default the router checks the certification revocation status, but if this command is set to **good**, the end-entity certificate revocation status is overwritten and a good revocation status is returned for the EE certificate. If this command is set to **revoked**, the router returns the actual revocation status of the end-entity certificate.
Options	revoked, good
Default	revoked
Introduced	23.7.R1
Platforms	All

ee-revocation

Synopsis	Enter the **ee-revocation** context

Platforms	All

use-pqc-only *boolean*

Synopsis	Negotiate only PQC ciphers, groups, and signatures
Context	**configure** system security tls use-pqc-only *boolean*
Tree	use-pqc-only
Description	When configured to **true**, the router only uses PQC algorithms. When configured to **true**, the system requires that the signature, cipher, and group lists must each have at least one PQC algorithm configured. If this condition is not met, the system does not allow the list to be assigned to an administratively enabled server or client TLS profile. In addition, with this command enabled, TLS 1.3 only advertises PQC algorithms within each list in the TLS handshake and ignores any non-PQC algorithms, if they are present in the list. This is a system-wide token and, when enabled, it affects all TLS sessions. Consequently, it cannot be enabled if any server or client TLS profiles contain existing lists that do not support PQC algorithms. To enable this command, the user must first add a PQC algorithm to all lists that are assigned to administratively enabled profiles. When configured to **false**, the router allows both non-PQC and PQC algorithms to be negotiated.
Default	false
Introduced	26.7.R1
Platforms	All

Range	0 to 60
Units	minutes
Default	5
Introduced	16.0.R1
Platforms	All

authentication-order

Synopsis	Enter the **authentication-order** context
Context	**configure** system security user-params authentication-order
Tree	authentication-order
Description	Commands in this context configure the sequence in which the system attempts authentication and authorization among the local user database, RADIUS servers, TACACS+ servers, and LDAP servers. Configure the order from the most preferred method to the least preferred. The presence of all methods in the command line does not guarantee they are all operational. Specifying options that are not available delays user authentication. If all operational methods are attempted and no authentication for a particular login has been granted, an entry in the security log records the failed attempt. Both the attempted login identification and originating IP address are logged with a timestamp. The default order is [**radius tacplus ldap local**]. The order is not applicable to SNMPv3. SNMPv3 messages ignore the configured order and are authorized using the locally configured users only. TACACS+, RADIUS, and LDAP are not supported for SNMPv3 authentication. **Note:** This command applies to a local user, in addition to users on RADIUS, TACACS+, and LDAP.
Introduced	16.0.R1
Platforms	All

exit-on-reject *boolean*

Synopsis	Ignore subsequent AAA methods after a reject
Context	**configure** system security user-params authentication-order exit-on-reject *boolean*
Tree	exit-on-reject
Description	When configured to **true**, the router stops authentication if one of the AAA methods configured in the authentication order sends a rejection.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the router attempts the next AAA method if a AAA method sends a rejection. If all AAA methods are exhausted, authentication and authorization is rejected.

If the order specifies **local** as the first method, the following actions apply:

- If this command is set to **true** and the user does not exist, the user is not authenticated.
- If the user can be authenticated locally, other methods, if configured, are used for authorization and accounting.
- If the user is configured locally but without console access, login is denied.

Default	false
Introduced	16.0.R1
Platforms	All

order *keyword*

Synopsis	Authentication and authorization order
Context	**configure** system security user-params authentication-order order *keyword*
Tree	order
Description	This command specifies the order of authentication and authorization. The default order is [**radius tacplus ldap local**]

disallow-sequence-keys *number*

Synopsis	Minimum length of disallowed sequential characters
Context	**configure** system security user-params local-user password complexity-rules disallow-sequence-keys *number*
Tree	disallow-sequence-keys
Description	This command configures the number of consecutive characters that are not allowed to be entered as part of the password on a U.S. English or Korean keyboard. These characters can be lowercase or uppercase letters, or numbers. Special characters are not taken into account. These consecutive characters can be horizontal (left to right) or (right to left) or diagonal (up to bottom or bottom to top). If the number of consecutive characters is equal to or larger than the configured value, the password is disallowed. For example, if the user attempts to use the password "dsalkjhgfdsa", with this command configured to 8, the system rejects the password because the first consecutive sequence "dsa" is 3 lowercase letters, which passes the check, but the second consecutive sequence is "lkjhgfdsa", which consists of 9 consecutive lowercase letters and this does not pass the check.
Range	2 to 8
Introduced	24.7.R1
Platforms	All

minimum-classes *number*

restricted-to-home *boolean*

Synopsis	Restrict file access to the home directory of the user
Context	**configure** system security user-params local-user user *named-item* restricted-to-home *boolean*
Tree	restricted-to-home
Description	When configured to **true**, the router denies the user from accessing files outside of their local home directory. Files can be accessed locally by CLI file commands and output modifiers such as **>** (file redirect). The system denies all configuration save operations (such as **admin save**) via any management interface (such as CLI and NETCONF) unless **save-when-restricted** is enabled. File access is denied unless a home directory is configured and the directory is created by an administrator.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When configured to **false**, the router permits the user to access all files on the system and to remote files.

Default true

Introduced 16.0.R1

Platforms All

save-when-restricted *boolean*

Synopsis Save configurations when the user is restricted to home

Context **configure** system security user-params local-user user *named-item* save-when-restricted *boolean*

Tree save-when-restricted

Description When configured to **true**, the system permits configuration save operations for all configuration regions (such as bof and configure) via any management interface (such as CLI and NETCONF) even if **restricted-to-home** is enabled.

The configuration for each region can be saved with **admin save** CLI commands or when committed over NETCONF and gRPC.

When configured to **false**, the system denies saving the configuration when **restricted-to-home** is enabled, unless the home directory of the user includes the location of the saved configuration file.

Default true

Introduced 22.10.R1

Platforms All

Tree	authentication
Description	Commands in this context configure the SNMPv3 authentication and privacy protocols for the user to communicate with the router. The keys are stored in an encrypted format in the configuration. The keys configured with these commands must be localized keys, which are a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the **tools perform system management-interface snmp generate-key** command to generate localized authentication and privacy keys. If authentication is not configured, only the username is required to allow and authenticate SNMPv3 operations.
Introduced	16.0.R1
Platforms	All

authentication-key *encrypted-leaf-hex-without-prefix*

Synopsis	Localized authentication key
Context	**configure** system security user-params local-user user *named-item* snmp authentication authentication-key *encrypted-leaf-hex-without-prefix*
Tree	authentication-key
Description	This command specifies the authentication key for the authentication protocol. The key must be a localized key, which is a hash of the SNMP engine ID and a password. The password is not entered directly in this command. Use the **tools perform system management-interface snmp generate-key** command to generate a localized authentication key. This command uses a protected format where the specific format is indicated by the **hash**, **hash2**, **hash3**, or **custom** suffix. See "Configuration secrets" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide* for more information.
String length	1 to 166
String format	'encrypted-leaf-hex-without-prefix' must have clear text in hex without 0x or end with hash/hash2/hash3/custom
Introduced	16.0.R1
Platforms	All

switch-fabric

Synopsis	Enter the **switch-fabric** context
Context	**configure** system switch-fabric
Tree	switch-fabric
Description	Commands in this context configure system level attributes related to the switch fabric.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR-7, 7750 SR-12e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS

failure-recovery

Synopsis	Enter the **failure-recovery** context
Context	**configure** system switch-fabric failure-recovery
Tree	failure-recovery
Description	Commands in this context configure the attributes related to the automatic switch fabric recovery process. This process is triggered when there are two resets of an IOM/XCM due to ICC failures within a small time frame. The recovery process involves the sequential resetting of SFM in case the issues are due to one of the SFM in the ICC communication path. As the final step in the recovery process, a CPM switchover is triggered to reset the active CPM.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR-7, 7750 SR-12e, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the failure recovery process

Default	disable
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR-7, 7750 SR-12e, 7950 XRS

sfm-loss-threshold *number*

Synopsis	Number of SFMs that can fail before SFM overload state
Context	**configure** system switch-fabric sfm-loss-threshold *number*
Tree	sfm-loss-threshold
Description	This command specifies the number of SFMs that are permitted to fail before the system goes into SFM overload state. The default value for the 7750 SR-7s is 1 and the default value for the 7750 SR-14s is 2. Users can select the SFM limit based on the number possible for the system minus one. For the 7750 SR-7s, the limit is 3 and the limit for the 7750 SR-14s is 7.
Range	1 to 7
Introduced	20.5.R1
Platforms	7750 SR-7s, 7750 SR-14s

telemetry

delay-on-boot *number*

Synopsis	Delay for persistent subscriptions after system boot
Context	**configure** system telemetry persistent-subscriptions delay-on-boot *number*
Tree	delay-on-boot
Description	This command configures the delay timer for gRPC telemetry persistent subscriptions. When the timer expires, gRPC telemetry persistent subscriptions become operational and connections are initiated. This delay prevents the system from trying to establish gRPC persistent subscriptions while it is still converging. When no delay is configured, gRPC telemetry persistent subscriptions are initiated after the system boots and gRPC becomes operational.

alarm [rmon-alarm-id] *number*

Synopsis	Enter the **alarm** list instance
Context	**configure** system thresholds rmon alarm *number*
Tree	alarm
Description	Commands in this context configure an entry in the RMON-MIB alarmTable and controls the monitoring and triggering of threshold crossing events. At least one associated **configure system thresholds rmon event** command must be configured to trigger the notification or logging of a threshold crossing event. The agent periodically takes statistical sample values from the MIB variable specified for monitoring and compares them to thresholds configured with this command. This command configures the MIB variable for monitoring, the polling period (interval), the sampling type (absolute or delta value), and the rising and falling threshold commands. If a sample has crossed a threshold value, the associated event is generated.
Max. instances	1200
Introduced	16.0.R1
Platforms	All

[**rmon-alarm-id**] *number*

Synopsis	RMON alarm identifier
Context	**configure** system thresholds rmon alarm *number*

falling-threshold *number*

Synopsis	Threshold for the falling sampled statistic
Context	**configure** system thresholds rmon alarm *number* falling-threshold *number*
Tree	falling-threshold
Description	This command configures the router to create a threshold event when the current sampled value is less than or equal to this threshold value, and the value at the last sampling interval was greater than this threshold. A single threshold crossing event is also generated if the first sample taken is less than or equal to this threshold and the associated **startup-alarm** is equal to **falling** or **either**. After a falling threshold crossing event is generated, another such event is not generated until the sampled value rises above this threshold and reaches greater than or equal to the **rising-threshold** value.
Range	-2147483648 to 2147483647
Introduced	16.0.R1
Platforms	All

interval *number*

Synopsis	Polling period over which data is sampled and compared
Context	**configure** system thresholds rmon alarm *number* interval *number*
Tree	interval
Description	This command specifies the polling interval over which the data is sampled and compared with the rising and falling thresholds. When setting this interval value, take care in the case of **delta** type sampling, set the interval short enough that the sampled variable is very unlikely to increase or decrease by more than 2147483647 - 1 during a single sampling interval. Take care to avoid setting the interval value too low, to avoid creating unnecessary processing overhead.
Range	1 to 2147483647
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

owner *string-not-all-spaces*

Options	absolute – Value compared with end sampling interval thresholds delta – Selected minus current and compared with thresholds
Default	absolute
Introduced	16.0.R1
Platforms	All

startup-alarm *keyword*

Synopsis	TCA type eligible to be raised on the test's first poll
Context	**configure** system thresholds rmon alarm *number* startup-alarm *keyword*
Tree	startup-alarm
Options	rising – Raise TCA if threshold is crossed in upward direction falling – Raise TCA if threshold is crossed in downward direction either – Raise TCA if threshold is crossed from either direction
Default	either
Introduced	16.0.R1
Platforms	All

variable-oid *string*

Synopsis	Object identifier to sample the specific variable
Context	**configure** system thresholds rmon alarm *number* variable-oid *string*
Tree	variable-oid
Description	This command configures the SNMP object identifier of the particular variable for sampling. Only SNMP variables that resolve to an ASN.1 primitive type of integer (Integer32, Counter32, Counter64, Gauge, or TimeTicks) may be sampled. The *oid-string* may be expressed using either the dotted string notation or as object name plus dotted instance identifier. For example, "1.3.6.1.2.1.2.2.1.10.184582144" or "ifInOctets.184582144".
String length	1 to 255
Notes	This element is mandatory.
Introduced	16.0.R1

Synopsis	Owner that created this entry and uses the resources
Context	**configure** system thresholds rmon event *number* owner *string-not-all-spaces*
Tree	owner
Description	This command configures the owner of the alarm. This command allows entries created in the RMON-MIB alarmTable by remote SNMP managers to save and reload in a CLI configuration file. CLI users do not normally configure the owner.
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Default	TiMOS CLI
Introduced	16.0.R1
Platforms	All

hc-alarm [rmon-hc-alarm-id] *number*

Synopsis	Enter the **hc-alarm** list instance
Context	**configure** system thresholds rmon hc-alarm *number*
Tree	hc-alarm
Description	Commands in this context configure an entry in the HC-ALARM-MIB hcAlarmTable and controls the monitoring and triggering of threshold crossing events. At least one associated **configure system thresholds rmon event** command must be configured to trigger the notification or logging of a threshold crossing event. The agent periodically takes statistical sample values from the MIB variable specified for monitoring and compares them to thresholds configured with this command. This command configures the MIB variable for monitoring, the polling period (interval), the sampling type (absolute or delta value), and the rising and falling threshold commands. If a sample has crossed a threshold value, the associated event is generated.

Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the router to create a threshold event when the current sampled value is less than or equal to this threshold value, and the value at the last sampling interval was greater than this threshold. A single threshold crossing event is also generated if the first sample taken is less than or equal to this threshold and the associated **startup-alarm** is equal to **falling** or **either**. After a falling threshold crossing event is generated, another such event is not generated until the sampled value rises above this threshold and reaches greater than or equal to the **rising-threshold** value.

authentication-keychain *reference*

Synopsis	Keychain used to authenticate broadcast messages
Context	**configure** system time ntp peer *(ipv4-address-no-zone | ipv6-address-no-zone)* router-instance *string* authentication-keychain *reference*
Tree	authentication-keychain
Description	This command configures the keychain used to authenticate messages sent by this node. The keychain infrastructure is queried using this keychain name to get the youngest key used for generating the authentication value for the message. When an NTP packet is received by this node, the keychain infrastructure is queried using the keychain name and the key ID extracted from the received message to get the key used to perform the authentication check. If authentication does not pass, the packet is rejected. Keychain entries also have a direction. The key ID and authentication keychain are mutually

Introduced	16.0.R1
Platforms	All

prefer-local-time *boolean*

Synopsis	Use local time over UTC time in the system
Context	**configure** system time prefer-local-time *boolean*
Tree	prefer-local-time
Description	When configured to **true**, the system uses local time. This preference is applied to objects such as log file names, created and completed times reported in log files, NETCONF and gRPC date-and-time leafs, and rollback times displayed in **show** command outputs. When configured to **false**, the system uses UTC time. **Note**: The timezone used for **show** command outputs during a CLI session can be controlled using the **environment time-display** command. **Note**: The format used for the date-time strings may change, depending on the command setting. For example, when this command is set to **true**, all date-time strings include a suffix of three to five characters that indicates the timezone used. **Note**: The time format for timestamps on log events is controlled on a per-log basis, using the **configure log log-id time-format** command.

4.46.1 test-oam command descriptions

test-oam

Synopsis	Enter the **test-oam** context
Context	**configure** test-oam
Tree	test-oam
Introduced	16.0.R4
Platforms	All

icmp

Synopsis	Enter the **icmp** context
Context	**configure** test-oam icmp
Tree	icmp
Introduced	20.10.R1
Platforms	All

ipv6

Synopsis	Enter the **ipv6** context
Context	**configure** test-oam icmp ipv6
Tree	ipv6
Introduced	22.7.R1
Platforms	All

length-field *boolean*

Synopsis	Use length field in ICMPv6 responses
Context	**configure** test-oam icmp ipv6 length-field *boolean*
Tree	length-field
Default	false
Introduced	22.7.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

maximum-original-datagram *boolean*

Synopsis	ICMPv6 traceroute responses with largest datagram
Context	**configure** test-oam icmp ipv6 maximum-original-datagram *boolean*
Tree	maximum-original-datagram
Description	When configured to **true**, this command enables the original datagram field of the ICMPv6 error message to be a maximum of 1232 bytes. When configured to **false**, the original datagram field of the ICMPv6 error message smaller than 1232 bytes be built smaller.
Default	false
Introduced	22.7.R1
Platforms	All

ping-template [name] *named-item-64*

Synopsis	Enter the **ping-template** list instance
Context	**configure** test-oam icmp ping-template *named-item-64*
Tree	ping-template
Description	Commands in this context define ping timers and thresholds that verify connectivity and the the operational state of the IP interface.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**name**] *named-item-64*

Synopsis	Ping template name
Context	**configure** test-oam icmp ping-template *named-item-64*
Tree	ping-template
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

description *description*

Synopsis	Text description
Context	**configure** test-oam icmp ping-template *named-item-64* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dot1p *number*

Synopsis	Dot1p in Ethernet header of outgoing ping packets
Context	**configure** test-oam icmp ping-template *named-item-64* dot1p *number*
Tree	dot1p
Range	0 to 7
Default	7
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dscp *keyword*

Synopsis	DSCP value used in the outgoing ping packet
Context	**configure** test-oam icmp ping-template *named-item-64* dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Default	nc1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

failure-threshold *number*

Synopsis	Failure threshold to declare inter-connectivity down
Context	**configure** test-oam icmp ping-template *named-item-64* failure-threshold *number*
Tree	failure-threshold
Range	2 to 10
Default	3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

Synopsis	Packet transmit interval
Context	**configure** test-oam icmp ping-template *named-item-64* interval *number*
Tree	interval
Range	1 to 60
Units	seconds
Default	60
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reactivation-failure-threshold *number*

Synopsis	Threshold of consecutive failures at reactivation
Context	**configure** test-oam icmp ping-template *named-item-64* reactivation-failure-threshold *number*
Tree	reactivation-failure-threshold
Description	This command configures the number of consecutive failures that must occur when transmitting at the reactivation interval without success before the transmission interval is changed to the standard interval.
Range	1 to 10
Default	4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

reactivation-interval *number*

Synopsis	Ping reactivation interval
Context	**configure** test-oam icmp ping-template *named-item-64* reactivation-interval *number*
Tree	reactivation-interval
Description	This command configures the packet transmit interval used when the IP interface becomes operationally down because of a ping template failure after receiving a successful response to the previous ICMP echo request.
Range	1 to 60
Units	seconds
Default	1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reactivation-threshold *number*

Synopsis	Success threshold to declare inter-connectivity up
Context	**configure** test-oam icmp ping-template *named-item-64* reactivation-threshold *number*
Tree	reactivation-threshold
Description	This command configures the minimum number of consecutive successful responses of ICMP replies that must occur before the IP interface transitions from operationally down (due to ping validation failure) to operationally up. This value is a stability metric intended to prevent flapping.
Range	1 to 10
Default	3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reactivation-timeout *number*

Synopsis	Reactivation wait time before packet is declared lost
Context	**configure** test-oam icmp ping-template *named-item-64* reactivation-timeout *number*
Tree	reactivation-timeout
Range	1 to 60
Units	seconds
Default	1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

size *number*

Synopsis	Data field size of the outgoing ICMP echo packet
Context	**configure** test-oam icmp ping-template *named-item-64* size *number*
Tree	size
Range	12 to 9786
Units	octets
Default	56
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

timeout *number*

Synopsis	Wait time before ICMP echo request is declared lost
Context	**configure** test-oam icmp ping-template *named-item-64* timeout *number*
Tree	timeout
Range	1 to 60
Units	seconds
Default	5
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ttl *number*

Synopsis	TTL value for the outgoing ping packet
Context	**configure** test-oam icmp ping-template *named-item-64* ttl *number*
Tree	ttl
Description	This command configures the TTL value used in the outgoing ping packet. The tested interface must be directly connected on the same subnet.
Range	1 to 255
Default	1
Introduced	20.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lag-ip-measurement

Synopsis	Enter the **lag-ip-measurement** context
Context	**configure** test-oam lag-ip-measurement
Tree	lag-ip-measurement
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lag-ip-measurement-template [template-name] *named-item-64*

Synopsis	Enter the **lag-ip-measurement-template** list instance
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64*
Tree	lag-ip-measurement-template
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[**template-name**] *named-item-64*

Synopsis	LAG IP measurement template name
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64*
Tree	lag-ip-measurement-template
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the template
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* admin-state *keyword*
Tree	admin-state

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Options	enable, disable
Default	disable
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *description*

Synopsis	Text description
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval *number*

Synopsis	Length of time between test packet transmits
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* interval *number*
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sample-window

Synopsis	Enter the **sample-window** context
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* sample-window
Tree	sample-window
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.

multiplier *number*

Synopsis	Duration of the sample window
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* sample-window multiplier *number*
Tree	multiplier
Description	This command configures the duration of each sample window, which is equal to the interval multiplied by this value.
Range	1 to 900
Default	10
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

twamp-light

Synopsis	Enter the **twamp-light** context
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* twamp-light
Tree	twamp-light
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-egress-remark-dscp *boolean*

Synopsis	Overwrite launched packet IP header DSCP
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* twamp-light allow-egress-remark-dscp *boolean*
Tree	allow-egress-remark-dscp
Description	When configured to **true**, the system overwrites the IP header DSCP for each launched packet, in accordance with the specified egress port QoS policy.
Default	false
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

allow-ipv6-udp-checksum-zero *boolean*

Synopsis	Allow processing of IPv6 packets with UDP checksum zero
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* twamp-light allow-ipv6-udp-checksum-zero *boolean*
Tree	allow-ipv6-udp-checksum-zero
Default	false
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dest-udp-port *number*

Synopsis	Destination UDP port for the tests
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* twamp-light dest-udp-port *number*
Tree	dest-udp-port
Range	1 to 65535
Default	862
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dscp *keyword*

Synopsis	DSCP in the IP header of the launched test packet
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* twamp-light dscp *keyword*
Tree	dscp
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Default	nc1
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fc *keyword*

Synopsis	QoS FC used to launch each test packet
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* twamp-light fc *keyword*
Tree	fc
Options	be – Best Effort l2 – Low 2 (best effort) af – Assured Forwarding (assured) l1 – Low 1 (assured) h2 – High 2 (high priority) ef – Expedited Forwarding (high priority) h1 – High 1 (high priority) nc – Network Control (high priority)
Default	h1
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

profile *keyword*

Synopsis	QoS profile used to launch each test packet
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* twamp-light profile *keyword*
Tree	profile
Options	in – In profile out – Out of profile
Default	in
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

session-sender-type *keyword*

Synopsis	Packet type to transmit
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* twamp-light session-sender-type *keyword*
Tree	session-sender-type
Description	This command configures the type of test packet to transmit. When the **stamp** option is configured, STAMP transmission, packet formatting, and packet processing is allowed and STAMP test packets support TLVs. When the **twamp-**

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

	light option is configured, TWAMP Light transmission, packet formatting, and packet processing is allowed, but TWAMP Light test packets do not allow TLVs.
Options	twamp-light – TWAMP Light test packet format stamp – STAMP test packet format
Default	twamp-light
Introduced	25.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

src-udp-port *number*

Synopsis	Source UDP port for testing
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* twamp-light src-udp-port *number*
Tree	src-udp-port
Description	This command configures the source UDP port for test packets. When a port is not specified using this command, the system dynamically allocates the UDP port from the dynamic range.
Range	64374 to 64383
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

timestamp-format *keyword*

Synopsis	Timestamp format for launched test packets
Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* twamp-light timestamp-format *keyword*
Tree	timestamp-format
Options	ntp – Network Time Protocol ptp – Precision Time Protocol
Default	ntp
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ttl *number*

Synopsis	TTL in the IP header of the launched test packet

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam lag-ip-measurement lag-ip-measurement-template *named-item-64* twamp-light ttl *number*
Tree	ttl
Range	1 to 255
Default	1
Introduced	24.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

link-measurement

Synopsis	Enter the **link-measurement** context
Context	**configure** test-oam link-measurement
Tree	link-measurement
Description	Commands in this context configure the link measurement template attributes that are inherited on associated IP interfaces for delay reporting to the routing engine.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

measurement-template [template-name] *named-item-64*

Synopsis	Enter the **measurement-template** list instance
Context	**configure** test-oam link-measurement measurement-template *named-item-64*
Tree	measurement-template
Description	Commands in this context configure the attributes of the measurement template that can be assigned to an IP interface. Changes can be made without disabling the template, although some modifications cause the test on associated IP interfaces to terminate and restart. A measurement template can be removed if no interfaces reference it.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[template-name] *named-item-64*

Synopsis	Measurement template name
Context	**configure** test-oam link-measurement measurement-template *named-item-64*
Tree	measurement-template

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the measurement template
Context	**configure** test-oam link-measurement measurement-template *named-item-64* admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

aggregate-sample-window

Synopsis	Enter the **aggregate-sample-window** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* aggregate-sample-window
Tree	aggregate-sample-window
Description	Commands in this context configure the attributes of the aggregate sample window used with the measurement template assigned to an IP interface. The aggregate sample window is the collection of sample windows.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *number*

Synopsis	Number of sample windows in the aggregate sample window
Context	**configure** test-oam link-measurement measurement-template *named-item-64* aggregate-sample-window multiplier *number*
Tree	multiplier
Range	1 to 12

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	12
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold

Synopsis	Enter the **threshold** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* aggregate-sample-window threshold
Tree	threshold
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

absolute *number*

Synopsis	Absolute delta for delay measurement reporting
Context	**configure** test-oam link-measurement measurement-template *named-item-64* aggregate-sample-window threshold absolute *number*
Tree	absolute
Description	This command configures the absolute minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine. If an absolute value is not configured the threshold is disabled.
Range	1 to 100000
Units	microseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

relative *number*

Synopsis	Relative delta for measurement reporting
Context	**configure** test-oam link-measurement measurement-template *named-item-64* aggregate-sample-window threshold relative *number*
Tree	relative
Description	This command configures the relative minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If a relative value is not configured, the threshold is disabled.

Range	1 to 100
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

window-integrity *number*

Synopsis	Sample percentage required for window integrity report
Context	**configure** test-oam link-measurement measurement-template *named-item-64* aggregate-sample-window window-integrity *number*
Tree	window-integrity
Description	This command configures the percentage value that is used to determine whether the aggregate sample window is integral, by comparing the number of samples received from the sample window to the percentage configured. The configured percentage translates to a required sample window count that must be included in the aggregate sample window. The number of samples is computed as follows: (window-integrity (%)) x (((aggregate-sample-window length (s)) / (sample-window length (s))) If the number of samples in the aggregate sample window is equal to or greater than the computed number of required samples, the sample window has integrity and the aggregate sample window result is compared to the configured sample window thresholds. If the count is less than the computed number of required samples, the aggregate sample window does not have integrity and the value is not considered as representative. In this case the aggregate sample window results are not compared to the configured sample window thresholds. If this parameter is not configured, integrity checking is disabled and all results are compared to the configured thresholds.
Range	1 to 100
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

delay *keyword*

Synopsis	Delay measurement statistic type
Context	**configure** test-oam link-measurement measurement-template *named-item-64* delay *keyword*

© 2026 Nokia.

last-reported-delay-hold *number*

Synopsis	Time to wait to flush the last reported delay
Context	**configure** test-oam link-measurement measurement-template *named-item-64* last-reported-delay-hold *number*
Tree	last-reported-delay-hold
Description	This command configures the timer that specifies the wait time before the last reported delay measurement is flushed after a link measurement test enters the operationally down state. The aging timer delays the flushing of the last reported delay metric to the routing engine. This timer starts a countdown to zero when an administrative function causes the operational state of the test on that specific interface to transition from up to down. If the timer expires before the operational state transitions to up, the previously reported value is flushed. The Delay Measurement Last Reported indicates “Cleared”. The timestamp indicates the time of the clear event. The Triggered By indicates “Expired”. If the administrative state recovers to operationally up before the expiration of the timer, the previous reported value is not flushed. The aging timer does not apply to failure conditions that do not affect the administrative state of the interface, for example interface failure or routing changes.
Range	0 | 1 to 86400
Units	seconds
Default	86400
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

reporting *boolean*

Synopsis	Report behavior for values for the configured threshold
Context	**configure** test-oam link-measurement measurement-template *named-item-64* reporting *boolean*
Tree	reporting
Description	When configured to **true**, the system reports a reached threshold to the routing engine.Reaching a configured **sample-window** or **aggregate-sample-window** indicates a value of interest. When configured to **false**, values reaching thresholds are not reported to the routing engine. In both enabled and disabled cases, the sample-window and aggregate-sample-window information and computed values are stored on the node until overwriting occurs.
Default	true
Introduced	22.7.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sample-window

Synopsis	Enter the **sample-window** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* sample-window
Tree	sample-window
Description	Commands in this context configure sample window attributes used when the measurement template is assigned to an IP interface. The sample window is the collection of individual probe results over a defined period.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

multiplier *number*

Synopsis	Multiplier of interval used for sample window length
Context	**configure** test-oam link-measurement measurement-template *named-item-64* sample-window multiplier *number*
Tree	multiplier
Description	This command configures the number of probe results that should be in the sample window. For example, a multiplier of 10 and an interval of 5 equals 50 probes being transmitted from an individual sample window. Consequently, 50 probe results are expected within the 50 second duration that the sample window is “In-progress”.
Range	1 to 900
Default	10
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

threshold

Synopsis	Enter the **threshold** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* sample-window threshold
Tree	threshold
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

absolute *number*

Synopsis	Absolute delta for delay measurement reporting
Context	**configure** test-oam link-measurement measurement-template *named-item-64* sample-window threshold absolute *number*
Tree	absolute
Description	This command configures the absolute minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine. If an absolute value is not configured the threshold is disabled.
Range	1 to 100000
Units	microseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

relative *number*

Synopsis	Relative delta for delay measurement reporting
Context	**configure** test-oam link-measurement measurement-template *named-item-64* sample-window threshold relative *number*
Tree	relative
Description	This command configures the relative minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine. If a relative value is not configured, the threshold is disabled.
Range	1 to 500
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

window-integrity *number*

Synopsis	Sample percentage required for window integrity report
Context	**configure** test-oam link-measurement measurement-template *named-item-64* sample-window window-integrity *number*
Tree	window-integrity

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command configures the percentage value that is used to determine whether the sample window has enough samples to be considered representative for that window (integrity), by comparing the number of samples received from the sample window to the percentage configured. The configured percentage considers the interval of probes and the length of the sample window to determine the number of packets required in the sample: (window-integrity (%)) x ((sample-window length (s)) / pps per test (interval)) If the count is less than the computed number of required samples, the sample window does not have integrity and the sample window results are not compared to configured sample window thresholds. If the count is equal to or greater than the computed number of required samples, the sample window has integrity and the aggregate sample window result is compared to the configured sample window thresholds. If the count is less than the computed number of required samples, the sample window does not have integrity and the value is not considered as representative. In this case the sample window results are not compared to the configured sample window thresholds. If this parameter is not configured, integrity checking is disabled and all results are compared to the configured thresholds.
Range	1 to 100
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

twamp-light

Synopsis	Enter the **twamp-light** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light
Tree	twamp-light
Description	Commands in this context configure TWAMP Light attributes that are used with the measurement template when assigned to IP interfaces.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-egress-remark-dscp *boolean*

Synopsis	Allow overwrite of DSCP value by the egress QoS policy
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light allow-egress-remark-dscp *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	allow-egress-remark-dscp
Description	When configured to **true**, the egress QoS process is able to modify the DSCP based on the egress QoS configuration and expose the DSCP to egress DSCP processing rules. When configured to **false**, the egress QoS process uses the DSCP as configured and bypasses egress QoS DSCP marking. If the **configure qos network egress remark-trusted force-egress-marking** command is configured for the network egress QoS profile, the egress QoS process is applied and the DSCP can be overwritten regardless of the **allow-egress-remark-dscp** configuration.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-ipv6-udp-checksum-zero *boolean*

Synopsis	Process IPv6 packets with UDP check sum zero
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light allow-ipv6-udp-checksum-zero *boolean*
Tree	allow-ipv6-udp-checksum-zero
Description	When configured to **true**, processing of IPv6 packets that arrive with a UDP checksum of zero is allowed. The destination UDP ports that are registered as TWAMP Test packets in the template allow this behavior. When configured to **false**, IPv6 packets that arrive with a UDP checksum of zero are discarded.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dest-udp-port *number*

Synopsis	Destination UDP port used by link measurement tests
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light dest-udp-port *number*
Tree	dest-udp-port
Description	This command configures the destination UDP port on outbound TWAMP Light measurement packets sent from the session controller. The destination UDP port must match the UDP port value configured on the TWAMP Light reflector that responds to this specific TWAMP Light test.
Range	1 to 65535

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	862
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dscp *keyword*

Synopsis	DSCP copied to TWAMP Light echo request packet header
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light dscp *keyword*
Tree	dscp
Description	This command configures the DSCP to be copied into the IP header of each TWAMP Light echo request packet launched for the test.
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

ipv6-destination-discovery

Synopsis	Enter the **ipv6-destination-discovery** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light ipv6-destination-discovery
Tree	ipv6-destination-discovery
Description	Commands in this context configure IPv6 discovery of a directly-connected IPv6 peer address.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of IPv6 auto destination discovery
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light ipv6-destination-discovery admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

discovery-interval *number*

Synopsis	Transmission frequency for discovery packets
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light ipv6-destination-discovery discovery-interval *number*
Tree	discovery-interval
Description	This command configures transmission frequency of the discovery packet to the all-routers multicast group (ff02::2) to discover the link-local address of the peer. This frequency is used during the **discover-timer** interval.
Range	1 to 10
Units	seconds
Default	10
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

discovery-timer *number*

Synopsis	Maximum time to remain in the discovery phase
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light ipv6-destination-discovery discovery-timer *number*
Tree	discovery-timer
Description	This command configures the amount of time to transmit peer discovery packets at the **discovery-interval**. The timer starts when the IPv6 protocols is enabled under the **configure router interface if-attribute delay dynamic twamp-light ipv6** context. At the expiration of the **discovery-interval** or when a peer is discovered, whichever comes first, the probe interval changes to the value configured for the **update-interval**.
Range	1 to 1800
Units	seconds
Default	60
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

update-interval *number*

Synopsis	Transmission frequency to maintain the peer address
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light ipv6-destination-discovery update-interval *number*
Tree	update-interval
Range	0 | 1 to 3600
Units	seconds
Default	600
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pad-tlv-size *number*

Synopsis	Optional PAD TLV size
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light pad-tlv-size *number*
Tree	pad-tlv-size

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Description	This command enables a STAMP PDU to include the PAD TLV. This increases the size of the STAMP PDU by the size of the added TLV. The PAD TLV includes an all zeros pattern.
Range	4 to 9714
Units	bytes
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

profile *keyword*

Synopsis	QoS profile for packet treatment in local node
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light profile *keyword*
Tree	profile
Description	This command specifies if the packets should be treated as in or out of profile as they move through the local node.
Options	in – In profile out – Out of profile
Default	in
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

return-path

Synopsis	Enter the **return-path** context
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light return-path
Tree	return-path
Description	Commands in this context configure the return-path TLV carried in the STAMP PDU.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

link *boolean*

Synopsis	The Return Path sub-TLV specifying link
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light return-path link *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	link
Description	When configured to **true**, the system includes the **return-path** TLV link. The link sub-tlv instructs a Session-Reflector configured for type **stamp** to use the receiving logical IP interface for the transmission of the response packet from the reflector to the **session-sender**. The destination of the reflected packet must be installed in the forwarding table and reachable out the IP interface or the packet is dropped by the Session-Reflector. When there are parallel non-equal cost return paths between the Session-Reflector and the Session-Sender the response packet can only be returned on the lowest cost path. When configured to **false**, the Return Path TLV carried in the STAMP PDU is not included with the test packet.
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

session-sender-type *keyword*

Synopsis	Packet type to transmit
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light session-sender-type *keyword*
Tree	session-sender-type
Description	This command configures the type of test packet to transmit. When the **stamp** option is configured, STAMP transmission, packet formatting, and packet processing is allowed and STAMP test packets support TLVs. When the **twamp-light** option is configured, TWAMP Light transmission, packet formatting, and packet processing is allowed, but TWAMP Light test packets do not allow TLVs.
Options	twamp-light – Two-Way Active Measurement Protocol (Light) stamp – Simple Two-Way Active Measurement Protocol
Default	stamp
Introduced	26.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

src-udp-port *number*

Synopsis	Fixed source UDP port for link measurement tests
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light src-udp-port *number*
Tree	src-udp-port
Description	This command specifies a source UDP port for link measurement tests.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Unless required, Nokia suggests that the link measurement dynamically select an available source UDP port from the dynamic range. Before a UDP port in the configurable range can be configured as a source it must be owned by the application. Use the **configure test-oam twamp twamp-light source-udp-port-pools port pool-type** command to map the port range to the application.

By default a source UDP port allocates from the dynamic range. The configuration of the source port should only be configured when required for interoperability. When the source IP, destination IP, and destination UPD port are the same for a test, the source UDP port must be different in order to uniquely identify the session.

Range	64374 to 64383
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

timestamp-format *keyword*

Synopsis	Format of the timestamp used in TWAMP Light PDU
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light timestamp-format *keyword*
Tree	timestamp-format
Description	This command configures the format of the timestamp used in the TWAMP Light PDU and places the requested timestamp format in the packet using the appropriate epoch. This is unrelated to any time distribution protocol used to synchronize time between clocks.
Options	ntp – Network Time Protocol ptp – Precision Time Protocol
Default	ntp
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ttl *number*

Synopsis	Time to live value used in the TWAMP Light test packet
Context	**configure** test-oam link-measurement measurement-template *named-item-64* twamp-light ttl *number*
Tree	ttl
Range	1 to 255
Default	1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

unidirectional-measurement *keyword*

Synopsis	Method used to compute the unidirectional delay value
Context	**configure** test-oam link-measurement measurement-template *named-item-64* unidirectional-measurement *keyword*
Tree	unidirectional-measurement
Description	This command specifies the unidirectional delay computation method as the actual forward delay (calculated using T2-T1 timestamps) or as derived using the round-trip delay divided by two (required if nodal clocks are not synchronized using an accurate time-synchronization method or protocol such as PTP).
Options	derived, actual
Default	derived
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mpls

Synopsis	Enter the **mpls** context
Context	**configure** test-oam mpls
Tree	mpls
Introduced	23.7.R1
Platforms	All

echo-request-downstream-map *keyword*

Synopsis	Format of the downstream mapping TLV
Context	**configure** test-oam mpls echo-request-downstream-map *keyword*
Tree	echo-request-downstream-map
Description	This command specifies the format of the downstream mapping TLV to use in all LSP trace packets and LDP tree trace packets originated on this node. The following downstream mapping TLVs are supported: the original Downstream Mapping (DSMAP) TLV, defined in RFC 4379 (obsoleted by RFC 8029) and the Downstream Detailed Mapping (DDMAP) TLV, defined in RFC 6424. See the "DDMAP TLV" section in the *7450 ESS, 7750 SR, 7950 XRS, and VSR OAM and Diagnostics Guide* for more information.
Options	dsmap – Downstream Mapping TLV ddmap – Downstream Detailed Mapping TLV

Use subject to Terms available at: www.nokia.com/terms.

Default	dsmap
Introduced	23.7.R1
Platforms	All

timestamp-format *keyword*

Synopsis	Timestamp format for MPLS ping request and reply PDUs
Context	**configure** test-oam mpls timestamp-format *keyword*
Tree	timestamp-format
Options	rfc4379 – 1900-based timestamp (standard) unix – 1970-based timestamp
Default	unix
Introduced	23.7.R1
Platforms	All

mpls-dm

Synopsis	Enter the **mpls-dm** context
Context	**configure** test-oam mpls-dm
Tree	mpls-dm
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of MPLS DM packet processing
Context	**configure** test-oam mpls-dm admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

service-activation-testhead

Synopsis	Enter the **service-activation-testhead** context
Context	**configure** test-oam service-activation-testhead
Tree	service-activation-testhead
Description	Commands in this context configure service activation launch parameters for the testhead function. This functionality is supported on FP4 and later platforms.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

acceptance-criteria-template [ac-template-name] *named-item-64*

Synopsis	Enter the **acceptance-criteria-template** list instance
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64*
Tree	acceptance-criteria-template
Description	Commands in this context configure the test acceptance criteria policy that the service test testhead OAM tool uses to determine the test result after test completion. The “default” value of this command is attached to every **service-stream** created under the **service-test** context for which no explicit acceptance criteria template policy is configured by the user. The default acceptance criteria template is not user-configurable. The default template does not set thresholds and only reports the end-of-run values.
Max. instances	100
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

[ac-template-name] *named-item-64*

Synopsis	Acceptance criteria template name
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64*
Tree	acceptance-criteria-template
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character

Notes	This element is part of a list key.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

cir-threshold *number*

Synopsis	CIR threshold
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64* cir-threshold *number*
Tree	cir-threshold
Description	This command configures a CIR value that is compared to the measured results for the CIR test types. If the measured value is equal to or greater than the configured value, the test passes; otherwise, it fails. For more information, see the **m-factor** command.
Range	1 to 400000000
Units	kilobps
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

delay-threshold *number*

Synopsis	Delay threshold configuration for acceptance criteria template
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64* delay-threshold *number*
Tree	delay-threshold
Description	This command configures a delay value that is compared to the measured delay at the end of the test to declare the test result. If the measured value is greater than the configured value, the test fails; otherwise, it passes. A measured delay value of zero also causes the test to fail.
Range	1 to 100000000
Units	microseconds
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

delay-var-threshold *number*

Synopsis	Delay variation threshold configuration for acceptance criteria template

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64* delay-var-threshold *number*
Tree	delay-var-threshold
Description	This command configures a delay variation value that is compared to the measured delay variation at the end of the test to declare the test result. If the measured value is greater than the configured value, the test fails; otherwise, it passes.
Range	1 to 100000000
Units	microseconds
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

description *description*

Synopsis	Text description
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

loss-threshold *decimal-number*

Synopsis	Loss threshold for acceptance criteria template
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64* loss-threshold *decimal-number*
Tree	loss-threshold
Description	This command configures a frame loss ratio (FLR) value that is compared to the measured FLR at the end of the test to determine the test result. If the measured value is greater than the configured value, the test fails; otherwise, it passes. Thresholds must be explicitly configured to use them for the comparison. The FLR is computed as a ratio of the difference of the number of received frames to the number of injected or sent frames divided by the number of sent frames.
Range	0.0000 to 100.0000
Units	percent
Introduced	23.10.R1

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

loss-threshold-policing *decimal-number*

Synopsis Frame loss ratio for a policing test

Context **configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64* loss-threshold-policing *decimal-number*

Tree loss-threshold-policing

Description This command configures a frame loss ratio (FLR) value for a policing test. The value is compared to the measured FLR at the end of the test to determine the test result. If the measured value is greater than the configured value, the test fails; otherwise, it passes.

Thresholds must be explicitly configured before they can be used for comparison. The FLR is computed as a ratio of the difference of the number of received frames to the number of injected or sent frames divided by the number of sent frames.

Range 0.0000 to 100.0000

Units percent

Introduced 23.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

m-factor *number*

Synopsis Throughput margin configuration

Context **configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64* m-factor *number*

Tree m-factor

Description This command configures the margin by which the observed throughput is off from the configured throughput to determine whether a service test passes or fails.

The M-factor is used with the CIR threshold and PIR threshold values for different test types to determine whether a test passes or fails.

type **cir**

- If the measured throughput is less than the difference of the configured CIR threshold and the M-factor, the test fails.

type **cir-pir**

- If the measured throughput is less than the difference of the configured PIR threshold and the M-factor, the test fails.

type **policing**

- If the measured throughput is less than the difference of the configured PIR threshold and the M-factor, the test fails.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- If the measured throughput is greater than the sum of the configured PIR threshold and the M-factor, the test fails.

type **performance**

- If the measured throughput is less than the difference of the configured PIR threshold and the M-factor, the test fails.

Range	1 to 400000000
Units	kilobps
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

pir-threshold *number*

Synopsis	PIR threshold
Context	**configure** test-oam service-activation-testhead acceptance-criteria-template *named-item-64* pir-threshold *number*
Tree	pir-threshold
Description	This command configures a PIR value that is compared to the measured results for the **cir-pir**, **policing**, and **performance** test types. If the measured value is equal to or greater than the configured value, the test passes; otherwise, it fails. For more information, see the **m-factor** command.
Range	1 to 400000000
Units	kilobps
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

frame-size-template [fs-template-name] *named-item-64*

Synopsis	Enter the **frame-size-template** list instance
Context	**configure** test-oam service-activation-testhead frame-size-template *named-item-64*
Tree	frame-size-template
Description	Commands in this context create a template to configure frames of different sizes for use with a test stream configured under the **service-test** command. The ITU-T Y.1564 methodology designates the letters “a” to “h” for a default frame size. The default frame size can be overwritten.
Max. instances	100
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

[**fs-template-name**] *named-item-64*

Synopsis	Frame size template name
Context	**configure** test-oam service-activation-testhead frame-size-template *named-item-64*
Tree	frame-size-template
String length	1 to 64
String format	'string-not-all-spaces' must contain at least one non-space character
Notes	This element is part of a list key.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

size-a *number*

Synopsis	Size-a
Context	**configure** test-oam service-activation-testhead frame-size-template *named-item-64* size-a *number*
Tree	size-a
Range	64 to 9212
Units	bytes
Default	64
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

size-b *number*

Synopsis	Size-b
Context	**configure** test-oam service-activation-testhead frame-size-template *named-item-64* size-b *number*
Tree	size-b
Range	64 to 9212

repeat *(hex-string | number)*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Repeated 4-byte pattern to pad each packet sent
Context	**configure** test-oam service-activation-testhead service-test *named-item-64* service-stream *number* frame-payload data-pattern repeat *(hex-string | number)*
Tree	repeat
Description	This command configures the data pattern padding bytes for the frames launched for the service stream. The specified data pattern value is repeated as many times as required to fill the remaining length of the payload for the highest level of the specified PDU. If only the Ethernet and ETH-CFM information is added, the data pattern is included in the data TLV of the ETH-CFM frame.
String length	10
String format	'hex-string' must be hexadecimal with prefix 0x (e.g. 0x1a2b)
Max. range	0 to 4294967295
Default	0x00000000
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

ethernet

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the **ethernet** context
Context	**configure** test-oam service-activation-testhead service-test *named-item-64* service-stream *number* frame-payload ethernet
Tree	ethernet
Description	Commands in this context configure the Ethernet header parameters and ETH-CFM information used by the testhead tool. Only the specified header information is included in the frame. At a minimum, Ethernet MAC address and ETH-CFM information must be included.
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

rate-cir *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	CIR packet transmit rate for the service stream

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam service-activation-testhead service-test *named-item-64* service-stream *number* rate-cir *number*
Tree	rate-cir
Description	This command configures the CIR that must be validated for a specific stream. If configured, the PIR value must be equal to or greater than the CIR value. When specified, the CIR rate overrides the default CIR value. The configured value must be a positive integer; fractional values are not allowed. If this command is not executed, or the CIR parameter is not explicitly specified, the default CIR value applies. The service activation testhead generates traffic up to the specified rate based on the test-types command, as follows. • For **type cir**, traffic is generated at a rate up to the configured CIR. • For **type cir-pir**, traffic is generated at a rate up to the configured PIR. • For **type policing**, traffic is generated at a rate up to 125% of the configured PIR. • For **type performance**, traffic is generated at a rate up to the configured PIR.
Range	0 to 400000000
Units	kilobps
Default	0
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

rate-pir *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PIR packet transmit rate for the service stream
Context	**configure** test-oam service-activation-testhead service-test *named-item-64* service-stream *number* rate-pir *number*
Tree	rate-pir
Description	This command specifies the PIR rate, which overrides the default administrative PIR value. The configured value must be a positive integer; fractional values are not allowed. If this command is not executed or the PIR parameter is not explicitly specified, the default PIR value applies. The service activation testhead generates traffic up to the specified rate based on the test-types command, as follows. • For **type cir**, traffic is generated at a rate up to the configured CIR. • For **type cir-pir**, traffic is generated at a rate up to the configured PIR. • For **type policing**, traffic is generated at a rate up to 125% of the configured PIR.

Description	Commands in this context configure the TWAMP functionality.
Introduced	16.0.R4
Platforms	All

server

Synopsis	Enter the **server** context
Context	**configure** test-oam twamp server
Tree	server
Description	Commands in this context configure the node for TWAMP server functionality.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the TWAMP server
Context	**configure** test-oam twamp server admin-state *keyword*
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

allow-ipv6-udp-checksum-zero *boolean*

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	**configure** test-oam twamp server allow-ipv6-udp-checksum-zero *boolean*
Tree	allow-ipv6-udp-checksum-zero
Description	When configured to **true**, the router accepts IPv6 packets with UDP checksums of 0. This optional configuration allows the router to process arriving IPv6 TWAMP Test packets that contain IPv6 UDP checksum of 0x0000. The UDP port specific to this TWAMP Light test bypasses the default discard IPv6 UDP checksum 0x0000. If this optional command is not configured, IPv6 UDP checksum 0x000 arriving packets are discarded. When configured to **false**, the router discards packets that arrive with an IPv6 UDP checksum of 0x0000.

Use subject to Terms available at: www.nokia.com/terms.

Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

enforce-test-session-start-time *boolean*

Synopsis	Discard TWAMP packets before test-session start time
Context	**configure** test-oam twamp server enforce-test-session-start-time *boolean*
Tree	enforce-test-session-start-time
Description	When configured to **true**, the router checks the signalled test-session start time against the server time and discards TWAMP test packets that arrive before the negotiated test-session start time. When configured to **false**, the router processes all TWAMP test packets without checking the test-session start time against the server time.
Default	true
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

inactivity-timeout *number*

WARNING:
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Inactivity time-out for TWAMP control connections
Context	**configure** test-oam twamp server inactivity-timeout *number*
Tree	inactivity-timeout
Description	This command configures the inactivity time-out for all TWAMP-control connections. If no TWAMP control message is exchanged over the TCP connection for this duration of time the connection is closed and all in-progress tests are terminated.
Range	60 to 3600
Units	seconds
Default	900
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

© 2026 Nokia.

[**port-number**] *number*

Synopsis	Source UDP port pools port number
Context	**configure** test-oam twamp twamp-light source-udp-port-pools port *number*
Tree	port
Range	64374 to 64383
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pool-type *keyword*

Synopsis	Pool type of an application pool

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** test-oam twamp twamp-light source-udp-port-pools port *number* pool-type *keyword*
Tree	pool-type
Description	This command maps the specified source UDP port to the TWAMP Light application allowed to configure the source UDP port. OAM-PM IP tests can only configure the source UDP port when the port pool UDP source port is configured with a **pool-type oam-pm**. The **test-oam link-measurement measurement-template** can only configure the **src-udp-port** when the port pool UDP source port is configured with **pool-type link-measurement**. A pool type cannot be changed if its current application is a test (either an oam-pm session or link-measurement template) and is configured to use the specified port, regardless of the administrative or operational state. The configuration reference linking to the source UDP prevents the change.
Options	oam-pm, link-measurement
Default	oam-pm
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

4.47.1 vrrp command descriptions

vrrp

Synopsis	Enter the **vrrp** context
Context	**configure** vrrp
Tree	vrrp
Introduced	16.0.R1
Platforms	All

policy [policy-id] *number*

Synopsis	Enter the **policy** list instance
Context	**configure** vrrp policy *number*
Tree	policy
Introduced	16.0.R1
Platforms	All

[**policy-id**] *number*

Synopsis	Policy ID
Context	**configure** vrrp policy *number*
Tree	policy
Range	1 to 9999
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of VRRP priority control policy
Context	**configure** vrrp policy *number* admin-state *keyword*
Tree	admin-state
Options	enable, disable

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Default	enable
Introduced	16.0.R1
Platforms	All

context *service-name*

WARNING:
Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service name to which this policy applies
Context	**configure** vrrp policy *number* context *service-name*
Tree	context
String length	1 to 64
String format	'service-name' must contain at least one non-space character
Introduced	16.0.R1
Platforms	All

delta-in-use-limit *number*

Synopsis	Limit on the delta priority control events
Context	**configure** vrrp policy *number* delta-in-use-limit *number*
Tree	delta-in-use-limit
Range	1 to 254
Default	1
Introduced	16.0.R1
Platforms	All

description *description*

Synopsis	Text description
Context	**configure** vrrp policy *number* description *description*
Tree	description
String length	1 to 80
String format	'string-not-all-spaces' must contain at least one non-space character
Introduced	16.0.R1

© 2026 Nokia.

Platforms	All

priority-event

Synopsis	Enter the **priority-event** context
Context	**configure** vrrp policy *number* priority-event
Tree	priority-event
Introduced	16.0.R1
Platforms	All

host-unreachable [ip-address] *(ipv4-address-with-zone | ipv6-address-with-zone)*

Synopsis	Enter the **host-unreachable** list instance
Context	**configure** vrrp policy *number* priority-event host-unreachable *(ipv4-address-with-zone | ipv6-address-with-zone)*
Tree	host-unreachable
Introduced	16.0.R1
Platforms	All

[ip-address] *(ipv4-address-with-zone | ipv6-address-with-zone)*

Synopsis	Host IP address that receives a constant ping probe
Context	**configure** vrrp policy *number* priority-event host-unreachable *(ipv4-address-with-zone | ipv6-address-with-zone)*
Tree	host-unreachable
Description	This command configures the host IP address for which the specific host unreachable priority event monitors connectivity with a continuous ICMP echo request (ping) probe.
String format	'ipv4-address-with-zone' must be a.b.c.d with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id 'ipv6-address-with-zone' must be valid IPv6 with optional %zone-id
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

drop-count *number*

Synopsis	Threshold for consecutive message send attempts

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** vrrp policy *number* priority-event host-unreachable *(ipv4-address-with-zone | ipv6-address-with-zone)* drop-count *number*
Tree	drop-count
Range	1 to 60
Default	3
Introduced	16.0.R1
Platforms	All

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance
Context	**configure** vrrp policy *number* priority-event host-unreachable *(ipv4-address-with-zone | ipv6-address-with-zone)* hold-clear *number*
Tree	hold-clear
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	All

hold-set *number*

Synopsis	Hold time before transitioning to cleared state
Context	**configure** vrrp policy *number* priority-event host-unreachable *(ipv4-address-with-zone | ipv6-address-with-zone)* hold-set *number*
Tree	hold-set
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	All

padding-size *number*

Synopsis	Packet length padding of the ICMP packet
Context	**configure** vrrp policy *number* priority-event host-unreachable *(ipv4-address-with-zone | ipv6-address-with-zone)* padding-size *number*
Tree	padding-size

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Range	0 to 16384
Units	bytes
Default	56
Introduced	16.0.R1
Platforms	All

priority

Synopsis	Enter the **priority** context
Context	**configure** vrrp policy *number* priority-event host-unreachable *(ipv4-address-with-zone | ipv6-address-with-zone)* priority
Tree	priority
Introduced	16.0.R1
Platforms	All

event-type *keyword*

Synopsis	Effect of priority-level value on base priority value
Context	**configure** vrrp policy *number* priority-event host-unreachable *(ipv4-address-with-zone | ipv6-address-with-zone)* priority event-type *keyword*
Tree	event-type
Options	delta, explicit
Default	delta
Introduced	16.0.R1
Platforms	All

priority-level *number*

Synopsis	Priority level associated with this event
Context	**configure** vrrp policy *number* priority-event host-unreachable *(ipv4-address-with-zone | ipv6-address-with-zone)* priority priority-level *number*
Tree	priority-level
Range	1 to 254
Introduced	16.0.R1
Platforms	All

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

request-interval *number*

Synopsis	Time interval between consecutive ICMP echo requests
Context	**configure** vrrp policy *number* priority-event host-unreachable *(ipv4-address-with-zone | ipv6-address-with-zone)* request-interval *number*
Tree	request-interval
Range	1 to 60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

timeout *number*

Synopsis	Timeout for ICMP echo request messages
Context	**configure** vrrp policy *number* priority-event host-unreachable *(ipv4-address-with-zone | ipv6-address-with-zone)* timeout *number*
Tree	timeout
Range	1 to 60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	All

lag-port-down [lag-name] *lag-interface*

Synopsis	Enter the **lag-port-down** list instance
Context	**configure** vrrp policy *number* priority-event lag-port-down *lag-interface*
Tree	lag-port-down
Introduced	16.0.R1
Platforms	All

[**lag-name**] *lag-interface*

Synopsis	LAG name

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	**configure** vrrp policy *number* priority-event lag-port-down *lag-interface*
Tree	lag-port-down
String length	1 to 27
String format	'lag-interface' must be lag- followed by number 1-800 or up to 23 chars (e.g. lag-1 or lag-my-lag)
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

hold-clear *number*

Synopsis	Delay time for a cleared event on the router instance
Context	**configure** vrrp policy *number* priority-event lag-port-down *lag-interface* hold-clear *number*
Tree	hold-clear
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	All

hold-set *number*

Synopsis	Hold time before transitioning to cleared state
Context	**configure** vrrp policy *number* priority-event lag-port-down *lag-interface* hold-set *number*
Tree	hold-set
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	All

number-down [number-of-lag-ports-down] *number*

Synopsis	Enter the **number-down** list instance
Context	**configure** vrrp policy *number* priority-event lag-port-down *lag-interface* number-down *number*
Tree	number-down

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Introduced	16.0.R1
Platforms	All

[**number-of-lag-ports-down**] *number*

Synopsis	Threshold of down LAG ports that create a set event
Context	**configure** vrrp policy *number* priority-event lag-port-down *lag-interface* number-down *number*
Tree	number-down
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

priority

Synopsis	Enter the **priority** context
Context	**configure** vrrp policy *number* priority-event lag-port-down *lag-interface* number-down *number* priority
Tree	priority
Introduced	16.0.R1
Platforms	All

event-type *keyword*

Synopsis	Effect of priority-level value on base priority value
Context	**configure** vrrp policy *number* priority-event lag-port-down *lag-interface* number-down *number* priority event-type *keyword*

5 Deprecated and obsolete commands

This section lists the deprecated and obsolete commands in this major release.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

5.1 Deprecated commands

This chapter provides a list of commands that are marked as “status deprecated” in the Nokia YANG models and the MD-CLI and should no longer be used. Only releases in which commands are initially deprecated are included in this section. If applicable, the equivalent configuration groups command is also deprecated (but not explicitly listed).

See the SR OS Software Release Notes for more information.

5.1.1 26.3.R1

subscriber-mgmt commands:

- configure subscriber-mgmt sla-profile idle-timeout
- configure subscriber-mgmt sla-profile idle-timeout apply-groups
- configure subscriber-mgmt sla-profile idle-timeout apply-groups-exclude
- configure subscriber-mgmt sla-profile idle-timeout category
- configure subscriber-mgmt sla-profile idle-timeout category action
- configure subscriber-mgmt sla-profile idle-timeout category apply-groups
- configure subscriber-mgmt sla-profile idle-timeout category apply-groups-exclude
- configure subscriber-mgmt sla-profile idle-timeout category category-name
- configure subscriber-mgmt sla-profile idle-timeout category timeout
- configure subscriber-mgmt sla-profile idle-timeout category-map-name

5.1.2 26.7.R1

service commands:

- configure service vprn mvpn auto-discovery source-address

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

5.2 Obsolete commands

This chapter provides a list of commands that are marked as “status obsolete” in the Nokia YANG models and the MD-CLI. These commands can no longer be used and are considered invalid. Only releases in which commands are initially obsoleted are included in this section. If applicable, the equivalent configuration groups command is also obsoleted (but not explicitly listed).

See the SR OS Software Release Notes for more information.

5.2.1 26.3.R1

anysec commands:

- configure anysec security-termination-policies
- configure anysec security-termination-policies policy
- configure anysec security-termination-policies policy admin-state
- configure anysec security-termination-policies policy apply-groups
- configure anysec security-termination-policies policy apply-groups-exclude
- configure anysec security-termination-policies policy flex-algo-id
- configure anysec security-termination-policies policy igp-instance-id
- configure anysec security-termination-policies policy local-address
- configure anysec security-termination-policies policy policy-name
- configure anysec security-termination-policies policy protocol
- configure anysec security-termination-policies policy rx-must-be-encrypted
- configure anysec service-encryption
- configure anysec service-encryption encryption-group
- configure anysec service-encryption encryption-group admin-state
- configure anysec service-encryption encryption-group apply-groups
