Clearing condition: NOT (((('Outstanding Alarms'anyBit'RX Section Synchronization Error') AND ('Report Alarms'anyBit'RX Section Synchronization Error'))		
Remedial action: Check the link status between SONET Port and the source.		

Table 20-92 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 20-93 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 20-94 SectionB1Error

Alarm	Attributes	Applicable major NE releases
Name: SectionB1Error (87) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: sectionB1Error (73)	<ul style="list-style-type: none"> • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when a SONET port reports a section error condition that a remote NE raises because of b1 errors received from the local NE. The alarm corresponds to the lrei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section B1 Error') AND ('Report Alarms'anyBit'Section B1 Error'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Section B1 Error') AND ('Report Alarms'anyBit'Section B1 Error'))))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Call customer support if necessary.		

Table 20-95 SectionLossOfFrame

Alarm	Attributes	Applicable major NE releases
Name: SectionLossOfFrame (90) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: sectionLossOfFrame (76)	<ul style="list-style-type: none"> • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when a SONET port reports a SLOF error. The alarm corresponds to the slof alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section Loss of Frame') AND ('Report Alarms'anyBit'Section Loss of Frame'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Section Loss of Frame') AND ('Report Alarms'anyBit'Section Loss of Frame'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

Table 20-96 SectionLossOfSignal

Alarm	Attributes	Applicable major NE releases
Name: SectionLossOfSignal (91) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: sectionLossOfSignal (77)	<ul style="list-style-type: none"> • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when a SONET port reports a SLOS error. The alarm corresponds to the slos alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section Loss of Signal') AND ('Report Alarms'anyBit'Section Loss of Signal'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Section Loss of Signal') AND ('Report Alarms'anyBit'Section Loss of Signal'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

Table 20-97 SectionS1Failure

Alarm	Attributes	Applicable major NE releases
Name: SectionS1Failure (86) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: sectionS1Failure (72)	<ul style="list-style-type: none"> • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when a SONET port reports a section synchronization failure. A section synchronization failure occurs when the S1 byte is inconsistent for eight consecutive frames.		
Raising condition: (('Outstanding Alarms'anyBit'Section S1 Failure') AND ('Report Alarms'anyBit'Section S1 Failure'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Section S1 Failure') AND ('Report Alarms'anyBit'Section S1 Failure'))))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Call customer support if necessary.		

Table 20-98 ServiceSiteDown

Alarm	Attributes	Applicable major NE releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 20-99 SiteManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

Table 20-100 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 20-101 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 20-102 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 20-103 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major NE releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 20-104 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> trapDestinationMisconfigured duplicateTrapLogId 	<ul style="list-style-type: none"> 1.1.0 3.0.0 3.1.0 3.2.0 3.3.0 3.4.0 4.0.0 4.1.0 4.2.0 5.0.0 5.1.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 20-105 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> 1.1.0 3.0.0 3.1.0 3.2.0 3.3.0 3.4.0 4.0.0 4.1.0 4.2.0 5.0.0 5.1.0
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		

(1 of 2)

20 – Alcatel-Lucent 9500 MPR alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

(2 of 2)

Table 20-106 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 20-107 TxSectionSynchronizationError

Alarm	Attributes	Applicable major NE releases
Name: TxSectionSynchronizationError (92) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: txSectionSynchronizationError (78)	<ul style="list-style-type: none"> • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when a SONET port reports an SS1F error. The alarm corresponds to the ss1f alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'TX Section Synchronization Error') AND ('Report Alarms'anyBit'TX Section Synchronization Error'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'TX Section Synchronization Error') AND ('Report Alarms'anyBit'TX Section Synchronization Error'))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Call customer support if necessary.		

Table 20-108 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 20-109 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 20-110 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 20-111 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 20-112 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 20-113 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 20-114 VlanPathInstanceDown

Alarm	Attributes	Applicable major NE releases
Name: VlanPathInstanceDown (748) Type: VlanPathInstanceAlarm (61) Package: mpr Raised on class: mpr.VlanPathInstance	Severity: major Implicitly cleared: true Default probable cause: vlanPathInstanceDown (524)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when the Operational State of a VLAN path instance is Down, for example, because of one of the following conditions: - The radio link is down. - A cross connect is deleted. - The Operational State of one or more ports in the cross connect is Down.		
Raising condition: ('Operational State' NOT EQUAL 'Up')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Ports and or links may be down. Please check the ports or links of the vlan path for root cause.		

Table 20-115 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 1.1.0 • 3.0.0 • 3.1.0 • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '"TiMOS-B-3.0.Generic "') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '"TiMOS-B-3.0.Generic "') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

21 — Alcatel-Lucent 9500 MPRe alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 21-1 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 21-2 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 21-3 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 21-4 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

(2 of 2)

Table 21-5 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 21-6 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 21-7 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 21-8 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 21-9 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

(2 of 2)

Table 21-10 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 21-11 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 21-12 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 21-13 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 21-14 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 21-15 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 21-16 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 21-17 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		

(1 of 2)

21 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

(2 of 2)

Table 21-18 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 21-19 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 21-20 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggns Raised on class: Iteggns.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 21-21 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\\"'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 21-22 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		

(1 of 2)

21 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

(2 of 2)

Table 21-23 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 21-24 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 21-25 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 21-26 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\')		
Clearing condition: ('EPS Path' NOT EQUAL '\')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 21-27 MvrSiteDown

Alarm	Attributes	Applicable major NE releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		

(1 of 2)

21 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

(2 of 2)

Table 21-28 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 21-29 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 21-30 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 21-31 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 21-32 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		

(1 of 2)

21 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

(2 of 2)

Table 21-33 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM. Add an discory rule in order to managed it.		

Table 21-34 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 21-35 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 21-36 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 21-37 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0

(1 of 2)

21 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

(2 of 2)

Table 21-38 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 21-39 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 21-40 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 21-41 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

Table 21-42 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the admin save command on an NE fails.		

(1 of 2)

21 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

(2 of 2)

Table 21-43 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 21-44 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 21-45 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 21-46 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> • trapDestinationMisconfigured • duplicateTrapLogId 	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 21-47 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0

(1 of 2)

21 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major NE releases
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: <ul style="list-style-type: none"> - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None. 		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

(2 of 2)

Table 21-48 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> 3.3.0 4.0.0 4.1.0 4.2.0 5.0.0
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 21-49 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 21-50 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 21-51 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		

(1 of 2)

21 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

(2 of 2)

Table 21-52 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 21-53 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 21-54 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 21-55 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL "\"TIMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL "\"TIMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

22 — Alcatel-Lucent 9xxx eNodeB alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 22-1 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 22-2 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 22-3 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 22-4 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

(2 of 2)

Table 22-5 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 22-6 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 22-7 BscAccessAdminDown

Alarm	Attributes	Applicable major NE releases
Name: BscAccessAdminDown (4629) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BscAccess	Severity: variable Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when a BSC Access Administrative State is down.		
Raising condition: (('administrativeState' NOT EQUAL 'Unlocked'))		
Clearing condition: (('administrativeState' EQUAL 'Unlocked'))		
Remedial action: Informational - no corrective action required.		

Table 22-8 BsCommunicationStateOffline

Alarm	Attributes	Applicable major NE releases
Name: BsCommunicationStateOffline (1264) Type: communicationsAlarm (4) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Implicitly cleared: true Default probable cause: bsCommunicationOffline (904)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm is raised when the BS Communication State goes 'offline'. While BS communication state is 'offline' none of the SNMP properties can be set.		
Raising condition: (('bsCommunicationState' NOT EQUAL 'Online') AND ('bsCommunicationState' NOT EQUAL 'OMC Managed'))		
Clearing condition: (('bsCommunicationState' EQUAL 'Online') OR ('bsCommunicationState' EQUAL 'OMC Managed'))		
Remedial action: Will come back online when the NEM session is closed.		

Table 22-9 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 22-10 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 22-11 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 22-12 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		

(1 of 2)

22 – Alcatel-Lucent 9xxx eNodeB alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

(2 of 2)

Table 22-13 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 22-14 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 22-15 ENBEquipmentAdminDown

Alarm	Attributes	Applicable major NE releases
Name: ENBEquipmentAdminDown (1359) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an ENB Equipment Administrative State is down.		
Raising condition: (('administrativeState' NOT EQUAL 'Unlocked'))		
Clearing condition: (('administrativeState' EQUAL 'Unlocked'))		
Remedial action: Informational - no corrective action required.		

Table 22-16 ENBEquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: ENBEquipmentDown (1360) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: info Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an ENB Equipment is operationally down.		
Raising condition: (('operationalState' NOT EQUAL 'Enabled') AND ('administrativeState' EQUAL 'Unlocked'))		
Clearing condition: (('operationalState' EQUAL 'Enabled') OR ('administrativeState' NOT EQUAL 'Unlocked'))		
Remedial action: The Equipment is inoperable. Additional attributes may indicate the nature and cause of the issue.		

Table 22-17 ENBEquipmentNotAvailable

Alarm	Attributes	Applicable major NE releases
Name: ENBEquipmentNotAvailable (1361) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: info Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an ENB Equipment is not fully available.		
Raising condition: ('availabilityStatus' NOT EQUAL 'No Bits Set')		
Clearing condition: ('availabilityStatus' EQUAL 'No Bits Set')		
Remedial action: The Equipment is not fully available. AvailabilityStatus value and Additional attributes may indicate the nature and cause of the issue.		

Table 22-18 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 22-19 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 22-20 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

(2 of 2)

Table 22-21 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 22-22 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 22-23 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0

(1 of 2)

22 – Alcatel-Lucent 9xxx eNodeB alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

(2 of 2)

Table 22-24 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 22-25 FRUAdminDown

Alarm	Attributes	Applicable major NE releases
Name: FRUAdminDown (2919) Type: equipmentAlarm (3) Package: lte Raised on class: lte.FRU	Severity: variable Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an ENB FRU Administrative State is down		
Raising condition: (('Administrative State' NOT EQUAL 'Unlocked'))		
Clearing condition: (('Administrative State' NOT EQUAL 'Locked'))		
Remedial action: Informational - no corrective action required.		

Table 22-26 FRUDown

Alarm	Attributes	Applicable major NE releases
Name: FRUDown (2920) Type: equipmentAlarm (3) Package: lte Raised on class: lte.FRU	Severity: info Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an ENB FRU is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Enabled') AND ('Administrative State' EQUAL 'Unlocked'))		
Clearing condition: (('Operational State' EQUAL 'Enabled') OR ('Administrative State' NOT EQUAL 'Unlocked'))		
Remedial action: The Equipment is inoperable. Additional attributes may indicate the nature and cause of the issue.		

Table 22-27 FRUNotAvailable

Alarm	Attributes	Applicable major NE releases
Name: FRUNotAvailable (2921) Type: equipmentAlarm (3) Package: lte Raised on class: lte.FRU	Severity: info Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an ENB FRU is not fully available.		
Raising condition: ('Availability Status' NOT EQUAL 'No Bits Set')		
Clearing condition: ('Availability Status' EQUAL 'No Bits Set')		
Remedial action: The Equipment is not fully available. AvailabilityStatus value and Additional attributes may indicate the nature and cause of the issue.		

Table 22-28 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: lteegsn Raised on class: lteegsn.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 22-29 IK4001001 - TMA UNREADABLE MANUFACTURER DATA

Alarm	Attributes	Applicable major NE releases
Name: IK4001001 (2122) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.TmaAldEntry	Severity: minor Specific problem: TMA UNREADABLE MANUFACTURER DATA (2) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure to read the TMA manufacturer data record.		
Impact: The TMA may not provide RF gain		
Remedial action: Check the TMA or the AISG communication bus		

Table 22-30 IK4001002 - TMA ALARM MINOR SUB1

Alarm	Attributes	Applicable major NE releases
Name: IK4001002 (2123) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.TmaAldEntry	Severity: minor Specific problem: TMA ALARM MINOR SUB1 (3) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a minor TMA subunit fault which reduces gain performance but maintains its function.		
Impact: Possible loss of Rx Gain		
Remedial action: Reset the TMA, if problem persists then replace the TMA.		

Table 22-31 IK4001003 - TMA ALARM MINOR SUB2

Alarm	Attributes	Applicable major NE releases
Name: IK4001003 (2124) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.TmaAldEntry	Severity: minor Specific problem: TMA ALARM MINOR SUB2 (4) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a minor TMA subunit fault which reduces gain performance but maintains its function.		
Impact: Possible loss of Rx Gain		
Remedial action: Reset the TMA, if problem persists then replace the TMA.		

Table 22-32 IK4001004 - TMA ALARM MINOR SUB3

Alarm	Attributes	Applicable major NE releases
Name: IK4001004 (2125) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAidEntry	Severity: minor Specific problem: TMA ALARM MINOR SUB3 (5) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a minor TMA subunit fault which reduces gain performance but maintains its function.		
Impact: Possible loss of Rx Gain		
Remedial action: Reset the TMA, if problem persists then replace the TMA.		

Table 22-33 IK4001005 - TMA ALARM MINOR SUB4

Alarm	Attributes	Applicable major NE releases
Name: IK4001005 (2126) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAidEntry	Severity: minor Specific problem: TMA ALARM MINOR SUB4 (6) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a minor TMA subunit fault which reduces gain performance but maintains its function.		
Impact: Possible loss of Rx Gain		
Remedial action: Reset the TMA, if problem persists then replace the TMA.		

Table 22-34 IK4001006 - TMA ALARM MINOR SUB5

Alarm	Attributes	Applicable major NE releases
Name: IK4001006 (2127) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAidEntry	Severity: minor Specific problem: TMA ALARM MINOR SUB5 (7) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a minor TMA subunit fault which reduces gain performance but maintains its function.		
Impact: Possible loss of Rx Gain		
Remedial action: Reset the TMA, if problem persists then replace the TMA.		

Table 22-35 IK4001007 - TMA ALARM MINOR SUB6

Alarm	Attributes	Applicable major NE releases
Name: IK4001007 (2128) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: minor Specific problem: TMA ALARM MINOR SUB6 (8) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a minor TMA subunit fault which reduces gain performance but maintains its function.		
Impact: Possible loss of Rx Gain		
Remedial action: Reset the TMA, if problem persists then replace the TMA.		

Table 22-36 IK4001008 - TMA ALARM MAJOR SUB1

Alarm	Attributes	Applicable major NE releases
Name: IK4001008 (2129) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: major Specific problem: TMA ALARM MAJOR SUB1 (9) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a major TMA subunit fault which prevents its function.		
Impact: Loss of one Rx Path		
Remedial action: Reset the TMA, if problem persists then replace the TMA.		

Table 22-37 IK4001009 - TMA ALARM MAJOR SUB2

Alarm	Attributes	Applicable major NE releases
Name: IK4001009 (2130) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: major Specific problem: TMA ALARM MAJOR SUB2 (10) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a major TMA subunit fault which prevents its function.		
Impact: Loss of one Rx Path		
Remedial action: Reset the TMA, if problem persists then replace the TMA.		

Table 22-38 IK4001010 - TMA ALARM MAJOR SUB3

Alarm	Attributes	Applicable major NE releases
Name: IK4001010 (2131) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: major Specific problem: TMA ALARM MAJOR SUB3 (11) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a major TMA subunit fault which prevents its function.		
Impact: Loss of one Rx Path		
Remedial action: Reset the TMA, if problem persists then replace the TMA.		

Table 22-39 IK4001011 - TMA ALARM MAJOR SUB4

Alarm	Attributes	Applicable major NE releases
Name: IK4001011 (2132) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: major Specific problem: TMA ALARM MAJOR SUB4 (12) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a major TMA subunit fault which prevents its function.		
Impact: Loss of one Rx Path		
Remedial action: Reset the TMA, if problem persists then replace the TMA.		

Table 22-40 IK4001012 - TMA ALARM MAJOR SUB5

Alarm	Attributes	Applicable major NE releases
Name: IK4001012 (2133) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: major Specific problem: TMA ALARM MAJOR SUB5 (13) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a major TMA subunit fault which prevents its function.		
Impact: Loss of one Rx Path		
Remedial action: Reset the TMA, if problem persists then replace the TMA.		

Table 22-41 IK4001013 - TMA ALARM MAJOR SUB6

Alarm	Attributes	Applicable major NE releases
Name: IK4001013 (2134) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: major Specific problem: TMA ALARM MAJOR SUB6 (14) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a major TMA subunit fault which prevents its function.		
Impact: Loss of one Rx Path		
Remedial action: Reset the TMA, if problem persists then replace the TMA.		

Table 22-42 IK4001014 - TMA ALD UNIT SUPPORT WRONG AISG VERSION

Alarm	Attributes	Applicable major NE releases
Name: IK4001014 (2135) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: minor Specific problem: TMA ALD UNIT SUPPORT WRONG AISG VERSION (15) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the ALD unit does not support AISG version 2.0.		
Impact: The TMA is out of service.		
Remedial action: Upgrade the TMA software or replace it with an AISG v2.0 unit.		

Table 22-43 IK4001015 - TMA LOSS OF COMM

Alarm	Attributes	Applicable major NE releases
Name: IK4001015 (2136) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: major Specific problem: TMA LOSS OF COMM (16) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the RFM that acts as an AISG Controller has lost communication to the TMA unit.		
Impact: Loss of alarm reporting by the TMA		
Remedial action: Reset the AISG-host RFM, inspect and repair the AISG bus, or replace the TMA.		

Table 22-44 IK4001016 - TMA FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4001016 (2959) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: minor Specific problem: TMA FAULT 1 (17) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified TMA fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-45 IK4001017 - TMA FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4001017 (2960) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: minor Specific problem: TMA FAULT 2 (18) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified TMA fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-46 IK4001018 - TMA FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4001018 (2961) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: minor Specific problem: TMA FAULT 3 (19) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified TMA fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-47 IK4001019 - TMA FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4001019 (2962) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: minor Specific problem: TMA FAULT 4 (20) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified TMA fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-48 IK4001020 - TMA FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4001020 (2963) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: minor Specific problem: TMA FAULT 5 (21) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified TMA fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-49 IK4001021 - TMA HW FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4001021 (2964) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAldEntry	Severity: major Specific problem: TMA HW FAILURE (22) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a general TMA HW failure.		
Impact: The TMA is out of service.		
Remedial action: Replace the TMA.		

Table 22-50 IK4001029 - TMA INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4001029 (3748) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.TmaAldEntry	Severity: major Specific problem: TMA INDETERMINATE OPERATIONAL FAILURE (24) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that a failure of the TMA has been detected that cannot be described by any specific alarm.		
Impact: If the failure affects the RF portion of the TMA then the receive RF gain on the path(s) served by the TMA is reduced. If the failure affects only the AISG terminal function of the TMA then RF gain should still be active.		
Remedial action: If the failure affects the RF portion of the TMA then the receive RF gain on the path(s) served by the TMA is reduced. If the failure affects only the AISG terminal function of the TMA then RF gain should still be active.		

Table 22-51 IK4001030 - TMA INITIALIZATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4001030 (3749) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.TmaAldEntry	Severity: major Specific problem: TMA INITIALIZATION FAILURE (25) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the unit is automatically reset to attempt to clear the fault. If the problem persists then replace the failed TMA.		
Impact: The unit is automatically reset to attempt to clear the fault. If the problem persists then replace the failed TMA.		
Remedial action: The unit is automatically reset to attempt to clear the fault. If the problem persists then replace the failed TMA.		

Table 22-52 IK4001031 - TMA INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4001031 (5192) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.TmaAldEntry	Severity: major Specific problem: TMA INDETERMINATE OPERATIONAL FAILURE (24) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates that a failure of the TMA has been detected that cannot be described by any specific alarm.		
Remedial action: If the failure affects the RF portion of the TMA then the receive RF gain on the path(s) served by the TMA is reduced. If the failure affects only the AISG terminal function of the TMA then RF gain should still be active.		

Table 22-53 IK4002001 - AMR INIT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4002001 (2137) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: AMR INIT FAILURE (26) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure to initialize the RF cabinet alarm module.		
Impact: The RF module is out of service.		
Remedial action: Check the cabling between TRDU and AMR. If the alarm persists, reset one or more of the TRDUs, or replace the AMR.		

Table 22-54 IK4002002 - AMR COMM FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4002002 (2138) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: AMR COMM FAIL (27) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the loss of communication with RF cabinet Alarm Module.		
Impact: The RF module is out of service.		
Remedial action: Check the cabling between TRDU and AMR. If the alarm persists, reset one or more of the TRDUs, or replace the AMR.		

Table 22-55 IK4002003 - AMR UNREADABLE MANUFACTURER DATA

Alarm	Attributes	Applicable major NE releases
Name: IK4002003 (2139) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: warning Specific problem: AMR UNREADABLE MANUFACTURER DATA (28) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure to read the RF cabinet alarm module manufacturer data.		
Impact: The RF module is out of service.		
Remedial action: Check the cabling between TRDU and AMR. If the alarm persists, reset one or more of the TRDUs, or replace the AMR.		

Table 22-56 IK4002004 - AMR FAN ALARM

Alarm	Attributes	Applicable major NE releases
Name: IK4002004 (2140) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: major Specific problem: AMR FAN ALARM (29) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RF cabinet fan is out of service.		
Impact: The RF cabinet components may fail due to overheating.		
Remedial action: Replace the fan of the RF cabinet.		

Table 22-57 IK4002005 - AMR DOOR ALARM

Alarm	Attributes	Applicable major NE releases
Name: IK4002005 (2141) Type: environmentalAlarm (2) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: AMR DOOR ALARM (30) Implicitly cleared: true Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RF cabinet door is open.		
Impact: The RF cabinet equipment is accessible and easily tampered. No immediate impact on call processing.		
Remedial action: Close the cabinet door.		

Table 22-58 IK4002006 - AMR OVER TEMP

Alarm	Attributes	Applicable major NE releases
Name: IK4002006 (2142) Type: environmentalAlarm (2) Package: lte Raised on class: lte.AMR	Severity: major Specific problem: AMR OVER TEMP (31) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RF cabinet temperature is above the safe operating temperature.		
Impact: The RF cabinet components may fail due to overheating.		
Remedial action: Check the cabinet for proper functioning fans and clean air filters. Check if the ambient temperature is within the recommended operating range.		

Table 22-59 IK4002007 - AMR FAF

Alarm	Attributes	Applicable major NE releases
Name: IK4002007 (2143) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: AMR FAF (32) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RF cabinet filter airflow is reduced.		
Impact: The RF cabinet components may fail due to overheating.		
Remedial action: Replace the fresh air filter.		

Table 22-60 IK4002016 - AMR FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4002016 (2966) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: AMR FAULT 1 (33) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. An unspecified AMR fault has been detected.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-61 IK4002017 - AMR FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4002017 (2967) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: AMR FAULT 2 (34) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. An unspecified AMR fault has been detected.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-62 IK4002018 - AMR FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4002018 (2968) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: AMR FAULT 3 (35) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. An unspecified AMR fault has been detected.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-63 IK4002019 - AMR FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4002019 (2969) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: AMR FAULT 4 (36) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. An unspecified AMR fault has been detected.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-64 IK4002020 - AMR FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4002020 (2970) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: AMR FAULT 5 (37) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. An unspecified AMR fault has been detected.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-65 IK4003001 - BB LOSS OF HS DATA LINK 1

Alarm	Attributes	Applicable major NE releases
Name: IK4003001 (5193) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB LOSS OF HS DATA LINK 1 (38) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates a failure of the BB to CB link.		
Remedial action: Reset BB, reset CB, replace BB or CB if problem persists.		

Table 22-66 IK4003002 - BB LOSS OF HS DATA LINK 2

Alarm	Attributes	Applicable major NE releases
Name: IK4003002 (5194) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB LOSS OF HS DATA LINK 2 (39) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates a failure of the BB to CB link.		
Remedial action: Reset BB, reset CB, replace BB or CB if problem persists.		

Table 22-67 IK4003003 - BB INIT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4003003 (2152) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB INIT FAILURE (40) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the BB initialization failure.		
Impact: The BB is completely or partially affected. The service impact depends on the eNodeB configuration.		
Remedial action: Reset BB. Use the reset command on the SAM, or reset using the remote connection to NEM. If the alarm persists, replace BB.		

Table 22-68 IK4003004 - BB LOSS OF HS DATA LINK 3

Alarm	Attributes	Applicable major NE releases
Name: IK4003004 (5195) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB LOSS OF HS DATA LINK 3 (41) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a failure of the BB to CB link.		
Remedial action: Reset BB, reset CB, replace BB or CB if problem persists.		

Table 22-69 IK4003006 - BB INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4003006 (5196) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB INDETERMINATE OPERATIONAL FAILURE (42) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that a failure of the modem (baseband unit) has been detected that cannot be described by any specific alarm.		
Remedial action: The unit is automatically reset to attempt to clear the fault. If the problem persists then replace the failed modem.		

Table 22-70 IK4003008 - BB LOSS OF COMM

Alarm	Attributes	Applicable major NE releases
Name: IK4003008 (2153) Type: communicationsAlarm (4) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB LOSS OF COMM (43) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This alarm indicates the loss of layer 3 communication to the modem.		
Impact: The module is not usable. The service impact depends on the eNodeB configuration.		
Remedial action: If the alarm persists for more than 15 minutes, then perform the following tasks sequentially until the alarm clears. Please allow 10 minutes for the alarm to clear after each task. 1. Check the state of the CEM. If "Initializing" is indicated then another 10 minutes should be allowed to pass before resetting the BB. 2. Reset the BB via NEM. 3. Check if BB is present in the cabinet, remove and reinsert BB. 4. Replace BB. 5. Check the back panel and replace CB. 6. Call next level of support.		

Table 22-71 IK4003042 - BB FAULT BIST FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4003042 (2154) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB FAULT BIST FAIL (44) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a Built In Self Test failure.		
Impact: LTE service is not possible on this BB.		
Remedial action: Reset BB, replace if problem persist		

Table 22-72 IK4003043 - BB FAULT DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4003043 (2155) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: minor Specific problem: BB FAULT DOWNLOAD FAILURE (45) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software download failure.		
Impact: No impact on eNodeB.		
Remedial action: Retry the download. If the problem persists, contact the next level support.		

Table 22-73 IK4003044 - BB OVER TEMP MAJOR

Alarm	Attributes	Applicable major NE releases
Name: IK4003044 (2156) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB OVER TEMP MAJOR (46) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the modem temperature is rising to the shutdown limit.		
Impact: If the alarm persists, it will impact the LTE service on this BB.		
Remedial action: Check for proper fan operation and that the fan type is compatible with the BB type, check that DBU inlet temperature is within operating range.		

Table 22-74 IK4003045 - BB OVER TEMP CRITICAL

Alarm	Attributes	Applicable major NE releases
Name: IK4003045 (2157) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB OVER TEMP CRITICAL (47) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the modem temperature is above operating range.		
Impact: LTE service is still possible on this BB until auto shutdown.		
Remedial action: Check for proper fan operation and that the fan type is compatible with the BB type, check that DBU inlet temperature is within operating range.		

Table 22-75 IK4003046 - BB SOFTWARE FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4003046 (2158) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB SOFTWARE FAIL (48) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a general platform software failure.		
Impact: LTE service is not possible on this BB.		
Remedial action: Reset the BB.		

Table 22-76 IK4003048 - BB L1 HARDWARE FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4003048 (2160) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB L1 HARDWARE FAIL (49) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a Layer 1 hardware failure.		
Impact: LTE service is not possible on this BB.		
Remedial action: Reset the BB, replace the BB if problem persists.		

Table 22-77 IK4003050 - BB L1 SOFTWARE WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4003050 (2162) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: warning Specific problem: BB L1 SOFTWARE WARNING (50) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a Layer 1 software warning.		
Impact: No impact on eNodeB.		
Remedial action: Reset the BB in low traffic hours.		

Table 22-78 IK4003051 - BB L2 SOFTWARE WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4003051 (2163) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: warning Specific problem: BB L2 SOFTWARE WARNING (51) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a Layer 2 software warning.		
Impact: No impact on eNodeB.		
Remedial action: Reset the BB in low traffic hours.		

Table 22-79 IK4003052 - BB L2 HARDWARE FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4003052 (2164) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB L2 HARDWARE FAIL (52) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a Layer 2 hardware failure.		
Impact: LTE service is not possible on this BB.		
Remedial action: Reset the BB, replace the BB if problem persists.		

Table 22-80 IK4003053 - BB LOSS OF HS DATA LINK ALL

Alarm	Attributes	Applicable major NE releases
Name: IK4003053 (2165) Type: communicationsAlarm (4) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB LOSS OF HS DATA LINK ALL (53) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of high-speed data links to all BBs.		
Impact: LTE service is not possible on this BB.		
Remedial action: Reset the BB and/or CB, if problem persists then replace the BB or CB.		

Table 22-81 IK4003054 - BB LED FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4003054 (2166) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: minor Specific problem: BB LED FAILURE (54) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure to control face-plate LEDs.		
Impact: No impact on eNodeB.		
Remedial action: Reset the BB in low traffic hours.		

Table 22-82 IK4003055 - BB NON CPU POWER FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4003055 (2167) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB NON CPU POWER FAILURE (55) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a BB power failure to the peripheral devices except the Ethernet switch and the P4080.		
Impact: LTE service is not provided on this BB.		
Remedial action: Replace the BB.		

Table 22-83 IK4003056 - BB HS DATA LINK SYNC FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4003056 (2168) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB HS DATA LINK SYNC FAULT (56) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure to synchronize SFN to modem.		
Impact: LTE service is not provided on this BB.		
Remedial action: Reset the BB.		

Table 22-84 IK4003057 - BB L1 SOFTWARE FAIL SLICE 1

Alarm	Attributes	Applicable major NE releases
Name: IK4003057 (2169) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB L1 SOFTWARE FAIL SLICE 1 (57) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software failure on the BB.		
Impact: LTE service is not possible on this BB slice.		
Remedial action: Reset the BB.		

Table 22-85 IK4003058 - BB L1 SOFTWARE FAIL SLICE 2

Alarm	Attributes	Applicable major NE releases
Name: IK4003058 (2170) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB L1 SOFTWARE FAIL SLICE 2 (58) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software failure on the BB.		
Impact: LTE service is not possible on this BB slice.		
Remedial action: Reset the BB.		

Table 22-86 IK4003059 - BB L1 SOFTWARE FAIL SLICE 3

Alarm	Attributes	Applicable major NE releases
Name: IK4003059 (2171) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB L1 SOFTWARE FAIL SLICE 3 (59) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software failure on the BB.		
Impact: LTE service is not possible on this BB slice.		
Remedial action: Reset the BB.		

Table 22-87 IK4003060 - BB L2 SOFTWARE FAIL SLICE 1

Alarm	Attributes	Applicable major NE releases
Name: IK4003060 (2172) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB L2 SOFTWARE FAIL SLICE 1 (60) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software failure on the BB.		
Impact: LTE service is not possible on this BB slice.		
Remedial action: Reset the BB.		

Table 22-88 IK4003061 - BB L2 SOFTWARE FAIL SLICE 2

Alarm	Attributes	Applicable major NE releases
Name: IK4003061 (2173) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB L2 SOFTWARE FAIL SLICE 2 (61) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software failure on the BB.		
Impact: LTE service is not possible on this BB slice.		
Remedial action: Reset the BB.		

Table 22-89 IK4003062 - BB L2 SOFTWARE FAIL SLICE 3

Alarm	Attributes	Applicable major NE releases
Name: IK4003062 (2174) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB L2 SOFTWARE FAIL SLICE 3 (62) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software failure on the BB.		
Impact: LTE service is not possible on this BB slice.		
Remedial action: Reset the BB.		

Table 22-90 IK4003063 - BB L2 HARDWARE FAIL SLICE 1

Alarm	Attributes	Applicable major NE releases
Name: IK4003063 (2175) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB L2 HARDWARE FAIL SLICE 1 (63) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a hardware failure on the BB.		
Impact: LTE service is not possible on this BB slice.		
Remedial action: Reset the BB, replace the BB if problem persists.		

Table 22-91 IK4003064 - BB L2 HARDWARE FAIL SLICE 2

Alarm	Attributes	Applicable major NE releases
Name: IK4003064 (2176) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB L2 HARDWARE FAIL SLICE 2 (64) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a hardware failure on the BB.		
Impact: LTE service is not possible on this BB slice.		
Remedial action: Reset the BB, replace the BB if problem persists.		

Table 22-92 IK4003065 - BB L2 HARDWARE FAIL SLICE 3

Alarm	Attributes	Applicable major NE releases
Name: IK4003065 (2177) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB L2 HARDWARE FAIL SLICE 3 (65) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a hardware failure on the BB.		
Impact: LTE service is not possible on this BB slice.		
Remedial action: Reset the BB, replace the BB if problem persists.		

Table 22-93 IK4003066 - BB L1 SOFTWARE WARNING SLICE 1

Alarm	Attributes	Applicable major NE releases
Name: IK4003066 (2178) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: warning Specific problem: BB L1 SOFTWARE WARNING SLICE 1 (66) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software warning on the BB.		
Impact: No impact on eNodeB.		
Remedial action: Reset BB in low traffic hours.		

Table 22-94 IK4003067 - BB L1 SOFTWARE WARNING SLICE 2

Alarm	Attributes	Applicable major NE releases
Name: IK4003067 (2179) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: warning Specific problem: BB L1 SOFTWARE WARNING SLICE 2 (67) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software warning on the BB.		
Impact: No impact on eNodeB.		
Remedial action: Reset BB in low traffic hours.		

Table 22-95 IK4003068 - BB L1 SOFTWARE WARNING SLICE 3

Alarm	Attributes	Applicable major NE releases
Name: IK4003068 (2180) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: warning Specific problem: BB L1 SOFTWARE WARNING SLICE 3 (68) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software warning on the BB.		
Impact: No impact on eNodeB.		
Remedial action: Reset BB in low traffic hours.		

Table 22-96 IK4003069 - BB L2 SOFTWARE WARNING SLICE 1

Alarm	Attributes	Applicable major NE releases
Name: IK4003069 (2181) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: warning Specific problem: BB L2 SOFTWARE WARNING SLICE 1 (69) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software warning on the BB.		
Impact: No impact on eNodeB.		
Remedial action: Reset BB in low traffic hours.		

Table 22-97 IK4003070 - BB L2 SOFTWARE WARNING SLICE 2

Alarm	Attributes	Applicable major NE releases
Name: IK4003070 (2182) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: warning Specific problem: BB L2 SOFTWARE WARNING SLICE 2 (70) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software warning on the BB.		
Impact: No impact on eNodeB.		
Remedial action: Reset BB in low traffic hours.		

Table 22-98 IK4003071 - BB L2 SOFTWARE WARNING SLICE 3

Alarm	Attributes	Applicable major NE releases
Name: IK4003071 (2183) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: warning Specific problem: BB L2 SOFTWARE WARNING SLICE 3 (71) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a software warning on the BB.		
Impact: No impact on eNodeB.		
Remedial action: Reset BB in low traffic hours.		

Table 22-99 IK4003072 - BB FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4003072 (2971) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: minor Specific problem: BB FAULT 1 (72) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-100 IK4003073 - BB FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4003073 (2972) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: minor Specific problem: BB FAULT 2 (73) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-101 IK4003074 - BB FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4003074 (2973) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: minor Specific problem: BB FAULT 3 (74) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-102 IK4003075 - BB FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4003075 (2974) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: minor Specific problem: BB FAULT 4 (75) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-103 IK4003076 - BB FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4003076 (2975) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: minor Specific problem: BB FAULT 5 (76) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-104 IK4003077 - BB LOSS OF HS DATA LINK 1

Alarm	Attributes	Applicable major NE releases
Name: IK4003077 (2976) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB LOSS OF HS DATA LINK 1 (38) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LT6.0
Description: This alarm indicates a failure of the BB to CB link.		
Impact: LTE service is not possible on this BB.		
Remedial action: Reset BB, reset CB, replace BB or CB if problem persists.		

Table 22-105 IK4003078 - BB LOSS OF HS DATA LINK 2

Alarm	Attributes	Applicable major NE releases
Name: IK4003078 (2977) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB LOSS OF HS DATA LINK 2 (39) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LT6.0
Description: This alarm indicates a failure of the BB to CB link.		
Impact: LTE service is not possible on this BB.		
Remedial action: Reset BB, reset CB, replace BB or CB if problem persists.		

Table 22-106 IK4003079 - BB LOSS OF HS DATA LINK 3

Alarm	Attributes	Applicable major NE releases
Name: IK4003079 (2978) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB LOSS OF HS DATA LINK 3 (41) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LT6.0
Description: This alarm indicates a failure of the BB to CB link.		
Impact: LTE service is not possible on this BB.		
Remedial action: Reset BB, reset CB, replace BB or CB if problem persists.		

Table 22-107 IK4003080 - BB LOSS OF HS DATA LINK 4

Alarm	Attributes	Applicable major NE releases
Name: IK4003080 (2979) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB LOSS OF HS DATA LINK 4 (77) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LT6.0
Description: This alarm indicates a failure of the BB to CB link.		
Impact: LTE service is not possible on this BB.		
Remedial action: Reset BB, reset CB, replace BB or CB if problem persists.		

Table 22-108 IK4003081 - BB DIV IMBALANCE 1

Alarm	Attributes	Applicable major NE releases
Name: IK4003081 (5197) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB DIV IMBALANCE 1 (78) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates Diversity imbalance fault.		
Remedial action: No action is required.		

Table 22-109 IK4003082 - BB DIV IMBALANCE 2

Alarm	Attributes	Applicable major NE releases
Name: IK4003082 (5198) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB DIV IMBALANCE 2 (79) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates Diversity imbalance fault.		
Remedial action: No action is required.		

Table 22-110 IK4003083 - BB DIV IMBALANCE 3

Alarm	Attributes	Applicable major NE releases
Name: IK4003083 (5199) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB DIV IMBALANCE 3 (80) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates Diversity imbalance fault.		
Remedial action: No action is required.		

Table 22-111 IK4003084 - BB INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4003084 (3750) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB INDETERMINATE OPERATIONAL FAILURE (42) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3
Description: This alarm indicates that a failure of the modem (baseband unit) has been detected that cannot be described by any specific alarm.		
Impact: Cells supported by this modem may have failed.		
Remedial action: The unit is automatically reset to attempt to clear the fault. If the problem persists then replace the failed modem.		

Table 22-112 IK4003085 - BB ALL MODEM CELL RESOURCES FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4003085 (3985) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB ALL MODEM CELL RESOURCES FAILURE (81) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L
Description: This alarm indicates all modem physical cell failure.		
Impact: LTE service is not possible on this BB.		
Remedial action: Reset the BB.		

Table 22-113 IK4003103 - BB CELL RESOURCES NOT ALLOCATED

Alarm	Attributes	Applicable major NE releases
Name: IK4003103 (5200) Type: communicationsAlarm (4) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: BB CELL RESOURCES NOT ALLOCATED (82) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates the BB requested more HSIQ links than free HSIQ links available at CB level.		
Remedial action: This alarm can be raised transiently in eCCM+3bCEM configurations. eNB will automatically solve it. If, the problem persists, reset the BB.		

Table 22-114 IK4004001 - CB INIT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4004001 (2184) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: CB INIT FAILURE (83) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure to initialize the associated resources.		
Impact: The LTE service is not possible.		
Remedial action: Reset CB using the remote connection to NEM. If the alarm persists, replace the CB.		

Table 22-115 IK4004002 - CB OSC LOSS

Alarm	Attributes	Applicable major NE releases
Name: IK4004002 (2185) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: CB OSC LOSS (84) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a hardware failure of the oscillator.		
Impact: The module is not usable. The eNodeB is not operational.		
Remedial action: If the alarm persists for more than a minute, replace the CB.		

Table 22-116 IK4004003 - CB 1PPS AND TOD REF INPUT LOCK FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4004003 (5201) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: major Specific problem: CB 1PPS AND TOD REF INPUT LOCK FAILURE (85) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates the loss of the Ingress Reference 1PPS signal.		
Remedial action: Check the 1PPS+ToD External Reference Connectivity. If fault persist, call next level of support		

Table 22-117 IK4004004 - CB 1PPS AND TOD REF INPUT PROTOCOL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4004004 (5202) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: major Specific problem: CB 1PPS AND TOD REF INPUT PROTOCOL FAILURE (86) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates the Failure of the Ingress 1PPS+ToD Protocol Link.		
Remedial action: Check the 1PPS+ToD External Reference Connectivity. If fault persist, call next level of support		

Table 22-118 IK4004005 - CB INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4004005 (5203) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: critical Specific problem: CB INDETERMINATE OPERATIONAL FAILURE (87) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that a failure of the controller board has been detected that cannot be described by any specific alarm.		
Remedial action: Reset the unit manually to attempt to clear the fault. If the problem persists then replace the controller board.		

Table 22-119 IK4004006 - CB OSC I2C FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4004006 (5204) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB OSC I2C FAULT (88) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates CB cannot tune the OSC		
Remedial action: Reset the CB or replace the OSC		

Table 22-120 IK4004007 - CB OSC OUT OF TUNE RANGE

Alarm	Attributes	Applicable major NE releases
Name: IK4004007 (5205) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB OSC OUT OF TUNE RANGE (89) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: The OSC is close to its life cycle		
Remedial action: Replace the OSC		

Table 22-121 IK4004008 - CB SFP INCOMPATIBILITY CPRI PORT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4004008 (5206) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB SFP INCOMPATIBILITY CPRI PORT 4 (90) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the equipped SFP doesn't allow to achieve the maximum CPRI rate allowed by SW.		
Remedial action: The operator may update the SFP on the BBU.		

Table 22-122 IK4004009 - CB FILE SYSTEM ACCESS FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4004009 (2186) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB FILE SYSTEM ACCESS FAILURE (91) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure to access files in a partition of the CB file system.		
Impact: Software download is not possible.		
Remedial action: Reset the CB. If the alarm persists, replace the CB.		

Table 22-123 IK4004011 - CB FLYWHEEL CRITICAL

Alarm	Attributes	Applicable major NE releases
Name: IK4004011 (2187) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: CB FLYWHEEL CRITICAL (92) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The timing reference source (e.g., GPS or 1588) has been unavailable for too long and timing may have drifted enough to cause RF violations.		
Impact: The LTE service is not possible.		
Remedial action: Check for reference source alarms: GPS RECEIVER (4004083);GPS 1PPS LOSS (4004065);LOSS OF SYNCE (4004160);PTP LOSS OF PRIMARY SYNC(4004162)		

Table 22-124 IK4004012 - CB FLYWHEEL MAJOR

Alarm	Attributes	Applicable major NE releases
Name: IK4004012 (2188) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB FLYWHEEL MAJOR (93) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The timing reference source (e.g., GPS or 1588) has been unavailable for an extended time and timing may have drifted enough.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: Check for reference source alarms: GPS RECEIVER (4004083);GPS 1PPS LOSS (4004065);LOSS OF SYNCE (4004160);PTP LOSS OF PRIMARY SYNC(4004162)		

Table 22-125 IK4004013 - CB FLYWHEEL MINOR

Alarm	Attributes	Applicable major NE releases
Name: IK4004013 (2189) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB FLYWHEEL MINOR (94) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The timing reference source (e.g., GPS or 1588) has been unavailable for an extended time and timing may have drifted enough.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: Check for reference source alarms: GPS RECEIVER (4004083);GPS 1PPS LOSS (4004065);LOSS OF SYNCE (4004160);PTP LOSS OF PRIMARY SYNC(4004162)		

Table 22-126 IK4004014 - CB FLYWHEEL START

Alarm	Attributes	Applicable major NE releases
Name: IK4004014 (2190) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB FLYWHEEL START (95) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The timing reference source (e.g., GPS or 1588) is not available.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: Check for reference source alarms: GPS RECEIVER (4004083);GPS 1PPS LOSS (4004065);LOSS OF SYNCE (4004160);PTP LOSS OF PRIMARY SYNC(4004162)		

Table 22-127 IK4004018 - CB TRANS LSL CPRI PORT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4004018 (2194) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS LSL CPRI PORT 1 (99) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The incoming optical signal level for this CPRI port is very low.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary.		

Table 22-128 IK4004019 - CB TRANS LSL CPRI PORT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4004019 (2195) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS LSL CPRI PORT 2 (100) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The incoming optical signal level for this CPRI port is very low.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary.		

Table 22-129 IK4004020 - CB TRANS LSL CPRI PORT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4004020 (2196) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS LSL CPRI PORT 3 (101) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The incoming optical signal level for this CPRI port is very low.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary.		

Table 22-130 IK4004021 - CB TRANS LSL CPRI PORT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4004021 (2197) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS LSL CPRI PORT 4 (102) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The incoming optical signal level for this CPRI port is very low.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary.		

Table 22-131 IK4004022 - CB TRANS LSL CPRI PORT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4004022 (2198) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS LSL CPRI PORT 5 (103) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The incoming optical signal level for this CPRI port is very low.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary.		

Table 22-132 IK4004023 - CB TRANS LSL CPRI PORT 6

Alarm	Attributes	Applicable major NE releases
Name: IK4004023 (2199) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS LSL CPRI PORT 6 (104) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The incoming optical signal level for this CPRI port is very low.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary.		

Table 22-133 IK4004024 - CB RAI CPRI PORT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4004024 (2200) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB RAI CPRI PORT 1 (105) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The first RFM on the CPRI port is reporting a CPRI link alarm.		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary. Reset or replace CB if problem persists.		

Table 22-134 IK4004025 - CB RAI CPRIPORT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4004025 (2201) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB RAI CPRIPORT 2 (106) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The first RFM on the CPRI port is reporting a CPRI link alarm.		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary. Reset or replace CB if problem persists.		

Table 22-135 IK4004026 - CB RAI CPRIPORT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4004026 (2202) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB RAI CPRIPORT 3 (107) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The first RFM on the CPRI port is reporting a CPRI link alarm.		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary. Reset or replace CB if problem persists.		

Table 22-136 IK4004027 - CB RAI CPRIPORT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4004027 (2203) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB RAI CPRIPORT 4 (108) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The first RFM on the CPRI port is reporting a CPRI link alarm.		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary. Reset or replace CB if problem persists.		

Table 22-137 IK4004028 - CB RAI CPRIPORT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4004028 (2204) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB RAI CPRIPORT 5 (109) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The first RFM on the CPRI port is reporting a CPRI link alarm.		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary. Reset or replace CB if problem persists.		

Table 22-138 IK4004029 - CB RAI CPRIPORT 6

Alarm	Attributes	Applicable major NE releases
Name: IK4004029 (2205) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB RAI CPRIPORT 6 (110) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The first RFM on the CPRI port is reporting a CPRI link alarm.		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary. Reset or replace CB if problem persists.		

Table 22-139 IK4004030 - CB LOS LOF CPRIPORT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4004030 (2206) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB LOS LOF CPRIPORT 1 (111) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the CPRI link from the first RFM on this port has failed (Loss of signal and/or loss of framing)		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link cable and SFPs (CB and RFM) for failures, otherwise reset the RFM or reset the CB		

Table 22-140 IK4004031 - CB LOS LOF CPRIPORT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4004031 (2207) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB LOS LOF CPRIPORT 2 (112) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the CPRI link from the first RFM on this port has failed (Loss of signal and/or loss of framing)		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link cable and SFPs (CB and RFM) for failures, otherwise reset the RFM or reset the CB		

Table 22-141 IK4004032 - CB LOS LOF CPRIPORT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4004032 (2208) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB LOS LOF CPRIPORT 3 (113) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the CPRI link from the first RFM on this port has failed (Loss of signal and/or loss of framing)		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link cable and SFPs (CB and RFM) for failures, otherwise reset the RFM or reset the CB		

Table 22-142 IK4004033 - CB LOS LOF CPRIPORT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4004033 (2209) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB LOS LOF CPRIPORT 4 (114) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the CPRI link from the first RFM on this port has failed (Loss of signal and/or loss of framing)		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link cable and SFPs (CB and RFM) for failures, otherwise reset the RFM or reset the CB		

Table 22-143 IK4004034 - CB LOS LOF CPRIPORT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4004034 (2210) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB LOS LOF CPRIPORT 5 (115) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the CPRI link from the first RFM on this port has failed (Loss of signal and/or loss of framing)		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link cable and SFPs (CB and RFM) for failures, otherwise reset the RFM or reset the CB		

Table 22-144 IK4004035 - CB LOS LOF CPRIPORT 6

Alarm	Attributes	Applicable major NE releases
Name: IK4004035 (2211) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB LOS LOF CPRIPORT 6 (116) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the CPRI link from the first RFM on this port has failed (Loss of signal and/or loss of framing)		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link cable and SFPs (CB and RFM) for failures, otherwise reset the RFM or reset the CB		

Table 22-145 IK4004036 - CB TRANS TX FAILURE CPRIPORT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4004036 (2212) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB TRANS TX FAILURE CPRIPORT 1 (117) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure in the CB CPRI port transmitter.		
Impact: Impacts the LTE service.		
Remedial action: Replace the SFP for this port.		

Table 22-146 IK4004037 - CB TRANS TX FAILURE CPRI PORT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4004037 (2213) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB TRANS TX FAILURE CPRI PORT 2 (118) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure in the CB CPRI port transmitter.		
Impact: Impacts the LTE service.		
Remedial action: Replace the SFP for this port.		

Table 22-147 IK4004038 - CB TRANS TX FAILURE CPRI PORT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4004038 (2214) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB TRANS TX FAILURE CPRI PORT 3 (119) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure in the CB CPRI port transmitter.		
Impact: Impacts the LTE service.		
Remedial action: Replace the SFP for this port.		

Table 22-148 IK4004039 - CB TRANS TX FAILURE CPRI PORT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4004039 (2215) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB TRANS TX FAILURE CPRI PORT 4 (120) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure in the CB CPRI port transmitter.		
Impact: Impacts the LTE service.		
Remedial action: Replace the SFP for this port.		

Table 22-149 IK4004040 - CB TRANS TX FAILURE CPRIPORT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4004040 (2216) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB TRANS TX FAILURE CPRIPORT 5 (121) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure in the CB CPRI port transmitter.		
Impact: Impacts the LTE service.		
Remedial action: Replace the SFP for this port.		

Table 22-150 IK4004041 - CB TRANS TX FAILURE CPRIPORT 6

Alarm	Attributes	Applicable major NE releases
Name: IK4004041 (2217) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB TRANS TX FAILURE CPRIPORT 6 (122) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure in the CB CPRI port transmitter.		
Impact: Impacts the LTE service.		
Remedial action: Replace the SFP for this port.		

Table 22-151 IK4004042 - CB TRANS RX LOS CPRIPORT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4004042 (2218) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS RX LOS CPRIPORT 1 (123) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: No CPRI signal is received at this CPRI port.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end), verify the RFM is operating.		

Table 22-152 IK4004043 - CB TRANS RX LOS CPRI PORT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4004043 (2219) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS RX LOS CPRI PORT 2 (124) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: No CPRI signal is received at this CPRI port.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end), verify the RFM is operating.		

Table 22-153 IK4004044 - CB TRANS RX LOS CPRI PORT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4004044 (2220) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS RX LOS CPRI PORT 3 (125) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: No CPRI signal is received at this CPRI port.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end), verify the RFM is operating.		

Table 22-154 IK4004045 - CB TRANS RX LOS CPRI PORT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4004045 (2221) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS RX LOS CPRI PORT 4 (126) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: No CPRI signal is received at this CPRI port.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end), verify the RFM is operating.		

Table 22-155 IK4004046 - CB TRANS RX LOS CPRI PORT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4004046 (2222) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS RX LOS CPRI PORT 5 (127) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: No CPRI signal is received at this CPRI port.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end), verify the RFM is operating.		

Table 22-156 IK4004047 - CB TRANS RX LOS CPRI PORT 6

Alarm	Attributes	Applicable major NE releases
Name: IK4004047 (2223) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS RX LOS CPRI PORT 6 (128) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: No CPRI signal is received at this CPRI port.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end), verify the RFM is operating.		

Table 22-157 IK4004054 - CB SDI CPRI PORT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4004054 (2224) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SDI CPRI PORT 1 (135) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: One or more data channels on this CPRI have failed.		
Impact: No impact on eNodeB.		
Remedial action: Reset RFM.		

Table 22-158 IK4004055 - CB SDI CPRIPORT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4004055 (2225) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SDI CPRIPORT 2 (136) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: One or more data channels on this CPRI have failed.		
Impact: No impact on eNodeB.		
Remedial action: Reset RFM.		

Table 22-159 IK4004056 - CB SDI CPRIPORT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4004056 (2226) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SDI CPRIPORT 3 (137) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: One or more data channels on this CPRI have failed.		
Impact: No impact on eNodeB.		
Remedial action: Reset RFM.		

Table 22-160 IK4004057 - CB SDI CPRIPORT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4004057 (2227) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SDI CPRIPORT 4 (138) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: One or more data channels on this CPRI have failed.		
Impact: No impact on eNodeB.		
Remedial action: Reset RFM.		

Table 22-161 IK4004058 - CB SDI CPRIPORT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4004058 (2228) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SDI CPRIPORT 5 (139) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: One or more data channels on this CPRI have failed.		
Impact: No impact on eNodeB.		
Remedial action: Reset RFM.		

Table 22-162 IK4004059 - CB SDI CPRIPORT 6

Alarm	Attributes	Applicable major NE releases
Name: IK4004059 (2229) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SDI CPRIPORT 6 (140) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: One or more data channels on this CPRI have failed.		
Impact: No impact on eNodeB.		
Remedial action: Reset RFM.		

Table 22-163 IK4004061 - CB ALL CPRIPORTS FAILED

Alarm	Attributes	Applicable major NE releases
Name: IK4004061 (2231) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: CB ALL CPRIPORTS FAILED (142) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure of all CPRI ports.		
Impact: The LTE service is not possible.		
Remedial action: Reset CB using the remote connection to NEM. If the alarm persists, replace the CB.		

Table 22-164 IK4004065 - CB GPS 1PPS LOSS

Alarm	Attributes	Applicable major NE releases
Name: IK4004065 (2235) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB GPS 1PPS LOSS (146) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the loss of GPS receiver 1PPS signal.		
Impact: eNodeB uses a lower priority clock reference source or goes into holdover.		
Remedial action: Check GPS signal, GPS antenna, external GPS receiver if present. If fault persist, call next level of support		

Table 22-165 IK4004066 - CB TRANS LSL BHPORT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4004066 (2236) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS LSL BHPORT 1 (147) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the received optical signal level is very low on the backhaul port.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and SFPs at CB and RFM.		

Table 22-166 IK4004067 - CB TRANS LSL BHPORT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4004067 (2237) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS LSL BHPORT 2 (148) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the received optical signal level is very low on the backhaul port.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and SFPs at CB and RFM.		

Table 22-167 IK4004072 - CB OSC IN WARMUP

Alarm	Attributes	Applicable major NE releases
Name: IK4004072 (2238) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB OSC IN WARMUP (149) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates the CB timing oscillator is below its operating temperature range.		
Impact: The LTE service is not possible during the warm up of the oscillator module.		
Remedial action: Wait for the oscillator module to warm up, worst case delay is 12 minutes at -5 Degree C cold start.. If the alarm persists and ambient temperature is within normal operating range then replace the CB.		

Table 22-168 IK4004073 - CB OSC OVER TEMP

Alarm	Attributes	Applicable major NE releases
Name: IK4004073 (2239) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB OSC OVER TEMP (150) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the CB timing oscillator temperature is above the specification limit.		
Impact: The LTE performance is low.		
Remedial action: Check for proper fan operation and that fan is compatible with modem unit, check DBU inlet temperature is within operating range. Replace the CB if necessary.		

Table 22-169 IK4004075 - CB SYSTEM CLOCK UNAVAILABLE

Alarm	Attributes	Applicable major NE releases
Name: IK4004075 (2241) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: CB SYSTEM CLOCK UNAVAILABLE (151) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the system clock is not available. The alarm is applicable for 1588 system clock, syncE, GPS and external reference sources.		
Impact: Impacts the LTE service.		
Remedial action: Check the synchronization sources and provisioning.		

Table 22-170 IK4004076 - CB LOSS OF PRIMARY REFERENCE

Alarm	Attributes	Applicable major NE releases
Name: IK4004076 (2242) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB LOSS OF PRIMARY REFERENCE (152) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates that the primary reference source is not available.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: Check the primary reference source.		

Table 22-171 IK4004082 - CB GPS ANT

Alarm	Attributes	Applicable major NE releases
Name: IK4004082 (2248) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB GPS ANT (153) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a GPS antenna failure.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: Check the GPS antenna.		

Table 22-172 IK4004083 - CB GPS RECEIVER

Alarm	Attributes	Applicable major NE releases
Name: IK4004083 (2249) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB GPS RECEIVER (154) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The GPS receiver has failed and cannot provide a timing reference signal.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: Ensure that eNodeB has completed initialization. Check the cable connection to the External GPS Receiver if equipped, replace receiver if necessary. If internal receiver then replace the CB.		

Table 22-173 IK4004091 - CB LOS LOF HSIQPORT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4004091 (2251) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOS LOF HSIQPORT 1 (155) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of signal between BB and CB.		
Impact: No impact on eNodeB.		
Remedial action: Replace the BB if a single port fault is present. If link faults exist across multiple ports then replace the CB.		

Table 22-174 IK4004092 - CB LOS LOF HSIQPORT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4004092 (2252) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOS LOF HSIQPORT 2 (156) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of signal between BB and CB.		
Impact: No impact on eNodeB.		
Remedial action: Replace the BB if a single port fault is present. If link faults exist across multiple ports then replace the CB.		

Table 22-175 IK4004093 - CB LOS LOF HSIQPORT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4004093 (2253) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOS LOF HSIQPORT 3 (157) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of signal between BB and CB.		
Impact: No impact on eNodeB.		
Remedial action: Replace the BB if a single port fault is present. If link faults exist across multiple ports then replace the CB.		

Table 22-176 IK4004094 - CB LOS LOF HSIQPORT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4004094 (2254) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOS LOF HSIQPORT 4 (158) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of signal between BB and CB.		
Impact: No impact on eNodeB.		
Remedial action: Replace the BB if a single port fault is present. If link faults exist across multiple ports then replace the CB.		

Table 22-177 IK4004095 - CB LOS LOF HSIQPORT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4004095 (2255) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOS LOF HSIQPORT 5 (159) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of signal between BB and CB.		
Impact: No impact on eNodeB.		
Remedial action: Replace the BB if a single port fault is present. If link faults exist across multiple ports then replace the CB.		

Table 22-178 IK4004096 - CB LOS LOF HSIQPORT 6

Alarm	Attributes	Applicable major NE releases
Name: IK4004096 (2256) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOS LOF HSIQPORT 6 (160) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of signal between BB and CB.		
Impact: No impact on eNodeB.		
Remedial action: Replace the BB if a single port fault is present. If link faults exist across multiple ports then replace the CB.		

Table 22-179 IK4004097 - CB LOS LOF HSIQPORT 7

Alarm	Attributes	Applicable major NE releases
Name: IK4004097 (2257) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOS LOF HSIQPORT 7 (161) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of signal between BB and CB.		
Impact: No impact on eNodeB.		
Remedial action: Replace the BB if a single port fault is present. If link faults exist across multiple ports then replace the CB.		

Table 22-180 IK4004098 - CB LOS LOF HSIQPORT 8

Alarm	Attributes	Applicable major NE releases
Name: IK4004098 (2258) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOS LOF HSIQPORT 8 (162) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of signal between BB and CB.		
Impact: No impact on eNodeB.		
Remedial action: Replace the BB if a single port fault is present. If link faults exist across multiple ports then replace the CB.		

Table 22-181 IK4004099 - CB LOS LOF HSIQPORT 9

Alarm	Attributes	Applicable major NE releases
Name: IK4004099 (2259) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOS LOF HSIQPORT 9 (163) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of signal between BB and CB.		
Impact: No impact on eNodeB.		
Remedial action: Replace the BB if a single port fault is present. If link faults exist across multiple ports then replace the CB.		

Table 22-182 IK4004100 - CB LOS LOF HSIQPORT 10

Alarm	Attributes	Applicable major NE releases
Name: IK4004100 (2260) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOS LOF HSIQPORT 10 (164) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of signal between BB and CB.		
Impact: No impact on eNodeB.		
Remedial action: Replace the BB if a single port fault is present. If link faults exist across multiple ports then replace the CB.		

Table 22-183 IK4004101 - CB LOS LOF HSIQPORT 11

Alarm	Attributes	Applicable major NE releases
Name: IK4004101 (2261) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOS LOF HSIQPORT 11 (165) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of signal between BB and CB.		
Impact: No impact on eNodeB.		
Remedial action: Replace the BB if a single port fault is present. If link faults exist across multiple ports then replace the CB.		

Table 22-184 IK4004102 - CB LOS LOF HSIQPORT 12

Alarm	Attributes	Applicable major NE releases
Name: IK4004102 (2262) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOS LOF HSIQPORT 12 (166) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a loss of signal between BB and CB.		
Impact: No impact on eNodeB.		
Remedial action: Replace the BB if a single port fault is present. If link faults exist across multiple ports then replace the CB.		

Table 22-185 IK4004104 - CB GPS RECEIVER COMM FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4004104 (2263) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB GPS RECEIVER COMM FAIL (167) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The CB cannot communicate with the GPS receiver.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: Ensure that eNodeB has completed initialization. Check the cable connection to the External GPS Receiver if equipped, replace receiver if necessary. If internal receiver then replace the CB.		

Table 22-186 IK4004107 - CB SFP INCOMPATIBILITY CPRI PORT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4004107 (2266) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB SFP INCOMPATIBILITY CPRI PORT 1 (168) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates that the equipped SFP doesn't allow to achieve the maximum CPRI rate allowed by SW.		
Remedial action: The operator may update the SFP on the BBU.		

Table 22-187 IK4004117 - CB OVER TEMP MAJOR

Alarm	Attributes	Applicable major NE releases
Name: IK4004117 (2276) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB OVER TEMP MAJOR (169) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the CB temperature is rising near the shutdown limit.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: Check for fan failure or high ambient temperature.		

Table 22-188 IK4004118 - CB OVER TEMP CRITICAL

Alarm	Attributes	Applicable major NE releases
Name: IK4004118 (2277) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: critical Specific problem: CB OVER TEMP CRITICAL (170) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the CB temperature is above the operating range.		
Impact: The LTE service is still possible until auto shutdown.		
Remedial action: CB autonomously powers down. Check for fan failure or high ambient temperature.		

Table 22-189 IK4004126 - CB FAILURE SLAVE SOC 2

Alarm	Attributes	Applicable major NE releases
Name: IK4004126 (2285) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: critical Specific problem: CB FAILURE SLAVE SOC 2 (171) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates a failure of a Slave SOC.		
Remedial action: Reset the CB manually to attempt to clear the fault. Replace the controller board if the problem persists.		

Table 22-190 IK4004127 - CB FAILURE SLAVE SOC 3

Alarm	Attributes	Applicable major NE releases
Name: IK4004127 (2286) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: critical Specific problem: CB FAILURE SLAVE SOC 3 (172) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates a failure of a Slave SOC.		
Remedial action: Reset the CB manually to attempt to clear the fault. Replace the controller board if the problem persists.		

Table 22-191 IK4004128 - CB CARD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4004128 (2287) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: CB CARD FAILURE (173) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a failure of controller board.		
Remedial action: Reset the CB manually to attempt to clear the fault. Replace the controller board if the problem persists		

Table 22-192 IK4004129 - CB SFP INCOMPATIBILITY CPRI PORT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4004129 (2288) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB SFP INCOMPATIBILITY CPRI PORT 2 (174) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the equipped SFP doesn't allow to achieve the maximum CPRI rate allowed by SW.		
Remedial action: The operator may update the SFP on the BBU.		

Table 22-193 IK4004130 - CB SFP1 I2C FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4004130 (2289) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SFP1 I2C FAULT (175) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates CB cannot read info of SFP 1 through I2C		
Remedial action: Reset the CB or replace the SFP		

Table 22-194 IK4004131 - CB SFP2 I2C FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4004131 (2290) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SFP2 I2C FAULT (176) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates CB cannot read info of SFP 2 through I2C		
Remedial action: Reset the CB or replace the SFP		

Table 22-195 IK4004132 - CB SFP3 I2C FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4004132 (2291) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SFP3 I2C FAULT (177) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates CB cannot read info of SFP 3 through I2C		
Remedial action: Reset the CB or replace the SFP

Alarm	Attributes	Applicable major NE releases
Name: IK4004134 (2293) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SFP5 I2C FAULT (179) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates CB cannot read info of SFP 5 through I2C		
Remedial action: Reset the CB or replace the SFP		

Table 22-198 IK4004135 - CB SFP6 I2C FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4004135 (2294) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SFP6 I2C FAULT (180) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates CB cannot read info of SFP 6 through I2C		
Remedial action: Reset the CB or replace the SFP		

Table 22-199 IK4004136 - CB GPS LOCK FAILURE CRITICAL

Alarm	Attributes	Applicable major NE releases
Name: IK4004136 (2295) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: CB GPS LOCK FAILURE CRITICAL (181) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that GPS satellite lock has been lost prior to achieving the synchronization		
Impact: The LTE service is not possible.		
Remedial action: Check the GPS antenna placement, GPS antenna status, or GPS antenna cable. Replace the External GPS Receiver or CB (if using internal GPS receiver).		

Table 22-200 IK4004137 - CB GPS LOCK FAILURE MAJOR

Alarm	Attributes	Applicable major NE releases
Name: IK4004137 (2296) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB GPS LOCK FAILURE MAJOR (182) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that GPS satellite lock has been lost after timing has been synchronized.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: Check the GPS antenna placement, GPS antenna status, or GPS antenna cable. Replace the External GPS Receiver or CB (if using internal GPS receiver).		

Table 22-201 IK4004138 - CB SFP7 I2C FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4004138 (2297) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SFP7 I2C FAULT (183) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates CB cannot read info of SFP 7 through I2C		
Remedial action: Reset the CB or replace the SFP		

Table 22-202 IK4004139 - CB SFP8 I2C FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4004139 (2298) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SFP8 I2C FAULT (184) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates CB cannot read info of SFP 8 through I2C		
Remedial action: Reset the CB or replace the SFP		

Table 22-203 IK4004140 - CB TOD OUT OF SYNC

Alarm	Attributes	Applicable major NE releases
Name: IK4004140 (2299) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TOD OUT OF SYNC (185) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the GPS timing pulses may be missing or incorrect.		
Impact: No impact on eNodeB.		
Remedial action: Replace the External GPS Receiver or CB (if using internal GPS receiver).		

Table 22-204 IK4004141 - CB PTP LOSS OF PRIMARY SYNCHRONIZATION

Alarm	Attributes	Applicable major NE releases
Name: IK4004141 (2986) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB PTP LOSS OF PRIMARY SYNCHRONIZATION (186) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates a loss of synchronization with the primary 1588 grandmaster server.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: Check configuration of link to 1588 Grandmaster is correct. If problem persists check the packet delay variation on the eNb backhaul interface.		

Table 22-205 IK4004142 - CB PTP LOSS OF SECONDARY SYNCHRONIZATION

Alarm	Attributes	Applicable major NE releases
Name: IK4004142 (2987) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB PTP LOSS OF SECONDARY SYNCHRONIZATION (187) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates a loss of synchronization with the secondary 1588 grandmaster server.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: Check configuration of link to 1588 Grandmaster is correct. If problem persists check the packet delay variation on the eNb backhaul interface.		

Table 22-206 IK4004143 - CB SFP9 I2C FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4004143 (5207) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB SFP9 I2C FAULT (188) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates CB cannot read info of SFP through I2C		
Remedial action: Reset the CB or replace the SFP		

Table 22-207 IK4004144 - CB FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4004144 (2988) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB FAULT 1 (189) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified CB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-208 IK4004145 - CB FAULT 2

Alarm	Attributes	Applicable major NE releases

Description: Provisioned for late churn-in. Unspecified CB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-212 IK4004150 - CB GPS INSUFFICIENT FIXED SATELLITES

Alarm	Attributes	Applicable major NE releases
Name: IK4004150 (2994) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: CB GPS INSUFFICIENT FIXED SATELLITES (195) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that insufficient fixed satellites are available to get GPS synchronization.		
Impact: The GPS synchronisation is not possible.		
Remedial action: Check the GPS antenna location and status. Replace GPS antenna, cable or receiver if necessary.		

Table 22-213 IK4004151 - CB GPS INSUFFICIENT VISIBLE SATELLITES

Alarm	Attributes	Applicable major NE releases
Name: IK4004151 (2995) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: CB GPS INSUFFICIENT VISIBLE SATELLITES (196) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that insufficient visible satellites are available to get GPS synchronization.		
Impact: The GPS synchronisation is not possible.		
Remedial action: Check the GPS antenna location and status. Replace GPS antenna, cable or receiver if necessary.		

Table 22-214 IK4004152 - CB SFP INCOMPATIBILITY CPRI PORT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4004152 (2996) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB SFP INCOMPATIBILITY CPRI PORT 3 (197) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the equipped SFP doesn't allow to achieve the maximum CPRI rate allowed by SW.		
Remedial action: The operator may update the SFP on the BBU.		

Table 22-215 IK4004153 - CB INIT GPS SELF SURVEY INPROGRESS

Alarm	Attributes	Applicable major NE releases
Name: IK4004153 (2997) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB INIT GPS SELF SURVEY INPROGRESS (198) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a high accuracy GPS survey is in progress.		
Impact: No impact on eNodeB.		
Remedial action: Wait. If the alarm persists beyond 10 hours, call the next level of support.		

Table 22-216 IK4004154 - CB LOOPBACK INACTIVITY

Alarm	Attributes	Applicable major NE releases
Name: IK4004154 (2998) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB LOOPBACK INACTIVITY (199) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates there is no packet activity for the interval specified in the loopback activation.		
Impact: No impact on eNodeB.		
Remedial action: Reset the CB. Call the next level of support		

Table 22-217 IK4004155 - CB PTP CLIENT INITIALIZING 1

Alarm	Attributes	Applicable major NE releases
Name: IK4004155 (3637) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB PTP CLIENT INITIALIZING 1 (200) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the 1588 client algorithm is stabilizing from a cold start-up, when the 1588 message transfer is set to Continuous mode. This alarm is inhibited when the 1588 message transfer is in Discontinuous mode.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: If alarm continues assess the Packet delay variation on the Network Interface.		

Table 22-218 IK4004156 - CB PTP CLIENT INITIALIZING 2

Alarm	Attributes	Applicable major NE releases
Name: IK4004156 (3638) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB PTP CLIENT INITIALIZING 2 (201) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the 1588 client algorithm is stabilizing from a cold start-up, when the 1588 message transfer is set to Continuous mode. This alarm is inhibited when the 1588 message transfer is in Discontinuous mode.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: If alarm continues assess the Packet delay variation on the Network Interface.		

Table 22-219 IK4004157 - CB GPS LOCK FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4004157 (3639) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB GPS LOCK FAILURE (202) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that GPS satellite lock has been lost after timing has been synchronized.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: Check the GPS antenna placement, GPS antenna status, or GPS antenna cable. Replace the External GPS Receiver or CB (if using internal GPS receiver).		

Table 22-220 IK4004158 - CB OSC IN WARMUP

Alarm	Attributes	Applicable major NE releases
Name: IK4004158 (3640) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB OSC IN WARMUP (149) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the CB timing oscillator is below its operating temperature range.		
Impact: The LTE service is not possible during the warm up of the oscillator module.		
Remedial action: Wait for the oscillator module to warm up, worst case delay is 12 minutes at -5 Degree C cold start.. If the alarm persists and ambient temperature is within normal operating range then replace the CB.		

Table 22-221 IK4004159 - CB LOSS OF PRIMARY REFERENCE

Alarm	Attributes	Applicable major NE releases
Name: IK4004159 (3641) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOSS OF PRIMARY REFERENCE (152) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the primary reference source is not available.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: Check the primary reference source.		

Table 22-222 IK4004160 - CB LOSS OF SYNCE

Alarm	Attributes	Applicable major NE releases
Name: IK4004160 (3642) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB LOSS OF SYNCE (203) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The SyncE timing reference is not available.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: The Backhaul Node connecting to the eNB cannot supply an accurate Synchronous Ethernet clock. Check the clock source on this Backhaul Node.		

Table 22-223 IK4004161 - CB GPS ANT POSITION UNKNOWN

Alarm	Attributes	Applicable major NE releases
Name: IK4004161 (3643) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB GPS ANT POSITION UNKNOWN (204) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LT6.0
Description: This alarm indicates a failure to detect the GPS antenna position.		
Impact: Impacts the location-based service.		
Remedial action: Check the position of the GPS antenna.		

Table 22-224 IK4004162 - CB PTP LOSS OF PRIMARY SYNCHRONIZATION

Alarm	Attributes	Applicable major NE releases
Name: IK4004162 (3644) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB PTP LOSS OF PRIMARY SYNCHRONIZATION (186) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a loss of synchronization with the primary 1588 grandmaster server, when the 1588 message transfer is set to Continuous mode. This alarm is inhibited when the 1588 message transfer is in Discontinuous mode.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: Check configuration of link to 1588 Grandmaster is correct. If problem persists check the packet delay variation on the eNb backhaul interface.		

Table 22-225 IK4004163 - CB PTP LOSS OF SECONDARY SYNCHRONIZATION

Alarm	Attributes	Applicable major NE releases
Name: IK4004163 (3645) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB PTP LOSS OF SECONDARY SYNCHRONIZATION (187) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a loss of synchronization with the secondary 1588 grandmaster server, when the 1588 message transfer is set to Continuous mode. This alarm is inhibited when the 1588 message transfer is in Discontinuous mode.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: Check configuration of link to 1588 Grandmaster is correct. If problem persists check the packet delay variation on the eNb backhaul interface.		

Table 22-226 IK4004164 - CB PTP UNEXPECTED LONG INITIALIZATION

Alarm	Attributes	Applicable major NE releases
Name: IK4004164 (3646) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB PTP UNEXPECTED LONG INITIALIZATION (205) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that 1588 client has taken longer than expected to achieve complete synchronization. When the 1588 message transfer is set to Discontinuous mode and the , this alarm indicates lock has not been obtained in a message transfer session before the next timed session, when the session length is defined by gaining Lock.		

(1 of 2)

22 – Alcatel-Lucent 9xxx eNodeB alarms

Alarm	Attributes	Applicable major NE releases
Impact: The LTE service is not possible with 1588 PTP as synchronization reference. However, the eNB may synchronize to an alternative available source.		
Remedial action: Verify 1588 grandmaster is operating correctly, check network conditions, otherwise reset the CB. Note: if eNB has synchronized to an alternative available source, then reset of CB will be service impacting.		

(2 of 2)

Table 22-227 IK4004165 - CB INIT GPS SELF SURVEY

Alarm	Attributes	Applicable major NE releases
Name: IK4004165 (3647) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: warning Specific problem: CB INIT GPS SELF SURVEY (206) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates a high accuracy GPS survey has not been successfully completed after 24 hours.		
Impact: Synchronization accuracy too low to support OTDOA.		
Remedial action: Check GPS receiver.		

Table 22-228 IK4004166 - CB GPS INSUFFICIENT FIXED SATELLITES

Alarm	Attributes	Applicable major NE releases
Name: IK4004166 (3648) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: minor Specific problem: CB GPS INSUFFICIENT FIXED SATELLITES (195) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L
Description: This alarm indicates that insufficient fixed satellites are available to get GPS synchronization.		
Impact: The GPS synchronisation is not possible.		
Remedial action: Check the GPS antenna location and status. Replace GPS antenna, cable or receiver if necessary.		

Table 22-229 IK4004167 - CB GPS INSUFFICIENT VISIBLE SATELLITES

Alarm	Attributes	Applicable major NE releases
Name: IK4004167 (3649) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: warning Specific problem: CB GPS INSUFFICIENT VISIBLE SATELLITES (196) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that insufficient visible satellites are available to get GPS synchronization.		
Impact: The GPS synchronisation is not possible.		
Remedial action: Check the GPS antenna location and status. Replace GPS antenna, cable or receiver if necessary.		

Table 22-230 IK4004170 - CB INIT GPS SELF SURVEY

Alarm	Attributes	Applicable major NE releases
Name: IK4004170 (3752) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: warning Specific problem: CB INIT GPS SELF SURVEY (206) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a high accuracy GPS survey has not been successfully completed after 24 hours.		
Impact: Synchronization accuracy too low to support OTDOA.		
Remedial action: Check GPS receiver.		

Table 22-231 IK4004171 - CB INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4004171 (3753) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: critical Specific problem: CB INDETERMINATE OPERATIONAL FAILURE (87) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that a failure of the controller board has been detected that cannot be described by any specific alarm.		
Impact: Operation of the eNodeB is interrupted as the controller board resets.		
Remedial action: Reset the unit manually to attempt to clear the fault. If the problem persists then replace the controller board.		

Table 22-232 IK4004172 - CB TRANS LSL CPRI PORT 7

Alarm	Attributes	Applicable major NE releases
Name: IK4004172 (4632) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS LSL CPRI PORT 7 (208) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The incoming optical signal level for this CPRI port is very low.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary.		

Table 22-233 IK4004173 - CB TRANS LSL CPRI PORT 8

Alarm	Attributes	Applicable major NE releases
Name: IK4004173 (4633) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS LSL CPRI PORT 8 (209) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The incoming optical signal level for this CPRI port is very low.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary.		

Table 22-234 IK4004174 - CB TRANS LSL CPRI PORT 9

Alarm	Attributes	Applicable major NE releases
Name: IK4004174 (4634) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB TRANS LSL CPRI PORT 9 (210) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The incoming optical signal level for this CPRI port is very low.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary.		

Table 22-235 IK4004175 - CB RAI CPRIPORT 7

Alarm	Attributes	Applicable major NE releases
Name: IK4004175 (4635) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB RAI CPRIPORT 7 (211) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The first RFM on the CPRI port is reporting a CPRI link alarm.		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary. Reset or replace CB if problem persists.		

Table 22-236 IK4004176 - CB RAI CPRIPORT 8

Alarm	Attributes	Applicable major NE releases
Name: IK4004176 (4636) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB RAI CPRIPORT 8 (212) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The first RFM on the CPRI port is reporting a CPRI link alarm.		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary. Reset or replace CB if problem persists.		

Table 22-237 IK4004177 - CB RAI CPRIPORT 9

Alarm	Attributes	Applicable major NE releases
Name: IK4004177 (4637) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB RAI CPRIPORT 9 (213) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The first RFM on the CPRI port is reporting a CPRI link alarm.		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link connections, cables, and SFPs and replace as necessary. Reset or replace CB if problem persists.		

Table 22-238 IK4004178 - CB LOS LOF CPRIPORT 7

Alarm	Attributes	Applicable major NE releases
Name: IK4004178 (4638) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB LOS LOF CPRIPORT 7 (214) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the CPRI link from the first RFM on this port has failed (Loss of signal and/or loss of framing)		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link cable and SFPs (CB and RFM) for failures, otherwise reset the RFM or reset the CB		

Table 22-239 IK4004179 - CB LOS LOF CPRIPORT 8

Alarm	Attributes	Applicable major NE releases
Name: IK4004179 (4639) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB LOS LOF CPRIPORT 8 (215) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the CPRI link from the first RFM on this port has failed (Loss of signal and/or loss of framing)		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link cable and SFPs (CB and RFM) for failures, otherwise reset the RFM or reset the CB		

Table 22-240 IK4004180 - CB LOS LOF CPRIPORT 9

Alarm	Attributes	Applicable major NE releases
Name: IK4004180 (4640) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB LOS LOF CPRIPORT 9 (216) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the CPRI link from the first RFM on this port has failed (Loss of signal and/or loss of framing)		
Impact: Impacts the LTE service.		
Remedial action: Check the CPRI link cable and SFPs (CB and RFM) for failures, otherwise reset the RFM or reset the CB		

Table 22-241 IK4004181 - CB TRANS TX FAILURE CPRI PORT 7

Alarm	Attributes	Applicable major NE releases
Name: IK4004181 (4641) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB TRANS TX FAILURE CPRI PORT 7 (217) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a failure in the CB CPRI port transmitter.		
Impact: Impacts the LTE service.		
Remedial action: Replace the SFP for this port.		

Table 22-242 IK4004182 - CB TRANS TX FAILURE CPRI PORT 8

Alarm	Attributes	Applicable major NE releases

Alarm	Attributes	Applicable major NE releases
Name: IK4004194 (5209) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB SFP INCOMPATIBILITY CPRI PORT 6 (227) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the equipped SFP doesn't allow to achieve the maximum CPRI rate allowed by SW.		
Remedial action: The operator may update the SFP on the BBU.		

Table 22-252 IK4004195 - CB SFP INCOMPATIBILITY CPRI PORT 7

Alarm	Attributes	Applicable major NE releases
Name: IK4004195 (5210) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB SFP INCOMPATIBILITY CPRI PORT 7 (228) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the equipped SFP doesn't allow to achieve the maximum CPRI rate allowed by SW.		
Remedial action: The operator may update the SFP on the BBU.		

Table 22-253 IK4004196 - CB SFP INCOMPATIBILITY CPRI PORT 8

Alarm	Attributes	Applicable major NE releases
Name: IK4004196 (5211) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB SFP INCOMPATIBILITY CPRI PORT 8 (229) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the equipped SFP doesn't allow to achieve the maximum CPRI rate allowed by SW.		
Remedial action: The operator may update the SFP on the BBU.		

Table 22-254 IK4004197 - CB SFP INCOMPATIBILITY CPRI PORT 9

Alarm	Attributes	Applicable major NE releases
Name: IK4004197 (5212) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB SFP INCOMPATIBILITY CPRI PORT 9 (230) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the equipped SFP doesn't allow to achieve the maximum CPRI rate allowed by SW.		
Remedial action: The operator may update the SFP on the BBU.		

Table 22-255 IK4005001 - DBU INITIALIZATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005001 (2300) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: critical Specific problem: DBU INITIALIZATION FAILURE (231) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This alarm indicates the failure to initialize the associated resources.		
Impact: The LTE service is not possible.		
Remedial action: Reset CB using the remote connection to NEM. Check BIST result. If the alarm persists, replace the CB.		

Table 22-256 IK4005002 - RECTIFIER FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005002 (2301) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: RECTIFIER FAILURE (232) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates that the rectifier has failed.		
Remedial action: Check rectifier for root cause and either replace rectifier or repair if possible.		

Table 22-257 IK4005003 - DBU MEMORY ACCESS FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005003 (2302) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: DBU MEMORY ACCESS FAILURE (233) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure to access the EEPROM on the eNodeB.		
Impact: The LTE service is not possible.		
Remedial action: Call the next level of support.		

Table 22-258 IK4005004 - DBU UNREADABLE MANUFACTURER DATA

Alarm	Attributes	Applicable major NE releases
Name: IK4005004 (2303) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: DBU UNREADABLE MANUFACTURER DATA (234) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure to read the manufacturer data.		
Impact: The LTE service is not possible.		
Remedial action: Call the next level of support.		

Table 22-259 IK4005005 - BATTERY FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005005 (5213) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: major Specific problem: BATTERY FAILURE (235) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a Battery failure (high temperature, voltage imbalance)		
Remedial action: Replace batteries.		

Table 22-260 IK4005006 - POWER CONTROL BOARD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005006 (2304) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: major Specific problem: POWER CONTROL BOARD FAILURE (236) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that AC/DC power system control board is in failure		
Remedial action: Check power system control module. Replace power system control module.		

Table 22-261 IK4005007 - AC CIRCUIT BREAKER

Alarm	Attributes	Applicable major NE releases
Name: IK4005007 (2305) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: major Specific problem: AC CIRCUIT BREAKER (237) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that one or several AC breakers have tripped. May be associated to AC Main alarm.		
Remedial action: Visit basestation and check AC main supply.		

Table 22-262 IK4005008 - DBU INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005008 (2306) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: critical Specific problem: DBU INDETERMINATE OPERATIONAL FAILURE (238) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that a failure of the shelf hardware has been detected that cannot be described by any specific alarm.		
Remedial action: Inspect the shelf hardware (fan unit, power converter unit, etc.), replace any faulty unit.		

Table 22-263 IK4005009 - FRESH AIR FILTER 1 FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005009 (2307) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: minor Specific problem: FRESH AIR FILTER 1 FAILURE (239) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that Fresh air filter 1 is clogged		
Remedial action: Replace filter.		

Table 22-264 IK4005010 - FRESH AIR FILTER 2 FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005010 (2308) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: minor Specific problem: FRESH AIR FILTER 2 FAILURE (240) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that Fresh air filter 2 is clogged.		
Remedial action: Replace filter.		

Table 22-265 IK4005038 - DBU AC MAJOR

Alarm	Attributes	Applicable major NE releases
Name: IK4005038 (2336) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: DBU AC MAJOR (241) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure of multiple rectifier components.		
Impact: No impact on eNodeB.		
Remedial action: Replace the failed rectifier component.		

Table 22-266 IK4005039 - DBU AC MINOR

Alarm	Attributes	Applicable major NE releases
Name: IK4005039 (2337) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: minor Specific problem: DBU AC MINOR (242) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a minor failure in the DC rectifier unit.		
Impact: No impact on eNodeB.		
Remedial action: Replace the failed fan or the rectifier component.		

Table 22-267 IK4005040 - DBU AC INPUT OUT OF SPEC

Alarm	Attributes	Applicable major NE releases
Name: IK4005040 (2338) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: DBU AC INPUT OUT OF SPEC (243) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the AC input voltage to the rectifiers is too high or too low.		
Impact: No impact on eNodeB.		
Remedial action: Verify and correct the AC power supply to the rectifiers.		

Table 22-268 IK4005041 - DBU AC BATTERY CHARGING FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005041 (2339) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: DBU AC BATTERY CHARGING FAILURE (244) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the eNodeB is operating on the battery power.		
Impact: The eNodeB is not operational due to the drained batteries.		
Remedial action: Verify and correct the AC power supply to the rectifiers. If the alarm persists, check and replace any failed rectifier components.		

Table 22-269 IK4005042 - DBU FAN ALARM

Alarm	Attributes	Applicable major NE releases
Name: IK4005042 (2340) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: DBU FAN ALARM (245) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the baseband cabinet fan failure.		
Impact: The baseband cabinet components may fail due to overheating.		
Remedial action: Replace the baseband cabinet fan.		

Table 22-270 IK4005043 - DBU DOOR ALARM

Alarm	Attributes	Applicable major NE releases
Name: IK4005043 (2341) Type: environmentalAlarm (2) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: minor Specific problem: DBU DOOR ALARM (246) Implicitly cleared: true Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the eNodeB door is open.		
Impact: The eNodeB equipment is accessible and easily tampered. No immediate impact on call processing.		
Remedial action: Close the cabinet door.		

Table 22-271 IK4005044 - DBU OVER TEMP

Alarm	Attributes	Applicable major NE releases
Name: IK4005044 (2342) Type: environmentalAlarm (2) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: major Specific problem: DBU OVER TEMP (247) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the baseband cabinet temperature is above the safe operating threshold.		
Impact: The eNodeB components may fail due to overheating.		
Remedial action: Check the cabinet for proper functioning fans and unclogged air filters. Check if the ambient temperature is within the recommended operating range.		

Table 22-272 IK4005045 - DBU UNDER TEMP

Alarm	Attributes	Applicable major NE releases
Name: IK4005045 (2343) Type: environmentalAlarm (2) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: major Specific problem: DBU UNDER TEMP (248) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the baseband cabinet temperature is below the safe operating threshold.		
Impact: The eNodeB components may fail due to low temperature.		
Remedial action: Check if the ambient temperature is within the recommended operating range.		

Table 22-273 IK4005046 - DBU FAF

Alarm	Attributes	Applicable major NE releases
Name: IK4005046 (2344) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: minor Specific problem: DBU FAF (249) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the baseband cabinet filter airflow is reduced by excessive dirt.		
Impact: The eNodeB components may fail due to overheating.		
Remedial action: Replace the fresh air filter.		

Table 22-274 IK4005047 - DBU AUX EQUIP

Alarm	Attributes	Applicable major NE releases
Name: IK4005047 (2345) Type: communicationsAlarm (4) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: DBU AUX EQUIP (250) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates an error in the auxiliary telecom equipment in the eNodeB.		
Impact: The eNodeB external communication fails or is degraded.		
Remedial action: Check the auxiliary telecom equipment.		

Table 22-275 IK4005051 - DBU BACKPLANE TYPE NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4005051 (2349) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: critical Specific problem: DBU BACKPLANE TYPE NOT SUPPORTED (253) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the backplane type is not supported.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Proceed with a software upgrade.		

Table 22-276 IK4005052 - DBU RUC FAN FAULT MAJOR

Alarm	Attributes	Applicable major NE releases
Name: IK4005052 (2350) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: DBU RUC FAN FAULT MAJOR (254) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the fan assemblies cooling capacity has been degraded.		
Impact: No impact on eNodeB.		
Remedial action: Check the fan.		

Table 22-277 IK4005053 - DBU RUC FAN FAULT CRITICAL

Alarm	Attributes	Applicable major NE releases
Name: IK4005053 (2351) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBShelfSpecifics	Severity: critical Specific problem: DBU RUC FAN FAULT CRITICAL (255) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the fan assemblies is not fonctionning.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: HW autonomously powers down the system.		

Table 22-278 IK4005054 - DBU WRONG FAN ASSEMBLY

Alarm	Attributes	Applicable major NE releases
Name: IK4005054 (2352) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBShelfSpecifics	Severity: major Specific problem: DBU WRONG FAN ASSEMBLY (256) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a wrong flow RUC, specifically a normal-flow RUC being present when a high-flow RUC is needed.		
Impact: No impact on eNodeB.		
Remedial action: Call the next level of support.		

Table 22-279 IK4005055 - DBU HEAT EXCHANGER

Alarm	Attributes	Applicable major NE releases
Name: IK4005055 (2999) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBShelfSpecifics	Severity: minor Specific problem: DBU HEAT EXCHANGER (257) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the cabinet heat exchanger has failed		
Impact: The eNodeB components may fail due to overheating.		
Remedial action: Replace the heat exchanger.		

Table 22-280 IK4005056 - DBU FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4005056 (3000) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: minor Specific problem: DBU FAULT 1 (258) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: Unspecified DBU fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-281 IK4005057 - DBU FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4005057 (3001) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: minor Specific problem: DBU FAULT 2 (259) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: Unspecified DBU fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-282 IK4005058 - DBU FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4005058 (3002) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: minor Specific problem: DBU FAULT 3 (260) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: Provisioned for late churn-in. Unspecified DBU fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-283 IK4005059 - DBU FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4005059 (3003) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: minor Specific problem: DBU FAULT 4 (261) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified DBU fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-284 IK4005060 - DBU FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4005060 (3004) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: minor Specific problem: DBU FAULT 5 (262) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified DBU fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-285 IK4005061 - DBU UNREADABLE MANUFACTURER DATA ATTACHED HW

Alarm	Attributes	Applicable major NE releases
Name: IK4005061 (3005) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: DBU UNREADABLE MANUFACTURER DATA ATTACHED HW (263) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates the failure to read the manufacturer data of an attached HW (e.g. eAM or FAN)		
Impact: The LTE service is not possible.		
Remedial action: Reset the CB. Check the cable between controller and RUC. Call next level of support, replace RUC unit		

Table 22-286 IK4005067 - DBU INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005067 (3756) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: critical Specific problem: DBU INDETERMINATE OPERATIONAL FAILURE (238) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that a failure of the shelf hardware has been detected that cannot be described by any specific alarm.		
Impact: Impact will depend on the affected unit. A fan failure may lead to overheating, an alarm module failure may hide existing alarms.		
Remedial action: Inspect the shelf hardware (fan unit, power converter unit, etc.), replace any faulty unit.		

Table 22-287 IK4005068 - FRESH AIR FILTER 1 FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005068 (3757) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: minor Specific problem: FRESH AIR FILTER 1 FAILURE (239) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that Fresh air filter 1 is clogged		
Impact: Fresh Air flow reduced		
Remedial action: Replace filter.		

Table 22-288 IK4005069 - FRESH AIR FILTER 2 FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005069 (3758) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: minor Specific problem: FRESH AIR FILTER 2 FAILURE (240) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that Fresh air filter 2 is clogged.		
Impact: Fresh Air flow reduced		
Remedial action: Replace filter.		

Table 22-289 IK4005070 - TRDU FAN FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005070 (3759) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: TRDU FAN FAILURE (266) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the TRDU fan has failed.		
Impact: TRDU may over heat		
Remedial action: Replace the fan.		

Table 22-290 IK4005071 - RECTIFIER FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005071 (3760) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: RECTIFIER FAILURE (232) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the rectifier has failed.		
Impact: Rectifier redundancy is no more available		
Remedial action: Check rectifier for root cause and either replace rectifier or repair if possible.		

Table 22-291 IK4005072 - BATTERY FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005072 (3761) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: BATTERY FAILURE (235) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates a Battery failure (high temperature, voltage imbalance)		
Impact: Batteries have degraded or failed. ENB may shut down if battery power is needed.		
Remedial action: Replace batteries.		

Table 22-292 IK4005073 - SMOKE DETECTOR

Alarm	Attributes	Applicable major NE releases
Name: IK4005073 (3762) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: major Specific problem: SMOKE DETECTOR (267) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the alarm is linked to an optional smoke detector inside cabinet.		
Impact: May damage eNB.		
Remedial action: Visit basestation to determine cause. Note: Reset the smoke detector.		

Table 22-293 IK4005074 - WATER DETECTOR

Alarm	Attributes	Applicable major NE releases
Name: IK4005074 (3763) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: major Specific problem: WATER DETECTOR (268) Implicitly cleared: true Default probable cause: floodDetected (1482)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the alarm is linked to a water ingress detector inside cabinet.		
Impact: Damage to eNB		
Remedial action: Visit basestation to determine cause. Note: Reset the water detector.		

Table 22-294 IK4005075 - MISSING LINK ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4005075 (3764) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: minor Specific problem: MISSING LINK ERROR (269) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the Battery thermal probe disconnection of battery thermal probe failure.		
Impact: Batteries may overheat		
Remedial action: Visit basestation to determine cause repair as needed. Note: Once the fault is corrected the alarm should clear.		

Table 22-295 IK4005076 - POWER CONTROL BOARD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005076 (3765) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: POWER CONTROL BOARD FAILURE (236) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that AC/DC power system control board is in failure		
Impact: AC/DC power system functioning is degraded. Alarm monitoring of power system may be degraded.		
Remedial action: Check power system control module. Replace power system control module.		

Table 22-296 IK4005077 - BATTERY NOT DETECTED

Alarm	Attributes	Applicable major NE releases
Name: IK4005077 (3766) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: BATTERY NOT DETECTED (270) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the DC breaker protecting the battery has tripped OFF.		
Impact: DC supply may be interrupted		
Remedial action: Visit basestation and check input to the battery.		

Table 22-297 IK4005078 - AC CIRCUIT BREAKER

Alarm	Attributes	Applicable major NE releases
Name: IK4005078 (3767) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: AC CIRCUIT BREAKER (237) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that one or several AC breakers have tripped. May be associated to AC Main alarm.		
Impact: eNB may shut down		
Remedial action: Visit basestation and check AC main supply.		

Table 22-298 IK4005079 - LOW VOLTAGE DETECTION

Alarm	Attributes	Applicable major NE releases
Name: IK4005079 (3768) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: warning Specific problem: LOW VOLTAGE DETECTION (271) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the Batteries are nearly totally discharged, the power system will soon stop.		
Impact: Power system will be stopped		
Remedial action: Visit basestation and determine battery failure.		

Table 22-299 IK4005080 - BATTERY MAJOR

Alarm	Attributes	Applicable major NE releases
Name: IK4005080 (3769) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: BATTERY MAJOR (272) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the batteries have reached the end of life and must be replaced.		
Impact: Power system will be stopped		
Remedial action: Replace batteries.		

Table 22-300 IK4005081 - RECTIFIER FAILURE MAJOR

Alarm	Attributes	Applicable major NE releases
Name: IK4005081 (3986) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: major Specific problem: RECTIFIER FAILURE MAJOR (273) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that more than one rectifier has failed.		
Impact: Possible total node B shutdown depending of traffic load.		
Remedial action: Check rectifier for root cause and either replace rectifier or repair if possible.		

Table 22-301 IK4005082 - AC SURGE PROTECTOR FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4005082 (3987) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: minor Specific problem: AC SURGE PROTECTOR FAULT (274) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the AC lightning protector is failed.		
Impact: No impact on service. The surge protection is inactive.		
Remedial action: Check for root cause and either replace surge protector or repair if possible.		

Table 22-302 IK4005083 - DBU UNREADABLE MANUFACTURER DATA ATTACHED HW

Alarm	Attributes	Applicable major NE releases
Name: IK4005083 (3988) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: minor Specific problem: DBU UNREADABLE MANUFACTURER DATA ATTACHED HW (263) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to read the manufacturer data of an attached HW (e.g. eAM or FAN)		
Impact: The LTE service is not possible.		
Remedial action: Reset the CB. Check the cable between controller and RUC. Call next level of support, replace RUC unit		

Table 22-303 IK4005084 - DBU FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4005084 (4650) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: minor Specific problem: DBU FAULT 1 (258) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified DBU fault detected		
Impact: Check the additional information for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-304 IK4005085 - DBU FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4005085 (4651) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: minor Specific problem: DBU FAULT 2 (259) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified DBU fault detected		
Impact: Check the additional information for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-305 IK4005086 - SINGLE RECTIFIER FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4005086 (4652) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: minor Specific problem: SINGLE RECTIFIER FAILURE (275) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that one rectifier within the DC rectifier equipment has failed.		
Impact: Available DC power may be reduced depending on number of redundant rectifiers.		
Remedial action: Replace the failed rectifier.		

Table 22-306 IK4006001 - RFM SELF TEST CRITICAL FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006001 (2353) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM SELF TEST CRITICAL FAIL (276) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates that the power-on self test detected a critical failure on the RFM. The alarm is cleared when the RFM is reset.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-307 IK4006002 - RFM TXPORT1 OVERCURRENT

Alarm	Attributes	Applicable major NE releases
Name: IK4006002 (2354) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TXPORT1 OVERCURRENT (277) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the DC-Bias Current for AISG Devices was exceeded on Tx Port 1		
Remedial action: Check For AISG device in critical alarm or failure mode.		

Table 22-308 IK4006003 - RFM OPERATION PROCESSING FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4006003 (2355) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM OPERATION PROCESSING FAILURE (278) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates the fault in the RFM software processing.		
Remedial action: Reset the RFM. If the problem persists, contact the next level support.		

Table 22-309 IK4006004 - RFM SFP INCOMPATIBILITY CPRIPORT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4006004 (2356) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: warning Specific problem: RFM SFP INCOMPATIBILITY CPRIPORT 1 (279) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the equipped SFP on the RFM doesn't allow to achieve the maximum CPRI rate allowed by SW.		
Remedial action: The operator may update the SFP on the RFM.		

Table 22-310 IK4006005 - RFM SFP INCOMPATIBILITY CPRI PORT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4006005 (2357) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: warning Specific problem: RFM SFP INCOMPATIBILITY CPRI PORT 2 (280) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates that the equipped SFP on the RFM doesn't allow to achieve the maximum CPRI rate allowed by SW.		
Remedial action: The operator may update the SFP on the RFM.		

Table 22-311 IK4006006 - RFM COMM FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006006 (2358) Type: communicationsAlarm (4) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM COMM FAIL (281) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that no management messages are received in the past 30 seconds, or no active C and M TCP connection.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Check the RFM, Fiber, and SFPs. Reset the CB.		

Table 22-312 IK4006007 - RFM UNDER TEMP

Alarm	Attributes	Applicable major NE releases
Name: IK4006007 (2359) Type: environmentalAlarm (2) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM UNDER TEMP (282) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RFM is below the operating temperature, but is capable of transmitting.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-313 IK4006008 - RFM WARM UP

Alarm	Attributes	Applicable major NE releases
Name: IK4006008 (2360) Type: environmentalAlarm (2) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM WARM UP (283) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RFM temperature is too low to generate RF.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Check the RFM environment temperature. If RFM has just initialized then wait for it to warm up.		

Table 22-314 IK4006009 - RFM OVER TEMP WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4006009 (2361) Type: environmentalAlarm (2) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM OVER TEMP WARNING (284) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the RFM is rising near the shutdown limit.		
Impact: No impact on eNodeB.		
Remedial action: Check the RFM environment temperature.		

Table 22-315 IK4006010 - RFM CRITICAL TEMP

Alarm	Attributes	Applicable major NE releases
Name: IK4006010 (2362) Type: environmentalAlarm (2) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM CRITICAL TEMP (285) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RFM temperature is above the operating limit and the transmitter has shut down in an attempt to reduce the temperature.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Check the RFM environment temperature.		

Table 22-316 IK4006011 - RFM ST CRITICAL FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006011 (2363) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM ST CRITICAL FAIL (286) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates that the power-on self test detected a critical failure on the RFM. The alarm is cleared when the RFM is reset.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-317 IK4006012 - RFM INIT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4006012 (2364) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM INIT FAILURE (287) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the FGPA download failure or unlocked PLLs. The evaluation occurs during initialization and the unit is not enabled.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-318 IK4006013 - RFM SOFTWARE FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4006013 (2365) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM SOFTWARE FAILURE (288) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the general software failures, including TCP/IP stack errors or TCP Allocate Packet errors. This alarm remains asserted for a minimum of 30 seconds.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: If the alarm does not clear in 30 seconds then reset the RFM. If the alarm persists, notify ALU support.		

Table 22-319 IK4006014 - RFM SIGNAL QUALITY

Alarm	Attributes	Applicable major NE releases
Name: IK4006014 (2366) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM SIGNAL QUALITY (289) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RFM output spectrum is degraded, but the RF is still enabled.		
Impact: The module is not usable. The LTE cells associated with this module may not be operational.		
Remedial action: Reset the RFM, if the problem persists then replace the RFM.		

Table 22-320 IK4006015 - RFM RECV FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006015 (2367) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM RECV FAIL (290) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates the failure of both Rx1 and Rx2 or Rx1 failure and diversity is disabled.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset RFM. Use the reset command on the SAM, or reset using the remote connection to NEM. If the alarm persists, replace RFM.		

Table 22-321 IK4006016 - RFM SFP INCOMPATIBILITY CPRI PORT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4006016 (2368) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: warning Specific problem: RFM SFP INCOMPATIBILITY CPRI PORT 3 (291) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates that the equipped SFP on the RFM doesn't allow to achieve the maximum CPRI rate allowed by SW.		
Remedial action: The operator may update the SFP on the RFM.		

Table 22-322 IK4006017 - RFM TX1 FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006017 (2369) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TX1 FAIL (292) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates the failure of the transmit chain. RF transmission is not possible on the first antenna port.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-323 IK4006018 - RFM TX2 FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006018 (2370) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TX2 FAIL (293) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates the failure of the transmit chain. RF transmission is not possible on the second antenna port.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-324 IK4006019 - RFM GAIN CONTROL TX1

Alarm	Attributes	Applicable major NE releases
Name: IK4006019 (2371) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM GAIN CONTROL TX1 (294) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the first transmit port gain is out of range.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-325 IK4006020 - RFM GAIN CONTROL TX2

Alarm	Attributes	Applicable major NE releases
Name: IK4006020 (2372) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM GAIN CONTROL TX2 (295) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the second transmit port gain is out of range.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-326 IK4006021 - RFM RF OUTPUT OVRDRV TX1

Alarm	Attributes	Applicable major NE releases
Name: IK4006021 (2373) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM RF OUTPUT OVRDRV TX1 (296) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates excessive RF output. The RF is interrupted or clamped for hardware protection.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-327 IK4006022 - RFM RF OUTPUT OVRDRV TX2

Alarm	Attributes	Applicable major NE releases
Name: IK4006022 (2374) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM RF OUTPUT OVRDRV TX2 (297) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates excessive RF output. The RF is interrupted or clamped for hardware protection.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-328 IK4006023 - RFM RX1 FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4006023 (2375) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM RX1 FAILURE (298) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates the RF receiver failure. If this RF receiver is the only configured receiver, the RECEIVER FAILURE alarm is also raised.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Operation is degraded with a single receiver. Reset the RFM, otherwise replace the RFM when possible.		

Table 22-329 IK4006024 - RFM RX2 FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4006024 (2376) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM RX2 FAILURE (299) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates the RF receiver failure. If this RF receiver is the only configured receiver, the RECEIVER FAILURE alarm is also raised.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Operation is degraded with a single receiver. Reset the RFM, otherwise replace the RFM when possible.		

Table 22-330 IK4006025 - RFM DIV IMBALANCE

Alarm	Attributes	Applicable major NE releases
Name: IK4006025 (2377) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM DIV IMBALANCE (300) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates an imbalance between the two diversity receive signals.		
Impact: No impact on eNodeB.		
Remedial action: Check the antennas and antenna cables and connections. If the problem persists then replace the RFM.		

Table 22-331 IK4006027 - RFM INPUT VOLTAGE FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006027 (2378) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM INPUT VOLTAGE FAIL (301) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the input voltage is very high or very low.		
Impact: If the RRH is not usable, the associated LTE cells are not operational.		
Remedial action: Verify and correct the DC input voltage. If the alarm persists, replace the RFM.		

Table 22-332 IK4006028 - RFM PWR CONVERTER FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006028 (2379) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM PWR CONVERTER FAIL (302) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The RFM internal power converter has failed.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM, if the alarm persists, replace the RFM.		

Table 22-333 IK4006029 - RFM CLOCK FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4006029 (2380) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM CLOCK FAILURE (303) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The RFM cannot derive proper clock signal from the incoming CPRI link.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Verify the CPRI connection and reset the RFM. If the problem persists then replace the RFM.		

Table 22-334 IK4006030 - RFM RF SYNTH FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006030 (2381) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM RF SYNTH FAIL (304) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The RFM internal frequency synthesizer is out of lock.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the problem persists then replace the RFM.		

Table 22-335 IK4006031 - RFM DIGITAL INPUT OVRDRV TX1

Alarm	Attributes	Applicable major NE releases
Name: IK4006031 (2382) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM DIGITAL INPUT OVRDRV TX1 (305) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-336 IK4006032 - RFM DIGITAL INPUT OVRDRV TX2

Alarm	Attributes	Applicable major NE releases
Name: IK4006032 (2383) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM DIGITAL INPUT OVRDRV TX2 (306) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-337 IK4006034 - RFM TX1 VSWR THRESH2

Alarm	Attributes	Applicable major NE releases
Name: IK4006034 (2384) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX1 VSWR THRESH2 (307) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-338 IK4006036 - RFM TX2 VSWR THRESH2

Alarm	Attributes	Applicable major NE releases
Name: IK4006036 (2385) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX2 VSWR THRESH2 (308) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-339 IK4006039 - RFM UNREADABLE MANUFACTURER DATA

Alarm	Attributes	Applicable major NE releases
Name: IK4006039 (2386) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: warning Specific problem: RFM UNREADABLE MANUFACTURER DATA (309) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This alarm indicates the failure to read the manufacturer data.		
Impact: Cells related to RRH are out of service.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-340 IK4006042 - RFM DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4006042 (2387) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM DOWNLOAD FAILURE (310) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the RFM software download failure.		
Impact: No impact on eNodeB.		
Remedial action: Reset the RFM to retry the download. If the problem persists, contact the next level support.		

Table 22-341 IK4006075 - RFM BIST PARTIAL

Alarm	Attributes	Applicable major NE releases
Name: IK4006075 (2394) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM BIST PARTIAL (311) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that at least one failure was detected during power on self-test, but the unit may still be functional, though in a degraded state.		
Impact: The eNodeB performance is low.		
Remedial action: Replace the RFM.		

Table 22-342 IK4006076 - RFM EQUIP FAIL TX1

Alarm	Attributes	Applicable major NE releases
Name: IK4006076 (2395) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM EQUIP FAIL TX1 (312) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates that the amplifier DC input voltage is out of range. The RF output is not available.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Replace the RFM.		

Table 22-343 IK4006077 - RFM EQUIP FAIL TX2

Alarm	Attributes	Applicable major NE releases
Name: IK4006077 (2396) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM EQUIP FAIL TX2 (313) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the amplifier DC input voltage is out of range. The RF output is not available.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Replace the RFM.		

Table 22-344 IK4006078 - RFM TX1 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006078 (2397) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX1 VSWR THRESH1 (314) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-345 IK4006079 - RFM TX2 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006079 (2398) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX2 VSWR THRESH1 (315) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-346 IK4006080 - RFM RX1 VSWR THRESH

Alarm	Attributes	Applicable major NE releases
Name: IK4006080 (2399) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM RX1 VSWR THRESH (316) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the Rx VSWR test detected a THRESH Level violation.		
Impact: The eNodeB performance is low due to RX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead. If the alarm persists, replace the RFM.		

Table 22-347 IK4006081 - RFM RX2 VSWR THRESH

Alarm	Attributes	Applicable major NE releases
Name: IK4006081 (2400) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM RX2 VSWR THRESH (317) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the Rx VSWR test detected a THRESH Level violation.		
Impact: The eNodeB performance is low due to RX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead. If the alarm persists, replace the RFM.		

Table 22-348 IK4006082 - RFM OPERATION PROCESSING FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4006082 (2401) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM OPERATION PROCESSING FAILURE (278) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates the fault in the RFM software processing.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the problem persists, contact the next level support.		

Table 22-349 IK4006083 - RFM LNA1 FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006083 (2402) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM LNA1 FAIL (318) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the external filter module has detected an LNA failure.		
Impact: No impact on eNodeB.		
Remedial action: Replace the external filter module.		

Table 22-350 IK4006084 - RFM LNA2 FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006084 (2403) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM LNA2 FAIL (319) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the external filter module has detected an LNA failure.		
Impact: No impact on eNodeB.		
Remedial action: Replace the external filter module.		

Table 22-351 IK4006085 - RFM EXTERNAL UNIT COMM FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006085 (2404) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM EXTERNAL UNIT COMM FAIL (320) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This alarm indicates the loss of communication with external alarm or filter module.		
Impact: No impact on eNodeB.		
Remedial action: Check external module and cable, replace if necessary.		

Table 22-352 IK4006089 - RFM INTERFACE MISMATCH

Alarm	Attributes	Applicable major NE releases
Name: IK4006089 (2408) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM INTERFACE MISMATCH (321) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the RFM interface version is not compatible with the version running in the CB.		
Impact: The eNodeB performance is low.		
Remedial action: Reset the RFM. If the problem persists, contact the next level support.		

Table 22-353 IK4006090 - RFM TX3 FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006090 (2409) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TX3 FAIL (322) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the amplifier DC input voltage is out of range. The RF output is not available.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-354 IK4006091 - RFM TX4 FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006091 (2410) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TX4 FAIL (323) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the amplifier DC input voltage is out of range. The RF output is not available.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-355 IK4006092 - RFM TX5 FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006092 (2411) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TX5 FAIL (324) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the amplifier DC input voltage is out of range. The RF output is not available.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-356 IK4006093 - RFM TX6 FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006093 (2412) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TX6 FAIL (325) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the amplifier DC input voltage is out of range. The RF output is not available.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-357 IK4006094 - RFM TX7 FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006094 (2413) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TX7 FAIL (326) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the amplifier DC input voltage is out of range. The RF output is not available.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-358 IK4006095 - RFM TX8 FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006095 (2414) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TX8 FAIL (327) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the amplifier DC input voltage is out of range. The RF output is not available.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-359 IK4006096 - RFM GAIN CONTROL TX3

Alarm	Attributes	Applicable major NE releases
Name: IK4006096 (2415) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM GAIN CONTROL TX3 (328) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the third transmit port gain is out of range.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-360 IK4006097 - RFM GAIN CONTROL TX4

Alarm	Attributes	Applicable major NE releases
Name: IK4006097 (2416) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM GAIN CONTROL TX4 (329) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the fourth transmit port gain is out of range.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-361 IK4006098 - RFM GAIN CONTROL TX5

Alarm	Attributes	Applicable major NE releases
Name: IK4006098 (2417) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM GAIN CONTROL TX5 (330) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the fifth transmit port gain is out of range.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-362 IK4006099 - RFM GAIN CONTROL TX6

Alarm	Attributes	Applicable major NE releases
Name: IK4006099 (2418) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM GAIN CONTROL TX6 (331) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the sixth transmit port gain is out of range.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-363 IK4006100 - RFM GAIN CONTROL TX7

Alarm	Attributes	Applicable major NE releases
Name: IK4006100 (2419) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM GAIN CONTROL TX7 (332) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the seventh transmit port gain is out of range.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-364 IK4006101 - RFM GAIN CONTROL TX8

Alarm	Attributes	Applicable major NE releases
Name: IK4006101 (2420) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM GAIN CONTROL TX8 (333) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the eighth transmit port gain is out of range.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-365 IK4006102 - RFM RF OUTPUT OVRDRV TX3

Alarm	Attributes	Applicable major NE releases
Name: IK4006102 (2421) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM RF OUTPUT OVRDRV TX3 (334) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-366 IK4006103 - RFM RF OUTPUT OVRDRV TX4

Alarm	Attributes	Applicable major NE releases
Name: IK4006103 (2422) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM RF OUTPUT OVRDRV TX4 (335) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-367 IK4006104 - RFM RF OUTPUT OVRDRV TX5

Alarm	Attributes	Applicable major NE releases
Name: IK4006104 (2423) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM RF OUTPUT OVRDRV TX5 (336) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-368 IK4006105 - RFM RF OUTPUT OVRDRV TX6

Alarm	Attributes	Applicable major NE releases
Name: IK4006105 (2424) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM RF OUTPUT OVRDRV TX6 (337) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-369 IK4006106 - RFM RF OUTPUT OVRDRV TX7

Alarm	Attributes	Applicable major NE releases
Name: IK4006106 (2425) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM RF OUTPUT OVRDRV TX7 (338) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-370 IK4006107 - RFM RF OUTPUT OVRDRV TX8

Alarm	Attributes	Applicable major NE releases
Name: IK4006107 (2426) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM RF OUTPUT OVRDRV TX8 (339) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-371 IK4006108 - RFM RX3 FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4006108 (2427) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM RX3 FAILURE (340) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates the RF receiver failure. If this RF receiver is the only configured receiver, the RECEIVER FAILURE alarm is also raised.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Operation is degraded with a single receiver. Reset the RFM, otherwise replace the RFM when possible.		

Table 22-372 IK4006109 - RFM RX4 FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4006109 (2428) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM RX4 FAILURE (341) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates the RF receiver failure. If this RF receiver is the only configured receiver, the RECEIVER FAILURE alarm is also raised.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Operation is degraded with a single receiver. Reset the RFM, otherwise replace the RFM when possible.

Description: This alarm indicates that the amplifier DC input voltage is out of range. The RF output is not available.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Replace the RFM.		

Table 22-380 IK4006117 - RFM EQUIP FAIL TX6

Alarm	Attributes	Applicable major NE releases
Name: IK4006117 (2436) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM EQUIP FAIL TX6 (349) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the amplifier DC input voltage is out of range. The RF output is not available.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Replace the RFM.		

Table 22-381 IK4006118 - RFM EQUIP FAIL TX7

Alarm	Attributes	Applicable major NE releases
Name: IK4006118 (2437) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM EQUIP FAIL TX7 (350) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the amplifier DC input voltage is out of range. The RF output is not available.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Replace the RFM.		

Table 22-382 IK4006119 - RFM EQUIP FAIL TX8

Alarm	Attributes	Applicable major NE releases
Name: IK4006119 (2438) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM EQUIP FAIL TX8 (351) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the amplifier DC input voltage is out of range. The RF output is not available.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Replace the RFM.		

Table 22-383 IK4006120 - RFM DIGITAL INPUT OVRDRV TX3

Alarm	Attributes	Applicable major NE releases
Name: IK4006120 (2439) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM DIGITAL INPUT OVRDRV TX3 (352) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-384 IK4006121 - RFM DIGITAL INPUT OVRDRV TX4

Alarm	Attributes	Applicable major NE releases
Name: IK4006121 (2440) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM DIGITAL INPUT OVRDRV TX4 (353) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-385 IK4006122 - RFM DIGITAL INPUT OVRDRV TX5

Alarm	Attributes	Applicable major NE releases
Name: IK4006122 (2441) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM DIGITAL INPUT OVRDRV TX5 (354) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-386 IK4006123 - RFM DIGITAL INPUT OVRDRV TX6

Alarm	Attributes	Applicable major NE releases
Name: IK4006123 (2442) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM DIGITAL INPUT OVRDRV TX6 (355) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-387 IK4006124 - RFM DIGITAL INPUT OVRDRV TX7

Alarm	Attributes	Applicable major NE releases
Name: IK4006124 (2443) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM DIGITAL INPUT OVRDRV TX7 (356) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-388 IK4006125 - RFM DIGITAL INPUT OVRDRV TX8

Alarm	Attributes	Applicable major NE releases
Name: IK4006125 (2444) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM DIGITAL INPUT OVRDRV TX8 (357) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: The CB is providing too large a digital signal to the RFM.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists contact the next level support.		

Table 22-389 IK4006126 - RFM TX3 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006126 (2445) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX3 VSWR THRESH1 (358) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-390 IK4006127 - RFM TX4 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006127 (2446) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX4 VSWR THRESH1 (359) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-391 IK4006128 - RFM TX5 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006128 (2447) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX5 VSWR THRESH1 (360) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-392 IK4006129 - RFM TX6 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006129 (2448) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX6 VSWR THRESH1 (361) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-393 IK4006130 - RFM TX7 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006130 (2449) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX7 VSWR THRESH1 (362) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-394 IK4006131 - RFM TX8 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006131 (2450) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX8 VSWR THRESH1 (363) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-395 IK4006132 - RFM TX3 VSWR THRESH2

Alarm	Attributes	Applicable major NE releases
Name: IK4006132 (2451) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX3 VSWR THRESH2 (364) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-396 IK4006133 - RFM TX4 VSWR THRESH2

Alarm	Attributes	Applicable major NE releases
Name: IK4006133 (2452) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX4 VSWR THRESH2 (365) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-397 IK4006134 - RFM TX5 VSWR THRESH2

Alarm	Attributes	Applicable major NE releases
Name: IK4006134 (2453) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX5 VSWR THRESH2 (366) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-398 IK4006135 - RFM TX6 VSWR THRESH2

Alarm	Attributes	Applicable major NE releases
Name: IK4006135 (2454) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX6 VSWR THRESH2 (367) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-399 IK4006136 - RFM TX7 VSWR THRESH2

Alarm	Attributes	Applicable major NE releases
Name: IK4006136 (2455) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX7 VSWR THRESH2 (368) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-400 IK4006137 - RFM TX8 VSWR THRESH2

Alarm	Attributes	Applicable major NE releases
Name: IK4006137 (2456) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TX8 VSWR THRESH2 (369) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-401 IK4006138 - RFM RX3 VSWR THRESH

Alarm	Attributes	Applicable major NE releases
Name: IK4006138 (2457) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM RX3 VSWR THRESH (370) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to RX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-402 IK4006139 - RFM RX4 VSWR THRESH

Alarm	Attributes	Applicable major NE releases
Name: IK4006139 (2458) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM RX4 VSWR THRESH (371) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to RX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-403 IK4006140 - RFM RX5 VSWR THRESH

Alarm	Attributes	Applicable major NE releases
Name: IK4006140 (2459) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM RX5 VSWR THRESH (372) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to RX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-404 IK4006141 - RFM RX6 VSWR THRESH

Alarm	Attributes	Applicable major NE releases
Name: IK4006141 (2460) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM RX6 VSWR THRESH (373) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> LT6.0
Description: The antenna port return loss is below threshold.

Description: This alarm indicates that the transmit attenuation limit is reached, or an internal gain error is detected.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-421 IK4006187 - RFM GAIN CONTROL WARNING TX7

Alarm	Attributes	Applicable major NE releases
Name: IK4006187 (2506) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM GAIN CONTROL WARNING TX7 (411) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the transmit attenuation limit is reached, or an internal gain error is detected.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-422 IK4006188 - RFM GAIN CONTROL WARNING TX8

Alarm	Attributes	Applicable major NE releases
Name: IK4006188 (2507) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM GAIN CONTROL WARNING TX8 (412) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the transmit attenuation limit is reached, or an internal gain error is detected.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-423 IK4006197 - RFM MESSAGE THROTTLING

Alarm	Attributes	Applicable major NE releases
Name: IK4006197 (2516) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM MESSAGE THROTTLING (413) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This alarm indicates the RFM is generating too many messages over the CPRI link.		
Impact: No impact on eNodeB.		
Remedial action: Reset the RFM.		

Table 22-424 IK4006214 - RFM FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4006214 (3008) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM FAULT 1 (414) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: Unspecified RFM fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-425 IK4006215 - RFM FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4006215 (3009) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM FAULT 2 (415) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: Provisioned for late churn-in. Unspecified RFM fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-426 IK4006216 - RFM FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4006216 (3010) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM FAULT 3 (416) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: Provisioned for late churn-in. Unspecified RFM fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-427 IK4006217 - RFM FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4006217 (3011) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM FAULT 4 (417) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified RFM fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-428 IK4006218 - RFM FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4006218 (3012) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM FAULT 5 (418) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified RFM fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-429 IK4006219 - RFM UNREADABLE MANUFACTURER DATA ATTACHED HW

Alarm	Attributes	Applicable major NE releases
Name: IK4006219 (3013) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM UNREADABLE MANUFACTURER DATA ATTACHED HW (419) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure to read the inventory record of an attached hardware (e.g. RDEM).		
Impact: Cells related to RFM are out of service.		
Remedial action: Check the attached hardware.		

Table 22-430 IK4006236 - RFM TTLNA1

Alarm	Attributes	Applicable major NE releases
Name: IK4006236 (3014) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TTLNA1 (420) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the tower-top amplifier has failed or gone into bypass.		
Impact: The eNodeB performance is low.		
Remedial action: Check the tower-top amplifier.		

Table 22-431 IK4006237 - RFM TTLNA2

Alarm	Attributes	Applicable major NE releases
Name: IK4006237 (3015) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TTLNA2 (421) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the tower-top amplifier has failed or gone into bypass.		
Impact: The eNodeB performance is low.		
Remedial action: Check the tower-top amplifier.		

Table 22-432 IK4006238 - RFM TTLNA3

Alarm	Attributes	Applicable major NE releases
Name: IK4006238 (3016) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TTLNA3 (422) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the tower-top amplifier has failed or gone into bypass.		
Impact: The eNodeB performance is low.		
Remedial action: Check the tower-top amplifier.		

Table 22-433 IK4006239 - RFM TTLNA4

Alarm	Attributes	Applicable major NE releases
Name: IK4006239 (3017) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TTLNA4 (423) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the tower-top amplifier has failed or gone into bypass.		
Impact: The eNodeB performance is low.		
Remedial action: Check the tower-top amplifier.		

Table 22-434 IK4006240 - RFM TTLNA5

Alarm	Attributes	Applicable major NE releases
Name: IK4006240 (3018) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TTLNA5 (424) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the tower-top amplifier has failed or gone into bypass.		
Impact: The eNodeB performance is low.		
Remedial action: Check the tower-top amplifier.		

Table 22-435 IK4006241 - RFM TTLNA6

Alarm	Attributes	Applicable major NE releases
Name: IK4006241 (3019) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TTLNA6 (425) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the tower-top amplifier has failed or gone into bypass.		
Impact: The eNodeB performance is low.		
Remedial action: Check the tower-top amplifier.		

Table 22-436 IK4006242 - RFM TTLNA7

Alarm	Attributes	Applicable major NE releases
Name: IK4006242 (3020) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TTLNA7 (426) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the tower-top amplifier has failed or gone into bypass.		
Impact: The eNodeB performance is low.		
Remedial action: Check the tower-top amplifier.		

Table 22-437 IK4006243 - RFM TTLNA8

Alarm	Attributes	Applicable major NE releases
Name: IK4006243 (3021) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM TTLNA8 (427) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the tower-top amplifier has failed or gone into bypass.		
Impact: The eNodeB performance is low.		
Remedial action: Check the tower-top amplifier.		

Table 22-438 IK4006244 - RFM LINK LOF PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4006244 (3022) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM LINK LOF PORT1 (428) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates that framing cannot be recovered at the slave link port. This alarm is enabled only after the link is established.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-439 IK4006245 - RFM LINK LOF PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4006245 (3023) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM LINK LOF PORT2 (429) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that framing cannot be recovered at the slave link port. This alarm is enabled only after the link is established.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-440 IK4006246 - RFM LINK LOF PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4006246 (3024) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM LINK LOF PORT3 (430) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that framing cannot be recovered at the slave link port. This alarm is enabled only after the link is established.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-441 IK4006247 - RFM LINK LOS PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4006247 (3025) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM LINK LOS PORT1 (431) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that no signal is detected at the link port. This alarm is enabled only after the link is established.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-442 IK4006248 - RFM LINK LOS PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4006248 (3026) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM LINK LOS PORT2 (432) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that no signal is detected at the link port. This alarm is enabled only after the link is established.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-443 IK4006249 - RFM LINK LOS PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4006249 (3027) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM LINK LOS PORT3 (433) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that no signal is detected at the link port. This alarm is enabled only after the link is established.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-444 IK4006250 - RFM LINK RAI PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4006250 (3028) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM LINK RAI PORT1 (434) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the incoming slave link RAI bit is set.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-445 IK4006251 - RFM LINK RAI PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4006251 (3029) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM LINK RAI PORT2 (435) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the incoming slave link RAI bit is set.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-446 IK4006252 - RFM LINK RAI PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4006252 (3030) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM LINK RAI PORT3 (436) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates that the incoming slave link RAI bit is set.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-447 IK4006253 - RFM SIGNAL LOW PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4006253 (3031) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM SIGNAL LOW PORT1 (437) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This alarm indicates that the optical signal strength is very low on the slave link port.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-448 IK4006254 - RFM SIGNAL LOW PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4006254 (3032) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM SIGNAL LOW PORT2 (438) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the optical signal strength is very low on the slave link port.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-449 IK4006255 - RFM SIGNAL LOW PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4006255 (3033) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM SIGNAL LOW PORT3 (439) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the optical signal strength is very low on the slave link port.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-450 IK4006256 - RFM TRANS TX FAILURE PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4006256 (3034) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TRANS TX FAILURE PORT1 (440) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure of the optical transceiver.		
Impact: No impact on eNodeB.		
Remedial action: Replace the RFM SFP		

Table 22-451 IK4006257 - RFM TRANS TX FAILURE PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4006257 (3035) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TRANS TX FAILURE PORT2 (441) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure of the optical transceiver.		
Impact: No impact on eNodeB.		
Remedial action: Replace the RFM SFP		

Table 22-452 IK4006258 - RFM TRANS TX FAILURE PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4006258 (3036) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TRANS TX FAILURE PORT3 (442) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure of the optical transceiver.		
Impact: No impact on eNodeB.		
Remedial action: Replace the RFM SFP		

Table 22-453 IK4006259 - RFM BER PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4006259 (3037) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM BER PORT1 (443) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates excessive bit errors on the CPRI link.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-454 IK4006260 - RFM BER PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4006260 (3038) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM BER PORT2 (444) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates excessive bit errors on the CPRI link.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-455 IK4006261 - RFM BER PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4006261 (3039) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM BER PORT3 (445) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates excessive bit errors on the CPRI link.		
Impact: No impact on eNodeB.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-456 IK4006262 - RFM SIGNAL SDI PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4006262 (3040) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM SIGNAL SDI PORT1 (446) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the incoming CPRI link SDI bit is set.		
Impact: No impact on eNodeB.		
Remedial action: Reset RFM. If the alarm persists then reset the CB.		

Table 22-457 IK4006263 - RFM SIGNAL SDI PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4006263 (3041) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM SIGNAL SDI PORT2 (447) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the incoming CPRI link SDI bit is set.		
Impact: No impact on eNodeB.		
Remedial action: Reset RFM. If the alarm persists then reset the CB.		

Table 22-458 IK4006264 - RFM SIGNAL SDI PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4006264 (3042) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM SIGNAL SDI PORT3 (448) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the incoming CPRI link SDI bit is set.		
Impact: No impact on eNodeB.		
Remedial action: Reset RFM. If the alarm persists then reset the CB.		

Table 22-459 IK4006265 - RFM DL IDLE PATTERN MISMATCH

Alarm	Attributes	Applicable major NE releases
Name: IK4006265 (3043) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM DL IDLE PATTERN MISMATCH (449) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that DL idle patterns are detected (delay calibration failure).		
Impact: No impact on eNodeB.		
Remedial action: Reset the RFM. If the alarm persists, call the next level of support.		

Table 22-460 IK4006272 - RFM TX1 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006272 (3050) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM TX1 VSWR THRESH1 (314) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-461 IK4006273 - RFM TX2 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006273 (3051) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM TX2 VSWR THRESH1 (315) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-462 IK4006274 - RFM TX3 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006274 (3052) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM TX3 VSWR THRESH1 (358) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-463 IK4006275 - RFM TX4 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006275 (3053) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM TX4 VSWR THRESH1 (359) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-464 IK4006276 - RFM TX5 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006276 (3054) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM TX5 VSWR THRESH1 (360) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-465 IK4006277 - RFM TX6 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006277 (3055) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM TX6 VSWR THRESH1 (361) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-466 IK4006278 - RFM TX7 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006278 (3056) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM TX7 VSWR THRESH1 (362) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-467 IK4006279 - RFM TX8 VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4006279 (3057) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM TX8 VSWR THRESH1 (363) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: The antenna port return loss is below threshold.		
Impact: The eNodeB performance is low due to TX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead.		

Table 22-468 IK4006280 - RFM RF PATHS NOT AVAILABLE

Alarm	Attributes	Applicable major NE releases
Name: IK4006280 (3770) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM RF PATHS NOT AVAILABLE (450) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RFM is shared with another technology which has locked the RFM operation.		
Impact: Cells supported by this RFM are disabled while the alarm is set.		
Remedial action: Enable the RFM operation through the other technology OMC.		

Table 22-469 IK4006281 - RFM INTERNAL RRH COMM FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006281 (3651) Type: communicationsAlarm (4) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM INTERNAL RRH COMM FAIL (451) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Communication has failed between the two subunits that make up this RFM.		
Impact: The cell supported on this RFM is degraded or failed if any or all of its paths use antenna ports supported on the far subunit.		
Remedial action: Check the inter-subunit CPRI link and SFPs for failure check the far end subunit for failure. Reset the RFM if no physical failure is found.		

Table 22-470 IK4006282 - RFM HW CONFIG MISMATCH

Alarm	Attributes	Applicable major NE releases
Name: IK4006282 (3652) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM HW CONFIG MISMATCH (452) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The two subunits that make up this RFM are not of the same type.		
Impact: Cells assigned to this RFM remain disabled until the fault is corrected.		
Remedial action: Replace one or both subunits so that they are both of the same type.		

Table 22-471 IK4006283 - RFM HW ASSIGNMENT INDETERMINATE

Alarm	Attributes	Applicable major NE releases
Name: IK4006283 (3653) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM HW ASSIGNMENT INDETERMINATE (453) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The two subunits that make up this RFM are both configured with the same subunit number.		
Impact: Cells assigned to this RFM remain disabled until the fault is corrected.		
Remedial action: Ensure that each RFM subunit has the proper connector to indicate that it is the first or the second subunit.		

Table 22-472 IK4006284 - RFM ALD BUS OVERCURRENT

Alarm	Attributes	Applicable major NE releases
Name: IK4006284 (3654) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM ALD BUS OVERCURRENT (454) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The AISG bus attached to this RFM is drawing too much DC electric current.		
Impact: TMAs or RETs connected to this RFM may not function properly, degrading receive path gain or preventing antenna tilt control.		
Remedial action: Ensure that the number of AISG devices and their individual current loads do not exceed the RFM limit. Check the AISG bus cable for short circuit, check for one or more failed AISG devices on the bus.		

Table 22-473 IK4006285 - RFM LINK LOF PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4006285 (3655) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM LINK LOF PORT1 (428) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that framing cannot be recovered at the slave link port.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-474 IK4006286 - RFM LINK LOF PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4006286 (3656) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM LINK LOF PORT2 (429) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that framing cannot be recovered at the slave link port.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-475 IK4006287 - RFM LINK LOF PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4006287 (3657) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM LINK LOF PORT3 (430) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that framing cannot be recovered at the slave link port.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-476 IK4006288 - RFM LINK LOS PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4006288 (3658) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM LINK LOS PORT1 (431) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that no signal is detected at the link port.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-477 IK4006289 - RFM LINK LOS PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4006289 (3659) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM LINK LOS PORT2 (432) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that no signal is detected at the link port.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-478 IK4006290 - RFM LINK LOS PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4006290 (3660) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM LINK LOS PORT3 (433) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that no signal is detected at the link port.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-479 IK4006291 - RFM LINK RAI PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4006291 (3661) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM LINK RAI PORT1 (434) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the incoming slave link RAI bit is set.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-480 IK4006292 - RFM LINK RAI PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4006292 (3662) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM LINK RAI PORT2 (435) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the incoming slave link RAI bit is set.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-481 IK4006293 - RFM LINK RAI PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4006293 (3663) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM LINK RAI PORT3 (436) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the incoming slave link RAI bit is set.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: Check the CPRI cable and connections, replace the SFP (RFM or CB end).		

Table 22-482 IK4006294 - RFM SELF TEST CRITICAL FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4006294 (3771) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM SELF TEST CRITICAL FAIL (276) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the power-on self test detected a critical failure on the RFM. The alarm is cleared when the RFM is reset.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the alarm persists, replace RFM.		

Table 22-483 IK4006295 - RFM ACCESS PANEL OPEN

Alarm	Attributes	Applicable major NE releases
Name: IK4006295 (3772) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM ACCESS PANEL OPEN (455) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the access panel for the RFM maintenance port is open.		
Impact: No immediate impact, however this alarm could indicate unauthorized access to the RFM.		
Remedial action: Close the maintenance port access door.		

Table 22-484 IK4006296 - RFM CELL DATA CONFLICT

Alarm	Attributes	Applicable major NE releases
Name: IK4006296 (3773) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM CELL DATA CONFLICT (456) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The RFM is shared by two technologies and one technology controller has attempted to configure a cell on the RFM which conflicts in frequency or transmit power setting with an existing configured cell.		
Impact: The new cell which triggered the conflict is not activated. Any existing cells remain active.		
Remedial action: Change the cell settings (eARFCN assignment, downlink power setting) for the RFM so that they are compatible (cell frequencies do not overlap, cell frequency settings do not exceed the RFM bandwidth, etc.). Since this is a shared RFM, the cell settings may reside in different databases.		

Table 22-485 IK4006297 - RF SETUP FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4006297 (3774) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RF SETUP FAULT (457) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RFM is currently transmitting and has received a new carrier configuration request that requires a disruption to transmission.		
Impact: Carriers must be disabled to allow the RF retuning.		
Remedial action: Lock the carriers (both technologies if this is a shared RFM) to disable transmission, the RFM will retune and clear the alarm. Carriers may then be unlocked.		

Table 22-486 IK4006298 - RFM DATA SYNCHRONIZATION FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4006298 (3775) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM DATA SYNCHRONIZATION FAULT (458) Implicitly cleared: true Default probable cause: timingProblem (903)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the RFM is shared by two technologies and one technology is transmitting CPRI data at a different rate than the other.		
Impact: There may be interruptions to the transmission of the non-LTE carriers when this alarm is present.		
Remedial action: Check the timing reference sources for both baseband units for failures.		

Table 22-487 IK4006300 - RFM TXPORT1 OVERCURRENT

Alarm	Attributes	Applicable major NE releases
Name: IK4006300 (3776) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TXPORT1 OVERCURRENT (277) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the DC-Bias Current for AISG Devices was exceeded on Tx Port 1		
Impact: Check the additional info for impact details.		
Remedial action: Check For AISG device in critical alarm or failure mode.		

Table 22-488 IK4006301 - RFM TXPORT2 OVERCURRENT

Alarm	Attributes	Applicable major NE releases
Name: IK4006301 (3777) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM TXPORT2 OVERCURRENT (459) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the DC-Bias Current for AISG Devices was exceeded on Tx Port 2		
Impact: Check the additional info for impact details.		
Remedial action: Check For AISG device in critical alarm or failure mode.		

Table 22-489 IK4006302 - RFM AISG PORT OVERCURRENT

Alarm	Attributes	Applicable major NE releases
Name: IK4006302 (3778) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM AISG PORT OVERCURRENT (460) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the DC-Bias Current for AISG Devices was exceeded on RS-485 Port		
Impact: Check the additional info for impact details.		
Remedial action: Check For AISG device in critical alarm or failure mode.		

Table 22-490 IK4006303 - RFM DC-BIAS OVERCURRENT

Alarm	Attributes	Applicable major NE releases
Name: IK4006303 (3779) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM DC-BIAS OVERCURRENT (461) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the DC-Bias Current Source in the RFM exceeded the maximum threshold.		
Impact: Check the additional info for impact details.		
Remedial action: Check that the number of ALDs device supported by the RFM are within the maximum number and/or none of them is in failure mode.		

Table 22-491 IK4006304 - RRH DC POWER OFF

Alarm	Attributes	Applicable major NE releases
Name: IK4006304 (4653) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RRH DC POWER OFF (462) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the RFM DC power supply is off.		
Impact: The RFM is not usable. The LTE cells associated with this RFM are not operational.		
Remedial action: Check the DC power supply for failure, both internal and external to the RFM.		

Table 22-492 IK4006307 - RFM FAN1 FAILED

Alarm	Attributes	Applicable major NE releases
Name: IK4006307 (4654) Type: environmentalAlarm (2) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM FAN1 FAILED (463) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Fan 1 in the RFM has failed.		
Impact: The RFM temperature will rise, leading to transmit signal power or quality degradation and eventual shutdown, disabling all cells supported on this RFM.		
Remedial action: Replace the failed hardware.		

Table 22-493 IK4006308 - RFM FAN2 FAILED

Alarm	Attributes	Applicable major NE releases
Name: IK4006308 (4655) Type: environmentalAlarm (2) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: RFM FAN2 FAILED (464) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Fan 2 in the RFM has failed.		
Impact: The RFM temperature will rise, leading to transmit signal power or quality degradation and eventual shutdown, disabling all cells supported on this RFM.		
Remedial action: Replace the failed hardware.		

Table 22-494 IK4006309 - RFM BOTH FANS FAILED

Alarm	Attributes	Applicable major NE releases
Name: IK4006309 (4656) Type: environmentalAlarm (2) Package: lte Raised on class: lte.RFM	Severity: critical Specific problem: RFM BOTH FANS FAILED (465) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Both fans in the RFM have failed.		
Impact: The RFM temperature will rise, leading to transmit signal power or quality degradation and eventual shutdown, disabling all cells supported on this RFM.		
Remedial action: Replace the failed hardware.		

Table 22-495 IK4007001 - BRC CC WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4007001 (2533) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: BRC CC WARNING (466) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the BRC-CC reported a warning.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-496 IK4007002 - BRC UC FAILED

Alarm	Attributes	Applicable major NE releases
Name: IK4007002 (2534) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: BRC UC FAILED (467) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the UeCallIP detected a no-response from BRC-UC.		
Impact: The eNodeB performance is low.		
Remedial action: No action is required.		

Table 22-497 IK4007003 - PCI POTENTIAL CONFUSION VICTIM

Alarm	Attributes	Applicable major NE releases
Name: IK4007003 (5214) Type: operationalViolation (93) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: PCI POTENTIAL CONFUSION VICTIM (468) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates this eNB is potentially a victim of PCI confusion, it has multiple potential neighbor cells that have the same PCI as each other.		
Remedial action: The maintenance action has to be done in one of the neighbor eNBs. Note that here only a potential confusion is raised, meaning that there may be no impact. In case HO KPIs show an issue, this may be the cause. Then a manual intervention, is needed in one of the distant eNBs to solve the problem, by changing the PCI. If the Neighbours are confirmed to be real, then the confusion is detected as real and AutoPCI will try to solve the conflict on the actor side. In case it is not enabled or it cannot solve the conflict, major alarms are raised on both actor and victim sides.		

Table 22-498 IK4007004 - BRC UC WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4007004 (2535) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: BRC UC WARNING (469) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the BRC-UC reported a warning.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-499 IK4007005 - CALLP MANAGER WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4007005 (2536) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: CALLP MANAGER WARNING (470) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that CallP Manager reports a warning.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-500 IK4007006 - CELL CALLP WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4007006 (2537) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: CELL CALLP WARNING (471) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that Cell CallP reports a warning.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-501 IK4007007 - RFTRACE ACTIVATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007007 (5215) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: RFTRACE ACTIVATION FAILURE (472) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR14.1.L
Description: This event indicates the failure to activate a new RF trace recording session.		
Remedial action: No action is required.		

Table 22-502 IK4007008 - RFTRACE COLLECTION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007008 (2538) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: RFTRACE COLLECTION FAILURE (473) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates the failure to collect RF trace data.		
Remedial action: No action is required.		

Table 22-503 IK4007009 - MCE SESSION PREEMPTION INDICATION

Alarm	Attributes	Applicable major NE releases
Name: IK4007009 (5216) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Mce	Severity: variable Specific problem: MCE SESSION PREEMPTION INDICATION (474) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that one or several sessions have been pre-empted (suspended for the considered MbsfnArea) in order to admit a higher priority session.		
Remedial action: No action is required.		

Table 22-504 IK4007010 - MCE SESSION RESUME INDICATION

Alarm	Attributes	Applicable major NE releases
Name: IK4007010 (2539) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Mce	Severity: variable Specific problem: MCE SESSION RESUME INDICATION (475) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that one or several sessions previously pre-empted have been resumed (resumed for the considered MbsfnArea).		
Remedial action: No action is required.		

Table 22-505 IK4007011 - PCI CONFUSION VICTIM

Alarm	Attributes	Applicable major NE releases
Name: IK4007011 (2540) Type: operationalViolation (93) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: PCI CONFUSION VICTIM (476) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates this eNB is victim of PCI confusion, it has multiple potential real neighbor cells that have the same PCI as each other. A manual intervention is needed to solve the problem.		
Remedial action: The maintenance action has to be done in one of the neighbor eNBs. If AutoPCI is not activated in these eNBs, then the manual intervention consists in changing the PCI. If AutoPCI is activated in these eNBs, then the manual intervention consists in changing some constraints (e.g. increase the pciAllowedList)		

Table 22-506 IK4007012 - VERY HIGH RACH ARRIVAL RATE

Alarm	Attributes	Applicable major NE releases
Name: IK4007012 (2541) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: VERY HIGH RACH ARRIVAL RATE (477) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that the eNB has triggered Access Class Barring in a cell due to RACH overload.		
Remedial action: No action is required.		

Table 22-507 IK4007013 - RFTRACE INVALID PARAMETER

Alarm	Attributes	Applicable major NE releases
Name: IK4007013 (2542) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: RFTRACE INVALID PARAMETER (478) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates the parameter received for RF trace is invalid.		
Remedial action: No action is required.		

Table 22-508 IK4007014 - M3AP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007014 (5217) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Mce	Severity: variable Specific problem: M3AP FAILURE (479) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: For the session identified by tmgi, the MCE has detected inconsistent or unsupported value of M3AP session parameters.		
Remedial action: No action is required.		

Table 22-509 IK4007015 - CAC FAILURE BEGIN

Alarm	Attributes	Applicable major NE releases
Name: IK4007015 (5218) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: CAC FAILURE BEGIN (480) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that CallIP reported a CAC failure.		
Remedial action: No action is required.		

Table 22-510 IK4007016 - CAC FAILURE END

Alarm	Attributes	Applicable major NE releases
Name: IK4007016 (5219) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: CAC FAILURE END (481) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that CallIP reported the expiration of the monitoring time interval timer.		
Remedial action: No action is required.		

Table 22-511 IK4007017 - CONFIRMED COMMUNICATION ISSUE MET WITH UE SETUPS ON THIS CELL

Alarm	Attributes	Applicable major NE releases
Name: IK4007017 (5220) Type: communicationsAlarm (4) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: CONFIRMED COMMUNICATION ISSUE MET WITH UE SETUPS ON THIS CELL (482) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that an internal communication issue has been met for multiple UEs on this cell during the UE Setup procedure.		
Remedial action: Lock and then unlock the lteCell. If this fails to clear the fault then lock and unlock the modem (BB) board.		

Table 22-512 IK4007018 - PCI CONFUSION NEIGHB CELLS

Alarm	Attributes	Applicable major NE releases
Name: IK4007018 (5221) Type: operationalViolation (93) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: PCI CONFUSION NEIGHB CELLS (483) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates this eNB is a victim of PCI confusion, it has multiple neighbor cells that have the same PCI as each other. A manual intervention is needed to solve the problem. This issue may affect mobility procedures in any of the eNodeB cells.		
Remedial action: The maintenance action has to be done in one of the neighbour eNBs. The issue is also reported by Alarms in these eNBs. If the automatic PCI allocation is activated in these eNBs: (1) If a Warning Alarm is raised, the issue will be automatically solved in the next maintenance window; (2) If a Major Alarm is raised, the issue cannot be automatically solved. It is necessary to increase the list of allowed PCI values, and the issue will be automatically solved in the next maintenance window. If the automatic PCI allocation is not activated in these eNBs: A Major Alarm is raised. It is necessary to change the PCI value of one of the actor cell of the issue.		

Table 22-513 IK4007019 - UBM FAILED

Alarm	Attributes	Applicable major NE releases
Name: IK4007019 (2543) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: UBM FAILED (484) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This event indicates a non-response of UBM entity detected by UeCallIP.		
Impact: The eNodeB performance is low.		
Remedial action: No action is required.		

Table 22-514 IK4007020 - PCI CONFUSION

Alarm	Attributes	Applicable major NE releases
Name: IK4007020 (5222) Type: operationalViolation (93) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: PCI CONFUSION (485) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates a PCI confusion between the cell and a neighbour cell of a neighbour cell. A manual intervention is needed to solve the problem. This can happen in the following cases: (1)The conflict could not be solved autonomously by the eNB; (2)The automatic PCI allocation is not activated.		
Remedial action: If the automatic PCI allocation is activated: Increase the list of allowed PCI values, either for the local or for the distant eNodeB; If the automatic PCI allocation is not activated:Change the PCI value, either for the local or the distant cell.		

Table 22-515 IK4007021 - UE CALLP WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4007021 (2544) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: UE CALLP WARNING (486) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a warning reported by UeCallIP.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-516 IK4007022 - MME S1 SETUP FAILURE RESPONSE

Alarm	Attributes	Applicable major NE releases
Name: IK4007022 (2545) Type: communicationsAlarm (4) Package: lte Raised on class: lte.MmeAccess	Severity: critical Specific problem: MME S1 SETUP FAILURE RESPONSE (487) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a persistent S1_SETUP_FAILURE_RESPONSE from MME detected by CallIPMgr.		
Impact: If S1 flex is available, the eNodeB performance is low. If the S1 flex is not available, the eNodeB service is not possible.		
Remedial action: Check the behavior of the MME.		

Table 22-517 IK4007023 - MME S1 SETUP NO RESPONSE

Alarm	Attributes	Applicable major NE releases
Name: IK4007023 (2546) Type: communicationsAlarm (4) Package: lte Raised on class: lte.MmeAccess	Severity: critical Specific problem: MME S1 SETUP NO RESPONSE (488) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a persistent NO_RESPONSE from MME detected by CallIPMgr.		
Impact: If S1 flex is available, the eNodeB performance is low. If the S1 flex is not available, the eNodeB service is not possible.		
Remedial action: Check the behavior of the MME.		

Table 22-518 IK4007024 - TIME FOR SESSION START STOP or UPDATE

Alarm	Attributes	Applicable major NE releases
Name: IK4007024 (5223) Type: integrityViolation (85) Package: lte Raised on class: lte.Mce	Severity: variable Specific problem: TIME FOR SESSION START STOP or UPDATE (489) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR14.1.L
Description: This event indicates that there is no absolute time has been provided in any received M3 MBMS Session Start Request, M3 MBMS Session Stop Request or M3 MBMS Session Update Request message.		
Remedial action: No action is required.		

Table 22-519 IK4007025 - IMMEDIATE LOAD CONTROL BEGIN

Alarm	Attributes	Applicable major NE releases
Name: IK4007025 (5224) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: IMMEDIATE LOAD CONTROL BEGIN (490) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR14.1.L
Description: This event indicate that immediate load control procedure begins.		
Remedial action: No action is required.		

Table 22-520 IK4007026 - ENB CANDIDATE X2 SETUP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007026 (2547) Type: communicationsAlarm (4) Package: lte Raised on class: lte.X2Access	Severity: critical Specific problem: ENB CANDIDATE X2 SETUP FAILURE (491) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a persistent X2_SETUP_FAILURE from eNodeB_CAND IDATE detected by CallMgr.		
Impact: If multiple X2 are available, the eNodeB performance is low. If an X2 is present, the eNodeB service is not available.		
Remedial action: Check the behavior of the candidate eNodeB. If the alarm persists, check provisioning of the initiating and candidate eNodeBs.		

Table 22-521 IK4007027 - ENB CANDIDATE X2 SETUP NO RESPONSE

Alarm	Attributes	Applicable major NE releases
Name: IK4007027 (2548) Type: communicationsAlarm (4) Package: lte Raised on class: lte.X2Access	Severity: critical Specific problem: ENB CANDIDATE X2 SETUP NO RESPONSE (492) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a persistent NO_RESPONSE from eNodeB_CAND IDATE detected by CallMgr.		
Impact: If multiple X2 are available, the eNodeB performance is low. If an X2 is present, the eNodeB service is not available.		
Remedial action: Check the behavior of the candidate eNodeB. If the alarm persists, check provisioning of the initiating and candidate eNodeBs.		

Table 22-522 IK4007028 - IMMEDIATE LOAD CONTROL END

Alarm	Attributes	Applicable major NE releases
Name: IK4007028 (5225) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: IMMEDIATE LOAD CONTROL END (493) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR14.1.L
Description: This event indicate that immediate load control procedure ends.		
Remedial action: No action is required.		

Table 22-523 IK4007029 - TELECOM SW FAILURE AT ENB

Alarm	Attributes	Applicable major NE releases
Name: IK4007029 (5226) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: TELECOM SW FAILURE AT ENB (494) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm will trigger all MAS reset, and cell disable on all cells before restarting all MAS and all cells.		
Remedial action: No action required. Cells will be deleted and rebuilt automatically		

Table 22-524 IK4007045 - ENB X2 SETUP REQ RESP FAIL UNKNOWN X2 ACCESS ID

Alarm	Attributes	Applicable major NE releases
Name: IK4007045 (2549) Type: communicationsAlarm (4) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: ENB X2 SETUP REQ RESP FAIL UNKNOWN X2 ACCESS ID (495) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: The eNodeB is implementing a check for future IOT. Common message like X2SAP X2 SETUP REQUEST/RESPONSE/FAILURE are received on a known X2 Access Id. If an unsolicited X2SAP X2 SETUP REQUEST message is received on an unknown X2 Access Id, the eNodeB answers with a X2SAP SETUP FAILURE and raises the event. If an unsolicited X2SAP X2 SETUP RESPONSE/FAILURE message is received on an unknown X2 ACCESS Id the eNodeB ignores the message and raises the event.		
Impact: If multiple X2 are available, the eNodeB performance is low. If an X2 is present, the eNodeB service is not available.		
Remedial action: No action is required.		

Table 22-525 IK4007046 - ANR X2IP ADDR RETRIEVAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007046 (2550) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.X2Access	Severity: major Specific problem: ANR X2IP ADDR RETRIEVAL FAILURE (496) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This alarm indicates the X2 IP address retrieval failure. When this alarm is raised, X2TransportLayerAccess is {Disabled, Failed} (and X2Access {Disabled, dependency}).		
Impact: The X2 link is not established until a valid IP address is assigned.		
Remedial action: Set the IP address manually.		

Table 22-526 IK4007051 - END OF ANR ACTIVE PHASE

Alarm	Attributes	Applicable major NE releases
Name: IK4007051 (2551) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.Cell	Severity: variable Specific problem: END OF ANR ACTIVE PHASE (497) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LT6.0
Description: This event indicates the end of the intra-frequency LTE ANR active phase.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-527 IK4007052 - CALLTRACE ACTIVATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007052 (2552) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.ENBEquipment	Severity: variable Specific problem: CALLTRACE ACTIVATION FAILURE (498) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This event indicates the failure to activate a new trace recording session.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-528 IK4007053 - CALLTRACE SIGN TRACE STOPPED BY MGT TRACE

Alarm	Attributes	Applicable major NE releases
Name: IK4007053 (2553) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.ENBEquipment	Severity: variable Specific problem: CALLTRACE SIGN TRACE STOPPED BY MGT TRACE (499) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This event indicates that the signaling based trace session is stopped when eNodeB received a management based trace session activation request.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-529 IK4007054 - CALLTRACE COLLECTION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007054 (2554) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: CALLTRACE COLLECTION FAILURE (500) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the failure to collect trace data.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-530 IK4007055 - CALLTRACE INVALID PARAMETER

Alarm	Attributes	Applicable major NE releases
Name: IK4007055 (2555) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: CALLTRACE INVALID PARAMETER (501) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This even indicates the parameter received for call trace is invalid.		
Impact: Call Trace session is de-activated.		
Remedial action: No action is required.		

Table 22-531 IK4007056 - DSIM CELL AUTO BARRED

Alarm	Attributes	Applicable major NE releases
Name: IK4007056 (2556) Type: communicationsAlarm (4) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: DSIM CELL AUTO BARRED (502) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the cell is auto-barred. If Dynamic Sysinfo Modification feature activated and MIM parameter lteCell.cellBarred set to 'notBarredAutoBarrable', the cell is auto-barred due to S1 service loss. This alarm is cleared when the cell is auto-unbarred due to S1 service recovery. When this alarm is raised, the related lteCell instance is {Enabled, Off-duty}.		
Impact: The cell cannot provide service as the cell is barred from use.		
Remedial action: Resolve the S1 faults and restore S1 service.		

Table 22-532 IK4007057 - MME S1AP COMMON MESSAGE BAD ROUTING

Alarm	Attributes	Applicable major NE releases
Name: IK4007057 (2557) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.MmeAccess	Severity: variable Specific problem: MME S1AP COMMON MESSAGE BAD ROUTING (503) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the UeCallIP was routed a non-UE associated message.		
Impact: The UeCallIP discards the non-UE associated message.		
Remedial action: No action is required.		

Table 22-533 IK4007058 - MME S1AP DEDICATED MESSAGE BAD ROUTING

Alarm	Attributes	Applicable major NE releases
Name: IK4007058 (2558) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.MmeAccess	Severity: variable Specific problem: MME S1AP DEDICATED MESSAGE BAD ROUTING (504) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that CallPmgr was routed an UE associated message, that was therefore discarded.		
Impact: The CallIPMgr discards the UE associated message.		
Remedial action: No action is required.		

Table 22-534 IK4007059 - ENB X2AP MESSAGE MISMATCH

Alarm	Attributes	Applicable major NE releases
Name: IK4007059 (2559) Type: communicationsAlarm (4) Package: lte Raised on class: lte.X2Access	Severity: variable Specific problem: ENB X2AP MESSAGE MISMATCH (505) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the fault when X2AP message including 'served cell info' is received. CallP cross-checks in the MiM neighboring cells relating to a remote eNodeB with list of served cells received from the current eNodeB. This fault can be triggered upon reception of X2AP X2 SETUP REQUEST, X2AP X2 SETUP RESPONSE or X2AP ENB CONFIGURATION UPDATE. This event is not used when ANR is activated because the cross-check is not performed.		
Impact: The eNodeB performance is low. The ENB configurations are not coherent. The callIP uses MiM data for mobility that leads to handover failures.		
Remedial action: No action is required.		

Table 22-535 IK4007071 - L1L2 SYS INFO REFUSED

Alarm	Attributes	Applicable major NE releases
Name: IK4007071 (2571) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: L1L2 SYS INFO REFUSED (506) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the BB L1/L2 entity rejected system information broadcast.		
Impact: The LTE service is not possible on the affected cell.		
Remedial action: 1 - lock the cell. 2- correct the wrong configuration value. 3- unlock the cell.		

Table 22-536 IK4007072 - L1L2 SYS INFO TIMEOUT

Alarm	Attributes	Applicable major NE releases
Name: IK4007072 (2572) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: L1L2 SYS INFO TIMEOUT (507) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a no-response from BB L1/L2 entity detected during the system information broadcast procedure.		
Impact: The LTE service is not possible on the affected cell.		
Remedial action: Lock and unlock the Cell. If the alarm persists, call the next level of support.		

Table 22-537 IK4007073 - L1L2 CONFIG ERROR CELL SETUP

Alarm	Attributes	Applicable major NE releases
Name: IK4007073 (2573) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: L1L2 CONFIG ERROR CELL SETUP (508) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a configuration error from BB L1/L2 entity detected during the Cell Setup procedure.		
Impact: The LTE service is not possible on the affected cell.		
Remedial action: Verify and correct the configuration data in the LTE CELL or CELL CONF.		

Table 22-538 IK4007074 - L1L2 CELL SETUP REFUSED

Alarm	Attributes	Applicable major NE releases
Name: IK4007074 (2574) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: L1L2 CELL SETUP REFUSED (509) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the BB L1/L2 entity rejected the cell setup.		
Impact: The LTE service is not possible on the affected cell.		
Remedial action: Call the next level of support.		

Table 22-539 IK4007075 - L1L2 CELL SETUP TIMEOUT

Alarm	Attributes	Applicable major NE releases
Name: IK4007075 (2575) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: L1L2 CELL SETUP TIMEOUT (510) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a no-response from BB L1/L2 entity detected during the Cell Setup procedure .		
Impact: The LTE service is not possible on the affected cell.		
Remedial action: Lock and unlock the cell. If the alarm persists, call the next level of support.		

Table 22-540 IK4007076 - L1L2 CONFIG ERROR GLOBAL SETUP

Alarm	Attributes	Applicable major NE releases

Name: IK4007081 (2581) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: CAC FAILURE END (481) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LT6.0
Description: This event indicates that CallP reported the expiration of the monitoring time interval timer.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-546 IK4007082 - L1L2 CONFIG MEAS FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007082 (2582) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: L1L2 CONFIG MEAS FAILURE (515) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that Measurement Configuration failed at L1/L2 entity level.		
Impact: No impact on eNodeB. Radio Access Control evolution feature not activated.		
Remedial action: Call the next level of support.		

Table 22-547 IK4007083 - PCI COLLISION DETECTED UNDER RESOLUTION

Alarm	Attributes	Applicable major NE releases
Name: IK4007083 (2583) Type: operationalViolation (93) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: PCI COLLISION DETECTED UNDER RESOLUTION (516) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a PCI collision between the cell and a neighbour one. The eNodeB attempts for a resolution.		
Impact: Interference in reference signal of conflicting cells, preventing potentially Ues to select these cells.		
Remedial action: If the alarm persists, call the next level of support.		

Table 22-548 IK4007084 - PCI COLLISION DETECTED

Alarm	Attributes	Applicable major NE releases
Name: IK4007084 (2584) Type: operationalViolation (93) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: PCI COLLISION DETECTED (517) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a PCI collision between the cell and a neighbour one, or between the cell and another one of the same eNB. A manual intervention is needed to solve the problem. This can happen in the following cases: - The conflict could not be solved autonomously by the eNB; - The automatic PCI allocation is not activated		
Impact: Interference in reference signal of conflicting cells, preventing potentially Ues to select these cells.		
Remedial action: Increase the list of allowed PCI values, either for the local or for the distant eNodeB when the other contributor is distant.		

Table 22-549 IK4007085 - PCI CONFUSION DETECTED UNDER RESOLUTION

Alarm	Attributes	Applicable major NE releases
Name: IK4007085 (2585) Type: operationalViolation (93) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: PCI CONFUSION DETECTED UNDER RESOLUTION (518) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a PCI confusion between the cell and a neighbour one. The eNodeB attempts for a resolution.		
Impact: Mobility procedure triggered in the cell is directed to a wrong neighboring cell, leading to further call drops.		
Remedial action: If the alarm persists, call the next level of support.		

Table 22-550 IK4007086 - PCI CONFUSION

Alarm	Attributes	Applicable major NE releases
Name: IK4007086 (2586) Type: operationalViolation (93) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: PCI CONFUSION (485) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates a PCI confusion between the cell and a neighbour one. A manual intervention is needed to solve the problem. This can happen in the following cases: - The conflict could not be solved autonomously by the eNB; - The automatic PCI allocation is not activated		
Impact: Mobility procedure triggered in the cell is directed to a wrong neighboring cell, leading to further call drops.		
Remedial action: Increase the list of allowed PCI values, either for the local or for the distant eNodeB.		

Table 22-551 IK4007087 - PCI CONFUSION NEIGHB CELLS

Alarm	Attributes	Applicable major NE releases
Name: IK4007087 (2587) Type: operationalViolation (93) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: PCI CONFUSION NEIGHB CELLS (483) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates a PCI confusion between several neighbour cells. A manual intervention is needed to solve the problem. This issue may affect mobility procedures in any of the eNodeB cells.		
Impact: Mobility procedure triggered in the cell is directed to a wrong neighboring cell, leading to further call drops.		
Remedial action: Modify the list of allowed PCI values for the serving eNodeB conflicting with the neighboring cells.		

Table 22-552 IK4007088 - ENB X2 COMMON MESSAGE BAD ROUTING

Alarm	Attributes	Applicable major NE releases
Name: IK4007088 (2588) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.X2Access	Severity: variable Specific problem: ENB X2 COMMON MESSAGE BAD ROUTING (519) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This event indicates a X2-AP non-UE associated message is routed to UeCallIP.		
Impact: The X2-AP non-UE associated message is not processed and is discarded by UeCallIP.		
Remedial action: No action is required.		

Table 22-553 IK4007089 - ENB X2 DEDICATED MESSAGE BAD ROUTING

Alarm	Attributes	Applicable major NE releases
Name: IK4007089 (2589) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.X2Access	Severity: variable Specific problem: ENB X2 DEDICATED MESSAGE BAD ROUTING (520) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a X2-AP UE associated message is routed to CalIPMgr.		
Impact: The X2-AP UE associated message is not processed and is discarded by CalIPMgr.		
Remedial action: No action is required.		

Table 22-554 IK4007091 - PCI DETECTION OF INTERFERENCE

Alarm	Attributes	Applicable major NE releases
Name: IK4007091 (2590) Type: operationalViolation (93) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: PCI DETECTION OF INTERFERENCE (521) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the PCI interference.		
Impact: Interference in reference signal of conflicting cells. Impacts UE performance in the cells.		
Remedial action: Increase the list of allowed PCI values for the serving eNodeB. The eNodeB must be able to allocate PCIs that are different modulo 3 for its cells (or for a cell and 2 co-sector cells), so the 3 values of PCI mod 3 must be present in the list of allowed PCI values. In case all the cells of a site raise an Interference alarm, check the configuration as it may inform about a site configuration error (too many cells in a site, wrong omni or cell azimuth in a site).		

Table 22-555 IK4007092 - PCI ASSIGNMENT

Alarm	Attributes	Applicable major NE releases
Name: IK4007092 (2591) Type: communicationsAlarm (4) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: PCI ASSIGNMENT (522) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the PCI of the cell is assigned or re-assigned by the eNodeB during eNodeB startup.		
Impact: The Cell is running with a new PCI. The new value will be synched up to SAM shortly.		
Remedial action: No action is required.		

Table 22-556 IK4007093 - ANR SERVED CELL INFO NOT HANDLED

Alarm	Attributes	Applicable major NE releases
Name: IK4007093 (2592) Type: communicationsAlarm (4) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: ANR SERVED CELL INFO NOT HANDLED (523) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the served cell and neighbor cell information received over X2 interface is not handled, because internal eNodeB tables reached the dimensioning limits.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-557 IK4007094 - ENB CANDIDATE X2 ENB CONFIGURATION UPDATE FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007094 (2593) Type: communicationsAlarm (4) Package: lte Raised on class: lte.X2Access	Severity: variable Specific problem: ENB CANDIDATE X2 ENB CONFIGURATION UPDATE FAILURE (524) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a persistent X2_ENB_CONFIGURATION_UPDATE_FAILURE message from eNB_Candidate eNodeB2 network element detected by CallpMgr.		
Impact: The service is degraded (with multiple X2s). The service is no longer available (without multiple X2s).		
Remedial action: No action is required.		

Table 22-558 IK4007095 - ENB CANDIDATE X2 ENB CONFIGURATION UPDATE NO RESPONSE

Alarm	Attributes	Applicable major NE releases
Name: IK4007095 (2594) Type: communicationsAlarm (4) Package: lte Raised on class: lte.X2Access	Severity: variable Specific problem: ENB CANDIDATE X2 ENB CONFIGURATION UPDATE NO RESPONSE (525) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a persistent NO_RESPONSE from eNodeB_CAND IDATE eNodeB2 network element detected by CallpMgr.		
Impact: The service is degraded (with multiple X2s). The service is no longer available (without multiple X2s).		
Remedial action: No action is required.		

Table 22-559 IK4007096 - MME S1 ENB CONFIGURATION UPDATE FAILURE RESPONSE

Alarm	Attributes	Applicable major NE releases
Name: IK4007096 (2595) Type: qualityOfServiceAlarm (82) Package: Ite Raised on class: Ite.MmeAccess	Severity: variable Specific problem: MME S1 ENB CONFIGURATION UPDATE FAILURE RESPONSE (526) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a persistent S1_ENB_CONFIGURATION_UPDATE_FAILURE_RESPONSE from MME network element detected by CallPMgr.		
Impact: The service is degraded (with S1 flex). The service is no longer available (without S1 flex).		
Remedial action: No action is required.		

Table 22-560 IK4007097 - MME S1 ENB CONFIGURATION UPDATE NO RESPONSE

Alarm	Attributes	Applicable major NE releases
Name: IK4007097 (2596) Type: qualityOfServiceAlarm (82) Package: Ite Raised on class: Ite.MmeAccess	Severity: variable Specific problem: MME S1 ENB CONFIGURATION UPDATE NO RESPONSE (527) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a persistent NO_RESPONSE from MME network element detected by CallPMgr.		
Impact: The service is degraded (with S1 flex). The service is no longer available (without S1 flex).		
Remedial action: No action is required.		

Table 22-561 IK4007098 - INCONSISTENT IP ADDRESS

Alarm	Attributes	Applicable major NE releases
Name: IK4007098 (2597) Type: communicationsAlarm (4) Package: Ite Raised on class: Ite.X2Access	Severity: variable Specific problem: INCONSISTENT IP ADDRESS (528) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the IP address attached to X2TransportLayerAccess instance depending on the X2Access instance is not correct.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-562 IK4007099 - GERAN SYS INFO TRANSFER INITIATION REPORT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007099 (2598) Type: communicationsAlarm (4) Package: lte Raised on class: lte.BscAccess	Severity: minor Specific problem: GERAN SYS INFO TRANSFER INITIATION REPORT FAILURE (529) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that CallIP does not manage to retrieve the system information (SI/PSI) of a target GERAN cell using RIM RAN-INFORMATION-REQUEST/multiple report.		
Impact: The service is degraded: the eNodeB is not able to provide SI/PSI of the target GERAN Cell identified in the Cell Change Order command sent to the UE.		
Remedial action: Check for the proper functioning of the following:1. GERAN cell provisioning;2. RIM support for MME and SGSN;3. IP routing path between eNodeB S1 interface IP endpoint and target BSC.		

Table 22-563 IK4007100 - GERAN SYS INFO TRANSFER STOP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007100 (2599) Type: communicationsAlarm (4) Package: lte Raised on class: lte.BscAccess	Severity: variable Specific problem: GERAN SYS INFO TRANSFER STOP FAILURE (530) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that CallIP does not manage to stop event-driven system information (SI/PSI) of a target GERAN Cell using RIM RAN-INFORMATION-REQUEST/stop.		
Impact: No impact on service.		
Remedial action: No action is required.		

Table 22-564 IK4007101 - GERAN SYS INFO UPDATE END

Alarm	Attributes	Applicable major NE releases
Name: IK4007101 (2600) Type: communicationsAlarm (4) Package: lte Raised on class: lte.BscAccess	Severity: variable Specific problem: GERAN SYS INFO UPDATE END (531) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the eNodeB CallIP has received RIM RAN-INFORMATION/end message from a target BSC indicating that event-driven system information update for a target GERAN cell has been stopped.		
Impact: The service is degraded: the eNodeB is not able to provide SI/PSI of the target GERAN cell identified in Cell Change Order command sent to the UE.		
Remedial action: No action is required.		

Table 22-565 IK4007102 - RAN INFORMATION ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4007102 (2601) Type: communicationsAlarm (4) Package: lte Raised on class: lte.BscAccess	Severity: variable Specific problem: RAN INFORMATION ERROR (532) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that there is an error in RIM container IE when eNodeB receive RIM message from peer node or RAN-INFORMATION-ERROR message is received from peer node.		
Impact: This is an IOT issue.		
Remedial action: No action is required.		

Table 22-566 IK4007103 - RAN INFORMATION APPLICATION ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4007103 (2602) Type: communicationsAlarm (4) Package: lte Raised on class: lte.BscAccess	Severity: variable Specific problem: RAN INFORMATION APPLICATION ERROR (533) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates there is an error in application container IE or there is application error container IE when eNodeB receive RIM message from peer node.		
Impact: This is an IOT issue.		
Remedial action: No action is required.		

Table 22-567 IK4007104 - CELL SETUP ARP TIMEOUT

Alarm	Attributes	Applicable major NE releases
Name: IK4007104 (2603) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: CELL SETUP ARP TIMEOUT (534) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a non-response to an ARP resolution request detected during the Cell Setup procedure.		
Impact: lteCell configuration is not possible.		
Remedial action: Call the next level of support.		

Table 22-568 IK4007105 - L1L2 CONFIG REFUSED CELL DELETE

Alarm	Attributes	Applicable major NE releases
Name: IK4007105 (2604) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: L1L2 CONFIG REFUSED CELL DELETE (535) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the cell deletion for logical cell resetting procedure is rejected by the BB entity.		
Impact: The service is not possible on this BB		
Remedial action: Lock then unlock the BB.		

Table 22-569 IK4007106 - L1L2 CONFIG TIMEOUT CELL DELETE

Alarm	Attributes	Applicable major NE releases
Name: IK4007106 (2605) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: L1L2 CONFIG TIMEOUT CELL DELETE (536) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a non-response from BB entity for cell deletion in the logical cell resetting procedure.		
Impact: The service is not possible on this BB		
Remedial action: Lock then unlock the BB.		

Table 22-570 IK4007107 - CELL CLEAN UP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007107 (2606) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: CELL CLEAN UP FAILURE (537) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a cell deletion failure when cell clean-up is triggered by lteCell instance deletion online, parameter update or when software failure happens		
Impact: The service is not possible on this BB		
Remedial action: Lock then unlock the BB.		

Table 22-571 IK4007108 - ENB X2 PLMN INCONSISTENCY

Alarm	Attributes	Applicable major NE releases
Name: IK4007108 (2607) Type: communicationsAlarm (4) Package: lte Raised on class: lte.X2Access	Severity: variable Specific problem: ENB X2 PLMN INCONSISTENCY (538) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates an inconsistency between the PLMN ID of Global eNB ID, Served Cell Information or Neighbour Information received from candidate eNB in X2AP message (X2 SETUP REQUEST, X2 SETUP RESPONSE, ENB CONFIGURATION UPDATE) and local eNodeB's PLMN ID.		
Impact: Handover to the remote eNodeB is restricted.		
Remedial action: No action is required.		

Table 22-572 IK4007109 - L1L2 CONFIG ERROR CELL UPDATE

Alarm	Attributes	Applicable major NE releases
Name: IK4007109 (2608) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: L1L2 CONFIG ERROR CELL UPDATE (539) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a configuration error detected by BB entity for the cell update procedure.		
Impact: The LTE service is affected on this cell. If power settings were changed, inconsistency between SIBs broadcast to UEs and modem power settings configuration can exist.		
Remedial action: Check and correct the wrong parameter.		

Table 22-573 IK4007110 - L1L2 CONFIG REFUSED CELL UPDATE

Alarm	Attributes	Applicable major NE releases
Name: IK4007110 (2609) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: L1L2 CONFIG REFUSED CELL UPDATE (540) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a cell update is refused by the BB entity.		
Impact: The LTE service is affected on this cell. If power settings were changed, inconsistency between SIBs broadcast to UEs and modem power settings configuration can exist.		
Remedial action: Call the next level of support.		

Table 22-574 IK4007111 - L1L2 CONFIG TIMEOUT CELL UPDATE

Alarm	Attributes	Applicable major NE releases
Name: IK4007111 (2610) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: L1L2 CONFIG TIMEOUT CELL UPDATE (541) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a non-response by the BB entity to the cell update procedure.		
Impact: The LTE service is affected on this cell. If power settings were changed, inconsistency between SIBs broadcast to UEs and modem power settings configuration can exist.		
Remedial action: Lock and unlock the cell. If the alarm persists. Call the next level of support.		

Table 22-575 IK4007112 - MME S1 SETUP REQUEST NOT SENT

Alarm	Attributes	Applicable major NE releases
Name: IK4007112 (2611) Type: communicationsAlarm (4) Package: lte Raised on class: lte.MmeAccess	Severity: critical Specific problem: MME S1 SETUP REQUEST NOT SENT (542) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the S1 Setup Request has not been sent because of an internal problem.		
Impact: The service is degraded (with S1 flex). The service is no longer available (without S1 flex).		
Remedial action: Check the parameters.		

Table 22-576 IK4007113 - L1L2 CONFIG ERROR CELL MBMS SCHEDULING INFO

Alarm	Attributes	Applicable major NE releases
Name: IK4007113 (2612) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: L1L2 CONFIG ERROR CELL MBMS SCHEDULING INFO (543) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the Cell MBMS scheduling info is rejected by the BB entity because of a configuration error.		
Impact: The MBMS service is not possible on this cell.		
Remedial action: Check the parameters.		

Table 22-577 IK4007114 - L1L2 CONFIG REFUSED CELL MBMS SCHEDULING INFO

Alarm	Attributes	Applicable major NE releases
Name: IK4007114 (2613) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.Cell	Severity: critical Specific problem: L1L2 CONFIG REFUSED CELL MBMS SCHEDULING INFO (544) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the Cell MBMS scheduling info is refused by the BB entity.		
Impact: The MBMS service is not possible on this cell.		
Remedial action: Call the next level of support.		

Table 22-578 IK4007115 - L1L2 CONFIG TIMEOUT CELL MBMS SCHEDULING INFO

Alarm	Attributes	Applicable major NE releases
Name: IK4007115 (2614) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.Cell	Severity: critical Specific problem: L1L2 CONFIG TIMEOUT CELL MBMS SCHEDULING INFO (545) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a non-response by the BB entity to the Cell MBMS scheduling info procedure.		
Impact: The MBMS service is not possible on this cell.		
Remedial action: Call the next level of support.		

Table 22-579 IK4007116 - BB DELAY CONFIG FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007116 (2615) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.BBCardSpecifics	Severity: critical Specific problem: BB DELAY CONFIG FAILURE (546) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modification of delays requiring BB to be reset so to use new values.		
Impact: The service is not possible on this BB.		
Remedial action: Reset the BB.		

Table 22-580 IK4007117 - CALLTRACE SIGN BASED STOPPED BY DDT

Alarm	Attributes	Applicable major NE releases
Name: IK4007117 (3058) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: CALLTRACE SIGN BASED STOPPED BY DDT (547) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the signaling based trace session is stopped when eNodeB received a dynamic debug trace session activation request.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-581 IK4007118 - DYNAMIC DEBUG TRACE ACTIVATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007118 (3059) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: DYNAMIC DEBUG TRACE ACTIVATION FAILURE (548) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the dynamic debug trace activation failed.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-582 IK4007119 - DYNAMIC DEBUG TRACE INVALID PARAMETER

Alarm	Attributes	Applicable major NE releases
Name: IK4007119 (3060) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: DYNAMIC DEBUG TRACE INVALID PARAMETER (549) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the dynamic debug trace parameters are invalid.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-583 IK4007120 - NO RRC CONNECTIONS DETECTED FOR A PERIOD

Alarm	Attributes	Applicable major NE releases
Name: IK4007120 (3061) Type: communicationsAlarm (4) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: NO RRC CONNECTIONS DETECTED FOR A PERIOD (550) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that no RRC connection has been setup for a period (no new connections, no re-establishments and no incoming handovers). This period is configurable per Cell.		
Impact: It is possible that RRC connections are being attempted but an error is not allowing any to be completed		
Remedial action: Check the configurable period and the hours this alarm is raised. If configurable period is long enough such that some connections should have been established, please call the next level of support.		

Table 22-584 IK4007121 - BB FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4007121 (3062) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: minor Specific problem: BB FAULT 1 (72) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-585 IK4007122 - BB FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4007122 (3063) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: minor Specific problem: BB FAULT 2 (73) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-586 IK4007123 - BB FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4007123 (3064) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: minor Specific problem: BB FAULT 3 (74) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-587 IK4007124 - BB EVENT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4007124 (3065) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: BB EVENT 1 (551) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-588 IK4007125 - BB EVENT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4007125 (3066) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: BB EVENT 2 (552) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-589 IK4007126 - BB EVENT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4007126 (3067) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: BB EVENT 3 (553) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-590 IK4007127 - BSC_ACCESS FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4007127 (3068) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BscAccess	Severity: minor Specific problem: BSC_ACCESS FAULT 1 (554) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BSC Access fault		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-591 IK4007128 - BSC_ACCESS FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4007128 (3069) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BscAccess	Severity: minor Specific problem: BSC_ACCESS FAULT 2 (555) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BSC Access fault		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-592 IK4007129 - BSC_ACCESS FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4007129 (3070) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BscAccess	Severity: minor Specific problem: BSC_ACCESS FAULT 3 (556) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified BSC Access fault		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.

Table 22-620 IK4007157 - END OF INTERRAT UTRAN ANR ACTIVE PHASE

Alarm	Attributes	Applicable major NE releases
Name: IK4007157 (3098) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.UtraFddNeighboringFreqConf	Severity: variable Specific problem: END OF INTERRAT UTRAN ANR ACTIVE PHASE (584) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the end of the inter-RAT UTRAN ANR active phase.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-621 IK4007158 - UTRAN NEIGHBOR RELATION MIB INSTANCE CANNOT BE REMOVED BY ANR

Alarm	Attributes	Applicable major NE releases
Name: IK4007158 (3099) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.UtraFddNeighboringCellRelation	Severity: variable Specific problem: UTRAN NEIGHBOR RELATION MIB INSTANCE CANNOT BE REMOVED BY ANR (585) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the UTRAN neighbor relation MIB instance is not removed because the removal is not allowed.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-622 IK4007159 - CREATED UTRAN NEIGHBOR CANNOT BE ASSOCIATED TO RNC

Alarm	Attributes	Applicable major NE releases
Name: IK4007159 (3100) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.UtraFddNeighboringCellRelation	Severity: variable Specific problem: CREATED UTRAN NEIGHBOR CANNOT BE ASSOCIATED TO RNC (586) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates no RNC is found to associate the UtraFddNeighbouringCellRelation.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-623 IK4007160 - END CMAS ALERT

Alarm	Attributes	Applicable major NE releases
Name: IK4007160 (3101) Type: communicationsAlarm (4) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: END CMAS ALERT (587) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the end of the CMAS message broadcast.		
Impact: No impact on service.		
Remedial action: No action is required.		

Table 22-624 IK4007161 - L1L2 CONFIG REFUSED CMAS

Alarm	Attributes	Applicable major NE releases
Name: IK4007161 (3102) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: L1L2 CONFIG REFUSED CMAS (588) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the BB L1/L2 entity rejected CMAS message broadcast.		
Impact: The CMAS message broadcast is not possible on the affected cell.		
Remedial action: No action is required.		

Table 22-625 IK4007162 - L1L2 CONFIG TIMEOUT CMAS

Alarm	Attributes	Applicable major NE releases
Name: IK4007162 (3103) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: L1L2 CONFIG TIMEOUT CMAS (589) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a no-response from BB L1/L2 entity detected during the CMAS broadcast procedure.		
Impact: The CMAS message broadcast is not possible on the affected cell.		
Remedial action: No action is required.		

Table 22-626 IK4007163 - UTRAN SYS INFO TRANSFER INITIATION REPORT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007163 (3104) Type: communicationsAlarm (4) Package: lte Raised on class: lte.RncAccess	Severity: minor Specific problem: UTRAN SYS INFO TRANSFER INITIATION REPORT FAILURE (590) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that CallIP does not manage to retrieve the system information (UTRASI) of a target UTRAN cell using RIM RAN-INFORMATION-REQUEST/multiple report.		
Impact: The service is degraded: the eNodeB is not able to provide UTRASI of the target UTRAN Cell in the RRC Connection Release sent to the UE.		
Remedial action: Check for the proper functioning of the following: 1. UTRAN cell provisioning 2. RIM support for MME and SGSN 3. IP routing path between eNodeB S1 interface IP endpoint and target RNC.		

Table 22-627 IK4007164 - UTRAN SYS INFO UPDATE STOP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007164 (3105) Type: communicationsAlarm (4) Package: lte Raised on class: lte.RncAccess	Severity: variable Specific problem: UTRAN SYS INFO UPDATE STOP FAILURE (591) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that CallIP does not manage to stop event-driven system information (UTRASI) of a target UTRAN Cell using RIM RAN-INFORMATION-REQUEST/stop.		
Impact: No impact on service.		
Remedial action: No action is required.		

Table 22-628 IK4007165 - UTRAN SYS INFO UPDATE END

Alarm	Attributes	Applicable major NE releases
Name: IK4007165 (3106) Type: communicationsAlarm (4) Package: lte Raised on class: lte.RncAccess	Severity: variable Specific problem: UTRAN SYS INFO UPDATE END (592) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the eNodeB CallP has received RIM RAN-INFORMATION/end message from a target RNC indicating that event-driven system information update for a target UTRAN cell has been stopped.		
Impact: The service is degraded: the eNodeB is not able to provide UTRAN SI of the target UTRAN cell in the RRC Connection Release sent to the UE.		
Remedial action: No action is required.		

Table 22-629 IK4007166 - UTRA RAN INFORMATION ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4007166 (3107) Type: communicationsAlarm (4) Package: lte Raised on class: lte.RncAccess	Severity: variable Specific problem: UTRA RAN INFORMATION ERROR (593) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that there is an error in RIM container IE when eNodeB receive RIM message from peer node or RAN-INFORMATION-ERROR message is received from peer node.		
Impact: The service is degraded: the eNodeB is not able to provide UTRAN SI of the target UTRAN cell in the RRC Connection Release sent to the UE.		
Remedial action: No action is required.		

Table 22-630 IK4007167 - UTRA RAN INFORMATION APPLICATION ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4007167 (3108) Type: communicationsAlarm (4) Package: lte Raised on class: lte.RncAccess	Severity: variable Specific problem: UTRA RAN INFORMATION APPLICATION ERROR (594) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates there is an error in application container IE or there is application error container IE when eNodeB receive RIM message from peer node.		
Impact: The service is degraded: the eNodeB is not able to provide UTRAN SI of the target UTRAN cell in the RRC Connection Release sent to the UE.		
Remedial action: No action is required.		

Table 22-631 IK4007168 - NEW INTERFREQ NEIGHBOUR DISCOVERED

Alarm	Attributes	Applicable major NE releases
Name: IK4007168 (3109) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.Cell	Severity: variable Specific problem: NEW INTERFREQ NEIGHBOUR DISCOVERED (595) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LT6.0
Description: This event indicates a new inter-frequency neighbour cell has been discovered by the eNB through ANR measurement report.		
Impact: No impact on service.		
Remedial action: No action is required.		

Table 22-632 IK4007169 - END OF INTRAFREQ LTE ANR ACTIVE PHASE

Alarm	Attributes	Applicable major NE releases
Name: IK4007169 (3110) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.Cell	Severity: variable Specific problem: END OF INTRAFREQ LTE ANR ACTIVE PHASE (596) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the end of the intra-frequency LTE ANR active phase.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-633 IK4007170 - MME S1 SETUP RESPONSE INCONSISTENCY

Alarm	Attributes	Applicable major NE releases
Name: IK4007170 (3111) Type: qualityOfServiceAlarm (82) Package: Ite Raised on class: Ite.MmeAccess	Severity: variable Specific problem: MME S1 SETUP RESPONSE INCONSISTENCY (597) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a configuration mismatch between the MIM and the MME.		
Impact: No impact on service.		
Remedial action: No action is required.		

Table 22-634 IK4007171 - X2 RESOURCE STATUS REPORTING INITIATION FAILURE OR NO RESPONSE

Alarm	Attributes	Applicable major NE releases
Name: IK4007171 (3780) Type: communicationsAlarm (4) Package: lte Raised on class: lte.X2Access	Severity: minor Specific problem: X2 RESOURCE STATUS REPORTING INITIATION FAILURE OR NO RESPONSE (598) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a persistent X2AP RESOURCE STATUS FAILURE message or no response from a peer eNodeB.		
Impact: No load information can be used for inter-freq mobility.		
Remedial action: Check peer eNB and do X2 lock/unlock when it is available for X2 load reporting		

Table 22-635 IK4007172 - END OF INTER-FREQ ANR ACTIVE PHASE

Alarm	Attributes	Applicable major NE releases
Name: IK4007172 (3781) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: END OF INTER-FREQ ANR ACTIVE PHASE (599) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the end of the inter-frequency LTE ANR active phase.		
Impact: No impact on eNodeB		
Remedial action: No action is required.		

Table 22-636 IK4007175 - SIB3 AUTOMATED PARAMETER UPDATE

Alarm	Attributes	Applicable major NE releases
Name: IK4007175 (3782) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: SIB3 AUTOMATED PARAMETER UPDATE (600) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the cell has automatically modified cell reselection parameters broadcast in SIB3 based on cell loading conditions		
Impact: No impact on eNodeB		
Remedial action: No action is required.		

Table 22-637 IK4007176 - SIB RATE EXCESS

Alarm	Attributes	Applicable major NE releases
Name: IK4007176 (3783) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: SIB RATE EXCESS (601) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that SIB updates incremented the Value Tag more than 32 times in elapsed 3 hours.		
Impact: 3 of the Ues coming back from neighbour cells may have missed parameters updates. The possible misbehaviour should have minor severity.		
Remedial action: No action is required.		

Table 22-638 IK4007177 - EMBMS QOS

Alarm	Attributes	Applicable major NE releases
Name: IK4007177 (3784) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: EMBMS QOS (602) Implicitly cleared: true Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that eMBMS service is experiencing packet loss (greater than lteCell::mbmsPacketLossThrHigh) or excessive delay (packets are detected in excess in eMBMS buffers).		
Impact: Degraded service quality due to excessive packet loss or delay.		
Remedial action: Depending on the reason found different actions can be taken: (1) packet loss or delay between the eNB and the BM-SC: fix network issue; (2) estimated network delay in the BM-SC is not correct: Check the network delay at the BM-SC; (3) time reference is different in eNB and BM-SC: check the synchronization period and the synchronization sequence provisionned in the BM-SC and the eNB parameters Mbms::m1SyncSequenceDuration and m1SyncPeriodDuration. The Mbms::m1SyncPeriodOffset can also be set on the eNB side to make a correction on the time-stamps received from the BM-SC. This value is subtracted to the BM-SC time-stamp (modulus m1SyncPeriodDuration). The same value shall be set on all eNBs of a MBSFN area. When possible, it is preferred to adjust the delay directly in the BM-SC rather than setting the syncPeriodOffset. (4) mismatch between the service bit rate and the resources allocated in the eNB: check MCE and content provider provisioning: the effective bit rate on the M1 interface seems to exceed the bit rate announced in M3 session start. (5) check isMbmsTrafficAllowed and the status of the synchronization clock source.		

Table 22-639 IK4007178 - LTE NEIGHBOR RELATION MIB INSTANCE CANNOT BE REMOVED BY ANR

Alarm	Attributes	Applicable major NE releases
Name: IK4007178 (3785) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: LTE NEIGHBOR RELATION MIB INSTANCE CANNOT BE REMOVED BY ANR (603) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the LTE neighbor relation MIB instance is not removed because the removal is not allowed.		

(1 of 2)

22 – Alcatel-Lucent 9xxx eNodeB alarms

Alarm	Attributes	Applicable major NE releases
Impact: No impact on eNodeB		
Remedial action: No action is required.		

(2 of 2)

Table 22-640 IK4007179 - CELL DISABLED DUE TO BAD POWER CONFIGURATION

Alarm	Attributes	Applicable major NE releases
Name: IK4007179 (3786) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: CELL DISABLED DUE TO BAD POWER CONFIGURATION (604) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the LTE Cell is disabled due to misconfiguration in power settings during cell setup procedure or cell parameter update procedure.		
Impact: The LTE Cell is out of service. No traffic on this cell.		
Remedial action: Correct the lteCell power parameters configuration and apply the update so to put the lteCell back into service.		

Table 22-641 IK4007181 - PCI CONFUSION

Alarm	Attributes	Applicable major NE releases
Name: IK4007181 (3787) Type: operationalViolation (93) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: PCI CONFUSION (485) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates a PCI confusion between the cell and a neighbour cell of a neighbour cell. A manual intervention is needed to solve the problem. This can happen in the following cases: (1)The conflict could not be solved autonomously by the eNB; (2)The automatic PCI allocation is not activated.		
Impact: Mobility procedure triggered in the neighbour cell may be directed to a wrong neighboring cell, leading to further call drops. The list of potentially victim eNBs is displayed.		
Remedial action: If the automatic PCI allocation is activated: Increase the list of allowed PCI values, either for the local or for the distant eNodeB; If the automatic PCI allocation is not activated: Change the PCI value, either for the local or the distant cell.		

Table 22-642 IK4007182 - PCI CONFUSION NEIGHB CELLS

Alarm	Attributes	Applicable major NE releases
Name: IK4007182 (3788) Type: operationalViolation (93) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: PCI CONFUSION NEIGHB CELLS (483) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates this eNB is a victim of PCI confusion, it has multiple neighbor cells that have the same PCI as each other. A manual intervention is needed to solve the problem. This issue may affect mobility procedures in any of the eNodeB cells.		
Impact: Mobility procedure triggered in the cell may be directed to a wrong neighboring cell, leading to further call drops.		
Remedial action: The maintenance action has to be done in one of the neighbour eNBs. The issue is also reported by Alarms in these eNBs. If the automatic PCI allocation is activated in these eNBs: (1) If a Warning Alarm is raised, the issue will be automatically solved in the next maintenance window; (2) If a Major Alarm is raised, the issue cannot be automatically solved. It is necessary to increase the list of allowed PCI values, and the issue will be automatically solved in the next maintenance window. If the automatic PCI allocation is not activated in these eNBs: A Major Alarm is raised. It is necessary to change the PCI value of one of the actor cell of the issue.		

Table 22-643 IK4007183 - INCOMPLETE BROADCAST OF A PRESIDENTIAL ALERT

Alarm	Attributes	Applicable major NE releases
Name: IK4007183 (3789) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: INCOMPLETE BROADCAST OF A PRESIDENTIAL ALERT (605) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the eNB has been unable to broadcast a CMAS Presidential Alert the requested number of times.		
Impact: Some or all users in the cell may have not received the Presidential Alert		
Remedial action: No action is required.		

Table 22-644 IK4007184 - BRC UC FAILED

Alarm	Attributes	Applicable major NE releases
Name: IK4007184 (3989) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: BRC UC FAILED (467) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the UeCallIP detected a no-response from BRC-UC.		
Impact: The eNodeB performance is low.		

(1 of 2)

22 – Alcatel-Lucent 9xxx eNodeB alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: No action is required.		

(2 of 2)

Table 22-645 IK4007185 - BRC UC WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4007185 (3990) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: BRC UC WARNING (469) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the BRC-UC reported a warning.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-646 IK4007186 - M3 SESSION START FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007186 (3991) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Mce	Severity: variable Specific problem: M3 SESSION START FAILURE (606) Implicitly cleared: true Default probable cause: congestion (694)	<ul style="list-style-type: none"> • LR13.1
Description: This event indicates that the MCE CAC for the incoming session has failed due to the cause Radio resources not available. So the MCE has returned back a Session Start Failure to the MME and the MCE has not performed any radio changes.		
Impact: The incoming eMBMS sessions can not be started		
Remedial action: For the MBSFN Area concerned by the incoming session: Stop another session or wait for that another session has ended, and then try to start the session. Another possibility: If possible, try to reduce the bit rate of the session and then try to start the session.		

Table 22-647 IK4007187 - M3 SESSION UPDATE FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007187 (3992) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Mce	Severity: variable Specific problem: M3 SESSION UPDATE FAILURE (607) Implicitly cleared: true Default probable cause: congestion (694)	<ul style="list-style-type: none"> • LR13.1
Description: This event indicates that the Session Update Request has failed due to the MCE CAC failure with the cause Radio resources not available for the new MBSFN Area(s) on which the session had to be broadcasted. So the MCE has returned back a Session Update Failure to the MME and the MCE has not performed any radio changes.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Impact: The eMBMS sessions can not be updated		
Remedial action: For the new MBSFN Area on which the session should be broadcasted: Stop another session or wait for that another session has ended, and then try to perform a Session Update Request. Another possibility: If possible, try to reduce the bit rate of the session and then try to perform a Session Update Request.		

(2 of 2)

Table 22-648 IK4007188 - BRC CC WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4007188 (4657) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: BRC CC WARNING (466) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the BRC-CC reported a warning.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-649 IK4007189 - L1L2 CONFIG REFUSED CELL DELETE

Alarm	Attributes	Applicable major NE releases
Name: IK4007189 (4658) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: L1L2 CONFIG REFUSED CELL DELETE (535) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the cell deletion for logical cell resetting procedure is rejected by the Modem entity.		
Impact: Service is not possible on this eNB.		
Remedial action: Lock then unlock the eNB		

Table 22-650 IK4007190 - L1L2 CONFIG TIMEOUT CELL DELETE

Alarm	Attributes	Applicable major NE releases
Name: IK4007190 (4659) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: L1L2 CONFIG TIMEOUT CELL DELETE (536) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a lack of response from the modem for cell deletion in the logical cell resetting procedure.		
Impact: Service is not possible on this eNB.		
Remedial action: Lock then unlock the eNB.		

Table 22-651 IK4007191 - CELL CLEAN UP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007191 (4660) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: CELL CLEAN UP FAILURE (537) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a cell deletion failure when cell clean-up is triggered by lteCell instance deletion online, parameter update or when software failure happens.		
Impact: Service is not possible on this eNB.		
Remedial action: Lock then unlock the eNB.		

Table 22-652 IK4007192 - SCB DELAY CONFIG FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007192 (4661) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: SCB DELAY CONFIG FAILURE (608) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Configured cell path delays are no longer correct and the modem function must be reset to adopt the new values.		
Impact: Service is not possible on this eNB until the modem is reset.		
Remedial action: Reset the modem.		

Table 22-653 IK4007193 - SCB FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4007193 (4662) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.MODULE	Severity: minor Specific problem: SCB FAULT 1 (609) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified Modem Function fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-654 IK4007194 - SCB FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4007194 (4663) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.MODULE	Severity: minor Specific problem: SCB FAULT 2 (610) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified Modem Function fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-655 IK4007195 - SCB FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4007195 (4664) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.MODULE	Severity: minor Specific problem: SCB FAULT 3 (611) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified Modem Function fault detected		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-656 IK4007196 - SCB EVENT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4007196 (4665) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: SCB EVENT 1 (612) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified Modem Function fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-657 IK4007197 - SCB EVENT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4007197 (4666) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: SCB EVENT 2 (613) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified Modem Function fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-658 IK4007198 - SCB EVENT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4007198 (4667) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: SCB EVENT 3 (614) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified Modem Function fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-659 IK4007201 - ANR X2IP ADDR RETRIEVAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007201 (4668) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANR X2IP ADDR RETRIEVAL FAILURE (496) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the X2 IP address retrieval failure. The alarm is cleared when X2Access instance created or internal timer.		
Impact: X2 link cannot be established until an X2Access instance is created.		
Remedial action: Create the X2Access instance, if an X2 link needs to be established.		

Table 22-660 IK4007202 - NEIGHBOR RELATION REPLACEMENT

Alarm	Attributes	Applicable major NE releases
Name: IK4007202 (4669) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: NEIGHBOR RELATION REPLACEMENT (615) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that a Neighbor Relation has been replaced with another higher priority neighbor.		
Impact: Neighbor Relation replaced		
Remedial action: No action is required.		

Table 22-661 IK4007203 - PSC CONFUSION UTRAN NEIGHB CELLS

Alarm	Attributes	Applicable major NE releases
Name: IK4007203 (4670) Type: operationalViolation (93) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: PSC CONFUSION UTRAN NEIGHB CELLS (616) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates this cell is a victim of a UTRAN PSC confusion, it has neighbor UTRAN cells in a particular UTRAN neighboring frequency that have the same PSC. A manual intervention is needed to solve the problem. This issue may affect mobility procedures from LTE to UTRAN.		
Impact: Mobility procedure triggered in the eNB towards UTRAN may be directed to a wrong neighboring cell, leading to further call drops.		
Remedial action: The maintenance action is to change the PSC value of one of the neighbor UTRAN cells to resolve the conflict.		

Table 22-662 IK4007204 - UTRAN CELL LOAD TRANSFER INITIATION REPORT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007204 (4671) Type: communicationsAlarm (4) Package: lte Raised on class: lte.RncAccess	Severity: minor Specific problem: UTRAN CELL LOAD TRANSFER INITIATION REPORT FAILURE (617) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that CalIP does not manage to retrieve the cell load of a target UTRAN cell using RIM RAN-INFORMATION-REQUEST/multiple report.		
Remedial action: Check for the proper functioning of the following: 1. UTRAN cell provisioning; 2. RIM support for MME and SGSN; 3. IP routing path between eNodeB S1 interface IP endpoint and target RNC.		

Table 22-663 IK4007205 - CONFIRMED COMMUNICATION ISSUE MET WITH UE SETUPS ON THIS CELL

Alarm	Attributes	Applicable major NE releases
Name: IK4007205 (4672) Type: communicationsAlarm (4) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: CONFIRMED COMMUNICATION ISSUE MET WITH UE SETUPS ON THIS CELL (482) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that an internal communication issue has been met for multiple UEs on this cell during the UE Setup procedure.		
Impact: LTE traffic is interrupted on this cell.		
Remedial action: Lock and then unlock the lteCell. If this fails to clear the fault then lock and unlock the modem (BB) board.		

Table 22-664 IK4007206 - SCTP RELEASE DUE TO DUPLICATED MMECs

Alarm	Attributes	Applicable major NE releases
Name: IK4007206 (4673) Type: operationalViolation (93) Package: lte Raised on class: lte.MmeAccess	Severity: critical Specific problem: SCTP RELEASE DUE TO DUPLICATED MMECs (618) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that a MMEC or PLMN, MMEGI, MMEC in the 'Served GUMMEIs' IE of S1 Setup Response from one MME was found to be a duplicate with the existing ones from another MME.		
Impact: MMEAccess changed to disabled/ offline. Capacity mismatch between eNodeB and MMEs is possible; some roaming UEs may get poor LTE service.		
Remedial action: Update MMEGI or MMEC to make MMEGI, MMEC unique across all MMEs having SCTP with the eNodeB, and then re-try S1 Setup.		

Table 22-665 IK4007207 - UTRAN CELL LOAD TRANSFER STOP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4007207 (4674) Type: communicationsAlarm (4) Package: Ite Raised on class: Ite.RncAccess	Severity: variable Specific problem: UTRAN CELL LOAD TRANSFER STOP FAILURE (619) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that CallP does not manage to stop event-driven cell load exchange of a target UTRAN Cell using RIM RAN-INFORMATION-REQUEST/stop.		
Remedial action: No action is required.		

Table 22-666 IK4007208 - UTRAN CELL LOAD UPDATE END

Alarm	Attributes	Applicable major NE releases
Name: IK4007208 (4675) Type: communicationsAlarm (4) Package: Ite Raised on class: Ite.RncAccess	Severity: variable Specific problem: UTRAN CELL LOAD UPDATE END (620) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the eNodeB CallP has received RIM RAN-INFORMATION/end message from a target RNC indicating that event-driven cell load update for a target UTRAN cell has been stopped.		
Remedial action: No action is required.		

Table 22-667 IK4008001 - EBP INIT

Alarm	Attributes	Applicable major NE releases
Name: IK4008001 (2916) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: critical Specific problem: EBP INIT (621) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates an initialization failure.		
Impact: EBP is out of service.		
Remedial action: Power cycle entire CB.		

Table 22-668 IK4008002 - EBP TX

Alarm	Attributes	Applicable major NE releases
Name: IK4008002 (2917) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: EBP TX (622) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates a fault in transmit path.		
Impact: EBP is out of service.		
Remedial action: Check cable.		

Table 22-669 IK4008003 - EBP RX

Alarm	Attributes	Applicable major NE releases
Name: IK4008003 (2918) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: EBP RX (623) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates a fault in receive path.		
Impact: EBP is out of service.		
Remedial action: Check cable.		

Table 22-670 IK4008004 - EBP FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4008004 (3112) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: EBP FAULT 1 (624) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: Provisioned for late churn-in.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-671 IK4008005 - EBP FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4008005 (3113) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: EBP FAULT 2 (625) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-672 IK4008006 - EBP FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4008006 (3114) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: EBP FAULT 3 (626) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-673 IK4008007 - EBP FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4008007 (3115) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: EBP FAULT 4 (627) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-674 IK4008008 - EBP FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4008008 (3116) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: EBP FAULT 5 (628) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-675 IK4008009 - EBP TRANS LSL BHPORT

Alarm	Attributes	Applicable major NE releases
Name: IK4008009 (3117) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: EBP TRANS LSL BHPORT (629) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the detection of degraded received optical signal level on port.		
Impact: Degraded received optical signal strength on port 1.		
Remedial action: Check SFP module and fiber cable, cleaning or replacement is required.		

Table 22-676 IK4008010 - ETHERNET BACKHAUL PORT INIT

Alarm	Attributes	Applicable major NE releases
Name: IK4008010 (3790) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: ETHERNET BACKHAUL PORT INIT (630) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates an initialization failure.		
Impact: EBP is out of service.		
Remedial action: Power cycle entire CB.		

Table 22-677 IK4008011 - ETHERNET BACKHAUL PORT TX

Alarm	Attributes	Applicable major NE releases
Name: IK4008011 (3791) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: critical Specific problem: ETHERNET BACKHAUL PORT TX (631) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates a fault in transmit path.		
Impact: EBP is out of service.		
Remedial action: Check cable.		

Table 22-678 IK4008012 - ETHERNET BACKHAUL PORT RX

Alarm	Attributes	Applicable major NE releases
Name: IK4008012 (3792) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: critical Specific problem: ETHERNET BACKHAUL PORT RX (632) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates a fault in receive path.		
Impact: EBP is out of service.		
Remedial action: Check cable.		

Table 22-679 IK4008013 - EBP INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4008013 (3793) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: critical Specific problem: EBP INDETERMINATE OPERATIONAL FAILURE (633) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that a failure of the Ethernet backhaul (telecom) port has been detected that cannot be described by any specific alarm.		
Impact: External communication (both OAM and Telecom) may have failed or become unstable.		
Remedial action: Inspect the Ethernet port SFP and cable, replace any faulty unit. If these are good then the controller board may need to be reseeded, or replaced.		

Table 22-680 IK4008014 - EBP ALL SFP MISSING

Alarm	Attributes	Applicable major NE releases
Name: IK4008014 (4676) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: EBP ALL SFP MISSING (634) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: All SFPs are missing.		
Impact: LTE service is not available without the SFPs.		
Remedial action: Insert SFPs then reset the SCB to clear the alarm.		

Table 22-681 IK4008015 - ETHERNET BACKHAUL PORT TX

Alarm	Attributes	Applicable major NE releases
Name: IK4008015 (5227) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: ETHERNET BACKHAUL PORT TX (631) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates a fault in transmit path.		
Remedial action: Check cable.		

Table 22-682 IK4008016 - ETHERNET BACKHAUL PORT RX

Alarm	Attributes	Applicable major NE releases
Name: IK4008016 (5228) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: ETHERNET BACKHAUL PORT RX (632) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates a fault in receive path.		
Remedial action: Check cable.		

Table 22-683 IK4008017 - EBP INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4008017 (5229) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: critical Specific problem: EBP INDETERMINATE OPERATIONAL FAILURE (633) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that a failure of the Ethernet backhaul (telecom) port has been detected that cannot be described by any specific alarm.		
Remedial action: Inspect the Ethernet port SFP and cable, replace any faulty unit. If these are good then the controller board may need to be resealed, or replaced.		

Table 22-684 IK4008018 - EBP SFP1 I2C FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4008018 (5230) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: minor Specific problem: EBP SFP1 I2C FAULT (635) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates CB cannot read info of SFP1 through I2C		
Remedial action: Reset the CB or replace the SFP		

Table 22-685 IK4008019 - EBP SFP2 I2C FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4008019 (5231) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: minor Specific problem: EBP SFP2 I2C FAULT (636) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates CB cannot read info of SFP2 through I2C		
Remedial action: Reset the CB or replace the SFP		

Table 22-686 IK4009001 - AUTOTEST FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009001 (2616) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: AUTOTEST FAILURE (637) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the self test of the module reported an error.		
Impact: Telecom: The telecom resources processed by the module are lost as the module is out of service. OAM: No impact on OAM service.		
Remedial action: Reset the module. If the alarm persists, replace the module.		

Table 22-687 IK4009002 - AUTOTEST FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009002 (2617) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: AUTOTEST FAILURE (637) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the self test of the module reported an error.		
Impact: Telecom: The telecom resources processed by the module are lost as the module is out of service. OAM: No impact on OAM service.		
Remedial action: Reset the module. If the alarm persists, replace the module.		

Table 22-688 IK4009003 - AUTOTEST FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009003 (2618) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: critical Specific problem: AUTOTEST FAILURE (637) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the self test of the module reported an error.		
Impact: Telecom: The telecom resources processed by the module are lost as the module is out of service. OAM: No impact on OAM service.		
Remedial action: Reset the module. If the alarm persists, replace the module.		

Table 22-689 IK4009006 - DHCP FAILURE TO OBTAIN PTP IP ADDRESS

Alarm	Attributes	Applicable major NE releases
Name: IK4009006 (2621) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: DHCP FAILURE TO OBTAIN PTP IP ADDRESS (638) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the eNodeB has failed to receive PTP IP address End-point using DHCP..		
Remedial action: No action is required.		

Table 22-690 IK4009007 - HIGH PACKET DROPPING RATE

Alarm	Attributes	Applicable major NE releases
Name: IK4009007 (2622) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: HIGH PACKET DROPPING RATE (639) Implicitly cleared: true Default probable cause: floodDetected (1482)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the policer controlling the local ingress traffic of the eNB is dropping packets on some flows with an abnormal rate.		
Remedial action: Unknown.		

Table 22-691 IK4009008 - LAST S1 SCTP ASSOCIATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009008 (5232) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: LAST S1 SCTP ASSOCIATION FAILURE (640) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the MME does not acknowledge the S1 association request from the eNodeB.		
Remedial action: 1. Check IP and SCTP provisioning in eNB and MME. 2. Check network connectivity between eNB and MME.		

Table 22-692 IK4009009 - LAST S1 SCTP ASSOCIATION DOWN

Alarm	Attributes	Applicable major NE releases
Name: IK4009009 (5233) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: LAST S1 SCTP ASSOCIATION DOWN (641) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates the last S1 association fault between eNodeB and MME.		
Remedial action: 1. Check IP and SCTP provisioning in eNB and MME. 2. Check network connectivity between eNB and MME.		

Table 22-693 IK4009010 - OAM MF EVENT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4009010 (2623) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: OAM MF EVENT 2 (642) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: Provisioned for late churn-in. This is a spare event for future use.		
Remedial action: No action is required.		

Table 22-694 IK4009011 - OAM MF EVENT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4009011 (2624) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: OAM MF EVENT 3 (643) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: Provisioned for late churn-in. This is a spare event for future use.		
Remedial action: No action is required.		

Table 22-695 IK4009012 - MODULE EXTRACTION

Alarm	Attributes	Applicable major NE releases
Name: IK4009012 (2625) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: MODULE EXTRACTION (644) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the system detected extraction of the module.		
Impact: The resources processed by the module are lost.		
Remedial action: No action is required.		

Table 22-696 IK4009013 - MF EVENT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4009013 (5234) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: MF EVENT 1 (645) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR14.1.L
Description: Provisioned for late churn-in. Unspecified MF fault detected.		
Remedial action: No action is required.		

Table 22-697 IK4009014 - MF EVENT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4009014 (5235) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: MF EVENT 2 (646) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR14.1.L
Description: Provisioned for late churn-in. Unspecified MF fault detected.		
Remedial action: No action is required.

Alarm	Attributes	Applicable major NE releases
Name: IK4009017 (5236) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: MF EVENT 3 (647) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: Provisioned for late churn-in. Unspecified MF fault detected.		
Remedial action: No action is required.		

Table 22-699 IK4009018 - SCTP BOARD INIT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009018 (2628) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: critical Specific problem: SCTP BOARD INIT FAILURE (648) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This alarm indicates the failure to initialize the SCTP access.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Reset the eNodeB.		

Table 22-700 IK4009019 - S1 SCTP ASSOCIATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009019 (2629) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MmeTransportLayerAccess	Severity: critical Specific problem: S1 SCTP ASSOCIATION FAILURE (649) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LT6.0
Description: This alarm indicates that the MME does not acknowledge the S1 association request from the eNodeB.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: 1. Check IP and SCTP provisioning in eNB and MME. 2. Check network connectivity between eNB and MME.		

Table 22-701 IK4009020 - X2 SCTP ASSOCIATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009020 (2630) Type: equipmentAlarm (3) Package: lte Raised on class: lte.X2TransportLayerAccess	Severity: major Specific problem: X2 SCTP ASSOCIATION FAILURE (650) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the neighboring eNodeB does not acknowledge the X2 association requests from the eNodeB.		
Impact: Telecom: No impact on the cells. Impacts the handover. OAM: No impact on OAM service.		
Remedial action: Reset the eNodeB.		

Table 22-702 IK4009021 - S1 SCTP ASSOCIATION DOWN

Alarm	Attributes	Applicable major NE releases
Name: IK4009021 (2631) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MmeTransportLayerAccess	Severity: critical Specific problem: S1 SCTP ASSOCIATION DOWN (651) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LT6.0
Description: This alarm indicates a S1 association fault between eNodeB and MME.		
Impact: Telecom: Impacts the telecom service depending on the nature of failure. OAM: No impact on OAM service.		
Remedial action: 1. Check IP and SCTP provisioning in eNB and MME. 2. Check network connectivity between eNB and MME.		

Table 22-703 IK4009022 - X2 SCTP ASSOCIATION DOWN

Alarm	Attributes	Applicable major NE releases
Name: IK4009022 (2632) Type: equipmentAlarm (3) Package: lte Raised on class: lte.X2TransportLayerAccess	Severity: major Specific problem: X2 SCTP ASSOCIATION DOWN (652) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a fault in the X2 association between the eNodeBs.		
Impact: Telecom: No impact on the cells. Impacts the handover. OAM: No impact on OAM service.		
Remedial action: 1. Check IP and SCTP provisioning in eNB and peer eNB. 2. Check network connectivity between eNB and peer eNB.		

Table 22-704 IK4009023 - WALG BOARD INITIALIZATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009023 (2633) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: WALG BOARD INITIALIZATION FAILURE (653) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates a failure to initialize the WAL gateway.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Reset the eNodeB.		

Table 22-705 IK4009024 - OAM INTERFACE CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009024 (2634) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: OAM INTERFACE CONFIGURATION FAILURE (654) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure of the IP and Ethernet configuration on the OAM interface.		
Impact: Telecom: Telecom traffic is not possible. OAM: The eNodeB management is not possible.		
Remedial action: Reset the eNodeB. If the alarm persists, contact the next level of support.		

Table 22-706 IK4009025 - TELECOM INTERFACE CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009025 (2635) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: TELECOM INTERFACE CONFIGURATION FAILURE (655) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure of the IP and Ethernet configuration on the telecom interface.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Reset the eNodeB. If the alarm persists, contact the next level of support.		

Table 22-707 IK4009026 - SSH SERVER START FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009026 (2636) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: SSH SERVER START FAILURE (656) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure to start the SSH server.		
Impact: Telecom: No impact on telecom service. OAM: SSH sessions on eNodeB are not possible.		
Remedial action: Reset the eNodeB.		

Table 22-708 IK4009027 - SSH SERVER STOP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009027 (2637) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: SSH SERVER STOP FAILURE (657) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the failure to stop the SSH server.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-709 IK4009028 - SNTP CLIENT START FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009028 (2638) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: SNTP CLIENT START FAILURE (658) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure to start the SNTP client.		
Impact: Telecom: No impact on telecom service. OAM: The eNodeB is not time synchronized with the NTP server.		
Remedial action: Check the network connectivity of NTP server and NTP server address provisioning. If the NTP server is unreachable or the provisioning is incorrect, address those aspects. If all other possible causes have been eliminated, reset the eNB.		

Table 22-710 IK4009029 - SNTP CLIENT STOP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009029 (2639) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: SNTP CLIENT STOP FAILURE (659) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the failure to stop the SNTP client.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-711 IK4009030 - WALG INITIALIZATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009030 (5237) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: WALG INITIALIZATION FAILURE (660) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates a failure to initialize the WAL gateway.		
Remedial action: Reset the eNodeB.		

Table 22-712 IK4009032 - DHCP CLIENT START FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009032 (2640) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: DHCP CLIENT START FAILURE (661) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure to start the DHCP client on the eNodeB network interface.		
Impact: Telecom: Telecom traffic is not possible. OAM: The eNodeB management is not possible.		
Remedial action: Reset the eNodeB.		

Table 22-713 IK4009033 - DHCP CLIENT STOP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009033 (2641) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: DHCP CLIENT STOP FAILURE (662) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the failure to stop the DHCP client on the eNodeB network interface.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-714 IK4009034 - UNEXPECTED DATA FROM DHCP SERVER

Alarm	Attributes	Applicable major NE releases
Name: IK4009034 (2642) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: UNEXPECTED DATA FROM DHCP SERVER (663) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the lease time offered by the DHCP server is different from the lease time requested by the DHCP client.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: Configure the DHCP server with an infinite lease time.		

Table 22-715 IK4009035 - INCONSISTENT DATA FROM DHCP SERVER

Alarm	Attributes	Applicable major NE releases
Name: IK4009035 (2643) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: INCONSISTENT DATA FROM DHCP SERVER (664) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LT6.0
Description: This alarm indicates that the eNodeB does not support the modified IP address offered by the DHCP server.		
Impact: Telecom: No impact on telecom service. OAM: The eNodeB uses the old IP address. eNodeB management is still possible.		
Remedial action: Reset the eNodeB.		

Table 22-716 IK4009036 - ETHERNET TRANSPORT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009036 (2644) Type: communicationsAlarm (4) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: ETHERNET TRANSPORT FAILURE (665) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates an interface error due to the counters exceeding the configured threshold.		
Impact: Telecom: The performance of the telecom service is low. OAM: The performance of the OAM service is low.		
Remedial action: Check the network status and cabling if possible. If the alarm persists, contact the next level support.		

Table 22-717 IK4009037 - NO RESPONSE TO ECHO REQUEST ON S1

Alarm	Attributes	Applicable major NE releases
Name: IK4009037 (2645) Type: communicationsAlarm (4) Package: lte Raised on class: lte.MmeAccess	Severity: critical Specific problem: NO RESPONSE TO ECHO REQUEST ON S1 (666) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LT6.0
Description: This alarm indicates a S1 fault following no response to a GTP Echo request. The alarm is triggered when the eNodeB does not receive a response to a GTP echo request message sent on a S1 interface towards a Serving Gateway. The alarm is triggered to signal a S1 failure when there are several SGW because of several operators with their own SGW or because an operator has several SGW. It is not possible to identify the failed S1 link.		
Impact: Telecom: The performance of the telecom service is low. OAM: No impact on OAM service.		
Remedial action: Check for connectivity and verify the GTP provisioning.		

Table 22-718 IK4009041 - NO CONTACT TO BOARD

Alarm	Attributes	Applicable major NE releases
Name: IK4009041 (2648) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: NO CONTACT TO BOARD (667) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure in communication with the board.		
Impact: Telecom: The performance of the telecom service is low. OAM: No impact on OAM service.		
Remedial action: Check the board connectivity.		

Table 22-719 IK4009042 - NO RESPONSE TO ECHO REQUEST ON S1

Alarm	Attributes	Applicable major NE releases
Name: IK4009042 (2649) Type: communicationsAlarm (4) Package: lte Raised on class: lte.MmeAccess	Severity: major Specific problem: NO RESPONSE TO ECHO REQUEST ON S1 (666) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a S1 fault due to the GTP Echo request.		
Impact: Telecom: The performance of the telecom service is low. OAM: No impact on OAM service.		
Remedial action: Check for connectivity and verify the GTP provisioning.		

Table 22-720 IK4009044 - S1 SCTP ASSOCIATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009044 (2650) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MmeTransportLayerAccess	Severity: major Specific problem: S1 SCTP ASSOCIATION FAILURE (649) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the MME does not acknowledge the S1 association request from the eNodeB.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: 1. Check IP and SCTP provisioning in eNB and MME. 2. Check network connectivity between eNB and MME.		

Table 22-721 IK4009046 - S1 SCTP ASSOCIATION DOWN

Alarm	Attributes	Applicable major NE releases
Name: IK4009046 (2651) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MmeTransportLayerAccess	Severity: major Specific problem: S1 SCTP ASSOCIATION DOWN (651) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a S1 association fault between eNodeB and MME.		
Impact: Telecom: Impacts the telecom service depending on the nature of failure. OAM: No impact on OAM service.		
Remedial action: 1. Check IP and SCTP provisioning in eNB and MME. 2. Check network connectivity between eNB and MME.		

Table 22-722 IK4009048 - DHCP LEASE LOST

Alarm	Attributes	Applicable major NE releases
Name: IK4009048 (2652) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: DHCP LEASE LOST (668) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the DHCP client lost the lease of the DHCP server.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-723 IK4009049 - DHCP CLIENT LEASE FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009049 (2653) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: DHCP CLIENT LEASE FAILURE (669) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure of the DHCP client to obtain the lease from the DHCP server.		
Impact: Telecom: Telecom traffic is not possible. OAM: The eNodeB backhaul interface is not configured.		
Remedial action: Check for connectivity. Check for DHCP server and network configurations.		

Table 22-724 IK4009050 - IP LOOPBACK ACTIVE

Alarm	Attributes	Applicable major NE releases
Name: IK4009050 (2654) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: IP LOOPBACK ACTIVE (670) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the IP loopback is activated.		
Impact: Telecom: Telecom traffic is not possible. OAM: The maintenance is restricted to local terminal.		
Remedial action: Call the next level of support.		

Table 22-725 IK4009051 - IP LOOPBACK MANUAL TERMINATION

Alarm	Attributes	Applicable major NE releases
Name: IK4009051 (2655) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: IP LOOPBACK MANUAL TERMINATION (671) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the IP loopback is manually stopped.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-726 IK4009052 - IP LOOPBACK INACTIVITY PERIOD TERMINATION

Alarm	Attributes	Applicable major NE releases
Name: IK4009052 (2656) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: IP LOOPBACK INACTIVITY PERIOD TERMINATION (672) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the IP loopback stopped automatically due to inactivity for certain period.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-727 IK4009053 - IP LOOPBACK GUARD TIMER TERMINATION

Alarm	Attributes	Applicable major NE releases
Name: IK4009053 (2657) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: IP LOOPBACK GUARD TIMER TERMINATION (673) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the IP loopback stopped automatically due to expiry of the guard timer.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-728 IK4009054 - MODULE EXTRACTION

Alarm	Attributes	Applicable major NE releases
Name: IK4009054 (2658) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: variable Specific problem: MODULE EXTRACTION (644) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the system detected extraction of the module.		
Impact: The resources processed by the module are lost.		
Remedial action: No action is required.		

Table 22-729 IK4009055 - MODULE EXTRACTION

Alarm	Attributes	Applicable major NE releases
Name: IK4009055 (2659) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAidEntry	Severity: variable Specific problem: MODULE EXTRACTION (644) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the system detected extraction of the module.		
Impact: The resources processed by the module are lost.		
Remedial action: No action is required.		

Table 22-730 IK4009056 - MODULE EXTRACTION

Alarm	Attributes	Applicable major NE releases
Name: IK4009056 (2660) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: variable Specific problem: MODULE EXTRACTION (644) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the system detected extraction of the module.		
Impact: The resources processed by the module are lost.		
Remedial action: No action is required.		

Table 22-731 IK4009057 - NO CONTACT TO BOARD

Alarm	Attributes	Applicable major NE releases
Name: IK4009057 (2661) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: major Specific problem: NO CONTACT TO BOARD (667) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure in communication with the board.		
Impact: Telecom: The performance of the telecom service is low. OAM: No impact on OAM service.		
Remedial action: Check for connectivity with the board.		

Table 22-732 IK4009058 - NO CONTACT TO BOARD

Alarm	Attributes	Applicable major NE releases
Name: IK4009058 (2662) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAidEntry	Severity: major Specific problem: NO CONTACT TO BOARD (667) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure in communication with the board.		
Impact: Telecom: The performance of the telecom service is low. OAM: No impact on OAM service.		
Remedial action: Check for connectivity with the board.		

Table 22-733 IK4009059 - NO CONTACT TO BOARD

Alarm	Attributes	Applicable major NE releases
Name: IK4009059 (2663) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: major Specific problem: NO CONTACT TO BOARD (667) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure in communication with the board.		
Impact: Telecom: The performance of the telecom service is low. OAM: No impact on OAM service.		
Remedial action: Check for connectivity with the board.		

Table 22-734 IK4009060 - OAM AMR FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4009060 (3118) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: OAM AMR FAULT 1 (674) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Unknown.		
Remedial action: Call the next level of support.

Name: IK4009137 (3195) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TRDU	Severity: variable Specific problem: OAM TRDU EVENT 3 (751) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. This is a spare event for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-812 IK4009138 - NO CONTACT TO BOARD

Alarm	Attributes	Applicable major NE releases
Name: IK4009138 (3196) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RRH	Severity: major Specific problem: NO CONTACT TO BOARD (667) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure in communication with the board.		
Impact: Telecom: The LTE cells associated with this module are not operational. OAM: No impact on OAM service.		
Remedial action: Check connectivity between controller and RFM. Check operation of RFM and controller. If the alarm persists, contact the next level of support.		

Table 22-813 IK4009139 - NO CONTACT TO BOARD

Alarm	Attributes	Applicable major NE releases
Name: IK4009139 (3197) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TRDU	Severity: major Specific problem: NO CONTACT TO BOARD (667) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure in communication with the board.		
Impact: Telecom: The LTE cells associated with this module are not operational. OAM: No impact on OAM service.		
Remedial action: Check connectivity between controller and TRDU. Check operation of TRDU and controller. If the alarm persists, contact the next level of support.		

Table 22-814 IK4009140 - AUTOTEST FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009140 (3198) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RRH	Severity: critical Specific problem: AUTOTEST FAILURE (637) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the self test of the module reported an error.		
Impact: Telecom: The telecom resources processed by the module are lost as the module is out of service. OAM: No impact on OAM service.		
Remedial action: Reset the module. If the alarm persists, replace the module.		

Table 22-815 IK4009141 - AUTOTEST FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009141 (3199) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TRDU	Severity: critical Specific problem: AUTOTEST FAILURE (637) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the self test of the module reported an error.		
Impact: Telecom: The telecom resources processed by the module are lost as the module is out of service. OAM: No impact on OAM service.		
Remedial action: Reset the module. If the alarm persists, replace the module.		

Table 22-816 IK4009142 - MODULE EXTRACTION

Alarm	Attributes	Applicable major NE releases
Name: IK4009142 (3200) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RRH	Severity: variable Specific problem: MODULE EXTRACTION (644) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the system detected extraction of the module.		
Impact: The resources processed by the module are lost.		
Remedial action: No action is required.		

Table 22-817 IK4009143 - MODULE EXTRACTION

Alarm	Attributes	Applicable major NE releases
Name: IK4009143 (3201) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TRDU	Severity: variable Specific problem: MODULE EXTRACTION (644) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the system detected extraction of the module.		
Impact: The resources processed by the module are lost.		
Remedial action: No action is required.		

Table 22-818 IK4009144 - SFP EXTRACTED CPRI PORT

Alarm	Attributes	Applicable major NE releases
Name: IK4009144 (3202) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: SFP EXTRACTED CPRI PORT (752) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that SFP module is extracted.		
Impact: Loss of RFM connection on CPRI port.		
Remedial action: Check SFP module and replace it.		

Table 22-819 IK4009150 - SFP EXTRACTED ON ALL CPRI PORTS

Alarm	Attributes	Applicable major NE releases
Name: IK4009150 (3203) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: SFP EXTRACTED ON ALL CPRI PORTS (753) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that SFP module of all ports are extracted.		
Impact: Loss of RFM connection on all CPRI ports.		
Remedial action: Check SFP modules and replace them if needed.		

Table 22-820 IK4009151 - SFP EXTRACTED BHPORT

Alarm	Attributes	Applicable major NE releases
Name: IK4009151 (3204) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: SFP EXTRACTED BHPORT (754) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that SFP module of Ethernet backhaul port is extracted.		
Impact: Loss of backhaul network access on port.		
Remedial action: Check SFP module and replace it.		

Table 22-821 IK4009156 - SCTP INIT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009156 (3796) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: SCTP INIT FAILURE (756) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to initialize the SCTP access.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Reset the eNodeB.		

Table 22-822 IK4009157 - WALG INITIALIZATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009157 (3797) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: WALG INITIALIZATION FAILURE (660) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates a failure to initialize the WAL gateway.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Reset the eNodeB.		

Table 22-823 IK4009158 - OAM ENB FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4009158 (3798) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: OAM ENB FAULT 4 (757) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Unknown.		
Remedial action: Unknown.		

Table 22-824 IK4009159 - OAM ENB FAULT 5

Alarm	Attributes	Applicable major NE releases

Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Unknown.		
Remedial action: Unknown.		

Table 22-827 IK4009162 - OAM RRH FAULT 6

Alarm	Attributes	Applicable major NE releases
Name: IK4009162 (3802) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RRH	Severity: minor Specific problem: OAM RRH FAULT 6 (761) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Unknown.		
Remedial action: Unknown.		

Table 22-828 IK4009163 - OAM CB FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4009163 (3803) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: OAM CB FAULT 4 (762) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Unknown.		
Remedial action: Unknown.		

Table 22-829 IK4009169 - END OF THE HOLDOVER DURATION

Alarm	Attributes	Applicable major NE releases
Name: IK4009169 (3809) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: END OF THE HOLDOVER DURATION (763) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that when it is close to the end of the holdover duration of the internal oscillator		
Impact: The eNB shall stop RF transmission. This holdover duration is dependant of the type of oscillator and the duration is coming from the design		
Remedial action: No action is required.		

Table 22-830 IK4009171 - ADAPTIVE ANTENNA ARRAY PARAMETER UPDATE FAILED

Alarm	Attributes	Applicable major NE releases
Name: IK4009171 (3810) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: ADAPTIVE ANTENNA ARRAY PARAMETER UPDATE FAILED (764) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that a cell Adaptive Antenna Array parameter has been changed but the RFM supporting the cell failed to implement the new value.		
Impact: The requested Adaptive Antenna Array setting has not been applied to the cell.		
Remedial action: Determine the alarm reason and remedy as necessary.		

Table 22-831 IK4009172 - ADAPTIVE ANTENNA ARRAY OPERATION DEGRADED

Alarm	Attributes	Applicable major NE releases
Name: IK4009172 (3811) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: ADAPTIVE ANTENNA ARRAY OPERATION DEGRADED (765) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that a hardware fault within the AAA function of the RFM is degrading the beam pattern.		
Impact: The cell supported on this RFM is still functional but the uplink or downlink beam pattern may be degraded.		
Remedial action: Replace the RFM hardware.		

Table 22-832 IK4009173 - ADAPTIVE ANTENNA ARRAY OPERATION FAILED

Alarm	Attributes	Applicable major NE releases
Name: IK4009173 (3812) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: ADAPTIVE ANTENNA ARRAY OPERATION FAILED (766) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that a hardware fault within the AAA function of the RFM has disabled the AAA function.		
Impact: The cell supported on this RFM is still functional but the uplink or downlink beam pattern is not controlled.		
Remedial action: Replace the RFM hardware.		

Table 22-833 IK4009174 - DHCP CLIENT STOP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009174 (3993) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: DHCP CLIENT STOP FAILURE (662) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the failure to stop the DHCP client on the eNodeB network interface.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-834 IK4009175 - DHCP LEASE LOST

Alarm	Attributes	Applicable major NE releases
Name: IK4009175 (3994) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: DHCP LEASE LOST (668) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the DHCP client lost the lease of the DHCP server.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-835 IK4009176 - IP LOOPBACK MANUAL TERMINATION

Alarm	Attributes	Applicable major NE releases
Name: IK4009176 (3995) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: IP LOOPBACK MANUAL TERMINATION (671) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the IP loopback is manually stopped.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-836 IK4009177 - IP LOOPBACK INACTIVITY PERIOD TERMINATION

Alarm	Attributes	Applicable major NE releases
Name: IK4009177 (3996) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: IP LOOPBACK INACTIVITY PERIOD TERMINATION (672) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the IP loopback stopped automatically due to inactivity for certain period.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-837 IK4009178 - IP LOOPBACK GUARD TIMER TERMINATION

Alarm	Attributes	Applicable major NE releases
Name: IK4009178 (3997) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: IP LOOPBACK GUARD TIMER TERMINATION (673) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the IP loopback stopped automatically due to expiry of the guard timer.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-838 IK4009179 - OAM SCB EVENT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4009179 (3998) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: OAM SCB EVENT 1 (767) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare event for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-839 IK4009180 - OAM SCB EVENT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4009180 (3999) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: OAM SCB EVENT 2 (768) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare event for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-840 IK4009181 - OAM SCB EVENT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4009181 (4000) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: OAM SCB EVENT 3 (769) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare event for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-841 IK4009182 - OAM MF EVENT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4009182 (4001) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: OAM MF EVENT 1 (770) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare event for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-842 IK4009183 - OAM MF EVENT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4009183 (4002) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: OAM MF EVENT 2 (642) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This is a spare event for future use.		
Impact: Unknown.		
Remedial action: Unknown.		

Table 22-843 IK4009184 - OAM MF EVENT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4009184 (4003) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: OAM MF EVENT 3 (643) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This is a spare event for future use.		
Impact: Unknown.		
Remedial action: Unknown.		

Table 22-844 IK4009185 - SNTP CLIENT STOP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009185 (4004) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: SNTP CLIENT STOP FAILURE (659) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the failure to stop the SNTP client.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-845 IK4009186 - SSH SERVER STOP FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009186 (4005) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: SSH SERVER STOP FAILURE (657) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the failure to stop the SSH server.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-846 IK4009187 - OAM RFME EVENT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4009187 (4006) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: variable Specific problem: OAM RFME EVENT 1 (771) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare event for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-847 IK4009188 - OAM RFME EVENT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4009188 (4007) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: variable Specific problem: OAM RFME EVENT 2 (772) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare event for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-848 IK4009189 - OAM RFME EVENT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4009189 (4008) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: variable Specific problem: OAM RFME EVENT 3 (773) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare event for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-849 IK4009190 - LOSS OF EMBMS PHASE SYNC

Alarm	Attributes	Applicable major NE releases
Name: IK4009190 (4009) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: LOSS OF EMBMS PHASE SYNC (755) Implicitly cleared: true Default probable cause: lossOfSignal (99)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the phase-sync requirement for supporting eMBMS can no longer be guaranteed due to the loss of clock reference.		
Impact: eMBMS specified commitment for error rate and cell coverage can no longer be guaranteed due to phase drift.		
Remedial action: If alarm remains consider the Clock reference alarms to determine the cause of the onset of holdover.		

Table 22-850 IK4009191 - M3 SCTP ASSOCIATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009191 (4010) Type: equipmentAlarm (3) Package: lte Raised on class: lte.M3MmeTransportLayerAccess	Severity: major Specific problem: M3 SCTP ASSOCIATION FAILURE (774) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the MME does not acknowledge the M3 association request from the MCE.		
Impact: No eMBMS sessions can be started.		
Remedial action: 1. Check IP and SCTP provisioning in eNB and MME. 2. Check network connectivity between eNB and MME.		

Table 22-851 IK4009192 - M3 SCTP ASSOCIATION DOWN

Alarm	Attributes	Applicable major NE releases
Name: IK4009192 (4011) Type: equipmentAlarm (3) Package: lte Raised on class: lte.M3MmeTransportLayerAccess	Severity: major Specific problem: M3 SCTP ASSOCIATION DOWN (775) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a M3 association fault between the eNodeB and the MME.		
Impact: eMBMS sessions outage. The on-going sessions broadcast transmissions are stopped, and no futur eMBMS sessions can be started		
Remedial action: 1. Check IP and SCTP provisioning in eNB and MME. 2. Check network connectivity between eNB and MME.		

Table 22-852 IK4009193 - LOSS OF EICIC PHASE SYNC

Alarm	Attributes	Applicable major NE releases
Name: IK4009193 (4012) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: LOSS OF EICIC PHASE SYNC (776) Implicitly cleared: true Default probable cause: timingProblem (903)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the eICIC functionality is not longer guaranteed to specification due to clock drift.		
Impact: eICIC capability is compromised.		
Remedial action: No action is required.		

Table 22-853 IK4009194 - LOSS OF EICIC PHASE SYNC

Alarm	Attributes	Applicable major NE releases
Name: IK4009194 (4013) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: LOSS OF EICIC PHASE SYNC (776) Implicitly cleared: true Default probable cause: timingProblem (903)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the eICIC functionality is not longer guaranteed to specification due to clock drift.		
Impact: eICIC capability is compromised.		
Remedial action: No action is required.		

Table 22-854 IK4009195 - ETHERNET PORT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009195 (4677) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: ETHERNET PORT FAILURE (777) Implicitly cleared: true Default probable cause: inputOutputDeviceError (703)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the BBU failed to send/receive traffic through an Ethernet port.		
Impact: Traffic cannot flow through the Ethernet backhaul port.		
Remedial action: Check the Ethernet port equipment for failure, replace the BBU controller board if necessary.		

Table 22-855 IK4009196 - BAD SHAPING CONFIGURATION

Alarm	Attributes	Applicable major NE releases
Name: IK4009196 (4678) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: BAD SHAPING CONFIGURATION (778) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the sum of the egress CIR per VLAN exceeds the daisy chained port speed when shaping per VLAN on the daisy chained port is requested. Either the egress CIR exceed the daisy chained port speed when shaping per port on daisy chained port is requested		
Impact: The shaping function has no effect.		
Remedial action: The shaping configuration shall be checked.		

Table 22-856 IK4009197 - BAD POLICING CONFIGURATION

Alarm	Attributes	Applicable major NE releases
Name: IK4009197 (4679) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: BAD POLICING CONFIGURATION (779) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the ingress CIR exceed the daisy chained port speed, when policing on daisy chained port is requested		
Impact: The policing function has no effect.		
Remedial action: Review the policing configuration and change if necessary.		

Table 22-857 IK4009198 - SCB PTP DISCONTINUOUS SESSION LOCK FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4009198 (4680) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB PTP DISCONTINUOUS SESSION LOCK FAIL (780) Implicitly cleared: true Default probable cause: lossOfSignal (99)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates, when the 1588 client is configured to Discontinuous mode that the client failed to achieve Lock in the 1588 message transfer session. This alarm is inhibited when the 1588 message transfer is in Continuous mode.		
Impact: The Metrocell moves to Holdover state, CallP remains supported.		
Remedial action: Investigate the link PDV impairment profile. Increase the length of the active 1588 message transfer session.		

Table 22-858 IK4009199 - TAMPER DETECTED

Alarm	Attributes	Applicable major NE releases
Name: IK4009199 (4681) Type: physicalViolation (91) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: TAMPER DETECTED (781) Implicitly cleared: true Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> • LR13.1
Description: This alarm indicates that the enclosure of the eNB-MCI has been opened.		
Impact: The internal components of the eNB-MCI may be accessible to an attacker.		
Remedial action: Check the enclosure.		

Table 22-859 IK4009200 - ETHERNET MAC ADDRESS MOVEMENT

Alarm	Attributes	Applicable major NE releases
Name: IK4009200 (4682) Type: integrityViolation (85) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: ETHERNET MAC ADDRESS MOVEMENT (782) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1
Description: This alarm indicates a MAC address learned by the L2 switch has moved between ports on the switch.		
Impact: eNodeB operation may be unimpaired, however the hardware Ethernet connectivity has been tampered with and the unit should be examined.		
Remedial action: Confirm the physical integrity of the eNodeB.		

Table 22-860 IK4009201 - TOO MANY CONNCTED MAC ADDRESSES

Alarm	Attributes	Applicable major NE releases
Name: IK4009201 (4683) Type: integrityViolation (85) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: TOO MANY CONNCTED MAC ADDRESSES (783) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1
Description: This alarm indicates the number of Ethernet MAC addresses communicating via a single port of the L2 switch exceeds the defined limit of 32.		
Impact: eNodeB operation may be unimpaired but the Ethernet connectivity has been tampered with.		
Remedial action: Verify integrity of the eNodeB and its backhaul connections.		

Table 22-861 IK4009202 - EFM L2 ETHERNET PORT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009202 (4684) Type: communicationsAlarm (4) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: EFM L2 ETHERNET PORT FAILURE (784) Implicitly cleared: true Default probable cause: lossOfFrame (97)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that an Ethernet MAC failure has been detected by the EFM protocol.		
Impact: Backhaul communication to the eNodeB may be lost.		
Remedial action: Check the EFM local and remote information for the Ethernet port.		

Table 22-862 IK4009203 - AUTOTEST FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009203 (4685) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: AUTOTEST FAILURE (637) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the self test of the module reported an error.		
Impact: The telecom resources processed by the module are lost since the module is out of service, however there is no impact on OAM services of the module.		
Remedial action: Reset the module. If the alarm persists, replace the module.		

Table 22-863 IK4009204 - NO CONTACT TO BOARD

Alarm	Attributes	Applicable major NE releases
Name: IK4009204 (4686) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: NO CONTACT TO BOARD (667) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The controller can no longer communicate with this unit.		
Impact: Telecom: The performance of the telecom service is low. OAM: No impact on OAM service.		
Remedial action: Check the board connectivity.		

Table 22-864 IK4009205 - AUTOTEST FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4009205 (4687) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: critical Specific problem: AUTOTEST FAILURE (637) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the self test of the module reported an error.		
Impact: The telecom resources processed by the module are lost since the module is out of service, however there is no impact on OAM services of the module.		
Remedial action: Reset the eNB. If the alarm persists, replace the module.		

Table 22-865 IK4009209 - NO CONTACT TO BOARD

Alarm	Attributes	Applicable major NE releases
Name: IK4009209 (4688) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: NO CONTACT TO BOARD (667) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The controller can no longer communicate with this unit.		
Impact: OAM inventory reporting is incorrect OAM:Metro Dock reporting degraded		
Remedial action: Check for connectivity with the board.		

Table 22-866 IK4009210 - MAX NUMBER OF ANTENNA LINE DEVICES EXCEEDED

Alarm	Attributes	Applicable major NE releases
Name: IK4009210 (4689) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: MAX NUMBER OF ANTENNA LINE DEVICES EXCEEDED (785) Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> • LR13.1
Description: The sum of antenna line devices connected to all RFMs of the eNodeB is greater than the supported maximum quantity for the eNodeB.		
Impact: Antenna line devices in excess of the supported limit will not be managed and may not function properly.		
Remedial action: Reduce the number of antenna line devices, replace individual TMA or RET devices with multiTMA or multiRET ALDs, recable some ALDs to other eNodeBs if possible.		

Table 22-867 IK4010001 - RET UNREADABLE MANUFACTURER DATA

Alarm	Attributes	Applicable major NE releases
Name: IK4010001 (2664) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: minor Specific problem: RET UNREADABLE MANUFACTURER DATA (786) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a failure to read manufacturer data record.		
Impact: The RET may not respond to tilt requests.		
Remedial action: Reset the RET, replace if necessary.		

Table 22-868 IK4010002 - RET MOTOR JAM

Alarm	Attributes	Applicable major NE releases
Name: IK4010002 (2665) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: minor Specific problem: RET MOTOR JAM (787) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RET motor cannot move.		
Impact: Loss of antenna tilt motion.		
Remedial action: Check for obstruction of antenna tilt mechanism, or replace failed RET actuator.		

Table 22-869 IK4010003 - RET ACTUATOR JAM

Alarm	Attributes	Applicable major NE releases
Name: IK4010003 (2666) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET ACTUATOR JAM (788) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RET actuator jam has been detected. No movement of the actuator, but movement of the motor was detected.		
Impact: Loss of antenna tilt motion.		
Remedial action: Check for obstruction of antenna tilt mechanism, or replace failed RET actuator.		

Table 22-870 IK4010004 - RET NOT CALIBRATED

Alarm	Attributes	Applicable major NE releases
Name: IK4010004 (2667) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET NOT CALIBRATED (789) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RET device has not completed a calibration operation, or calibration has been lost		
Impact: RET tilt angle may not be accurate.		
Remedial action: Execute the RET calibration procedure.		

Table 22-871 IK4010005 - RET NOT CONFIGURED

Alarm	Attributes	Applicable major NE releases
Name: IK4010005 (2668) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET NOT CONFIGURED (790) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RET actuator antenna configuration file is missing.		
Impact: No Antenna Tilt Function.		
Remedial action: Download proper ACF configuration data and repeat calibration.		

Table 22-872 IK4010006 - RET HW FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4010006 (2669) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: minor Specific problem: RET HW FAILURE (791) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a general hardware failure.		
Impact: The RET is out of service.		
Remedial action: Reset the RET, replace the RET if the problem persists.		

Table 22-873 IK4010007 - RET ACTUATOR INTERFERENCE

Alarm	Attributes	Applicable major NE releases
Name: IK4010007 (2670) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: minor Specific problem: RET ACTUATOR INTERFERENCE (792) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates an actuator movement outside the control of the RET unit. Probable cause is manual interference.		
Impact: Loss of antenna tilt motion.		
Remedial action: Check the antenna panel for mechanical interference.		

Table 22-874 IK4010008 - RET SOFTWARE FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4010008 (2671) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: minor Specific problem: RET SOFTWARE FAIL (793) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a general RET SW failure.		
Impact: The RET is out of service.		
Remedial action: Reset the RET. If the problem persists then download new software to the RET, otherwise replace the RET.		

Table 22-875 IK4010009 - RET ALD UNIT SUPPORT WRONG AISG VERSION

Alarm	Attributes	Applicable major NE releases
Name: IK4010009 (2672) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET ALD UNIT SUPPORT WRONG AISG VERSION (794) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the ALD unit does not support AISG version 2.0.		
Impact: The RET is out of service.		
Remedial action: Upgrade the software.		

Table 22-876 IK4010010 - RET LOSS OF COMM

Alarm	Attributes	Applicable major NE releases
Name: IK4010010 (2673) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET LOSS OF COMM (795) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the RFM that acts as an AISG Controller lost communication to the RET unit.		
Impact: Loss of alarm reporting by the RET.		
Remedial action: Inspect and repair the AISG bus if needed, otherwise replace the RET.		

Table 22-877 IK4010011 - RET FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4010011 (3205) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET FAULT 1 (796) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified RET fault.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-878 IK4010012 - RET FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4010012 (3206) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: RET FAULT 2 (797) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified RET fault.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-879 IK4010013 - RET FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4010013 (3207) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: RET FAULT 3 (798) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified RET fault.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-880 IK4010014 - RET FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4010014 (3208) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: RET FAULT 4 (799) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified RET fault.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-881 IK4010015 - RET FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4010015 (3209) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: minor Specific problem: RET FAULT 5 (800) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. Unspecified RET fault.		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-882 IK4010016 - RET INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4010016 (3813) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: minor Specific problem: RET INDETERMINATE OPERATIONAL FAILURE (801) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that a failure of the RET has been detected that cannot be described by any specific alarm.		
Impact: Antenna tilt may not function while this alarm is present, but cell operation is unaffected (though antenna tilt position may be unknown)		
Remedial action: The unit is automatically reset to attempt to clear the fault. If the problem persists then replace the RET.		

Table 22-883 IK4010017 - RET SUBUNIT 2 MOTOR JAM

Alarm	Attributes	Applicable major NE releases
Name: IK4010017 (3814) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: minor Specific problem: RET SUBUNIT 2 MOTOR JAM (802) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RET Subunit 2 motor cannot move.		
Impact: Loss of antenna tilt motion for Subunit 2		
Remedial action: Check for obstruction of antenna tilt mechanism, or replace failed RET Subunit 2 actuator.		

Table 22-884 IK4010018 - RET SUBUNIT 2 ACTUATOR JAM

Alarm	Attributes	Applicable major NE releases
Name: IK4010018 (3815) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: RET SUBUNIT 2 ACTUATOR JAM (803) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that RET Subunit 2 actuator jam has been detected. No movement of the actuator, but movement of the motor was detected.		
Impact: Loss of antenna tilt motion for Subunit 2		
Remedial action: Check for obstruction of antenna tilt mechanism, or replace failed RET Subunit 2 actuator.		

Table 22-885 IK4010019 - RET SUBUNIT 2 NOT CALIBRATED

Alarm	Attributes	Applicable major NE releases
Name: IK4010019 (3816) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: RET SUBUNIT 2 NOT CALIBRATED (804) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RET Subunit 2 device has not completed a calibration operation, or calibration has been lost		
Impact: RET Subunit 3 needs re-calibration for Subunit 2		
Remedial action: Execute the RET Subunit 2 calibration procedure.		

Table 22-886 IK4010020 - RET SUBUNIT 2 NOT CONFIGURED

Alarm	Attributes	Applicable major NE releases
Name: IK4010020 (3817) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: RET SUBUNIT 2 NOT CONFIGURED (805) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RET Subunit 2 actuator antenna configuration file is missing.		
Impact: No Antenna Tilt Function for Subunit 2		
Remedial action: Download proper ACF configuration data to Subunit 2 and repeat calibration.		

Table 22-887 IK4010021 - RET SUBUNIT 3 MOTOR JAM

Alarm	Attributes	Applicable major NE releases
Name: IK4010021 (3818) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: RET SUBUNIT 3 MOTOR JAM (806) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RET Subunit 3 motor cannot move.		
Impact: Loss of antenna tilt motion Subunit 3		
Remedial action: Check for obstruction of antenna tilt mechanism, or replace failed RET Subunit 3 actuator.		

Table 22-888 IK4010022 - RET SUBUNIT 3 ACTUATOR JAM

Alarm	Attributes	Applicable major NE releases
Name: IK4010022 (3819) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: RET SUBUNIT 3 ACTUATOR JAM (807) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that RET Subunit 3 actuator jam has been detected. No movement of the actuator, but movement of the motor was detected.		
Impact: Loss of antenna tilt motion Subunit 3		
Remedial action: Check for obstruction of antenna tilt mechanism, or replace failed RET Subunit 3 actuator.		

Table 22-889 IK4010023 - RET SUBUNIT 3 NOT CALIBRATED

Alarm	Attributes	Applicable major NE releases
Name: IK4010023 (3820) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: RET SUBUNIT 3 NOT CALIBRATED (808) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RET Subunit 3 device has not completed a calibration operation, or calibration has been lost		
Impact: RET Subunit 3 needs re-calibration		
Remedial action: Execute the RET calibration procedure for Subunit 3.		

Table 22-890 IK4010024 - RET SUBUNIT 3 NOT CONFIGURED

Alarm	Attributes	Applicable major NE releases
Name: IK4010024 (3821) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET SUBUNIT 3 NOT CONFIGURED (809) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RET Subunit 3 actuator antenna configuration file is missing.		
Impact: No Antenna Tilt Function for Subunit 3.		
Remedial action: Download proper ACF configuration data to subunit 3 and repeat calibration.		

Table 22-891 IK4010025 - RET SUBUNIT 4 MOTOR JAM

Alarm	Attributes	Applicable major NE releases
Name: IK4010025 (3822) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET SUBUNIT 4 MOTOR JAM (810) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RET Subunit 4 motor cannot move.		
Impact: Loss of antenna tilt motion Subunit 4		
Remedial action: Check for obstruction of antenna tilt mechanism, or replace failed RET Subunit 4 actuator.		

Table 22-892 IK4010026 - RET SUBUNIT 4 ACTUATOR JAM

Alarm	Attributes	Applicable major NE releases
Name: IK4010026 (3823) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET SUBUNIT 4 ACTUATOR JAM (811) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that RET Subunit 4 actuator jam has been detected. No movement of the actuator, but movement of the motor was detected.		
Impact: Loss of antenna tilt motion Subunit 4		
Remedial action: Check for obstruction of antenna tilt mechanism, or replace failed RET Subunit 4 actuator.		

Table 22-893 IK4010027 - RET SUBUNIT 4 NOT CALIBRATED

Alarm	Attributes	Applicable major NE releases
Name: IK4010027 (3824) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET SUBUNIT 4 NOT CALIBRATED (812) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RET Subunit 4 device has not completed a calibration operation, or calibration has been lost		
Impact: RET Subunit 4 needs re-calibration		
Remedial action: Execute the RET Subunit 4 calibration procedure.		

Table 22-894 IK4010028 - RET SUBUNIT 4 NOT CONFIGURED

Alarm	Attributes	Applicable major NE releases
Name: IK4010028 (3825) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET SUBUNIT 4 NOT CONFIGURED (813) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RET Subunit 4 actuator antenna configuration file is missing.		
Impact: No Antenna Tilt Function for Subunit 4.		
Remedial action: Download proper ACF configuration data to Subunit 4 and repeat calibration.		

Table 22-895 IK4010029 - RET ACTUATOR INTERFERENCE 1

Alarm	Attributes	Applicable major NE releases
Name: IK4010029 (4014) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET ACTUATOR INTERFERENCE 1 (814) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates an actuator movement outside the control of the RET subunit 1. Probable cause is manual interference.		
Impact: Loss of antenna tilt motion.		
Remedial action: Check the antenna panel for mechanical interference.		

Table 22-896 IK4010030 - RET ACTUATOR INTERFERENCE 2

Alarm	Attributes	Applicable major NE releases
Name: IK4010030 (4015) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: RET ACTUATOR INTERFERENCE 2 (815) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates an actuator movement outside the control of the RET subunit 2. Probable cause is manual interference.		
Impact: Loss of antenna tilt motion.		
Remedial action: Check the antenna panel for mechanical interference.		

Table 22-897 IK4010031 - RET ACTUATOR INTERFERENCE 3

Alarm	Attributes	Applicable major NE releases
Name: IK4010031 (4016) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: RET ACTUATOR INTERFERENCE 3 (816) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates an actuator movement outside the control of the RET subunit 3. Probable cause is manual interference.		
Impact: Loss of antenna tilt motion.		
Remedial action: Check the antenna panel for mechanical interference.		

Table 22-898 IK4010032 - RET ACTUATOR INTERFERENCE 4

Alarm	Attributes	Applicable major NE releases
Name: IK4010032 (4017) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: RET ACTUATOR INTERFERENCE 4 (817) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates an actuator movement outside the control of the RET subunit 4. Probable cause is manual interference.		
Impact: Loss of antenna tilt motion.		
Remedial action: Check the antenna panel for mechanical interference.		

Table 22-899 IK4010033 - RET SUBUNIT 1 MOTOR JAM

Alarm	Attributes	Applicable major NE releases
Name: IK4010033 (4018) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: minor Specific problem: RET SUBUNIT 1 MOTOR JAM (818) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RET Subunit 1 motor cannot move.		
Impact: Loss of antenna tilt motion for Subunit 1		
Remedial action: Check for obstruction of antenna tilt mechanism, or replace failed RET Subunit 1 actuator.		

Table 22-900 IK4010034 - RET SUBUNIT 1 ACTUATOR JAM

Alarm	Attributes	Applicable major NE releases
Name: IK4010034 (4019) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: minor Specific problem: RET SUBUNIT 1 ACTUATOR JAM (819) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that RET Subunit 1 actuator jam has been detected. No movement of the actuator, but movement of the motor was detected.		
Impact: Loss of antenna tilt motion for Subunit 1		
Remedial action: Check for obstruction of antenna tilt mechanism, or replace failed RET Subunit 1 actuator.		

Table 22-901 IK4010035 - RET SUBUNIT 1 NOT CALIBRATED

Alarm	Attributes	Applicable major NE releases
Name: IK4010035 (4020) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: minor Specific problem: RET SUBUNIT 1 NOT CALIBRATED (820) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RET Subunit 1 device has not completed a calibration operation, or calibration has been lost		
Impact: Execute the RET Subunit 1 calibration procedure		
Remedial action: Execute the RET Subunit 1 calibration procedure.		

Table 22-902 IK4010036 - RET SUBUNIT 1 NOT CONFIGURED

Alarm	Attributes	Applicable major NE releases
Name: IK4010036 (4021) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET SUBUNIT 1 NOT CONFIGURED (821) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RET Subunit 1 actuator antenna configuration file is missing.		
Impact: No Antenna Tilt Function for Subunit 1		
Remedial action: Download proper ACF configuration data to Subunit 1 and repeat calibration.		

Table 22-903 IK4010038 - ALL SUBUNITS IN ALARM STATUS

Alarm	Attributes	Applicable major NE releases
Name: IK4010038 (4690) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: ALL SUBUNITS IN ALARM STATUS (822) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that all the subunits (or the only unit of a single subunit device) are in alarm.		
Impact: Tilt of the antennas supported by this RET cannot be adjusted.		
Remedial action: Refer to the alarm reported for the specific subunits and correct the fault or replace the unit as necessary.		

Table 22-904 IK4010039 - RET INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4010039 (5238) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET INDETERMINATE OPERATIONAL FAILURE (801) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates that a failure of the RET has been detected that cannot be described by any specific alarm.		
Remedial action: The unit is automatically reset to attempt to clear the fault. If the problem persists then replace the RET.		

Table 22-905 IK4011003 - ANTENNA_PORT GAIN CONTROL WARNING TX

Alarm	Attributes	Applicable major NE releases
Name: IK4011003 (3212) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT GAIN CONTROL WARNING TX (825) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The RFM in Macro eNB or RFME in Metro eNB may not be able to maintain normal transmit gain on this port, but the port is still transmitting.		
Impact: The RFM port in Macro or RFME port in Metro is still transmitting but possibly at reduced power output.		
Remedial action: Check the RFM (Macro) or RFME (Metro) environment. If no environmental problems are present then reset the RFM (Macro eNB) or reset eNB (Metro eNB) at the next maintenance window. If the alarm persists then prepare for possible failure of the unit, replacement may be necessary.		

Table 22-906 IK4011004 - ANTENNA_PORT TX FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4011004 (3213) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT TX FAIL (826) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the RF transmission has failed on this port.		
Impact: The RFM port in Macro or RFME port in Metro is no longer transmitting, but the cell may still be partially supported on another port.		
Remedial action: Reset the RFM (Macro eNB) or in case of Metro all-in-one equipment reset eNB (Metro eNB) at the next maintenance window. If the alarm persists then replace the RFM in Macro or the Metro Equipment."		

Table 22-907 IK4011005 - ANTENNA_PORT GAIN CONTROL TX

Alarm	Attributes	Applicable major NE releases
Name: IK4011005 (3214) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT GAIN CONTROL TX (827) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the RFM in Macro eNB or RFME in Metro eNB cannot provide the required RF gain on this port and is no longer transmitting.		
Impact: The RFM port in Macro or RFME port in Metro is no longer transmitting, but the cell may still be partially supported on another port.		

(1 of 2)

22 – Alcatel-Lucent 9xxx eNodeB alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Reset the RFM (Macro eNB) or in case of Metro all-in-one equipment reset eNB (Metro eNB) at the next maintenance window. If the alarm persists then replace the RFM in Macro or the Metro Equipment."		

(2 of 2)

Table 22-908 IK4011006 - ANTENNA_PORT RF OUTPUT OVRDRV TX

Alarm	Attributes	Applicable major NE releases
Name: IK4011006 (3215) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT RF OUTPUT OVRDRV TX (828) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the RFM in Macro eNB or RFME in Metro has detected that transmit power on this port is too high so transmission for the port has been turned off. The turn off may also be caused by High reflected power: if the antenna cable is disconnected or damaged, or the antenna is damaged there may be high RF power levels reflected back into the RFM antenna port. RFMs can absorb a certain amount of this but newer high power units may not be able to absorb high return levels and so need to shut down. The power off may be also be due to High input IQ slew rates- internal slew detectors shut down the transmit path if the IQ levels swing too much for too long (5 seconds)		
Impact: The RFM port in Macro or RFME port in Metro is no longer transmitting, but the cell may still be partially supported on another port.		
Remedial action: Check for proper downlink power settings of the cells assigned to this port. Check also if the antenna cable is disconnected or damaged, or if the antenna is damaged, this may be the cause of High Reflected Power. Check also the CPRI cable connection, that may be the cause of High Input slew detectors		

Table 22-909 IK4011007 - ANTENNA_PORT RX FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4011007 (3216) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT RX FAIL (829) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the receiver for this port has failed.		
Impact: Reception on this port is no longer functioning, but the cell may still be partially supported on another port.		
Remedial action: Reset the RFM (Macro eNB) or in case of Metro all-in-one equipment reset eNB (Metro eNB) at the next maintenance window. If the alarm persists then replace the RFM in Macro or the Metro Equipment."		

Table 22-910 IK4011008 - ANTENNA_PORT EQUIP FAIL TX

Alarm	Attributes	Applicable major NE releases
Name: IK4011008 (3217) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT EQUIP FAIL TX (830) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the transmit amplifier for this port cannot function and transmission for the port has been turned off.		
Impact: The RFM port in Macro or RFME port in Metro is no longer transmitting, but the cell may still be partially supported on another port.		
Remedial action: Check the input voltage of the RFM in Macro or RFME in Metro to ensure it is within range, otherwise reset the RFM (Macro eNB) or in case of Metro all-in-one equipment reset eNB (Metro eNB) at the next maintenance window. If the alarm persists then replace the RFM in Macro or the Metro Equipment.		

Table 22-911 IK4011009 - ANTENNA_PORT DIGITAL INPUT OVRDRV TX

Alarm	Attributes	Applicable major NE releases
Name: IK4011009 (3218) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT DIGITAL INPUT OVRDRV TX (831) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the digital transmit signal from the modem is too high for the RFM in Macro or RFME in Metro.		
Impact: Transmission on the port is degraded but still functioning. Cell performance may be degraded.		
Remedial action: Verify that the cell settings are correct. Reset the modem or reset the RFM (Macro eNB) or reset eNB (Metro eNB).		

Table 22-912 IK4011010 - ANTENNA_PORT TX VSWR THRESH1

Alarm	Attributes	Applicable major NE releases
Name: IK4011010 (3219) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: ANTENNA_PORT TX VSWR THRESH1 (832) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RF transmit power reflected back into this port exceeds the warning alarm threshold.		
Impact: The eNodeB performance is degraded due to TX losses.		

(1 of 2)

22 – Alcatel-Lucent 9xxx eNodeB alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Check the cabling between Radio Module output and antenna. Check the connection torque value between the Radio Module and the bulkhead. If the alarm persists then reset the RFM (Macro eNB) or in case of Metro all-in-one equipment reset eNB (Metro eNB) at the next maintenance window. If this fails to clear the alarm then replace the antenna.		

(2 of 2)

Table 22-913 IK4011011 - ANTENNA_PORT TX VSWR THRESH2

Alarm	Attributes	Applicable major NE releases
Name: IK4011011 (3220) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT TX VSWR THRESH2 (833) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RF transmit power reflected back into this port exceeds the urgent alarm threshold.		
Impact: The eNodeB performance is degraded due to TX losses.		
Remedial action: Check the cabling between Radio Module output and antenna. Check the connection torque value between the Radio Module and the bulkhead. If the alarm persists then reset the RFM (Macro eNB) or in case of Metro all-in-one equipment reset eNB (Metro eNB) at the next maintenance window. If this fails to clear the alarm then replace the antenna"		

Table 22-914 IK4011012 - ANTENNA_PORT RX VSWR THRESH

Alarm	Attributes	Applicable major NE releases
Name: IK4011012 (3221) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT RX VSWR THRESH (834) Implicitly cleared: true Default probable cause: adapterError (688)	<ul style="list-style-type: none"> • LR13.1
Description: This alarm indicates that the Rx VSWR test detected a THRESH Level violation.		
Impact: The eNodeB performance is low due to RX losses.		
Remedial action: Check the cabling between RFM output and antenna. Check the connection torque value between the RFM and the bulkhead. If the alarm persists, replace the antenna.		

Table 22-915 IK4011013 - ANTENNA_PORT LNA FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4011013 (3222) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: ANTENNA_PORT LNA FAIL (835) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the receive amplifier in the RFM or external filter module has failed.		
Impact: Reception on this port is no longer functioning, but the cell may still be partially supported on another port.		
Remedial action: Reset the RFM (Macro eNB) or in case of Metro all-in-one equipment reset eNB (Metro eNB) at the next maintenance window. If the alarm persists then replace the RFM in Macro or the Metro Equipment or the external filter module.		

Table 22-916 IK4011014 - ANTENNA_PORT TTLNA FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4011014 (3223) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT TTLNA FAILURE (836) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the tower-top amplifier has failed or gone into bypass.		
Impact: Reception on this port may be degraded.		
Remedial action: Replace the tower-top amplifier.		

Table 22-917 IK4011015 - ANTENNA_PORT FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4011015 (3224) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT FAULT 1 (837) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified antenna port fault		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-918 IK4011016 - ANTENNA_PORT FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4011016 (3225) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT FAULT 2 (838) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified antenna port fault		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-919 IK4011017 - ANTENNA_PORT FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4011017 (3226) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT FAULT 3 (839) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified antenna port fault		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-920 IK4011018 - ANTENNA_PORT FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4011018 (3227) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT FAULT 4 (840) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified antenna port fault		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-921 IK4011019 - ANTENNA_PORT FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4011019 (3228) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: ANTENNA_PORT FAULT 5 (841) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified antenna port fault		
Impact: Check the additional info for impact details.		
Remedial action: Check the additional info for maintenance action details.		

Table 22-922 IK4012000 - SCB UNREADABLE MANUFACTURER DATA

Alarm	Attributes	Applicable major NE releases
Name: IK4012000 (4023) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB UNREADABLE MANUFACTURER DATA (842) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates failure to read manufacturer data record. Flash is available.		
Impact: The LTE service is not possible.		
Remedial action: reset if no commissioning data is available from MIM.		

Table 22-923 IK4012001 - SCB AC MAJOR

Alarm	Attributes	Applicable major NE releases
Name: IK4012001 (4024) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB AC MAJOR (843) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates internal Contact AC power fault.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-924 IK4012002 - SCB AC MINOR

Alarm	Attributes	Applicable major NE releases
Name: IK4012002 (4025) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: minor Specific problem: SCB AC MINOR (844) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates internal Contact AC power fault.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-925 IK4012003 - SCB AC INPUT OUT OF SPEC

Alarm	Attributes	Applicable major NE releases
Name: IK4012003 (4026) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: minor Specific problem: SCB AC INPUT OUT OF SPEC (845) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates internal Contact AC input out of specification.		
Impact: The eNodeB is not operational.		
Remedial action: No action is required.		

Table 22-926 IK4012004 - SCB INDETERMINATE OPERATIONAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4012004 (4027) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: critical Specific problem: SCB INDETERMINATE OPERATIONAL FAILURE (846) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates generic SW processing failure.		
Impact: Impact will depend on the affected HW unit.		
Remedial action: Reset.		

Table 22-927 IK4012005 - SCB INITIALIZATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4012005 (4028) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: SCB INITIALIZATION FAILURE (847) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that it fails to properly initialize represented resources.		
Impact: The LTE service is not possible.		
Remedial action: Reset.		

Table 22-928 IK4012006 - SCB OSC LOSS

Alarm	Attributes	Applicable major NE releases
Name: IK4012006 (4029) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: SCB OSC LOSS (848) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that this is a maintenance error that indicates HW failure of the OSC.		
Impact: The module is not usable. The eNodeB is not operational.		
Remedial action: Requires eNB replacement.		

Table 22-929 IK4012007 - SCB GPS 1PPS LOSS

Alarm	Attributes	Applicable major NE releases
Name: IK4012007 (4030) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB GPS 1PPS LOSS (849) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the loss of 1PPS timing to timing circuitry.		
Impact: eNodeB uses a lower priority clock reference source or goes into holdover.		
Remedial action: No action is required.		

Table 22-930 IK4012008 - SCB FILE SYSTEM ACCESS FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4012008 (4031) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: major Specific problem: SCB FILE SYSTEM ACCESS FAILURE (850) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to access files in active or passive partition.		
Impact: Software download is not possible.		
Remedial action: No action is required.		

Table 22-931 IK4012009 - SCB FLYWHEEL CRITICAL

Alarm	Attributes	Applicable major NE releases
Name: IK4012009 (4032) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: critical Specific problem: SCB FLYWHEEL CRITICAL (851) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the Flywheel (free-running) time limit reached.		
Impact: The LTE service is not possible.		
Remedial action: Reset.		

Table 22-932 IK4012010 - SCB FLYWHEEL MAJOR

Alarm	Attributes	Applicable major NE releases
Name: IK4012010 (4033) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: major Specific problem: SCB FLYWHEEL MAJOR (852) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the Flywheel (free-running) time reached major threshold.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: No action is required.		

Table 22-933 IK4012011 - SCB FLYWHEEL MINOR

Alarm	Attributes	Applicable major NE releases
Name: IK4012011 (4034) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB FLYWHEEL MINOR (853) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the Flywheel (free-running) time reached minor threshold.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: No action is required.		

Table 22-934 IK4012012 - SCB FLYWHEEL START

Alarm	Attributes	Applicable major NE releases
Name: IK4012012 (4035) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: warning Specific problem: SCB FLYWHEEL START (854) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the Flywheel (free-running) started.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: No action is required.		

Table 22-935 IK4012013 - SCB FAULT RAI CPRI PORT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4012013 (4036) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB FAULT RAI CPRI PORT 1 (855) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the fault of CPRI port. Change the K_IET_CMLPX_CPRI_STATE_n to (disable/failed/NA).		
Impact: Impacts the LTE service.		
Remedial action: Reset RFME.		

Table 22-936 IK4012014 - SCB FAULT RAI CPRI PORT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4012014 (4037) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB FAULT RAI CPRI PORT 2 (856) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the fault of CPRI port. Change the K_IET_CMPLX_CPRI_STATE_n to (disable/failed/NA).		
Impact: Impacts the LTE service.		
Remedial action: Reset RFME.

Description: This alarm indicates generic SW processing failure.		
Remedial action: Reset.		

Table 22-942 IK4012031 - SCB ALL CPRI PORTS FAILED

Alarm	Attributes	Applicable major NE releases
Name: IK4012031 (4042) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: SCB ALL CPRI PORTS FAILED (861) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that all CPRI ports in use are disabled due to fault condition other than missing.		
Impact: Impacts the LTE service.		
Remedial action: No action is required.		

Table 22-943 IK4012032 - SCB OSC OVER TEMP

Alarm	Attributes	Applicable major NE releases
Name: IK4012032 (4043) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB OSC OVER TEMP (862) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates pluggable OSM is operating at a temperature above spec limit causing performance to be degraded.		
Impact: The LTE performance is low.		
Remedial action: No action is required.		

Table 22-944 IK4012033 - SCB SYSTEM CLOCK UNAVAILABLE

Alarm	Attributes	Applicable major NE releases
Name: IK4012033 (4044) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: SCB SYSTEM CLOCK UNAVAILABLE (863) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the system clock is not available. The alarm is applicable for 1588 system clock, syncE, GPS and external reference sources.		
Impact: Impacts the LTE service.		
Remedial action: Check the synchronization sources and provisioning.		

Table 22-945 IK4012034 - SCB LOSS OF PRIMARY REFERENCE

Alarm	Attributes	Applicable major NE releases
Name: IK4012034 (4045) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: minor Specific problem: SCB LOSS OF PRIMARY REFERENCE (864) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the primary reference source is not available.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: Check the primary reference source.		

Table 22-946 IK4012035 - SCB LOSS OF SYNCE

Alarm	Attributes	Applicable major NE releases
Name: IK4012035 (4046) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: minor Specific problem: SCB LOSS OF SYNCE (865) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that Ethernet clock is insufficient to maintain 50ppb on the air interface.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: No action is required.		

Table 22-947 IK4012036 - SCB GPS ANT

Alarm	Attributes	Applicable major NE releases
Name: IK4012036 (4047) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: major Specific problem: SCB GPS ANT (866) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates GPS Antenna failure. Set only if GPS sync source is enabled.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: No action is required.		

Table 22-948 IK4012037 - SCB GPS RECEIVER

Alarm	Attributes	Applicable major NE releases
Name: IK4012037 (4048) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: major Specific problem: SCB GPS RECEIVER (867) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the GPS receiver has failed and cannot provide a timing reference signal.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: No action is required.		

Table 22-949 IK4012038 - SCB GPS RECEIVER COMM FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4012038 (4049) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: major Specific problem: SCB GPS RECEIVER COMM FAIL (868) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the GPS receiver communication failure.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: No action is required.		

Table 22-950 IK4012039 - SCB GPS ANT POSITION UNKNOWN

Alarm	Attributes	Applicable major NE releases
Name: IK4012039 (4050) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: minor Specific problem: SCB GPS ANT POSITION UNKNOWN (869) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates GPS antenna position unknown. Set only if Geo-Based location service required.		
Impact: Impacts the location-based service.		
Remedial action: Check the position of the GPS antenna.		

Table 22-951 IK4012040 - SCB OVER TEMP MAJOR

Alarm	Attributes	Applicable major NE releases
Name: IK4012040 (4051) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB OVER TEMP MAJOR (870) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the CCM temperature is rising near the shutdown limit.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: No action is required.		

Table 22-952 IK4012041 - SCB OVER TEMP CRITICAL

Alarm	Attributes	Applicable major NE releases
Name: IK4012041 (4052) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: SCB OVER TEMP CRITICAL (871) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the CCM temperature is above operating range.		
Impact: The LTE service is still possible until auto shutdown.		
Remedial action: Board will autonomously power down.		

Table 22-953 IK4012042 - SCB PTP LOSS OF PRIMARY SYNCHRONIZATION

Alarm	Attributes	Applicable major NE releases
Name: IK4012042 (4053) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB PTP LOSS OF PRIMARY SYNCHRONIZATION (872) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates indicate the lack of SYNCH message from the primary server when SYNCH messages have not been received for the period set by the SYNCH_RECEIPT_TIMEOUT_EXPIRES event in the client .		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: No action is required.		

Table 22-954 IK4012043 - SCB PTP LOSS OF SECONDARY SYNCHRONIZATION

Alarm	Attributes	Applicable major NE releases
Name: IK4012043 (4054) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB PTP LOSS OF SECONDARY SYNCHRONIZATION (873) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates indicate the lack of SYNCH message from the secondary server when SYNCH messages have not been received for the period set by the SYNCH_RECEIPT_TIMEOUT_EXPIRES event in the client .		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: No action is required.		

Table 22-955 IK4012044 - SCB UNEXPECTED LONG INITIALIZATION

Alarm	Attributes	Applicable major NE releases
Name: IK4012044 (4055) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB UNEXPECTED LONG INITIALIZATION (874) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that PTP engine has taken longer than expected to achieve complete synchronization.		
Impact: The LTE service is not possible with 1588 PTP as synchronization reference. However, the eNB may synchronize to an alternative available source.		
Remedial action: No action is required.		

Table 22-956 IK4012045 - SCB PTP CLIENT INITIALIZING 1

Alarm	Attributes	Applicable major NE releases
Name: IK4012045 (4056) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: warning Specific problem: SCB PTP CLIENT INITIALIZING 1 (875) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the alarm is active on cold-start when the primary Grandmaster server is in the initializing state.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: No action is required.		

Table 22-957 IK4012046 - SCB PTP CLIENT INITIALIZING 2

Alarm	Attributes	Applicable major NE releases
Name: IK4012046 (4057) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: warning Specific problem: SCB PTP CLIENT INITIALIZING 2 (876) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the alarm is active on cold-start when the secondary Grandmaster server is in the initializing state.		
Impact: If the reference resource is immediately rectified, there is no impact on eNodeB.		
Remedial action: No action is required.		

Table 22-958 IK4012047 - SCB GPS LOCK FAILURE CRITICAL

Alarm	Attributes	Applicable major NE releases
Name: IK4012047 (4058) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB GPS LOCK FAILURE CRITICAL (877) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that GPS is not locked.		
Impact: If the alarm persists, it will impact the LTE service.		
Remedial action: No action is required.		

Table 22-959 IK4012048 - SCB LOOPBACK INACTIVITY

Alarm	Attributes	Applicable major NE releases
Name: IK4012048 (4059) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: warning Specific problem: SCB LOOPBACK INACTIVITY (878) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates there is no packet activity for the interval specified in the loopback activation.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-960 IK4012049 - SCB INIT GPS SELF SURVEY

Alarm	Attributes	Applicable major NE releases
Name: IK4012049 (4060) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB INIT GPS SELF SURVEY (879) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that if high accuracy GPS self survey has not been successfully completed after 24 hours. This survey will continue after the fault is raised until either it completes successful or long survey is disabled.		
Impact: Synchronization accuracy too low to support OTDOA.		
Remedial action: No action is required.		

Table 22-961 IK4012050 - SCB INIT GPS SELF SURVEY INPROGRESS

Alarm	Attributes	Applicable major NE releases
Name: IK4012050 (4061) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: warning Specific problem: SCB INIT GPS SELF SURVEY INPROGRESS (880) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that it is raised to represents the (10hour) self survey time required upon initial GPS lock, for the eNB to gain its GPS location to the accuracy required to support OTDOA.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-962 IK4012051 - SCB GPS INSUFFICIENT FIXED SATELLITES

Alarm	Attributes	Applicable major NE releases
Name: IK4012051 (4062) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB GPS INSUFFICIENT FIXED SATELLITES (881) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the available fixed satellites are less than the required ones to get GPS synchronization. The alarm will only be generated when GPS is configured as the synchronization source.		
Impact: The GPS synchronisation is not possible.		
Remedial action: No action is required.		

Table 22-963 IK4012052 - SCB LAYER 1 SOFTWARE WARNING 1

Alarm	Attributes	Applicable major NE releases
Name: IK4012052 (4063) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: warning Specific problem: SCB LAYER 1 SOFTWARE WARNING 1 (882) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a Layer 1 software warning.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-964 IK4012053 - SCB LAYER 1 SOFTWARE WARNING 2

Alarm	Attributes	Applicable major NE releases
Name: IK4012053 (4064) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: warning Specific problem: SCB LAYER 1 SOFTWARE WARNING 2 (883) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a Layer 1 software warning.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-965 IK4012054 - SCB LAYER 1 SOFTWARE WARNING 3

Alarm	Attributes	Applicable major NE releases
Name: IK4012054 (4065) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: warning Specific problem: SCB LAYER 1 SOFTWARE WARNING 3 (884) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a Layer 1 software warning.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-966 IK4012055 - SCB LAYER 2 SOFTWARE WARNING 1

Alarm	Attributes	Applicable major NE releases
Name: IK4012055 (4066) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: warning Specific problem: SCB LAYER 2 SOFTWARE WARNING 1 (885) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a Layer 2 software warning.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-967 IK4012056 - SCB LAYER 2 SOFTWARE WARNING 2

Alarm	Attributes	Applicable major NE releases
Name: IK4012056 (4067) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: warning Specific problem: SCB LAYER 2 SOFTWARE WARNING 2 (886) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a Layer 2 software warning.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-968 IK4012057 - SCB LAYER 2 SOFTWARE WARNING 3

Alarm	Attributes	Applicable major NE releases
Name: IK4012057 (4068) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: warning Specific problem: SCB LAYER 2 SOFTWARE WARNING 3 (887) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a Layer 2 software warning.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-969 IK4012058 - SCB LED FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4012058 (4069) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB LED FAILURE (888) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a failure to control face-plate LEDs.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-970 IK4012059 - SCB DIV IMBALANCE 1

Alarm	Attributes	Applicable major NE releases
Name: IK4012059 (4070) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB DIV IMBALANCE 1 (889) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates Diversity imbalance fault.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-971 IK4012060 - SCB DIV IMBALANCE 2

Alarm	Attributes	Applicable major NE releases
Name: IK4012060 (4071) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB DIV IMBALANCE 2 (890) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates Diversity imbalance fault.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-972 IK4012061 - SCB DIV IMBALANCE 3

Alarm	Attributes	Applicable major NE releases
Name: IK4012061 (4072) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB DIV IMBALANCE 3 (891) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates Diversity imbalance fault.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-973 IK4012062 - METRO BOX DOOR ALARM

Alarm	Attributes	Applicable major NE releases
Name: IK4012062 (4073) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: METRO BOX DOOR ALARM (892) Implicitly cleared: true Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the Metro box was opened.		
Impact: The eNodeB equipment is accessible and easily tampered. No immediate impact on call processing.		
Remedial action: No action is required.		

Table 22-974 IK4012063 - SCB FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4012063 (4074) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB FAULT 1 (609) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified SCB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-975 IK4012064 - SCB FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4012064 (4075) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB FAULT 2 (610) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified SCB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-976 IK4012065 - SCB FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4012065 (4076) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB FAULT 3 (611) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified SCB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-977 IK4012066 - SCB FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4012066 (4077) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB FAULT 4 (893) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified SCB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-978 IK4012067 - SCB FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4012067 (4078) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB FAULT 5 (894) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified SCB fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-979 IK4012068 - SCB GPS LOCK FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4012068 (4691) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SCB GPS LOCK FAILURE (895) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that GPS satellite lock has been lost after timing has been synchronized.		
Impact: The alarm will impact LTE service if the fault persists past the timing holdover period.		
Remedial action: Check the GPS antenna placement, GPS antenna status, or GPS antenna cable. Replace the External GPS Receiver or SCB (if using internal GPS receiver).		

Table 22-980 IK4012069 - SCB GPS INSUFFICIENT VISIBLE SATELLITES

Alarm	Attributes	Applicable major NE releases
Name: IK4012069 (4692) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: warning Specific problem: SCB GPS INSUFFICIENT VISIBLE SATELLITES (896) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that insufficient visible satellites are available to get GPS synchronization.		
Impact: GPS synchronisation is not possible.		
Remedial action: Check the GPS antenna location and status. Replace GPS antenna, cable or receiver if necessary.		

Table 22-981 IK4012070 - SCB L1 SOFTWARE FAIL SLICE 1

Alarm	Attributes	Applicable major NE releases
Name: IK4012070 (4693) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB L1 SOFTWARE FAIL SLICE 1 (897) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a software failure on the Modem Function.		
Impact: LTE service is not possible on this modem slice.		
Remedial action: Reset the modem.		

Table 22-982 IK4012071 - SCB L1 SOFTWARE FAIL SLICE 2

Alarm	Attributes	Applicable major NE releases
Name: IK4012071 (4694) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB L1 SOFTWARE FAIL SLICE 2 (898) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a software failure on the Modem Function.		
Impact: LTE service is not possible on this modem slice.		
Remedial action: Reset the modem.		

Table 22-983 IK4012072 - SCB L1 SOFTWARE FAIL SLICE 3

Alarm	Attributes	Applicable major NE releases
Name: IK4012072 (4695) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB L1 SOFTWARE FAIL SLICE 3 (899) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a software failure on the Modem Function.		
Impact: LTE service is not possible on this modem slice.		
Remedial action: Reset the modem.		

Table 22-984 IK4012073 - SCB L1 HARDWARE FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4012073 (4696) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: SCB L1 HARDWARE FAIL (900) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a Layer 1 hardware failure.		
Impact: LTE service is not possible on the modem.		
Remedial action: Reset the Modem Function, replace the eNodeB if the problem persists.		

Table 22-985 IK4012074 - SCB L2 SOFTWARE FAIL SLICE 1

Alarm	Attributes	Applicable major NE releases
Name: IK4012074 (4697) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB L2 SOFTWARE FAIL SLICE 1 (901) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a software failure on the Modem Function.		
Impact: LTE service is not possible on the modem.		
Remedial action: Reset the modem.		

Table 22-986 IK4012075 - SCB L2 SOFTWARE FAIL SLICE 2

Alarm	Attributes	Applicable major NE releases
Name: IK4012075 (4698) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB L2 SOFTWARE FAIL SLICE 2 (902) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a software failure on the Modem Function.		
Impact: LTE service is not possible on the modem.		
Remedial action: Reset the modem.		

Table 22-987 IK4012076 - SCB L2 SOFTWARE FAIL SLICE 3

Alarm	Attributes	Applicable major NE releases
Name: IK4012076 (4699) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: SCB L2 SOFTWARE FAIL SLICE 3 (903) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a software failure on the Modem Function.		
Impact: LTE service is not possible on the modem.		
Remedial action: Reset the modem.		

Table 22-988 IK4012077 - BTS PACKAGE TYPE NOT RECOGNIZED

Alarm	Attributes	Applicable major NE releases
Name: IK4012077 (4700) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: BTS PACKAGE TYPE NOT RECOGNIZED (904) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the BTS package type is not recognized.		
Impact: Unknown.		
Remedial action: Re-configure to correct BTS package type.		

Table 22-989 IK4013000 - RFME COMM FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4013000 (4079) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: critical Specific problem: RFME COMM FAIL (905) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the loss of RFME communication.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: No action is required.		

Table 22-990 IK4013001 - RFME UNDER TEMP

Alarm	Attributes	Applicable major NE releases
Name: IK4013001 (4080) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME UNDER TEMP (906) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RFME ambient temperature is low.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-991 IK4013002 - RFME WARM UP

Alarm	Attributes	Applicable major NE releases
Name: IK4013002 (4081) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: critical Specific problem: RFME WARM UP (907) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RFME ambient temperature is too low.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Wait.		

Table 22-992 IK4013003 - RFME OVER TEMP WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4013003 (4082) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME OVER TEMP WARNING (908) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RFME ambient temperature is high.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-993 IK4013004 - RFME CRITICAL TEMP

Alarm	Attributes	Applicable major NE releases
Name: IK4013004 (4083) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: critical Specific problem: RFME CRITICAL TEMP (909) Implicitly cleared: true Default probable cause: heatingOrVentilationOrCoolingSystemProblem (701)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the RFME temperature is high.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Disable.		

Table 22-994 IK4013005 - RFME ST CRITICAL FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4013005 (4084) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: critical Specific problem: RFME ST CRITICAL FAIL (910) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the RFME Hardware failure.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Init.		

Table 22-995 IK4013006 - RFME INIT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4013006 (4085) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: critical Specific problem: RFME INIT FAILURE (911) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the RFME initialization failure.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Init.		

Table 22-996 IK4013007 - RFME SOFTWARE FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4013007 (4086) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: critical Specific problem: RFME SOFTWARE FAIL (912) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1
Description: This alarm indicates the RFME software failure.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Init.		

Table 22-997 IK4013008 - RFME SIGNAL QUALITY

Alarm	Attributes	Applicable major NE releases
Name: IK4013008 (4087) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME SIGNAL QUALITY (913) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the RFME signal quality.		
Impact: The module is not usable. The LTE cells associated with this module may not be operational.		
Remedial action: No action is required.		

Table 22-998 IK4013009 - RFME INPUT VOLTAGE FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4013009 (4088) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME INPUT VOLTAGE FAIL (914) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the input voltage is very high or very low.		
Impact: If the RRH is not usable, the associated LTE cells are not operational.		
Remedial action: No action is required.		

Table 22-999 IK4013010 - RFME PWR CONVERTER FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4013010 (4089) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: critical Specific problem: RFME PWR CONVERTER FAIL (915) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The RFME internal power converter has failed.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Init.		

Table 22-1000 IK4013011 - RFME CLOCK FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4013011 (4090) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: critical Specific problem: RFME CLOCK FAILURE (916) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The RFME cannot derive proper clock signal from the incoming CPRI link.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Init		

Table 22-1001 IK4013012 - RFME RF SYNTH FAIL

Alarm	Attributes	Applicable major NE releases
Name: IK4013012 (4091) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: critical Specific problem: RFME RF SYNTH FAIL (917) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The RFME internal frequency synthesizer is out of lock.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Init.		

Table 22-1002 IK4013015 - RFME UNREADABLE MANUFACTURER DATA

Alarm	Attributes	Applicable major NE releases
Name: IK4013015 (4092) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: warning Specific problem: RFME UNREADABLE MANUFACTURER DATA (918) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to read the manufacturer data.		
Impact: Cells related to RRH are out of service.		
Remedial action: Init		

Table 22-1003 IK4013016 - RFME FAULT DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4013016 (4093) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME FAULT DOWNLOAD FAILURE (919) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates a software download failure.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1004 IK4013017 - RFME BIST PARTIAL

Alarm	Attributes	Applicable major NE releases
Name: IK4013017 (4094) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME BIST PARTIAL (920) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that at least one failure was detected during power on self-test, but the unit may still be functional, though in a degraded state.		
Impact: The eNodeB performance is low.		
Remedial action: No action is required.		

Table 22-1005 IK4013018 - RFME LINK LOF PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4013018 (4095) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME LINK LOF PORT1 (921) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that framing cannot be recovered at the slave link port. This alarm is enabled only after the link is established.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: No action is required.		

Table 22-1006 IK4013019 - RFME LINK LOF PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4013019 (4096) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME LINK LOF PORT2 (922) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that framing cannot be recovered at the slave link port. This alarm is enabled only after the link is established.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: No action is required.		

Table 22-1007 IK4013020 - RFME LINK LOF PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4013020 (4097) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME LINK LOF PORT3 (923) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that framing cannot be recovered at the slave link port. This alarm is enabled only after the link is established.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: No action is required.		

Table 22-1008 IK4013021 - RFME LINK LOS PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4013021 (4098) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME LINK LOS PORT1 (924) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that no signal is detected at the link port. This alarm is enabled only after the link is established.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: No action is required.		

Table 22-1009 IK4013022 - RFME LINK LOS PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4013022 (4099) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME LINK LOS PORT2 (925) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that no signal is detected at the link port. This alarm is enabled only after the link is established.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: No action is required.		

Table 22-1010 IK4013023 - RFME LINK LOS PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4013023 (4100) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME LINK LOS PORT3 (926) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that no signal is detected at the link port. This alarm is enabled only after the link is established.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: No action is required.		

Table 22-1011 IK4013024 - RFME LINK RAI PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4013024 (4101) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME LINK RAI PORT1 (927) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the incoming slave link RAI bit is set.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: No action is required.		

Table 22-1012 IK4013025 - RFME LINK RAI PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4013025 (4102) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME LINK RAI PORT2 (928) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the incoming slave link RAI bit is set.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: No action is required.		

Table 22-1013 IK4013026 - RFME LINK RAI PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4013026 (4103) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME LINK RAI PORT3 (929) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the incoming slave link RAI bit is set.		
Impact: Possibly repetitions at higher levels. The capacity of the module can be reduced.		
Remedial action: No action is required.		

Table 22-1014 IK4013027 - RFME SIGNAL LOW PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4013027 (4104) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME SIGNAL LOW PORT1 (930) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the optical signal strength is very low on the slave link port.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1015 IK4013028 - RFME SIGNAL LOW PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4013028 (4105) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME SIGNAL LOW PORT2 (931) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the optical signal strength is very low on the slave link port.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1016 IK4013029 - RFME SIGNAL LOW PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4013029 (4106) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME SIGNAL LOW PORT3 (932) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the optical signal strength is very low on the slave link port.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1017 IK4013030 - RFME BER PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4013030 (4107) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME BER PORT1 (933) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates excessive bit errors on the CPRI link.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1018 IK4013031 - RFME BER PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4013031 (4108) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME BER PORT2 (934) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates excessive bit errors on the CPRI link.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1019 IK4013032 - RFME BER PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4013032 (4109) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME BER PORT3 (935) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates excessive bit errors on the CPRI link.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1020 IK4013033 - RFME SIGNAL SDI PORT1

Alarm	Attributes	Applicable major NE releases
Name: IK4013033 (4110) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME SIGNAL SDI PORT1 (936) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the incoming CPRI link SDI bit is set.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1021 IK4013034 - RFME SIGNAL SDI PORT2

Alarm	Attributes	Applicable major NE releases
Name: IK4013034 (4111) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME SIGNAL SDI PORT2 (937) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the incoming CPRI link SDI bit is set.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1022 IK4013035 - RFME SIGNAL SDI PORT3

Alarm	Attributes	Applicable major NE releases
Name: IK4013035 (4112) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: major Specific problem: RFME SIGNAL SDI PORT3 (938) Implicitly cleared: true Default probable cause: inputDeviceError (704)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the incoming CPRI link SDI bit is set.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1023 IK4013036 - RFME MESSAGE THROTTLING

Alarm	Attributes	Applicable major NE releases
Name: IK4013036 (4113) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME MESSAGE THROTTLING (939) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the RF is generating too many messages over the CPRI link.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1024 IK4013037 - RFME FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4013037 (4114) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME FAULT 1 (940) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified RFME fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-1025 IK4013038 - RFME FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4013038 (4115) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME FAULT 2 (941) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified RFME fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-1026 IK4013039 - RFME FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4013039 (4116) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME FAULT 3 (942) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified RFME fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-1027 IK4013040 - RFME FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4013040 (4117) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME FAULT 4 (943) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified RFME fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-1028 IK4013041 - RFME FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4013041 (4118) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: RFME FAULT 5 (944) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. Unspecified RFME fault detected		
Impact: Check the additional info for impact details.		
Remedial action: No action is required.		

Table 22-1029 IK4014001 - MEDO DETECTION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4014001 (4701) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: MEDO DETECTION FAILURE (947) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to detect the presence of MEDO.		
Impact: OAM: Metro Dock reporting degraded. May impact Telecom Service		
Remedial action: Call the next level of support.		

Table 22-1030 IK4014002 - MEDO MEMORY ACCES FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4014002 (4702) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: MEDO MEMORY ACCES FAILURE (948) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates the failure to access the EEPROM on the Metro Dock		
Impact: OAM: Metro Dock reporting degraded no impact on Telecom Service		
Remedial action: Call the next level of support.		

Table 22-1031 IK4014003 - MEDO UNREADABLE MANUFACTURER DATA

Alarm	Attributes	Applicable major NE releases
Name: IK4014003 (4703) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: MEDO UNREADABLE MANUFACTURER DATA (949) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to read the manufacturer data.		
Impact: OAM: Metro Dock reporting degraded no impact on Telecom Service		
Remedial action: Call the next level of support.		

Table 22-1032 IK4014007 - MEDO FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4014007 (4704) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: minor Specific problem: MEDO FAULT 4 (950) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for MEDO for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1033 IK4014008 - MEDO FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4014008 (4705) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: minor Specific problem: MEDO FAULT 5 (951) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for MEDO for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1034 IK4014009 - MEDO MEMORY ACCESS FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4014009 (4998) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: minor Specific problem: MEDO MEMORY ACCESS FAILURE (952) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to access the EEPROM on the Metro Dock		
Impact: OAM: Metro Dock reporting degraded no impact on Telecom Service		
Remedial action: Call the next level of support.		

Table 22-1035 IK4015000 - BB FAILURE SLAVE SOC 2

Alarm	Attributes	Applicable major NE releases
Name: IK4015000 (5240) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB FAILURE SLAVE SOC 2 (953) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a failure of a Slave SOC.		
Remedial action: The faulty unit is automatically reset to attempt to clear the fault. Replace the BB If the problem persists.		

Table 22-1036 IK4015001 - BB FAILURE SLAVE SOC 3

Alarm	Attributes	Applicable major NE releases
Name: IK4015001 (5241) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB FAILURE SLAVE SOC 3 (954) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a failure of a Slave SOC.		
Remedial action: The faulty unit is automatically reset to attempt to clear the fault. Replace the BB If the problem persists.		

Table 22-1037 IK4015002 - BB CARD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4015002 (5242) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB CARD FAILURE (955) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a failure of modem board.		
Remedial action: The modem board is automatically reset to attempt to clear the fault. Replace the BB If the problem persists.

Table 22-1128 IK4020009 - CB L2 SOFTWARE FAIL SOC-SLICE 2-2

Alarm	Attributes	Applicable major NE releases
Name: IK4020009 (5333) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB L2 SOFTWARE FAIL SOC-SLICE 2-2 (1046) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a software failure on a CB SOC unit.		
Remedial action: The faulty unit is automatically reset to attempt to clear the fault. If the problem persists then reset the CB.		

Table 22-1129 IK4020010 - CB FAULT 1 SOC 2

Alarm	Attributes	Applicable major NE releases
Name: IK4020010 (5334) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB FAULT 1 SOC 2 (1047) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: Provisioned for late churn-in. Unspecified CB fault detected on a SOC.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-1130 IK4020011 - CB FAULT 2 SOC 2

Alarm	Attributes	Applicable major NE releases
Name: IK4020011 (5335) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB FAULT 2 SOC 2 (1048) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: Provisioned for late churn-in. Unspecified CB fault detected on a SOC.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-1131 IK4020012 - CB DIV IMBALANCE SOC-SLICE 2-1

Alarm	Attributes	Applicable major NE releases
Name: IK4020012 (5336) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: minor Specific problem: CB DIV IMBALANCE SOC-SLICE 2-1 (1049) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates Diversity imbalance fault.		
Remedial action: No action is required.		

Table 22-1132 IK4020013 - CB DIV IMBALANCE SOC-SLICE 2-2

Alarm	Attributes	Applicable major NE releases
Name: IK4020013 (5337) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: minor Specific problem: CB DIV IMBALANCE SOC-SLICE 2-2 (1050) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates Diversity imbalance fault.		
Remedial action: No action is required.		

Table 22-1133 IK4021000 - CB INDETERMINATE OPERATIONAL FAILURE SOC 3

Alarm	Attributes	Applicable major NE releases
Name: IK4021000 (5338) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: critical Specific problem: CB INDETERMINATE OPERATIONAL FAILURE SOC 3 (1051) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that a SOC modem failure of a controller board has been detected that cannot be described by any specific alarm.		
Remedial action: The faulty unit is automatically reset to attempt to clear the fault. If the problem persists then reset the CB.		

Table 22-1134 IK4021001 - CB INIT FAILURE SOC 3

Alarm	Attributes	Applicable major NE releases
Name: IK4021001 (5339) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: CB INIT FAILURE SOC 3 (1052) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a failure to initialize a SOC of a controller board.		
Remedial action: The faulty unit is automatically reset to attempt to clear the fault. If the problem persists then reset the CB.		

Table 22-1135 IK4021002 - CB L1 HARDWARE FAIL SOC 3

Alarm	Attributes	Applicable major NE releases
Name: IK4021002 (5340) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: CB L1 HARDWARE FAIL SOC 3 (1053) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a Layer 1 hardware or a CPRI configuration failure.		
Remedial action: The faulty unit is automatically reset to attempt to clear the fault. If the problem persists then reset the CB.		

Table 22-1136 IK4021003 - CB L1 SOFTWARE FAIL SOC-SLICE 3-1

Alarm	Attributes	Applicable major NE releases
Name: IK4021003 (5341) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB L1 SOFTWARE FAIL SOC-SLICE 3-1 (1054) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a software failure on a CB SOC unit.		
Remedial action: The faulty unit is automatically reset to attempt to clear the fault. If the problem persists then reset the CB.		

Table 22-1137 IK4021004 - CB L1 SOFTWARE FAIL SOC-SLICE 3-2

Alarm	Attributes	Applicable major NE releases
Name: IK4021004 (5342) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB L1 SOFTWARE FAIL SOC-SLICE 3-2 (1055) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a software failure on a CB SOC unit.		
Remedial action: The faulty unit is automatically reset to attempt to clear the fault. If the problem persists then reset the CB.		

Table 22-1138 IK4021005 - CB L1 SOFTWARE WARNING SOC-SLICE 3-1

Alarm	Attributes	Applicable major NE releases
Name: IK4021005 (5343) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB L1 SOFTWARE WARNING SOC-SLICE 3-1 (1056) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a software warning on a CB SOC unit.		
Remedial action: No action is required.		

Table 22-1139 IK4021006 - CB L1 SOFTWARE WARNING SOC-SLICE 3-2

Alarm	Attributes	Applicable major NE releases
Name: IK4021006 (5344) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB L1 SOFTWARE WARNING SOC-SLICE 3-2 (1057) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a software warning on a CB SOC unit.		
Remedial action: No action is required.		

Table 22-1140 IK4021007 - CB MODEM CELL RESOURCES FAILURE SOC 3

Alarm	Attributes	Applicable major NE releases
Name: IK4021007 (5345) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: CB MODEM CELL RESOURCES FAILURE SOC 3 (1058) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a modem physical cell failure.		
Remedial action: The faulty unit is automatically reset to attempt to clear the fault. If the problem persists then reset the CB.		

Table 22-1141 IK4021008 - CB L2 SOFTWARE FAIL SOC-SLICE 3-1

Alarm	Attributes	Applicable major NE releases
Name: IK4021008 (5346) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB L2 SOFTWARE FAIL SOC-SLICE 3-1 (1059) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a software failure on a CB SOC unit.		
Remedial action: The faulty unit is automatically reset to attempt to clear the fault. If the problem persists then reset the CB.		

Table 22-1142 IK4021009 - CB L2 SOFTWARE FAIL SOC-SLICE 3-2

Alarm	Attributes	Applicable major NE releases
Name: IK4021009 (5347) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: CB L2 SOFTWARE FAIL SOC-SLICE 3-2 (1060) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a software failure on a CB SOC unit.		
Remedial action: The faulty unit is automatically reset to attempt to clear the fault. If the problem persists then reset the CB.		

Table 22-1143 IK4021010 - CB FAULT 1 SOC 3

Alarm	Attributes	Applicable major NE releases
Name: IK4021010 (5348) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB FAULT 1 SOC 3 (1061) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: Provisioned for late churn-in. Unspecified CB fault detected on a SOC.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-1144 IK4021011 - CB FAULT 2 SOC 3

Alarm	Attributes	Applicable major NE releases
Name: IK4021011 (5349) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: minor Specific problem: CB FAULT 2 SOC 3 (1062) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: Provisioned for late churn-in. Unspecified CB fault detected on a SOC.		
Remedial action: Check the additional information for maintenance action details.		

Table 22-1145 IK4021012 - CB DIV IMBALANCE SOC-SLICE 3-1

Alarm	Attributes	Applicable major NE releases

Description: This alarm indicates the scenario failure due to no-response from the module.		
Impact: Telecom: The telecom resources processed by the module are lost as the module is out of service. OAM: No impact on OAM service.		
Remedial action: Reset the module. If the alarm persists, replace the module.		

Table 22-1167 IK4305006 - MISSING CALLP SUBSCRIPTION

Alarm	Attributes	Applicable major NE releases
Name: IK4305006 (2686) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: MISSING CALLP SUBSCRIPTION (1071) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the CallP instance did not send the subscribe message due to initialization error in the CallP instance.		
Impact: Telecom: The telecom resources processed by the module not operational. OAM: No impact on OAM service.		
Remedial action: Reset the eNodeB.		

Table 22-1168 IK4305007 - MISSING CALLP REQUEST

Alarm	Attributes	Applicable major NE releases
Name: IK4305007 (2687) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: MISSING CALLP REQUEST (1072) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that there is no request from any CallP instance for the MIM status.		
Impact: Telecom: The telecom resources processed by the module not operational. OAM: No impact on OAM service.		
Remedial action: Reset the eNodeB.		

Table 22-1169 IK4305008 - RESET DB

Alarm	Attributes	Applicable major NE releases
Name: IK4305008 (2688) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: RESET DB (1073) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates the failure to restore database.		
Impact: The controller board resets automatically with an empty database.		
Remedial action: Contact the next level of support.		

Table 22-1170 IK4305009 - INCORRECT FREQUENCY BAND

Alarm	Attributes	Applicable major NE releases
Name: IK4305009 (2689) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: INCORRECT FREQUENCY BAND (1074) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the module is not compatible with the frequency band configuration data.		
Impact: The hardware does not support the frequency indicated in the configuration data.		
Remedial action: Verify the frequency band of the module with the configured frequency band. If the alarm persists, replace the module.		

Table 22-1171 IK4305010 - CELL CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305010 (2690) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: CELL CONFIGURATION FAILURE (1075) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure to configure the cell.		
Impact: Telecom: The telecom service on the cell is disabled. OAM: No impact on OAM service.		
Remedial action: Verify the cell configuration data. Reset the modem and allocate the cell resources.		

Table 22-1172 IK4305011 - MISSING CALLP ACTION

Alarm	Attributes	Applicable major NE releases
Name: IK4305011 (2691) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: MISSING CALLP ACTION (1076) Implicitly cleared: true Default probable cause: softwareError (718)	<ul style="list-style-type: none"> • LT6.0
Description: This alarm indicates that CallP did not update the OAM database.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Perform lock/unlock on the impacted cell. If needed, perform eNodeB reset.		

Table 22-1173 IK4305012 - INVALID CONFIGURATION DATA

Alarm	Attributes	Applicable major NE releases
Name: IK4305012 (2692) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: critical Specific problem: INVALID CONFIGURATION DATA (1077) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates inconsistency in the eNodeB configuration data.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1174 IK4305013 - IP ADDRESS CONFIGURATION DATA MISMATCH

Alarm	Attributes	Applicable major NE releases
Name: IK4305013 (2693) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.MmeTransportLayerAccess	Severity: major Specific problem: IP ADDRESS CONFIGURATION DATA MISMATCH (1078) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a mismatch in the IP address type and the actual IP address specified in the configuration data.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1175 IK4305014 - IP ADDRESS CONFIGURATION DATA MISMATCH

Alarm	Attributes	Applicable major NE releases
Name: IK4305014 (2694) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.X2TransportLayerAccess	Severity: major Specific problem: IP ADDRESS CONFIGURATION DATA MISMATCH (1078) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a mismatch in the IP address type and the actual IP address specified in the configuration data.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1176 IK4305015 - CONFIGURED SECTORS RESOURCES MISMATCH VERSUS HARDWARE

Alarm	Attributes	Applicable major NE releases
Name: IK4305015 (2695) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RRH	Severity: minor Specific problem: CONFIGURED SECTORS RESOURCES MISMATCH VERSUS HARDWARE (1079) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates inconsistency in the eNodeB configured sector resources versus the hardware capacity		
Remedial action: Verify and correct the configuration data or Verify and correct the hardware configuration		

Table 22-1177 IK4305016 - PRIMARY CPRI PORT CONFIGURATION MISMATCH

Alarm	Attributes	Applicable major NE releases
Name: IK4305016 (2696) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RRH	Severity: minor Specific problem: PRIMARY CPRI PORT CONFIGURATION MISMATCH (1080) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates configured primary CPRI port position is conflict with other RRHs real CPRI port position		
Remedial action: Verify and correct the configuration data or Verify and correct the hardware configuration		

Table 22-1178 IK4305017 - INVALID TRANSPORT CONFIGURATION DATA

Alarm	Attributes	Applicable major NE releases
Name: IK4305017 (2697) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: INVALID TRANSPORT CONFIGURATION DATA (1081) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This alarm indicates an inconsistency in the eNodeB transport configuration data.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1179 IK4305018 - PRIMARY IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305018 (2698) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: PRIMARY IPSEC TUNNEL FAILURE (1082) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure of the primary IPsec tunnel.		
Impact: OAM: The OAM service is impacted. OAM traffic is not possible. Telecom: Telecom traffic is not possible if OAM and Telecom are configured in the first VLAN.		
Remedial action: Check the IP Security configuration.		

Table 22-1180 IK4305019 - SECONDARY IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305019 (2699) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: SECONDARY IPSEC TUNNEL FAILURE (1083) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the failure of the secondary IPsec tunnel.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1181 IK4305020 - FACTORY MODE

Alarm	Attributes	Applicable major NE releases
Name: IK4305020 (2700) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Specific problem: FACTORY MODE (1084) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the eNodeB is not completely configured.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Complete the eNodeB configuration.		

Table 22-1182 IK4305021 - VSWR CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305021 (2701) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RRH	Severity: minor Specific problem: VSWR CONFIGURATION FAILURE (1085) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the thresholds of the VSWR configuration could not be applied to the eNodeB.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service but VSWR supervision may not be active.		
Remedial action: Verify the correctness of the configuration data. Apply again the data. Reset the eNodeB if it fails.		

Table 22-1183 IK4305022 - VSWR CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305022 (2702) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TRDU	Severity: minor Specific problem: VSWR CONFIGURATION FAILURE (1085) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the thresholds of the VSWR configuration could not be applied to the eNodeB.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service but VSWR supervision may not be active.		
Remedial action: Verify the correctness of the configuration data. Apply again the data. Reset the eNodeB if it fails.		

Table 22-1184 IK4305023 - DELAY TIMING OUT OF RANGE

Alarm	Attributes	Applicable major NE releases
Name: IK4305023 (2703) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: DELAY TIMING OUT OF RANGE (1086) Implicitly cleared: true Default probable cause: corruptData (910)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the delay timing values is out of range.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: 1 - Lock the cell. 2 - Verify the correctness of the configuration data. 3 - Unlock the cell.		

Table 22-1185 IK4305024 - MODULE SCENARIO ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4305024 (2704) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: MODULE SCENARIO ERROR (1070) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the scenario failure due to no-response from the module.		
Impact: Telecom: No impact on traffic. OAM: No impact on OAM service. RF Cabinet alarms may not be reported.		
Remedial action: Reset the module. If the alarm persists, replace the module.		

Table 22-1186 IK4305025 - MODULE SCENARIO ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4305025 (2705) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.TmaAidEntry	Severity: major Specific problem: MODULE SCENARIO ERROR (1070) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the scenario failure due to no-response from the module.		
Impact: Telecom: The telecom resources processed by the module are lost as the module is out of service. OAM: No impact on OAM service.		
Remedial action: Reset the module. If the alarm persists, replace the module.		

Table 22-1187 IK4305026 - MODULE SCENARIO ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4305026 (2706) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RetAidEntry	Severity: minor Specific problem: MODULE SCENARIO ERROR (1070) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the scenario failure due to no-response from the module.		
Impact: Telecom: No impact on traffic. OAM: No impact on OAM service. Antenna tilt motion may not be available.		
Remedial action: Reset the module. If the alarm persists, replace the module.		

Table 22-1188 IK4305027 - IP ADDRESS CONFIGURATION DATA MISMATCH

Alarm	Attributes	Applicable major NE releases
Name: IK4305027 (2707) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: IP ADDRESS CONFIGURATION DATA MISMATCH (1078) Implicitly cleared: true Default probable cause: corruptData (910)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the eNodeB performed an autonomous fallback to the previous transport configuration due to lack of OAM connectivity.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service if the eNodeB can be connected by the network management system.		
Remedial action: Verify and correct the configuration data.		

Table 22-1189 IK4305028 - TOTAL ROUND TRIP DELAY EXCEEDED

Alarm	Attributes	Applicable major NE releases
Name: IK4305028 (2708) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: TOTAL ROUND TRIP DELAY EXCEEDED (1087) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the eNodeB measured total round trip delay exceeds the predefined maximum allowed value as determined by licensing.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify setting of isFiberDelayAllowed is consistent with length of BBU to radio link. Parameter isFiberDelayAllowed must be True if BBU to radio link exceeds 500 meters. Verify antennaPathDelayDL and antennaPathDelayUL parameter values. Parameter isDasDelayEnabled must be True if antenna delay exceeds 2100 nanoseconds.		

Table 22-1190 IK4305029 - DELAY COMPENSATION WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4305029 (2709) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: DELAY COMPENSATION WARNING (1088) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the eNodeB delay compensation is not accurate enough.		
Impact: Telecom: The cell might be impacted. OAM: No impact on OAM service.		
Remedial action: Verify delay compensation parameters.		

Table 22-1191 IK4305030 - HW SW CAPABILITY CHECK RADIOCAC FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305030 (2710) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: HW SW CAPABILITY CHECK RADIOCAC FAILURE (1089) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the configuration parameters, number of users per cell and/or number of data bearers per cell, exceed the HW or SW capabilities of the modem.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1192 IK4305031 - HW SW CAPABILITY CHECK CELL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305031 (2711) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: HW SW CAPABILITY CHECK CELL FAILURE (1090) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the configured bandwidth and/or downlink power of the cell and /or band ID is not in line with the HW capabilities.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1193 IK4305032 - HW SW CAPABILITY CHECK DOWNGRADE

Alarm	Attributes	Applicable major NE releases
Name: IK4305032 (2712) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: HW SW CAPABILITY CHECK DOWNGRADE (1091) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the configuration data is inconsistent with the HW and SW capabilities of the eNodeB. OAM has downgraded the configured data to be in line with the HW and SW capabilities.		
Impact: Telecom: The cell is operational but degraded. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1194 IK4305033 - DELAY COMPENSATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305033 (2713) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: DELAY COMPENSATION FAILURE (1092) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the eNodeB is unable to compute a valid downlink/uplink frame offset value for the modem.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify the fiber length between the controller board and the remote radio head. Verify the antenna cable length. Verify the delay compensation parameters.		

Table 22-1195 IK4305034 - DELAY COMPENSATION HW CAPABILITY FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305034 (2714) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: DELAY COMPENSATION HW CAPABILITY FAILURE (1093) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the eNodeB is unable to compute a valid downlink/uplink frame offset value for the modem because of hardware constraints.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify the hardware capabilities of the controller and of the remote radio head.		

Table 22-1196 IK4305035 - MISSING MODEM RESOURCES FOR CONFIGURED LTECELL

Alarm	Attributes	Applicable major NE releases
Name: IK4305035 (3230) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: MISSING MODEM RESOURCES FOR CONFIGURED LTECELL (1094) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that there are not enough modem resources available to support the configured cell.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1197 IK4305036 - MISSING RFM FOR CONFIGURED LTECELL

Alarm	Attributes	Applicable major NE releases
Name: IK4305036 (3231) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: MISSING RFM FOR CONFIGURED LTECELL (1095) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that there are no sectors or RFMs available to support the configured cell.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1198 IK4305037 - RFM EQUIPPED WITHOUT LTECELL CONFIGURATION

Alarm	Attributes	Applicable major NE releases
Name: IK4305037 (3232) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RRH	Severity: warning Specific problem: RFM EQUIPPED WITHOUT LTECELL CONFIGURATION (1096) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that there is a RRH equipped but no cell is mapped on the sector.		
Impact: Telecom: The sector is not providing telecom services. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1199 IK4305038 - RFM EQUIPPED WITHOUT LTECELL CONFIGURATION

Alarm	Attributes	Applicable major NE releases
Name: IK4305038 (3233) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TRDU	Severity: warning Specific problem: RFM EQUIPPED WITHOUT LTECELL CONFIGURATION (1096) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that there is a TRDU equipped but no cell is mapped on the sector.		
Impact: Telecom: The sector is not providing telecom services. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1200 IK4305039 - BB EQUIPPED WITHOUT LTECELL CONFIGURATION

Alarm	Attributes	Applicable major NE releases
Name: IK4305039 (3234) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: warning Specific problem: BB EQUIPPED WITHOUT LTECELL CONFIGURATION (1097) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that there is a modem equipped but no cell is mapped.		
Impact: Telecom: The modem board does not provide telecom services. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1201 IK4305040 - HW SW CAPABILITY ANTENNA CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305040 (3235) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: HW SW CAPABILITY ANTENNA CONFIGURATION FAILURE (1098) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the antenna configuration data is inconsistent with the hardware and software capabilities of the eNodeB.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1202 IK4305041 - HW SW CAPABILITY DLEARFCN VIOLATE LOWER BANDEDGE

Alarm	Attributes	Applicable major NE releases
Name: IK4305041 (3236) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: HW SW CAPABILITY DLEARFCN VIOLATE LOWER BANDEDGE (1099) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the configured downlink EARFCN with the configured bandwidth violate the lower operating band edge.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1203 IK4305042 - HW SW CAPABILITY DLEARFCN VIOLATE UPPER BANDEDGE

Alarm	Attributes	Applicable major NE releases
Name: IK4305042 (3237) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: HW SW CAPABILITY DLEARFCN VIOLATE UPPER BANDEDGE (1100) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the configured downlink EARFCN with the configured bandwidth violate the upper operating band edge.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1204 IK4305043 - HW SW CAPABILITY ULEARFCN VIOLATE LOWER BANDEDGE

Alarm	Attributes	Applicable major NE releases
Name: IK4305043 (3238) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: HW SW CAPABILITY ULEARFCN VIOLATE LOWER BANDEDGE (1101) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the configured uplink EARFCN with the configured bandwidth violate the lower operating band edge.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1205 IK4305044 - HW SW CAPABILITY ULEARFCN VIOLATE UPPER BANDEDGE

Alarm	Attributes	Applicable major NE releases
Name: IK4305044 (3239) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: HW SW CAPABILITY ULEARFCN VIOLATE UPPER BANDEDGE (1102) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the configured uplink EARFCN with the configured bandwidth violate the upper operating band edge.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1206 IK4305045 - HW SW CAPABILITY RACK DOES NOT SUPPORT MODEM

Alarm	Attributes	Applicable major NE releases
Name: IK4305045 (3240) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: major Specific problem: HW SW CAPABILITY RACK DOES NOT SUPPORT MODEM (1103) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the equipped modem version is not support by d2u rack version.		
Impact: Telecom: The modem board is not operational and can not provide telecom services. OAM: No impact on OAM service.		
Remedial action: Verify and correct the equipment configuration.		

Table 22-1207 IK4305046 - LOSS OF GEO LOC PHASE SYNC

Alarm	Attributes	Applicable major NE releases
Name: IK4305046 (3241) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: LOSS OF GEO LOC PHASE SYNC (1104) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the 100ns phase sync can no longer be guaranteed due to loss of GPS reference.		
Impact: Telecom: OTDOA service is no longer supported. Telecom traffic is still possible. OAM: No impact on OAM service.		
Remedial action: Resolve faulty references.		

Table 22-1208 IK4305047 - CDMA PHASE SYNC HOLDOVER TIMER EXPIRED

Alarm	Attributes	Applicable major NE releases
Name: IK4305047 (3242) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: CDMA PHASE SYNC HOLDOVER TIMER EXPIRED (1105) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the phase sync holdover time expired. The LTE to HRPD enhanced non optimized handover is no longer possible.		
Impact: Telecom: LTE to HRPD enhanced handover not possible. OAM: None.		
Remedial action: Resolve faulty references.		

Table 22-1209 IK4305048 - CT NOT STARTED DUE TO ACTIVE DDT

Alarm	Attributes	Applicable major NE releases
Name: IK4305048 (3243) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: CT NOT STARTED DUE TO ACTIVE DDT (1106) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that call trace could not be started because dynamic debug trace is already active.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1210 IK4305049 - DDT NOT STARTED DUE TO ACTIVE CT

Alarm	Attributes	Applicable major NE releases
Name: IK4305049 (3244) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: DDT NOT STARTED DUE TO ACTIVE CT (1107) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that dynamic debug trace could not be started because call trace is already active.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1211 IK4305050 - TRACE CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305050 (3245) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: TRACE CONFIGURATION FAILURE (1108) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the trace server destination could not be configured.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data. If the problem persists, reset the eNodeB.		

Table 22-1212 IK4305051 - UNCOMPLETE ENB SCENARIO RELATED TO CELL

Alarm	Attributes	Applicable major NE releases
Name: IK4305051 (3246) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.Cell	Severity: critical Specific problem: UNCOMPLETE ENB SCENARIO RELATED TO CELL (1109) Implicitly cleared: true Default probable cause: softwareError (718)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the Cell Setup scenario failed due to a missing or incomplete internal action.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Perform lock/unlock on the impacted cell. If needed, perform eNodeB reset.		

Table 22-1213 IK4305052 - FEATURE UNLIMITED PRB LICENSE NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305052 (3247) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: warning Specific problem: FEATURE UNLIMITED PRB LICENSE NOT SUPPORTED (1110) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature mismatch, feature UnlimitedPRBLicense is disabled by eNodeB OAM.		
Impact: No impact on eNodeB except for the feature UnlimitedPRBLicense which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1214 IK4305053 - FEATURE MOBILITY TO 1XRTT NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305053 (3248) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.ENBEquipment	Severity: warning Specific problem: FEATURE MOBILITY TO 1XRTT NOT SUPPORTED (1111) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature mismatch, MobilityTo1xRTT feature disabled by eNodeB OAM.		
Impact: No impact on eNodeB except for the feature MobilityTo1xRTT which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1215 IK4305054 - FEATURE UE CATEGORY 4 NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305054 (3249) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Specific problem: FEATURE UE CATEGORY 4 NOT SUPPORTED (1112) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature mismatch, UeCategory4 feature disabled by eNodeB OAM.		
Impact: No impact on eNodeB except for the feature UeCategory4 which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1216 IK4305055 - FEATURE SPS NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305055 (3250) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Specific problem: FEATURE SPS NOT SUPPORTED (1113) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature mismatch, Sps feature is disabled by eNodeB OAM.		
Impact: No impact on eNodeB except for the feature Sps which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1217 IK4305056 - FEATURE ROHC NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305056 (3251) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Specific problem: FEATURE ROHC NOT SUPPORTED (1114) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature mismatch, Rohc feature is disabled by eNodeB OAM.		
Impact: No impact on eNodeB except for the feature Rohc which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1218 IK4305057 - FEATURE ECID NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305057 (3252) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Specific problem: FEATURE ECID NOT SUPPORTED (1115) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LT6.0
Description: This alarm indicates a modem type feature mismatch, Ecid feature is disabled by eNodeB OAM.		
Impact: No impact on eNodeB except for the feature Ecid which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1219 IK4305058 - FEATURE OTDOA HEARABILITY ENHANCEMENT SUPPORT NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305058 (3253) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Specific problem: FEATURE OTDOA HEARABILITY ENHANCEMENT SUPPORT NOT SUPPORTED (1116) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LT6.0
Description: This alarm indicates a modem type feature mismatch, OTDOAHearabilityEnhancement feature is disabled by eNodeB OAM.		
Impact: No impact on eNodeB except for the feature OTDOAHearabilityEnhancement which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1220 IK4305059 - FEATURE 4 RX DIVERSITY NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305059 (3254) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: FEATURE 4 RX DIVERSITY NOT SUPPORTED (1117) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature 4RxDiversity mismatch, lteCell is operating in degraded mode.		
Impact: No impact on eNodeB except for the feature 4RxDiversity which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1221 IK4305060 - FEATURE SYNC SIGNALS DIVERSITY NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305060 (3255) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.Cell	Severity: warning Specific problem: FEATURE SYNC SIGNALS DIVERSITY NOT SUPPORTED (1118) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature mismatch, SyncSignalsDiversity feature is disabled by eNodeB OAM.		
Impact: No impact on eNodeB except for the feature SyncSignalsDiversity which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1222 IK4305061 - FEATURE NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305061 (3256) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.Cell	Severity: warning Specific problem: FEATURE NOT SUPPORTED (1119) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature mismatch, feature is disabled by OAM.		
Impact: No impact on eNodeB except for the feature which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1223 IK4305062 - EXPECTED MODEM NOT EQUIPPED

Alarm	Attributes	Applicable major NE releases
Name: IK4305062 (3257) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.BBCardSpecifics	Severity: critical Specific problem: EXPECTED MODEM NOT EQUIPPED (1120) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LT6.0
Description: This alarm indicates that equipped modem type does not fit the expectedModemType in the database.		
Impact: All features of modem type are not supported and modem is disabled by eNodeB OAM.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1224 IK4305065 - TMA SOFTWARE DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305065 (3260) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.TmaAldEntry	Severity: minor Specific problem: TMA SOFTWARE DOWNLOAD FAILURE (1123) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the software download to the TMA unit failed.		
Impact: The telecom service may be degraded because of missing TMA amplification.		
Remedial action: Retry the download. If the problem persists, contact the next level support.		

Table 22-1225 IK4305066 - RET SOFTWARE DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305066 (3261) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET SOFTWARE DOWNLOAD FAILURE (1124) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the software download to the RET unit failed.		
Impact: No impact on eNodeB except that the antenna tilting can not be changed.		
Remedial action: Retry the download. If the problem persists, contact the next level support.		

Table 22-1226 IK4305067 - RET ANTENNA CONFIGURATION FILE DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305067 (3262) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.RetAldEntry	Severity: minor Specific problem: RET ANTENNA CONFIGURATION FILE DOWNLOAD FAILURE (1125) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the configuration file download to the RET unit failed.		
Impact: No impact on eNodeB except that the antenna tilting can not be changed.		
Remedial action: Retry the download. If the problem persists, contact the next level support.		

Table 22-1227 IK4305068 - ANTENNA PATH LOST

Alarm	Attributes	Applicable major NE releases
Name: IK4305068 (3263) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: ANTENNA PATH LOST (1126) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that at least one antenna path of that cell is lost and that the cell operates in degraded mode (e.g. SIMO/SISO instead of MIMO).		
Impact: Telecom: The cell is still operational, but operates in degraded mode. OAM: No impact on OAM service.		
Remedial action: Verify the antennas and the RFM, belonging to the cell.		

Table 22-1228 IK4305069 - UNKNOWN FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4305069 (3264) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: UNKNOWN FAULT (1127) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the OAM layer of the eNodeB received an unknown fault from an other software layer. A specific handling of this unknown fault is not possible. Eventually available information about the unknown fault is provided in the alarm additional information attribute.		
Impact: The impact on the eNodeB depends on the nature of the unknown fault.		
Remedial action: Contact the next level of support.		

Table 22-1229 IK4305070 - 3GPP TEST MODE CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305070 (3265) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: 3GPP TEST MODE CONFIGURATION FAILURE (1128) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that during the configuration of the 3GPP test mode the call processing layer or the modem software failed to process the provided configuration.		
Impact: The configuration of the desired 3GPP test mode on the cell failed. The test can not be started.		
Remedial action: Check and correct the configuration data. Lock/unlock the cell. If the problem persists, contact the next level support.		

Table 22-1230 IK4305071 - CELL DIV IMBALANCE THRESHOLD EXCEEDED

Alarm	Attributes	Applicable major NE releases
Name: IK4305071 (3266) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: CELL DIV IMBALANCE THRESHOLD EXCEEDED (1129) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates the exceedance of the imbalance threshold between the diversity receive signals.		
Impact: No impact on eNodeB.		
Remedial action: Check the antennas and antenna cables and connections. If the problem persists then replace the RFM.		

Table 22-1231 IK4305072 - OAM CELL FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4305072 (3267) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: OAM CELL FAULT 1 (1130) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Unknown.		
Remedial action: Call the next level of support.		

Table 22-1232 IK4305073 - OAM CELL FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4305073 (3268) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: OAM CELL FAULT 2 (1131) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Unknown.		
Remedial action: Call the next level of support.		

Table 22-1233 IK4305074 - OAM CELL FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4305074 (3269) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: OAM CELL FAULT 3 (1132) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Unknown.		
Remedial action: Call the next level of support.		

Table 22-1234 IK4305075 - OAM CELL FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4305075 (3270) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: OAM CELL FAULT 4 (1133) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Unknown.		
Remedial action: Call the next level of support.		

Table 22-1235 IK4305076 - OAM CELL FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4305076 (3271) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: OAM CELL FAULT 5 (1134) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Unknown.		
Remedial action: Call the next level of support.		

Table 22-1236 IK4305077 - FEATURE GEO LOC PHASE SYNCH NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305077 (3664) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Specific problem: FEATURE GEO LOC PHASE SYNCH NOT SUPPORTED (1135) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature mismatch, Geo loc phase synch feature is disabled by eNodeB OAM.		
Impact: No impact on eNodeB except for the feature Geo loc phase synch which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1237 IK4305078 - FEATURE IMS EMERGENCY CALL NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305078 (3665) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Specific problem: FEATURE IMS EMERGENCY CALL NOT SUPPORTED (1136) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature mismatch, IMS emergency call feature is disabled by eNodeB OAM.		
Impact: No impact on eNodeB except for the feature IMS emergency call which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1238 IK4305079 - FEATURE RACH 2 FORMAT NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305079 (3666) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: FEATURE RACH 2 FORMAT NOT SUPPORTED (1137) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature RACH 2 format mismatch, lteCell is disabled by OAM.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: 1 - Lock the cell. 2 - Ensure compatibility between the eNodeB configuration data and the equipped modem type. 3 - Unlock the cell.		

Table 22-1239 IK4305080 - FEATURE DAS DELAY NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305080 (3667) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: FEATURE DAS DELAY NOT SUPPORTED (1138) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature DAS delay mismatch, lteCell is disabled by OAM.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: 1 - Lock the cell. 2 -Ensure compatibility between the eNodeB configuration data and the equipped modem type. 3 - Unlock the cell.		

Table 22-1240 IK4305082 - ALL ANTENNA PATHS LOST

Alarm	Attributes	Applicable major NE releases
Name: IK4305082 (3669) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: ALL ANTENNA PATHS LOST (1140) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that all antenna paths of that cell are lost and that the cell is disabled.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify the antennas and the RFM, belonging to the cell.		

Table 22-1241 IK4305083 - FEATURE LONG FIBER NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305083 (3670) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: FEATURE LONG FIBER NOT SUPPORTED (1141) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a modem type feature long fibre delay mismatch, lteCell is disabled by OAM.		
Impact: Equipped modem type does not support long fiber lengths, lteCell is disabled by eNodeB OAM.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1242 IK4305084 - INCOMPATIBLE CONFIGURATION MAJOR

Alarm	Attributes	Applicable major NE releases
Name: IK4305084 (3671) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: major Specific problem: INCOMPATIBLE CONFIGURATION MAJOR (1142) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The LTE controller has encountered an error while configuring this RE, possibly due to an incompatibility in the interface between controller and RE. As a result a cell assigned to this RE cannot be configured and activated.		
Impact: All cells assigned to the impacted RE, can not be configured or activated.		
Remedial action: Reconfigure the RE to correct the value of any parameter described in the alarm additional information.		

Table 22-1243 IK4305085 - INCOMPATIBLE CONFIGURATION WARNING

Alarm	Attributes	Applicable major NE releases
Name: IK4305085 (3672) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: warning Specific problem: INCOMPATIBLE CONFIGURATION WARNING (1143) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The LTE controller has encountered an error while configuring the RE but the cell(s) on this RE can still be activated.		
Impact: The cell(s) on the impacted MSRE may not be fully operational.		
Remedial action: Reconfigure the RE to correct the value of any parameter described in the alarm additional information. If this is a multistandard RE and the parameter applies to a common resource of the RE then the value must be Unset.		

Table 22-1244 IK4305086 - LOCAL CELL POWER LIMIT EXCEEDED

Alarm	Attributes	Applicable major NE releases
Name: IK4305086 (3673) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: LOCAL CELL POWER LIMIT EXCEEDED (1144) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The downlink total power for a cell assigned to this RE exceeds the Local Cell Power Limit set at installation time.		
Impact: All cells assigned to the impacted RE, can not be configured or activated.		
Remedial action: Reconfigure the cell of this RE: set the power to be less than or equal to the local cell power limit defined for this MSRE at installation time.		

Table 22-1245 IK4305088 - CONFIGURATION DATA MISMATCH VERSUS HARDWARE

Alarm	Attributes	Applicable major NE releases
Name: IK4305088 (3828) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.RRH	Severity: warning Specific problem: CONFIGURATION DATA MISMATCH VERSUS HARDWARE (1146) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates inconsistency in the eNodeB configuration data versus the equipped hardware.		
Impact: Telecom: The affected hardware and the assigned cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data. Verify and correct the hardware configuration		

Table 22-1246 IK4305089 - CONFIGURATION DATA MISMATCH VERSUS HARDWARE

Alarm	Attributes	Applicable major NE releases
Name: IK4305089 (3829) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.TRDU	Severity: warning Specific problem: CONFIGURATION DATA MISMATCH VERSUS HARDWARE (1146) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates inconsistency in the eNodeB configuration data versus the equipped hardware.		
Impact: Telecom: The affected hardware and the assigned cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data. Verify and correct the hardware configuration		

Table 22-1247 IK4305090 - CONFIGURATION DATA MISMATCH VERSUS HARDWARE

Alarm	Attributes	Applicable major NE releases
Name: IK4305090 (3830) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.ENBEquipment	Severity: warning Specific problem: CONFIGURATION DATA MISMATCH VERSUS HARDWARE (1146) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates inconsistency in the eNodeB configuration data versus the equipped hardware.		
Impact: Telecom: The affected hardware and the assigned cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data. Verify and correct the hardware configuration		

Table 22-1248 IK4305091 - HW SW CAPABILITY CHECK ANTENNA PORT

Alarm	Attributes	Applicable major NE releases
Name: IK4305091 (3831) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Specific problem: HW SW CAPABILITY CHECK ANTENNA PORT (1147) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates inconsistency in the eNodeB AntennaPort configuration data		
Impact: Telecom: No impact on Telecom service. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1249 IK4305092 - CMS INIT FAILED (ERROR)

Alarm	Attributes	Applicable major NE releases
Name: IK4305092 (3832) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: CMS INIT FAILED (ERROR) (1148) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates CMS(Certificate Management Support) initialization request failure due to an error.		
Impact: The certificate enrollment can not start. eNB didn't receive the certificate bundle due to an error on CMP initialization request.		
Remedial action: Check the Sub CMS configuration. Verify and correct the CMS configuration data based on the error code received. Check the network connection. eNB has to get the valid operator-signed certificate(s) before the concerned traffic can be resumed.		

Table 22-1250 IK4305093 - CMS INIT FAILED (TIMEOUT)

Alarm	Attributes	Applicable major NE releases
Name: IK4305093 (3833) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: CMS INIT FAILED (TIMEOUT) (1149) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates CMS(Certificate Management Support) initialization request failure due to timeout.		
Impact: The certificate enrollment can not start. eNB didn't receive the certificate bundle due to time out waiting response on CMP initialization request.		
Remedial action: eNB has to get the valid operator-signed certificate(s) before the concerned traffic can be resumed. Check the network connection, then check IP connectivity, HTTP connectivity and Sub CMS/CMS server connectivity. Check the Sub CMS/CMS configuration.		

Table 22-1251 IK4305094 - CMS KEY UPDATE FAILED (ERROR)

Alarm	Attributes	Applicable major NE releases
Name: IK4305094 (3834) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: CMS KEY UPDATE FAILED (ERROR) (1150) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates CMS(Certificate Management Support) key update failure due to an error.		
Impact: The certificate enrollment can not start. eNB didn't receive the certificate bundle due to an error on CMP key update request.		
Remedial action: Check the Sub CMS configuration. Verify and correct the CMS configuration data based on the error code received.		

Table 22-1252 IK4305095 - CMS KEY UPDATE FAILED (TIMEOUT)

Alarm	Attributes	Applicable major NE releases
Name: IK4305095 (3835) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: CMS KEY UPDATE FAILED (TIMEOUT) (1151) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates CMS(Certificate Management Support) key update activity failure due to timeout.		
Impact: The certificate enrollment can not start. eNB did not receive the certificate bundle due to time out waiting response on CMP key update request.		
Remedial action: The eNodeB did not receive a message response back from the Sub-CMS during a CMP message exchange. The timeout could be because the Sub CMS is not online or the CMS IP address was incorrect or the network is down or some other failure reason.		

Table 22-1253 IK4305097 - OPERATOR CERTIFICATE ENROLLMENT ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4305097 (3837) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: OPERATOR CERTIFICATE ENROLLMENT ERROR (1153) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that certificate enrollment can not be started because no authentication credentials were found.		
Impact: eNodeB can not start the operator certificate enrollment.		

(1 of 2)

22 – Alcatel-Lucent 9xxx eNodeB alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Provide the shared key for authentication of CMPv2 messages . eNodeB uses a shared key for authentication to Sub CMS when performing certificate enrollment.		

(2 of 2)

Table 22-1254 IK4305098 - #3 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305098 (3838) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #3 IPSEC TUNNEL FAILURE (1154) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates a failure of IPsec tunnel (#3).		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1255 IK4305099 - FEATURE eMBMS NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305099 (3839) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Specific problem: FEATURE eMBMS NOT SUPPORTED (1155) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the cell configuration for eMBMS feature is not supported by equipped modem type		
Impact: No impact on eNodeB except for the feature eMBMS which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1256 IK4305100 - FEATURE TTI BUNDLING FOR VoIP NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305100 (3840) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Specific problem: FEATURE TTI BUNDLING FOR VoIP NOT SUPPORTED (1156) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: This alarm indicates that the cell configuration for TTI bundling for VoIP feature is not supported by equipped modem type		
Impact: No impact on eNodeB except for the feature TTI bundling for VoIP which is disabled.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

(2 of 2)

Table 22-1257 IK4305101 - FEATURE DUAL-BAND NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305101 (3841) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.Cell	Severity: critical Specific problem: FEATURE DUAL-BAND NOT SUPPORTED (1157) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the cell configuration with dual band ID is not supported by equipped modem type		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1258 IK4305102 - FEATURE DUPLEX MODE NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305102 (3842) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.Cell	Severity: critical Specific problem: FEATURE DUPLEX MODE NOT SUPPORTED (1158) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the cell configuration duplex-mode is not supported by equipped modem type		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1259 IK4305103 - FEATURE OP-PUCCH NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305103 (3843) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: FEATURE OP-PUCCH NOT SUPPORTED (1159) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the cell configuration for OP-PUCCH is not supported by equipped modem type		
Impact: No impact on eNodeB except for the feature OP-PUCCH per cell which is disabled.		
Remedial action: Verify and correct the configuration data.		

Table 22-1260 IK4305104 - HW SW CAPABILITY DOWNLINK CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305104 (3844) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: HW SW CAPABILITY DOWNLINK CONFIGURATION FAILURE (1160) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the cell DL configuration is not supported by equipped modem type		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1261 IK4305105 - FEATURE 3 MHZ NOT SUPPORTED BY MODEM TYPE

Alarm	Attributes	Applicable major NE releases
Name: IK4305105 (3845) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: FEATURE 3 MHZ NOT SUPPORTED BY MODEM TYPE (1161) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that modem type does not support 3 MHz bandwidth.		
Impact: Equipped modem type does not support 3 MHz and modem is disabled by eNodeB OAM.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1262 IK4305106 - #4 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305106 (3846) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #4 IPSEC TUNNEL FAILURE (1162) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure of the IPsec tunnel (#4).		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1263 IK4305107 - #5 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305107 (3847) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #5 IPSEC TUNNEL FAILURE (1163) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure of the IPsec tunnel (#5).		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1264 IK4305108 - #6 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305108 (3848) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #6 IPSEC TUNNEL FAILURE (1164) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure of the IPsec tunnel (#6).		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1265 IK4305109 - #7 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305109 (3849) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #7 IPSEC TUNNEL FAILURE (1165) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure of the IPsec tunnel (#7).		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1266 IK4305110 - #8 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305110 (3850) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #8 IPSEC TUNNEL FAILURE (1166) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure of the IPsec tunnel (#8).		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1267 IK4305111 - #9 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305111 (3851) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #9 IPSEC TUNNEL FAILURE (1167) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure of the IPsec tunnel (#9).		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1268 IK4305112 - #10 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305112 (3852) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #10 IPSEC TUNNEL FAILURE (1168) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure of the IPsec tunnel (#10).		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1269 IK4305113 - DNS SERVICE UNAVAILABLE

Alarm	Attributes	Applicable major NE releases
Name: IK4305113 (3853) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: DNS SERVICE UNAVAILABLE (1169) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that No DNS server at all is available for resolving a symbolic address to a numeric IP address		
Impact: The IPsec tunnel cannot be setup since IKEv2 fails.		
Remedial action: Check the state of DNS server(s) and the state of the comm. network between eNB and DNS		

Table 22-1270 IK4305114 - INCOMPATIBLE UCF MIM VERSION

Alarm	Attributes	Applicable major NE releases
Name: IK4305114 (4712) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: INCOMPATIBLE UCF MIM VERSION (1170) Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates the MIM version of the UCF is incompatible with the MIM version of the running SW version.		
Impact: UCF is not used during data migration to provide default values for attributes. Default values from eNB software are used instead.		
Remedial action: Generate a UCF that is compatible with the MIM version of the running SW version.		

Table 22-1271 IK4305115 - INVALID UCF

Alarm	Attributes	Applicable major NE releases
Name: IK4305115 (4713) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: INVALID UCF (1171) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR13.1 LR13.3
Description: This alarm indicates that the UCF has an error that prevents it from being used by the eNodeB.		
Impact: UCF is not used during data migration to provide default values for attributes. Default values from eNB software are used instead.		
Remedial action: Generate a UCF that is valid, readable and syntactically correct.		

Table 22-1272 IK4305116 - SECONDARY CPRI PORT CONFIGURATION MISMATCH

Alarm	Attributes	Applicable major NE releases
Name: IK4305116 (5352) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RRH	Severity: minor Specific problem: SECONDARY CPRI PORT CONFIGURATION MISMATCH (1172) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates configured secondary CPRI port position is conflict with its real secondary CPRI port position or other RRHs real CPRI port position.		
Remedial action: Verify and correct the configuration data or Verify and correct the hardware configuration		

Table 22-1273 IK4305117 - CELL ANTENNA PORT NUMBER MISMATCH VERSUS MODEM LOAD TYPE

Alarm	Attributes	Applicable major NE releases
Name: IK4305117 (5353) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: CELL ANTENNA PORT NUMBER MISMATCH VERSUS MODEM LOAD TYPE (1173) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates the DL/UL antenna number configured for this Cell mismatch with Modem load. Triggers for raising the alarm: 1. If (lteCell->numberOfULAntennas !=8 Or CellActivationService.IsMultiRRHEnabled=True) AND EnbTDD.Is8ALoadNeeded=False 2. If (lteCell->numberOfULAntennas!=8 AND CellActivationService.IsMultiRRHEnabled=False) AND EnbTDD.Is8ALoadNeeded=True Triggers for clear the alarm: 1. If (lteCell->numberOfULAntennas ==8 Or CellActivationService.IsMultiRRHEnabled=True) AND EnbTDD.Is8ALoadNeeded=True 2. If (lteCell->numberOfULAntennas!=8 AND CellActivationService.IsMultiRRHEnabled=False) AND EnbTDD.Is8ALoadNeeded=False"		
Remedial action: Online modify parameter is8ALoadNeeded on EnbTDD object or modify DL/UL antenna number configuration of lteCell to make them consistent.		

Table 22-1274 IK4305118 - M3 LINK RESET DUE ON-LINE M3-INTERFACE CLASS PARAMETER UPDATE

Alarm	Attributes	Applicable major NE releases
Name: IK4305118 (5354) Type: communicationsAlarm (4) Package: lte Raised on class: lte.M3MmeTransportLayerAccess	Severity: variable Specific problem: M3 LINK RESET DUE ON-LINE M3-INTERFACE CLASS PARAMETER UPDATE (1174) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates M3 link has reset when operator updates the value of M3-interface Class parameter on-line.		
Remedial action: No action is required.		

Table 22-1275 IK4305119 - AUTOMATED HANDOVER PARAMETER ADJUSTMENT NOT POSSIBLE

Alarm	Attributes	Applicable major NE releases
Name: IK4305119 (4714) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: AUTOMATED HANDOVER PARAMETER ADJUSTMENT NOT POSSIBLE (1175) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L
Description: This alarm indicates the SON process that automatically adjusts intra-frequency handover parameters cannot make any adjustments because of the setting of the configurable limits on the allowed adjustments.		
Impact: The cell cannot initiate HO parameter adjustments to improve HO performance.		
Remedial action: Modify the handover parameter adjustment limits to allow additional values.		

Table 22-1276 IK4305120 - TOTAL LOSS OF EICIC PHASE SYNC

Alarm	Attributes	Applicable major NE releases
Name: IK4305120 (4715) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: TOTAL LOSS OF EICIC PHASE SYNC (1176) Implicitly cleared: true Default probable cause: timingProblem (903)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L
Description: This alarm indicates that the eICIC functionality is being disabled due to very large clock drift		
Impact: High interference received at the UE due to the timing misalignment cancels any feature gain.		
Remedial action: Check the timing source of the eNB		

Table 22-1277 IK4305121 - TOTAL LOSS OF EICIC PHASE SYNC

Alarm	Attributes	Applicable major NE releases
Name: IK4305121 (4716) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: TOTAL LOSS OF EICIC PHASE SYNC (1176) Implicitly cleared: true Default probable cause: timingProblem (903)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the eICIC functionality is being disabled due to very large clock drift		
Impact: High interference received at UE due to timing misalignment rendering feature gain null.		
Remedial action: Check the timing source of the eNB		

Table 22-1278 IK4305122 - LOGIN AUTHENTICATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305122 (4717) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: LOGIN AUTHENTICATION FAILURE (1177) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1
Description: This alarms indicates that a login attempt has failed authentication.		
Impact: The eNB might be subject to a password guessing attack.		
Remedial action: Check the cause of the failure.		

Table 22-1279 IK4305124 - SHUTDOWN TIMEOUT WITH EMERGENCY HIGH PRIORITY CALLS ACTIVE

Alarm	Attributes	Applicable major NE releases
Name: IK4305124 (4718) Type: communicationsAlarm (4) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: SHUTDOWN TIMEOUT WITH EMERGENCY HIGH PRIORITY CALLS ACTIVE (1178) Implicitly cleared: true Default probable cause: callEstablishmentError (778)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the shutdown timer has expired for a shutting down MO but the cell has at least one emergency or high priority call active. The shutting down MO will not be locked until all emergency and high priority calls have terminated.		
Impact: Transmit power is not gradually reduced in the affected cell to encourage handoffs of existing calls. Shutting down MO is not locked until all emergency and high priority calls are terminated.		
Remedial action: Operator should wait for all emergency and high priority calls to terminate or force the shut down to end by locking the shutting down MO.		

Table 22-1280 IK4305125 - EMERGENCY HIGH PRIORITY CALLS ACTIVE FOR BLOCKED CELL

Alarm	Attributes	Applicable major NE releases
Name: IK4305125 (4719) Type: communicationsAlarm (4) Package: lte Raised on class: lte.Cell	Severity: warning Specific problem: EMERGENCY HIGH PRIORITY CALLS ACTIVE FOR BLOCKED CELL (1179) Implicitly cleared: true Default probable cause: callEstablishmentError (778)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that there is at least one emergency or high priority call active on a cell that is blocked. The cell will not be disabled until all emergency and high priority calls have terminated.		
Impact: Transmit power is not gradually reduced in the affected cell to encourage handoffs of existing calls. Shutting down MO is not locked until all emergency and high priority calls are terminated.		
Remedial action: Operator should wait for all emergency and high priority calls to terminate or force the shut down to end by locking the shutting down MO.		

Table 22-1281 IK4305126 - CELL MAJOR CONFIGURATION ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4305126 (4720) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: CELL MAJOR CONFIGURATION ERROR (1180) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates there is a major error in the configuration of the cell.		
Impact: Configuration error may prevent the cell from behaving properly. Degradation of service is possible.		
Remedial action: Operator must set the attribute(s) in error to a value consistent with the configuration of the lteCell.		

Table 22-1282 IK4305127 - ENB WARNING CONFIGURATION ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4305127 (4721) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: ENB WARNING CONFIGURATION ERROR (1181) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates there is a warning error in the configuration of the eNB.		
Impact: Configuration error may prevent the value of the attribute in error from being used in the eNB. However, no degradation of service will result.		
Remedial action: Operator should set the attribute(s) in error to a value consistent with the configuration of the eNB.		

Table 22-1283 IK4305128 - RFTRACE NOT STARTED DUE TO ACTIVE DDT

Alarm	Attributes	Applicable major NE releases
Name: IK4305128 (5355) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: RFTRACE NOT STARTED DUE TO ACTIVE DDT (1182) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates that RF trace could not be started because dynamic debug trace is already active.		
Remedial action: Verify and correct the configuration data.		

Table 22-1284 IK4305129 - CB TWAMP EXCESSIVE TEST SESSIONS

Alarm	Attributes	Applicable major NE releases
Name: IK4305129 (4722) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: warning Specific problem: CB TWAMP EXCESSIVE TEST SESSIONS (1183) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates 6 TWAMP test-sessions have been requested in a TWAMP Control-session in a VLAN. 5 is the maximum supported number.		
Impact: TWAMP test sessions above the number supported are ignored.		
Remedial action: Check TWAMP client configuration to ensure it matches maximum requirements of the base station server.		

Table 22-1285 IK4305130 - MODULE SCENARIO ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4305130 (4723) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: MODULE SCENARIO ERROR (1070) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the scenario failure due to no-response from the module.		
Impact: Telecom: The telecom resources processed by the module are lost as the module is out of service. OAM: No impact on OAM service.		
Remedial action: Reset the module. If the alarm persists, replace the module.		

Table 22-1286 IK4305131 - MISSING CALLP SUBSCRIPTION

Alarm	Attributes	Applicable major NE releases
Name: IK4305131 (4724) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: MISSING CALLP SUBSCRIPTION (1071) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the CallP instance did not send the subscribe message due to initialization error in the CallP instance.		
Impact: Telecom: The telecom resources processed by the module not operational. OAM: No impact on OAM service.		
Remedial action: Reset the eNodeB.		

Table 22-1287 IK4305132 - MISSING CALLP REQUEST

Alarm	Attributes	Applicable major NE releases
Name: IK4305132 (4725) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: MISSING CALLP REQUEST (1072) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that there is no request from any CallP instance for the MIM status.		
Impact: Telecom: The telecom resources processed by the module not operational. OAM: No impact on OAM service.		
Remedial action: Reset the eNodeB.		

Table 22-1288 IK4305133 - INCORRECT FREQUENCY BAND

Alarm	Attributes	Applicable major NE releases
Name: IK4305133 (4726) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: INCORRECT FREQUENCY BAND (1074) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the module is not compatible with the frequency band configuration data.		
Impact: The cell is not operational.		
Remedial action: Verify the frequency band of the module with the configured frequency band. If the alarm persists, replace the module.		

Table 22-1289 IK4305134 - INVALID CONFIGURATION DATA

Alarm	Attributes	Applicable major NE releases
Name: IK4305134 (4727) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.MODULE	Severity: critical Specific problem: INVALID CONFIGURATION DATA (1077) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates inconsistency in the eNodeB configuration data.		
Impact: The cell is not operational.		
Remedial action: Verify and correct the configuration data.		

Table 22-1290 IK4305135 - INVALID TRANSPORT CONFIGURATION DATA

Alarm	Attributes	Applicable major NE releases
Name: IK4305135 (4728) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.MODULE	Severity: critical Specific problem: INVALID TRANSPORT CONFIGURATION DATA (1081) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates an inconsistency in the eNodeB transport configuration data.		
Impact: Telecom traffic is not possible.		
Remedial action: Verify and correct the configuration data.		

Table 22-1291 IK4305136 - UNKNOWN FAULT

Alarm	Attributes	Applicable major NE releases
Name: IK4305136 (4729) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.MODULE	Severity: warning Specific problem: UNKNOWN FAULT (1127) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the OAM layer of the eNodeB received an unknown fault from another software layer.		
Impact: The impact of of the fault is unknown.		
Remedial action: Refer to the alarm additional information for further detail, contact the next level of support.		

Table 22-1292 IK4305137 - RESET DATABASE

Alarm	Attributes	Applicable major NE releases
Name: IK4305137 (4730) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: RESET DATABASE (1145) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to restore database.		
Impact: The controller board resets automatically with an empty database.		
Remedial action: Contact the next level of support.		

Table 22-1293 IK4305138 - CELL CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305138 (4731) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: CELL CONFIGURATION FAILURE (1075) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to configure the cell.		
Impact: The cell remains disabled until properly configured.		
Remedial action: Verify the cell configuration data. Reset the modem and allocate the cell resources.		

Table 22-1294 IK4305139 - MODEM FUNCTION AVAILABLE WITHOUT LTECELL CONFIGURATION

Alarm	Attributes	Applicable major NE releases
Name: IK4305139 (4732) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: warning Specific problem: MODEM FUNCTION AVAILABLE WITHOUT LTECELL CONFIGURATION (1184) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that there is a modem function equipped but no cell is mapped to the modem.		
Impact: The cell remains disabled until properly configured.		
Remedial action: Verify and correct the configuration data.		

Table 22-1295 IK4305140 - EXPECTED MODEM NOT EQUIPPED

Alarm	Attributes	Applicable major NE releases
Name: IK4305140 (4733) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: EXPECTED MODEM NOT EQUIPPED (1120) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that equipped modem type does not fit the expectedModemType in the database.		
Impact: All features of modem type are not supported and modem is disabled by eNodeB OAM.		
Remedial action: Modify the database to correctly describe the modem hardware.		

Table 22-1296 IK4305142 - OAM INTERFACE CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305142 (4734) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: OAM INTERFACE CONFIGURATION FAILURE (654) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure of the IP and Ethernet configuration on the OAM interface.		
Impact: Telecom traffic and eNodeB management are not possible.		
Remedial action: Reset the eNodeB. If the alarm persists, contact the next level of support.		

Table 22-1297 IK4305143 - TELECOM INTERFACE CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305143 (4735) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: TELECOM INTERFACE CONFIGURATION FAILURE (655) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure of the IP and Ethernet configuration on the telecom interface.		
Impact: Telecom traffic and eNodeB management are not possible.		
Remedial action: Reset the eNodeB. If the alarm persists, contact the next level of support.		

Table 22-1298 IK4305144 - SSH SERVER START FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305144 (4736) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: SSH SERVER START FAILURE (656) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to start the SSH server.		
Impact: OAM SSH sessions on the eNodeB are not possible.		
Remedial action: Reset the eNodeB.		

Table 22-1299 IK4305145 - SNTP CLIENT START FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305145 (4737) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: SNTP CLIENT START FAILURE (658) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to start the SNTP client.		
Impact: The eNodeB is not time synchronized with the NTP server.		
Remedial action: Check the network connectivity of NTP server and NTP server address provisioning. If the NTP server is unreachable or the provisioning is incorrect, address those aspects. If all other possible causes have been eliminated, reset the eNodeB.		

Table 22-1300 IK4305146 - DHCP CLIENT START FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305146 (4738) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: DHCP CLIENT START FAILURE (661) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to start the DHCP client on the eNodeB network interface.		
Impact: Telecom traffic and eNodeB management are not possible.		
Remedial action: Reset the eNodeB.		

Table 22-1301 IK4305147 - UNEXPECTED DATA FROM DHCP SERVER

Alarm	Attributes	Applicable major NE releases
Name: IK4305147 (4739) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: UNEXPECTED DATA FROM DHCP SERVER (663) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the lease time offered by the DHCP server is different from the lease time requested by the DHCP client.		
Impact: No impact on telecom or OAM service.		
Remedial action: Configure the DHCP server with an infinite lease time.		

Table 22-1302 IK4305148 - INCONSISTENT DATA FROM DHCP SERVER

Alarm	Attributes	Applicable major NE releases
Name: IK4305148 (4740) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: INCONSISTENT DATA FROM DHCP SERVER (664) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the eNodeB does not support the modified IP address offered by the DHCP server.		
Impact: The eNodeB uses the old IP address. eNodeB management is impacted during reset.		
Remedial action: Reset the eNodeB.		

Table 22-1303 IK4305149 - SCTP INIT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305149 (4741) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: SCTP INIT FAILURE (756) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to initialize the SCTP access.		
Impact: Telecom traffic is not possible.		
Remedial action: Reset the eNodeB.		

Table 22-1304 IK4305150 - WALG INITIALIZATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305150 (4742) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: critical Specific problem: WALG INITIALIZATION FAILURE (660) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates a failure to initialize the eNodeB network processor.		
Impact: Telecom traffic is not possible.		
Remedial action: Reset the eNodeB.		

Table 22-1305 IK4305151 - END OF THE HOLDOVER DURATION

Alarm	Attributes	Applicable major NE releases
Name: IK4305151 (4743) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: critical Specific problem: END OF THE HOLDOVER DURATION (763) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The internal oscillator is not being disciplined by the reference source and its frequency drift may soon exceed allowed limits. This holdover duration is dependent on the type of oscillator.		
Impact: The eNB shall stop RF transmission.		
Remedial action: Fix the timing reference source.		

Table 22-1306 IK4305152 - LOSS OF EMBMS PHASE SYNC

Alarm	Attributes	Applicable major NE releases
Name: IK4305152 (4744) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: major Specific problem: LOSS OF EMBMS PHASE SYNC (755) Implicitly cleared: true Default probable cause: lossOfSignal (99)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the phase-sync requirement for supporting eMBMS can no longer be guaranteed due to the loss of clock reference.		
Impact: eMBMS specified commitment for error rate and cell coverage can no longer be guaranteed due to phase drift.		
Remedial action: If alarm remains consider the Clock reference alarms to determine the cause of the onset of holdover.		

Table 22-1307 IK4305153 - #3 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305153 (5356) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #3 IPSEC TUNNEL FAILURE (1154) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates a failure of IPsec tunnel (#3).		
Remedial action: Check the IP Security configuration.		

Table 22-1308 IK4305154 - CELL CONFIGURATION DATA MISMATCH VERSUS CORRESPONDING FEATURE DEACTIVATION

Alarm	Attributes	Applicable major NE releases
Name: IK4305154 (5357) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: CELL CONFIGURATION DATA MISMATCH VERSUS CORRESPONDING FEATURE DEACTIVATION (1185) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates the cell configuration data mismatch versus coreponding feature deactivation.		
Remedial action: Verify and correct the configuration data.		

Table 22-1309 IK4305155 - OAM SCB FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4305155 (4745) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: OAM SCB FAULT 2 (1186) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1310 IK4305156 - OAM SCB FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4305156 (4746) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: OAM SCB FAULT 3 (1187) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1311 IK4305157 - OAM SCB FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4305157 (4747) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: OAM SCB FAULT 4 (1188) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1312 IK4305158 - OAM MODEM FUNCTION FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4305158 (4748) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: OAM MODEM FUNCTION FAULT 1 (1189) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1313 IK4305159 - OAM MODEM FUNCTION FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4305159 (4749) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: OAM MODEM FUNCTION FAULT 2 (1190) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This is a spare alarm for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1314 IK4305160 - OAM MODEM FUNCTION FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4305160 (4750) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: OAM MODEM FUNCTION FAULT 3 (1191) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1315 IK4305161 - FEATURE 3 MHZ NOT SUPPORTED BY MODEM TYPE

Alarm	Attributes	Applicable major NE releases
Name: IK4305161 (4751) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: FEATURE 3 MHZ NOT SUPPORTED BY MODEM TYPE (1161) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that modem type does not support 3 MHz bandwidth.		
Impact: The modem is disabled by eNodeB OAM.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped modem type.		

Table 22-1316 IK4305162 - ETHERNET TRANSPORT FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305162 (4752) Type: communicationsAlarm (4) Package: Ite Raised on class: Ite.MODULE	Severity: major Specific problem: ETHERNET TRANSPORT FAILURE (665) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates an interface error due to the counters exceeding the configured threshold.		
Impact: The performance of the telecom and OAM services are degraded.		
Remedial action: Check the network status and cabling if possible. If the alarm persists, contact the next level support.		

Table 22-1317 IK4305163 - DHCP CLIENT LEASE FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305163 (4753) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: major Specific problem: DHCP CLIENT LEASE FAILURE (669) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure of the DHCP client to obtain the lease from the DHCP server.		
Impact: Telecom traffic is not possible and the eNodeB backhaul interface is not configured.		
Remedial action: Check for connectivity. Check for DHCP server and network configurations.		

Table 22-1318 IK4305164 - IP LOOPBACK ACTIVE

Alarm	Attributes	Applicable major NE releases
Name: IK4305164 (4754) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: warning Specific problem: IP LOOPBACK ACTIVE (670) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the IP loopback is activated.		
Impact: Telecom: Telecom traffic is not possible. OAM: The maintenance is restricted to local terminal.		
Remedial action: Call the next level of support.		

Table 22-1319 IK4305165 - MODULE SCENARIO ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4305165 (4755) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RFME	Severity: critical Specific problem: MODULE SCENARIO ERROR (1070) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates an internal procedure failure due to no response from the module.		
Impact: Telecom: The telecom resources processed by the module are lost as the module is out of service. OAM: Impact on OAM service during reset.		
Remedial action: Reset the eNB. If the alarm persists, replace the module.		

Table 22-1320 IK4305166 - OAM RFME FAULT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4305166 (4756) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: OAM RFME FAULT 4 (1192) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1321 IK4305167 - OAM RFME FAULT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4305167 (4757) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: OAM RFME FAULT 5 (1193) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1322 IK4305168 - OAM RFME FAULT 6

Alarm	Attributes	Applicable major NE releases
Name: IK4305168 (4758) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: OAM RFME FAULT 6 (1194) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1323 IK4305169 - VSWR CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4305169 (4759) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: VSWR CONFIGURATION FAILURE (1085) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the thresholds of the VSWR configuration could not be applied to the eNodeB.		
Impact: No impact on telecom or OAM service but VSWR supervision may not be active.		
Remedial action: Verify the correctness of the configuration data and apply the data again. If this fails to correct the fault then reset the eNodeB.		

Table 22-1324 IK4305170 - RFME AVAILABLE WITHOUT LTECELL CONFIGURATION

Alarm	Attributes	Applicable major NE releases
Name: IK4305170 (4760) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: warning Specific problem: RFME AVAILABLE WITHOUT LTECELL CONFIGURATION (1195) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that there is RFME equipped but no cell is mapped.		
Impact: The cell is disabled.		
Remedial action: Verify and correct the configuration data.		

Table 22-1325 IK4305171 - LOCAL CELL POWER LIMIT EXCEEDED

Alarm	Attributes	Applicable major NE releases
Name: IK4305171 (4761) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: minor Specific problem: LOCAL CELL POWER LIMIT EXCEEDED (1144) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The downlink total power for a cell assigned to this RE exceeds the Local Cell Power Limit set at installation time.		
Impact: All cells assigned to the impacted RE, can not be configured or activated.		
Remedial action: Reconfigure the cell of this RE: set the power to be less than or equal to the local cell power limit defined for this MSRE at installation time.		

Table 22-1326 IK4305172 - MEDO FAULT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4305172 (4762) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: MEDO FAULT 1 (1196) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for MEDO for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1327 IK4305173 - MEDO FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4305173 (4763) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: MEDO FAULT 2 (1197) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for MEDO for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1328 IK4305174 - MEDO FAULT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4305174 (4764) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: MEDO FAULT 3 (1198) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This is a spare alarm for MEDO for future use.		
Impact: Refer to additional information in the alarm report.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1329 IK4305177 - RESET DATABASE

Alarm	Attributes	Applicable major NE releases
Name: IK4305177 (4765) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: critical Specific problem: RESET DATABASE (1145) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure to restore database.		
Impact: The controller board resets automatically with an empty database.		
Remedial action: Contact the next level of support.		

Table 22-1330 IK4305178 - CONFIGURATION DATA MISMATCH VERSUS HARDWARE

Alarm	Attributes	Applicable major NE releases
Name: IK4305178 (4766) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RFME	Severity: warning Specific problem: CONFIGURATION DATA MISMATCH VERSUS HARDWARE (1146) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates inconsistency in the eNodeB configuration data versus the equipped hardware.		
Impact: The affected hardware and the assigned cell is not operational.		
Remedial action: Verify and correct the configuration data. Verify and correct the hardware configuration		

Table 22-1331 IK4305179 - CERTIFICATE EXPIRED

Alarm	Attributes	Applicable major NE releases
Name: IK4305179 (4767) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: CERTIFICATE EXPIRED (1152) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The eNodeB discovered an expired certificate during validity date audit. Re-install or reconfigure the eNodeB so that key pair creation and certificate enrollment with the CMS are performed again.		
Impact: The ltpsec tunnels are using expired certificates.		
Remedial action: Trigger the certificate enrollment to generate new certificates.		

Table 22-1332 IK4305180 - FEATURE CARRIER AGGREGATION NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305180 (4768) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: FEATURE CARRIER AGGREGATION NOT SUPPORTED (1199) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the cell configuration with Carrier Aggregation is not supported by the equipped modem type.		
Impact: Telecom traffic is not enabled for the cell.		
Remedial action: Verify and correct the configuration data.		

Table 22-1333 IK4305181 - FEATURE SIX CELLS NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305181 (4769) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: FEATURE SIX CELLS NOT SUPPORTED (1200) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the cell configuration with six cells with single carrier is not supported by the equipped modem type.		
Impact: Telecom traffic is not enabled for the cell.		
Remedial action: Verify and correct the configuration data.		

Table 22-1334 IK4305182 - FEATURE TR-CARRIER NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4305182 (4770) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.Cell	Severity: critical Specific problem: FEATURE TR-CARRIER NOT SUPPORTED (1201) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that the cell configuration with Tri-carrier is not supported by the equipped modem type.		
Impact: Telecom traffic is not enabled for the cell.		
Remedial action: Verify and correct the configuration data.		

Table 22-1335 IK4305183 - SCB TWAMP EXCESSIVE TEST SESSIONS

Alarm	Attributes	Applicable major NE releases
Name: IK4305183 (4771) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: warning Specific problem: SCB TWAMP EXCESSIVE TEST SESSIONS (1202) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates 6 TWAMP test-sessions have been requested in a TWAMP Control-session in a VLAN. 5 is the maximum supported number.		
Impact: TWAMP test sessions above the number supported are ignored.		
Remedial action: Check the TWAMP client configuration to ensure it matches maximum requirements of the base station server.		

Table 22-1336 IK4305184 - RFTRACE STOPPED DUE TO ACTIVE DDT

Alarm	Attributes	Applicable major NE releases
Name: IK4305184 (5358) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.ENBEquipment	Severity: minor Specific problem: RFTRACE STOPPED DUE TO ACTIVE DDT (1203) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates that RF trace has stopped because dynamic debug trace has been activated.		
Remedial action: Verify and correct the configuration data.		

Table 22-1337 IK4305185 - CMS INIT START

Alarm	Attributes	Applicable major NE releases
Name: IK4305185 (5359) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: CMS INIT START (1204) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that operator certificate enrollment scenario started.		
Remedial action: No action is required.		

Table 22-1338 IK4305186 - CPRI LICENSE REQUIRED TO SUPPORT BANDWIDTH FOR CONFIGURED LTECELL

Alarm	Attributes	Applicable major NE releases
Name: IK4305186 (5360) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: CPRI LICENSE REQUIRED TO SUPPORT BANDWIDTH FOR CONFIGURED LTECELL (1205) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the required CPRI line rate to support the bandwidth of the configured cell can not be achieved due to licensing restriction.		
Remedial action: The operator shall purchase the license for CPRI rate 5		

Table 22-1339 IK4306000 - UNEXPECTED RF MODULE RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4306000 (5361) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: variable Specific problem: UNEXPECTED RF MODULE RESET (1206) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that the ENB suffered from an unexpected, unplanned failure on the RFM. Specific details are in the Additional Text.		
Remedial action: No action is required.		

Table 22-1340 IK4306001 - SESSION STOP FAILURE AT MCE

Alarm	Attributes	Applicable major NE releases
Name: IK4306001 (4772) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Mce	Severity: variable Specific problem: SESSION STOP FAILURE AT MCE (1207) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the Session Stop procedure has failed at MCE level.		
Impact: Risk of MBSFN mode breakdown for the MBSFN Area having the session wrongly stopped.		
Remedial action: No action is required.		

Table 22-1341 IK4306002 - SESSION STOP FAILURE AT ENB

Alarm	Attributes	Applicable major NE releases
Name: IK4306002 (4773) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: SESSION STOP FAILURE AT ENB (1208) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the Session Stop procedure has failed at eNB level.		
Impact: Risk of MBSFN mode breakdown for the MBSFN Area having the session wrongly stopped.		
Remedial action: No action is required.		

Table 22-1342 IK4306003 - MBSFN - POSITIONNING REFERENCE SIGNAL COLLISION

Alarm	Attributes	Applicable major NE releases
Name: IK4306003 (4774) Type: operationalViolation (93) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: MBSFN - POSITIONNING REFERENCE SIGNAL COLLISION (1209) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the set of sub-frames allocated by the MCE for eMBMS services overwrites some sub-frames dedicated to Positioning reference signals.		
Impact: New eMBMS services may not be transmitted or geolocalization of users may fail.		
Remedial action: No action is required.		

Table 22-1343 IK4306004 - MBSFN - ABS SUB-FRAME COLLISON

Alarm	Attributes	Applicable major NE releases
Name: IK4306004 (4775) Type: operationalViolation (93) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: MBSFN - ABS SUB-FRAME COLLISON (1210) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the set of sub-frames allocated by the MCE for eMBMS services includes some Almost Blank Subframes reserved for the eICIC feature.		
Impact: New eMBMS services may not be transmitted or the current cell may interfere with some neighbour cells.		
Remedial action: No action is required.		

Table 22-1344 IK4306005 - LACK OF UNICAST RESOURCES DUE TO EMBMS RESOURCE ALLOCATION

Alarm	Attributes	Applicable major NE releases
Name: IK4306005 (4776) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: LACK OF UNICAST RESOURCES DUE TO EMBMS RESOURCE ALLOCATION (1211) Implicitly cleared: true Default probable cause: congestion (694)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the amount of sub-frames needed by the unicast bearers is exceeding the configured threshold.		
Impact: Unicast traffic in excess may be discarded.		
Remedial action: Multiple actions are possible: (1) use a greater value of unicastPercentUsageThreshold (2) use a larger value of unicastCongestionTime (3) reserve more resources for eMBMS in eNB admission control (percentMcastReservedPRB) (4) limit the eMBMS resources over the different MBSFN areas in the MCE configuration (5) set up external equipments so that they can notify the MCE of session start with more anticipation and unicast bearers have more time to disconnect		

Table 22-1345 IK4306006 - NETCONF QUEUE LIMIT EXCEEDED

Alarm	Attributes	Applicable major NE releases
Name: IK4306006 (4777) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: NETCONF QUEUE LIMIT EXCEEDED (1212) Implicitly cleared: true Default probable cause: queueSizeExceeded (712)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates that one or more DB update request messages received from eNB CalIP has been discarded by eNB OAM due to Netconf queue exceeding its limit. The alarm is cleared when no messages have been discarded for 5 minutes.		
Impact: DB updates triggered by CalIP (such as Neighbor relation and X2Access additions/deletion/modifications) cannot be made.		
Remedial action: Remove any PCI related mismatches using WPS checks (specifically check Nei_Lte_0003)		

Table 22-1346 IK4306007 - ALL ALARMS CLEARED

Alarm	Attributes	Applicable major NE releases
Name: IK4306007 (4778) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: ALL ALARMS CLEARED (1213) Implicitly cleared: true Default probable cause: softwareProgramAbnormallyTerminated (719)	<ul style="list-style-type: none"> LR13.1
Description: This is a pseudo alarm to indicate that all pending alarms have been cleared, e.g. by a reset of the eNB controller.		
Impact: There is no impact by this alarm.		
Remedial action: No Maintenance Action requires.		

Table 22-1347 IK4306008 - #11 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306008 (4779) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #11 IPSEC TUNNEL FAILURE (1214) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L
Description: This alarm indicates the failure of the IPsec tunnel (#11).		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1348 IK4306009 - #12 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306009 (4780) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #12 IPSEC TUNNEL FAILURE (1215) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L
Description: This alarm indicates the failure of the IPsec tunnel (#12).		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1349 IK4306010 - #13 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306010 (4781) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #13 IPSEC TUNNEL FAILURE (1216) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure of the IPsec tunnel (#13).		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1350 IK4306011 - #14 IPSEC TUNNEL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306011 (4782) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: #14 IPSEC TUNNEL FAILURE (1217) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This alarm indicates the failure of the IPsec tunnel (#14).		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: Check the IP Security configuration.		

Table 22-1351 IK4306012 - BB MODEM BOARD INCOMPATIBLE WITH CONTROLLER BOARD

Alarm	Attributes	Applicable major NE releases
Name: IK4306012 (4783) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: critical Specific problem: BB MODEM BOARD INCOMPATIBLE WITH CONTROLLER BOARD (1218) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1
Description: This alarm indicates that the modem board is not compatible with the controller board.		
Impact: The cell(s) supported by this modem are disabled.		
Remedial action: Change the modem board to a modem board supported by the controller type.		

Table 22-1352 IK4306013 - EXPECTED CONTROLLER NOT EQUIPPED - CB

Alarm	Attributes	Applicable major NE releases
Name: IK4306013 (4784) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: major Specific problem: EXPECTED CONTROLLER NOT EQUIPPED - CB (1219) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR13.1
Description: This alarm indicates that the equipped controller type does not fit the expectedControllerType in the database.		
Impact: The eNodeB capacity is downgraded.		
Remedial action: Ensure compatibility between the eNodeB configuration data and the equipped controller type.		

Table 22-1353 IK4306014 - INSUFFICIENT CPRI IQ RESOURCE FOR CONFIGURED LTECELL

Alarm	Attributes	Applicable major NE releases
Name: IK4306014 (4999) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.Cell	Severity: critical Specific problem: INSUFFICIENT CPRI IQ RESOURCE FOR CONFIGURED LTECELL (1220) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR13.3 LR14.1.L
Description: This alarm indicates that there are no cpri IQ resource available to support the configured cell.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: 1. Lock the cell. 2. Check any HW(SFP, RRRH type, CB type) impact on CPRI IQ resource. If HW is correct, verify and correct the configuration data. 3. Unlock the cell.		

Table 22-1354 IK4306015 - INVALID TIME ZONE NAME

Alarm	Attributes	Applicable major NE releases
Name: IK4306015 (5362) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.ENBEquipment	Severity: minor Specific problem: INVALID TIME ZONE NAME (1221) Implicitly cleared: true Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the eNodeB could not be configured with the requested time zone.		
Remedial action: Operator may select another equivalent time zone value, e.g. try Etc/GMT+x or Etc/GMT-x instead of the requested Area/Location, or contact their next level of technical support.		

Table 22-1355 IK4306016 - CELL DISABLED DUE TO LRA

Alarm	Attributes	Applicable major NE releases
Name: IK4306016 (5363) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: CELL DISABLED DUE TO LRA (1222) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the cell was disabled by a LRA from another alarm.		
Remedial action: Lock and unlock the cell. If the alarm persists. Call the next level of support.		

Table 22-1356 IK4306017 - PARAMETER WRITE FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306017 (5364) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Specific problem: PARAMETER WRITE FAILURE (1223) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: An antenna port parameter (such as antennaGainConfigure or horizontalBeamwidthConfigure) was set, however the corresponding parameter (antennaGain, horizontalBeamwidth) could not be changed, possibly because the value is read from the hardware (such as for AA units). The SAM and eNodeB databases have different values for these parameters while the alarm is raised.		
Remedial action: Determine the equipped RFM type. If AA, then antenna characteristics are read from the hardware and cannot be modified. Change the setting (antennaGainConfigure, horizontalBeamwidthConfigure, or other) back to Unset.		

Table 22-1357 IK4306022 - IPSEC KEY GENERATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306022 (5000) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: IPSEC KEY GENERATION FAILURE (1224) Implicitly cleared: true Default probable cause: corruptData (910)	<ul style="list-style-type: none"> LR13.3 LR14.1.L
Description: This alarm indicates that the eNB platform failed to generate an RSA key pair for IPsec.		
Impact: If the RSA key generation fails, the eNB cannot request a new IPsec certificate, and the eNB cannot setup the IPsec tunnel with the SeGW. The communication between the eNB and SAM and Packet Core (MME, SGW) will be lost.		
Remedial action: Reboot the eNB manually at a later time. If this problem continues, the operator should contact ALU support.		

Table 22-1358 IK4306023 - IPSEC IKE CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306023 (5001) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: IPSEC IKE CONFIGURATION FAILURE (1225) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: The alarm indicates IPsec IKE configuration failure.		
Impact: If the IPsec and/or IKE configuration failed, then the eNB cannot setup the IPsec tunnel with the SeGW. Depending on the tunnel configuration (OAM or Telecom), the communication between the eNB and SAM and Packet Core (MME, SGW) will not be possible.		
Remedial action: Check the correctness of the eNB configuration data and apply the data again. eNB should reset. If after eNB start-up the problem/alarm persists and the problem is not related to eNB misconfiguration then call next level of support.		

Table 22-1359 IK4306024 - MEDO LOSS OF COMMUNICATION

Alarm	Attributes	Applicable major NE releases
Name: IK4306024 (5002) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: MEDO LOSS OF COMMUNICATION (1226) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates that a failure in internal communication with the Metro Dock.		
Impact: OAM inventory reporting for Metro Dock becoming incorrect.		
Remedial action: Check for connectivity with the board.		

Table 22-1360 IK4306025 - HW SW CAPABILITY INCOMPATIBLE MODEM TYPE

Alarm	Attributes	Applicable major NE releases
Name: IK4306025 (5003) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: HW SW CAPABILITY INCOMPATIBLE MODEM TYPE (1227) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates that the installed modem type is not compatible with installed controller board or with expectedModemType.		
Impact: TELECOM traffic is not allowed with this configuration.		

(1 of 2)

22 – Alcatel-Lucent 9xxx eNodeB alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: The operator has to 1 - lock the cell. 2 - change the MIM configuration accordingly the installed eNB HW. 3 - unlock the cell.		

(2 of 2)

Table 22-1361 IK4306026 - HW SW CAPABILITY EXPECTED CONTROLLER NOT EQUIPPED

Alarm	Attributes	Applicable major NE releases
Name: IK4306026 (5004) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.Cell	Severity: critical Specific problem: HW SW CAPABILITY EXPECTED CONTROLLER NOT EQUIPPED (1228) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates that the installed controller type is not compatible with the expectedControllerType in MIM.		
Impact: TELECOM traffic is not allowed with this configuration.		
Remedial action: The operator has to 1 - lock the cell. 2 - change the MIM configuration accordingly the installed eNB controller HW. 3 - unlock the cell.		

Table 22-1362 IK4306027 - UNEXPECTED BASEBAND BOARD RESET BB

Alarm	Attributes	Applicable major NE releases
Name: IK4306027 (5005) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.BBCardSpecifics	Severity: variable Specific problem: UNEXPECTED BASEBAND BOARD RESET BB (1229) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This event indicates that the baseband board suffered from an unexpected, unplanned reset.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: No impact on OAM.		
Remedial action: No action is required.		

Table 22-1363 IK4306028 - INTER-FREQ LOAD BALANCING BEGIN

Alarm	Attributes	Applicable major NE releases
Name: IK4306028 (5006) Type: qualityOfServiceAlarm (82) Package: Ite Raised on class: Ite.Cell	Severity: variable Specific problem: INTER-FREQ LOAD BALANCING BEGIN (1230) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: This event indicate that inter-freq load balancing procedure begins.		
Impact: No impact		
Remedial action: No action is required.		

(2 of 2)

Table 22-1364 IK4306029 - INTER-FREQ LOAD BALANCING END

Alarm	Attributes	Applicable major NE releases
Name: IK4306029 (5007) Type: qualityOfServiceAlarm (82) Package: Ite Raised on class: Ite.Cell	Severity: variable Specific problem: INTER-FREQ LOAD BALANCING END (1231) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This event indicate that inter-freq load balancing procedure ends.		
Impact: No impact		
Remedial action: No action is required.		

Table 22-1365 IK4306030 - MCE CAC FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306030 (5008) Type: qualityOfServiceAlarm (82) Package: Ite Raised on class: Ite.Mce	Severity: variable Specific problem: MCE CAC FAILURE (1232) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: Description1: MCE admission reaches the max nbr of sessions in MBSFN Area Mbsfnareald. Failed sessions listofFailedTmgi Description2: MCE admission reaches the max nbr of available sub-frames in MBSFN Area Mbsfnareald. Nbr of needed Sf NbrNeededSf, nbr of available Sf NbrAvailableSf, failed sessions listofFailedTmgi		
Impact: One or several eMBMS sessions are rejected.		
Remedial action: No action is required.		

Table 22-1366 IK4306031 - M2 ERROR INDICATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306031 (5009) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Mce	Severity: variable Specific problem: M2 ERROR INDICATION FAILURE (1233) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This event indicates that the fault is still present on eNB side in despite of a M2 ERROR INDICATION procedure previously exchanged between the eNB and the MCE to solve the issue.		
Impact: One or several eMBMS sessions can not be broadcasted.		
Remedial action: No action is required.		

Table 22-1367 IK4306032 - PCI RAISED RECORD REMOVED

Alarm	Attributes	Applicable major NE releases
Name: IK4306032 (5010) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: PCI RAISED RECORD REMOVED (1234) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This event indicates SAM/operator that the raised PCI changing request is deleted by eNB itself due to the PCI status changing to unresolved or resolved by other ways.		
Impact: No impact		
Remedial action: No action is required.		

Table 22-1368 IK4306033 - SON REQUEST TABLE NOT EMPTY

Alarm	Attributes	Applicable major NE releases
Name: IK4306033 (5011) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: SON REQUEST TABLE NOT EMPTY (1235) Implicitly cleared: true Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates SAM/operator that there are valid SON 'changing request records' remaining and waiting for operator feedback in the SON control mode.		
Impact: If no feedback from operator on these 'changing request record', the related process in SON control mode is pending.		
Remedial action: Operator give feedback on the existing 'changing request record'.		

Table 22-1369 IK4306034 - SON REQUEST TABLE FULL

Alarm	Attributes	Applicable major NE releases
Name: IK4306034 (5012) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: SON REQUEST TABLE FULL (1236) Implicitly cleared: true Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates SAM/operator that there is no valid SON related 'changing request records' can be raised by eNB in the SON control mode.		
Impact: If no feedback from operator on these 'changing request record', the control mode of certain SON area is totally pending.		
Remedial action: Operator give feedback on the existing request record.		

Table 22-1370 IK4306035 - INCONSISTENT IP VERSION MULTICAST ADDRESS

Alarm	Attributes	Applicable major NE releases
Name: IK4306035 (5365) Type: communicationsAlarm (4) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: INCONSISTENT IP VERSION MULTICAST ADDRESS (1237) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR14.1.L
Description: This event indicates that inconsistency between the VLAN configuration in the eNB and the IP version of the multicast address or the IP version of the multicast source address received in the M3 Session Start and M2 Session Start messages.		
Remedial action: No action is required.		

Table 22-1371 IK4306036 - OAM MODEM FUNCTION FAULT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4306036 (5366) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: minor Specific problem: OAM MODEM FUNCTION FAULT 2 (1190) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This is a spare alarm for future use.		
Remedial action: Refer to additional information in the alarm report.		

Table 22-1372 IK4306037 - SIM HEALTH CHECK -TX PWR FAILED

Alarm	Attributes	Applicable major NE releases
Name: IK4306037 (5367) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: SIM HEALTH CHECK -TX PWR FAILED (1238) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the System Integrity Monitor monitoring the health of the eNodeB has detected a degradation. Depending on the severity of the degradation, local recovery actions may be taken.		
Remedial action: If the alarm persists, the cell may need to be reinitialized.		

Table 22-1373 IK4306038 - DNS RESOLUTION ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4306038 (5368) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: DNS RESOLUTION ERROR (1239) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that the searched item does not exist in DNS		
Remedial action: No action is required.		

Table 22-1374 IK4306039 - LOSS OF EMBMS PHASE SYNC

Alarm	Attributes	Applicable major NE releases
Name: IK4306039 (5369) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: LOSS OF EMBMS PHASE SYNC (755) Implicitly cleared: true Default probable cause: lossOfSignal (99)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the phase-sync requirement for supporting eMBMS can no longer be guaranteed due to the loss of clock reference.		
Remedial action: If alarm remains consider the Clock reference alarms to determine the cause of the onset of holdover.		

Table 22-1375 IK4306040 - LOGICAL RESET AND RF RECONF DUE TO ON-LINE B-CELL+RF(s) CLASS PARAMETER UPDATE

Alarm	Attributes	Applicable major NE releases
Name: IK4306040 (5370) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.Cell	Severity: variable Specific problem: LOGICAL RESET AND RF RECONF DUE TO ON-LINE B-CELL+RF(s) CLASS PARAMETER UPDATE (1240) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates the LTE Cell is logically reset and the RF is reconfigured during parameter update procedure.		
Remedial action: No action is required.		

Table 22-1376 IK4306041 - SHUTDOWN TIMEOUT WITH EMERGENCY HIGH PRIORITY CALLS ACTIVE

Alarm	Attributes	Applicable major NE releases
Name: IK4306041 (5371) Type: communicationsAlarm (4) Package: Ite Raised on class: Ite.Cell	Severity: warning Specific problem: SHUTDOWN TIMEOUT WITH EMERGENCY HIGH PRIORITY CALLS ACTIVE (1178) Implicitly cleared: true Default probable cause: callEstablishmentError (778)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the shutdown timer has expired for a shutting down MO but the cell has at least one emergency or high priority call active. The shutting down MO will not be locked until all emergency and high priority calls have terminated.		
Remedial action: Operator should wait for all emergency and high priority calls to terminate or force the shut down to end by locking the shutting down MO.		

Table 22-1377 IK4306042 - EMERGENCY HIGH PRIORITY CALLS ACTIVE FOR BLOCKED CELL

Alarm	Attributes	Applicable major NE releases
Name: IK4306042 (5372) Type: communicationsAlarm (4) Package: Ite Raised on class: Ite.Cell	Severity: warning Specific problem: EMERGENCY HIGH PRIORITY CALLS ACTIVE FOR BLOCKED CELL (1179) Implicitly cleared: true Default probable cause: callEstablishmentError (778)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that there is at least one emergency or high priority call active on a cell that is blocked. The cell will not be disabled until all emergency and high priority calls have terminated.		
Remedial action: Operator should wait for all emergency and high priority calls to terminate or force the shut down to end by locking the shutting down MO.		

Table 22-1378 IK4306043 - WALG INITIALIZATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306043 (5373) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: critical Specific problem: WALG INITIALIZATION FAILURE (660) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR14.1.L
Description: This alarm indicates a failure to initialize the eNodeB network processor.		
Remedial action: Reset the eNodeB.		

Table 22-1379 IK4306044 - CB UNEXPECTED PARTIAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306044 (5013) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: CB UNEXPECTED PARTIAL FAILURE (1241) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This event indicates that the ENB suffered from an unexpected, unplanned partial failure on the CB. Specific details are in the Additional Text.		
Impact: Depending on the nature of the partial failure, some Telecom or OAM functionalities may not be available during recovery. On recovery, the Telecom and OAM functionalities are available. Details of the fault signature are in the additional text.		
Remedial action: No action is required.		

Table 22-1380 IK4306045 - BB UNEXPECTED PARTIAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306045 (5014) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: BB UNEXPECTED PARTIAL FAILURE (1242) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This event indicates that the ENB suffered from an unexpected, unplanned partial failure on the BB. Specific details are in the Additional Text.		
Impact: Depending on the nature of the partial failure, some Telecom or OAM functionalities may not be available during recovery. On recovery, the Telecom and OAM functionalities are available. Details of the fault signature are in the additional text.		
Remedial action: No action is required.		

Table 22-1381 IK4306046 - SCB UNEXPECTED PARTIAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306046 (5015) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: SCB UNEXPECTED PARTIAL FAILURE (1243) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This event indicates that the ENB suffered from an unexpected, unplanned partial failure on the SCB. Specific details are in the Additional Text.		
Impact: Depending on the nature of the partial failure, some Telecom or OAM functionalities may not be available during recovery. On recovery, the Telecom and OAM functionalities are available. Details of the fault signature are in the additional text.		
Remedial action: No action is required.		

Table 22-1382 IK4306047 - POOL USAGE FOR RADIO ALLOCATION

Alarm	Attributes	Applicable major NE releases
Name: IK4306047 (5016) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Mce	Severity: variable Specific problem: POOL USAGE FOR RADIO ALLOCATION (1244) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This event indicates that the MCE needs to use the pool of radio resources to complete the allocation for a session.		
Impact: No impact.		
Remedial action: No action is required.		

Table 22-1383 IK4306048 - MBMS RADIO CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306048 (5017) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: MBMS RADIO CONFIGURATION FAILURE (1245) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This event indicates that the radio configuration made by the MCE for eMBMS could not be setup correctly.		
Impact: eMBMS services not transmitted.		
Remedial action: No action is required.		

Table 22-1384 IK4306049 - TIME FOR SESSION START STOP or UPDATE

Alarm	Attributes	Applicable major NE releases
Name: IK4306049 (5018) Type: integrityViolation (85) Package: lte Raised on class: lte.Mce	Severity: variable Specific problem: TIME FOR SESSION START STOP or UPDATE (489) Implicitly cleared: true Default probable cause: operatorCommand (905)	<ul style="list-style-type: none"> • LR13.3
Description: This event indicates that there is no absolute time has been provided in any received M3 MBMS Session Start Request, M3 MBMS Session Stop Request or M3 MBMS Session Update Request message.		
Impact: MbsfnArea allocation inconsistency might occur		
Remedial action: For the future sessions to start or stop, check that the Absolute Time is filled to avoid any risk of MbsfnArea allocation inconsistency.		

Table 22-1385 IK4306050 - BAND CLASS-BANDWIDTH NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4306050 (5019) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: major Specific problem: BAND CLASS-BANDWIDTH NOT SUPPORTED (1246) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates that when a non-supported Band Class or Bandwidth is detected based on the Metro modem type.		
Impact: Disable cell		
Remedial action: 1 - Lock the cell. ; 2.Make sure to configure/equip the supported Band-class or Band width based on the equipped Modem type.; 3. -Unlock the cell.		

Table 22-1386 IK4306051 - MODEM CAPACITY CONFIGURATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306051 (5020) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: minor Specific problem: MODEM CAPACITY CONFIGURATION FAILURE (1247) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates that if the capacity tolerance check fails based on the Metro modem type.		
Impact: cell is degraded		
Remedial action: Check the capacity tolerance based the equipped Modem type.		

Table 22-1387 IK4306052 - MODEM BOARD INCOMPATIBLE WITH CONTROLLER BOARD

Alarm	Attributes	Applicable major NE releases
Name: IK4306052 (5021) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: critical Specific problem: MODEM BOARD INCOMPATIBLE WITH CONTROLLER BOARD (1248) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates that the modem board is not compatible with the controller board.		
Impact: The cell(s) supported by this modem are disabled.		
Remedial action: Change the modem board to a modem board supported by the controller type.		

Table 22-1388 IK4306053 - CB DATA BASE RESTORE FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306053 (5022) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: warning Specific problem: CB DATA BASE RESTORE FAILURE (1249) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates if eNB fails to download successfully the full DB backup file for a full DB restore request, this alarm will be raised and the download will be failed.		
Impact: Depending on the nature of download failure, some Telecom or OAM functionalities may not be available during eCCM HW swap.		
Remedial action: Retry the download. If the problem persists, contact the next level support.		

Table 22-1389 IK4306060 - RFM OPERATION PROCESSING FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306060 (5023) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.RFM	Severity: critical Specific problem: RFM OPERATION PROCESSING FAILURE (278) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.3
Description: This alarm indicates the fault in the RFM software processing.		
Impact: The module is not usable. The LTE cells associated with this module are not operational.		
Remedial action: Reset the RFM. If the problem persists, contact the next level support.		

Table 22-1390 IK4306061 - LOSS OF EMBMS PHASE SYNC

Alarm	Attributes	Applicable major NE releases
Name: IK4306061 (5374) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: LOSS OF EMBMS PHASE SYNC (755) Implicitly cleared: true Default probable cause: lossOfSignal (99)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that the phase-sync requirement for supporting eMBMS can no longer be guaranteed due to the loss of clock reference.		
Remedial action: If alarm remains consider the Clock reference alarms to determine the cause of the onset of holdover.		

Table 22-1391 IK4306062 - CB UNEXPECTED SOC FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306062 (5375) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: CB UNEXPECTED SOC FAILURE (1250) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that the ENB suffered from an unexpected, unplanned partial failure on a SOC of a CB. Specific details are in the Additional Text.		
Remedial action: No action is required.		

Table 22-1392 IK4306063 - BB UNEXPECTED SOC FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306063 (5376) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: BB UNEXPECTED SOC FAILURE (1251) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that the ENB suffered from an unexpected, unplanned partial failure on a SOC of a BB. Specific details are in the Additional Text.		
Remedial action: No action is required.		

Table 22-1393 IK4306064 - ENB LOCATION VERIFICATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306064 (5377) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: critical Specific problem: ENB LOCATION VERIFICATION FAILURE (1252) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that the eNB may not be in the expected location.		
Remedial action: Check the bbu Configured latitude and longitude and the bbuPositionErrorThreshold.		

Table 22-1394 IK4306065 - RET SOFTWARE DOWNLOAD IN PROGRESS

Alarm	Attributes	Applicable major NE releases
Name: IK4306065 (5378) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: variable Specific problem: RET SOFTWARE DOWNLOAD IN PROGRESS (1253) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that a Software Download to RET unit Started.		
Remedial action: No action is required.		

Table 22-1395 IK4306066 - CONFIGURED CELL RESOURCES MISMATCH VERSUS HARDWARE

Alarm	Attributes	Applicable major NE releases
Name: IK4306066 (5024) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RRH	Severity: minor Specific problem: CONFIGURED CELL RESOURCES MISMATCH VERSUS HARDWARE (1254) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR13.3 LR14.1.L
Description: This alarm indicates inconsistency in the eNodeB configured cell resources versus the hardware capacity.		
Impact: Telecom: the assigned cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data or Verify and correct the hardware configuration		

Table 22-1396 IK4306067 - RET SOFTWARE DOWNLOAD COMPLETED

Alarm	Attributes	Applicable major NE releases
Name: IK4306067 (5379) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: variable Specific problem: RET SOFTWARE DOWNLOAD COMPLETED (1255) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that a Software Download to a RET unit Completed. The RET unit will reset automatically and would start on the new software		
Remedial action: No action is required.		

Table 22-1397 IK4306068 - RET ACF DOWNLOAD IN PROGRESS

Alarm	Attributes	Applicable major NE releases
Name: IK4306068 (5380) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAldEntry	Severity: variable Specific problem: RET ACF DOWNLOAD IN PROGRESS (1256) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR14.1.L
Description: This event indicates that a Download of an Antenna Configuration File to RET Subunit Started. The RET unit will not operational until the download is completed.		
Remedial action: No action is required.		

Table 22-1398 IK4306069 - CELL RECONFIGURATION ATTEMPT TO A NEW BB

Alarm	Attributes	Applicable major NE releases
Name: IK4306069 (5025) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: CELL RECONFIGURATION ATTEMPT TO A NEW BB (1257) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> LR13.3 LR14.1.L
Description: This event indicates that an attempt to reconfigure the lteCell to a new BB is performed. This procedure happens when a BB meets a permanent failure or when a new BB is inserted in the DBU.		
Impact: Short loss of the LTE service on this cell during the reconfiguration procedure if the cell was enabled at the moment it is reconfigured. The Carrier Aggregation is lost if this reconfiguration happens for coverage recovery reasons.		
Remedial action: No action is required.		

Table 22-1399 IK4306070 - LOSS OF ECSFB PHASE SYNC

Alarm	Attributes	Applicable major NE releases
Name: IK4306070 (5026) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: major Specific problem: LOSS OF ECSFB PHASE SYNC (1258) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates that the 10us phase-sync requirement for supporting eCSFB can no longer be guaranteed due to the loss of clock reference.		
Impact: eCSFB performance is degraded.		
Remedial action: If alarm remains consider the Clock reference alarms to determine the cause of the onset of holdover.		

Table 22-1400 IK4306077 - LOSS OF ECSFB PHASE SYNC

Alarm	Attributes	Applicable major NE releases
Name: IK4306077 (5027) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: major Specific problem: LOSS OF ECSFB PHASE SYNC (1258) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates that the 10us phase-sync requirement for supporting eCSFB can no longer be guaranteed due to the loss of clock reference.		
Impact: eCSFB performance is degraded.		
Remedial action: If alarm remains consider the Clock reference alarms to determine the cause of the onset of holdover.		

Table 22-1401 IK4306078 - INCONSISTENT IP VERSION MULTICAST ADDRESS

Alarm	Attributes	Applicable major NE releases
Name: IK4306078 (5028) Type: communicationsAlarm (4) Package: lte Raised on class: lte.M3MmeTransportLayerAccess	Severity: variable Specific problem: INCONSISTENT IP VERSION MULTICAST ADDRESS (1237) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.3
Description: This event indicates that inconsistency between the VLAN configuration in the eNB and the IP version of the multicast address or the IP version of the multicast source address received in the M3 Session Start and M2 Session Start messages.		
Impact: The Multicast channel cannot be established with the Last Hop router and the M1 multicast traffic cannot be sent by the eNB.		
Remedial action: Change the configuration of the IP version in the VLAN at the eNB or the IP version of the multicast address or the IP version of the address of the multicast source at the eMBMs GW.		

Table 22-1402 IK4306079 - CELL RESET OAM TIMEOUT

Alarm	Attributes	Applicable major NE releases
Name: IK4306079 (5029) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: CELL RESET OAM TIMEOUT (1259) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates message from eNB OAM is not received in Cellcallp in time		
Impact: The service is not possible on this cell.		
Remedial action: Lock and unlock the cell. If the alarm persists. Call the next level of support.		

Table 22-1403 IK4306080 - TMA SOFTWARE DOWNLOAD IN PROGRESS

Alarm	Attributes	Applicable major NE releases
Name: IK4306080 (5381) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAidEntry	Severity: variable Specific problem: TMA SOFTWARE DOWNLOAD IN PROGRESS (1260) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR14.1.L
Description: This event indicates that a Software Download to TMA unit Started.		
Remedial action: No action is required.		

Table 22-1404 IK4306081 - TMA SOFTWARE DOWNLOAD COMPLETED

Alarm	Attributes	Applicable major NE releases
Name: IK4306081 (5382) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAidEntry	Severity: variable Specific problem: TMA SOFTWARE DOWNLOAD COMPLETED (1261) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR14.1.L
Description: This event indicates that a Software Download to a TMA unit Completed. The TMA unit will reset automatically and would start on the new software		
Remedial action: No action is required.		

Table 22-1405 IK4306082 - RET ACF DOWNLOAD COMPLETED

Alarm	Attributes	Applicable major NE releases
Name: IK4306082 (5383) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.RetAldEntry	Severity: variable Specific problem: RET ACF DOWNLOAD COMPLETED (1262) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR14.1.L
Description: This event indicates that the Download of the ACF to the RET unit completed.		
Remedial action: No action is required.		

Table 22-1406 IK4306092 - MODEM RESET DUE TO RE-ASSIGNMENT OF MODEM RESOURCES

Alarm	Attributes	Applicable major NE releases
Name: IK4306092 (5030) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.BBCardSpecifics	Severity: variable Specific problem: MODEM RESET DUE TO RE-ASSIGNMENT OF MODEM RESOURCES (1263) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: The event indicates that a Modem has been reset due to the re-assignment of the modem resources to cells.		
Impact: Service impact on Modem		
Remedial action: No action is required.		

Table 22-1407 IK4306093 - FEATURE ONE LOGIC CELL NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4306093 (5031) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.Cell	Severity: critical Specific problem: FEATURE ONE LOGIC CELL NOT SUPPORTED (1264) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates that the OLC feature is not supported by current cell configuration.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1408 IK4306094 - FEATURE RRH DAISY CHAIN NOT SUPPORTED

Alarm	Attributes	Applicable major NE releases
Name: IK4306094 (5032) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: FEATURE RRH DAISY CHAIN NOT SUPPORTED (1265) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates that the cell mapped on chained RRH is not supported by equipped controller type.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1409 IK4306095 - CELL CONFIGURATION DATA MISMATCH VERSUS CORRESPONDING FEATURE DEACTIVATION

Alarm	Attributes	Applicable major NE releases
Name: IK4306095 (5033) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: CELL CONFIGURATION DATA MISMATCH VERSUS CORRESPONDING FEATURE DEACTIVATION (1185) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.3
Description: This alarm indicates the cell configuration data mismatch versus corresponding feature deactivation.		
Impact: Telecom: The cell is not operational. OAM: No impact on OAM service.		
Remedial action: Verify and correct the configuration data.		

Table 22-1410 IK4306096 - PCI UNSOLVED UNDER CONTROLLED MODE

Alarm	Attributes	Applicable major NE releases
Name: IK4306096 (5034) Type: operationalViolation (93) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: PCI UNSOLVED UNDER CONTROLLED MODE (1266) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This alarm indicates a PCI conflict (collision and/or confusion) between the cell and a neighbour one. A manual intervention is needed to solve the problem. This can happen in the following case: The recommended PCI value can't be raised by eNB and PCI controlled mode is activated.		
Impact: Interference in reference signal of conflicting cells, preventing potentially UEs to select these cells.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Increase the list of allowed PCI values, either for the local or for the distant eNodeB or manual PCI online modification from SAM.		

(2 of 2)

Table 22-1411 IK4306098 - LAST S1 SCTP ASSOCIATION FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4306098 (5035) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MmeTransportLayerAccess	Severity: critical Specific problem: LAST S1 SCTP ASSOCIATION FAILURE (640) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.3
Description: This alarm indicates that the MME does not acknowledge the S1 association request from the eNodeB.		
Impact: Telecom: Telecom traffic is not possible. OAM: No impact on OAM service.		
Remedial action: 1. Check IP and SCTP provisioning in eNB and MME. 2. Check network connectivity between eNB and MME.		

Table 22-1412 IK4306099 - LAST S1 SCTP ASSOCIATION DOWN

Alarm	Attributes	Applicable major NE releases
Name: IK4306099 (5036) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MmeTransportLayerAccess	Severity: critical Specific problem: LAST S1 SCTP ASSOCIATION DOWN (641) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.3
Description: This alarm indicates the last S1 association fault between eNodeB and MME.		
Impact: Telecom: Impacts the telecom service depending on the nature of failure. OAM: No impact on OAM service.		
Remedial action: 1. Check IP and SCTP provisioning in eNB and MME. 2. Check network connectivity between eNB and MME.		

Table 22-1413 IK4306100 - NO RESPONSE TO ECHO REQUEST ON LAST S1

Alarm	Attributes	Applicable major NE releases
Name: IK4306100 (5037) Type: communicationsAlarm (4) Package: lte Raised on class: lte.MmeAccess	Severity: critical Specific problem: NO RESPONSE TO ECHO REQUEST ON LAST S1 (1267) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR13.3 LR14.1.L

(1 of 2)

22 – Alcatel-Lucent 9xxx eNodeB alarms

Alarm	Attributes	Applicable major NE releases
Description: This alarm indicates at the last S1 fault following no response to a GTP Echo request. The alarm is triggered when the eNodeB does not receive a response to a GTP echo request message sent on a S1 interface towards a Serving Gateway. The alarm is triggered to signal a S1 failure when there are several SGW because of several operators with their own SGW or because an operator has several SGW. It is not possible to identify the failed S1 link.		
Impact: Telecom: The performance of the telecom service is low. OAM: No impact on OAM service.		
Remedial action: Check for connectivity and verify the GTP provisioning.		

(2 of 2)

Table 22-1414 IK4306101 - PCI CHANGE

Alarm	Attributes	Applicable major NE releases
Name: IK4306101 (5038) Type: communicationsAlarm (4) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: PCI CHANGE (1268) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This event indicates that a new PCI is assigned by the eNodeB to the cell.		
Impact: The cell has been reset. The Cell is running with the new PCI.		
Remedial action: No action is required.		

Table 22-1415 IK4306107 - ALL ALARMS CLEARED

Alarm	Attributes	Applicable major NE releases
Name: IK4306107 (5039) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: minor Specific problem: ALL ALARMS CLEARED (1213) Implicitly cleared: true Default probable cause: softwareProgramAbnormallyTerminated (719)	<ul style="list-style-type: none"> • LR13.3 • LR14.1.L
Description: This is a pseudo alarm to indicate that all pending alarms have been cleared, e.g. by a reset of the eNB controller.		
Impact: There is no impact by this alarm.		
Remedial action: No Maintenance Action requires.		

Table 22-1416 IK4500001 - AMR EXTERNAL CONTACT CHANGE 1

Alarm	Attributes	Applicable major NE releases
Name: IK4500001 (2715) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: AMR EXTERNAL CONTACT CHANGE 1 (1269) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RF cabinet external contact for the user alarm closure has changed.		
Impact: Impacts the user equipment.		
Remedial action: Check the user equipment.		

Table 22-1417 IK4500002 - AMR EXTERNAL CONTACT CHANGE 2

Alarm	Attributes	Applicable major NE releases
Name: IK4500002 (2716) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AMR	Severity: minor Specific problem: AMR EXTERNAL CONTACT CHANGE 2 (1270) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the RF cabinet external contact for the user alarm closure has changed.		
Impact: Impacts the user equipment.		
Remedial action: Check the user equipment.

Name: IK4500037 (2751) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: minor Specific problem: DBU EXTERNAL CONTACT CHANGE 29 (1305) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a change in the external user alarm contact state.		
Impact: No impact on eNodeB.		
Remedial action: Check the user equipment.		

Table 22-1453 IK4500038 - DBU EXTERNAL CONTACT CHANGE 30

Alarm	Attributes	Applicable major NE releases
Name: IK4500038 (2752) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: minor Specific problem: DBU EXTERNAL CONTACT CHANGE 30 (1306) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a change in the external user alarm contact state.		
Impact: No impact on eNodeB.		
Remedial action: Check the user equipment.		

Table 22-1454 IK4500039 - DBU EXTERNAL CONTACT CHANGE 31

Alarm	Attributes	Applicable major NE releases
Name: IK4500039 (2753) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: minor Specific problem: DBU EXTERNAL CONTACT CHANGE 31 (1307) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a change in the external user alarm contact state.		
Impact: No impact on eNodeB.		
Remedial action: Check the user equipment.		

Table 22-1455 IK4500040 - DBU EXTERNAL CONTACT CHANGE 32

Alarm	Attributes	Applicable major NE releases
Name: IK4500040 (2754) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: minor Specific problem: DBU EXTERNAL CONTACT CHANGE 32 (1308) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates a change in the external user alarm contact state.		
Impact: No impact on eNodeB.		
Remedial action: Check the user equipment.		

Table 22-1456 IK4500041 - RFM EXTERNAL CONTACT CHANGE 1

Alarm	Attributes	Applicable major NE releases
Name: IK4500041 (2755) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM EXTERNAL CONTACT CHANGE 1 (1309) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the external alarm wired to the RFM has changed state.		
Impact: No impact on eNodeB.		
Remedial action: Check the attached user equipment.		

Table 22-1457 IK4500042 - RFM EXTERNAL CONTACT CHANGE 2

Alarm	Attributes	Applicable major NE releases
Name: IK4500042 (2756) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM EXTERNAL CONTACT CHANGE 2 (1310) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the external alarm wired to the RFM has changed state.		
Impact: No impact on eNodeB.		
Remedial action: Check the attached user equipment.		

Table 22-1458 IK4500043 - RFM EXTERNAL CONTACT CHANGE 3

Alarm	Attributes	Applicable major NE releases
Name: IK4500043 (2757) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM EXTERNAL CONTACT CHANGE 3 (1311) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the external alarm wired to the RFM has changed state.		
Impact: No impact on eNodeB.		
Remedial action: Check the attached user equipment.		

Table 22-1459 IK4500044 - RFM EXTERNAL CONTACT CHANGE 4

Alarm	Attributes	Applicable major NE releases
Name: IK4500044 (2758) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM EXTERNAL CONTACT CHANGE 4 (1312) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the external alarm wired to the RFM has changed state.		
Impact: No impact on eNodeB.		
Remedial action: Check the attached user equipment.		

Table 22-1460 IK4500045 - RFM EXTERNAL CONTACT CHANGE 5

Alarm	Attributes	Applicable major NE releases
Name: IK4500045 (2759) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM EXTERNAL CONTACT CHANGE 5 (1313) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the external alarm wired to the RFM has changed state.		
Impact: No impact on eNodeB.		
Remedial action: Check the attached user equipment.		

Table 22-1461 IK4500046 - RFM EXTERNAL CONTACT CHANGE 6

Alarm	Attributes	Applicable major NE releases
Name: IK4500046 (2760) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM EXTERNAL CONTACT CHANGE 6 (1314) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the external alarm wired to the RFM has changed state.		
Impact: No impact on eNodeB.		
Remedial action: Check the attached user equipment.		

Table 22-1462 IK4500047 - RFM EXTERNAL CONTACT CHANGE 7

Alarm	Attributes	Applicable major NE releases
Name: IK4500047 (3272) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM EXTERNAL CONTACT CHANGE 7 (1315) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the external alarm wired to the RFM has changed state.		
Impact: No impact on eNodeB.		
Remedial action: Check the attached user equipment.		

Table 22-1463 IK4500048 - RFM EXTERNAL CONTACT CHANGE 8

Alarm	Attributes	Applicable major NE releases
Name: IK4500048 (3273) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: minor Specific problem: RFM EXTERNAL CONTACT CHANGE 8 (1316) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm indicates that the external alarm wired to the RFM has changed state.		
Impact: No impact on eNodeB.		
Remedial action: Check the attached user equipment.		

Table 22-1464 IK4901001 - POWER ON

Alarm	Attributes	Applicable major NE releases
Name: IK4901001 (2761) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: POWER ON (1317) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the system is powered on successfully.		
Impact: All resources are available on successful power on of the system.		
Remedial action: No action is required.		

Table 22-1465 IK4901002 - CORRUPT FILE

Alarm	Attributes	Applicable major NE releases
Name: IK4901002 (2762) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: CORRUPT FILE (1318) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a checksum error.		
Impact: Software replacement failure.		
Remedial action: No action is required.		

Table 22-1466 IK4901003 - CORRUPT FILE

Alarm	Attributes	Applicable major NE releases
Name: IK4901003 (2763) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: CORRUPT FILE (1318) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a checksum error.		
Impact: Software replacement failure.		
Remedial action: No action is required.		

Table 22-1467 IK4901004 - CORRUPT FILE

Alarm	Attributes	Applicable major NE releases
Name: IK4901004 (2764) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RRH	Severity: variable Specific problem: CORRUPT FILE (1318) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a checksum error.		
Impact: Software replacement failure.		
Remedial action: No action is required.		

Table 22-1468 IK4901005 - CORRUPT FILE

Alarm	Attributes	Applicable major NE releases
Name: IK4901005 (2765) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.TRDU	Severity: variable Specific problem: CORRUPT FILE (1318) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a checksum error.		
Impact: Software replacement failure.		
Remedial action: No action is required.		

Table 22-1469 IK4901006 - RESET CONTROLLER OAM LACK RESOURCE

Alarm	Attributes	Applicable major NE releases
Name: IK4901006 (2766) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: RESET CONTROLLER OAM LACK RESOURCE (1319) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LT6.0
Description: This event indicates that the controller board is reset due to lack of internal resources.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: If the alarm persists, call the next level of support.		

Table 22-1470 IK4901007 - RESET CONTROLLER WATCHDOG

Alarm	Attributes	Applicable major NE releases
Name: IK4901007 (2767) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: RESET CONTROLLER WATCHDOG (1320) Implicitly cleared: true Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LT6.0
Description: This event indicates that the controller is reset due to hardware watchdog timeout.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: If the alarm persists, call the next level of support.		

Table 22-1471 IK4901008 - CONTROLLER OAM AUTO RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4901008 (2768) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: CONTROLLER OAM AUTO RESET (1321) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This event indicates that the controller is auto-reset due to an internal problem.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: If the alarm persists, call the next level of support.		

Table 22-1472 IK4901009 - OAM AUTO RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4901009 (2769) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: OAM AUTO RESET (1322) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LT6.0
Description: This event indicates an OAM auto-reset due to an internal problem.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: If the alarm persists, call the next level of support.		

Table 22-1473 IK4901010 - RESET OAM EXCEPTION

Alarm	Attributes	Applicable major NE releases
Name: IK4901010 (2770) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: RESET OAM EXCEPTION (1323) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the controller is reset due to an processor exception.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1474 IK4901011 - RESET AFTER ACTIVATE WITH DB MIGRATION

Alarm	Attributes	Applicable major NE releases
Name: IK4901011 (2771) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: RESET AFTER ACTIVATE WITH DB MIGRATION (1324) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the software activation and the successful data migration.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1475 IK4901012 - RESET AFTER ACTIVATE WITHOUT DB MIGRATION

Alarm	Attributes	Applicable major NE releases
Name: IK4901012 (2772) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: RESET AFTER ACTIVATE WITHOUT DB MIGRATION (1325) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the software activation without a data migration.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1476 IK4901013 - RESET AFTER ACTIVATE WITH EMPTY DATABASE

Alarm	Attributes	Applicable major NE releases
Name: IK4901013 (2773) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: RESET AFTER ACTIVATE WITH EMPTY DATABASE (1326) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the software activation. The database is not found.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1477 IK4901014 - RESET AFTER REJECT

Alarm	Attributes	Applicable major NE releases
Name: IK4901014 (2774) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: RESET AFTER REJECT (1327) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the software is rejected. The module is reset to activate the previous software version.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1478 IK4901015 - RESET AFTER REJECT WITH EMPTY DATABASE

Alarm	Attributes	Applicable major NE releases
Name: IK4901015 (2775) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: RESET AFTER REJECT WITH EMPTY DATABASE (1328) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the software is rejected. The module is reset to activate the previous software version. The database is not found.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1479 IK4901016 - AUTO-REJECT TO PREVIOUS SW VERSION AFTER ACTIVATE

Alarm	Attributes	Applicable major NE releases
Name: IK4901016 (2776) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: AUTO-REJECT TO PREVIOUS SW VERSION AFTER ACTIVATE (1329) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that a reset was performed due to the activation of the previous software version caused by a corrupt file.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1480 IK4901018 - SW UPDATED AUTOMATICALLY

Alarm	Attributes	Applicable major NE releases
Name: IK4901018 (2778) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: SW UPDATED AUTOMATICALLY (1331) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the board was enabled with invalid software. OAM automatically updates the required software version.		
Impact: Telecom: All calls and cells associated with the module are not operational. On successful reset, all resources are functional. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1481 IK4901019 - CB DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4901019 (2779) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: CB DOWNLOAD FAILURE (1332) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the failure of the FTP transfer of the software package from the code-server to the local RAM disk.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1482 IK4901020 - CB MODULE DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4901020 (2780) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: CB MODULE DOWNLOAD FAILURE (1333) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the failure to transfer the software package from the local storage to the board.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1483 IK4901021 - BB MODULE DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4901021 (2781) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: BB MODULE DOWNLOAD FAILURE (1334) Implicitly cleared: true Default probable cause: softwareError (718)	<ul style="list-style-type: none"> • LT6.0
Description: This event indicates the failure to transfer the software package from the local storage to the board.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1484 IK4901022 - RRH MODULE DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4901022 (2782) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RRH	Severity: variable Specific problem: RRH MODULE DOWNLOAD FAILURE (1335) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the failure to transfer the software package from the local storage to the board.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1485 IK4901023 - TRDU MODULE DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4901023 (2783) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TRDU	Severity: variable Specific problem: TRDU MODULE DOWNLOAD FAILURE (1336) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the failure to transfer the software package from the local storage to the board.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1486 IK4901024 - SOFTWARE AND DATABASE FALLBACK

Alarm	Attributes	Applicable major NE releases
Name: IK4901024 (2784) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: SOFTWARE AND DATABASE FALLBACK (1337) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the eNodeB has detected a critical failure during eNodeB initialization while booting from the active software partition. The eNodeB has switched over to the passive software partition and booted up on the previous software version with the previous configuration data.		
Impact: Telecom: Services may not be operating properly until the eNodeB is restored to the proper software version and configuration data. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1487 IK4901025 - SOFTWARE FALLBACK

Alarm	Attributes	Applicable major NE releases
Name: IK4901025 (2785) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: SOFTWARE FALLBACK (1338) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the eNodeB has detected a critical failure during eNodeB initialization while booting from the active software partition. The eNodeB has switched over to the passive software partition and booted up on the previous software version with the previous configuration data.		
Impact: Telecom: Services may not be operating properly until the eNodeB is restored to the proper software version and configuration data. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1488 IK4901026 - NEW SW DOES NOT SUPPORT ALL ACTUAL HW MODULES

Alarm	Attributes	Applicable major NE releases
Name: IK4901026 (2786) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: NEW SW DOES NOT SUPPORT ALL ACTUAL HW MODULES (1339) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the new software package does not support all actual hardware modules installed in the eNodeB.		
Impact: Telecom: Modules not supported by the software may not offer telecom services. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1489 IK4901027 - BACK TO FACTORY MODE

Alarm	Attributes	Applicable major NE releases
Name: IK4901027 (3274) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: BACK TO FACTORY MODE (1340) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that software meta data is deleted or corrupted.		
Impact: Telecom: No telecom service possible. OAM: No impact on OAM service except for remote board contact which is not possible.		
Remedial action: No action is required.		

Table 22-1490 IK4901028 - BACK TO MINIMUM DB

Alarm	Attributes	Applicable major NE releases
Name: IK4901028 (3275) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: BACK TO MINIMUM DB (1341) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the database contents have been reset to default.		
Impact: Telecom: No telecom service possible. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1491 IK4901029 - BACK TO FACTORY MODE AND MINIMUM DB

Alarm	Attributes	Applicable major NE releases
Name: IK4901029 (3276) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: BACK TO FACTORY MODE AND MINIMUM DB (1342) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that software meta data is deleted or corrupted and that the database contents have been reset to default.		
Impact: Telecom: No telecom service possible. OAM: No impact on OAM service except for remote board contact which is not possible.		
Remedial action: No action is required.		

Table 22-1492 IK4901030 - BB MODULE DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4901030 (3277) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: BB MODULE DOWNLOAD FAILURE (1334) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the failure to transfer the software package from the local storage to the board.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1493 IK4901031 - RESET CONTROLLER OAM LACK RESOURCE

Alarm	Attributes	Applicable major NE releases
Name: IK4901031 (3278) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: RESET CONTROLLER OAM LACK RESOURCE (1319) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the controller board is reset due to lack of internal resources.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1494 IK4901032 - RESET CONTROLLER WATCHDOG

Alarm	Attributes	Applicable major NE releases
Name: IK4901032 (3279) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: RESET CONTROLLER WATCHDOG (1320) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the controller is reset due to hardware watchdog timeout.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1495 IK4901033 - CONTROLLER OAM AUTO RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4901033 (3280) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: CONTROLLER OAM AUTO RESET (1321) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the controller is auto-reset due to an internal problem.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1496 IK4901034 - OAM AUTO RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4901034 (3281) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: OAM AUTO RESET (1322) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates an OAM auto-reset due to an internal problem.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1497 IK4901035 - UNEXPECTED CONTROL BOARD RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4901035 (3854) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.CBCardSpecifics	Severity: variable Specific problem: UNEXPECTED CONTROL BOARD RESET (1343) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the control board suffered from an unexpected, unplanned reset.		
Remedial action: No action is required.		

Table 22-1498 IK4901036 - AUTO-REJECT TO PREVIOUS SW VERSION AFTER ACTIVATE

Alarm	Attributes	Applicable major NE releases
Name: IK4901036 (4121) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: AUTO-REJECT TO PREVIOUS SW VERSION AFTER ACTIVATE (1329) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that a reset was performed due to the activation of the previous software version caused by a corrupt file.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1499 IK4901037 - BACK TO FACTORY MODE

Alarm	Attributes	Applicable major NE releases
Name: IK4901037 (4122) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: BACK TO FACTORY MODE (1340) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that software meta data is deleted or corrupted.		
Impact: Telecom: No telecom service possible. OAM: No impact on OAM service except for remote board contact which is not possible.		
Remedial action: No action is required.		

Table 22-1500 IK4901038 - BACK TO MINIMUM DB

Alarm	Attributes	Applicable major NE releases
Name: IK4901038 (4123) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: BACK TO MINIMUM DB (1341) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the database contents have been reset to default.		
Impact: Telecom: No telecom service possible. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1501 IK4901039 - BACK TO FACTORY MODE AND MINIMUM DB

Alarm	Attributes	Applicable major NE releases
Name: IK4901039 (4124) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: BACK TO FACTORY MODE AND MINIMUM DB (1342) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that software meta data is deleted or corrupted and that the database contents have been reset to default.		
Impact: Telecom: No telecom service possible. OAM: No impact on OAM service except for remote board contact which is not possible.		
Remedial action: No action is required.		

Table 22-1502 IK4901040 - SCB DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4901040 (4125) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: SCB DOWNLOAD FAILURE (1344) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the failure of the FTP transfer of the software package from the code-server to the local RAM disk.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1503 IK4901041 - SCB MODULE DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4901041 (4126) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: SCB MODULE DOWNLOAD FAILURE (1345) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the failure to transfer the software package from the local storage to the board.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1504 IK4901042 - CONTROLLER OAM AUTO RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4901042 (4127) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: CONTROLLER OAM AUTO RESET (1321) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the controller is auto-reset due to an internal problem.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1505 IK4901043 - CORRUPT FILE

Alarm	Attributes	Applicable major NE releases
Name: IK4901043 (4128) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: CORRUPT FILE (1318) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates a checksum error.		
Impact: Software replacement failure.		
Remedial action: No action is required.		

Table 22-1506 IK4901044 - NEW SW DOES NOT SUPPORT ALL ACTUAL HW MODULES

Alarm	Attributes	Applicable major NE releases
Name: IK4901044 (4129) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: NEW SW DOES NOT SUPPORT ALL ACTUAL HW MODULES (1339) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the new software package does not support all actual hardware modules installed in the eNodeB.		
Impact: Telecom: Modules not supported by the software may not offer telecom services. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1507 IK4901045 - OAM AUTO RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4901045 (4130) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: OAM AUTO RESET (1322) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates an OAM auto-reset due to an internal problem.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1508 IK4901046 - POWER ON

Alarm	Attributes	Applicable major NE releases
Name: IK4901046 (4131) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: POWER ON (1317) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the system is powered on successfully.		
Impact: All resources are available on successful power on of the system.		
Remedial action: No action is required.		

Table 22-1509 IK4901047 - RESET AFTER ACTIVATE WITH DB MIGRATION

Alarm	Attributes	Applicable major NE releases
Name: IK4901047 (4132) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: RESET AFTER ACTIVATE WITH DB MIGRATION (1324) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the software activation and the successful data migration.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1510 IK4901048 - RESET AFTER ACTIVATE WITHOUT DB MIGRATION

Alarm	Attributes	Applicable major NE releases
Name: IK4901048 (4133) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: RESET AFTER ACTIVATE WITHOUT DB MIGRATION (1325) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the software activation without a data migration.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1511 IK4901049 - RESET AFTER ACTIVATE WITH EMPTY DATABASE

Alarm	Attributes	Applicable major NE releases
Name: IK4901049 (4134) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: RESET AFTER ACTIVATE WITH EMPTY DATABASE (1326) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the software activation. The database is not found.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1512 IK4901050 - RESET AFTER REJECT

Alarm	Attributes	Applicable major NE releases
Name: IK4901050 (4135) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: RESET AFTER REJECT (1327) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the software is rejected. The module is reset to activate the previous software version.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1513 IK4901051 - RESET AFTER REJECT WITH EMPTY DATABASE

Alarm	Attributes	Applicable major NE releases
Name: IK4901051 (4136) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: RESET AFTER REJECT WITH EMPTY DATABASE (1328) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the software is rejected. The module is reset to activate the previous software version. The database is not found.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1514 IK4901052 - RESET CONTROLLER OAM LACK RESOURCE

Alarm	Attributes	Applicable major NE releases
Name: IK4901052 (4137) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: RESET CONTROLLER OAM LACK RESOURCE (1319) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the controller board is reset due to lack of internal resources.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1515 IK4901053 - RESET CONTROLLER WATCHDOG

Alarm	Attributes	Applicable major NE releases
Name: IK4901053 (4138) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: RESET CONTROLLER WATCHDOG (1320) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the controller is reset due to hardware watchdog timeout.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1516 IK4901054 - RESET OAM EXCEPTION

Alarm	Attributes	Applicable major NE releases
Name: IK4901054 (4139) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: RESET OAM EXCEPTION (1323) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the controller is reset due to an processor exception.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1517 IK4901055 - SOFTWARE AND DATABASE FALLBACK

Alarm	Attributes	Applicable major NE releases
Name: IK4901055 (4140) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: SOFTWARE AND DATABASE FALLBACK (1337) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the eNodeB has detected a critical failure during eNodeB initialization while booting from the active software partition. The eNodeB has switched over to the passive software partition and booted up on the previous software version with the previous configuration data.		
Impact: Telecom: Services may not be operating properly until the eNodeB is restored to the proper software version and configuration data. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1518 IK4901056 - SOFTWARE FALLBACK

Alarm	Attributes	Applicable major NE releases
Name: IK4901056 (4141) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: SOFTWARE FALLBACK (1338) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the eNodeB has detected a critical failure during eNodeB initialization while booting from the active software partition. The eNodeB has switched over to the passive software partition and booted up on the previous software version with the previous configuration data.		
Impact: Telecom: Services may not be operating properly until the eNodeB is restored to the proper software version and configuration data. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1519 IK4901057 - SW UPDATED AUTOMATICALLY

Alarm	Attributes	Applicable major NE releases
Name: IK4901057 (4142) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: SW UPDATED AUTOMATICALLY (1331) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the board was enabled with invalid software. OAM automatically updates the required software version.		
Impact: Telecom: All calls and cells associated with the module are not operational. On successful reset, all resources are functional. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1520 IK4901058 - UNEXPECTED CONTROL BOARD RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4901058 (4143) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: UNEXPECTED CONTROL BOARD RESET (1343) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the control board suffered from an unexpected, unplanned reset.		
Remedial action: No action is required.		

Table 22-1521 IK4901059 - CORRUPT FILE

Alarm	Attributes	Applicable major NE releases
Name: IK4901059 (4144) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.RFME	Severity: variable Specific problem: CORRUPT FILE (1318) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates a checksum error.		
Impact: Software replacement failure.		
Remedial action: No action is required.		

Table 22-1522 IK4901060 - RFME MODULE DOWNLOAD FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4901060 (4145) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: variable Specific problem: RFME MODULE DOWNLOAD FAILURE (1346) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the failure to transfer the software package from the local storage to the board.		
Impact: Telecom: No impact on telecom service. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1523 IK4901061 - UNSUPPORTED DELEGATION BY OTHER CONTROLLER

Alarm	Attributes	Applicable major NE releases
Name: IK4901061 (5384) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: warning Specific problem: UNSUPPORTED DELEGATION BY OTHER CONTROLLER (1347) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR14.1.L
Description: The primary controller for this RE (CDMA, WCDMA or GSM) has delegated a management function such as 'Software Management' to the LTE controller. This function is not supported by this LTE release.		
Remedial action: Reconfigure the RE on the primary controller (CDMA, WCDMA or GSM) to no longer delegate the unsupported management function to LTE.		

Table 22-1524 IK4904001 - UPDATE RI FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4904001 (2787) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: UPDATE RI FAILURE (1348) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the failure to update the remote inventory information for the module.		
Impact: Telecom: No impact on telecom service. OAM: Incorrect information is stored in the remote inventory file or the remote inventory of the module.		
Remedial action: No action is required.		

Table 22-1525 IK4904002 - UPDATE RI FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4904002 (2788) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: UPDATE RI FAILURE (1348) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the failure to update the remote inventory information for the module.		
Impact: Telecom: No impact on telecom service. OAM: Incorrect information is stored in the remote inventory file or the remote inventory of the module.		
Remedial action: No action is required.		

Table 22-1526 IK4904003 - UPDATE RI FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4904003 (2789) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: variable Specific problem: UPDATE RI FAILURE (1348) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the failure to update the remote inventory information for the module.		
Impact: Telecom: No impact on telecom service. OAM: Incorrect information is stored in the remote inventory file or the remote inventory of the module.		
Remedial action: No action is required.		

Table 22-1527 IK4904004 - UPDATE RI FAILURE

Alarm	Attributes	Applicable major NE releases

Impact: Telecom: Impacts the telecom traffic, depending on the module state. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1564 IK4904046 - ALU DEBUG SESSION ON-DEMAND SNAPSHOT INTERNAL FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4904046 (4152) Type: qualityOfServiceAlarm (82) Package: lte Raised on class: lte.RFME	Severity: variable Specific problem: ALU DEBUG SESSION ON-DEMAND SNAPSHOT INTERNAL FAILURE (1359) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the on-demand snapshot request failed due to eNodeB internal error.		
Impact: No impact to eNodeB.		
Remedial action: No action is required.		

Table 22-1565 IK4904047 - UPDATE RI FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4904047 (4785) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: variable Specific problem: UPDATE RI FAILURE (1348) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates a failure to update the remote inventory information for the module.		
Impact: Incorrect information is stored in the remote inventory file or the remote inventory of the module.		
Remedial action: No action is required.		

Table 22-1566 IK4904048 - UPDATE RI FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4904048 (4786) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: UPDATE RI FAILURE (1348) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the failure to update the remote inventory information for the module.		
Impact: Incorrect information is stored in the remote inventory file or the remote inventory of the module.		
Remedial action: No action is required.		

Table 22-1567 IK4905001 - RESET ON OPERATOR REQUEST

Alarm	Attributes	Applicable major NE releases
Name: IK4905001 (2810) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: RESET ON OPERATOR REQUEST (1360) Implicitly cleared: true Default probable cause: operatorCommand (905)	<ul style="list-style-type: none"> • LT6.0
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1568 IK4905002 - RESET OAM ON OPERATOR REQUEST

Alarm	Attributes	Applicable major NE releases
Name: IK4905002 (2811) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: RESET OAM ON OPERATOR REQUEST (1361) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1569 IK4905003 - RESET CONTROLLER OAM ON OPERATOR REQUEST

Alarm	Attributes	Applicable major NE releases
Name: IK4905003 (2812) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: RESET CONTROLLER OAM ON OPERATOR REQUEST (1362) Implicitly cleared: true Default probable cause: operatorCommand (905)	<ul style="list-style-type: none"> LT6.0
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1570 IK4905004 - CONTROLLER OAM RESET AFTER RESTORE

Alarm	Attributes	Applicable major NE releases
Name: IK4905004 (2813) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: CONTROLLER OAM RESET AFTER RESTORE (1363) Implicitly cleared: true Default probable cause: operatorCommand (905)	<ul style="list-style-type: none"> LT6.0
Description: This event indicates that the controller board is reset to restore the configuration data.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1571 IK4905005 - CONTROLLER OAM RESET AFTER RESTORE WITH EMPTY DATABASE

Alarm	Attributes	Applicable major NE releases
Name: IK4905005 (2814) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: CONTROLLER OAM RESET AFTER RESTORE WITH EMPTY DATABASE (1364) Implicitly cleared: true Default probable cause: corruptData (910)	<ul style="list-style-type: none"> LT6.0
Description: This event indicates an OAM auto-reset with an empty database as the database was not restored properly.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: Restore a valid eNodeB configuration.		

Table 22-1572 IK4905006 - LRA RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905006 (2815) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: LRA RESET (1365) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset due to a local recovery action.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1573 IK4905007 - LRA RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905007 (2816) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: LRA RESET (1365) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset due to a local recovery action.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1574 IK4905008 - LRA RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905008 (2817) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBShelfSpecifics	Severity: variable Specific problem: LRA RESET (1365) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset due to a local recovery action.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1575 IK4905009 - LRA RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905009 (2818) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RRH	Severity: variable Specific problem: LRA RESET (1365) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset due to a local recovery action.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1576 IK4905010 - LRA RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905010 (2819) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TRDU	Severity: variable Specific problem: LRA RESET (1365) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset due to a local recovery action.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1577 IK4905011 - MODULE RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905011 (2820) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: MODULE RESET (1366) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1578 IK4905012 - MODULE RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905012 (2821) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: MODULE RESET (1366) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1579 IK4905013 - MODULE RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905013 (2822) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBSelfSpecifics	Severity: variable Specific problem: MODULE RESET (1366) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1580 IK4905014 - MODULE RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905014 (2823) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RRH	Severity: variable Specific problem: MODULE RESET (1366) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1581 IK4905015 - MODULE RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905015 (2824) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TRDU	Severity: variable Specific problem: MODULE RESET (1366) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1582 IK4905016 - MODULE RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905016 (2825) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: MODULE RESET (1366) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1583 IK4905020 - DATABASE RECONFIGURATION RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905020 (2828) Type: communicationsAlarm (4) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: DATABASE RECONFIGURATION RESET (1368) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that a reset was performed due to a database reconfiguration.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1584 IK4905021 - MAX NUMBER OF DYNAMIC CARDINALITY REACHED

Alarm	Attributes	Applicable major NE releases
Name: IK4905021 (2829) Type: communicationsAlarm (4) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: MAX NUMBER OF DYNAMIC CARDINALITY REACHED (1369) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LT6.0
Description: This event indicates that the number of X2Access objects being in an invisible state has reached the limit and the ANR function triggers the creation of a further dynamic X2Access/X2TransportLayerAccess. The new invisible X2Access/X2TransportLayerAccess is not created.		
Impact: No impact on eNodeB.		
Remedial action: Remove X2 objects which are not needed from the predefined configuration data.		

Table 22-1585 IK4905022 - FALLBACK AFTER RECONFIGURATION

Alarm	Attributes	Applicable major NE releases
Name: IK4905022 (2830) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: FALLBACK AFTER RECONFIGURATION (1370) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the eNodeB did an autonomous fallback to the previous configuration because the contact to the network management system could not be restored.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1586 IK4905023 - MAX NUMBER OF CARDINALITY REACHED

Alarm	Attributes	Applicable major NE releases
Name: IK4905023 (3288) Type: communicationsAlarm (4) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: MAX NUMBER OF CARDINALITY REACHED (1367) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the maximum number of object cardinality is reached. The automatic creation of new objects is not possible anymore.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1587 IK4905024 - RESET ON OPERATOR REQUEST

Alarm	Attributes	Applicable major NE releases
Name: IK4905024 (3289) Type: equipmentAlarm (3) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: RESET ON OPERATOR REQUEST (1360) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1588 IK4905025 - RESET CONTROLLER OAM ON OPERATOR REQUEST

Alarm	Attributes	Applicable major NE releases
Name: IK4905025 (3290) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: RESET CONTROLLER OAM ON OPERATOR REQUEST (1362) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1589 IK4905026 - CONTROLLER OAM RESET AFTER RESTORE

Alarm	Attributes	Applicable major NE releases
Name: IK4905026 (3291) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: CONTROLLER OAM RESET AFTER RESTORE (1363) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the controller board is reset to restore the configuration data.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1590 IK4905027 - CONTROLLER OAM RESET AFTER RESTORE WITH EMPTY DATABASE

Alarm	Attributes	Applicable major NE releases
Name: IK4905027 (3292) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: CONTROLLER OAM RESET AFTER RESTORE WITH EMPTY DATABASE (1364) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates an OAM auto-reset with an empty database as the database was not restored properly.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1591 IK4905028 - BBU POSITION CHANGE

Alarm	Attributes	Applicable major NE releases
Name: IK4905028 (3293) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: BBU POSITION CHANGE (1371) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the BBU position coordinates have changed. The GPS antenna of the eNodeB has been moved or the bbuPositionDeltaX/Y/Z coordinates have been reconfigured.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1592 IK4905029 - BBU POSITION ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4905029 (3294) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: BBU POSITION ERROR (1372) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the BBU position coordinates might not be correct.		
Impact: Configured coordinates of the BBU might not be correct.		
Remedial action: No action is required.		

Table 22-1593 IK4905030 - MAIN ANTENNA POSITION CHANGE

Alarm	Attributes	Applicable major NE releases
Name: IK4905030 (3295) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: MAIN ANTENNA POSITION CHANGE (1373) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the main RF antenna position coordinates have changed. The GPS antenna of the eNodeB has been moved or the mainAntennaPositionDeltaX/Y/Z values have been reconfigured.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1594 IK4905031 - MAIN ANTENNA POSITION ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4905031 (3296) Type: equipmentAlarm (3) Package: lte Raised on class: lte.CBCardSpecifics	Severity: variable Specific problem: MAIN ANTENNA POSITION ERROR (1374) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the main RF antenna position coordinates might not be correct.		
Impact: Location fix of UEs might be inaccurate.		
Remedial action: No action is required.		

Table 22-1595 IK4905034 - OAM CELL EVENT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4905034 (3299) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: OAM CELL EVENT 3 (1377) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. This event is for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-1596 IK4905035 - OAM CELL EVENT 4

Alarm	Attributes	Applicable major NE releases
Name: IK4905035 (3300) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: OAM CELL EVENT 4 (1378) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. This event is for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-1597 IK4905036 - OAM CELL EVENT 5

Alarm	Attributes	Applicable major NE releases
Name: IK4905036 (3301) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: OAM CELL EVENT 5 (1379) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: Provisioned for late churn-in. This event is for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-1598 IK4905037 - LRA RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905037 (3675) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAidEntry	Severity: variable Specific problem: LRA RESET (1365) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset due to a local recovery action.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1599 IK4905038 - LRA RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905038 (3676) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: variable Specific problem: LRA RESET (1365) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset due to a local recovery action.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1600 IK4905039 - MODULE RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905039 (3677) Type: equipmentAlarm (3) Package: lte Raised on class: lte.TmaAidEntry	Severity: variable Specific problem: MODULE RESET (1366) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1601 IK4905040 - MODULE RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905040 (3678) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RetAidEntry	Severity: variable Specific problem: MODULE RESET (1366) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1602 IK4905041 - CELL BLOCK REQUEST RECEIVED AT SHARED RFM

Alarm	Attributes	Applicable major NE releases
Name: IK4905041 (3679) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFM	Severity: variable Specific problem: CELL BLOCK REQUEST RECEIVED AT SHARED RFM (1380) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the RFM is about to interrupt RF operation and so any cells fully supported on the RFM should be blocked. This cell block procedure is supported on shared RFMs (including ROCM) and is triggered by the other controller sharing the RFM.		
Impact: Telecom: The Cell Block procedure shuts down call processing on the cell(s) supported on this RFM. OAM: None.		
Remedial action: No action is required.		

Table 22-1603 IK4905043 - MODEM RESET DUE ON-LINE B-MODEM CLASS PARAMETER UPDATE

Alarm	Attributes	Applicable major NE releases
Name: IK4905043 (3859) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: MODEM RESET DUE ON-LINE B-MODEM CLASS PARAMETER UPDATE (1381) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates Modem has reset when operator updates the value of B-Modem Class parameter on-line.		
Impact: Service impact on Modem		
Remedial action: No action is required.		

Table 22-1604 IK4905044 - X2 LINK RESET DUE ON-LINE B-X2-INTERFACE CLASS PARAMETER UPDATE

Alarm	Attributes	Applicable major NE releases
Name: IK4905044 (3860) Type: communicationsAlarm (4) Package: lte Raised on class: lte.X2TransportLayerAccess	Severity: variable Specific problem: X2 LINK RESET DUE ON-LINE B-X2-INTERFACE CLASS PARAMETER UPDATE (1382) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates X2 link has reset when operator updates the value of B-X2-interface Class parameter on-line.		
Impact: Service impact on X2 link		
Remedial action: No action is required.		

Table 22-1605 IK4905045 - S1 LINK RESET DUE ON-LINE B-S1-INTERFACE CLASS PARAMETER UPDATE

Alarm	Attributes	Applicable major NE releases
Name: IK4905045 (3861) Type: communicationsAlarm (4) Package: lte Raised on class: lte.MmeTransportLayerAccess	Severity: variable Specific problem: S1 LINK RESET DUE ON-LINE B-S1-INTERFACE CLASS PARAMETER UPDATE (1383) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates S1 link has reset when operator updates the value of B-S1-interface Class parameter on-line.		
Impact: Service impact on S1 link		
Remedial action: No action is required.		

Table 22-1606 IK4905046 - CELL OUTAGE START

Alarm	Attributes	Applicable major NE releases
Name: IK4905046 (3862) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: CELL OUTAGE START (1384) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the cell has stopped to provide telecom services.		
Impact: Telecom: The cell is not operational. OAM: No impact		
Remedial action: No action is required.		

Table 22-1607 IK4905047 - CELL OUTAGE END

Alarm	Attributes	Applicable major NE releases
Name: IK4905047 (3863) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: CELL OUTAGE END (1385) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the cell has started to provide telecom services.		
Impact: Telecom: no impact. OAM: No impact.		
Remedial action: No action is required.		

Table 22-1608 IK4905048 - OAM CELL EVENT 6

Alarm	Attributes	Applicable major NE releases
Name: IK4905048 (3864) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: OAM CELL EVENT 6 (1386) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This event is for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-1609 IK4905049 - OAM CELL EVENT 7

Alarm	Attributes	Applicable major NE releases
Name: IK4905049 (3865) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: OAM CELL EVENT 7 (1387) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: Provisioned for late churn-in. This event is for future use.		
Impact: Unknown.		
Remedial action: No action is required.		

Table 22-1610 IK4905050 - MODULE WARM RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905050 (3866) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: MODULE WARM RESET (1388) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates a modem warm reset of the physical cell resource.		
Impact: Telecom: The affected hardware and the assigned cell is not operational. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1611 IK4905051 - LRA WARM RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905051 (3867) Type: equipmentAlarm (3) Package: lte Raised on class: lte.BBCardSpecifics	Severity: variable Specific problem: LRA WARM RESET (1389) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates a local recovery action of the modem physical cell resource.		
Impact: Telecom: Associated cell and calls are not operational. OAM: No impact		
Remedial action: No action is required.		

Table 22-1612 IK4905052 - CMS INIT START

Alarm	Attributes	Applicable major NE releases
Name: IK4905052 (3868) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: CMS INIT START (1204) Implicitly cleared: true Default probable cause: operatorCommand (905)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This event indicates that operator certificate enrollment scenario started.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1613 IK4905053 - CMS INIT END

Alarm	Attributes	Applicable major NE releases
Name: IK4905053 (3869) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: CMS INIT END (1390) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that operator enrollment scenario ended.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1614 IK4905054 - KEY UPDATE START

Alarm	Attributes	Applicable major NE releases
Name: IK4905054 (3870) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: KEY UPDATE START (1391) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the key updated started.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1615 IK4905055 - KEY UPDATE END

Alarm	Attributes	Applicable major NE releases
Name: IK4905055 (3871) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: KEY UPDATE END (1392) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the key updated ended.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1616 IK4905056 - NEW CERTIFICATE AVAILABLE

Alarm	Attributes	Applicable major NE releases
Name: IK4905056 (3872) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: NEW CERTIFICATE AVAILABLE (1393) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This event indicates that new certificate was downloaded on eNB.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1617 IK4905057 - DNS RESOLUTION ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4905057 (3873) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: DNS RESOLUTION ERROR (1239) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This event indicates that the searched item does not exist in DNS		
Impact: Depends on eNB configuration for certificate revocation (strictCrIPolicy parameter): either no impact (not strict..) or IPsec setup fails in which case there will be a separate alarm		
Remedial action: Check DNS configuration for HTTP URI-related records.		

Table 22-1618 IK4905058 - MF EVENT 1

Alarm	Attributes	Applicable major NE releases
Name: IK4905058 (4153) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: MF EVENT 1 (645) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: Unspecified MF fault detected.		
Impact: Unknown.		
Remedial action: Unknown.		

Table 22-1619 IK4905059 - MF EVENT 2

Alarm	Attributes	Applicable major NE releases
Name: IK4905059 (4154) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: MF EVENT 2 (646) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: Unspecified MF fault detected.		
Impact: Unknown.		
Remedial action: Unknown.		

Table 22-1620 IK4905060 - MF EVENT 3

Alarm	Attributes	Applicable major NE releases
Name: IK4905060 (4155) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: MF EVENT 3 (647) Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: Unspecified MF fault detected.		
Impact: Unknown.		
Remedial action: Unknown.		

Table 22-1621 IK4905061 - CONTROLLER OAM RESET AFTER RESTORE

Alarm	Attributes	Applicable major NE releases
Name: IK4905061 (4156) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: CONTROLLER OAM RESET AFTER RESTORE (1363) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the controller board is reset to restore the configuration data.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1622 IK4905062 - CONTROLLER OAM RESET AFTER RESTORE WITH EMPTY DATABASE

Alarm	Attributes	Applicable major NE releases
Name: IK4905062 (4157) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: CONTROLLER OAM RESET AFTER RESTORE WITH EMPTY DATABASE (1364) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates an OAM auto-reset with an empty database as the database was not restored properly.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1623 IK4905063 - DATABASE RECONFIGURATION RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905063 (4158) Type: communicationsAlarm (4) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: DATABASE RECONFIGURATION RESET (1368) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that a reset was performed due to a database reconfiguration.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1624 IK4905064 - LRA RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905064 (4159) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: LRA RESET (1365) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the reset due to a local recovery action.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1625 IK4905065 - LRA WARM RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905065 (4160) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: LRA WARM RESET (1389) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates a local recovery action of the modem physical cell resource.		
Impact: Telecom: Associated cell and calls are not operational. OAM: No impact		
Remedial action: No action is required.		

Table 22-1626 IK4905066 - MAIN ANTENNA POSITION CHANGE

Alarm	Attributes	Applicable major NE releases
Name: IK4905066 (4161) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: MAIN ANTENNA POSITION CHANGE (1373) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the main RFME antenna position coordinates have changed. The GPS antenna of the eNodeB has been moved or the mainAntennaPositionDeltaX/Y/Z values have been reconfigured.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1627 IK4905067 - MAIN ANTENNA POSITION ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4905067 (4162) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: MAIN ANTENNA POSITION ERROR (1374) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the main RFME antenna position coordinates might not be correct.		
Impact: Location fix of UEs might be inaccurate.		
Remedial action: No action is required.		

Table 22-1628 IK4905068 - MODULE RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905068 (4163) Type: equipmentAlarm (3) Package: Ite Raised on class: Ite.MODULE	Severity: variable Specific problem: MODULE RESET (1366) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1629 IK4905069 - MODULE WARM RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905069 (4164) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: MODULE WARM RESET (1388) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates a modem warm reset of the physical cell resource.		
Impact: Telecom: The affected hardware and the assigned cell is not operational. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1630 IK4905070 - RESET CONTROLLER OAM ON OPERATOR REQUEST

Alarm	Attributes	Applicable major NE releases
Name: IK4905070 (4165) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: RESET CONTROLLER OAM ON OPERATOR REQUEST (1362) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1631 IK4905071 - RESET OAM ON OPERATOR REQUEST

Alarm	Attributes	Applicable major NE releases
Name: IK4905071 (4166) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: RESET OAM ON OPERATOR REQUEST (1361) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1632 IK4905072 - RESET ON OPERATOR REQUEST

Alarm	Attributes	Applicable major NE releases
Name: IK4905072 (4167) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: RESET ON OPERATOR REQUEST (1360) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls are lost. OAM: No impact on OAM service.		
Remedial action: No action is required.		

Table 22-1633 IK4905073 - LRA RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905073 (4168) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: variable Specific problem: LRA RESET (1365) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the reset due to a local recovery action.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1634 IK4905074 - MODULE RESET

Alarm	Attributes	Applicable major NE releases
Name: IK4905074 (4169) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RFME	Severity: variable Specific problem: MODULE RESET (1366) Implicitly cleared: true Default probable cause: operatorCommand (905)	<ul style="list-style-type: none"> • LR13.1
Description: This event indicates the reset command by the operator.		
Impact: Telecom: All associated calls and cells are not operational during reset. On successful reset, all resources are functional. OAM: The OAM functionalities are not available during reset. On successful reset, the OAM functionalities are available.		
Remedial action: No action is required.		

Table 22-1635 IK4905077 - SIM HEALTH CHECK - TX PWR FAILED

Alarm	Attributes	Applicable major NE releases
Name: IK4905077 (4787) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: critical Specific problem: SIM HEALTH CHECK - TX PWR FAILED (1238) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This alarm indicates that the System Integrity Monitor monitoring the health of the eNodeB has detected a degradation. Depending on the severity of the degradation, local recovery actions may be taken.		
Impact: Telecom service is impaired on the cell.		
Remedial action: If the alarm persists, the cell may need to be reinitialized.		

Table 22-1636 IK4905080 - LOGICAL RESET AND RF RECONF DUE TO ON-LINE B-CELL+RF(s) CLASS PARAMETER UPDATE

Alarm	Attributes	Applicable major NE releases
Name: IK4905080 (4788) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: LOGICAL RESET AND RF RECONF DUE TO ON-LINE B-CELL+RF(s) CLASS PARAMETER UPDATE (1240) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> • LR13.1 • LR13.3
Description: This event indicates the LTE Cell is logically reset and the RF is reconfigured during parameter update procedure.		
Impact: The LTE Cell is reset and the RF is reconfigured, releasing all calls handled on this cell. The cell is then back into service with new values of the parameters.		
Remedial action: None.		

Table 22-1637 IK4905083 - AUTOMATED HANDOVER PARAMETER ADJUSTMENT COMPLETED

Alarm	Attributes	Applicable major NE releases
Name: IK4905083 (4789) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.Cell	Severity: variable Specific problem: AUTOMATED HANDOVER PARAMETER ADJUSTMENT COMPLETED (1394) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates the SON process that automatically adjusts intra-frequency handover parameters has no further adjustments to make.		
Impact: The cell will not initiate further HO parameter adjustments unless HO performance degrades more than a configurable amount or the operator manually triggers the MRO feature to attempt further adjustments.		
Remedial action: No action is required.		

Table 22-1638 IK4905086 - BBU POSITION CHANGE

Alarm	Attributes	Applicable major NE releases
Name: IK4905086 (4790) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: BBU POSITION CHANGE (1371) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the BBU position coordinates have changed.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1639 IK4905087 - BBU POSITION ERROR

Alarm	Attributes	Applicable major NE releases
Name: IK4905087 (4791) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MODULE	Severity: variable Specific problem: BBU POSITION ERROR (1372) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: This event indicates that the BBU position coordinates might not be correct.		
Impact: Configured coordinates of the BBU might not be correct.		
Remedial action: No action is required.		

Table 22-1640 IK4906001 - THREE UNSUCCESSFUL LOGIN ATTEMPTS

Alarm	Attributes	Applicable major NE releases
Name: IK4906001 (2831) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: THREE UNSUCCESSFUL LOGIN ATTEMPTS (1395) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the user failed to log into the eNodeB through SSH or CLI for three times in a span of 10 minutes.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1641 IK4906002 - SUCCESSFUL LOGIN

Alarm	Attributes	Applicable major NE releases
Name: IK4906002 (2832) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: SUCCESSFUL LOGIN (1396) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the user successfully logged into the eNodeB through SSH or CLI.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1642 IK4906003 - UNSUCCESSFUL LOGIN ATTEMPT

Alarm	Attributes	Applicable major NE releases
Name: IK4906003 (2833) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: UNSUCCESSFUL LOGIN ATTEMPT (1397) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the user failed to log into the eNodeB through SSH or CLI.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1643 IK4906004 - SUCCESSFUL ROLE CHANGE

Alarm	Attributes	Applicable major NE releases
Name: IK4906004 (2834) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: SUCCESSFUL ROLE CHANGE (1398) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that the user successfully changed roles on the eNodeB.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1644 IK4906005 - UNSUCCESSFUL ROLE CHANGE

Alarm	Attributes	Applicable major NE releases
Name: IK4906005 (2835) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: UNSUCCESSFUL ROLE CHANGE (1399) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates the failure to change the user role on the eNodeB.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1645 IK4906006 - ETHERNET CABLE CONNECTED

Alarm	Attributes	Applicable major NE releases
Name: IK4906006 (2836) Type: physicalViolation (91) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: ETHERNET CABLE CONNECTED (1400) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that an Ethernet cable is connected to a port on the eNodeB.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1646 IK4906007 - ETHERNET CABLE DISCONNECTED

Alarm	Attributes	Applicable major NE releases
Name: IK4906007 (2837) Type: physicalViolation (91) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: ETHERNET CABLE DISCONNECTED (1401) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that an Ethernet cable is disconnected from a port on the eNodeB.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1647 IK4906008 - SECURITY LOG ROLLED OVER

Alarm	Attributes	Applicable major NE releases
Name: IK4906008 (2838) Type: integrityViolation (85) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: SECURITY LOG ROLLED OVER (1402) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates that a security log is rolled over.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1648 IK4906010 - AUTHORIZATION LOG READ FAILURE

Alarm	Attributes	Applicable major NE releases
Name: IK4906010 (3302) Type: integrityViolation (85) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: AUTHORIZATION LOG READ FAILURE (1404) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This event indicates a failure to read the SSH authorization log. The eNodeB is unable to log login attempts.		
Impact: No impact on eNodeB.		
Remedial action: No action is required.		

Table 22-1649 IK4906011 - NEW CERTIFICATE AVAILABLE

Alarm	Attributes	Applicable major NE releases
Name: IK4906011 (5385) Type: processingErrorAlarm (81) Package: lte Raised on class: lte.ENBEquipment	Severity: variable Specific problem: NEW CERTIFICATE AVAILABLE (1393) Implicitly cleared: true Default probable cause: unknown (1097)	<ul style="list-style-type: none"> • LR14.1.L
Description: This event indicates that new certificate was downloaded on eNB.		
Remedial action: No action is required.		

Table 22-1650 IK4906012 - DNS SERVICE UNAVAILABLE

Alarm	Attributes	Applicable major NE releases
Name: IK4906012 (5386) Type: securityServiceOrMechanismViolation (92) Package: lte Raised on class: lte.ENBEquipment	Severity: major Specific problem: DNS SERVICE UNAVAILABLE (1169) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.1.L
Description: This alarm indicates that No DNS server at all is available for resolving a symbolic address to a numeric IP address		
Remedial action: Check the state of DNS server(s) and the state of the comm. network between eNB and DNS		

Table 22-1651 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 22-1652 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 22-1653 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 22-1654 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 22-1655 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 22-1656 LTECellAdminDown

Alarm	Attributes	Applicable major NE releases
Name: LTECellAdminDown (1471) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: variable Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an LTE Cell Administrative State is down.		
Raising condition: (('administrativeState' NOT EQUAL 'Unlocked'))		
Clearing condition: (('administrativeState' EQUAL 'Unlocked'))		
Remedial action: Informational - no corrective action required.		

Table 22-1657 LTECellDown

Alarm	Attributes	Applicable major NE releases
Name: LTECellDown (1472) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: info Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an LTE Cell is operationally down.		
Raising condition: (('operationalState' NOT EQUAL 'Enabled') AND ('administrativeState' EQUAL 'Unlocked'))		
Clearing condition: (('operationalState' EQUAL 'Enabled') OR ('administrativeState' NOT EQUAL 'Unlocked'))		
Remedial action: The Cell is inoperable. Additional attributes may indicate the nature and cause of the issue.		

Table 22-1658 LTECellNotAvailable

Alarm	Attributes	Applicable major NE releases
Name: LTECellNotAvailable (1473) Type: equipmentAlarm (3) Package: lte Raised on class: lte.Cell	Severity: info Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an LTE Cell is not fully available.		
Raising condition: ('availabilityStatus' NOT EQUAL 'No Bits Set')		
Clearing condition: ('availabilityStatus' EQUAL 'No Bits Set')		
Remedial action: The Cell is not fully available. AvailabilityStatus value and Additional attributes may indicate the nature and cause of the issue.		

Table 22-1659 M3MmeAccessAdminDown

Alarm	Attributes	Applicable major NE releases
Name: M3MmeAccessAdminDown (4792) Type: equipmentAlarm (3) Package: lte Raised on class: lte.M3MmeAccess	Severity: variable Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The alarm is raised when an LTE Cell Administrative State is down.		
Raising condition: (('Administrative State' NOT EQUAL 'Unlocked'))		
Clearing condition: (('Administrative State' EQUAL 'Unlocked'))		
Remedial action: Informational - no corrective action required.		

Table 22-1660 M3MmeAccessDown

Alarm	Attributes	Applicable major NE releases
Name: M3MmeAccessDown (4793) Type: equipmentAlarm (3) Package: lte Raised on class: lte.M3MmeAccess	Severity: info Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The alarm is raised when an LTE Cell is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Enabled') AND ('Administrative State' EQUAL 'Unlocked'))		
Clearing condition: (('Operational State' EQUAL 'Enabled') OR ('Administrative State' NOT EQUAL 'Unlocked'))		
Remedial action: The Equipment is inoperable. Additional attributes may indicate the nature and cause of the issue.		

Table 22-1661 M3MmeAccessNotAvailable

Alarm	Attributes	Applicable major NE releases
Name: M3MmeAccessNotAvailable (4794) Type: equipmentAlarm (3) Package: lte Raised on class: lte.M3MmeAccess	Severity: info Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L
Description: The alarm is raised when an LTE Cell is not fully available.		
Raising condition: ('Availability Status' NOT EQUAL 'No Bits Set')		
Clearing condition: ('Availability Status' EQUAL 'No Bits Set')		
Remedial action: The Equipment is not fully available. AvailabilityStatus value and Additional attributes may indicate the nature and cause of the issue.		

Table 22-1662 MmeAccessAdminDown

Alarm	Attributes	Applicable major NE releases
Name: MmeAccessAdminDown (1523) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MmeAccess	Severity: variable Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an MME Access Administrative State is down.		
Raising condition: (('Administrative State' NOT EQUAL 'Unlocked'))		
Clearing condition: (('Administrative State' EQUAL 'Unlocked'))		
Remedial action: Informational - no corrective action required.		

Table 22-1663 MmeAccessDown

Alarm	Attributes	Applicable major NE releases
Name: MmeAccessDown (1524) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MmeAccess	Severity: info Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an MME Access is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Enabled') AND ('Administrative State' EQUAL 'Unlocked'))		
Clearing condition: (('Operational State' EQUAL 'Enabled') OR ('Administrative State' NOT EQUAL 'Unlocked'))		
Remedial action: The Equipment is inoperable. Additional attributes may indicate the nature and cause of the issue.		

Table 22-1664 MmeAccessNotAvailable

Alarm	Attributes	Applicable major NE releases
Name: MmeAccessNotAvailable (1525) Type: equipmentAlarm (3) Package: lte Raised on class: lte.MmeAccess	Severity: info Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an MME Access is not fully available.		
Raising condition: ('Availability Status' NOT EQUAL 'No Bits Set')		
Clearing condition: ('Availability Status' EQUAL 'No Bits Set')		
Remedial action: The Equipment is not fully available. AvailabilityStatus value and Additional attributes may indicate the nature and cause of the issue.		

Table 22-1665 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\')		
Clearing condition: ('EPS Path' NOT EQUAL '\')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 22-1666 MonitoredLinkStatusError

Alarm	Attributes	Applicable major NE releases
Name: MonitoredLinkStatusError (4796) Type: processingErrorAlarm (81) Package: Ite Raised on class: Ite.ENBEquipment	Severity: major Implicitly cleared: true Default probable cause: corruptData (910)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm is raised when the Network Element is reachable but the monitoring of link status fails. This alarm can be raised when several managers are managing a given Network Element which is not able to support multiple managers. The alarm can also be raised if the identifier of Network Element does not match the identifier in the Network Element managed in SAM. It is automatically cleared when the monitoring of the link status succeeds.		
Raising condition: ('OAM Link Status' EQUAL 'Down')		
Clearing condition: ('OAM Link Status' EQUAL 'Up')		
Remedial action: Network Element is reachable but the monitoring of link status fails		

Table 22-1667 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

(2 of 2)

Table 22-1668 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 22-1669 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 22-1670 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 22-1671 NodeRebooted

Alarm	Attributes	Applicable major NE releases
Name: NodeRebooted (32) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: false Default probable cause: nodeReboot (25)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the 5620 SAM detects an NE reboot based on the latest NE sysUpTime value.		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 22-1672 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 22-1673 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotManagedByAnyEms (1934)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM.Add an discory rule in order to managed it.		

Table 22-1674 OutOfService

Alarm	Attributes	Applicable major NE releases
Name: OutOfService (4385) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an Equipment is detected as Out Of Service. For an ENB: the supervision link is down and all S1c Links between the ENB and its MMEs are down.		
Remedial action: The NE is Out of Service. Investigate on Site.		

Table 22-1675 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 22-1676 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 22-1677 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 22-1678 PMCMaxResultStringBlockSizeNotOptimum

Alarm	Attributes	Applicable major NE releases
Name: PMCMaxResultStringBlockSizeNotOptimum (2922) Type: performanceOptimization (97) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Implicitly cleared: true Default probable cause: wrongValue (1120)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: This alarm is raised when the PM maximum block size that will be transferred in one SNMP request is set to a value less than an optimum value of 6000 bytes. NOTE that the node's default value can be lower than 6000 bytes.		
Raising condition: ('pmcMaxResultStringBlockSize' < '6000')		
Clearing condition: ('pmcMaxResultStringBlockSize' >= " '6000'")		
Remedial action: Set blocksize to the recommended value.		

(2 of 2)

Table 22-1679 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 22-1680 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 22-1681 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 22-1682 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 22-1683 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

(2 of 2)

Table 22-1684 RncAccessAdminDown

Alarm	Attributes	Applicable major NE releases
Name: RncAccessAdminDown (4797) Type: equipmentAlarm (3) Package: lte Raised on class: lte.RncAccess	Severity: variable Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when a RNC Access Administrative State is down.		
Raising condition: (('administrativeState' NOT EQUAL 'Unlocked'))		
Clearing condition: (('administrativeState' EQUAL 'Unlocked'))		
Remedial action: Informational - no corrective action required.		

Table 22-1685 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 22-1686 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0

(1 of 2)

22 – Alcatel-Lucent 9xxx eNodeB alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

(2 of 2)

Table 22-1687 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 22-1688 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 22-1689 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> trapDestinationMisconfigured duplicateTrapLogId 	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 22-1690 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> LR13.1 LR13.3 LR14.1.L LT6.0
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 22-1691 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 22-1692 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 22-1693 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

(2 of 2)

Table 22-1694 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 22-1695 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 22-1696 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 22-1697 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 22-1698 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL "\"TIMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL "\"TIMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

Table 22-1699 X2AccessAdminDown

Alarm	Attributes	Applicable major NE releases
Name: X2AccessAdminDown (1906) Type: equipmentAlarm (3) Package: lte Raised on class: lte.X2Access	Severity: variable Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an X2 Access Administrative State is down.		
Raising condition: (('Administrative State' NOT EQUAL 'Unlocked'))		
Clearing condition: (('Administrative State' EQUAL 'Unlocked'))		
Remedial action: Informational - no corrective action required.		

Table 22-1700 X2AccessDown

Alarm	Attributes	Applicable major NE releases
Name: X2AccessDown (1907) Type: equipmentAlarm (3) Package: lte Raised on class: lte.X2Access	Severity: info Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an X2 Access is operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Enabled') AND ('Administrative State' EQUAL 'Unlocked'))		
Clearing condition: (('Operational State' EQUAL 'Enabled') OR ('Administrative State' NOT EQUAL 'Unlocked'))		
Remedial action: The Equipment is inoperable. Additional attributes may indicate the nature and cause of the issue.		

Table 22-1701 X2AccessNotAvailable

Alarm	Attributes	Applicable major NE releases
Name: X2AccessNotAvailable (1908) Type: equipmentAlarm (3) Package: lte Raised on class: lte.X2Access	Severity: info Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> • LR13.1 • LR13.3 • LR14.1.L • LT6.0
Description: The alarm is raised when an X2 Access is not fully available.		
Raising condition: ('Availability Status' NOT EQUAL 'No Bits Set')		
Clearing condition: ('Availability Status' EQUAL 'No Bits Set')		
Remedial action: The Equipment is not fully available. AvailabilityStatus value and Additional attributes may indicate the nature and cause of the issue.		

23 — Alcatel-Lucent-HIP alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter [35](#) for information about the alarm.

Table 23-1 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> N/A
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

23 – Alcatel-Lucent-HIP alarms

Table 23-2 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 23-3 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 23-4 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

(2 of 2)

Table 23-5 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 23-6 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> persistentIndexFailure configFileBootFailure 	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

23 – Alcatel-Lucent-HIP alarms

Table 23-7 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 23-8 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 23-9 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 23-10 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 23-11 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 23-12 EMSNetworkElementSystemAlarmOverLoad

Alarm	Attributes	Applicable major NE releases
Name: EMSNetworkElementSystemAlarmOverLoad (4620) Type: processingErrorAlarm (81) Package: hip Raised on class: hip.EMSNetworkElement	Severity: critical Implicitly cleared: true Default probable cause: systemResourcesOverload (1505)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the 5620 SAM detects an overload of EMS alarms in the alarm list.		

(1 of 2)

23 – Alcatel-Lucent-HIP alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: ('alarmOverLoaded' EQUAL 'true')		
Clearing condition: ('alarmOverLoaded' EQUAL 'false')		
Remedial action: Informational - no corrective action required.		

(2 of 2)

Table 23-13 EMSNetworkElementSystemUnreachable

Alarm	Attributes	Applicable major NE releases
Name: EMSNetworkElementSystemUnreachable (4621) Type: communicationsAlarm (4) Package: hip Raised on class: hip.EMSNetworkElement	Severity: major Implicitly cleared: true Default probable cause: connectionEstablishmentError (1136) Applicable probable causes: <ul style="list-style-type: none"> • connectionEstablishmentError • transmissionError • fireDetected • lossOfRedundancy • protectionMechanismFailure • protectingResourceFailure • excessiveResponseTime • excessiveRetransmissionRate 	<ul style="list-style-type: none"> • N/A
Description: The alarm is raised when the 5620 SAM detects a HIP communication link failure to the EM System while the EM System is administratively up. The alarm clears when the HIP link returns to service or the EM System is no longer administratively up.		
Raising condition: ('alarmNetworkConnection' EQUAL 'true')		
Clearing condition: ('alarmNetworkConnection' EQUAL 'false')		
Remedial action: Check network connectivity between the SAM main server and EM System server. Check that the EM System is running and connectivity to SAM is operational.		

Table 23-14 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 23-15 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 23-16 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 23-17 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

23 – Alcatel-Lucent-HIP alarms

Table 23-18 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 23-19 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 23-20 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggsn Raised on class: Iteggsn.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 23-21 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 23-22 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 23-23 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

23 – Alcatel-Lucent-HIP alarms

Table 23-24 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\\"')"		
Clearing condition: ('EPS Path' NOT EQUAL '\\"')"		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 23-25 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> N/A
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 23-26 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 23-27 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 23-28 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

23 – Alcatel-Lucent-HIP alarms

Table 23-29 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 23-30 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM. Add an discory rule in order to managed it.		

Table 23-31 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 23-32 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 23-33 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 23-34 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		

(1 of 2)

23 – Alcatel-Lucent-HIP alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

(2 of 2)

Table 23-35 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 23-36 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 23-37 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> N/A
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

Table 23-38 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 23-39 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

23 – Alcatel-Lucent-HIP alarms

Table 23-40 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 23-41 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 23-42 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> trapDestinationMisconfigured duplicateTrapLogId 	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

(2 of 2)

Table 23-43 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> N/A
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 23-44 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> N/A

(1 of 2)

23 – Alcatel-Lucent-HIP alarms

Alarm	Attributes	Applicable major NE releases
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

(2 of 2)

Table 23-45 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 23-46 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 23-47 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 23-48 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 23-49 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> N/A
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL "\"TIMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL "\"TIMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

24 — Alcatel-Lucent OS10K alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 24-1 AccessInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm (32) Package: service Raised on class: service.AccessInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC-Lag') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC-Lag') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 24-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 24-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 24-4 AreaTypeMismatch

Alarm	Attributes	Applicable major NE releases
Name: AreaTypeMismatch (38) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Area	Severity: warning Implicitly cleared: true Default probable cause: areaTypeMisconfigured (34)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an OSPF area on one NE is configured as an NSSA and the same OSPF area on another NE is configured as a stub area.		
Raising condition: ('Type Mismatch' EQUAL 'true')		
Clearing condition: ('Type Mismatch' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A configuration error has been made which must be corrected. The OSPF area type configured for the NE does not match with the same OSPF area configured on another NE. Compare the configuration on the endpoint and correct the mismatch.		

(2 of 2)

Table 24-5 AtcaFanFailure

Alarm	Attributes	Applicable major NE releases
Name: AtcaFanFailure (1124) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Fan	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('operationalState' EQUAL 'Disabled') OR ('operationalState' EQUAL 'Down'))		
Clearing condition: (('operationalState' EQUAL 'Enabled') OR ('operationalState' EQUAL 'Up'))		
Remedial action: This alarm is raised if the fan speed falls below 500 rpm. If the alarm persists, replace the appropriate (upper or lower) fan tray.		

Table 24-6 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 24-7 BgpDown

Alarm	Attributes	Applicable major NE releases
Name: BgpDown (6) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a BGP instance has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP protocol entity is down - administratively disable BGP and re-enable. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 24-8 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 24-9 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

(2 of 2)

Table 24-10 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 24-11 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 24-12 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 24-13 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 24-14 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

(2 of 2)

Table 24-15 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 24-16 DDMAux1HighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1HighAlarm (495) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux1HighAlarm (381)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-17 DDMAux1HighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1HighWarning (494) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux1HighWarning (380)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-18 DDMAux1LowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1LowAlarm (493) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux1LowAlarm (379)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-19 DDMAux1LowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1LowWarning (492) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux1LowWarning (378)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-20 DDMAux2HighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2HighAlarm (499) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux2HighAlarm (385)	<ul style="list-style-type: none"> 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-21 DDMAux2HighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2HighWarning (498) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux2HighWarning (384)	<ul style="list-style-type: none"> 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-22 DDMAux2LowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2LowAlarm (497) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux2LowAlarm (383)	<ul style="list-style-type: none"> 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-23 DDMAux2LowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2LowWarning (496) Type: communicatiothresholdAlarmnsAlarm (50) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux2LowWarning (382)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-24 DDMRxOpticalPowerHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerHighAlarm (491) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: rxOpticalPowerHighAlarm (377)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-25 DDMRxOpticalPowerHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerHighWarning (490) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: rxOpticalPowerHighWarning (376)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-26 DDMRxOpticalPowerLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerLowAlarm (489) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: rxOpticalPowerLowAlarm (375)	<ul style="list-style-type: none"> 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-27 DDMRxOpticalPowerLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerLowWarning (488) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: rxOpticalPowerLowWarning (374)	<ul style="list-style-type: none"> 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-28 DDMSupplyVoltageHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageHighAlarm (479) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: supplyVoltageHighAlarm (365)	<ul style="list-style-type: none"> 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-29 DDMSupplyVoltageHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageHighWarning (478) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: supplyVoltageHighWarning (364)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-30 DDMSupplyVoltageLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageLowAlarm (477) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: supplyVoltageLowAlarm (363)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-31 DDMSupplyVoltageLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageLowWarning (476) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: supplyVoltageLowWarning (362)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-32 DDMTemperatureHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureHighAlarm (475) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: temperatureHighAlarm (361)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-33 DDMTemperatureHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureHighWarning (474) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: temperatureHighWarning (360)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-34 DDMTemperatureLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureLowAlarm (473) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: temperatureLowAlarm (359)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-35 DDMTemperatureLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureLowWarning (472) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: temperatureLowWarning (358)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-36 DDMTxBiasCurrentHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentHighAlarm (483) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txBiasCurrentHighAlarm (369)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-37 DDMTxBiasCurrentHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentHighWarning (482) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txBiasCurrentHighWarning (368)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-38 DDMTxBiasCurrentLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentLowAlarm (481) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txBiasCurrentLowAlarm (367)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-39 DDMTxBiasCurrentLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentLowWarning (480) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txBiasCurrentLowWarning (366)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-40 DDMTxOutputPowerHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerHighAlarm (487) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txOutputPowerHighAlarm (373)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-41 DDMTxOutputPowerHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerHighWarning (486) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txOutputPowerHighWarning (372)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-42 DDMTxOutputPowerLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerLowAlarm (485) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txOutputPowerLowAlarm (371)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-43 DDMTxOutputPowerLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerLowWarning (484) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txOutputPowerLowWarning (370)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 24-44 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 24-45 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 24-46 EquipmentDegraded

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 24-47 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 24-48 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 24-49 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

(2 of 2)

Table 24-50 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 24-51 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 24-52 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm (11) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback (567)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised by the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 24-53 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: DuplicateLane (1387)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 24-54 EthernetPortHighBer

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortHighBer (307) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 24-55 EthernetPortLocalFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortLocalFault (305) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: LocalFault (236)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 24-56 EthernetPortNoAmLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoAmLock (1388)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 24-57 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoBlockLock (1389)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 24-58 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoFrameLock (237)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 24-59 EthernetPortRemoteFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: RemoteFault (235)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 24-60 EthernetPortSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: SignalFailure (234)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 24-61 FanFailure

Alarm	Attributes	Applicable major NE releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfService'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 24-62 FanTrayRemoved

Alarm	Attributes	Applicable major NE releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 24-63 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 24-64 FrameSizeProblem (svt)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: svt Raised on class: svt.SdpBinding	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 7.3.3
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('Operational State' EQUAL 'MTU Mismatch') OR ('Operational State' EQUAL 'Tunnel MTU Too Small'))		
Clearing condition: (('Operational State' NOT EQUAL 'MTU Mismatch') AND ('Operational State' NOT EQUAL 'Tunnel MTU Too Small'))		
Remedial action: The MTU value must be changed such that is is less than or equal to the supported MTU size value.		

Table 24-65 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggns Raised on class: Iteggns.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 24-66 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.L2AccessInterface	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

Table 24-67 IgmpDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpDown (158) Type: ProtocolAlarm (1) Package: igmp Raised on class: igmp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

(2 of 2)

Table 24-68 IgmpSnoopingDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.Bridge	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 24-69 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 24-70 InterfaceDown (netw)

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDown (36) Type: InterfaceAlarm (13) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operation. Ensure that the interface is cabled and that there isn't a configuration error (i.e. MTU size set incorrectly) on the interface. Once the issue w		

Table 24-71 IsisDown

Alarm	Attributes	Applicable major NE releases
Name: IsisDown (19) Type: ProtocolAlarm (1) Package: isis Raised on class: isis.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an IS-IS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The protocol is not working anymore, could be a problem with IP addresses, resources on the device, ...		

Table 24-72 LabelProblem

Alarm	Attributes	Applicable major NE releases
Name: LabelProblem (98) Type: CircuitAlarm (17) Package: svt Raised on class: svt.SdpBinding	Severity: critical Implicitly cleared: true Default probable cause: labelProblem (84)	<ul style="list-style-type: none"> • 7.3.3
Description: The alarm is raised when an ingress or an egress label is missing.		
Raising condition: (('Operational State' EQUAL 'No Egress Label') OR ('Operational State' EQUAL 'No Ingress Label') OR ('Operational State' EQUAL 'No Labels'))		
Clearing condition: (('Operational State' NOT EQUAL 'No Egress Label') AND ('Operational State' NOT EQUAL 'No Ingress Label') AND ('Operational State' NOT EQUAL 'No Labels'))		

(1 of 2)

24 – Alcatel-Lucent OS10K alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: An ingress or egress label is missing for the SDP binding.		

(2 of 2)

Table 24-73 LagDown

Alarm	Attributes	Applicable major NE releases
Name: LagDown (20) Type: equipmentAlarm (3) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagDown (17)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end) may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and that the cable has not been damaged.		

Table 24-74 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 24-75 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 24-76 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 24-77 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		

(1 of 2)

24 – Alcatel-Lucent OS10K alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

(2 of 2)

Table 24-78 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 24-79 LpsViolation

Alarm	Attributes	Applicable major NE releases
Name: LpsViolation (518) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LearnedPortSecurity	Severity: major Implicitly cleared: true Default probable cause: learnedPortSecurityViolation (393)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 24-80 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 24-81 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: info Implicitly cleared: true Default probable cause: MacMoveRateExceededNonBlock (1951)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTIsLimitMacMove) is set to 'nonBlocking'.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 24-82 MepAISReceivedAlarm

Alarm	Attributes	Applicable major NE releases
Name: MepAISReceivedAlarm (2945) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: variable Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a MEP Receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 24-83 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL "\")		
Clearing condition: ('EPS Path' NOT EQUAL "\")		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 24-84 MvrSiteDown

Alarm	Attributes	Applicable major NE releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 24-85 NeighborDown

Alarm	Attributes	Applicable major NE releases
Name: NeighborDown (121) Type: NeighborDown (20) Package: ospf Raised on class: ospf.AbstractNeighbor	Severity: major Implicitly cleared: true Default probable cause: NeighborDown (103)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an OSPF interface neighbor is operationally Down.		
Raising condition: ('Operational State' NOT EQUAL 'full')		
Clearing condition: ('Operational State' EQUAL 'full')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: This alarm is raised when the OSPF interface neighbor is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

(2 of 2)

Table 24-86 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> 7.1.1 7.2.1 7.3.1 7.3.2 7.3.3
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 24-87 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> 7.1.1 7.2.1 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 24-88 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 24-89 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 24-90 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

(2 of 2)

Table 24-91 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM. Add an discory rule in order to managed it.		

Table 24-92 OspflInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: OspflInterfaceDown (141) Type: OspflInterfaceDown (24) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: true Default probable cause: OspflInterfaceDown (112)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an OSPF interface is operationally down.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF interface is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 24-93 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 24-94 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 24-95 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when persistence is set to Off in the NE BOF.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

(2 of 2)

Table 24-96 PimDown

Alarm	Attributes	Applicable major NE releases
Name: PimDown (184) Type: ProtocolAlarm (1) Package: pim Raised on class: pim.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a PIM site is administratively Up but operationally Down. The alarm is cleared when the PIM site becomes operationally Up but administratively Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This should never happen. Contact Alcatel-Lucent Customer Support for assistance.		

Table 24-97 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 24-98 PowerSupplyFailure

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyFailure (633) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: critical Implicitly cleared: true Default probable cause: powerSupplyFailure (117)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 24-99 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: minor Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown (2073)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down'))		
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 24-100 PowerSupplyRemoved

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyRemoved (542) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: major Implicitly cleared: true Default probable cause: PowerSupplyRemoved (415)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

(2 of 2)

Table 24-101 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 24-102 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 24-103 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 24-104 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

Table 24-105 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm (18) Package: ethernetOam Raised on class: ethernetOam.Mep	Severity: minor Implicitly cleared: true Default probable cause: misconfiguredRedundantMep (1416)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an Active and Redundant MEP do not have the same Id, Operational MAC Address or Sub Group configured.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

(2 of 2)

Table 24-106 RedundantMepMissing

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMissing (3632) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: missingRedundantMep (1417)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 24-107 RemoteMepCCMAAlarm

Alarm	Attributes	Applicable major NE releases
Name: RemoteMepCCMAAlarm (502) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: major Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 24-108 RipDown

Alarm	Attributes	Applicable major NE releases
Name: RipDown (72) Type: ProtocolAlarm (1) Package: rip Raised on class: rip.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g. IOM is not shutdown or installed.		

Table 24-109 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 24-110 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

(2 of 2)

Table 24-111 SdpBindingDown

Alarm	Attributes	Applicable major NE releases
Name: SdpBindingDown (221) Type: SdpBindingAlarm (30) Package: svt Raised on class: svt.SdpBinding	Severity: critical Implicitly cleared: true Default probable cause: SdpBindingNotReady (166)	<ul style="list-style-type: none"> 7.3.3
Description: The alarm is raised when an SDP binding has an Operational State other than Up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-Homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For BGP Multi-Homing'))		
Remedial action: To resolve this alarm check the SDP binding to determine if a configuration mismatch exists. If configuration is determined to be correct then the associated network interface may be down. Further investigation is required to determine why the underlying network interface is down.		

Table 24-112 SdpBindingTunnelDown

Alarm	Attributes	Applicable major NE releases
Name: SdpBindingTunnelDown (222) Type: CircuitAlarm (17) Package: svt Raised on class: svt.SdpBinding	Severity: critical Implicitly cleared: true Default probable cause: SdpTunnelNotReady (167)	<ul style="list-style-type: none"> 7.3.3
Description: The alarm is raised when an SDP binding tunnel has an Operational State other than Up.		
Raising condition: (('Operational State' EQUAL 'Tunnel Not Ready') OR ('Operational State' EQUAL 'Tunnel Down'))		
Clearing condition: (('Operational State' NOT EQUAL 'Tunnel Not Ready') AND ('Operational State' NOT EQUAL 'Tunnel Down'))		
Remedial action: To resolve this alarm check the endpoints of the SDP binding to determine if a configuration mismatch exists. If configuration matches then the underlying network resource between the endpoints of the SDP may be down. Further investigation is required to determine why the underlying transport network is down.		

Table 24-113 ServiceSiteDown

Alarm	Attributes	Applicable major NE releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 24-114 SiteManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

Table 24-115 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

(2 of 2)

Table 24-116 SpbSiteDown

Alarm	Attributes	Applicable major NE releases
Name: SpbSiteDown (4396) Type: ProtocolAlarm (1) Package: spb Raised on class: spb.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> 7.3.3
Description: The alarm is raised when an SPB site has an Operational State other than Up.		
Raising condition: ('Operational State' NOT EQUAL 'Up')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Check if the administrative state is down. If the administrative state is up, then check the ISIS instance associated with the SPB and make sure it is up.		

Table 24-117 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> 7.1.1 7.2.1 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 24-118 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> 7.1.1 7.2.1 7.3.1 7.3.2 7.3.3

(1 of 2)

24 – Alcatel-Lucent OS10K alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

(2 of 2)

Table 24-119 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 24-120 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major NE releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 24-121 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> trapDestinationMisconfigured duplicateTrapLogId 	<ul style="list-style-type: none"> 7.1.1 7.2.1 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 24-122 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> 7.1.1 7.2.1 7.3.1 7.3.2 7.3.3
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 24-123 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 24-124 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 24-125 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

(2 of 2)

Table 24-126 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 24-127 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 24-128 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 24-129 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 24-130 VirtualLinkDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkDown (122) Type: VirtualLinkAlarm (21) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: true Default probable cause: VirtualLinkDown (104)	<ul style="list-style-type: none"> • 7.1.1 • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a virtual link is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: This alarm is raised when the OSPF virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

(2 of 2)

Table 24-131 VirtualNeighborDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualNeighborDown (123) Type: VirtualNeighborDown (22) Package: ospf Raised on classes: <ul style="list-style-type: none"> ospf.ShamLink ospf.VirtualLink 	Severity: warning Implicitly cleared: true Default probable cause: VirtualNeighborDown (105)	<ul style="list-style-type: none"> 7.1.1 7.2.1 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when a neighbor virtual link is operationally down.		
Raising condition: ('neighborCount' EQUAL '0L')		
Clearing condition: ('neighborCount' NOT EQUAL '0L')		
Remedial action: This alarm is raised when the OSPF neighbor virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 24-132 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> 7.1.1 7.2.1 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL "\"TiMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL "\"TiMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

25 — Alcatel-Lucent OS6250 alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 25-1 AccessInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm (32) Package: service Raised on class: service.AccessInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC-Lag') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC-Lag') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 25-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 25-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 25-4 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 25-5 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 25-6 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 25-7 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		

(1 of 2)

25 – Alcatel-Lucent OS6250 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

(2 of 2)

Table 25-8 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 25-9 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 25-10 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 25-11 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 25-12 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		

(1 of 2)

25 – Alcatel-Lucent OS6250 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

(2 of 2)

Table 25-13 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 25-14 EfmOamAlarm

Alarm	Attributes	Applicable major NE releases
Name: EfmOamAlarm (4617) Type: equipmentAlarm (3) Package: ethernetEquipment Raised on class: ethernetEquipment.Dot3Oam	Severity: minor Implicitly cleared: true Default probable cause: EFMOAMOperationalStateOutOfService (1886)	<ul style="list-style-type: none"> • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when EFM Ignore status is Enabled, and Physical port Administrative State is Down.		
Raising condition: ('Ignore EFM State' EQUAL 'true')		
Clearing condition: ('Ignore EFM State' EQUAL 'true')		
Remedial action: The alarm is raised when EFM Ignore status is Enabled, and Physical port Administrative State is Down.		

Table 25-15 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 25-16 EquipmentDegraded

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 25-17 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 25-18 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 25-19 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 25-20 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

(2 of 2)

Table 25-21 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 25-22 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm (11) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback (567)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised by the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 25-23 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: DuplicateLane (1387)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 25-24 EthernetPortHighBer

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortHighBer (307) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 25-25 EthernetPortLocalFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortLocalFault (305) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: LocalFault (236)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 25-26 EthernetPortNoAmLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoAmLock (1388)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 25-27 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoBlockLock (1389)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 25-28 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoFrameLock (237)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 25-29 EthernetPortRemoteFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: RemoteFault (235)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 25-30 EthernetPortSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: SignalFailure (234)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 25-31 FanFailure

Alarm	Attributes	Applicable major NE releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfService'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 25-32 FanTrayRemoved

Alarm	Attributes	Applicable major NE releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 25-33 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL 'OL'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL 'OL'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 25-34 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggns Raised on class: Iteggns.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 25-35 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.L2AccessInterface	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

(2 of 2)

Table 25-36 IgmpDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpDown (158) Type: ProtocolAlarm (1) Package: igmp Raised on class: igmp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 25-37 IgmpSnoopingDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.Bridge	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 25-38 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		

(1 of 2)

25 – Alcatel-Lucent OS6250 alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

(2 of 2)

Table 25-39 InterfaceDown (netw)

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDown (36) Type: InterfaceAlarm (13) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operation. Ensure that the interface is cabled and that there isn't a configuration error (i.e. MTU size set incorrectly) on the interface. Once the issue w		

Table 25-40 LagDown

Alarm	Attributes	Applicable major NE releases
Name: LagDown (20) Type: equipmentAlarm (3) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagDown (17)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 25-41 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 25-42 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 25-43 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 25-44 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 25-45 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 25-46 LpsViolation

Alarm	Attributes	Applicable major NE releases
Name: LpsViolation (518) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LearnedPortSecurity	Severity: major Implicitly cleared: true Default probable cause: learnedPortSecurityViolation (393)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 25-47 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 25-48 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: info Implicitly cleared: true Default probable cause: MacMoveRateExceededNonBlock (1951)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTIsLimitMacMove) is set to 'nonBlocking'.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 25-49 MepAISReceivedAlarm

Alarm	Attributes	Applicable major NE releases
Name: MepAISReceivedAlarm (2945) Type: oamAlarm (18) Package: ethernetOAM Raised on class: ethernetOAM.Mep	Severity: variable Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a MEP Receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 25-50 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\\"')'		
Clearing condition: ('EPS Path' NOT EQUAL '\\"')'		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 25-51 MvrSiteDown

Alarm	Attributes	Applicable major NE releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 25-52 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

(2 of 2)

Table 25-53 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 25-54 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 25-55 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 25-56 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 25-57 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotManagedByAnyEms (1934)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when node is not managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM. Add a discovery rule in order to manage it.		

Table 25-58 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 25-59 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 25-60 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		

(1 of 2)

25 – Alcatel-Lucent OS6250 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

(2 of 2)

Table 25-61 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 25-62 PowerSupplyFailure

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyFailure (633) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: critical Implicitly cleared: true Default probable cause: powerSupplyFailure (117)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 25-63 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: minor Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown (2073)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down'))		
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 25-64 PowerSupplyRemoved

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyRemoved (542) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: major Implicitly cleared: true Default probable cause: PowerSupplyRemoved (415)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 25-65 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 25-66 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 25-67 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 25-68 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

(2 of 2)

Table 25-69 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: misconfiguredRedundantMep (1416)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when an Active and Redundant MEP do not have the same Id, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 25-70 RedundantMepMissing

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMissing (3632) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: missingRedundantMep (1417)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 25-71 RemoteMepCCMAAlarm

Alarm	Attributes	Applicable major NE releases
Name: RemoteMepCCMAAlarm (502) Type: oamAlarm (18) Package: ethernetOam Raised on class: ethernetOam.Mep	Severity: major Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 25-72 RipDown

Alarm	Attributes	Applicable major NE releases
Name: RipDown (72) Type: ProtocolAlarm (1) Package: rip Raised on class: rip.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g. IOM is not shutdown or installed.		

Table 25-73 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 25-74 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 25-75 ServiceSiteDown

Alarm	Attributes	Applicable major NE releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 25-76 SiteManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

(2 of 2)

Table 25-77 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 25-78 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 25-79 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

(2 of 2)

Table 25-80 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 25-81 TlsSiteDown

Alarm	Attributes	Applicable major NE releases
Name: TlsSiteDown (163) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.TlsSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('TLS Admin Status' EQUAL 'Disabled')		
Clearing condition: ('TLS Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable TLS Admin Status under the Bridge Instance.		

Table 25-82 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major NE releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 25-83 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> • trapDestinationMisconfigured • duplicateTrapLogId 	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 25-84 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

(2 of 2)

Table 25-85 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 25-86 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 25-87 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 25-88 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 25-89 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 25-90 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 25-91 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 25-92 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 6.6.1 • 6.6.2 • 6.6.3 • 6.6.4
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL 'TiMOS-B-3.0.Generic') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL 'TiMOS-B-3.0.Generic') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

26 — Alcatel-Lucent OS6400 alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 26-1 AccessInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm (32) Package: service Raised on class: service.AccessInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC-Lag') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC-Lag') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 26-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 26-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 26-4 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 26-5 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 26-6 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 26-7 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		

(1 of 2)

26 – Alcatel-Lucent OS6400 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

(2 of 2)

Table 26-8 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 26-9 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 26-10 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 26-11 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 26-12 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		

(1 of 2)

26 – Alcatel-Lucent OS6400 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

(2 of 2)

Table 26-13 DDMAux1HighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1HighAlarm (495) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux1HighAlarm (381)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-14 DDMAux1HighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1HighWarning (494) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux1HighWarning (380)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-15 DDMAux1LowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1LowAlarm (493) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux1LowAlarm (379)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

(2 of 2)

Table 26-16 DDMAux1LowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1LowWarning (492) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux1LowWarning (378)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-17 DDMAux2HighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2HighAlarm (499) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux2HighAlarm (385)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-18 DDMAux2HighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2HighWarning (498) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux2HighWarning (384)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-19 DDMAux2LowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2LowAlarm (497) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux2LowAlarm (383)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-20 DDMAux2LowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2LowWarning (496) Type: communicatiothresholdAlarmnsAlarm (50) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux2LowWarning (382)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-21 DDMRxOpticalPowerHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerHighAlarm (491) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: rxOpticalPowerHighAlarm (377)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBitRx Optical Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBitRx Optical Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-22 DDMRxOpticalPowerHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerHighWarning (490) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: rxOpticalPowerHighWarning (376)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBitRx Optical Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBitRx Optical Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-23 DDMRxOpticalPowerLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerLowAlarm (489) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: rxOpticalPowerLowAlarm (375)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBitRx Optical Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBitRx Optical Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-24 DDMRxOpticalPowerLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerLowWarning (488) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: rxOpticalPowerLowWarning (374)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBitRx Optical Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBitRx Optical Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-25 DDMSupplyVoltageHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageHighAlarm (479) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: supplyVoltageHighAlarm (365)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBitSupply Voltage High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBitSupply Voltage High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-26 DDMSupplyVoltageHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageHighWarning (478) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: supplyVoltageHighWarning (364)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBitSupply Voltage High Warning')		
Clearing condition: NOT (('failedThresholds'anyBitSupply Voltage High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-27 DDMSupplyVoltageLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageLowAlarm (477) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: supplyVoltageLowAlarm (363)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-28 DDMSupplyVoltageLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageLowWarning (476) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: supplyVoltageLowWarning (362)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-29 DDMTemperatureHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureHighAlarm (475) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: temperatureHighAlarm (361)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-30 DDMTemperatureHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureHighWarning (474) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: temperatureHighWarning (360)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-31 DDMTemperatureLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureLowAlarm (473) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: temperatureLowAlarm (359)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-32 DDMTemperatureLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureLowWarning (472) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: temperatureLowWarning (358)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-33 DDMTxBiasCurrentHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentHighAlarm (483) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txBiasCurrentHighAlarm (369)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-34 DDMTxBiasCurrentHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentHighWarning (482) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txBiasCurrentHighWarning (368)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-35 DDMTxBiasCurrentLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentLowAlarm (481) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txBiasCurrentLowAlarm (367)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-36 DDMTxBiasCurrentLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentLowWarning (480) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txBiasCurrentLowWarning (366)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-37 DDMTxOutputPowerHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerHighAlarm (487) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txOutputPowerHighAlarm (373)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-38 DDMTxOutputPowerHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerHighWarning (486) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txOutputPowerHighWarning (372)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-39 DDMTxOutputPowerLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerLowAlarm (485) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txOutputPowerLowAlarm (371)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-40 DDMTxOutputPowerLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerLowWarning (484) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txOutputPowerLowWarning (370)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 26-41 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 26-42 EfmOamAlarm

Alarm	Attributes	Applicable major NE releases
Name: EfmOamAlarm (4617) Type: equipmentAlarm (3) Package: ethernetEquipment Raised on class: ethernetEquipment.Dot3Oam	Severity: minor Implicitly cleared: true Default probable cause: EFMOperationalStateOutOfService (1886)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when EFM Ignore status is Enabled, and Physical port Administrative State is Down.		
Raising condition: ('Ignore EFM State' EQUAL 'true')		
Clearing condition: ('Ignore EFM State' EQUAL 'true')		
Remedial action: The alarm is raised when EFM Ignore status is Enabled, and Physical port Administrative State is Down.		

Table 26-43 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 26-44 EquipmentDegraded

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 26-45 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 26-46 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 26-47 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		

(1 of 2)

26 – Alcatel-Lucent OS6400 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Informational - no corrective action required.		

(2 of 2)

Table 26-48 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 26-49 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 26-50 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm (11) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback (567)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised by the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

(2 of 2)

Table 26-51 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: DuplicateLane (1387)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 26-52 EthernetPortHighBer

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortHighBer (307) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 26-53 EthernetPortLocalFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortLocalFault (305) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: LocalFault (236)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 26-54 EthernetPortNoAmLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoAmLock (1388)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 26-55 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoBlockLock (1389)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

(2 of 2)

Table 26-56 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoFrameLock (237)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: ((('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock')))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 26-57 EthernetPortRemoteFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: RemoteFault (235)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: ((('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault')))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 26-58 EthernetPortSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: SignalFailure (234)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 26-59 FanFailure

Alarm	Attributes	Applicable major NE releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfService'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 26-60 FanTrayRemoved

Alarm	Attributes	Applicable major NE releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 26-61 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 26-62 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggns Raised on class: Iteggns.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 26-63 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.L2AccessInterface	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

(2 of 2)

Table 26-64 IgmpDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpDown (158) Type: ProtocolAlarm (1) Package: igmp Raised on class: igmp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 26-65 IgmpSnoopingDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.Bridge	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 26-66 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

(2 of 2)

Table 26-67 InterfaceDown (netw)

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDown (36) Type: InterfaceAlarm (13) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operation. Ensure that the interface is cabled and that there isn't a configuration error (i.e. MTU size set incorrectly) on the interface. Once the issue w		

Table 26-68 LagDown

Alarm	Attributes	Applicable major NE releases
Name: LagDown (20) Type: equipmentAlarm (3) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagDown (17)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 26-69 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 26-70 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 26-71 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 26-72 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 26-73 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 26-74 LpsViolation

Alarm	Attributes	Applicable major NE releases
Name: LpsViolation (518) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LearnedPortSecurity	Severity: major Implicitly cleared: true Default probable cause: learnedPortSecurityViolation (393)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 26-75 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 26-76 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: info Implicitly cleared: true Default probable cause: MacMoveRateExceededNonBlock (1951)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTIsLimitMacMove) is set to 'nonBlocking'.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 26-77 MepAISReceivedAlarm

Alarm	Attributes	Applicable major NE releases
Name: MepAISReceivedAlarm (2945) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: variable Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a MEP Receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 26-78 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\\"')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 26-79 MvrSiteDown

Alarm	Attributes	Applicable major NE releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 26-80 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		

(1 of 2)

26 – Alcatel-Lucent OS6400 alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

(2 of 2)

Table 26-81 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> 6.4.3 6.4.4 6.4.5
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 26-82 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> 6.4.3 6.4.4 6.4.5
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 26-83 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 26-84 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 26-85 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotManagedByAnyEms (1934)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when node is not managed by any EMS after n retries (threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM. Add a discovery rule in order to manage it.		

Table 26-86 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 26-87 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 26-88 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

(2 of 2)

Table 26-89 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 26-90 PowerSupplyFailure

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyFailure (633) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: critical Implicitly cleared: true Default probable cause: powerSupplyFailure (117)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 26-91 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: minor Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown (2073)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down'))		
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 26-92 PowerSupplyRemoved

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyRemoved (542) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: major Implicitly cleared: true Default probable cause: PowerSupplyRemoved (415)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 26-93 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 26-94 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 26-95 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 26-96 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		

(1 of 2)

26 – Alcatel-Lucent OS6400 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

(2 of 2)

Table 26-97 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: misconfiguredRedundantMep (1416)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when an Active and Redundant MEP do not have the same Id, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 26-98 RedundantMepMissing

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMissing (3632) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: missingRedundantMep (1417)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 26-99 RemoteMepCCMAAlarm

Alarm	Attributes	Applicable major NE releases
Name: RemoteMepCCMAAlarm (502) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: major Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 26-100 RipDown

Alarm	Attributes	Applicable major NE releases
Name: RipDown (72) Type: ProtocolAlarm (1) Package: rip Raised on class: rip.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g. IOM is not shutdown or installed.		

Table 26-101 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 26-102 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 26-103 ServiceSiteDown

Alarm	Attributes	Applicable major NE releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 26-104 SiteManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

(2 of 2)

Table 26-105 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 26-106 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 26-107 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5

(1 of 2)

26 – Alcatel-Lucent OS6400 alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

(2 of 2)

Table 26-108 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 26-109 TlsSiteDown

Alarm	Attributes	Applicable major NE releases
Name: TlsSiteDown (163) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.TlsSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('TLS Admin Status' EQUAL 'Disabled')		
Clearing condition: ('TLS Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable TLS Admin Status under the Bridge Instance.		

Table 26-110 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major NE releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetEquipment Raised on class: ethernetEquipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 26-111 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> • trapDestinationMisconfigured • duplicateTrapLogId 	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 26-112 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

(2 of 2)

Table 26-113 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> 6.4.3 6.4.4 6.4.5
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 26-114 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 26-115 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 26-116 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 26-117 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 26-118 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 26-119 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 26-120 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\TiMOS-B-3.0.Generic \') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\TiMOS-B-3.0.Generic \') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

27 — Alcatel-Lucent OS6450 alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 27-1 AccessInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm (32) Package: service Raised on class: service.AccessInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC-Lag') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC-Lag') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 27-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 27-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 27-4 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 27-5 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 27-6 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 27-7 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> persistentIndexFailure configFileBootFailure 	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		

(1 of 2)

27 – Alcatel-Lucent OS6450 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

(2 of 2)

Table 27-8 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 27-9 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 27-10 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 27-11 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 27-12 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		

(1 of 2)

27 – Alcatel-Lucent OS6450 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

(2 of 2)

Table 27-13 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 27-14 EfmOamAlarm

Alarm	Attributes	Applicable major NE releases
Name: EfmOamAlarm (4617) Type: equipmentAlarm (3) Package: ethernetEquipment Raised on class: ethernetEquipment.Dot3Oam	Severity: minor Implicitly cleared: true Default probable cause: EFMOAMOperationalStateOutOfService (1886)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when EFM Ignore status is Enabled, and Physical port Administrative State is Down.		
Raising condition: ('Ignore EFM State' EQUAL 'true')		
Clearing condition: ('Ignore EFM State' EQUAL 'true')		
Remedial action: The alarm is raised when EFM Ignore status is Enabled, and Physical port Administrative State is Down.		

Table 27-15 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 27-16 EquipmentDegraded

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 27-17 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 27-18 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 27-19 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 27-20 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

(2 of 2)

Table 27-21 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 27-22 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm (11) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback (567)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised by the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 27-23 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: DuplicateLane (1387)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 27-24 EthernetPortHighBer

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortHighBer (307) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 27-25 EthernetPortLocalFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortLocalFault (305) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: LocalFault (236)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 27-26 EthernetPortNoAmLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoAmLock (1388)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 27-27 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoBlockLock (1389)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 27-28 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoFrameLock (237)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 27-29 EthernetPortRemoteFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: RemoteFault (235)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 27-30 EthernetPortSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: SignalFailure (234)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 27-31 FanFailure

Alarm	Attributes	Applicable major NE releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfService'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 27-32 FanTrayRemoved

Alarm	Attributes	Applicable major NE releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 27-33 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 27-34 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggns Raised on class: Iteggns.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 27-35 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.L2AccessInterface	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

(2 of 2)

Table 27-36 IgmpDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpDown (158) Type: ProtocolAlarm (1) Package: igmp Raised on class: igmp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 27-37 IgmpSnoopingDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.Bridge	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 27-38 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		

(1 of 2)

27 – Alcatel-Lucent OS6450 alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

(2 of 2)

Table 27-39 InterfaceDown (netw)

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDown (36) Type: InterfaceAlarm (13) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operation. Ensure that the interface is cabled and that there isn't a configuration error (i.e. MTU size set incorrectly) on the interface. Once the issue w		

Table 27-40 LagDown

Alarm	Attributes	Applicable major NE releases
Name: LagDown (20) Type: equipmentAlarm (3) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagDown (17)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 27-41 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 27-42 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 27-43 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 27-44 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 27-45 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 27-46 LpsViolation

Alarm	Attributes	Applicable major NE releases
Name: LpsViolation (518) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LearnedPortSecurity	Severity: major Implicitly cleared: true Default probable cause: learnedPortSecurityViolation (393)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 27-47 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 27-48 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: info Implicitly cleared: true Default probable cause: MacMoveRateExceededNonBlock (1951)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTIsLimitMacMove) is set to 'nonBlocking'.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 27-49 MepAISReceivedAlarm

Alarm	Attributes	Applicable major NE releases
Name: MepAISReceivedAlarm (2945) Type: oamAlarm (18) Package: ethernetOAM Raised on class: ethernetOAM.Mep	Severity: variable Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a MEP Receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 27-50 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\')		
Clearing condition: ('EPS Path' NOT EQUAL '\')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 27-51 MvrSiteDown

Alarm	Attributes	Applicable major NE releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 27-52 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

(2 of 2)

Table 27-53 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 27-54 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 27-55 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 27-56 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 27-57 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM. Add an discory rule in order to managed it.		

Table 27-58 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 27-59 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 27-60 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		

(1 of 2)

27 – Alcatel-Lucent OS6450 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

(2 of 2)

Table 27-61 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 27-62 PowerSupplyFailure

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyFailure (633) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: critical Implicitly cleared: true Default probable cause: powerSupplyFailure (117)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 27-63 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: minor Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown (2073)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down'))		
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 27-64 PowerSupplyRemoved

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyRemoved (542) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: major Implicitly cleared: true Default probable cause: PowerSupplyRemoved (415)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 27-65 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 27-66 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 27-67 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 27-68 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

(2 of 2)

Table 27-69 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: misconfiguredRedundantMep (1416)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when an Active and Redundant MEP do not have the same Id, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 27-70 RedundantMepMissing

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMissing (3632) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: missingRedundantMep (1417)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 27-71 RemoteMepCCMAAlarm

Alarm	Attributes	Applicable major NE releases
Name: RemoteMepCCMAAlarm (502) Type: oamAlarm (18) Package: ethernetOam Raised on class: ethernetOam.Mep	Severity: major Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 27-72 RipDown

Alarm	Attributes	Applicable major NE releases
Name: RipDown (72) Type: ProtocolAlarm (1) Package: rip Raised on class: rip.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g, IOM is not shutdown or installed.		

Table 27-73 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 27-74 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 27-75 ServiceSiteDown

Alarm	Attributes	Applicable major NE releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 27-76 SiteManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		

(1 of 2)

27 – Alcatel-Lucent OS6450 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

(2 of 2)

Table 27-77 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 27-78 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 27-79 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> 6.6.3 6.6.4

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

(2 of 2)

Table 27-80 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 27-81 TlsSiteDown

Alarm	Attributes	Applicable major NE releases
Name: TlsSiteDown (163) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.TlsSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('TLS Admin Status' EQUAL 'Disabled')		
Clearing condition: ('TLS Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable TLS Admin Status under the Bridge Instance.		

Table 27-82 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major NE releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 27-83 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> • trapDestinationMisconfigured • duplicateTrapLogId 	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 27-84 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

(2 of 2)

Table 27-85 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 27-86 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 27-87 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 27-88 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> 6.6.3 6.6.4
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 27-89 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 27-90 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 27-91 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 27-92 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 6.6.3 • 6.6.4
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\TiMOS-B-3.0.Generic \') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\TiMOS-B-3.0.Generic \') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

28 — Alcatel-Lucent OS6850/6850E alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 28-1 AccessInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm (32) Package: service Raised on class: service.AccessInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC-Lag') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC-Lag') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 28-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 28-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 28-4 AreaTypeMismatch

Alarm	Attributes	Applicable major NE releases
Name: AreaTypeMismatch (38) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Area	Severity: warning Implicitly cleared: true Default probable cause: areaTypeMisconfigured (34)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an OSPF area on one NE is configured as an NSSA and the same OSPF area on another NE is configured as a stub area.		
Raising condition: ('Type Mismatch' EQUAL 'true')		
Clearing condition: ('Type Mismatch' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A configuration error has been made which must be corrected. The OSPF area type configured for the NE does not match with the same OSPF area configured on another NE. Compare the configuration on the endpoint and correct the mismatch.		

(2 of 2)

Table 28-5 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 28-6 BgpDown

Alarm	Attributes	Applicable major NE releases
Name: BgpDown (6) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a BGP instance has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP protocol entity is down - administratively disable BGP and re-enable. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 28-7 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 28-8 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 28-9 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

(2 of 2)

Table 28-10 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 28-11 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 28-12 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 28-13 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 28-14 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

(2 of 2)

Table 28-15 DDMAux1HighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1HighAlarm (495) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux1HighAlarm (381)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-16 DDMAux1HighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1HighWarning (494) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux1HighWarning (380)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-17 DDMAux1LowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1LowAlarm (493) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux1LowAlarm (379)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-18 DDMAux1LowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1LowWarning (492) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux1LowWarning (378)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-19 DDMAux2HighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2HighAlarm (499) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux2HighAlarm (385)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-20 DDMAux2HighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2HighWarning (498) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux2HighWarning (384)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-21 DDMAux2LowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2LowAlarm (497) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux2LowAlarm (383)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-22 DDMAux2LowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2LowWarning (496) Type: communicationthresholdAlarmnsAlarm (50) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux2LowWarning (382)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-23 DDMRxOpticalPowerHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerHighAlarm (491) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: rxOpticalPowerHighAlarm (377)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-24 DDMRxOpticalPowerHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerHighWarning (490) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: rxOpticalPowerHighWarning (376)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-25 DDMRxOpticalPowerLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerLowAlarm (489) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: rxOpticalPowerLowAlarm (375)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-26 DDMRxOpticalPowerLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerLowWarning (488) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: rxOpticalPowerLowWarning (374)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBitRx Optical Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBitRx Optical Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-27 DDMSupplyVoltageHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageHighAlarm (479) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: supplyVoltageHighAlarm (365)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBitSupply Voltage High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBitSupply Voltage High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-28 DDMSupplyVoltageHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageHighWarning (478) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: supplyVoltageHighWarning (364)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBitSupply Voltage High Warning')		
Clearing condition: NOT (('failedThresholds'anyBitSupply Voltage High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-29 DDMSupplyVoltageLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageLowAlarm (477) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: supplyVoltageLowAlarm (363)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-30 DDMSupplyVoltageLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageLowWarning (476) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: supplyVoltageLowWarning (362)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-31 DDMTemperatureHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureHighAlarm (475) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: temperatureHighAlarm (361)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-32 DDMTemperatureHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureHighWarning (474) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: temperatureHighWarning (360)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-33 DDMTemperatureLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureLowAlarm (473) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: temperatureLowAlarm (359)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-34 DDMTemperatureLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureLowWarning (472) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: temperatureLowWarning (358)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-35 DDMTxBiasCurrentHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentHighAlarm (483) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txBiasCurrentHighAlarm (369)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-36 DDMTxBiasCurrentHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentHighWarning (482) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txBiasCurrentHighWarning (368)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-37 DDMTxBiasCurrentLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentLowAlarm (481) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txBiasCurrentLowAlarm (367)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-38 DDMTxBiasCurrentLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentLowWarning (480) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txBiasCurrentLowWarning (366)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-39 DDMTxOutputPowerHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerHighAlarm (487) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txOutputPowerHighAlarm (373)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-40 DDMTxOutputPowerHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerHighWarning (486) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txOutputPowerHighWarning (372)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-41 DDMTxOutputPowerLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerLowAlarm (485) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txOutputPowerLowAlarm (371)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-42 DDMTxOutputPowerLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerLowWarning (484) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txOutputPowerLowWarning (370)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 28-43 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 28-44 EfmOamAlarm

Alarm	Attributes	Applicable major NE releases
Name: EfmOamAlarm (4617) Type: equipmentAlarm (3) Package: ethernetEquipment Raised on class: ethernetEquipment.Dot3Oam	Severity: minor Implicitly cleared: true Default probable cause: EFMOperationalStateOutOfService (1886)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when EFM Ignore status is Enabled, and Physical port Administrative State is Down.		
Raising condition: ('Ignore EFM State' EQUAL 'true')		
Clearing condition: ('Ignore EFM State' EQUAL 'true')		
Remedial action: The alarm is raised when EFM Ignore status is Enabled, and Physical port Administrative State is Down.		

Table 28-45 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 28-46 EquipmentDegraded

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 28-47 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 28-48 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 28-49 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

(2 of 2)

Table 28-50 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 28-51 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 28-52 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm (11) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback (567)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised by the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 28-53 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: DuplicateLane (1387)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 28-54 EthernetPortHighBer

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortHighBer (307) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 28-55 EthernetPortLocalFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortLocalFault (305) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: LocalFault (236)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 28-56 EthernetPortNoAmLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoAmLock (1388)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 28-57 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoBlockLock (1389)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 28-58 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoFrameLock (237)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 28-59 EthernetPortRemoteFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: RemoteFault (235)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 28-60 EthernetPortSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: SignalFailure (234)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 28-61 FanFailure

Alarm	Attributes	Applicable major NE releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfService'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 28-62 FanTrayRemoved

Alarm	Attributes	Applicable major NE releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 28-63 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 28-64 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggns Raised on class: Iteggns.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

(2 of 2)

Table 28-65 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.L2AccessInterface	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

Table 28-66 IgmpDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpDown (158) Type: ProtocolAlarm (1) Package: igmp Raised on class: igmp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 28-67 IgmpSnoopingDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.Bridge	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 28-68 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 28-69 InterfaceDown (netw)

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDown (36) Type: InterfaceAlarm (13) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operation. Ensure that the interface is cabled and that there isn't a configuration error (i.e. MTU size set incorrectly) on the interface. Once the issue w		

(2 of 2)

Table 28-70 IsisDown

Alarm	Attributes	Applicable major NE releases
Name: IsisDown (19) Type: ProtocolAlarm (1) Package: isis Raised on class: isis.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an IS-IS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The protocol is not working anymore, could be a problem with IP addresses, resources on the device, ...		

Table 28-71 LagDown

Alarm	Attributes	Applicable major NE releases
Name: LagDown (20) Type: equipmentAlarm (3) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagDown (17)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 28-72 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 28-73 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 28-74 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

(2 of 2)

Table 28-75 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 28-76 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 28-77 LpsViolation

Alarm	Attributes	Applicable major NE releases
Name: LpsViolation (518) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LearnedPortSecurity	Severity: major Implicitly cleared: true Default probable cause: learnedPortSecurityViolation (393)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 28-78 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 28-79 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: info Implicitly cleared: true Default probable cause: MacMoveRateExceededNonBlock (1951)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTIsLimitMacMove) is set to 'nonBlocking'.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 28-80 MepAISReceivedAlarm

Alarm	Attributes	Applicable major NE releases
Name: MepAISReceivedAlarm (2945) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: variable Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a MEP Receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 28-81 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\')		
Clearing condition: ('EPS Path' NOT EQUAL '\')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 28-82 MvrSiteDown

Alarm	Attributes	Applicable major NE releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

(2 of 2)

Table 28-83 NeighborDown

Alarm	Attributes	Applicable major NE releases
Name: NeighborDown (121) Type: NeighborDown (20) Package: ospf Raised on class: ospf.AbstractNeighbor	Severity: major Implicitly cleared: true Default probable cause: NeighborDown (103)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an OSPF interface neighbor is operationally Down.		
Raising condition: ('Operational State' NOT EQUAL 'full')		
Clearing condition: ('Operational State' EQUAL 'full')		
Remedial action: This alarm is raised when the OSPF interface neighbor is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 28-84 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')) AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 28-85 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 28-86 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 28-87 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		

(1 of 2)

28 – Alcatel-Lucent OS6850/6850E alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

(2 of 2)

Table 28-88 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 28-89 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotManagedByAnyEms (1934)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when node is not managed by any EMS after n retries (threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM. Add a discovery rule in order to manage it.		

Table 28-90 OspfInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: OspfInterfaceDown (141) Type: OspfInterfaceDown (24) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: true Default probable cause: OspfInterfaceDown (112)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an OSPF interface is operationally down.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF interface is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 28-91 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 28-92 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		

(1 of 2)

28 – Alcatel-Lucent OS6850/6850E alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

(2 of 2)

Table 28-93 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 28-94 PimDown

Alarm	Attributes	Applicable major NE releases
Name: PimDown (184) Type: ProtocolAlarm (1) Package: pim Raised on class: pim.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a PIM site is administratively Up but operationally Down. The alarm is cleared when the PIM site becomes operationally Up but administratively Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This should never happen. Contact Alcatel-Lucent Customer Support for assistance.		

Table 28-95 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 28-96 PowerSupplyFailure

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyFailure (633) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: critical Implicitly cleared: true Default probable cause: powerSupplyFailure (117)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 28-97 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: minor Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown (2073)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		

(1 of 2)

28 – Alcatel-Lucent OS6850/6850E alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down'))		
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

(2 of 2)

Table 28-98 PowerSupplyRemoved

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyRemoved (542) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: major Implicitly cleared: true Default probable cause: PowerSupplyRemoved (415)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 28-99 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 28-100 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 28-101 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 28-102 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: This alarm is raised when the reconfig action failed.		

(1 of 2)

28 – Alcatel-Lucent OS6850/6850E alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

(2 of 2)

Table 28-103 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: misconfiguredRedundantMep (1416)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an Active and Redundant MEP do not have the same Id, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 28-104 RedundantMepMissing

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMissing (3632) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: missingRedundantMep (1417)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 28-105 RemoteMepCCMAAlarm

Alarm	Attributes	Applicable major NE releases
Name: RemoteMepCCMAAlarm (502) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: major Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 28-106 RipDown

Alarm	Attributes	Applicable major NE releases
Name: RipDown (72) Type: ProtocolAlarm (1) Package: rip Raised on class: rip.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g, IOM is not shutdown or installed.		

Table 28-107 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		

(1 of 2)

28 – Alcatel-Lucent OS6850/6850E alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

(2 of 2)

Table 28-108 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 28-109 ServiceSiteDown

Alarm	Attributes	Applicable major NE releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 28-110 SiteManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

Table 28-111 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 28-112 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 28-113 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 28-114 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 28-115 TlsSiteDown

Alarm	Attributes	Applicable major NE releases
Name: TlsSiteDown (163) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.TlsSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: ('TLS Admin Status' EQUAL 'Disabled')		
Clearing condition: ('TLS Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable TLS Admin Status under the Bridge Instance.		

(2 of 2)

Table 28-116 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major NE releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 28-117 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> • trapDestinationMisconfigured • duplicateTrapLogId 	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 28-118 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 28-119 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

(2 of 2)

Table 28-120 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 28-121 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 28-122 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: ((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC'))))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 28-123 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 28-124 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Informational - no corrective action required.		

(2 of 2)

Table 28-125 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 6.4.2 • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 28-126 VirtualLinkDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkDown (122) Type: VirtualLinkAlarm (21) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: true Default probable cause: VirtualLinkDown (104)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a virtual link is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 28-127 VirtualNeighborDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualNeighborDown (123) Type: VirtualNeighborDown (22) Package: ospf Raised on classes: <ul style="list-style-type: none"> ospf.ShamLink ospf.VirtualLink 	Severity: warning Implicitly cleared: true Default probable cause: VirtualNeighborDown (105)	<ul style="list-style-type: none"> 6.4.4 6.4.5 6.4.6
Description: The alarm is raised when a neighbor virtual link is operationally down.		
Raising condition: ('neighborCount' EQUAL '0L')		
Clearing condition: ('neighborCount' NOT EQUAL '0L')		
Remedial action: This alarm is raised when the OSPF neighbor virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 28-128 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> 6.4.2 6.4.3 6.4.4 6.4.5 6.4.6
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '"TiMOS-B-3.0.Generic "') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '"TiMOS-B-3.0.Generic "') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

29 — Alcatel-Lucent OS6855 alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 29-1 AccessInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm (32) Package: service Raised on class: service.AccessInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC-Lag') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC-Lag') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 29-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 29-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 29-4 AreaTypeMismatch

Alarm	Attributes	Applicable major NE releases
Name: AreaTypeMismatch (38) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Area	Severity: warning Implicitly cleared: true Default probable cause: areaTypeMisconfigured (34)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an OSPF area on one NE is configured as an NSSA and the same OSPF area on another NE is configured as a stub area.		
Raising condition: ('Type Mismatch' EQUAL 'true')		
Clearing condition: ('Type Mismatch' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The OSPF area type configured for the NE does not match with the same OSPF area configured on another NE. Compare the configuration on the endpoint and correct the mismatch.		

Table 29-5 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 29-6 BgpDown

Alarm	Attributes	Applicable major NE releases
Name: BgpDown (6) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a BGP instance has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP protocol entity is down - administratively disable BGP and re-enable. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 29-7 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		

(1 of 2)

29 – Alcatel-Lucent OS6855 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

(2 of 2)

Table 29-8 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 29-9 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 29-10 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 29-11 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 29-12 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 29-13 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 29-14 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 29-15 DDMAux1HighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1HighAlarm (495) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux1HighAlarm (381)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Alarm')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

(2 of 2)

Table 29-16 DDMAux1HighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1HighWarning (494) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux1HighWarning (380)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-17 DDMAux1LowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1LowAlarm (493) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux1LowAlarm (379)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-18 DDMAux1LowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1LowWarning (492) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux1LowWarning (378)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6

(1 of 2)

29 – Alcatel-Lucent OS6855 alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

(2 of 2)

Table 29-19 DDMAux2HighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2HighAlarm (499) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux2HighAlarm (385)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-20 DDMAux2HighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2HighWarning (498) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux2HighWarning (384)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-21 DDMAux2LowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2LowAlarm (497) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux2LowAlarm (383)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-22 DDMAux2LowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2LowWarning (496) Type: communicationthresholdAlarmnsAlarm (50) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux2LowWarning (382)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-23 DDMRxOpticalPowerHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerHighAlarm (491) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: rxOpticalPowerHighAlarm (377)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-24 DDMRxOpticalPowerHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerHighWarning (490) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: rxOpticalPowerHighWarning (376)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBitRx Optical Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBitRx Optical Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-25 DDMRxOpticalPowerLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerLowAlarm (489) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: rxOpticalPowerLowAlarm (375)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBitRx Optical Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBitRx Optical Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-26 DDMRxOpticalPowerLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerLowWarning (488) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: rxOpticalPowerLowWarning (374)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBitRx Optical Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBitRx Optical Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-27 DDMSupplyVoltageHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageHighAlarm (479) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: supplyVoltageHighAlarm (365)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-28 DDMSupplyVoltageHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageHighWarning (478) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: supplyVoltageHighWarning (364)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-29 DDMSupplyVoltageLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageLowAlarm (477) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: supplyVoltageLowAlarm (363)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-30 DDMSupplyVoltageLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageLowWarning (476) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: supplyVoltageLowWarning (362)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-31 DDMTemperatureHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureHighAlarm (475) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: temperatureHighAlarm (361)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-32 DDMTemperatureHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureHighWarning (474) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: temperatureHighWarning (360)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-33 DDMTemperatureLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureLowAlarm (473) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: temperatureLowAlarm (359)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-34 DDMTemperatureLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureLowWarning (472) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: temperatureLowWarning (358)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-35 DDMTxBiasCurrentHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentHighAlarm (483) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txBiasCurrentHighAlarm (369)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-36 DDMTxBiasCurrentHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentHighWarning (482) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txBiasCurrentHighWarning (368)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-37 DDMTxBiasCurrentLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentLowAlarm (481) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txBiasCurrentLowAlarm (367)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-38 DDMTxBiasCurrentLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentLowWarning (480) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txBiasCurrentLowWarning (366)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-39 DDMTxOutputPowerHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerHighAlarm (487) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txOutputPowerHighAlarm (373)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-40 DDMTxOutputPowerHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerHighWarning (486) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txOutputPowerHighWarning (372)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-41 DDMTxOutputPowerLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerLowAlarm (485) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txOutputPowerLowAlarm (371)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-42 DDMTxOutputPowerLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerLowWarning (484) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txOutputPowerLowWarning (370)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 29-43 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 29-44 EfmOamAlarm

Alarm	Attributes	Applicable major NE releases
Name: EfmOamAlarm (4617) Type: equipmentAlarm (3) Package: ethernetEquipment Raised on class: ethernetEquipment.Dot3Oam	Severity: minor Implicitly cleared: true Default probable cause: EFMOAMOperationalStateOutOfService (1886)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when EFM Ignore status is Enabled, and Physical port Administrative State is Down.		
Raising condition: ('Ignore EFM State' EQUAL 'true')		
Clearing condition: ('Ignore EFM State' EQUAL 'true')		
Remedial action: The alarm is raised when EFM Ignore status is Enabled, and Physical port Administrative State is Down.		

Table 29-45 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 29-46 EquipmentDegraded

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 29-47 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

29 – Alcatel-Lucent OS6855 alarms

Table 29-48 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 29-49 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 29-50 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

(2 of 2)

Table 29-51 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 29-52 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm (11) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback (567)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised by the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 29-53 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: DuplicateLane (1387)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 29-54 EthernetPortHighBer

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortHighBer (307) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 29-55 EthernetPortLocalFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortLocalFault (305) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: LocalFault (236)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 29-56 EthernetPortNoAmLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoAmLock (1388)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 29-57 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoBlockLock (1389)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 29-58 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoFrameLock (237)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 29-59 EthernetPortRemoteFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: RemoteFault (235)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 29-60 EthernetPortSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: SignalFailure (234)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 29-61 FanFailure

Alarm	Attributes	Applicable major NE releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfService'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 29-62 FanTrayRemoved

Alarm	Attributes	Applicable major NE releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 29-63 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL 'OL'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL 'OL'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 29-64 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggsn Raised on class: Iteggsn.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 29-65 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.L2AccessInterface	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

(2 of 2)

Table 29-66 IgmpDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpDown (158) Type: ProtocolAlarm (1) Package: igmp Raised on class: igmp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 29-67 IgmpSnoopingDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.Bridge	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 29-68 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		

(1 of 2)

29 – Alcatel-Lucent OS6855 alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

(2 of 2)

Table 29-69 InterfaceDown (netw)

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDown (36) Type: InterfaceAlarm (13) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operation. Ensure that the interface is cabled and that there isn't a configuration error (i.e. MTU size set incorrectly) on the interface. Once the issue w		

Table 29-70 IsisDown

Alarm	Attributes	Applicable major NE releases
Name: IsisDown (19) Type: ProtocolAlarm (1) Package: isis Raised on class: isis.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an IS-IS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The protocol is not working anymore, could be a problem with IP addresses, resources on the device, ...		

Table 29-71 LagDown

Alarm	Attributes	Applicable major NE releases
Name: LagDown (20) Type: equipmentAlarm (3) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagDown (17)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 29-72 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 29-73 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		

(1 of 2)

29 – Alcatel-Lucent OS6855 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

(2 of 2)

Table 29-74 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 29-75 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 29-76 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 29-77 LpsViolation

Alarm	Attributes	Applicable major NE releases
Name: LpsViolation (518) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LearnedPortSecurity	Severity: major Implicitly cleared: true Default probable cause: learnedPortSecurityViolation (393)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 29-78 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 29-79 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: info Implicitly cleared: true Default probable cause: MacMoveRateExceededNonBlock (1951)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTlsLimitMacMove) is set to 'nonBlocking'.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 29-80 MepAISReceivedAlarm

Alarm	Attributes	Applicable major NE releases
Name: MepAISReceivedAlarm (2945) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: variable Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a MEP Receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 29-81 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\\"')'		
Clearing condition: ('EPS Path' NOT EQUAL '\\"')'		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 29-82 MvrSiteDown

Alarm	Attributes	Applicable major NE releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 29-83 NeighborDown

Alarm	Attributes	Applicable major NE releases
Name: NeighborDown (121) Type: NeighborDown (20) Package: ospf Raised on class: ospf.AbstractNeighbor	Severity: major Implicitly cleared: true Default probable cause: NeighborDown (103)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an OSPF interface neighbor is operationally Down.		
Raising condition: ('Operational State' NOT EQUAL 'full')		
Clearing condition: ('Operational State' EQUAL 'full')		
Remedial action: This alarm is raised when the OSPF interface neighbor is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 29-84 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		

(1 of 2)

29 – Alcatel-Lucent OS6855 alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

(2 of 2)

Table 29-85 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 29-86 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 29-87 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 29-88 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 29-89 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotManagedByAnyEms (1934)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when node is not managed by any EMS after n retries (threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM. Add a discovery rule in order to manage it.		

Table 29-90 OspfInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: OspfInterfaceDown (141) Type: OspfInterfaceDown (24) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: true Default probable cause: OspfInterfaceDown (112)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an OSPF interface is operationally down.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF interface is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 29-91 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 29-92 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

(2 of 2)

Table 29-93 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 29-94 PimDown

Alarm	Attributes	Applicable major NE releases
Name: PimDown (184) Type: ProtocolAlarm (1) Package: pim Raised on class: pim.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a PIM site is administratively Up but operationally Down. The alarm is cleared when the PIM site becomes operationally Up but administratively Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This should never happen. Contact Alcatel-Lucent Customer Support for assistance.		

Table 29-95 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 29-96 PowerSupplyFailure

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyFailure (633) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: critical Implicitly cleared: true Default probable cause: powerSupplyFailure (117)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 29-97 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: minor Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown (2073)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

(2 of 2)

Table 29-98 PowerSupplyRemoved

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyRemoved (542) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: major Implicitly cleared: true Default probable cause: PowerSupplyRemoved (415)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 29-99 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 29-100 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 29-101 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 29-102 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

(2 of 2)

Table 29-103 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: misconfiguredRedundantMep (1416)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an Active and Redundant MEP do not have the same Id, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 29-104 RedundantMepMissing

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMissing (3632) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: missingRedundantMep (1417)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

29 – Alcatel-Lucent OS6855 alarms

Table 29-105 RemoteMepCCMAAlarm

Alarm	Attributes	Applicable major NE releases
Name: RemoteMepCCMAAlarm (502) Type: oamAlarm (18) Package: ethernetOam Raised on class: ethernetOam.Mep	Severity: major Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 29-106 RipDown

Alarm	Attributes	Applicable major NE releases
Name: RipDown (72) Type: ProtocolAlarm (1) Package: rip Raised on class: rip.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g. IOM is not shutdown or installed.		

Table 29-107 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 29-108 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 29-109 ServiceSiteDown

Alarm	Attributes	Applicable major NE releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 29-110 SiteManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		

(1 of 2)

29 – Alcatel-Lucent OS6855 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

(2 of 2)

Table 29-111 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 29-112 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 29-113 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

(2 of 2)

Table 29-114 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 29-115 TlsSiteDown

Alarm	Attributes	Applicable major NE releases
Name: TlsSiteDown (163) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.TlsSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('TLS Admin Status' EQUAL 'Disabled')		
Clearing condition: ('TLS Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable TLS Admin Status under the Bridge Instance.		

Table 29-116 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major NE releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 29-117 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> • trapDestinationMisconfigured • duplicateTrapLogId 	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 29-118 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

(2 of 2)

Table 29-119 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 29-120 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 29-121 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 29-122 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 29-123 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 29-124 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 29-125 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 29-126 VirtualLinkDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkDown (122) Type: VirtualLinkAlarm (21) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: true Default probable cause: VirtualLinkDown (104)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a virtual link is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 29-127 VirtualNeighborDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualNeighborDown (123) Type: VirtualNeighborDown (22) Package: ospf Raised on classes: <ul style="list-style-type: none"> • ospf.ShamLink • ospf.VirtualLink 	Severity: warning Implicitly cleared: true Default probable cause: VirtualNeighborDown (105)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a neighbor virtual link is operationally down.		
Raising condition: ('neighborCount' EQUAL '0L')		
Clearing condition: ('neighborCount' NOT EQUAL '0L')		
Remedial action: This alarm is raised when the OSPF neighbor virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 29-128 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '"TiMOS-B-3.0.Generic "') AND ('Chassis Type' EQUAL '7701 CPAA'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('Software Version' NOT EQUAL '\TIMOS-B-3.0.Generic \') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

(2 of 2)

30 — Alcatel-Lucent OS6900 alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 30-1 AccessInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm (32) Package: service Raised on class: service.AccessInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC-Lag') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC-Lag') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 30-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 30-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 30-4 AreaTypeMismatch

Alarm	Attributes	Applicable major NE releases
Name: AreaTypeMismatch (38) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Area	Severity: warning Implicitly cleared: true Default probable cause: areaTypeMisconfigured (34)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an OSPF area on one NE is configured as an NSSA and the same OSPF area on another NE is configured as a stub area.		
Raising condition: ('Type Mismatch' EQUAL 'true')		
Clearing condition: ('Type Mismatch' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The OSPF area type configured for the NE does not match with the same OSPF area configured on another NE. Compare the configuration on the endpoint and correct the mismatch.		

Table 30-5 AtcaFanFailure

Alarm	Attributes	Applicable major NE releases
Name: AtcaFanFailure (1124) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Fan	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('operationalState' EQUAL 'Disabled') OR ('operationalState' EQUAL 'Down'))		
Clearing condition: (('operationalState' EQUAL 'Enabled') OR ('operationalState' EQUAL 'Up'))		
Remedial action: This alarm is raised if the fan speed falls below 500 rpm. If the alarm persists, replace the appropriate (upper or lower) fan tray.		

Table 30-6 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 30-7 BgpDown

Alarm	Attributes	Applicable major NE releases
Name: BgpDown (6) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a BGP instance has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP protocol entity is down - administratively disable BGP and re-enable. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 30-8 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 30-9 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 30-10 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

(2 of 2)

Table 30-11 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 30-12 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 30-13 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 30-14 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 30-15 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

(2 of 2)

Table 30-16 DDMAux1HighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1HighAlarm (495) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux1HighAlarm (381)	<ul style="list-style-type: none"> 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-17 DDMAux1HighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1HighWarning (494) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux1HighWarning (380)	<ul style="list-style-type: none"> 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-18 DDMAux1LowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1LowAlarm (493) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux1LowAlarm (379)	<ul style="list-style-type: none"> 7.3.1 7.3.2 7.3.3

(1 of 2)

30 – Alcatel-Lucent OS6900 alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

(2 of 2)

Table 30-19 DDMAux1LowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1LowWarning (492) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux1LowWarning (378)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-20 DDMAux2HighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2HighAlarm (499) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux2HighAlarm (385)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-21 DDMAux2HighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2HighWarning (498) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux2HighWarning (384)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-22 DDMAux2LowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2LowAlarm (497) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux2LowAlarm (383)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-23 DDMAux2LowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2LowWarning (496) Type: communicationthresholdAlarmnsAlarm (50) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux2LowWarning (382)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-24 DDMRxOpticalPowerHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerHighAlarm (491) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: rxOpticalPowerHighAlarm (377)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-25 DDMRxOpticalPowerHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerHighWarning (490) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: rxOpticalPowerHighWarning (376)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-26 DDMRxOpticalPowerLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerLowAlarm (489) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: rxOpticalPowerLowAlarm (375)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-27 DDMRxOpticalPowerLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerLowWarning (488) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: rxOpticalPowerLowWarning (374)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBitRx Optical Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBitRx Optical Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-28 DDMSupplyVoltageHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageHighAlarm (479) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: supplyVoltageHighAlarm (365)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBitSupply Voltage High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBitSupply Voltage High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-29 DDMSupplyVoltageHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageHighWarning (478) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: supplyVoltageHighWarning (364)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBitSupply Voltage High Warning')		
Clearing condition: NOT (('failedThresholds'anyBitSupply Voltage High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-30 DDMSupplyVoltageLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageLowAlarm (477) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: supplyVoltageLowAlarm (363)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-31 DDMSupplyVoltageLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageLowWarning (476) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: supplyVoltageLowWarning (362)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-32 DDMTemperatureHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureHighAlarm (475) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: temperatureHighAlarm (361)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-33 DDMTemperatureHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureHighWarning (474) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: temperatureHighWarning (360)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-34 DDMTemperatureLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureLowAlarm (473) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: temperatureLowAlarm (359)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-35 DDMTemperatureLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureLowWarning (472) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: temperatureLowWarning (358)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-36 DDMTxBiasCurrentHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentHighAlarm (483) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txBiasCurrentHighAlarm (369)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-37 DDMTxBiasCurrentHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentHighWarning (482) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txBiasCurrentHighWarning (368)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-38 DDMTxBiasCurrentLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentLowAlarm (481) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txBiasCurrentLowAlarm (367)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-39 DDMTxBiasCurrentLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentLowWarning (480) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txBiasCurrentLowWarning (366)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-40 DDMTxOutputPowerHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerHighAlarm (487) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txOutputPowerHighAlarm (373)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-41 DDMTxOutputPowerHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerHighWarning (486) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txOutputPowerHighWarning (372)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-42 DDMTxOutputPowerLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerLowAlarm (485) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txOutputPowerLowAlarm (371)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-43 DDMTxOutputPowerLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerLowWarning (484) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txOutputPowerLowWarning (370)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 30-44 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 30-45 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 30-46 EquipmentDegraded

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 30-47 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 30-48 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 30-49 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 30-50 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

(2 of 2)

Table 30-51 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 30-52 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm (11) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback (567)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised by the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 30-53 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: DuplicateLane (1387)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 30-54 EthernetPortHighBer

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortHighBer (307) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 30-55 EthernetPortLocalFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortLocalFault (305) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: LocalFault (236)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 30-56 EthernetPortNoAmLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoAmLock (1388)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 30-57 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoBlockLock (1389)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 30-58 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoFrameLock (237)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 30-59 EthernetPortRemoteFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: RemoteFault (235)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 30-60 EthernetPortSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: SignalFailure (234)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 30-61 FanFailure

Alarm	Attributes	Applicable major NE releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfService'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 30-62 FanTrayRemoved

Alarm	Attributes	Applicable major NE releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 30-63 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 30-64 FrameSizeProblem (svt)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: svt Raised on class: svt.SdpBinding	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 7.3.3
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('Operational State' EQUAL 'MTU Mismatch') OR ('Operational State' EQUAL 'Tunnel MTU Too Small'))		
Clearing condition: (('Operational State' NOT EQUAL 'MTU Mismatch') AND ('Operational State' NOT EQUAL 'Tunnel MTU Too Small'))		
Remedial action: The MTU value must be changed such that is is less than or equal to the supported MTU size value.		

Table 30-65 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggsn Raised on class: Iteggsn.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 30-66 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.L2AccessInterface	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

Table 30-67 IgmpDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpDown (158) Type: ProtocolAlarm (1) Package: igmp Raised on class: igmp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 30-68 IgmpSnoopingDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.Bridge	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 30-69 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 30-70 InterfaceDown (netw)

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDown (36) Type: InterfaceAlarm (13) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface is not operation. Ensure that the interface is cabled and that there isn't a configuration error (i.e. MTU size set incorrectly) on the interface. Once the issue w		

Table 30-71 IsisDown

Alarm	Attributes	Applicable major NE releases
Name: IsisDown (19) Type: ProtocolAlarm (1) Package: isis Raised on class: isis.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an IS-IS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: The protocol is not working anymore, could be a problem with IP addresses, resources on the device, ...		

(2 of 2)

Table 30-72 LabelProblem

Alarm	Attributes	Applicable major NE releases
Name: LabelProblem (98) Type: CircuitAlarm (17) Package: svt Raised on class: svt.SdpBinding	Severity: critical Implicitly cleared: true Default probable cause: labelProblem (84)	<ul style="list-style-type: none"> 7.3.3
Description: The alarm is raised when an ingress or an egress label is missing.		
Raising condition: (('Operational State' EQUAL 'No Egress Label') OR ('Operational State' EQUAL 'No Ingress Label') OR ('Operational State' EQUAL 'No Labels'))		
Clearing condition: (('Operational State' NOT EQUAL 'No Egress Label') AND ('Operational State' NOT EQUAL 'No Ingress Label') AND ('Operational State' NOT EQUAL 'No Labels'))		
Remedial action: An ingress or egress label is missing for the SDP binding.		

Table 30-73 LagDown

Alarm	Attributes	Applicable major NE releases
Name: LagDown (20) Type: equipmentAlarm (3) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagDown (17)	<ul style="list-style-type: none"> 7.2.1 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end) may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and that the cable has not been damaged.		

Table 30-74 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 30-75 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 30-76 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 30-77 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 30-78 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 30-79 LpsViolation

Alarm	Attributes	Applicable major NE releases
Name: LpsViolation (518) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LearnedPortSecurity	Severity: major Implicitly cleared: true Default probable cause: learnedPortSecurityViolation (393)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 30-80 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 30-81 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: info Implicitly cleared: true Default probable cause: MacMoveRateExceededNonBlock (1951)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTIsLimitMacMove) is set to 'nonBlocking'.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 30-82 MepAISReceivedAlarm

Alarm	Attributes	Applicable major NE releases
Name: MepAISReceivedAlarm (2945) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: variable Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a MEP Receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 30-83 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\\"')"		
Clearing condition: ('EPS Path' NOT EQUAL '\\"')"		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 30-84 MvrSiteDown

Alarm	Attributes	Applicable major NE releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 30-85 NeighborDown

Alarm	Attributes	Applicable major NE releases
Name: NeighborDown (121) Type: NeighborDown (20) Package: ospf Raised on class: ospf.AbstractNeighbor	Severity: major Implicitly cleared: true Default probable cause: NeighborDown (103)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an OSPF interface neighbor is operationally Down.		
Raising condition: ('Operational State' NOT EQUAL 'full')		
Clearing condition: ('Operational State' EQUAL 'full')		

(1 of 2)

30 – Alcatel-Lucent OS6900 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: This alarm is raised when the OSPF interface neighbor is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

(2 of 2)

Table 30-86 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> 7.2.1 7.3.1 7.3.2 7.3.3
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 30-87 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> 7.2.1 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 30-88 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 30-89 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 30-90 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 30-91 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotManagedByAnyEms (1934)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM.Add an discory rule in order to managed it.		

Table 30-92 OspflInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: OspflInterfaceDown (141) Type: OspflInterfaceDown (24) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: true Default probable cause: OspflInterfaceDown (112)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an OSPF interface is operationally down.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF interface is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 30-93 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 30-94 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 30-95 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 30-96 PimDown

Alarm	Attributes	Applicable major NE releases
Name: PimDown (184) Type: ProtocolAlarm (1) Package: pim Raised on class: pim.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a PIM site is administratively Up but operationally Down. The alarm is cleared when the PIM site becomes operationally Up but administratively Down.		

(1 of 2)

30 – Alcatel-Lucent OS6900 alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This should never happen. Contact Alcatel-Lucent Customer Support for assistance.		

(2 of 2)

Table 30-97 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 30-98 PowerSupplyFailure

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyFailure (633) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: critical Implicitly cleared: true Default probable cause: powerSupplyFailure (117)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 30-99 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: minor Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown (2073)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down'))		
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 30-100 PowerSupplyRemoved

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyRemoved (542) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: major Implicitly cleared: true Default probable cause: PowerSupplyRemoved (415)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 30-101 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 30-102 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 30-103 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 30-104 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

(2 of 2)

Table 30-105 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: misconfiguredRedundantMep (1416)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an Active and Redundant MEP do not have the same Id, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 30-106 RedundantMepMissing

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMissing (3632) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: missingRedundantMep (1417)	<ul style="list-style-type: none"> • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 30-107 RemoteMepCCMAAlarm

Alarm	Attributes	Applicable major NE releases
Name: RemoteMepCCMAAlarm (502) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: major Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 30-108 RipDown

Alarm	Attributes	Applicable major NE releases
Name: RipDown (72) Type: ProtocolAlarm (1) Package: rip Raised on class: rip.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g. IOM is not shutdown or installed.		

Table 30-109 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 30-110 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> 7.2.1 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 30-111 SdpBindingDown

Alarm	Attributes	Applicable major NE releases
Name: SdpBindingDown (221) Type: SdpBindingAlarm (30) Package: svt Raised on class: svt.SdpBinding	Severity: critical Implicitly cleared: true Default probable cause: SdpBindingNotReady (166)	<ul style="list-style-type: none"> 7.3.3
Description: The alarm is raised when an SDP binding has an Operational State other than Up.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-Homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For BGP Multi-Homing'))		
Remedial action: To resolve this alarm check the SDP binding to determine if a configuration mismatch exists. If configuration is determined to be correct then the associated network interface may be down. Further investigation is required to determine why the underlying network interface is down.		

Table 30-112 SdpBindingTunnelDown

Alarm	Attributes	Applicable major NE releases
Name: SdpBindingTunnelDown (222) Type: CircuitAlarm (17) Package: svt Raised on class: svt.SdpBinding	Severity: critical Implicitly cleared: true Default probable cause: SdpTunnelNotReady (167)	<ul style="list-style-type: none"> 7.3.3
Description: The alarm is raised when an SDP binding tunnel has an Operational State other than Up.		
Raising condition: (('Operational State' EQUAL 'Tunnel Not Ready') OR ('Operational State' EQUAL 'Tunnel Down'))		
Clearing condition: (('Operational State' NOT EQUAL 'Tunnel Not Ready') AND ('Operational State' NOT EQUAL 'Tunnel Down'))		

(1 of 2)

30 – Alcatel-Lucent OS6900 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: To resolve this alarm check the endpoints of the SDP binding to determine if a configuration mismatch exists. If configuration matches then the underlying network resource between the endpoints of the SDP may be down. Further investigation is required to determine why the underlying transport network is down.		

(2 of 2)

Table 30-113 ServiceSiteDown

Alarm	Attributes	Applicable major NE releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 30-114 SiteManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

Table 30-115 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 30-116 SpbSiteDown

Alarm	Attributes	Applicable major NE releases
Name: SpbSiteDown (4396) Type: ProtocolAlarm (1) Package: spb Raised on class: spb.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 7.3.3
Description: The alarm is raised when an SPB site has an Operational State other than Up.		
Raising condition: ('Operational State' NOT EQUAL 'Up')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Check if the administrative state is down. If the administrative state is up, then check the ISIS instance associated with the SPB and make sure it is up.		

Table 30-117 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 30-118 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 30-119 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 30-120 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major NE releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

(2 of 2)

Table 30-121 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> trapDestinationMisconfigured duplicateTrapLogId 	<ul style="list-style-type: none"> 7.2.1 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 30-122 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> 7.2.1 7.3.1 7.3.2 7.3.3
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		

(1 of 2)

30 – Alcatel-Lucent OS6900 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

(2 of 2)

Table 30-123 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> 7.2.1 7.3.1 7.3.2 7.3.3
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 30-124 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> 7.2.1 7.3.1 7.3.2 7.3.3
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

(2 of 2)

Table 30-125 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 30-126 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 30-127 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 30-128 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 30-129 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 30-130 VirtualLinkDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkDown (122) Type: VirtualLinkAlarm (21) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: true Default probable cause: VirtualLinkDown (104)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a virtual link is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 30-131 VirtualNeighborDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualNeighborDown (123) Type: VirtualNeighborDown (22) Package: ospf Raised on classes: <ul style="list-style-type: none"> • ospf.ShamLink • ospf.VirtualLink 	Severity: warning Implicitly cleared: true Default probable cause: VirtualNeighborDown (105)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when a neighbor virtual link is operationally down.		
Raising condition: ('neighborCount' EQUAL '0L')		
Clearing condition: ('neighborCount' NOT EQUAL '0L')		
Remedial action: This alarm is raised when the OSPF neighbor virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 30-132 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 7.2.1 • 7.3.1 • 7.3.2 • 7.3.3
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '"TiMOS-B-3.0.Generic "') AND ('Chassis Type' EQUAL '7701 CPAA'))		

(1 of 2)

30 – Alcatel-Lucent OS6900 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('Software Version' NOT EQUAL '\TIMOS-B-3.0.Generic \') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

(2 of 2)

31 — Alcatel-Lucent OS9600 alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 31-1 AccessInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm (32) Package: service Raised on class: service.AccessInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC-Lag') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC-Lag') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 31-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 31-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 31-4 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 31-5 BgpDown

Alarm	Attributes	Applicable major NE releases
Name: BgpDown (6) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a BGP instance has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP protocol entity is down - administratively disable BGP and re-enable. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 31-6 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 31-7 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		

(1 of 2)

31 – Alcatel-Lucent OS9600 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

(2 of 2)

Table 31-8 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 31-9 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 31-10 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> 6.3.4 6.4.2 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 31-11 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> 6.3.4 6.4.2 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 31-12 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> 6.3.4 6.4.2 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		

(1 of 2)

31 – Alcatel-Lucent OS9600 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

(2 of 2)

Table 31-13 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 31-14 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 31-15 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 31-16 EquipmentDegraded

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 31-17 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 31-18 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 31-19 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 31-20 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

(2 of 2)

Table 31-21 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 31-22 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm (11) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback (567)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised by the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 31-23 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: DuplicateLane (1387)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 31-24 EthernetPortHighBer

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortHighBer (307) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 31-25 EthernetPortLocalFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortLocalFault (305) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: LocalFault (236)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 31-26 EthernetPortNoAmLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoAmLock (1388)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 31-27 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoBlockLock (1389)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 31-28 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoFrameLock (237)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 31-29 EthernetPortRemoteFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: RemoteFault (235)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 31-30 EthernetPortSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: SignalFailure (234)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 31-31 FanFailure

Alarm	Attributes	Applicable major NE releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfService'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 31-32 FanTrayRemoved

Alarm	Attributes	Applicable major NE releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 31-33 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL 'OL'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL 'OL'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 31-34 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggns Raised on class: Iteggns.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 31-35 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.L2AccessInterface	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

(2 of 2)

Table 31-36 IgmpDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpDown (158) Type: ProtocolAlarm (1) Package: igmp Raised on class: igmp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 31-37 IgmpSnoopingDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.Bridge	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 31-38 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		

(1 of 2)

31 – Alcatel-Lucent OS9600 alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

(2 of 2)

Table 31-39 InterfaceDown (netw)

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDown (36) Type: InterfaceAlarm (13) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operation. Ensure that the interface is cabled and that there isn't a configuration error (i.e. MTU size set incorrectly) on the interface. Once the issue w		

Table 31-40 IsisDown

Alarm	Attributes	Applicable major NE releases
Name: IsisDown (19) Type: ProtocolAlarm (1) Package: isis Raised on class: isis.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an IS-IS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The protocol is not working anymore, could be a problem with IP addresses, resources on the device, ...		

Table 31-41 LagDown

Alarm	Attributes	Applicable major NE releases
Name: LagDown (20) Type: equipmentAlarm (3) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagDown (17)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 31-42 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 31-43 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		

(1 of 2)

31 – Alcatel-Lucent OS9600 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

(2 of 2)

Table 31-44 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 31-45 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 31-46 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 31-47 LpsViolation

Alarm	Attributes	Applicable major NE releases
Name: LpsViolation (518) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LearnedPortSecurity	Severity: major Implicitly cleared: true Default probable cause: learnedPortSecurityViolation (393)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 31-48 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 31-49 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: info Implicitly cleared: true Default probable cause: MacMoveRateExceededNonBlock (1951)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTlsLimitMacMove) is set to 'nonBlocking'.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 31-50 MepAISReceivedAlarm

Alarm	Attributes	Applicable major NE releases
Name: MepAISReceivedAlarm (2945) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: variable Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a MEP Receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 31-51 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\\"')'		
Clearing condition: ('EPS Path' NOT EQUAL '\\"')'		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 31-52 MvrSiteDown

Alarm	Attributes	Applicable major NE releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> 6.3.4 6.4.2 6.4.3
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 31-53 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> 6.3.4 6.4.2 6.4.3
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only'))) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only'))) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only'))) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only'))) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 31-54 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> 6.3.4 6.4.2 6.4.3

(1 of 2)

31 – Alcatel-Lucent OS9600 alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

(2 of 2)

Table 31-55 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 31-56 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 31-57 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 31-58 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM. Add an discory rule in order to managed it.		

Table 31-59 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 31-60 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 31-61 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 31-62 PimDown

Alarm	Attributes	Applicable major NE releases
Name: PimDown (184) Type: ProtocolAlarm (1) Package: pim Raised on class: pim.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a PIM site is administratively Up but operationally Down. The alarm is cleared when the PIM site becomes operationally Up but administratively Down.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This should never happen. Contact Alcatel-Lucent Customer Support for assistance.		

(2 of 2)

Table 31-63 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 31-64 PowerSupplyFailure

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyFailure (633) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: critical Implicitly cleared: true Default probable cause: powerSupplyFailure (117)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 31-65 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: minor Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown (2073)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down'))		
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 31-66 PowerSupplyRemoved

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyRemoved (542) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: major Implicitly cleared: true Default probable cause: PowerSupplyRemoved (415)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 31-67 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 31-68 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 31-69 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 31-70 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		

(1 of 2)

31 – Alcatel-Lucent OS9600 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

(2 of 2)

Table 31-71 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: misconfiguredRedundantMep (1416)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an Active and Redundant MEP do not have the same Id, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 31-72 RedundantMepMissing

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMissing (3632) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: missingRedundantMep (1417)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 31-73 RemoteMepCCMAAlarm

Alarm	Attributes	Applicable major NE releases
Name: RemoteMepCCMAAlarm (502) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: major Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 31-74 RipDown

Alarm	Attributes	Applicable major NE releases
Name: RipDown (72) Type: ProtocolAlarm (1) Package: rip Raised on class: rip.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g, IOM is not shutdown or installed.		

Table 31-75 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 31-76 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 31-77 ServiceSiteDown

Alarm	Attributes	Applicable major NE releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 31-78 SiteManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

(2 of 2)

Table 31-79 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 31-80 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 31-81 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3

(1 of 2)

31 – Alcatel-Lucent OS9600 alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

(2 of 2)

Table 31-82 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 31-83 TlsSiteDown

Alarm	Attributes	Applicable major NE releases
Name: TlsSiteDown (163) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.TlsSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('TLS Admin Status' EQUAL 'Disabled')		
Clearing condition: ('TLS Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable TLS Admin Status under the Bridge Instance.		

Table 31-84 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major NE releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetEquipment Raised on class: ethernetEquipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 31-85 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> • trapDestinationMisconfigured • duplicateTrapLogId 	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 31-86 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

(2 of 2)

Table 31-87 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> 6.3.4 6.4.2 6.4.3
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 31-88 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 31-89 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 31-90 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 31-91 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 31-92 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 31-93 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 31-94 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\TiMOS-B-3.0.Generic \') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\TiMOS-B-3.0.Generic \') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

32 — Alcatel-Lucent OS9700 alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 32-1 AccessInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm (32) Package: service Raised on class: service.AccessInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC-Lag') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC-Lag') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 32-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 32-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 32-4 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 32-5 BgpDown

Alarm	Attributes	Applicable major NE releases
Name: BgpDown (6) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a BGP instance has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP protocol entity is down - administratively disable BGP and re-enable. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 32-6 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 32-7 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		

(1 of 2)

32 — Alcatel-Lucent OS9700 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

(2 of 2)

Table 32-8 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 32-9 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 32-10 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 32-11 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 32-12 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		

(1 of 2)

32 — Alcatel-Lucent OS9700 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

(2 of 2)

Table 32-13 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 32-14 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 32-15 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 32-16 EquipmentDegraded

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 32-17 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 32-18 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 32-19 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 32-20 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

(2 of 2)

Table 32-21 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 32-22 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm (11) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback (567)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised by the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 32-23 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: DuplicateLane (1387)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 32-24 EthernetPortHighBer

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortHighBer (307) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 32-25 EthernetPortLocalFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortLocalFault (305) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: LocalFault (236)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 32-26 EthernetPortNoAmLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoAmLock (1388)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 32-27 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoBlockLock (1389)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 32-28 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoFrameLock (237)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 32-29 EthernetPortRemoteFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: RemoteFault (235)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 32-30 EthernetPortSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: SignalFailure (234)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 32-31 FanFailure

Alarm	Attributes	Applicable major NE releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfService'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 32-32 FanTrayRemoved

Alarm	Attributes	Applicable major NE releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 32-33 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL 'OL'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL 'OL'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 32-34 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggns Raised on class: Iteggns.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 32-35 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.L2AccessInterface	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

(2 of 2)

Table 32-36 IgmpDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpDown (158) Type: ProtocolAlarm (1) Package: igmp Raised on class: igmp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 32-37 IgmpSnoopingDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.Bridge	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 32-38 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		

(1 of 2)

32 – Alcatel-Lucent OS9700 alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

(2 of 2)

Table 32-39 InterfaceDown (netw)

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDown (36) Type: InterfaceAlarm (13) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operation. Ensure that the interface is cabled and that there isn't a configuration error (i.e. MTU size set incorrectly) on the interface. Once the issue w		

Table 32-40 IsisDown

Alarm	Attributes	Applicable major NE releases
Name: IsisDown (19) Type: ProtocolAlarm (1) Package: isis Raised on class: isis.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an IS-IS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The protocol is not working anymore, could be a problem with IP addresses, resources on the device, ...		

Table 32-41 LagDown

Alarm	Attributes	Applicable major NE releases
Name: LagDown (20) Type: equipmentAlarm (3) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagDown (17)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 32-42 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 32-43 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		

(1 of 2)

32 – Alcatel-Lucent OS9700 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

(2 of 2)

Table 32-44 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 32-45 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 32-46 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 32-47 LpsViolation

Alarm	Attributes	Applicable major NE releases
Name: LpsViolation (518) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LearnedPortSecurity	Severity: major Implicitly cleared: true Default probable cause: learnedPortSecurityViolation (393)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 32-48 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 32-49 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: info Implicitly cleared: true Default probable cause: MacMoveRateExceededNonBlock (1951)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTlsLimitMacMove) is set to 'nonBlocking'.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 32-50 MepAISReceivedAlarm

Alarm	Attributes	Applicable major NE releases
Name: MepAISReceivedAlarm (2945) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: variable Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a MEP Receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 32-51 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\\"')'		
Clearing condition: ('EPS Path' NOT EQUAL '\\"')'		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 32-52 MvrSiteDown

Alarm	Attributes	Applicable major NE releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 32-53 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only'))) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only'))) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band')))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only'))) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only'))) AND ('Primary Route Preference' EQUAL 'Out Of Band')))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 32-54 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3

(1 of 2)

32 – Alcatel-Lucent OS9700 alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

(2 of 2)

Table 32-55 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 32-56 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 32-57 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 32-58 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM. Add an discory rule in order to managed it.		

Table 32-59 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 32-60 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 32-61 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 32-62 PimDown

Alarm	Attributes	Applicable major NE releases
Name: PimDown (184) Type: ProtocolAlarm (1) Package: pim Raised on class: pim.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a PIM site is administratively Up but operationally Down. The alarm is cleared when the PIM site becomes operationally Up but administratively Down.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This should never happen. Contact Alcatel-Lucent Customer Support for assistance.		

(2 of 2)

Table 32-63 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 32-64 PowerSupplyFailure

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyFailure (633) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: critical Implicitly cleared: true Default probable cause: powerSupplyFailure (117)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 32-65 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: minor Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown (2073)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down'))		
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 32-66 PowerSupplyRemoved

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyRemoved (542) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: major Implicitly cleared: true Default probable cause: PowerSupplyRemoved (415)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 32-67 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 32-68 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 32-69 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 32-70 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

(2 of 2)

Table 32-71 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: misconfiguredRedundantMep (1416)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an Active and Redundant MEP do not have the same Id, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 32-72 RedundantMepMissing

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMissing (3632) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: missingRedundantMep (1417)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 32-73 RemoteMepCCMAAlarm

Alarm	Attributes	Applicable major NE releases
Name: RemoteMepCCMAAlarm (502) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: major Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 32-74 RipDown

Alarm	Attributes	Applicable major NE releases
Name: RipDown (72) Type: ProtocolAlarm (1) Package: rip Raised on class: rip.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g, IOM is not shutdown or installed.		

Table 32-75 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 32-76 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 32-77 ServiceSiteDown

Alarm	Attributes	Applicable major NE releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 32-78 SiteManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

(2 of 2)

Table 32-79 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 32-80 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 32-81 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3

(1 of 2)

32 — Alcatel-Lucent OS9700 alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

(2 of 2)

Table 32-82 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 32-83 TlsSiteDown

Alarm	Attributes	Applicable major NE releases
Name: TlsSiteDown (163) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.TlsSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('TLS Admin Status' EQUAL 'Disabled')		
Clearing condition: ('TLS Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable TLS Admin Status under the Bridge Instance.		

Table 32-84 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major NE releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetEquipment Raised on class: ethernetEquipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 32-85 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> • trapDestinationMisconfigured • duplicateTrapLogId 	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 32-86 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

(2 of 2)

Table 32-87 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> 6.3.4 6.4.2 6.4.3
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 32-88 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 32-89 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 32-90 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 32-91 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 32-92 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 32-93 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 32-94 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\TiMOS-B-3.0.Generic \') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\TiMOS-B-3.0.Generic \') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

33 — Alcatel-Lucent OS9700E/9800E alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 33-1 AccessInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm (32) Package: service Raised on class: service.AccessInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC-Lag') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC-Lag') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 33-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 33-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 33-4 AreaTypeMismatch

Alarm	Attributes	Applicable major NE releases
Name: AreaTypeMismatch (38) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Area	Severity: warning Implicitly cleared: true Default probable cause: areaTypeMisconfigured (34)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an OSPF area on one NE is configured as an NSSA and the same OSPF area on another NE is configured as a stub area.		
Raising condition: ('Type Mismatch' EQUAL 'true')		
Clearing condition: ('Type Mismatch' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The OSPF area type configured for the NE does not match with the same OSPF area configured on another NE. Compare the configuration on the endpoint and correct the mismatch.		

Table 33-5 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 33-6 BgpDown

Alarm	Attributes	Applicable major NE releases
Name: BgpDown (6) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a BGP instance has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP protocol entity is down - administratively disable BGP and re-enable. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 33-7 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		

(1 of 2)

33 – Alcatel-Lucent OS9700E/9800E alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

(2 of 2)

Table 33-8 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 33-9 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 33-10 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 33-11 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 33-12 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 33-13 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 33-14 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 33-15 DDMAux1HighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1HighAlarm (495) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux1HighAlarm (381)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Alarm')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

(2 of 2)

Table 33-16 DDMAux1HighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1HighWarning (494) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux1HighWarning (380)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-17 DDMAux1LowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1LowAlarm (493) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux1LowAlarm (379)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-18 DDMAux1LowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux1LowWarning (492) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux1LowWarning (378)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6

(1 of 2)

33 – Alcatel-Lucent OS9700E/9800E alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the manufacturer-specific Auxiliary 1 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux1 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux1 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

(2 of 2)

Table 33-19 DDMAux2HighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2HighAlarm (499) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux2HighAlarm (385)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-20 DDMAux2HighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2HighWarning (498) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux2HighWarning (384)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-21 DDMAux2LowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2LowAlarm (497) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: aux2LowAlarm (383)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-22 DDMAux2LowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMAux2LowWarning (496) Type: communicatiothresholdAlarmnsAlarm (50) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: aux2LowWarning (382)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the manufacturer-specific Auxiliary 2 of the XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBit'Aux2 Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Aux2 Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-23 DDMRxOpticalPowerHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerHighAlarm (491) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: rxOpticalPowerHighAlarm (377)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Rx Optical Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Rx Optical Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-24 DDMRxOpticalPowerHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerHighWarning (490) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: rxOpticalPowerHighWarning (376)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBitRx Optical Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBitRx Optical Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-25 DDMRxOpticalPowerLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerLowAlarm (489) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: rxOpticalPowerLowAlarm (375)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the received optical power of an SFP or XFP reaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBitRx Optical Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBitRx Optical Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-26 DDMRxOpticalPowerLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMRxOpticalPowerLowWarning (488) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: rxOpticalPowerLowWarning (374)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the received optical power of an SFP or XFP approaches the minimum threshold value.		
Raising condition: ('failedThresholds'anyBitRx Optical Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBitRx Optical Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-27 DDMSupplyVoltageHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageHighAlarm (479) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: supplyVoltageHighAlarm (365)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-28 DDMSupplyVoltageHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageHighWarning (478) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: supplyVoltageHighWarning (364)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-29 DDMSupplyVoltageLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageLowAlarm (477) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: supplyVoltageLowAlarm (363)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the supply voltage of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-30 DDMSupplyVoltageLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMSupplyVoltageLowWarning (476) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: supplyVoltageLowWarning (362)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the supply voltage of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Supply Voltage Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Supply Voltage Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-31 DDMTemperatureHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureHighAlarm (475) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: temperatureHighAlarm (361)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-32 DDMTemperatureHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureHighWarning (474) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: temperatureHighWarning (360)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-33 DDMTemperatureLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureLowAlarm (473) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: temperatureLowAlarm (359)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the temperature of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-34 DDMTemperatureLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTemperatureLowWarning (472) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: temperatureLowWarning (358)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the temperature of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Temperature Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Temperature Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-35 DDMTxBiasCurrentHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentHighAlarm (483) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txBiasCurrentHighAlarm (369)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-36 DDMTxBiasCurrentHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentHighWarning (482) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txBiasCurrentHighWarning (368)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-37 DDMTxBiasCurrentLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentLowAlarm (481) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txBiasCurrentLowAlarm (367)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the transmit bias current of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-38 DDMTxBiasCurrentLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxBiasCurrentLowWarning (480) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txBiasCurrentLowWarning (366)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the transmit bias current of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Bias Current Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Bias Current Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-39 DDMTxOutputPowerHighAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerHighAlarm (487) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txOutputPowerHighAlarm (373)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-40 DDMTxOutputPowerHighWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerHighWarning (486) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txOutputPowerHighWarning (372)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power High Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power High Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-41 DDMTxOutputPowerLowAlarm

Alarm	Attributes	Applicable major NE releases
Name: DDMTxOutputPowerLowAlarm (485) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: major Implicitly cleared: true Default probable cause: txOutputPowerLowAlarm (371)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the output power of an SFP or XFP reaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Alarm')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Alarm'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-42 DDMtxOutputPowerLowWarning

Alarm	Attributes	Applicable major NE releases
Name: DDMtxOutputPowerLowWarning (484) Type: thresholdAlarm (49) Package: equipment Raised on class: equipment.AbstractDDM	Severity: warning Implicitly cleared: true Default probable cause: txOutputPowerLowWarning (370)	<ul style="list-style-type: none"> • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the output power of an SFP or XFP approaches the maximum threshold value.		
Raising condition: ('failedThresholds'anyBit'Tx Output Power Low Warning')		
Clearing condition: NOT (('failedThresholds'anyBit'Tx Output Power Low Warning'))		
Remedial action: Informational. Check the environmental parameters of the transceiver and ensure that it is not faulty.		

Table 33-43 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 33-44 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 33-45 EquipmentDegraded

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 33-46 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 33-47 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		

(1 of 2)

33 – Alcatel-Lucent OS9700E/9800E alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

(2 of 2)

Table 33-48 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 33-49 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 33-50 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

(2 of 2)

Table 33-51 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm (11) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback (567)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised by the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 33-52 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: DuplicateLane (1387)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 33-53 EthernetPortHighBer

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortHighBer (307) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 33-54 EthernetPortLocalFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortLocalFault (305) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: LocalFault (236)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 33-55 EthernetPortNoAmLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoAmLock (1388)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

(2 of 2)

Table 33-56 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoBlockLock (1389)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: ((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock')))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 33-57 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoFrameLock (237)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: ((('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock')))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 33-58 EthernetPortRemoteFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: RemoteFault (235)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 33-59 EthernetPortSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: SignalFailure (234)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 33-60 FanFailure

Alarm	Attributes	Applicable major NE releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfService'))		
Clearing condition: ('Device State' EQUAL 'OK')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

(2 of 2)

Table 33-61 FanTrayRemoved

Alarm	Attributes	Applicable major NE releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 33-62 ForwardingTableSizeLimitReached

Alarm	Attributes	Applicable major NE releases
Name: ForwardingTableSizeLimitReached (164) Type: resourceAlarm (28) Package: I2fwd Raised on class: I2fwd.SiteFib	Severity: major Implicitly cleared: true Default probable cause: resourceLimitReached (131)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the number of MAC address entries in the FIB reaches or exceeds the VPLS site high watermark specified by I2fwd.SiteFib.highWatermark. The alarm clears when the number of MAC address entries in the FIB drops below the VPLS site low watermark specified by I2fwd.SiteFib.lowWatermark. The alarm can be raised against a VPLS site, L2 access interface, or spoke SDP binding.		
Raising condition: (('Entries' >= 'Size') OR ('Entries' >= (('High Watermark' * 'Size') / 100.0)))		
Clearing condition: (('Entries' < 'Size') AND (('High Watermark' EQUAL '0L') OR ('Entries' < (('Low Watermark' * 'Size') / 100.0))) AND (('Low Watermark' EQUAL '0L') OR ('Entries' < (('Low Watermark' * 'Size') / 100.0)))		
Remedial action: Informational		

Table 33-63 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL 'OL'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL 'OL'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 33-64 FrameSizeProblem (svt)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: svt Raised on class: svt.SdpBinding	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('Operational State' EQUAL 'MTU Mismatch') OR ('Operational State' EQUAL 'Tunnel MTU Too Small'))		
Clearing condition: (('Operational State' NOT EQUAL 'MTU Mismatch') AND ('Operational State' NOT EQUAL 'Tunnel MTU Too Small'))		
Remedial action: The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 33-65 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggns Raised on class: Iteggns.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 33-66 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.L2AccessInterface	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

Table 33-67 IgmpDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpDown (158) Type: ProtocolAlarm (1) Package: igmp Raised on class: igmp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 33-68 IgmpSnoopingDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.Bridge	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 33-69 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 33-70 InterfaceDown (netw)

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDown (36) Type: InterfaceAlarm (13) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface is not operation. Ensure that the interface is cabled and that there isn't a configuration error (i.e. MTU size set incorrectly) on the interface. Once the issue w		

Table 33-71 IsisDown

Alarm	Attributes	Applicable major NE releases
Name: IsisDown (19) Type: ProtocolAlarm (1) Package: isis Raised on class: isis.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an IS-IS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: The protocol is not working anymore, could be a problem with IP addresses, resources on the device, ...		

(2 of 2)

Table 33-72 KeepAliveProblem

Alarm	Attributes	Applicable major NE releases
Name: KeepAliveProblem (100) Type: oamAlarm (18) Package: svt Raised on class: svt.Tunnel	Severity: warning Implicitly cleared: true Default probable cause: keepAliveFailed (86)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM detects a keep-alive protocol status of senderIdInvalid or responderIdError.		
Raising condition: (('Keep-Alive State' NOT EQUAL 'Disabled') AND ('Keep-Alive State' NOT EQUAL 'Alive') AND ('Keep-Alive State' NOT EQUAL 'Unknown'))		
Clearing condition: (('Keep-Alive State' EQUAL 'Disabled') OR ('Keep-Alive State' EQUAL 'Alive') OR ('Keep-Alive State' EQUAL 'Unknown'))		
Remedial action: Check the configuration of this tunnel and underlying physical transport.		

Table 33-73 LabelProblem

Alarm	Attributes	Applicable major NE releases
Name: LabelProblem (98) Type: CircuitAlarm (17) Package: svt Raised on class: svt.SdpBinding	Severity: critical Implicitly cleared: true Default probable cause: labelProblem (84)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an ingress or an egress label is missing.		
Raising condition: (('Operational State' EQUAL 'No Egress Label') OR ('Operational State' EQUAL 'No Ingress Label') OR ('Operational State' EQUAL 'No Labels'))		
Clearing condition: (('Operational State' NOT EQUAL 'No Egress Label') AND ('Operational State' NOT EQUAL 'No Ingress Label') AND ('Operational State' NOT EQUAL 'No Labels'))		
Remedial action: An ingress or egress label is missing for the SDP binding.		

Table 33-74 LagDown

Alarm	Attributes	Applicable major NE releases
Name: LagDown (20) Type: equipmentAlarm (3) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagDown (17)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end) may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and that the cable has not been damaged.		

Table 33-75 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 33-76 LdpDown

Alarm	Attributes	Applicable major NE releases
Name: LdpDown (22) Type: ProtocolAlarm (1) Package: ldp Raised on class: ldp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an LDP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check operational state down reason and update accordingly.		

Table 33-77 LdpSessionNonexistent

Alarm	Attributes	Applicable major NE releases
Name: LdpSessionNonexistent (2954) Type: LdpSessionAlarm (101) Package: ldp Raised on class: ldp.Session	Severity: critical Implicitly cleared: true Default probable cause: LdpSessionDown (1149)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an LDP session is non-existent.		
Raising condition: ('Session State' EQUAL 'Non-existent')		
Clearing condition: ('Session State' EQUAL 'Operational')		
Remedial action: Please check the LDP session path to make sure all associated protocols/interfaces/connections are OK.		

Table 33-78 LdpTargetedPeerDown

Alarm	Attributes	Applicable major NE releases
Name: LdpTargetedPeerDown (23) Type: ProtocolAlarm (1) Package: ldp Raised on class: ldp.TargetedPeer	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an LDP targeted peer is operationally down.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: Please check the route to LDP targeted peer to make sure all associated protocols/interfaces/connections are OK.		

Table 33-79 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 33-80 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 33-81 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 33-82 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 33-83 LpsViolation

Alarm	Attributes	Applicable major NE releases
Name: LpsViolation (518) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LearnedPortSecurity	Severity: major Implicitly cleared: true Default probable cause: learnedPortSecurityViolation (393)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 33-84 LspDown

Alarm	Attributes	Applicable major NE releases
Name: LspDown (25) Type: pathAlarm (12) Package: mpls Raised on class: mpls.Lsp	Severity: critical Implicitly cleared: true Default probable cause: lspDown (19)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the Operational State of an LSP is Down, but the Administrative State is Up.		
Raising condition: (('administrativeState' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('administrativeState' NOT EQUAL 'Up'))		
Remedial action: So many things can cause LSP down, check if source and destination interfaces are down, LSP path is down and the failure code, or MPLS path is down...		

Table 33-85 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 33-86 macMoveRateExceeded (svt)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceeded (3690) Type: SpokeSdpBindingAlarm (104) Package: svt Raised on class: svt.SpokeSdpBinding	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the SDP exceeds the Service Site's MAC Move Frequency.		
Raising condition: ('operationalFlags'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('operationalFlags'anyBit'Relearn Limit Exceeded'))		
Remedial action: Check Service Site MAC move frequency or underlying physical link to understand issue.		

Table 33-87 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: info Implicitly cleared: true Default probable cause: MacMoveRateExceededNonBlock (1951)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTIsLimitMacMove) is set to 'nonBlocking'.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 33-88 MepAISReceivedAlarm

Alarm	Attributes	Applicable major NE releases
Name: MepAISReceivedAlarm (2945) Type: oamAlarm (18) Package: ethernetOam Raised on class: ethernetOam.Mep	Severity: variable Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a MEP Receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 33-89 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\\"')'		
Clearing condition: ('EPS Path' NOT EQUAL '\\"')'		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 33-90 MplsDown

Alarm	Attributes	Applicable major NE releases
Name: MplsDown (27) Type: ProtocolAlarm (1) Package: mpls Raised on class: mpls.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an MPLS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Check operational down reason and update accordingly.		

Table 33-91 MvrSiteDown

Alarm	Attributes	Applicable major NE releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 33-92 NeighborDown

Alarm	Attributes	Applicable major NE releases
Name: NeighborDown (121) Type: NeighborDown (20) Package: ospf Raised on class: ospf.AbstractNeighbor	Severity: major Implicitly cleared: true Default probable cause: NeighborDown (103)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an OSPF interface neighbor is operationally Down.		
Raising condition: ('Operational State' NOT EQUAL 'full')		
Clearing condition: ('Operational State' EQUAL 'full')		
Remedial action: This alarm is raised when the OSPF interface neighbor is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 33-93 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only'))) AND ('Primary Route Preference' EQUAL 'Out Of Band')) AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only'))) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only'))) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only'))) AND ('Primary Route Preference' EQUAL 'Out Of Band'))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 33-94 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 33-95 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 33-96 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 33-97 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 33-98 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM. Add an discory rule in order to managed it.		

Table 33-99 OspfInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: OspfInterfaceDown (141) Type: OspfInterfaceDown (24) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: true Default probable cause: OspfInterfaceDown (112)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an OSPF interface is operationally down.		
Raising condition: ('operationalState' EQUAL 'Down')		
Clearing condition: ('operationalState' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF interface is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 33-100 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 33-101 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 33-102 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		

(1 of 2)

33 – Alcatel-Lucent OS9700E/9800E alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

(2 of 2)

Table 33-103 PimDown

Alarm	Attributes	Applicable major NE releases
Name: PimDown (184) Type: ProtocolAlarm (1) Package: pim Raised on class: pim.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a PIM site is administratively Up but operationally Down. The alarm is cleared when the PIM site becomes operationally Up but administratively Down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This should never happen. Contact Alcatel-Lucent Customer Support for assistance.		

Table 33-104 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 33-105 PowerSupplyFailure

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyFailure (633) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: critical Implicitly cleared: true Default probable cause: powerSupplyFailure (117)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 33-106 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: minor Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown (2073)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down'))		
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 33-107 PowerSupplyRemoved

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyRemoved (542) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: major Implicitly cleared: true Default probable cause: PowerSupplyRemoved (415)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 33-108 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 33-109 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 33-110 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

(2 of 2)

Table 33-111 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

Table 33-112 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: misconfiguredRedundantMep (1416)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an Active and Redundant MEP do not have the same Id, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 33-113 RedundantMepMissing

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMissing (3632) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: missingRedundantMep (1417)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 33-114 RemoteMepCCMAAlarm

Alarm	Attributes	Applicable major NE releases
Name: RemoteMepCCMAAlarm (502) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: major Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 33-115 RipDown

Alarm	Attributes	Applicable major NE releases
Name: RipDown (72) Type: ProtocolAlarm (1) Package: rip Raised on class: rip.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g. IOM is not shutdown or installed.		

Table 33-116 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 33-117 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 33-118 SdpBindingTunnelDown

Alarm	Attributes	Applicable major NE releases
Name: SdpBindingTunnelDown (222) Type: CircuitAlarm (17) Package: svt Raised on class: svt.SdpBinding	Severity: critical Implicitly cleared: true Default probable cause: SdpTunnelNotReady (167)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an SDP binding tunnel has an Operational State other than Up.		
Raising condition: (('Operational State' EQUAL 'Tunnel Not Ready') OR ('Operational State' EQUAL 'Tunnel Down'))		
Clearing condition: (('Operational State' NOT EQUAL 'Tunnel Not Ready') AND ('Operational State' NOT EQUAL 'Tunnel Down'))		

(1 of 2)

33 – Alcatel-Lucent OS9700E/9800E alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: To resolve this alarm check the endpoints of the SDP binding to determine if a configuration mismatch exists. If configuration matches then the underlying network resource between the endpoints of the SDP may be down. Further investigation is required to determine why the underlying transport network is down.		

(2 of 2)

Table 33-119 SdpEgressIfsNetDomainInConsistent

Alarm	Attributes	Applicable major NE releases
Name: SdpEgressIfsNetDomainInConsistent (3616) Type: resourceAlarm (28) Package: svt Raised on class: svt.Tunnel	Severity: warning Implicitly cleared: true Default probable cause: sdpEgressIfsNetDomainInConsistent (1405)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the SDP egress interface's consistency state changes to inconsistent.		
Raising condition: ('Egress Interfaces Consistency State' EQUAL '3')		
Clearing condition: ('Egress Interfaces Consistency State' EQUAL '2')		
Remedial action: To resolve this alarm check egress interfaces of the SDP configuration. If configuration is determined to be correct check underlying physical transport. Further investigation is required.		

Table 33-120 ServiceSiteDown

Alarm	Attributes	Applicable major NE releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 33-121 SiteManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

Table 33-122 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 33-123 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 33-124 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 33-125 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 33-126 TlsSiteDown

Alarm	Attributes	Applicable major NE releases
Name: TlsSiteDown (163) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.TlsSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('TLS Admin Status' EQUAL 'Disabled')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('TLS Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable TLS Admin Status under the Bridge Instance.		

(2 of 2)

Table 33-127 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major NE releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 33-128 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> • trapDestinationMisconfigured • duplicateTrapLogId 	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 33-129 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 33-130 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

(2 of 2)

Table 33-131 TunnelAdministrativelyDown (svt)

Alarm	Attributes	Applicable major NE releases
Name: TunnelAdministrativelyDown (523) Type: pathAlarm (12) Package: svt Raised on class: svt.Tunnel	Severity: minor Implicitly cleared: true Default probable cause: tunnelAdministrativelyDown (333)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM detects that a service tunnel is administratively down.		
Raising condition: ('administrativeState' NOT EQUAL 'Up')		
Clearing condition: ('administrativeState' EQUAL 'Up')		
Remedial action: Informational - an operator has manually turned down a service tunnel.		

Table 33-132 TunnelDown (svt)

Alarm	Attributes	Applicable major NE releases
Name: TunnelDown (30) Type: pathAlarm (12) Package: svt Raised on class: svt.AbstractTunnel	Severity: critical Implicitly cleared: true Default probable cause: tunnelDown (23)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 5620 SAM detects that a service tunnel is operationally down.		
Raising condition: (('Administrative' EQUAL 'Up') AND ('Operational' NOT EQUAL 'Up'))		
Clearing condition: (('Operational' EQUAL 'Up') OR ('Administrative' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that a problem has been made in the underlying transport network. If the alarm persists or re-occurs frequently then investigation of the underlying transport issues is warranted.		

Table 33-133 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6

(1 of 2)

33 – Alcatel-Lucent OS9700E/9800E alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

(2 of 2)

Table 33-134 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 33-135 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 33-136 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 33-137 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 33-138 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 33-139 VirtualLinkDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkDown (122) Type: VirtualLinkAlarm (21) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: true Default probable cause: VirtualLinkDown (104)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a virtual link is Down.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' NOT EQUAL 'Down')		
Remedial action: This alarm is raised when the OSPF virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 33-140 VirtualNeighborDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualNeighborDown (123) Type: VirtualNeighborDown (22) Package: ospf Raised on classes: <ul style="list-style-type: none"> • ospf.ShamLink • ospf.VirtualLink 	Severity: warning Implicitly cleared: true Default probable cause: VirtualNeighborDown (105)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when a neighbor virtual link is operationally down.		
Raising condition: ('neighborCount' EQUAL '0L')		
Clearing condition: ('neighborCount' NOT EQUAL '0L')		
Remedial action: This alarm is raised when the OSPF neighbor virtual link is operationally down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 33-141 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 6.4.3 • 6.4.4 • 6.4.5 • 6.4.6
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL "\"TiMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: (('Software Version' NOT EQUAL 'TIMOS-B-3.0.Generic "') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

(2 of 2)

34 — Alcatel-Lucent OS9800 alarms

Note — Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 35 for information about the alarm.

Table 34-1 AccessInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm (32) Package: service Raised on class: service.AccessInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC-Lag') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC-Lag') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

Table 34-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major NE releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 34-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major NE releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 34-4 AuxiliaryServerStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 34-5 BgpDown

Alarm	Attributes	Applicable major NE releases
Name: BgpDown (6) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a BGP instance has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The BGP protocol entity is down - administratively disable BGP and re-enable. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 34-6 BootableConfigBackupFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 34-7 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		

(1 of 2)

34 – Alcatel-Lucent OS9800 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

(2 of 2)

Table 34-8 BootParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') OR ('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded')))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 34-9 ClientDelegateServerStatus

Alarm	Attributes	Applicable major NE releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 34-10 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> 6.3.4 6.4.2 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 34-11 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> 6.3.4 6.4.2 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 34-12 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> 6.3.4 6.4.2 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		

(1 of 2)

34 – Alcatel-Lucent OS9800 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

(2 of 2)

Table 34-13 CorruptImageFile

Alarm	Attributes	Applicable major NE releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 34-14 downgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 34-15 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 34-16 EquipmentDegraded

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 34-17 EquipmentDown

Alarm	Attributes	Applicable major NE releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 34-18 EquipmentFailure

Alarm	Attributes	Applicable major NE releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 34-19 EquipmentInTest

Alarm	Attributes	Applicable major NE releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 34-20 EquipmentMismatch

Alarm	Attributes	Applicable major NE releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

(2 of 2)

Table 34-21 EquipmentRemoved

Alarm	Attributes	Applicable major NE releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (('compositeEquipmentState' EQUAL 'Removed') AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Removed')		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 34-22 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm (11) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback (567)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised by the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 34-23 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: DuplicateLane (1387)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 34-24 EthernetPortHighBer

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortHighBer (307) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 34-25 EthernetPortLocalFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortLocalFault (305) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: LocalFault (236)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 34-26 EthernetPortNoAmLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoAmLock (1388)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 34-27 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoBlockLock (1389)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 34-28 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoFrameLock (237)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 34-29 EthernetPortRemoteFault

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: RemoteFault (235)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 34-30 EthernetPortSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: SignalFailure (234)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

(2 of 2)

Table 34-31 FanFailure

Alarm	Attributes	Applicable major NE releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfService'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 34-32 FanTrayRemoved

Alarm	Attributes	Applicable major NE releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 34-33 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major NE releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL 'OL'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL 'OL'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 34-34 GaPeerDown

Alarm	Attributes	Applicable major NE releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggns Raised on class: Iteggns.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 34-35 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.L2AccessInterface	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

(2 of 2)

Table 34-36 IgmpDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpDown (158) Type: ProtocolAlarm (1) Package: igmp Raised on class: igmp.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an IGMP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: While configured under VPRN, check if VPRN site is admin down, or if route distinguisher is not configured.		

Table 34-37 IgmpSnoopingDown

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnoopingDown (161) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.Bridge	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when IGMP snooping is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('IGMP Snooping' EQUAL 'Disabled')		
Clearing condition: ('IGMP Snooping' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable IGMP Snooping under the Bridge Instance.		

Table 34-38 IncompleteConfiguration

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		

(1 of 2)

34 – Alcatel-Lucent OS9800 alarms

Alarm	Attributes	Applicable major NE releases
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

(2 of 2)

Table 34-39 InterfaceDown (netw)

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDown (36) Type: InterfaceAlarm (13) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operation. Ensure that the interface is cabled and that there isn't a configuration error (i.e. MTU size set incorrectly) on the interface. Once the issue w		

Table 34-40 IsisDown

Alarm	Attributes	Applicable major NE releases
Name: IsisDown (19) Type: ProtocolAlarm (1) Package: isis Raised on class: isis.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an IS-IS site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The protocol is not working anymore, could be a problem with IP addresses, resources on the device, ...		

Table 34-41 LagDown

Alarm	Attributes	Applicable major NE releases
Name: LagDown (20) Type: equipmentAlarm (3) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagDown (17)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 34-42 LagPortAddFailed

Alarm	Attributes	Applicable major NE releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 34-43 LicensedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		

(1 of 2)

34 – Alcatel-Lucent OS9800 alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

(2 of 2)

Table 34-44 LinkDown

Alarm	Attributes	Applicable major NE releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 34-45 LowTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 34-46 LowTemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: LowTemperatureThresholdCrossed (1128) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a low-temperature threshold is crossed.		
Raising condition: ('lowTemperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('lowTemperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 34-47 LpsViolation

Alarm	Attributes	Applicable major NE releases
Name: LpsViolation (518) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LearnedPortSecurity	Severity: major Implicitly cleared: true Default probable cause: learnedPortSecurityViolation (393)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM detects an LPS violation.		
Raising condition: ('Operational State' EQUAL 'Security Violated')		
Clearing condition: ('Operational State' EQUAL 'Down')		
Remedial action: Port reset is required to return the port to normal operation.		

Table 34-48 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 34-49 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major NE releases
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: info Implicitly cleared: true Default probable cause: MacMoveRateExceededNonBlock (1951)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTlsLimitMacMove) is set to 'nonBlocking'.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

Table 34-50 MepAISReceivedAlarm

Alarm	Attributes	Applicable major NE releases
Name: MepAISReceivedAlarm (2945) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: variable Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a MEP Receives AIS test frames from one or more of its sub-layer MEPs.		
Raising condition: (('AIS Received (AisRx)' EQUAL 'true') AND ('Facility VLAN ID' EQUAL '0'))		
Clearing condition: ('AIS Received (AisRx)' EQUAL 'false')		
Remedial action: This alarm indicates that it has received a MEP fault from a sub-layer MEP, user should investigate the fault cause on the sub-layer MEP and resolve this root cause issue.		

Table 34-51 MobileConnectorDown

Alarm	Attributes	Applicable major NE releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\\"')'		
Clearing condition: ('EPS Path' NOT EQUAL '\\"')'		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 34-52 MvrSiteDown

Alarm	Attributes	Applicable major NE releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 34-53 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major NE releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 34-54 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major NE releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3

(1 of 2)

34 – Alcatel-Lucent OS9800 alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

(2 of 2)

Table 34-55 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 34-56 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 34-57 NodeSuspended

Alarm	Attributes	Applicable major NE releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 34-58 OrphanNodeDetected

Alarm	Attributes	Applicable major NE releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('state' EQUAL 'orphan')		
Remedial action: The NE is not managed by any SAM. Add an discory rule in order to managed it.		

Table 34-59 OverTemperatureDetected

Alarm	Attributes	Applicable major NE releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 34-60 PartialResyncProblem

Alarm	Attributes	Applicable major NE releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an Partial Resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 34-61 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 34-62 PimDown

Alarm	Attributes	Applicable major NE releases
Name: PimDown (184) Type: ProtocolAlarm (1) Package: pim Raised on class: pim.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a PIM site is administratively Up but operationally Down. The alarm is cleared when the PIM site becomes operationally Up but administratively Down.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This should never happen. Contact Alcatel-Lucent Customer Support for assistance.		

(2 of 2)

Table 34-63 PollerProblem

Alarm	Attributes	Applicable major NE releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 34-64 PowerSupplyFailure

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyFailure (633) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: critical Implicitly cleared: true Default probable cause: powerSupplyFailure (117)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a power-supply tray reports a failure. When the alarm is raised during device discovery, a power-supply tray may be out of service. When the alarm is raised while the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: (('Power Supply 1 Status' EQUAL 'Not Equipped') OR ('Power Supply 1 Status' EQUAL 'Failed'))		
Clearing condition: (('Power Supply 1 Status' EQUAL 'OK'))		
Remedial action: Ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 34-65 PowerSupplyInputFeedDown

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyInputFeedDown (5422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: minor Implicitly cleared: true Default probable cause: powerSupplyInputFeedDown (2073)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: This alarm is generated if any one of the input feeds for a given power supply is not supplying power.		
Raising condition: (('Input Feed Status' EQUAL 'Input A Down') OR ('Input Feed Status' EQUAL 'Input B Down') OR (('Input Feed Status'allBits'Input A Down') AND ('Input Feed Status'allBits'Input B Down'))		
Clearing condition: ('Input Feed Status' EQUAL 'None')		
Remedial action: Restore all of the input feeds that are not supplying power.		

Table 34-66 PowerSupplyRemoved

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyRemoved (542) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: major Implicitly cleared: true Default probable cause: PowerSupplyRemoved (415)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a chassis power supply is removed.		
Raising condition: ('Power Supply 1 Status' EQUAL 'Not Equipped')		
Clearing condition: ('Power Supply 1 Status' NOT EQUAL 'Not Equipped')		
Remedial action: To recover from this event, the customer is requested to add a new power supply to the system, or change a faulty power supply with a working one.		

Table 34-67 PrimaryImageBootFailure

Alarm	Attributes	Applicable major NE releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 34-68 RadiusOperStatusDown

Alarm	Attributes	Applicable major NE releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 34-69 ReachabilityProblem

Alarm	Attributes	Applicable major NE releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an Mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. By default, the 5620 SAM polls a managed NE every two minutes. If a poll fails, the alarm is raised. The 5620 SAM polls the NE two minutes after the first failure. If successive polls fail, the 5620 SAM raises the polling interval for the NE by two minutes after each failure to a maximum of 12 min. The polling interval remains at 12 min until the 5620 SAM receives a response from the NE. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 34-70 ReconfigFailure

Alarm	Attributes	Applicable major NE releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		

(1 of 2)

34 – Alcatel-Lucent OS9800 alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

(2 of 2)

Table 34-71 RedundantMepMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMisconfiguration (3631) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: misconfiguredRedundantMep (1416)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an Active and Redundant MEP do not have the same Id, Operational MAC Address or Sub Group configured.		
Raising condition: ('validRedundantMepConfig' EQUAL 'false')		
Clearing condition: ('validRedundantMepConfig' EQUAL 'true')		
Remedial action: MC-LAG redundant MEP configuration (MEP ID or Mac Address) for Active & Standby Interfaces do not match, this could cause issues with CFM or CCM tests if Active interface changes. Delete and Re-create Standby MEP to match Active.		

Table 34-72 RedundantMepMissing

Alarm	Attributes	Applicable major NE releases
Name: RedundantMepMissing (3632) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: missingRedundantMep (1417)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a MEP misses a redundant counterpart on LAG or SAP.		
Raising condition: (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' EQUAL '\'))		
Clearing condition: (('MC-LAG Inactive' EQUAL 'Not Applicable') OR (('MC-LAG Inactive' NOT EQUAL 'Not Applicable') AND ('Redundant MEP' NOT EQUAL '\')))		
Remedial action: MC-LAG redundant MEP is missing Active & Standby Interfaces, this will cause issues with CFM or CCM tests if Active interface changes. Create missing Active/Standby MEP to match existing.		

Table 34-73 RemoteMepCCMAAlarm

Alarm	Attributes	Applicable major NE releases
Name: RemoteMepCCMAAlarm (502) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: major Implicitly cleared: true Default probable cause: missingRemoteMep (388)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a MEP loses connectivity with one or more remote MEPs. The Remote MEP DB State tab on a MEP lists the missing remote MEPs.		
Raising condition: ('High-Priority Defect' NOT EQUAL '0')		
Clearing condition: ('High-Priority Defect' EQUAL '0')		
Remedial action: MEP has lost communication with Remote MEP defined in Maintenance Association (MEG) Remote MEP list, Either Remote MEP list is incorrect or diagnose connection fault and resolve.		

Table 34-74 RipDown

Alarm	Attributes	Applicable major NE releases
Name: RipDown (72) Type: ProtocolAlarm (1) Package: rip Raised on class: rip.Site	Severity: critical Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a RIP site has an Operational State other than Up, and the Administrative State is Up.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: The RIP Site is down while it is administratively up. Please check the node e.g. IOM is not shutdown or installed.		

Table 34-75 SaveConfigFailed

Alarm	Attributes	Applicable major NE releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 34-76 ScheduledPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 34-77 ServiceSiteDown

Alarm	Attributes	Applicable major NE releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 34-78 SiteManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

(2 of 2)

Table 34-79 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 34-80 StatsRetrieveFailed

Alarm	Attributes	Applicable major NE releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 34-81 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3

(1 of 2)

34 – Alcatel-Lucent OS9800 alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

(2 of 2)

Table 34-82 TemperatureThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: TemperatureThresholdCrossed (7) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Environment	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a temperature crosses a threshold.		
Raising condition: ('temperatureThresholdCrossed' EQUAL 'true')		
Clearing condition: ('temperatureThresholdCrossed' EQUAL 'false')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 34-83 TlsSiteDown

Alarm	Attributes	Applicable major NE releases
Name: TlsSiteDown (163) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.TlsSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('TLS Admin Status' EQUAL 'Disabled')		
Clearing condition: ('TLS Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable TLS Admin Status under the Bridge Instance.		

Table 34-84 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major NE releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetEquipment Raised on class: ethernetEquipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 34-85 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> • trapDestinationMisconfigured • duplicateTrapLogId 	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 34-86 TrapReceivingFailure

Alarm	Attributes	Applicable major NE releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'In Band Preferred')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

(2 of 2)

Table 34-87 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major NE releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> 6.3.4 6.4.2 6.4.3
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

Table 34-88 UnidentifiedNode

Alarm	Attributes	Applicable major NE releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 34-89 UnmanageFailed

Alarm	Attributes	Applicable major NE releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'unmanage failed')		
Clearing condition: ('Site State' NOT EQUAL 'unmanage failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 34-90 unsupportedPortUsage

Alarm	Attributes	Applicable major NE releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised in case unsupported port type is configured		
Raising condition: (('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))"		
Clearing condition: NOT (((('portId' >= '1L') AND ('portId' <= '4L') AND ('specificCardType' EQUAL 'EASv2') AND (('Port Usage' EQUAL 'MPT-HC') OR ('Port Usage' EQUAL 'MPT-MC')))))"		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 34-91 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 34-92 upgradedCardAlarm

Alarm	Attributes	Applicable major NE releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 34-93 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major NE releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 34-94 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major NE releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 6.3.4 • 6.4.2 • 6.4.3
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '"TiMOS-B-3.0.Generic "') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '"TiMOS-B-3.0.Generic "') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

35 — Unspecified NE alarms

Note — This chapter lists alarms that have no NE type specified. The alarms listed in this chapter may apply to one or more NE types, however, this information is not specified in the 5620 SAM alarm schema. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort.

Table 35-1 AARadiusAcctPlcyFailure

Alarm	Attributes	Applicable major NE releases
Name: AARadiusAcctPlcyFailure (3948) Type: AARadiusAcctPlcyFailureAlarm (120) Package: aapolicy Raised on class: aapolicy.AARadiusAccountingPolicy	Severity: major Implicitly cleared: false Default probable cause: aARadiusAcctPlcyFailure (1527)	Unspecified
Description: The alarm is raised when a RADIUS accounting request was not successfully sent to any of the RADIUS servers specified in the AA RADIUS accounting policy. The effect is accounting data for current subscribers will not be exported externally. Based on the noted reason, if necessary take action to ensure that the next RADIUS accounting will be successfully sent.		
Remedial action: The AA Radius Accounting Server(s) which are configured in the AA Radius Accounting Policy are unreachable. This may occur in a number of different scenarios. The server(s) may have become unresponsive - please refer to the AA Radius Accounting Server documentation for assistance. The network connectivity to the server(s) may have been lost - please investigate why the underlying transport network is unreliable.		

35 – Unspecified NE alarms

Table 35-2 AARadiusAcctServerStateChanged

Alarm	Attributes	Applicable major NE releases
Name: AARadiusAcctServerStateChanged (3949) Type: AARadiusAcctServerStateChangedAlarm (121) Package: aapolicy Raised on class: aapolicy.AARadiusAccountingServer	Severity: info Implicitly cleared: true Default probable cause: aARadiusAcctServerStateChanged (1528)	Unspecified
Description: The notification alarm is raised when the operational status of an AA RADIUS accounting policy server has transitioned from 'inService' to 'outOfService' and cleared when operational status transitioned from 'outOfService' to 'inService'.		
Raising condition: (('Operational State' EQUAL 'Out Of Service') AND ('isLocal' EQUAL 'true'))		
Clearing condition: ('Operational State' EQUAL 'In Service')		
Remedial action: Informational - This is a notification alarm to indicate that AA Radius Accounting Server which is configured in the AA Radius Accounting Policy is changing operational state.		

Table 35-3 AarpStateChanged

Alarm	Attributes	Applicable major NE releases
Name: AarpStateChanged (3705) Type: AarpStateChanged (108) Package: aapolicy Raised on class: aapolicy.Aarp	Severity: info Implicitly cleared: false Default probable cause: AarpStateChanged (1445)	Unspecified
Description: The alarm is raised when the 5620 SAM detects that an AARP state is changed.		
Remedial action: The application assurance redundancy protocol state is changed between standalone, remote, master or backup.		

Table 35-4 AAUrIFilterStateChanged

Alarm	Attributes	Applicable major NE releases
Name: AAUrIFilterStateChanged (4972) Type: processingErrorAlarm (81) Package: aapolicy Raised on class: aapolicy.AAUrIFilter	Severity: info Implicitly cleared: true Default probable cause: aAAUrIFilterStateChanged (2029)	Unspecified
Description: The notification alarm is raised when the operational status has transitioned from 'tmnxInService' to 'tmnxOutOfService' and cleared when operational status transitioned from 'tmnxOutOfService' to 'tmnxInService'.		
Raising condition: (('Operational State' EQUAL 'Down') AND ('isLocal' EQUAL 'true'))		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Informational - This is a notification alarm to indicate that AA URL Filter which is configured in the AA URL Filter Policy is changing operational state.		

Table 35-5 ABSAlarm

Alarm	Attributes	Applicable major NE releases
Name: ABSAlarm (5187) Type: equipmentAlarm (3) Package: isa Raised on class: isa.MgGroupMember	Severity: major Implicitly cleared: true Default probable cause: resourceLimitReached (131)	Unspecified
Description: The ABSAlarm is raised when a set of the internal parameters for ICC call latency and memory utilization reach the high threshold (activated) and cleared when it drop back and keep staying below the low threshold for at least some time period (de-activated)		
Remedial action: Diagnose why high memory utilization and/or control signaling overload happen.		

Table 35-6 ActivationSessionActiveTooLong

Alarm	Attributes	Applicable major NE releases
Name: ActivationSessionActiveTooLong (1153) Type: configurationAlarm (11) Package: activation Raised on class: activation.Session	Severity: warning Implicitly cleared: true Default probable cause: activationSessionOpen (857)	Unspecified
Description: The alarm is raised when an activation session has been active for 24 hours.		
Remedial action: Close the Activation Session.		

Table 35-7 AddressMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: AddressMisconfiguration (591) Type: configurationAlarm (11) Package: service Raised on class: service.Service	Severity: major Implicitly cleared: true Default probable cause: EpipeBackboneMacAddressMismatch (444) Applicable probable causes: <ul style="list-style-type: none"> EpipeBackboneMacAddressMismatch BVplsSourceMacAddressDuplicate 	Unspecified
Description: The alarm is raised when B-VPLS site addresses are misconfigured. The EpipeBackboneMacAddressMismatch probable cause indicates that the backbone destination MAC address does not match the backbone source MAC address of the site on the destination NE. The BVplsSourceMacAddressDuplicate probable cause indicates that there are duplicate backbone source MAC addresses.		
Remedial action: Reconfigure the backbone MAC address so that the destination MAC address match the destination site for an EPIPE, or the source MAC address is not duplicate to the other source MAC address for a B-VPLS.		

Table 35-8 AdvNotActivated

Alarm	Attributes	Applicable major NE releases
Name: AdvNotActivated (741) Type: configurationAlarm (11) Package: vrrp Raised on class: vrrp.InstanceV6	Severity: warning Implicitly cleared: true Default probable cause: advertisementNotActivated (517)	Unspecified
Description: The alarm is raised when the parent interface of an IPv6 VR instance is not configured to send router advertisements, or when router advertisement is not configured to use the virtual MAC address.		
Remedial action: Activate the Advertisement for the interface for the VRRP so that it sends Advertisement and Use Virtual MAC Address.		

Table 35-9 Ais

Alarm	Attributes	Applicable major NE releases
Name: Ais (736) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: ais (513)	Unspecified
Description: The alarm is raised when an NE reports an AIS condition on the Tx or Rx circuit of a PDH tributary.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-10 AisRx

Alarm	Attributes	Applicable major NE releases
Name: AisRx (1157) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: aisRx (860)	Unspecified
Description: The alarm is raised when there is a receiver alarm indication signal.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-11 AisTx

Alarm	Attributes	Applicable major NE releases
Name: AisTx (1158) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: aisTx (861)	Unspecified
Description: The alarm is raised when there is a transmission alarm indication signal.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-12 AlarmReplayFailure

Alarm	Attributes	Applicable major NE releases
Name: AlarmReplayFailure (5121) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	Unspecified
Description: The alarm is raised when the Alarm Replay fails. It is stored in Alarm Historical table.		
Remedial action: An Alarm Replay has failed (usually due to communication problems) - Some alarms may be missing in the Historical Alarm List.		

Table 35-13 AllBgpPeerConnectionsDown

Alarm	Attributes	Applicable major NE releases
Name: AllBgpPeerConnectionsDown (5417) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: CPAAPeerConnectionDown (2124)	Unspecified
Description: The alarm is raised when all CPAA's BGP peers went down.		
Remedial action: 1) All BGP peer connections are down for the active CPAA. Please check the connections. 2) If the standby CPAA is functional as per your requirements, switch-over might resolve the issue.		

35 – Unspecified NE alarms

Table 35-14 AllTimingReferencesNotQualified

Alarm	Attributes	Applicable major NE releases
Name: AllTimingReferencesNotQualified (549) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: major Implicitly cleared: true Default probable cause: allTimingReferencesNotQualified (419)	Unspecified
Description: The alarm is raised when no timing references on an NE are in the Qualified state.		
Raising condition: (('Qualified For Use' NOT EQUAL 'Qualified') AND ('Qualified For Use' NOT EQUAL 'Qualified') AND ('Qualified For Use' NOT EQUAL 'Qualified') AND ('Qualified For Use' NOT EQUAL 'Qualified'))		
Clearing condition: (('Qualified For Use' EQUAL 'Qualified') OR ('Qualified For Use' EQUAL 'Qualified') OR ('Qualified For Use' EQUAL 'Qualified') OR ('Qualified For Use' EQUAL 'Qualified'))		
Remedial action: Make sure that all the Timing References are qualified.		

Table 35-15 apsCfgRaiseAlarm

Alarm	Attributes	Applicable major NE releases
Name: apsCfgRaiseAlarm (772) Type: configurationAlarm (11) Package: ethernetntunnel Raised on class: ethernetntunnel.EthernetTunnelEndpoint	Severity: major Implicitly cleared: true Default probable cause: configurationMismatch (548)	Unspecified
Description: The alarm is raised when the 5620 SAM detects a mismatch between the working and protection Ethernet tunnel group configurations.		
Remedial action: Fix the mismatch between the working and protection Ethernet tunnel configurations.		

Table 35-16 apsNoRspRaiseAlarm

Alarm	Attributes	Applicable major NE releases
Name: apsNoRspRaiseAlarm (773) Type: configurationAlarm (11) Package: ethernetntunnel Raised on class: ethernetntunnel.EthernetTunnelEndpoint	Severity: major Implicitly cleared: true Default probable cause: incompleteProtectionSwitching (549)	Unspecified
Description: The alarm is raised when an Ethernet tunnel group protection switch is incomplete, as indicated by a comparison of the transmitted 'Requested Signal' values and the received 'Bridged Signal' in the APS protocol.		
Remedial action: Fix the mismatch between the working and protection Ethernet tunnel configurations.		

Table 35-17 apsPrvsnAlarm

Alarm	Attributes	Applicable major NE releases
Name: apsPrvsnAlarm (1196) Type: configurationAlarm (11) Package: ethring Raised on class: ethring.Element	Severity: major Implicitly cleared: true Default probable cause: provisioningMismatch (470)	Unspecified
Description: The alarm is raised when a mismatch is detected on Ethernet Ring provisioning. The mismatch occurs when the RPL Owner Node receives one or more No Request R-APS message(s) with an RPL blocked status flag set (NR, RB) and a different Node ID.		
Remedial action: Probably more than one Ring Protection Link owners configured in the Ring, make sure which one should be RPL owner and delete others.		

Table 35-18 apsPrvsnRaiseAlarm

Alarm	Attributes	Applicable major NE releases
Name: apsPrvsnRaiseAlarm (774) Type: configurationAlarm (11) Package: ethernetntunnel Raised on class: ethernetntunnel.EthernetTunnelEndpoint	Severity: major Implicitly cleared: true Default probable cause: provisioningMismatch (470)	Unspecified
Description: The alarm is raised when an Ethernet tunnel group provisioning mismatch is detected at the ETH layer. The mismatch is detected through a comparison of the transmitted and received APS protocol A, B and D bits.		
Remedial action: Check the configuration of the two ends of the tunnel are compatible/same for the protocol.		

Table 35-19 AsymmetricalConfig (bundle)

Alarm	Attributes	Applicable major NE releases
Name: AsymmetricalConfig (295) Type: configurationAlarm (11) Package: bundle Raised on class: bundle.MultiChassisApsInterface	Severity: major Implicitly cleared: true Default probable cause: asymmetricalConfig (226)	Unspecified
Description: The alarm is raised when the bundles in an APS group do not have matching configurations.		
Raising condition: ('Asymmetrical Config Detected' EQUAL 'true')		
Clearing condition: ('Asymmetrical Config Detected' EQUAL 'false')		
Remedial action: Check configurations on both members to see anything not matched.		

Table 35-20 ATPCHighPowerTimeout

Alarm	Attributes	Applicable major NE releases
Name: ATPCHighPowerTimeout (4818) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: ATPCLoopProblem (1903)	Unspecified
Description: The alarm is raised when a MPT detects a ATPC High Power Timeout		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-21 AtpcLoopProblem

Alarm	Attributes	Applicable major NE releases
Name: AtpcLoopProblem (1142) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: atpcLoopProblem (848)	Unspecified
Description: The alarm is raised when a local transmitter was operating continuously at full power for 5-minutes, and the transmitter power is reduced to its minimum power setting.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-22 ATPCTimeout

Alarm	Attributes	Applicable major NE releases
Name: ATPCTimeout (3939) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: atpcTimeout (1521)	Unspecified
Description: The alarm is raised when a the ATPC timeout defect raise.		
Remedial action: The alarm is raised when a the ATPC timeout defect raise.		

Table 35-23 AuthFailure

Alarm	Attributes	Applicable major NE releases
Name: AuthFailure (281) Type: authenticationAlarm (14) Package: vrrp Raised on class: vrrp.AbstractInstance	Severity: major Implicitly cleared: false Default probable cause: authFailure (46)	Unspecified
Description: The alarm is raised when authentication fails. The alarm information includes the source IP address.		
Remedial action: Reconfigure the authentication key so that the keys are the same for the peer VRRP instances.		

Table 35-24 AuthKeyConflict (Idp)

Alarm	Attributes	Applicable major NE releases
Name: AuthKeyConflict (5188) Type: processingErrorAlarm (81) Package: Idp Raised on class: Idp.Peer	Severity: warning Implicitly cleared: true Default probable cause: AuthKeyConflict (2103)	Unspecified
Description: The alarm is raised when both Authentication Key and LDP Peer Keychain are configured. LDP Peer Keychain will be used.		
Remedial action: Authentication Key and LDP Peer Keychain are both configured. LDP Peer Keychain will be used. The alarm is cleared when only one is configured.		

Table 35-25 AuxiliaryAlarm

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryAlarm (1159) Type: dryContactAlarm (47) Package: equipment Raised on class: equipment.AuxAlarmDefinition	Severity: variable Implicitly cleared: false Default probable cause: auxiliaryAlarmTriggered (862)	Unspecified
Description: The alarm is raised when an NE reports that a configured auxiliary alarm condition has been triggered.		
Remedial action: Informational - no corrective action required.		

Table 35-26 AuxiliaryDatabaseProxyStateChangeDetected

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryDatabaseProxyStateChangeDetected (5170) Type: databaseAlarm (29) Package: db Raised on class: db.AuxiliaryDatabase	Severity: warning Implicitly cleared: false Default probable cause: systemFailed (144)	Unspecified
Description: This informative alarm is raised when the state of the auxiliary database proxy has changed at least once since the last check interval.		
Remedial action: Informational - no corrective action required. The state (up/down) of the auxiliary database proxy has changed at least once since the last check interval. The alarm must be manually cleared.		

Table 35-27 AuxiliaryDatabaseProxyUnreachable

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryDatabaseProxyUnreachable (5171) Type: communicationsAlarm (4) Package: db Raised on class: db.AuxiliaryDatabase	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	Unspecified
Description: This informative alarm is raised when a 5620 SAM server cannot communicate with an auxiliary database proxy. The alarm clears when communication is restored.		
Raising condition: ('Database Proxy Status' EQUAL 'Down')		
Clearing condition: ('Database Proxy Status' EQUAL 'Up')		
Remedial action: The 5620 SAM server cannot communicate with an auxiliary database proxy. Check the status of the auxiliary database proxy and the communication link between SAM server and auxiliary database node.		

Table 35-28 AuxiliaryDatabaseStateChangeDetected

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryDatabaseStateChangeDetected (5172) Type: databaseAlarm (29) Package: db Raised on class: db.AuxiliaryDatabase	Severity: warning Implicitly cleared: false Default probable cause: systemFailed (144)	Unspecified
Description: This informative alarm is raised when the state of the auxiliary database has changed at least once since the last check interval.		
Remedial action: Informational - no corrective action required. The state (up/down) of the auxiliary database has changed at least once since the last check interval. The alarm must be manually cleared.		

Table 35-29 AuxiliaryDatabaseStatus

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryDatabaseStatus (5173) Type: communicationsAlarm (4) Package: db Raised on class: db.AuxiliaryDatabase	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	Unspecified
Description: This informative alarm is raised when a 5620 SAM server cannot communicate with an auxiliary database server. The alarm clears when communication is restored.		
Raising condition: ('Database Status' EQUAL 'Down')		
Clearing condition: ('Database Status' EQUAL 'Up')		
Remedial action: The 5620 SAM server cannot communicate with an auxiliary database. Check the status of the auxiliary database and the communication link between SAM server and auxiliary database node.		

Table 35-30 AuxiliaryServerAssignmentProblem

Alarm	Attributes	Applicable major NE releases
Name: AuxiliaryServerAssignmentProblem (5135) Type: processingErrorAlarm (81) Package: server Raised on class: server.AuxiliaryServer	Severity: warning Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	Unspecified
Description: This alarm is raised when a NE cannot be assigned to an AuxiliaryServer during load balancing or manual assignment operation.		
Remedial action: Ensure the NE is managed, reachable and that no configuration operation is in progress on that NE and relaunch the operation.		

Table 35-31 BackgroundDiagnosticFault

Alarm	Attributes	Applicable major NE releases
Name: BackgroundDiagnosticFault (467) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: minor Implicitly cleared: true Default probable cause: backgroundDiagnosticFault (353)	Unspecified
Description: The alarm is raised when an NE detects a failure in a background diagnostic test suite.		
Remedial action: Informational - if the condition persists then the element indicated in the alarm should be replaced.		

Table 35-32 BackupRestoreApplicationLockNotObtained

Alarm	Attributes	Applicable major NE releases
Name: BackupRestoreApplicationLockNotObtained (1962) Type: integrityViolation (85) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Implicitly cleared: true Default probable cause: UnableToAcquireLock (949)	Unspecified
Description: This alarm is raised when the Backup/Restore Application is unable to acquire lock. Retry the Backup/Restore Operation once the lock is released by the other application.		
Remedial action: Retry the Backup/Restore Operation once the lock is released by the other application.		

Table 35-33 backupScriptInUse

Alarm	Attributes	Applicable major NE releases
Name: backupScriptInUse (274) Type: configurationAlarm (11) Package: subscriber Raised on class: subscriber.Policy	Severity: major Implicitly cleared: true Default probable cause: backupInUse (206)	Unspecified
Description: The alarm is raised when the primary subscriber identification script is operationally down, but one of the other scripts is operationally up.		
Raising condition: (('isLocal' EQUAL 'true') AND ('Primary Script Operational State' NOT EQUAL 'Up') AND (('Secondary Script Operational State' EQUAL 'Up') OR ('Tertiary Script Operational State' EQUAL 'Up')))		
Clearing condition: (('isLocal' EQUAL 'true') AND (('Primary Script Operational State' EQUAL 'Up') OR (('Secondary Script Operational State' NOT EQUAL 'Up') AND ('Tertiary Script Operational State' NOT EQUAL 'Up'))))		
Remedial action: If the DHCP ACK Python script processing behaviour is desired, please make sure that primary, secondary and tertiary scripts are installed and operationally up.		

Table 35-34 BandwidthOverflow

Alarm	Attributes	Applicable major NE releases
Name: BandwidthOverflow (1143) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: bandwidthOverflow (849)	Unspecified
Description: The alarm is raised when a MPT is on-line and the cross-connections occupation overcomes the MPT net capacity bandwidth.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-35 BatteryFail (equipment)

Alarm	Attributes	Applicable major NE releases
Name: BatteryFail (616) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: batteryFail (457)	Unspecified
Description: The alarm is raised when the battery fails or is missing.		
Remedial action: The battery on the CPM should be replaced or re-installed.		

Table 35-36 BatteryFail (mpr)

Alarm	Attributes	Applicable major NE releases
Name: BatteryFail (616) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: batteryFail (457)	Unspecified
Description: The alarm is raised when the battery fails or is missing.		
Remedial action: The battery on the subrack element should be replaced or re-installed.		

Table 35-37 BfdSessionDown (rtr)

Alarm	Attributes	Applicable major NE releases
Name: BfdSessionDown (439) Type: bfdSessionAlarm (46) Package: rtr Raised on class: rtr.NetworkInterface	Severity: warning Implicitly cleared: true Default probable cause: bfdSessionDown (346)	Unspecified
Description: The alarm is raised when a BFD session is operationally Down.		
Remedial action: This alarm is raised when a BFD session on a network interface goes down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

35 – Unspecified NE alarms

Table 35-38 BfdSessionDown (service)

Alarm	Attributes	Applicable major NE releases
Name: BfdSessionDown (439) Type: bfdSessionAlarm (46) Package: service Raised on class: service.L3AccessInterface	Severity: warning Implicitly cleared: true Default probable cause: bfdSessionDown (346)	Unspecified
Description: The alarm is raised when a BFD session is operationally down.		
Remedial action: This alarm is raised when a BFD session on a L3 access interface goes down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 35-39 BfdSessionDown (vprn)

Alarm	Attributes	Applicable major NE releases
Name: BfdSessionDown (439) Type: bfdSessionAlarm (46) Package: vprn Raised on class: vprn.NetworkInterface	Severity: warning Implicitly cleared: true Default probable cause: bfdSessionDown (346)	Unspecified
Description: The alarm is raised when a BFD session is operationally Down.		
Remedial action: This alarm is raised when a BFD session on a VPRN network interface goes down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 35-40 BfdSessionFlapped (rtr)

Alarm	Attributes	Applicable major NE releases
Name: BfdSessionFlapped (3900) Type: bfdSessionAlarm (46) Package: rtr Raised on class: rtr.NetworkInterface	Severity: warning Implicitly cleared: true Default probable cause: bfdSessionFlapped (1491)	Unspecified
Description: The alarm is raised when a BFD session transitions from Up to Down and back to Up within the BFD operational state transition interval.		
Remedial action: The BFD session on a network interface has transitioned from Up to Down and back to Up within the configured BFD Flapping Interval.		

Table 35-41 BfdSessionFlapped (service)

Alarm	Attributes	Applicable major NE releases
Name: BfdSessionFlapped (3900) Type: bfdSessionAlarm (46) Package: service Raised on class: service.L3AccessInterface	Severity: warning Implicitly cleared: true Default probable cause: bfdSessionFlapped (1491)	Unspecified
Description: The alarm is raised when a BFD session transitions from Up to Down and back to Up within the BFD operational state transition interval.		
Remedial action: The BFD session on a L3 access interface has transitioned from Up to Down and back to Up within the configured BFD Flapping Interval.		

Table 35-42 BfdSessionFlapped (vprn)

Alarm	Attributes	Applicable major NE releases
Name: BfdSessionFlapped (3900) Type: bfdSessionAlarm (46) Package: vprn Raised on class: vprn.NetworkInterface	Severity: warning Implicitly cleared: true Default probable cause: bfdSessionFlapped (1491)	Unspecified
Description: The alarm is raised when a BFD session transitions from Up to Down and back to Up within the BFD operational state transition interval.		
Remedial action: The BFD session on a VPRN network interface has transitioned from Up to Down and back to Up within the configured BFD Flapping Interval.		

Table 35-43 BfdSessionMissing (rtr)

Alarm	Attributes	Applicable major NE releases
Name: BfdSessionMissing (438) Type: bfdSessionAlarm (46) Package: rtr Raised on class: rtr.NetworkInterface	Severity: warning Implicitly cleared: true Default probable cause: bfdSessionMissing (345)	Unspecified
Description: The alarm is raised when a previously present BFD session is absent.		
Remedial action: This alarm is raised when a previously present BFD session on a network interface is absent. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the near end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

35 – Unspecified NE alarms

Table 35-44 BfdSessionMissing (service)

Alarm	Attributes	Applicable major NE releases
Name: BfdSessionMissing (438) Type: bfdSessionAlarm (46) Package: service Raised on class: service.L3AccessInterface	Severity: warning Implicitly cleared: true Default probable cause: bfdSessionMissing (345)	Unspecified
Description: The alarm is raised when a previously present BFD session is absent.		
Remedial action: This alarm is raised when a previously present BFD session on a L3 access interface is absent. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the near end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 35-45 BfdSessionMissing (vprn)

Alarm	Attributes	Applicable major NE releases
Name: BfdSessionMissing (438) Type: bfdSessionAlarm (46) Package: vprn Raised on class: vprn.NetworkInterface	Severity: warning Implicitly cleared: true Default probable cause: bfdSessionMissing (345)	Unspecified
Description: The alarm is raised when a previously present BFD session is absent.		
Remedial action: This alarm is raised when a previously present BFD session on a VPRN network interface is absent. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the near end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 35-46 BgpAdVplsIdDiscoveryError

Alarm	Attributes	Applicable major NE releases
Name: BgpAdVplsIdDiscoveryError (572) Type: serviceAlarm (16) Package: vpls Raised on class: vpls.AbstractSite	Severity: major Implicitly cleared: true Default probable cause: bgpAdVplsIdInconsistent (439)	Unspecified
Description: The alarm is raised when the VPLS ID of a discovered VPLS instance is ambiguous.		
Remedial action: Check that all VPLS IDs are properly configured for all VPLS instances.		

Table 35-47 BgpAdVplsIdMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: BgpAdVplsIdMisconfiguration (570) Type: configurationAlarm (11) Package: vpls Raised on class: vpls.AbstractVpls	Severity: major Implicitly cleared: true Default probable cause: bgpAdVplsIdInconsistent (439)	Unspecified
Description: The alarm is raised when the VPLS ID of a site does not match the VPLS ID of the other sites in the service.		
Remedial action: All VPLS IDs of sites in a service must be the same.		

Table 35-48 BgpAsPathLenPerMonPrefThresholdReached

Alarm	Attributes	Applicable major NE releases
Name: BgpAsPathLenPerMonPrefThresholdReached (795) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: asPathTooLong (562)	Unspecified
Description: The alarm is raised when the AS path length for a monitored BGP route reaches or exceeds the maximum threshold value.		
Remedial action: User configured alarm for monitoring purpose. Alarm text provides information about the affected prefix. User can look at the records for BGP prefix monitoring or BGP events history for debugging purpose.		

Table 35-49 BgpEventUnreachable

Alarm	Attributes	Applicable major NE releases
Name: BgpEventUnreachable (4896) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: prefixUnreachable (827)	Unspecified
Description: The alarm is raised when Unreachable BGP Event is detected.		
Remedial action: Alarm text provides information about the affected prefix. User can look at the BGP events history for debugging purpose.		

Table 35-50 BgpFlowspecNlriProblem

Alarm	Attributes	Applicable major NE releases
Name: BgpFlowspecNlriProblem (3317) Type: ProtocolAlarm (1) Package: rtr Raised on class: rtr.RoutingInstanceSite	Severity: major Implicitly cleared: false Default probable cause: NlriProblem (1156)	Unspecified
Description: The alarm is raised when the filter module receives a BGP FlowSpec NLRI that cannot be treated.		
Remedial action: Information - if the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-51 BgpMonitorPrefixFlapRateThresholdReached

Alarm	Attributes	Applicable major NE releases
Name: BgpMonitorPrefixFlapRateThresholdReached (432) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: unstablePrefix (410)	Unspecified
Description: The alarm is raised when a BGP monitor prefix flap rate exceeds the maximum flap rate threshold value.		
Remedial action: User configured alarm for monitoring purpose. Alarm text provides information about the affected prefix. User can look at the records for BGP prefix monitoring or BGP events history for debugging purpose.		

Table 35-52 BgpMonPrefixUnreachable

Alarm	Attributes	Applicable major NE releases
Name: BgpMonPrefixUnreachable (1114) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: prefixUnreachable (827)	Unspecified
Description: The alarm is raised when no route for the monitored prefix is detected.		
Remedial action: User configured alarm for monitoring purpose. Alarm text provides information about the affected prefix. User can look at the records for BGP prefix monitoring or BGP events history for debugging purpose.		

Table 35-53 BgpMonPrefRedundancyLossThresholdReached

Alarm	Attributes	Applicable major NE releases
Name: BgpMonPrefRedundancyLossThresholdReached (796) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: lowNumberOfNHops (563)	Unspecified
Description: The alarm is raised when the number of next hops for a monitored BGP route reaches or falls below the minimum threshold value.		
Remedial action: User configured alarm for monitoring purpose. Alarm text provides information about the affected prefix. User can look at the records for BGP prefix monitoring or BGP events history for debugging purpose.		

Table 35-54 BgpPktRateThresholdReached

Alarm	Attributes	Applicable major NE releases
Name: BgpPktRateThresholdReached (431) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: unstableBgpSpeaker (409)	Unspecified
Description: The alarm is raised when a BGP packet rate exceeds the maximum threshold value.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 35-55 BgpRouteChangeThresholdPerNHopReached

Alarm	Attributes	Applicable major NE releases
Name: BgpRouteChangeThresholdPerNHopReached (601) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: unstableBgpSpeaker (409)	Unspecified
Description: The alarm is raised when the number of BGP route changes for a next hop reaches the maximum threshold value for a next hop.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 35-56 BgpRouteChangeThresholdPerRTargetReached

Alarm	Attributes	Applicable major NE releases
Name: BgpRouteChangeThresholdPerRTargetReached (600) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: unstableVpnSite (413)	Unspecified
Description: The alarm is raised when the number of BGP route changes for a route target reaches the maximum threshold value for route targets.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 35-57 BgpRouteCountThresholdReached

Alarm	Attributes	Applicable major NE releases
Name: BgpRouteCountThresholdReached (428) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: tooManyBgpRouteForNextHop (408)	Unspecified
Description: The alarm is raised when the BGP route count for a next hop exceeds the maximum threshold value for next hops.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 35-58 BgpRouteFlapRateThresholdReached

Alarm	Attributes	Applicable major NE releases
Name: BgpRouteFlapRateThresholdReached (430) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: unstableBgpSpeaker (409)	Unspecified
Description: The alarm is raised when the BGP route flap rate exceeds the maximum threshold value.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 35-59 BgpRouteHighWatermarkPerRTargetReached

Alarm	Attributes	Applicable major NE releases
Name: BgpRouteHighWatermarkPerRTargetReached (433) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: tooManyBgpRouteForGivenRouteTarget (411)	Unspecified
Description: The alarm is raised when there are too many BGP routes for a route target.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 35-60 BgpRouteLowWatermarkPerRTargetReached

Alarm	Attributes	Applicable major NE releases
Name: BgpRouteLowWatermarkPerRTargetReached (434) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: tooLittleBgpRouteForGivenRouteTarget (412)	Unspecified
Description: The alarm is raised when there are too few BGP routes for a route target.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 35-61 BgpRouteRateThresholdPerRTargetReached

Alarm	Attributes	Applicable major NE releases
Name: BgpRouteRateThresholdPerRTargetReached (435) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: unstableVpnSite (413)	Unspecified
Description: The alarm is raised when the BGP route rate for a target reaches the maximum threshold value for route targets.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 35-62 BgpRouteRateThresholdReached

Alarm	Attributes	Applicable major NE releases
Name: BgpRouteRateThresholdReached (429) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: tooManyBgpRouteForNextHop (408)	Unspecified
Description: The alarm is raised when the BGP route rate for a next hop exceeds the maximum threshold value for next hops.		
Remedial action: User configured alarm for monitoring purpose. BGP events history can be used for debugging purpose.		

Table 35-63 BidirectionalTPLspDestinationMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: BidirectionalTPLspDestinationMisconfiguration (5117) Type: configurationAlarm (11) Package: mplstp Raised on class: mplstp.GlobalTPLsp	Severity: critical Implicitly cleared: true Default probable cause: DestinationParametersMismatch (2053)	Unspecified
Description: The alarm is raised when the Destination Global ID, Destination Node ID, or Destination Tunnel Number is not consistent with the configuration of the opposite TP-LSP in a Bidirectional TP-LSP.		
Remedial action: This alarm is generated when a TP-LSP that belongs to a Bidirectional TP-LSP has any of its Destination Global ID, Destination Node ID, or Destination Tunnel Number misconfigured. Review the configuration both TP-LSPs in the Bidirectional TP-LSP and ensure that the Destination Global ID, Destination Node ID, and Destination Tunnel Number are configured properly.		

Table 35-64 BidirectionalTPLspPathLspNumberMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: BidirectionalTPLspPathLspNumberMisconfiguration (5118) Type: configurationAlarm (11) Package: mplstp Raised on class: mplstp.GlobalTPLspPath	Severity: critical Implicitly cleared: true Default probable cause: LSPNumberMismatch (2054)	Unspecified
Description: The alarm is raised when the LSP Path Number is not consistent with the LSP Path Number for LER A and LER B.		
Remedial action: This alarm is generated when the LSP Path Number for the Bidirectional TP-LSP Path does not match LER A and/or LER B. Review the configuration of LSP Path Number LER A and LER B and ensure both are set to the same value as the Bidirectional TP-LSP Path's LSP Path Number.		

Table 35-65 BidirIpPathMonitorPathsDiverge

Alarm	Attributes	Applicable major NE releases
Name: BidirIpPathMonitorPathsDiverge (603) Type: topologyAlarm (34) Package: monpath Raised on class: monpath.BidirMonitoredIpPath	Severity: minor Implicitly cleared: true Default probable cause: ipPathsDiverge (449)	Unspecified
Description: The alarm is raised when the 5650 CPAM detects that the IP paths of a bidirectional IP path monitor diverge. The alarm clears when the paths converge. This may occur when an IP path monitor cannot be set up after the number of attempts specified by the cpamManagedRoute problematicThresholdAlarmAfter value in the nms-server.xml file. The alarm is raised if the cpamManagedRoute problematicRetryStrategy value in nms-server.xml is set to countdown. The default problematicRetryStrategy value of reactive prevents the alarm from being raised.		
Remedial action: Informational - Paths in both direction can be highlighted on the CPAM map to identify the divergence point.		

Table 35-66 BidirLspMonitorPathsDiverge

Alarm	Attributes	Applicable major NE releases
Name: BidirLspMonitorPathsDiverge (1915) Type: topologyAlarm (34) Package: monpath Raised on class: monpath.BidirMonitoredLspPath	Severity: minor Implicitly cleared: true Default probable cause: LspPathsDiverge (917)	Unspecified
Description: The alarm is raised when the LSP's active path's hops do not match in the forward and reverse direction.		
Remedial action: Informational - Paths in both direction can be highlighted on the CPAM map to identify the divergence point.		

Table 35-67 BootEnvironmentSyncFailed

Alarm	Attributes	Applicable major NE releases
Name: BootEnvironmentSyncFailed (101) Type: equipmentAlarm (3) Package: sw Raised on class: sw.SoftwareUpgradeManager	Severity: critical Implicitly cleared: true Default probable cause: bootEnvironmentSyncFailed (87)	Unspecified
Description: The alarm is raised when the synchronization of one or more system initialization files between the active and standby CPM cards fails, or when one or both of the CSM compact flash devices do not have enough space when the 'admin redundancy synchronize boot-env' command is executed, or when the node is rebooted.		
Remedial action: The operator should make sure that the Boot Environment files on the CSM cards are in Sync with each other or there is enough space available on the compact flash.		

Table 35-68 BrokenLoop

Alarm	Attributes	Applicable major NE releases
Name: BrokenLoop (469) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.StackConfiguration	Severity: major Implicitly cleared: true Default probable cause: stackNotInLoop (355)	Unspecified
Description: The alarm is raised when the loop-detection stack detects a loop condition, or when the stack contains an unexpected element.		
Remedial action: Login to switch console, check and correct configuration and reload stack.		

Table 35-69 BWUtilizationExceeded

Alarm	Attributes	Applicable major NE releases
Name: BWUtilizationExceeded (811) Type: thresholdCrossed (6) Package: netw Raised on class: netw.AbstractPhysicalLink	Severity: major Implicitly cleared: true Default probable cause: thresholdCrossed (12)	Unspecified
Description: The alarm is raised when the per-CoS or overall bandwidth utilization exceeds the configured threshold.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand how this Physical Link became overbooked		

Table 35-70 CableLOS (equipment)

Alarm	Attributes	Applicable major NE releases
Name: CableLOS (678) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: cableLOS (493)	Unspecified
Description: The alarm is raised when an MSS detects a cable LOS event.		
Remedial action: The alarm is raised when an MSS detects a cable LOS event.		

Table 35-71 CableLOS (radioequipment)

Alarm	Attributes	Applicable major NE releases
Name: CableLOS (678) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: cableLOS (493)	Unspecified
Description: The alarm is raised when an MSS detects a cable LOS event.		
Remedial action: The alarm is raised when an MSS detects a cable LOS event. Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-72 CallTraceAlreadyActive

Alarm	Attributes	Applicable major NE releases
Name: CallTraceAlreadyActive (1279) Type: callTraceSessionAlarm (90) Package: lte Raised on class: lte.CTg	Severity: warning Implicitly cleared: true Default probable cause: callTraceManuallyActivated (906)	Unspecified
Description: The alarm is raised when a Call Trace Session is already active when the scheduled task starts. The scheduled task will not deactivate it. The Call Trace Session must to be manually deactivated. The alarm is cleared when the Call Trace session is deactivated successfully.		
Remedial action: The existing Call Trace Session must to be manually deactivated. The alarm is cleared when the Call Trace session is deactivated successfully.		

Table 35-73 CallTraceScheduledTaskExecutionError

Alarm	Attributes	Applicable major NE releases
Name: CallTraceScheduledTaskExecutionError (1280) Type: callTraceSessionAlarm (90) Package: lte Raised on class: lte.CTg	Severity: warning Implicitly cleared: false Default probable cause: callTraceConfigurationError (907) Applicable probable causes: <ul style="list-style-type: none"> callTraceConfigurationError eventBasedTraceEnabled debugTraceActive 	Unspecified
Description: The alarm is raised when the execution of a Call Trace scheduled task has a failure activating or deactivating this Call Trace session.		
Remedial action: Check the call trace session.		

Table 35-74 CAProfileStateChange

Alarm	Attributes	Applicable major NE releases
Name: CAProfileStateChange (3910) Type: configurationAlarm (11) Package: sitesec Raised on class: sitesec.CertificateAuthProfile	Severity: major Implicitly cleared: true Default probable cause: caProfileStateDown (1497)	Unspecified
Description: The alarm is raised when Certificate Authority profile changes state to 'down' due to tmnxSecNotifFailureReason.		
Remedial action: The Certificate Authority profile changes state to 'down'. Depending on the reason specified, corrective action should be taken		

Table 35-75 CardCPUAboveThreshold

Alarm	Attributes	Applicable major NE releases
Name: CardCPUAboveThreshold (618) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.CardSlot	Severity: major Implicitly cleared: false Default probable cause: CardCPUUtilizationCrossedAboveThreshold (458)	Unspecified
Description: The alarm is raised when the card CPU usage exceeds the threshold value.		
Remedial action: Informational - The CPU of the card indicated in the alarm is overloaded. If the condition persists then processing load should be transferred from this card to other cards which are more lightly loaded. If the problem persists then please contact Alcatel-Lucent support for assistance.		

Table 35-76 CardMemoryAboveThreshold

Alarm	Attributes	Applicable major NE releases
Name: CardMemoryAboveThreshold (619) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.CardSlot	Severity: major Implicitly cleared: false Default probable cause: CardMemoryUtilizationCrossedAboveThreshold (459)	Unspecified
Description: The alarm is raised when the card memory usage exceeds the threshold value.		
Remedial action: Informational - The memory of the card indicated in the alarm is over utilized. If the condition persists then processing load should be transferred from this card to other cards which are more lightly loaded in order to reduce memory consumption. If the problem persists then please contact Alcatel-Lucent support for assistance.		

Table 35-77 CardRxAboveThreshold

Alarm	Attributes	Applicable major NE releases
Name: CardRxAboveThreshold (620) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.CardSlot	Severity: major Implicitly cleared: true Default probable cause: CardRxUtilizationCrossedAboveThreshold (460)	Unspecified
Description: The alarm is raised when the card Rx exceeds the threshold value.		
Remedial action: The utilization of the card is higher than normal. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-78 CardRxTxAboveThreshold

Alarm	Attributes	Applicable major NE releases
Name: CardRxTxAboveThreshold (621) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.CardSlot	Severity: major Implicitly cleared: true Default probable cause: CardRxTxUtilizationCrossedAboveThreshold (461)	Unspecified
Description: The alarm is raised when the card Tx exceeds the threshold value.		
Remedial action: The utilization of the card is higher than normal. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-79 CardUnseated

Alarm	Attributes	Applicable major NE releases
Name: CardUnseated (1161) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.CardSlot	Severity: major Implicitly cleared: true Default probable cause: CardUnseated (864)	Unspecified
Description: The alarm is raised when a card is removed.		
Remedial action: Informational - no corrective action required.		

Table 35-80 CeAddressIncompatible

Alarm	Attributes	Applicable major NE releases
Name: CeAddressIncompatible (251) Type: configurationAlarm (11) Package: ipipe Raised on class: ipipe.Ipipe	Severity: major Implicitly cleared: true Default probable cause: ceAddressIncompatible (190)	Unspecified
Description: The alarm is raised when two SAPs in an Ipipe have the same CE IP address, or when the CE IP address is not the same as the CE IP address of the peer SDP binding.		
Raising condition: ('ceAddressIncompatible' EQUAL 'true')		
Clearing condition: ('ceAddressIncompatible' EQUAL 'false')		
Remedial action: Modify the CE Address so that it's not same address as other SAPs and it matches the address of the peer SDP binding.		

Table 35-81 CheckpointLimitAt75Percent

Alarm	Attributes	Applicable major NE releases
Name: CheckpointLimitAt75Percent (425) Type: configurationAlarm (11) Package: topology Raised on class: topology.TopologyManager	Severity: warning Implicitly cleared: false Default probable cause: tooManyCheckpoints (337)	Unspecified
Description: The alarm is raised when the number of check points reaches 75 percent of the maximum allowed value.		
Remedial action: Informational - deprecated 9.0		

Table 35-82 CheckpointLimitReachedOrExceeded

Alarm	Attributes	Applicable major NE releases
Name: CheckpointLimitReachedOrExceeded (426) Type: configurationAlarm (11) Package: topology Raised on class: topology.TopologyManager	Severity: warning Implicitly cleared: false Default probable cause: tooManyCheckpointObjects (837)	Unspecified
Description: The alarm is raised when the number of check points objects reaches or exceeds the maximum allowed value.		
Remedial action: Maximum number of Checkpoint objects reached, the IGP history cleanup task begins and removes older objects. To keep history increase maximumNumberOfCheckpointObjects in nms-server.xml.		

Table 35-83 ChildTemplateInvalid

Alarm	Attributes	Applicable major NE releases
Name: ChildTemplateInvalid (193) Type: configurationAlarm (11) Package: template Raised on class: template.TemplateBinding	Severity: major Implicitly cleared: true Default probable cause: referencedObjectInvalid (152)	Unspecified
Description: The alarm is raised when a child template in a template binding is invalid. The alarm is deprecated in the 5620 SAM, Release 6.0 and later.		
Raising condition: ('childTemplateInvalidReference' EQUAL 'true')		
Clearing condition: ('childTemplateInvalidReference' EQUAL 'false')		
Remedial action: Informational - deprecated 6.0		

Table 35-84 CliLoginMaxAttempts

Alarm	Attributes	Applicable major NE releases
Name: CliLoginMaxAttempts (3701) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: false Default probable cause: cliLoginMaxAttempts (1439)	Unspecified
Description: The alarm is raised when the number of CLI login failures due to an incorrect user name or password using TELNET session exceeds the configured value.		
Remedial action: Informational		

Table 35-85 ClockFailure

Alarm	Attributes	Applicable major NE releases
Name: ClockFailure (1162) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: clockFailure (865)	Unspecified
Description: The alarm is raised when an MPT radio clock failure occurs.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-86 CModeRxQueryMismatch

Alarm	Attributes	Applicable major NE releases
Name: CModeRxQueryMismatch (160) Type: configurationAlarm (11) Package: igmp Raised on class: igmp.Interface	Severity: major Implicitly cleared: false Default probable cause: InvalidCompatibilityModeofQueryReceieved (130)	Unspecified
Description: The alarm is raised when an IGMP interface receives an IGMP query of a higher version than the version configured on the interface, for example, when the interface is configured for IGMPv1 and it receives an IGMPv2 or IGMPv3 query. The interface does not process the received IGMP message.		
Remedial action: Informational - no corrective action required.		

Table 35-87 CommonLOS

Alarm	Attributes	Applicable major NE releases
Name: CommonLOS (3621) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: commonLOS (1410)	Unspecified
Description: The alarm is raised when a radio interface CLA detects a loss of signal.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-88 CommunityMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: CommunityMisconfiguration (442) Type: serviceAlarm (16) Package: vprn Raised on class: vprn.AbstractSite	Severity: major Implicitly cleared: true Default probable cause: CommunityMisconfiguration (347)	Unspecified
Description: The alarm is raised when the 5620 SAM detects a community misconfiguration on a service site.		
Remedial action: Configure the SNMP community String on the VPRN service site		

Table 35-89 ConfigFileSyncFailed

Alarm	Attributes	Applicable major NE releases
Name: ConfigFileSyncFailed (102) Type: equipmentAlarm (3) Package: sw Raised on class: sw.SoftwareUpgradeManager	Severity: critical Implicitly cleared: true Default probable cause: configFileSyncFailed (88)	Unspecified
Description: The alarm is raised when the configuration file synchronization between the active and standby CPM cards fails.		
Remedial action: Please log into the NE in question via CLI and execute a manual synchronization. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-90 ConfigNotCompatible

Alarm	Attributes	Applicable major NE releases
Name: ConfigNotCompatible (405) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: critical Implicitly cleared: false Default probable cause: DaughterCardConfigNotCompatible (301)	Unspecified
Description: The alarm is raised when an MDA configuration is incompatible with the MDA.		
Remedial action: A configuration error has occurred which must be corrected. The MDA type configured for the slot identified in the alarm must match the installed MDA type.		

Table 35-91 ContainingEquipmentMissing

Alarm	Attributes	Applicable major NE releases
Name: ContainingEquipmentMissing (463) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMissing (327)	Unspecified
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMissing.		
Clearing condition: (('Status' NOT EQUAL 'Parent Removed') OR ('isTerminatable' NOT EQUAL 'true') OR ('Equipped' EQUAL 'false'))		
Remedial action: Informational - an card has been removed from the system.		

35 – Unspecified NE alarms

Table 35-92 CorporateAndSecuredCompositeServicesAreNotConnected

Alarm	Attributes	Applicable major NE releases
Name: CorporateAndSecuredCompositeServicesAreNotConnected (828) Type: serviceAlarm (16) Package: ipsec Raised on class: ipsec.IPSecSecuredVpn	Severity: warning Implicitly cleared: false Default probable cause: CompositeServiceMisconfiguration (591)	Unspecified
Description: The alarm is raised when the corporate and secured services used by an IPsec VPN do not have a connector between them.		
Raising condition: ('corporateToSecureServiceConnector' EQUAL 'Not Connected')		
Clearing condition: (('corporateToSecureServiceConnector' EQUAL 'Connected') OR ('corporateToSecureServiceConnector' EQUAL 'None'))		
Remedial action: Create a connector to connect the Corporate service and Secured service.		

Table 35-93 CorporateAndSecuredCompositeServicesMismatch

Alarm	Attributes	Applicable major NE releases
Name: CorporateAndSecuredCompositeServicesMismatch (829) Type: serviceAlarm (16) Package: ipsec Raised on class: ipsec.IPSecSecuredVpn	Severity: warning Implicitly cleared: false Default probable cause: CompositeServiceMisconfiguration (591)	Unspecified
Description: The alarm is raised when the corporate and secured services used by an IPsec VPN are in different composite services.		
Remedial action: Informational - no corrective action required.		

Table 35-94 CorruptedBgpUpdate

Alarm	Attributes	Applicable major NE releases
Name: CorruptedBgpUpdate (3328) Type: topologyAlarm (34) Package: topology Raised on class: topology.BgpAutonomousSystem	Severity: major Implicitly cleared: false Default probable cause: CorruptedBgpUpdateDetected (1164)	Unspecified
Description: The alarm is raised when a BGP-bad-update-packet-received message is sent from the CPAA against a BGP AS. The alarm is not auto-cleared by CPAM.		
Remedial action: A peer is sending a corrupted BGP update. The information regarding the update can be viewed in the BGP corrupted update record. Action should be taken to fix the offending BGP speaker.		

Table 35-95 CouplingEthernetLinkDown

Alarm	Attributes	Applicable major NE releases
Name: CouplingEthernetLinkDown (4819) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: LossOfSignal (541)	Unspecified
Description: The alarm is raised when a MPT detects a coupling Ethernet Link Down		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-96 CouplingLossOfRadioFrame

Alarm	Attributes	Applicable major NE releases
Name: CouplingLossOfRadioFrame (4820) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: LossOfFrame (1904)	Unspecified
Description: The alarm is raised when a MPT detects a Loss of Radio Frame from Coupling Path		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-97 CouplingPortSFPCardFailure

Alarm	Attributes	Applicable major NE releases
Name: CouplingPortSFPCardFailure (4821) Type: equipmentAlarm (3) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: ReplaceableUnitProblem (1905)	Unspecified
Description: This alarm is raised when coupling port SFP Card failure is detected.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-98 CouplingPortSFPMissing

Alarm	Attributes	Applicable major NE releases
Name: CouplingPortSFPMissing (4822) Type: equipmentAlarm (3) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: ReplaceableUnitMissing (1906)	Unspecified

(1 of 2)

35 – Unspecified NE alarms

Alarm	Attributes	Applicable major NE releases
Description: This alarm is raised when coupling port SFP is missing.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

(2 of 2)

Table 35-99 CpaalAreaUnreachableThroughISIS

Alarm	Attributes	Applicable major NE releases
Name: CpaalAreaUnreachableThroughISIS (5418) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaal	Severity: major Implicitly cleared: true Default probable cause: CPAALinksToAreaDown (2125)	Unspecified
Description: The alarm is raised when all links from CPAA to an area are down.		
Remedial action: 1) The active CPAA cannot reach certain CPAA instance through the ISIS protocol. Please check the links to the unreachable CPAA instance. 2) If the standby CPAA is functional as per your requirements, switch-over might resolve the issue.		

Table 35-100 CpaalAreaUnreachableThroughOSPF

Alarm	Attributes	Applicable major NE releases
Name: CpaalAreaUnreachableThroughOSPF (5419) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaal	Severity: major Implicitly cleared: true Default probable cause: CPAALinksToAreaDown (2125)	Unspecified
Description: The alarm is raised when all links from CPAA to OSPF area are down.		
Remedial action: 1) The active CPAA cannot reach certain area through the OSPF protocol. Please check the links to the unreachable area. 2) If the standby CPAA is functional as per your requirements, switch-over might resolve the issue.		

Table 35-101 CpaalAreaUnreachableThroughOSPFv3

Alarm	Attributes	Applicable major NE releases
Name: CpaalAreaUnreachableThroughOSPFv3 (5420) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaal	Severity: major Implicitly cleared: true Default probable cause: CPAALinksToAreaDown (2125)	Unspecified
Description: The alarm is raised when all links from CPAA to OSPFv3 area are down.		
Remedial action: 1) The active CPAA cannot reach certain area through the OSPFv3 protocol. Please check the links to the unreachable area. 2) If the standby CPAA is functional as per your requirements, switch-over might resolve the issue.		

Table 35-102 CpmTimedLicenseExpiryNotice

Alarm	Attributes	Applicable major NE releases
Name: CpmTimedLicenseExpiryNotice (692) Type: cpmLicensingAlarm (39) Package: security Raised on class: security.CpmLicense	Severity: variable Implicitly cleared: false Default probable cause: timedcpmLicenseExpiryNotice (293)	Unspecified
Description: The alarm is raised when the 5650 CPAM license timer expires. The alarm information includes the license expiry date.		
Remedial action: Informational - the CPAM license key is about to expire. Please contact Alcatel-Lucent Sales to request either an extension for the license or a permanent license key.		

Table 35-103 CpeUnreachable

Alarm	Attributes	Applicable major NE releases
Name: CpeUnreachable (525) Type: communicationsAlarm (4) Package: rtr Raised on class: rtr.StaticRoute	Severity: major Implicitly cleared: true Default probable cause: CpeUnreachable (334)	Unspecified
Description: The alarm is raised when the CPE associated with a static route is unreachable.		
Remedial action: Please check that the static route is correct or exists for the CPE.		

Table 35-104 CPMPChipMemoryEvent

Alarm	Attributes	Applicable major NE releases
Name: CPMPChipMemoryEvent (4989) Type: hardwareAnomaly (55) Package: equipment Raised on class: equipment.ProcessorCard	Severity: warning Implicitly cleared: true Default probable cause: memoryParityError (451)	Unspecified
Description: The alarm is raised when a PChip detects a memory error. The alarm is raised against a 7450 ESS, 7710 SR, 7950 SR, or 7750 SR. The alarm is raised against a Release 11.0 NE at R4 or later.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact Alcatel-Lucent support for assistance.		

35 – Unspecified NE alarms

Table 35-105 CreditControlInsertedFiltrEntryDropped

Alarm	Attributes	Applicable major NE releases
Name: CreditControlInsertedFiltrEntryDropped (1150) Type: configurationAlarm (11) Package: acfilter Raised on class: acfilter.FilterDefinition	Severity: warning Implicitly cleared: false Default probable cause: FilterEntryDropped (856)	Unspecified
Description: The alarm is raised when a request to insert a filter entry is not successful for a credit control application.		
Remedial action: A Configuration error has occurred. The request to insert a filter entry was not successful for Credit Control application. Check the configuration filter entry.		

Table 35-106 CreditControlInsertSpaceThresholdAlarm

Alarm	Attributes	Applicable major NE releases
Name: CreditControlInsertSpaceThresholdAlarm (1149) Type: configurationAlarm (11) Package: acfilter Raised on class: acfilter.FilterDefinition	Severity: major Implicitly cleared: true Default probable cause: UtilizationExceedConfiguredLimit (855)	Unspecified
Description: The alarm is raised when the utilization of a filter entry range that is reserved for filter entry insertion increases to the configured maximum value for a credit control application insert range.		
Remedial action: The filter entry range reserved for filter entry insertion has increased to the configured high watermark for Credit Control application. Make an adjusted to the high watermark or to the filter.		

Table 35-107 CrossConnectionFail

Alarm	Attributes	Applicable major NE releases
Name: CrossConnectionFail (679) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: crossConnectionFail (494)	Unspecified
Description: The alarm is raised when an MSS TDM cross-connection fails.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-108 CTAuxMisalignmentWhileEnbAutoAllocationDisabled

Alarm	Attributes	Applicable major NE releases
Name: CTAuxMisalignmentWhileEnbAutoAllocationDisabled (5423) Type: communicationsAlarm (4) Package: lte Raised on class: lte.CallTraceSessionManager	Severity: major Implicitly cleared: true Default probable cause: eNBsAuxIPMisalignment (2126)	Unspecified
Description: The alarm is raised if automatic AUX allocation is disabled and if there is a discrepancy between the eNB configurations and the AUX assigned to the eNB in SAM. If the automatic AUX allocation is enabled, SAM will automatically set the eNB IP addresses linked to the trace management on the assigned AUX in SAM.		
Remedial action: Manually launch the allocation of the eNBs to the active CT AUX server.		

Table 35-109 DatabaseServerErrors

Alarm	Attributes	Applicable major NE releases
Name: DatabaseServerErrors (5174) Type: databaseAlarm (29) Package: db Raised on class: db.DatabaseManager	Severity: critical Implicitly cleared: false Default probable cause: DatabaseErrors (2090)	Unspecified
Description: The alarm is raised when when a critical Oracle error occurs.		
Remedial action: The probable cause of this alarm is the database server detected a critical error. The EmsDbServerHealth.log and oracle trace files will provide more information.		

Table 35-110 DatabaseSqlFormatInvalid

Alarm	Attributes	Applicable major NE releases
Name: DatabaseSqlFormatInvalid (4419) Type: databaseAlarm (29) Package: db Raised on class: db.DatabaseManager	Severity: major Implicitly cleared: false Default probable cause: InvalidSqlFormat (1583)	Unspecified
Description: The alarm is raised when an invalid SQL is detected by the database server.		
Remedial action: The probable cause of this alarm is the database server detected invalid SQL. The EmsDbServerHealth.log will provide more information. Possible causes include SQL injection and invalid SQL statement errors.		

Table 35-111 DataChannelLoopback

Alarm	Attributes	Applicable major NE releases
Name: DataChannelLoopback (3945) Type: configurationAlarm (11) Package: tdmequipment Raised on class: tdmequipment.DataChannelSpecifics	Severity: warning Implicitly cleared: true Default probable cause: dataChannelLoopback (1526)	Unspecified
Description: The alarm is raised when an NE reports that a data channel has a loopback alarm condition.		
Remedial action: Informational only.		

Table 35-112 DataMtReused

Alarm	Attributes	Applicable major NE releases
Name: DataMtReused (361) Type: dataMtReusedAlarm (37) Package: pim Raised on class: pim.DataMtInterface	Severity: warning Implicitly cleared: false Default probable cause: DataMtReused (258)	Unspecified
Description: The alarm is raised when a data MDT is reused.		
Remedial action: A configuration error has occurred that must be corrected. Please check MVPN Selective Tunnel Data MT Interface configuration so that no duplicate C (S,G) is mapped to a data MDT.		

Table 35-113 DaughterCardConfigNotCompatible

Alarm	Attributes	Applicable major NE releases
Name: DaughterCardConfigNotCompatible (404) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.DaughterCardSlot	Severity: critical Implicitly cleared: false Default probable cause: DaughterCardConfigNotCompatible (301)	Unspecified
Description: The alarm is raised when a supported MDA is inserted into a compatible IOM slot, but the configuration on the MDA ports is not compatible with the MDA.		
Remedial action: A configuration error has occurred which must be corrected. The configuration of one or more ports must be changed to match the ports on the MDA.		

Table 35-114 DDosCardFpEventOverflow

Alarm	Attributes	Applicable major NE releases
Name: DDosCardFpEventOverflow (4460) Type: securityServiceOrMechanismViolation (92) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: eventOverflow (1684)	Unspecified
Description: The alarm is raised when a flood of distributed CPU FP protection events occur on a particular card and some of the events are lost due to event throttling mechanism.		
Remedial action: Please reduce the number of distributed DoS FP protection policers configured.		

Table 35-115 DDosCardSapEventOverflow

Alarm	Attributes	Applicable major NE releases
Name: DDosCardSapEventOverflow (4461) Type: securityServiceOrMechanismViolation (92) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: eventOverflow (1684)	Unspecified
Description: The alarm is raised when a flood of distributed CPU protection SAP events occur on a particular card and some of the events are lost due to event throttling mechanism.		
Remedial action: Please reduce the number of distributed DoS SAP protection policers configured.		

Table 35-116 DDosCardVrtrIfEventOverflow

Alarm	Attributes	Applicable major NE releases
Name: DDosCardVrtrIfEventOverflow (4462) Type: securityServiceOrMechanismViolation (92) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: eventOverflow (1684)	Unspecified
Description: The alarm is raised when a flood of distributed CPU protection network-interface events occur on a particular card and some of the events are lost due to event throttling mechanism.		
Remedial action: Please reduce the number of distributed DoS Network Interface protection policers configured.		

Table 35-117 DDosFpDynamicPoolUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: DDosFpDynamicPoolUsageHigh (4463) Type: securityServiceOrMechanismViolation (92) Package: equipment Raised on class: equipment.ForwardingPlane	Severity: warning Implicitly cleared: true Default probable cause: resourceLimitReached (131)	Unspecified
Description: The alarm is raised when the dynamic enforcement policer pool usage on the forwarding plane is nearly exhausted.		
Remedial action: Please adjust the dynamic enforcement policer pool usage.		

Table 35-118 Degrade

Alarm	Attributes	Applicable major NE releases
Name: Degrade (622) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: degrade (462)	Unspecified
Description: The alarm is raised when a degraded signal is detected.		
Remedial action: The signal being received on the indicated port is of poor quality. Check to ensure that the physical link is not damaged and that the link is properly connected/seated to the port.		

Table 35-119 DemFail (equipment)

Alarm	Attributes	Applicable major NE releases
Name: DemFail (680) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: demFail (495)	Unspecified
Description: The alarm is raised when an MSS demodulation function fails.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-120 DemFail (radioequipment)

Alarm	Attributes	Applicable major NE releases
Name: DemFail (680) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: demFail (495)	Unspecified
Description: The alarm is raised when an MSS demodulation function fails.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-121 DemodulatorUnlocked

Alarm	Attributes	Applicable major NE releases
Name: DemodulatorUnlocked (4823) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: DemodulationFailure (1907)	Unspecified
Description: The alarm is raised when a MPT detects demodulation failure.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-122 DemXpicLOS (equipment)

Alarm	Attributes	Applicable major NE releases
Name: DemXpicLOS (3622) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: demXpicLos (1411)	Unspecified
Description: The alarm is raised when a loss of signal occurs during XPIC demodulation.		
Remedial action: The alarm is raised when a loss of signal occurs on XPIC demodulation		

Table 35-123 DemXpicLOS (mpr)

Alarm	Attributes	Applicable major NE releases
Name: DemXpicLOS (3622) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: demXpicLos (1411)	Unspecified

(1 of 2)

35 – Unspecified NE alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a loss of signal occurs during XPIC demodulation.		
Remedial action: The alarm is raised when a loss of signal occurs on XPIC demodulation		

(2 of 2)

Table 35-124 DependentObjectDeleted

Alarm	Attributes	Applicable major NE releases
Name: DependentObjectDeleted (192) Type: configurationAlarm (11) Package: template Raised on class: template.Template	Severity: major Implicitly cleared: true Default probable cause: referencedObjectGone (151)	Unspecified
Description: The alarm is raised when an object referenced by a template cannot be found. The alarm is deprecated in the 5620 SAM, Release 6.0 and later.		
Raising condition: ('Invalid References (Reset on Save)' EQUAL 'true')		
Clearing condition: ('Invalid References (Reset on Save)' EQUAL 'false')		
Remedial action: Informational - deprecated 6.0		

Table 35-125 DeployProfileFailed

Alarm	Attributes	Applicable major NE releases
Name: DeployProfileFailed (610) Type: configurationAlarm (11) Package: autoconfig Raised on class: autoconfig.AutoProvisioning	Severity: major Implicitly cleared: false Default probable cause: DeployProfileFailed (453)	Unspecified
Description: The alarm is raised when the deployment of a script to a 7705 SAR fails.		
Remedial action: Informational - Please revisit target node configuration.		

Table 35-126 DetectedPreProvisionedCandidateNodeHasConfig

Alarm	Attributes	Applicable major NE releases
Name: DetectedPreProvisionedCandidateNodeHasConfig (1960) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: critical Implicitly cleared: false Default probable cause: detectedPreProvisionedCandidateNodeHasConfig (947)	Unspecified

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the candidate node detected for pre-provisioning already has a configuration in it. The configuration in the detected node is replaced with the configuration in the matching pre-provisioned node in SAM during the deployment stage of self-configuration.		
Remedial action: Verify that the candidate network element is intended to be pre-provisioned with the specified configuration. configuration deployment stage of self-config		

(2 of 2)

Table 35-127 DfPeerDown

Alarm	Attributes	Applicable major NE releases
Name: DfPeerDown (3304) Type: EpcLIAAlarm (102) Package: Iteli Raised on class: Iteli.DfPeer	Severity: major Implicitly cleared: true Default probable cause: DfPeerDown (1151)	Unspecified
Description: The alarm is raised on a Delivery Function that is operationally down.		
Raising condition: (('isLocal' EQUAL 'true') AND ('Operational State' NOT EQUAL 'In Service'))		
Clearing condition: NOT (((('isLocal' EQUAL 'true') AND ('Operational State' NOT EQUAL 'In Service'))))		
Remedial action: A TCP connection failure associated with a Delivery Function has occurred. The underlying transport network is unreliable. Please correct the issue within the transport network.		

Table 35-128 DHCPSPoLeaseUpdateFailedAddressConflict

Alarm	Attributes	Applicable major NE releases
Name: DHCPSPoLeaseUpdateFailedAddressConflict (4977) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Implicitly cleared: false Default probable cause: DHCPSPoLeaseUpdateFailedAddressConflict (2032)	Unspecified
Description: This alarm is raised when a address conflict lease update received from the failover peer cannot be processed successfully. This DHCP server instance has already leased another address to this host.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. This DHCP server instance has already leased another address to this host. Please ensure all configuration is correct.		

35 – Unspecified NE alarms

Table 35-129 DHCPSPFoLeaseUpdateFailedfoShutdown

Alarm	Attributes	Applicable major NE releases
Name: DHCPSPFoLeaseUpdateFailedfoShutdown (4985) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Implicitly cleared: false Default probable cause: DHCPSPFoLeaseUpdateFailedfoShutdown (2040)	Unspecified
Description: This alarm is raised when a shutdown lease update received from the failover peer cannot be processed successfully. The failover state of this DHCP Server instance is 'shutdown'.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. The failover state of this DHCP Server instance is 'shutdown'. Please ensure all configuration is correct.		

Table 35-130 DHCPSPFoLeaseUpdateFailedHostConflict

Alarm	Attributes	Applicable major NE releases
Name: DHCPSPFoLeaseUpdateFailedHostConflict (4978) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Implicitly cleared: false Default probable cause: DHCPSPFoLeaseUpdateFailedHostConflict (2033)	Unspecified
Description: This alarm is raised when a host conflict lease update received from the failover peer cannot be processed successfully. This DHCP server instance has already leased this address to another host.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. This DHCP server instance has already leased this address to another host. Please ensure all configuration is correct.		

Table 35-131 DHCPSPFoLeaseUpdateFailedLeaseExpired

Alarm	Attributes	Applicable major NE releases
Name: DHCPSPFoLeaseUpdateFailedLeaseExpired (4979) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Implicitly cleared: false Default probable cause: DHCPSPFoLeaseUpdateFailedLeaseExpired (2034)	Unspecified
Description: This alarm is raised when a lease expired lease update received from the failover peer cannot be processed successfully. The lease received from the peer has expired.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. The lease received from the peer has expired. Please ensure all configuration is correct.		

Table 35-132 DHCPSPoLeaseUpdateFailedMaxLeaseReached

Alarm	Attributes	Applicable major NE releases
Name: DHCPSPoLeaseUpdateFailedMaxLeaseReached (4980) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Implicitly cleared: false Default probable cause: DHCPSPoLeaseUpdateFailedMaxLeaseReached (2035)	Unspecified
Description: This alarm is raised when a maximum reached lease update received from the failover peer cannot be processed successfully. The maximum number of leases is already reached.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. The maximum number of leases is already reached. Please ensure all configuration is correct.		

Table 35-133 DHCPSPoLeaseUpdateFailedPeerConflict

Alarm	Attributes	Applicable major NE releases
Name: DHCPSPoLeaseUpdateFailedPeerConflict (4981) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Implicitly cleared: false Default probable cause: DHCPSPoLeaseUpdateFailedPeerConflict (2036)	Unspecified
Description: This alarm is raised when a peer conflict lease update received from the failover peer cannot be processed successfully. The failover peer has leased an address within a subnet range of which the failover control is set to 'local' on this local DHCP server instance.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. The failover peer has leased an address within a subnet range of which the failover control is set to 'local' on this local DHCP server instance. Please ensure all configuration is correct.		

Table 35-134 DHCPSPoLeaseUpdateFailedPersistenceCongested

Alarm	Attributes	Applicable major NE releases
Name: DHCPSPoLeaseUpdateFailedPersistenceCongested (4982) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Implicitly cleared: false Default probable cause: DHCPSPoLeaseUpdateFailedPersistenceCongested (2037)	Unspecified
Description: This alarm is raised when a persistence congested lease update received from the failover peer cannot be processed successfully. The lease received from the peer can not be persistently stored because the persistence subsystem is in overload.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. The lease received from the peer can not be persistently stored because the persistence subsystem is in overload. Please ensure all configuration is correct.		

35 – Unspecified NE alarms

Table 35-135 DHCPFoLeaseUpdateFailedRangeNotFound

Alarm	Attributes	Applicable major NE releases
Name: DHCPFoLeaseUpdateFailedRangeNotFound (4983) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Implicitly cleared: false Default probable cause: DHCPFoLeaseUpdateFailedRangeNotFound (2038)	Unspecified
Description: This alarm is raised when a range not found lease update received from the failover peer cannot be processed successfully. No valid include range for this lease could be found.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. No valid include range for this lease could be found. Please ensure all configuration is correct.		

Table 35-136 DHCPFoLeaseUpdateFailedSubnetNotFound

Alarm	Attributes	Applicable major NE releases
Name: DHCPFoLeaseUpdateFailedSubnetNotFound (4984) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.LocalDhcpServerFailover	Severity: warning Implicitly cleared: false Default probable cause: DHCPFoLeaseUpdateFailedSubnetNotFound (2039)	Unspecified
Description: This alarm is raised when a subnet not found lease update received from the failover peer cannot be processed successfully. No valid subnet for this lease could be found.		
Remedial action: This alarm indicates the Local DHCP Server Failover lease update has failed. Packet received from the failover peer, cannot be processed successfully. No valid subnet for this lease could be found. Please ensure all configuration is correct.		

Table 35-137 DiamAppMessageDropped

Alarm	Attributes	Applicable major NE releases
Name: DiamAppMessageDropped (5175) Type: processingErrorAlarm (81) Package: diameter Raised on class: diameter.DiameterPeer	Severity: minor Implicitly cleared: false Default probable cause: diamAppMessageDropped (2091)	Unspecified
Description: The alarm is raised when the Diameter protocol has dropped a message		
Remedial action: The recovery action depends on the exact cause of the failure. See the Additional Text field in the Alarm Info form for a specific cause for the failure.		

Table 35-138 DiamAppSessionFailure

Alarm	Attributes	Applicable major NE releases
Name: DiamAppSessionFailure (5410) Type: processingErrorAlarm (81) Package: ressubscr Raised on class: ressubscr.ResidentialSubscriberInstance	Severity: minor Implicitly cleared: false Default probable cause: diamAppSessionFailure (2118)	Unspecified
Description: The alarm is raised when the Diameter protocol has a session failure.		
Remedial action: The recovery action depends on the exact cause of the failure. See the Additional Text field in the Alarm Info form for a specific cause for the failure.		

Table 35-139 DiskCapacityProblem

Alarm	Attributes	Applicable major NE releases
Name: DiskCapacityProblem (144) Type: storageAlarm (25) Package: equipment Raised on class: equipment.FlashMemory	Severity: variable Implicitly cleared: false Default probable cause: diskCapacityProblem (115)	Unspecified
Description: The alarm is raised when a compact flash capacity threshold value on an NE is reached or exceeded. The alarm condition is detected during resynchronization or when a tnmxEqFlashDiskFull trap is received. The threshold value is not configurable. The severity of the alarm depends on the percentage of disk capacity used, as listed below: - 75 percent, Minor - 90 percent, Major - 100 percent, Critical		
Remedial action: The usage of the compact flash device must be analysed and old or redundant files must be removed. This operation must be executed using the CLI interface on the NE.		

Table 35-140 DryContactAlarm

Alarm	Attributes	Applicable major NE releases
Name: DryContactAlarm (460) Type: dryContactAlarm (47) Package: equipment Raised on class: equipment.DryContact	Severity: variable Implicitly cleared: false Default probable cause: dryContactExternalAlarmRaised (351)	Unspecified
Description: The alarm is raised when a device detects a dry contact alarm condition.		
Remedial action: The remedial action for this alarm depends on the condition that the dry contact alarm is configured.		

Table 35-141 DS1E1Loopback

Alarm	Attributes	Applicable major NE releases
Name: DS1E1Loopback (409) Type: configurationAlarm (11) Package: tdmequipment Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ds1e1Loopback (305)	Unspecified
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has a loopback alarm condition.		
Remedial action: Informational only.		

Table 35-142 DS3E3Loopback

Alarm	Attributes	Applicable major NE releases
Name: DS3E3Loopback (408) Type: configurationAlarm (11) Package: tdmequipment Raised on class: tdmequipment.DS3E3ChannelSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ds3e3Loopback (304)	Unspecified
Description: The alarm is raised when an NE reports that a specific DS3 or E3 channel has a loopback alarm condition.		
Remedial action: Informational only.		

Table 35-143 DscPlatformLicenseKeyExpiredAlarm

Alarm	Attributes	Applicable major NE releases
Name: DscPlatformLicenseKeyExpiredAlarm (1133) Type: EpcAlarm (59) Package: lte Raised on class: lte.DynamicServicesControllerInstance	Severity: major Implicitly cleared: false Default probable cause: DscPlatformLicenseKeyExpired (841)	Unspecified
Description: The alarm is raised when the DSC platform license key is expired.		
Remedial action: Contact Alcatel-Lucent support to obtain new DSC license key		

Table 35-144 DscPlatformLicenseKeyExpiringAlarm

Alarm	Attributes	Applicable major NE releases
Name: DscPlatformLicenseKeyExpiringAlarm (1134) Type: EpcAlarm (59) Package: Ite Raised on class: Ite.DynamicServicesControllerInstance	Severity: minor Implicitly cleared: false Default probable cause: DscPlatformLicenseKeyExpiring (842)	Unspecified
Description: The alarm is raised when the DSC platform license key is expiring.		
Remedial action: Contact Alcatel-Lucent support to obtain new DSC license key		

Table 35-145 DscPlatformLicenseKeyHighWaterAlarm

Alarm	Attributes	Applicable major NE releases
Name: DscPlatformLicenseKeyHighWaterAlarm (1135) Type: EpcAlarm (59) Package: Ite Raised on class: Ite.DynamicServicesControllerInstance	Severity: minor Implicitly cleared: false Default probable cause: DscPlatformLicenseKeyHighWaterMarkCrossed (843)	Unspecified
Description: The alarm is raised when the 5780 DSC license key crosses the high watermark for a specified threshold.		
Remedial action: Contact Alcatel-Lucent support to obtain new DSC license key		

Table 35-146 DscPlatformLicenseKeyLowWaterAlarm

Alarm	Attributes	Applicable major NE releases
Name: DscPlatformLicenseKeyLowWaterAlarm (1136) Type: EpcAlarm (59) Package: Ite Raised on class: Ite.DynamicServicesControllerInstance	Severity: info Implicitly cleared: false Default probable cause: DscPlatformLicenseKeyLowWaterMarkCrossed (844)	Unspecified
Description: The alarm is raised when the 5780 DSC license key crosses the low watermark for a specified threshold.		
Remedial action: Contact Alcatel-Lucent support to obtain new DSC license key		

Table 35-147 DscPlatformLicenseKeyThresholdReachedAlarm

Alarm	Attributes	Applicable major NE releases
Name: DscPlatformLicenseKeyThresholdReachedAlarm (1137) Type: EpcAlarm (59) Package: lte Raised on class: lte.DynamicServicesControllerInstance	Severity: major Implicitly cleared: true Default probable cause: DscPlatformLicenseKeyThresholdReached (845)	Unspecified
Description: The alarm is raised when the 5780 DSC license key reaches a specified threshold.		
Remedial action: NContact Alcatel-Lucent support to obtain new DSC license key		

Table 35-148 DualEndedLossNotSupported

Alarm	Attributes	Applicable major NE releases
Name: DualEndedLossNotSupported (1194) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.MaintAssociation	Severity: warning Implicitly cleared: true Default probable cause: dualEndedLossNotSupported (895)	Unspecified
Description: The alarm is raised when a MEP that does not support Y1731 Dual Ended Loss test is participating in a CFM Continuity Check test that has Y1731 Dual Ended Loss test enabled.		
Remedial action: Informational - The alarm is raised when at least one MEP that does not support Y1731 Dual Ended Loss test is participating in a CFM Continuity Check test that has Y1731 Dual Ended Loss test enabled.		

Table 35-149 DualEndedLossThresholdAlarm

Alarm	Attributes	Applicable major NE releases
Name: DualEndedLossThresholdAlarm (1195) Type: oamAlarm (18) Package: ethernetToam Raised on class: ethernetToam.Mep	Severity: minor Implicitly cleared: true Default probable cause: dualEndedLossThresholdExceeded (896)	Unspecified
Description: The alarm is raised when a MEP reports that either the Local or Remote loss ratio has exceeded the configured threshold for the specified remote MEP.		
Remedial action: Informational - The alarm is raised when a MEP reports that either the Local or Remote loss ratio has exceeded the configured threshold for the specified remote MEP.		

Table 35-150 DualMaster

Alarm	Attributes	Applicable major NE releases
Name: DualMaster (420) Type: configurationAlarm (11) Package: srrp Raised on class: srrp.Instance	Severity: major Implicitly cleared: false Default probable cause: dualMaster (313)	Unspecified
Description: The alarm is raised when the local and remote SRRP instances are in the master state.		
Remedial action: Shut down one of the peer SRRP instances, modify the priority to a larger value (lower priority) and then turn it up.		

Table 35-151 duplicateAdminGroupName

Alarm	Attributes	Applicable major NE releases
Name: duplicateAdminGroupName (4895) Type: configurationAlarm (11) Package: svt Raised on class: svt.TunnelAdminGroup	Severity: warning Implicitly cleared: true Default probable cause: duplicateNameExists (1953)	Unspecified
Description: The alarm is raised when two or more global Admin Groups share the same group name.		
Remedial action: Either change the admin group name to a different value, or delete this one and recreate it with a new name.		

Table 35-152 DuplicateIpAddress

Alarm	Attributes	Applicable major NE releases
Name: DuplicateIpAddress (5129) Type: configurationAlarm (11) Package: rtr Raised on class: rtr.VirtualRouterIpAddress	Severity: major Implicitly cleared: true Default probable cause: duplicateIpAddress (2059)	Unspecified
Description: The alarm is raised when a duplicate routing instance IP Address is configured on on two or more different NEs.		
Remedial action: A configuration error has been made which must be corrected. The duplicate IP address with the Prefix must be deleted or modified. Navigate to the Virtual Router Duplicate IP Addresses listing: (Tools -> Network Resources -> Virtual Router Duplicate IP Addresses), for more information on the duplicate IP address.		

Table 35-153 DuplicateRole

Alarm	Attributes	Applicable major NE releases
Name: DuplicateRole (470) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.StackConfiguration	Severity: major Implicitly cleared: false Default probable cause: twoElementsWithSameRole (356)	Unspecified
Description: The alarm is raised when a slot has the same primary or secondary role as another slot in the stack. The slot subsequently enters pass-through mode.		
Remedial action: Login to switch console, check and correct configuration and reload stack.		

Table 35-154 DuplicateRouteDistinguisher

Alarm	Attributes	Applicable major NE releases
Name: DuplicateRouteDistinguisher (4996) Type: configurationAlarm (11) Package: I3fwd Raised on class: I3fwd.ServiceSite	Severity: warning Implicitly cleared: true Default probable cause: duplicateRouteDistinguisher (2050)	Unspecified
Description: The alarm is raised if a duplicate Route Distinguisher is configured on two different NE's on the same or different VPRN Service.		
Remedial action: The Route Distinguisher has been configured on another L3 VPRN Site. Please check the value of Route Distinguisher under Routing tab of VPRN Routing Instance.		

Table 35-155 DuplicateSlot

Alarm	Attributes	Applicable major NE releases
Name: DuplicateSlot (468) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.StackConfiguration	Severity: major Implicitly cleared: false Default probable cause: duplicateSlotNINumber (354)	Unspecified
Description: The alarm is raised when a slot has the same slot number as another stack element. The slot must relinquish its operational status because it has a higher election key, based on the up time, slot number, and MAC address. Both slots subsequently enter pass-through mode.		
Remedial action: Login to switch console, correct the slot number and reload stack.		

Table 35-156 DuplicateVrfPolicy

Alarm	Attributes	Applicable major NE releases
Name: DuplicateVrfPolicy (229) Type: configurationAlarm (11) Package: I3fwd Raised on classes: <ul style="list-style-type: none"> I3fwd.ServiceSiteImportPolicy I3fwd.ServiceSiteExportPolicy 	Severity: warning Implicitly cleared: true Default probable cause: duplicateVrfPolicyExists (177)	Unspecified
Description: The alarm is raised when the 5620 SAM detects a duplicate VRF policy in a VPRN. The alarm information includes the VRF policy ID and type, and information about the service site. Note: starting from SAM 12.0 R1, SAM no longer raise this alarm since it is not much useful but has performance issue.		
Remedial action: A configuration error has been made which must be corrected. The duplicate VRF policy must be deleted. Note: starting from SAM 12.0 R1, SAM no longer raises this alarm.		

Table 35-157 DuplicateVrfTarget

Alarm	Attributes	Applicable major NE releases
Name: DuplicateVrfTarget (230) Type: configurationAlarm (11) Package: I3fwd Raised on class: I3fwd.ServiceSite	Severity: warning Implicitly cleared: true Default probable cause: duplicateVrfTargetExists (178)	Unspecified
Description: The alarm is raised when the 5620 SAM detects a duplicate VRF target in a VPRN. The alarm information includes the VRF policy ID and type, and information about the service site.		
Remedial action: A configuration error has been made which must be corrected. The duplicate VRF target must be deleted.		

Table 35-158 DyingGasp (equipment)

Alarm	Attributes	Applicable major NE releases
Name: DyingGasp (1164) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.CardSlot	Severity: major Implicitly cleared: false Default probable cause: dyingGaspSignal (463)	Unspecified
Description: The alarm is raised when a Dying Gasp trap is received to indicate a power failure.		
Remedial action: This alarm is raised by the node just before going down, this might be due to the fact that the power supply connected to the node is down or failed. Please make sure the power supply to the specific node is proper.		

Table 35-159 DyingGasp (netw)

Alarm	Attributes	Applicable major NE releases
Name: DyingGasp (1164) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: dyingGasp (1423)	Unspecified
Description: The alarm is raised when a 7210 SAS node has loss of power.		
Remedial action: This alarm is raised by the node just before going down, this might be due to the fact that the power supply connected to the node is down or failed. Please make sure the power supply to the specific node is proper.		

Table 35-160 DyingGaspSignal

Alarm	Attributes	Applicable major NE releases
Name: DyingGaspSignal (623) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.PhysicalPort	Severity: major Implicitly cleared: false Default probable cause: dyingGaspSignal (463)	Unspecified
Description: The alarm is raised when a Dying Gasp signal is received from a remote 7210 SAS to indicate a power loss.		
Clearing condition: ('state' EQUAL 'Link Up')		
Remedial action: This alarm is raised by the node to indicate that one of the neighbouring node which is directly connected to the specific port of this node has signaled that it's going down. This might be due to the fact that the power supply connected to the remote node is down or failed, please make sure the power supply to that specific remote node through the specific port (as found in the additional text field) is proper.		

Table 35-161 DynSvcIdRangeConflict

Alarm	Attributes	Applicable major NE releases
Name: DynSvcIdRangeConflict (4420) Type: DynSvcIdRangeConflict (126) Package: dynsvc Raised on class: dynsvc.DynSvcNeConfig	Severity: warning Implicitly cleared: true Default probable cause: DynSvcIdRangeConflict (1584)	Unspecified
Description: The alarm is raised when the configured Dynamic Service ID Range has conflicts with one or more Range Policies.		
Remedial action: A possible conflict currently exists between the Dynamic Service ID Range specified for this NE and one or more Range Policy entries. To clear the alarm, one of the two must change. This alarm may be benign if the the conflicting Range Policy and Dynamic Service ID Range were intended.		

Table 35-162 DynSvcSapFailure

Alarm	Attributes	Applicable major NE releases
Name: DynSvcSapFailure (4421) Type: DynSvcSapFailure (127) Package: dynsvc Raised on class: dynsvc.DynSvcNeConfig	Severity: warning Implicitly cleared: false Default probable cause: DynSvcSapFailure (1585)	Unspecified
Description: The DynSvcSapFailure alarm is raised when a Dynamic Services service SAP creation, modification or removal failed. If the SAP does not exist at the time of this notification, the value 'invalid portid' is put in the alarms sapPortId.'		
Remedial action: Ensure that the RADIUS server and python script specified by the Dynamic Service Policy is functioning correctly.		

Table 35-163 EarlyWarning (mwa)

Alarm	Attributes	Applicable major NE releases
Name: EarlyWarning (681) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: EarlyWarning (1908)	Unspecified
Description: The alarm is raised when a MPT detects an early warning event.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-164 EarlyWarning (radioequipment)

Alarm	Attributes	Applicable major NE releases
Name: EarlyWarning (681) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: earlyWarning (496)	Unspecified
Description: The alarm is raised when an MSS detects an early warning event.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-165 EcIdRxTxOrMacModified

Alarm	Attributes	Applicable major NE releases
Name: EcIdRxTxOrMacModified (802) Type: configurationAlarm (11) Package: mpr Raised on class: mpr.MprVII	Severity: minor Implicitly cleared: false Default probable cause: ecIdRxTxOrMacModified (568)	Unspecified
Description: The alarm is raised when something other than the 5620 SAM deletes a service cross-connect and creates a new service cross-connect whose MAC address, EC ID Rx, or EC ID Tx value does not match the value in the original service.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-166 EncapsulationTypeIncompatible

Alarm	Attributes	Applicable major NE releases
Name: EncapsulationTypeIncompatible (250) Type: configurationAlarm (11) Package: vll Raised on class: vll.VII	Severity: major Implicitly cleared: false Default probable cause: sapEncapsulationTypeIncompatible (189)	Unspecified
Description: The alarm is raised when the encapsulation types of two SAPs in the same lpipe are mismatched.		
Raising condition: ('encapsulationTypeIncompatible' EQUAL 'true')		
Clearing condition: ('encapsulationTypeIncompatible' EQUAL 'false')		
Remedial action: Ensure that the encapsulation type of any two SAPs in I-Pipe service are not mismatched.		

Table 35-167 EndpointActiveObjectChanged

Alarm	Attributes	Applicable major NE releases
Name: EndpointActiveObjectChanged (437) Type: redundancyAlarm (52) Package: service Raised on class: service.Endpoint	Severity: warning Implicitly cleared: false Default probable cause: ServiceEndpointSwitchover (1442) Applicable probable causes: <ul style="list-style-type: none"> ServiceEndpointSwitchover ForceSwitchover 	Unspecified
Description: The alarm is raised when an automatic or manual endpoint switchover occurs.		
Remedial action: Informational - no corrective action required.		

Table 35-168 EndpointMacLimitReached

Alarm	Attributes	Applicable major NE releases
Name: EndpointMacLimitReached (444) Type: resourceAlarm (28) Package: vpls Raised on class: vpls.Endpoint	Severity: warning Implicitly cleared: true Default probable cause: resourceLimitReached (131)	Unspecified
Description: The alarm is raised when the 5620 SAM receives the svcEndpointMacLimitAlarmRaised trap from an NE, which indicates that the number of MAC addresses stored in the FDB for the endpoint exceeds the high watermark for the site FIB. The number of MAC addresses includes the static MAC addresses on the endpoint and the learned MAC addresses in the spoke SDPs that are associated with the endpoint. The alarm clears when the 5620 SAM receives the svcEndpointMacLimitAlarmCleared trap from the NE.		
Remedial action: Increase the high water mark for the site FIB to allow more entries to be added.		

Table 35-169 EPSAbnormalState

Alarm	Attributes	Applicable major NE releases
Name: EPSAbnormalState (3932) Type: epsAbnormalConditionAlarm (113) Package: mpr Raised on class: mpr.MPRProtection	Severity: variable Implicitly cleared: true Default probable cause: EPSProblem (1515)	Unspecified
Description: The alarm is raised when abnormal state resulted due to force switch/lockout operation in EPS mode.		
Remedial action: This alarm is raised when forced-switch/lockout command in EPS mode which led to an abnormal condition.		

Table 35-170 EPSPathDrillDownFailed

Alarm	Attributes	Applicable major NE releases
Name: EPSPathDrillDownFailed (847) Type: EpcAlarm (59) Package: lte Raised on class: lte.EPSPath	Severity: major Implicitly cleared: true Default probable cause: EPSPathDrillDownFailed (604)	Unspecified
Description: The alarm is raised when the drilldown of an EPS path fails.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: A configuration error has been made which must be corrected. The configured drill down hint does not match the underlying transport connectivity.		

35 – Unspecified NE alarms

Table 35-171 EPSPathReferencedObjectDeleted

Alarm	Attributes	Applicable major NE releases
Name: EPSPathReferencedObjectDeleted (848) Type: EpcAlarm (59) Package: lte Raised on class: lte.EPSPathComponent	Severity: major Implicitly cleared: true Default probable cause: EPSPathReferencedObjectDeleted (605)	Unspecified
Description: The alarm is raised when a referenced object is deleted.		
Raising condition: ('componentPointer' EQUAL '\\"')		
Clearing condition: ('componentPointer' NOT EQUAL '\\"')		
Remedial action: Informational - no corrective action required.		

Table 35-172 EthernetPortCrcFailure

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortCrcFailure (3629) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: ethernetPortCrcFailure (1414)	Unspecified
Description: The alarm is raised when an Ethernet port CRC alarm condition is detected (Signal Degradation Threshold or Signal Failure Threshold exceeded).		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-173 EthernetPortInternalAlarm

Alarm	Attributes	Applicable major NE releases
Name: EthernetPortInternalAlarm (3630) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: ethernetPortInternalAlarm (1415)	Unspecified
Description: The alarm is raised when an Ethernet port experiences excessive internal MAC tx errors. It is generated only when downOnInternalError is enabled on the port.		
Remedial action: This alarm indicates that the port (card) in question is likely faulty. Please replace the card with a card known to be functional.		

Table 35-174 EthernetTunnelDown

Alarm	Attributes	Applicable major NE releases
Name: EthernetTunnelDown (771) Type: configurationAlarm (11) Package: ethernetTunnel Raised on class: ethernetTunnel.EthernetTunnel	Severity: major Implicitly cleared: true Default probable cause: ethernetTunnelDown (547)	Unspecified
Description: The alarm is raised when the aggregated Ethernet tunnel Operational State is Down.		
Raising condition: (('aggrEndPtOperationalState' EQUAL 'Down'))		
Clearing condition: (('aggrEndPtOperationalState' NOT EQUAL 'Down'))		
Remedial action: Fix the error indicated in the alarm, e.g. port down, MEP down...		

Table 35-175 ExcessiveEnvironmentTemperature (equipment)

Alarm	Attributes	Applicable major NE releases
Name: ExcessiveEnvironmentTemperature (1118) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: excessiveEnvironmentTemp (830)	Unspecified
Description: The alarm is raised when MPT is overheated.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-176 ExcessiveEnvironmentTemperature (mpr)

Alarm	Attributes	Applicable major NE releases
Name: ExcessiveEnvironmentTemperature (1118) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: excessiveEnvironmentTemp (830)	Unspecified
Description: The alarm is raised when MPT is overheated.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-177 ExportPolicyNotFound

Alarm	Attributes	Applicable major NE releases
Name: ExportPolicyNotFound (231) Type: configurationAlarm (11) Package: I3fwd Raised on class: I3fwd.ServiceSiteExportPolicy	Severity: major Implicitly cleared: true Default probable cause: exportPolicyDoesNotExist (179)	Unspecified
Description: The alarm is raised when a VRF export policy for a VPRN cannot be found. The alarm information includes the policy ID. Note: starting from SAM 12.0 R1, SAM no longer raise this alarm since it is not much useful but has performance issue.		
Remedial action: A configuration error has occurred which must be corrected. The VRP export policy must be created and distributed to the NE reporting the problem. Note: starting from SAM 12.0 R1, SAM no longer raises this alarm.		

Table 35-178 FanCommunicationProblem

Alarm	Attributes	Applicable major NE releases
Name: FanCommunicationProblem (5424) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: fanCommunicationProblem (2127)	Unspecified
Description: The alarm is raised when a communication problem with fan is detected.		
Remedial action: The alarm is raised when FAN communication Problem is detected on the subrack. Refer 9500 Node Maintenance manual for remedial action information		

Table 35-179 FanRPMAAlarm

Alarm	Attributes	Applicable major NE releases
Name: FanRPMAAlarm (1126) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Fan	Severity: variable Implicitly cleared: false Default probable cause: fanFailure (116)	Unspecified
Description: The alarm is raised when a fan alarm usage state is other than Normal.		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 35-180 FIBHighOccupancy

Alarm	Attributes	Applicable major NE releases
Name: FIBHighOccupancy (752) Type: resourceAlarm (28) Package: equipment Raised on class: equipment.BaseCard	Severity: warning Implicitly cleared: true Default probable cause: FIBHighOccupancy (528)	Unspecified
Description: The alarm is raised when the FIB occupancy on an IOM card changes from normal to high.		
Remedial action: Informational - no corrective action required.		

Table 35-181 FibOutOfSynch

Alarm	Attributes	Applicable major NE releases
Name: FibOutOfSynch (625) Type: resourceAlarm (28) Package: equipment Raised on class: equipment.DaughterCard	Severity: critical Implicitly cleared: true Default probable cause: fibUpdateFailed (464)	Unspecified
Description: The alarm is raised when the FIB on an MDA is out of synchronization.		
Remedial action: Informational - no corrective action required.		

Table 35-182 FilterApplyPathProblem

Alarm	Attributes	Applicable major NE releases
Name: FilterApplyPathProblem (4904) Type: configurationAlarm (11) Package: filterprefixlist Raised on class: filterprefixlist.PrefixListApplyPathMember	Severity: minor Implicitly cleared: false Default probable cause: tFilterApplyPathProblem (1960)	Unspecified
Description: The alarm is raised when a problem is encountered for a configured IP PrefixList apply-path rule.		
Remedial action: Clear the alarm and verify the prefix-list configurations which might have reached the maximum limit. Try reducing the prefix-list/ apply-path members.		

Table 35-183 FilterEmbeddingOperStateChange

Alarm	Attributes	Applicable major NE releases
Name: FilterEmbeddingOperStateChange (4973) Type: configurationAlarm (11) Package: acfilter Raised on class: acfilter.FilterEmbeddedRefTable	Severity: minor Implicitly cleared: false Default probable cause: tFilterEmbeddingOperStateChange (2030)	Unspecified
Description: The alarm is raised when the embedding oper state change is other than in-service.		
Remedial action: The alarm is raised when the embedded filter operstate is other than inService. Remove and reapply the embedding to make operstate as inService.		

Table 35-184 FirmwareDownloadOnGoing (equipment)

Alarm	Attributes	Applicable major NE releases
Name: FirmwareDownloadOnGoing (626) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: firmwareDownloadOnGoing (465)	Unspecified
Description: The alarm is raised when a firmware download is in progress.		
Remedial action: Informational - Firmware for the equipment is downloading.		

Table 35-185 FirmwareDownloadOnGoing (mpr)

Alarm	Attributes	Applicable major NE releases
Name: FirmwareDownloadOnGoing (626) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: firmwareDownloadOnGoing (465)	Unspecified
Description: The alarm is raised when a firmware download is in progress.		
Remedial action: Informational - Firmware for the equipment is downloading.		

Table 35-186 FirmwareMismatchAlarm

Alarm	Attributes	Applicable major NE releases
Name: FirmwareMismatchAlarm (146) Type: firmwareAlarm (26) Package: equipment Raised on class: equipment.Card	Severity: critical Implicitly cleared: true Default probable cause: bootRomVersionMismatch (119) Applicable probable causes: <ul style="list-style-type: none"> bootRomVersionMismatch fpgaVersionMismatch 	Unspecified
Description: The alarm is raised when a device detects a mismatch between the firmware version and the device software image. The alarm information includes the expected firmware version.		
Remedial action: Either the firmware or the device SW must be upgraded to compatible versions. The image (firmware or device SW) which is the oldest should be upgraded. Firmware must be upgraded using the NE's CLI. 5620 SAM can be used to upgrade the SW image on the device.		

Table 35-187 FirmwareUpgradeAlarm

Alarm	Attributes	Applicable major NE releases
Name: FirmwareUpgradeAlarm (212) Type: firmwareAlarm (26) Package: equipment Raised on class: equipment.Card	Severity: info Implicitly cleared: false Default probable cause: firmwareUpgraded (169)	Unspecified
Description: The alarm is raised when a device automatically upgrades the firmware of a hot-inserted IOM or CPM.		
Remedial action: Informational - no corrective action required.		

Table 35-188 firstExpirationThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: firstExpirationThresholdCrossed (2907) Type: configurationAlarm (11) Package: ranlicense Raised on class: ranlicense.RANLicense	Severity: minor Implicitly cleared: true Default probable cause: ageingLicense (1113)	Unspecified
Description: The alarm is raised when the specified First Expiration Threshold for RAN licensing is crossed.		
Remedial action: Ask for a new LKDI license file with a further expiration date.		

35 – Unspecified NE alarms

Table 35-189 firstUsageThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: firstUsageThresholdCrossed (2908) Type: configurationAlarm (11) Package: ranlicense Raised on class: ranlicense.RANLicense	Severity: minor Implicitly cleared: true Default probable cause: insufficientPurchasedLicenses (1114)	Unspecified
Description: The alarm is raised when the specified First Usage Threshold for RAN licensing is crossed.		
Remedial action: Ask for a new LKDI license file with more tokens.		

Table 35-190 FlowRouteInvalid

Alarm	Attributes	Applicable major NE releases
Name: FlowRouteInvalid (2932) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Peer	Severity: minor Implicitly cleared: false Default probable cause: flowRouteInvalid (1126)	Unspecified
Description: The alarm is raised when the received BGP flow route is invalid. The BGP peer dose not create ip filter entry for the received flow route.		
Remedial action: The NE has received an invalid flow route from a 3rd party appliance which is monitoring the network for suspect traffic. This could be the result of corruption or a SW error on the 3rd party appliance. Please refer to the documentation supplied with appliance for assistance.		

Table 35-191 FlowspecUnsupportdComAction

Alarm	Attributes	Applicable major NE releases
Name: FlowspecUnsupportdComAction (2933) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Site	Severity: minor Implicitly cleared: false Default probable cause: unsupportdComAction (1127)	Unspecified
Description: The alarm is raised when the best route for a FlowSpec NLRI is received from a remote BGP peer with an extended community action that is unsupported.		
Remedial action: Informational - no corrective action required.		

Table 35-192 ForceQTagForwardingMisconfiguration (epipe)

Alarm	Attributes	Applicable major NE releases
Name: ForceQTagForwardingMisconfiguration (813) Type: configurationAlarm (11) Package: epipe Raised on class: epipe.Epipe	Severity: warning Implicitly cleared: true Default probable cause: forceQTagForwardingInconsistent (576)	Unspecified
Description: The alarm is raised when two I-sites in a service use different Force Q Tag Forwarding values.		
Raising condition: ('operationalFlags'anyBit'Force Q Tag Forwarding Inconsistent')		
Clearing condition: NOT (('operationalFlags'anyBit'Force Q Tag Forwarding Inconsistent'))		
Remedial action: Check configuration so that I-sites in the service use same Force Q-Tag Forwarding values.		

Table 35-193 ForceQTagForwardingMisconfiguration (vppls)

Alarm	Attributes	Applicable major NE releases
Name: ForceQTagForwardingMisconfiguration (813) Type: configurationAlarm (11) Package: vppls Raised on class: vppls.AbstractVpls	Severity: warning Implicitly cleared: true Default probable cause: forceQTagForwardingInconsistent (576)	Unspecified
Description: The alarm is raised when two I-sites in a service use different Force Q Tag Forwarding values.		
Raising condition: ('operationalFlags'anyBit'Force Q Tag Forwarding Inconsistent')		
Clearing condition: NOT (('operationalFlags'anyBit'Force Q Tag Forwarding Inconsistent'))		
Remedial action: Check configuration so that I-sites in the service use same Force Q-Tag Forwarding values.		

Table 35-194 GenericInterfaceLinkDown

Alarm	Attributes	Applicable major NE releases
Name: GenericInterfaceLinkDown (403) Type: equipmentAlarm (3) Package: genericne Raised on class: genericne.GenericNeInterface	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	Unspecified
Description: The alarm is raised when the 5620 SAM detects a communication link failure on a GNE interface. The alarm clears when the link returns to service.		
Raising condition: ('Operational State' EQUAL 'Down')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: The Operational State of the generic NE interface is down. The physical port (near end or far end) may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

35 – Unspecified NE alarms

Table 35-195 GlobalAppProfileCreated

Alarm	Attributes	Applicable major NE releases
Name: GlobalAppProfileCreated (2931) Type: ConfigurationAlarm (15) Package: aapolicy Raised on class: aapolicy.ApplicationProfile	Severity: warning Implicitly cleared: true Default probable cause: globalAppProfileMissing (1125)	Unspecified
Description: The alarm is raised when a global application profile to which a global transit ip policy is referenced does not exist. The alarm notifies the user that a global application profile has been created.		
Remedial action: Informational. A global Application Profile has been created; this object is referenced by a Transit IP Policy or Transit Prefix Policy.		

Table 35-196 globalLicenseViolation

Alarm	Attributes	Applicable major NE releases
Name: globalLicenseViolation (2909) Type: configurationAlarm (11) Package: ranlicense Raised on class: ranlicense.RANLicenseManager	Severity: critical Implicitly cleared: true Default probable cause: atLeastOneLicenseInViolation (1115)	Unspecified
Description: The alarm is raised when at least one RAN license is in violation.		
Remedial action: Provide a new LKDI license file with a further expiration date and/or more tokens.		

Table 35-197 GneCommunicationAlarm

Alarm	Attributes	Applicable major NE releases
Name: GneCommunicationAlarm (783) Type: CommunicationAlarm (64) Package: netw Raised on class: netw.NetworkElement	Severity: variable Implicitly cleared: false Default probable cause: User_Defined (558)	Unspecified
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 35-198 GneEnvironmentalAlarm

Alarm	Attributes	Applicable major NE releases
Name: GneEnvironmentalAlarm (784) Type: EnvironmentalAlarm (65) Package: netw Raised on class: netw.NetworkElement	Severity: variable Implicitly cleared: false Default probable cause: User_Defined (558)	Unspecified
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 35-199 GneEquipmentAlarm

Alarm	Attributes	Applicable major NE releases
Name: GneEquipmentAlarm (785) Type: EquipmentAlarm (66) Package: netw Raised on class: netw.NetworkElement	Severity: variable Implicitly cleared: false Default probable cause: User_Defined (558)	Unspecified
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 35-200 GneMTIEAlarm (genericne)

Alarm	Attributes	Applicable major NE releases
Name: GneMTIEAlarm (3633) Type: EquipmentAlarm (66) Package: genericne Raised on class: genericne.GenericNeInterface	Severity: variable Implicitly cleared: false Default probable cause: User_Defined (558)	Unspecified
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 35-201 GneMTIEAlarm (netw)

Alarm	Attributes	Applicable major NE releases
Name: GneMTIEAlarm (3633) Type: EquipmentAlarm (66) Package: netw Raised on class: netw.NetworkElement	Severity: variable Implicitly cleared: false Default probable cause: User_Defined (558)	Unspecified
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 35-202 GneProcessingErrorAlarm

Alarm	Attributes	Applicable major NE releases
Name: GneProcessingErrorAlarm (786) Type: ProcessingErrorAlarm (67) Package: netw Raised on class: netw.NetworkElement	Severity: variable Implicitly cleared: false Default probable cause: User_Defined (558)	Unspecified
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 35-203 GneQualityOfServiceAlarm

Alarm	Attributes	Applicable major NE releases
Name: GneQualityOfServiceAlarm (787) Type: QualityOfServiceAlarm (68) Package: netw Raised on class: netw.NetworkElement	Severity: variable Implicitly cleared: false Default probable cause: User_Defined (558)	Unspecified
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 35-204 GneServiceAlarm

Alarm	Attributes	Applicable major NE releases
Name: GneServiceAlarm (788) Type: ServiceAlarm (69) Package: netw Raised on class: netw.NetworkElement	Severity: variable Implicitly cleared: false Default probable cause: User_Defined (558)	Unspecified
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 35-205 GneSystemAlarm

Alarm	Attributes	Applicable major NE releases
Name: GneSystemAlarm (789) Type: SystemAlarm (70) Package: netw Raised on class: netw.NetworkElement	Severity: variable Implicitly cleared: false Default probable cause: User_Defined (558)	Unspecified
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 35-206 GneTransportAlarm

Alarm	Attributes	Applicable major NE releases
Name: GneTransportAlarm (790) Type: TransportAlarm (71) Package: netw Raised on class: netw.NetworkElement	Severity: variable Implicitly cleared: false Default probable cause: User_Defined (558)	Unspecified
Description: This user-definable alarm is raised against a generic NE when the 5620 SAM receives a trap from the generic NE that is mapped to the alarm in a generic NE alarm catalogue. The alarm mapping defines the Probable cause, Severity, and Implicitly cleared values, and optionally contains an extension that is appended to the Name value.		
Remedial action: This alarm is mapped from a GNE trap. Remedial action depends on the specific equipment and trap definition.		

Table 35-207 GponPortInBandAlarm

Alarm	Attributes	Applicable major NE releases
Name: GponPortInBandAlarm (3697) Type: gponInBandSignallingAlarm (106) Package: equipment Raised on class: equipment.GponPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: InBandSignallingNotEstablishedBetweenSARAndONT (1435)	Unspecified
Description: The alarm is raised when in-band signaling between the ONT and SAR for GPON statistics collection is not established after 30 seconds of GPON port uptime.		
Remedial action: Informational - Reachability between SAR and ONT devices has to be checked.		

Table 35-208 GponPortInBandAlarmClear

Alarm	Attributes	Applicable major NE releases
Name: GponPortInBandAlarmClear (3698) Type: gponInBandSignallingAlarm (106) Package: equipment Raised on class: equipment.GponPortSpecifics	Severity: cleared Implicitly cleared: true Default probable cause: InBandSignallingEstablishedBetweenSARAndONT (1436)	Unspecified
Description: The alarm is raised when in-band signaling between the ONT and SAR for GPON statistics collection is established.		
Remedial action: Informational - no corrective action required.		

Table 35-209 GroupInSSMRRange

Alarm	Attributes	Applicable major NE releases
Name: GroupInSSMRRange (187) Type: configurationAlarm (11) Package: pim Raised on class: pim.Site	Severity: warning Implicitly cleared: false Default probable cause: STARGGroupInSSMRRange (147)	Unspecified
Description: The alarm is raised when an NE receives a PIM register, PIM (*,G) assert, PIM (*,G) join/prune, or an IGMP local membership message for a group defined in the SSM address range.		
Remedial action: Informational - no corrective action required		

Table 35-210 GwAcrFailuresAlarmMajor

Alarm	Attributes	Applicable major NE releases
Name: GwAcrFailuresAlarmMajor (2955) Type: communicationsAlarm (4) Package: lte Raised on class: lte.AgWrfPeer	Severity: major Implicitly cleared: false Default probable cause: connectionDown (2)	Unspecified
Description: A tmnxMobGwAcrFailuresAlarmMajor is generated when 2 ACR transmission failures occur in a 10 second interval or 5 ACR transmission failures occur in a 60 second interval to the peer.		
Remedial action: Informational - a threshold for Anonymous Communication Rejection transmission failures has been exceeded. If the condition persists please contact Alcatel-Lucent support for assistance.		

Table 35-211 GwCdfDownAlarm

Alarm	Attributes	Applicable major NE releases
Name: GwCdfDownAlarm (2956) Type: communicationsAlarm (4) Package: lte Raised on class: lte.RfReferencePoint	Severity: minor Implicitly cleared: false Default probable cause: connectionDown (2)	Unspecified
Description: A tmnxMobGwCdfDownAlarm notification is generated when both the primary and the secondary Charging Data Functions (CDFs) are down for active Rf diameter sessions		
Remedial action: The Charging Data Functions (primary and secondary) are down for a Rf reference point. The CDF function appears down for one of the following reasons: the underlying IP or physical interface is down, the far end diameter peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end diameter peer is operational and check that the underlying transport network is up.		

Table 35-212 GwCfCapacityAlarmMajor

Alarm	Attributes	Applicable major NE releases
Name: GwCfCapacityAlarmMajor (2957) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AGWReferencePoint	Severity: major Implicitly cleared: false Default probable cause: resourceFull (53)	Unspecified
Description: A tmnxMobGwCfCapacityAlarmMajor notification is generated when compact flash capacity reaches 95% limit.		
Remedial action: The compact flash device of the MGW is approaching capacity. The contents of the device must be analysed to identify redundant content which can be deleted.		

Table 35-213 GwCfCapacityAlarmMinor

Alarm	Attributes	Applicable major NE releases
Name: GwCfCapacityAlarmMinor (2958) Type: equipmentAlarm (3) Package: lte Raised on class: lte.AGWReferencePoint	Severity: minor Implicitly cleared: false Default probable cause: resourceFull (53)	Unspecified
Description: A tmnxMobGwCfCapacityAlarmMinor notification is generated when compact flash capacity reaches 85% limit		
Remedial action: The compact flash device of the MGW is approaching capacity. The contents of the device must be analysed to identify redundant content which can be deleted.		

Table 35-214 GwDdnThrottlingStart

Alarm	Attributes	Applicable major NE releases
Name: GwDdnThrottlingStart (4630) Type: communicationsAlarm (4) Package: lte Raised on class: lte.SigAGWGTPPMIPPeer	Severity: warning Implicitly cleared: false Default probable cause: downLinkThrottling (1897)	Unspecified
Description: A GwDdnThrottlingStart notification is generated when the serving gateway (SGW) starts throttling the Downlink Data Notification (DDN) for the low priority traffic towards a peer node (SGSN/MME).		
Remedial action: The serving gateway (SGW) starts throttling the Downlink Data Notification (DDN) for the low priority traffic towards a peer node (SGSN/MME). When the throttling duration is passed, the SGW will stop throttling the DDN.		

Table 35-215 GwDdnThrottlingStop

Alarm	Attributes	Applicable major NE releases
Name: GwDdnThrottlingStop (4631) Type: communicationsAlarm (4) Package: lte Raised on class: lte.SigAGWGTPPMIPPeer	Severity: warning Implicitly cleared: false Default probable cause: downLinkThrottling (1897)	Unspecified
Description: A GwDdnThrottlingStop notification is generated when the serving gateway (SGW) stops throttling the Downlink Data Notification (DDN) for the low priority traffic towards a peer node (SGSN/MME).		
Remedial action: The serving gateway (SGW) stops throttling the Downlink Data Notification (DDN) for the low priority traffic towards a peer node (SGSN/MME). When another throttling instruction is received from a peer node, the SGW will start throttling the DDN.		

Table 35-216 GwGtpPriSrvGrpStateChange

Alarm	Attributes	Applicable major NE releases
Name: GwGtpPriSrvGrpStateChange (3635) Type: EpcAlarm (59) Package: Ite Raised on class: Ite.EPCGateway	Severity: major Implicitly cleared: true Default probable cause: GwGtpPriSrvGrpDown (1419)	Unspecified
Description: An alarm is raised when there has been a change in GPRS Tunneling Protocol (GTP) Prime Server state for all mobile system groups.		
Remedial action: If a GTP Prime server group state is down, CDR packets will be written to CDR files until at least one server becomes available.		

Table 35-217 GwPoolCapacityAlarmMajor

Alarm	Attributes	Applicable major NE releases
Name: GwPoolCapacityAlarmMajor (5190) Type: EpcAlarm (59) Package: Ite Raised on class: Ite.IpPool	Severity: major Implicitly cleared: true Default probable cause: Threshold (2104)	Unspecified
Description: A tmnxMobGwPoolCapacityAlarmMajor notification is generated when either the IPv4 or IPv6 address pool usage reaches 95% of the pool size.		
Remedial action: The IPv4 or IPv6 address pool usage reached 95% of the pool size. Need to look at increasing the address pool size.		

Table 35-218 GwPoolCapacityAlarmMinor

Alarm	Attributes	Applicable major NE releases
Name: GwPoolCapacityAlarmMinor (5191) Type: EpcAlarm (59) Package: Ite Raised on class: Ite.IpPool	Severity: minor Implicitly cleared: true Default probable cause: Threshold (2104)	Unspecified
Description: A tmnxMobGwPoolCapacityAlarmMinor notification is generated when either the IPv4 or IPv6 address pool usage reaches 85% of the pool size.		
Remedial action: Informational: The IPv4 or IPv6 address pool usage reached 85% of the pool size. Need to closely monitor the usage.		

35 – Unspecified NE alarms

Table 35-219 GwRadGroupFail

Alarm	Attributes	Applicable major NE releases
Name: GwRadGroupFail (3636) Type: EpcAlarm (59) Package: Ite Raised on class: Ite.EPCGateway	Severity: major Implicitly cleared: false Default probable cause: EPSGroupDown (1420)	Unspecified
Description: A tmnxMobGwRadGrpFailAlarm notification is generated when all the radius servers have failed in the radius server group.		
Remedial action: The Radius server(s) which are configured in the Radius Server are unreachable. This problem may occur in a number of different scenarios. The server(s) may have become unresponsive - please refer to the Radius server documentation for assistance. The network connectivity to the server(s) may have been lost - please investigate why the underlying transport network is unreliable.		

Table 35-220 GwRadPeerFail

Alarm	Attributes	Applicable major NE releases
Name: GwRadPeerFail (3682) Type: EpcAlarm (59) Package: Iteradius Raised on class: Iteradius.PdnRadiusPeer	Severity: major Implicitly cleared: false Default probable cause: EPSPeerDown (602)	Unspecified
Description: The alarm is raised when the 5620 SAM receives a tmnxMobGwRadPeerFailAlarm notification in response to a RADIUS server failure.		
Remedial action: A Radius peer is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 35-221 HardwareBootFailure

Alarm	Attributes	Applicable major NE releases
Name: HardwareBootFailure (108) Type: softwareAlarm (19) Package: sw Raised on class: sw.CardSoftware	Severity: critical Implicitly cleared: true Default probable cause: softwareBootProblemDueToHardwareIssues (92)	Unspecified
Description: The alarm is raised when an NE fails to boot because of a hardware problem.		
Remedial action: Please contact Alcatel-Lucent support for assistance.		

Table 35-222 HardwareRedundancyAlarm

Alarm	Attributes	Applicable major NE releases
Name: HardwareRedundancyAlarm (147) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ControlProcessor	Severity: major Implicitly cleared: true Default probable cause: primaryCpmFailure (121)	Unspecified
Description: The alarm is raised when the primary CPM fails.		
Remedial action: The CPM card in the chassis may have suffered a failure. Remove and reset the card in question. If this does not resolve the problem replace the card.		

Table 35-223 HashLabelMismatch (svt)

Alarm	Attributes	Applicable major NE releases
Name: HashLabelMismatch (1113) Type: configurationAlarm (11) Package: svt Raised on class: svt.SdpBinding	Severity: warning Implicitly cleared: true Default probable cause: hashLabelMismatch (826)	Unspecified
Description: The alarm is raised when an SDP binding hash label is enabled and the return SDP binding hash label is disabled. If this misconfiguration causes the mismatch of the operational hash label on both sides, the receiving site will drop the data packets as a result. This alarm is cleared when the hash label is either enabled or disabled on both sides.		
Remedial action: The hash label must be enabled or disabled on both ends of the SDP		

Table 35-224 HashLabelMismatch (vprn)

Alarm	Attributes	Applicable major NE releases
Name: HashLabelMismatch (1113) Type: configurationAlarm (11) Package: vprn Raised on class: vprn.Vprn	Severity: warning Implicitly cleared: true Default probable cause: hashLabelMismatch (826)	Unspecified
Description: The alarm is raised when the hash label is enabled on a VPRN site and disabled on another site in the service.		
Remedial action: A configuration error has occurred which must be corrected. The hash label must be enabled or disabled on both ends of the SDP		

Table 35-225 HashLabelSignalCapabilityMismatch

Alarm	Attributes	Applicable major NE releases
Name: HashLabelSignalCapabilityMismatch (3327) Type: configurationAlarm (11) Package: svt Raised on class: svt.SdpBinding	Severity: warning Implicitly cleared: true Default probable cause: hashLabelSignalCapabilityMismatch (1163)	Unspecified
Description: The alarm is raised when an SDP binding hash label signal capability is enabled and the return SDP binding hash label signal capability is disabled or not supported. If this misconfiguration causes the mismatch of the operational hash label on both sides, the receiving site will drop the data packets as a result. This alarm is cleared when the hash label signal capability is either enabled or disabled on both sides.		
Remedial action: The hash label signal capability must be enabled or disabled on both ends of the SDP		

Table 35-226 HighBER (mwa)

Alarm	Attributes	Applicable major NE releases
Name: HighBER (682) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: HighBER (1909)	Unspecified
Description: The alarm is raised when a MPT detects a high BER.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-227 HighBER (radioequipment)

Alarm	Attributes	Applicable major NE releases
Name: HighBER (682) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: highBER (497)	Unspecified
Description: The alarm is raised when an MSS detects a high BER.		
Remedial action: The alarm is raised when an MSS detects a high BER.		

Table 35-228 HighLevelRoutesReached

Alarm	Attributes	Applicable major NE releases
Name: HighLevelRoutesReached (1197) Type: ProtocolAlarm (1) Package: I3fwd Raised on class: I3fwd.ServiceSite	Severity: minor Implicitly cleared: true Default probable cause: HighLevelRoutesReached (897)	Unspecified
Description: The alarm is raised when the number of routes in a VPRN exceeds the high threshold value. The high threshold value is a percentage of the maximum number of routes specified in the VPRN configuration. The percentage is derived by adding 100 to the threshold value in the VPRN configuration and dividing the result by 2. The alarm information includes the number of routes and this calculated high threshold value.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE or VRF instance in the network. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-229 HoldTimeInconsistent

Alarm	Attributes	Applicable major NE releases
Name: HoldTimeInconsistent (810) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Peer	Severity: major Implicitly cleared: false Default probable cause: holdTimeInconsistent (575)	Unspecified
Description: The alarm is raised when a BGP site tries to establish a peering using a hold time that is less than the configured strict hold time. The peering is rejected as a result.		
Remedial action: A configuration error has occurred which must be corrected. The hold time must be set to a value greater than the strict hold time.		

Table 35-230 HostConnectivityLostRateExceeded

Alarm	Attributes	Applicable major NE releases
Name: HostConnectivityLostRateExceeded (276) Type: communicationsAlarm (4) Package: ressubscr Raised on class: ressubscr.ShcvSite	Severity: major Implicitly cleared: false Default probable cause: hostDown (208) Applicable probable causes: <ul style="list-style-type: none"> hostDown trapDropped 	Unspecified
Description: The alarm is raised when the trapDroppedRaisesAlarm parameter is enabled and the maximum allowed number of SHCV host connectivity loss events on a SAP is exceeded. The SHCV action in response to the alarm is specified by the maxHostLostConnectivityRate parameter. If the specified action is to remove the host information, the host information is removed and the connectivity of the host is not subsequently verified.		
Remedial action: This may be a transient error condition in the network or possible congestion or could be a sign that the SHCV ping interval is too short. Verify the status of the network for those subscribers and the service SHCV configuration.		

35 – Unspecified NE alarms

Table 35-231 HostSharedFilterHighWatermarkAlarm

Alarm	Attributes	Applicable major NE releases
Name: HostSharedFilterHighWatermarkAlarm (4974) Type: configurationAlarm (11) Package: acfilter Raised on class: acfilter.FilterDefinition	Severity: warning Implicitly cleared: true Default probable cause: HostSharedFilterHighWatermarkAlarm (2031)	Unspecified
Description: The alarm is raised when the number of dynamically allocated Host Shared Filters based on the indicated filter reaches or exceeds the configured high watermark. This alarm is cleared when the number of dynamically allocated Host Shared Filters drops to or below the configured low watermark of the indicated filter.		
Remedial action: Please check the watermark configurations on the indicated filter and make an adjustment accordingly.		

Table 35-232 HouseKeeping (equipment)

Alarm	Attributes	Applicable major NE releases
Name: HouseKeeping (1165) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: houseKeeping (867)	Unspecified
Description: The alarm is raised when a HouseKeeping trap is received.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-233 HouseKeeping (mpr)

Alarm	Attributes	Applicable major NE releases
Name: HouseKeeping (1165) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.AbstractMprAux	Severity: minor Implicitly cleared: true Default probable cause: HouseKeeping (1564)	Unspecified
Description: Defect detected by an house-keeping interface on AUX card.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-234 IgmpGrplfSapMaxGroupsLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: IgmpGrplfSapMaxGroupsLimitExceeded (3979) Type: configurationAlarm (11) Package: igmp Raised on class: igmp.GroupInterfaceSap	Severity: warning Implicitly cleared: false Default probable cause: IgmpGrplfSapMaxGroupsLimitExceeded (1556)	Unspecified
Description: This alarm is raised when an IGMP host subscribes to a new multicast group that cannot be installed because the maximum number of active groups on the IGMP group interface SAP has already been reached.		
Remedial action: Increase the value of the 'maxGroups' attribute in the parent IGMP group interface so that the number of active IGMP groups stays under the configured threshold.		

Table 35-235 IgmpGrplfSapMaxGrpSrcLimExcd

Alarm	Attributes	Applicable major NE releases
Name: IgmpGrplfSapMaxGrpSrcLimExcd (4622) Type: configurationAlarm (11) Package: igmp Raised on class: igmp.GroupInterfaceSap	Severity: warning Implicitly cleared: false Default probable cause: IgmpGrplfSapMaxGrpSrcLimExcd (1890)	Unspecified
Description: This alarm is raised when an attempt is made to configure a group source for a group when the number of group sources is equal to vRtrIgmpGrplfSapMaxGrpSources, the maximum number of group sources per group supported on the SAP.		
Remedial action: Increase the value of the 'maxGrpSources' attribute in the parent IGMP group interface so that the number of active IGMP Group sources stays under the configured threshold.		

Table 35-236 IgmpGrplfSapMaxSourcesLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: IgmpGrplfSapMaxSourcesLimitExceeded (3980) Type: configurationAlarm (11) Package: igmp Raised on class: igmp.GroupInterfaceSap	Severity: warning Implicitly cleared: false Default probable cause: IgmpGrplfSapMaxSourcesLimitExceeded (1557)	Unspecified
Description: This alarm is raised when an IGMP host subscribes to a multicast group with a source that cannot be installed because the maximum number of active sources on the IGMP group interface SAP has already been reached.		
Remedial action: Increase the value of the 'maxSources' attribute in the parent IGMP group interface so that the number of active IGMP sources stays under the configured threshold.		

Table 35-237 IgmpHostMaxGrpSrcsLimitExcd

Alarm	Attributes	Applicable major NE releases
Name: IgmpHostMaxGrpSrcsLimitExcd (4623) Type: configurationAlarm (11) Package: igmp Raised on class: igmp.GrpInterface	Severity: warning Implicitly cleared: false Default probable cause: IgmpHostMaxGrpSrcsLimitExcd (1891)	Unspecified
Description: This alarm is raised when an attempt is made to configure a source for a group when the number of group sources is equal to vRtrIgmpHostMaxGrpSources, the maximum number of group sources per group supported on the host.		
Remedial action: Increase the value of the 'maxGrpSources' attribute in the parent IGMP group interface so that the number of active IGMP Group sources stays under the configured threshold.		

Table 35-238 IgmpSnpGGrpDroppedLimitExceeded (svt)

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnpGGrpDroppedLimitExceeded (392) Type: SdpBindingAlarm (30) Package: svt Raised on class: svt.SdpBindingIgmpSnpGCfg	Severity: warning Implicitly cleared: false Default probable cause: igmpSnpGGrpMaxNbrGrpsReached (292)	Unspecified
Description: The alarm is raised when an IGMP group is removed from an SDP binding because the number of allowed IGMP groups specified by sdpBndIgmpSnpGCfgMaxNbrGrps is reached.		
Remedial action: This can be remedied by increasing the maximum number of allowed IGMP groups on the SDP.		

Table 35-239 IgmpSnpGGrpDroppedLimitExceeded (vpls)

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnpGGrpDroppedLimitExceeded (392) Type: AccessInterfaceAlarm (32) Package: vpls Raised on class: vpls.L2AccessInterfaceIgmpSnpGCfg	Severity: warning Implicitly cleared: false Default probable cause: igmpSnpGGrpMaxNbrGrpsReached (292)	Unspecified
Description: The alarm is raised when an IGMP group is removed from a SAP because the number of allowed IGMP groups specified by sapIgmpSnpGCfgMaxNbrGrps is reached.		
Remedial action: This can be remedied by increasing the maximum number of allowed IGMP groups on the SAP.		

Table 35-240 IgmpSnpgGrpSrcLimitExceed

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnpgGrpSrcLimitExceed (4894) Type: SdpBindingAlarm (30) Package: svt Raised on class: svt.SdpBindingIgmpSnpgCfg	Severity: major Implicitly cleared: false Default probable cause: IgmpSnpgGrpSrcLimitExceed (1952)	Unspecified
Description: The alarm is raised when an IGMP group or source is dropped on a given SDP Bind because a user configurable upper limit given by sdpBndIgmpSnpgCfgMaxNbrGrpSrcs is reached		
Remedial action: This can be remedied by increasing the maximum number of allowed IGMP group sources on the SDP.		

Table 35-241 IgmpSnpgGrpSrcLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnpgGrpSrcLimitExceeded (4897) Type: AccessInterfaceAlarm (32) Package: vpls Raised on class: vpls.L2AccessInterfaceIgmpSnpgCfg	Severity: major Implicitly cleared: false Default probable cause: igmpSnpgGrpMaxNbrGrpSrcsReached (1954)	Unspecified
Description: The alarm is raised when an IGMP group or source is dropped on a given SAP because a user configurable upper limit given by sapIgmpSnpgCfgMaxNbrGrpSrcs is reached		
Remedial action: This can be remedied by increasing the maximum number of allowed IGMP Group sources on the SAP.		

Table 35-242 IgmpSnpgSrcDroppedLimitExceeded (svt)

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnpgSrcDroppedLimitExceeded (735) Type: SdpBindingAlarm (30) Package: svt Raised on class: svt.SdpBindingIgmpSnpgCfg	Severity: warning Implicitly cleared: false Default probable cause: igmpSnpgGrpMaxNbrSrcsReached (512)	Unspecified
Description: The alarm is raised when an IGMP source is removed from an SDP binding because the number of allowed IGMP sources specified by sdpBndIgmpSnpgCfgMaxNbrSrcs is reached.		
Remedial action: This can be remedied by increasing the maximum number of allowed IGMP sources on the SDP.		

Table 35-243 IgmpSnpgSrcDroppedLimitExceeded (vpls)

Alarm	Attributes	Applicable major NE releases
Name: IgmpSnpgSrcDroppedLimitExceeded (735) Type: AccessInterfaceAlarm (32) Package: vpls Raised on class: vpls.L2AccessInterfaceIgmpSnpgCfg	Severity: warning Implicitly cleared: false Default probable cause: igmpSnpgGrpMaxNbrSrcsReached (512)	Unspecified
Description: The alarm is raised when an IGMP source is removed from a SAP because the number of allowed IGMP sources specified by sapIgmpSnpgCfgMaxNbrGrps is reached.		
Remedial action: This can be remedied by increasing the maximum number of allowed IGMP sources on the SAP.		

Table 35-244 ignoreUnknownImportedLicenses

Alarm	Attributes	Applicable major NE releases
Name: ignoreUnknownImportedLicenses (2910) Type: configurationAlarm (11) Package: ranlicense Raised on class: ranlicense.RANLicenseManager	Severity: major Implicitly cleared: true Default probable cause: licenseMappingFileNotAlignedWithImportedFile (1116)	Unspecified
Description: The alarm is raised when at least one of the imported licenses in the LKDI license file is not recognized by the 5620 SAM.		
Remedial action: Informational - Provide a LKDI license file compliant with supported licenses.		

Table 35-245 ImportPolicyNotFound

Alarm	Attributes	Applicable major NE releases
Name: ImportPolicyNotFound (232) Type: configurationAlarm (11) Package: I3fwd Raised on class: I3fwd.ServiceSiteImportPolicy	Severity: major Implicitly cleared: true Default probable cause: importPolicyDoesNotExist (180)	Unspecified
Description: The alarm is raised when a VRF import policy for a VPRN cannot be found. The alarm information includes the policy ID. Note: starting from SAM 12.0 R1, SAM no longer raise this alarm since it is not much useful but has performance issue.		
Remedial action: A configuration error has occurred which must be corrected. The VRP import policy must be created and distributed to the NE reporting the problem. Note: starting from SAM 12.0 R1, SAM no longer raises this alarm.		

Table 35-246 IncompatibleCapacity

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleCapacity (1166) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: incompatibleCapacity (868)	Unspecified
Description: The alarm is raised when there is a radio capacity incompatibility.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-247 IncompatibleChannelSpacing (equipment)

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleChannelSpacing (1167) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: incompatibleChannelSpacing (869)	Unspecified
Description: The alarm is raised when there is a channel spacing incompatibility.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-248 IncompatibleChannelSpacing (radioequipment)

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleChannelSpacing (1167) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: incompatibleChannelSpacing (869)	Unspecified
Description: The alarm is raised when a incompatibility of channel spacing value defect raise.		
Remedial action: The alarm is raised when a incompatibility of channel spacing value defect raise.		

Table 35-249 IncompatibleFrequency (mwa)

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleFrequency (683) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: IncompatibleFrequency (1910)	Unspecified

(1 of 2)

35 – Unspecified NE alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a provisioned MPT frequency is incompatible with the MPT hardware.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

(2 of 2)

Table 35-250 IncompatibleFrequency (radioequipment)

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleFrequency (683) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: incompatibleFrequency (498)	Unspecified
Description: The alarm is raised when a provisioned MSS frequency is incompatible with the MSS hardware.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-251 IncompatibleModulation

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleModulation (4417) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: incompatibleModulation (850)	Unspecified
Description: The alarm is raised when an incompatibility of the modulation value defect raise.		
Remedial action: The alarm is raised when an incompatibility of the modulation value defect raise.		

Table 35-252 IncompatibleModulationParam (mwa)

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleModulationParam (1144) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: IncompatibleModulationParam (1911)	Unspecified
Description: The alarm is raised when the provisioned modulation parameters are incompatible with the MPT hardware.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-253 IncompatibleModulationParam (radioequipment)

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleModulationParam (1144) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: incompatibleModulation (850)	Unspecified
Description: The alarm is raised when the configured modulation parameters are not supported by MPT (or) when XPIC is configured on an MPT that does not allow XPIC capability.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-254 IncompatiblePower

Alarm	Attributes	Applicable major NE releases
Name: IncompatiblePower (3940) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: incompatiblePower (1522)	Unspecified
Description: The alarm is raised when a incompatibility of the power value defect raise.		
Remedial action: The alarm is raised when a incompatibility of the power value defect raise.		

Table 35-255 IncompatibleProtection (equipment)

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleProtection (4824) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: incompatibleProtection (2076)	Unspecified
Description: The alarm is raised in case of hardware incompatibility for 1+1 radio configuration i.e. MPT-HCv2 without RPS or XPIC equipped.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-256 IncompatibleProtection (mwa)

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleProtection (4824) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: IncompatibleProtection (1912)	Unspecified
Description: The alarm is raised when a incompatible protection scheme is selected.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-257 IncompatiblePTX

Alarm	Attributes	Applicable major NE releases
Name: IncompatiblePTX (684) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: incompatiblePTX (499)	Unspecified
Description: The alarm is raised when the provisioned MSS transmit power is incompatible with the MSS hardware.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-258 IncompatibleShifter (mwa)

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleShifter (685) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: Incompatibleshifter (1913)	Unspecified
Description: The alarm is raised when the provisioned MPT shifter parameters are incompatible with the MPT hardware.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-259 IncompatibleShifter (radioequipment)

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleShifter (685) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: incompatibleShifter (500)	Unspecified

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the provisioned MSS shifter parameters are incompatible with the MSS hardware.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

(2 of 2)

Table 35-260 IncompatibleTxPower

Alarm	Attributes	Applicable major NE releases
Name: IncompatibleTxPower (4825) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: IncompatibleTxPower (1914)	Unspecified
Description: The alarm is raised when the provisioned MPT transmit power is incompatible with the MPT hardware.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-261 IncompleteConfig (bundle)

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfig (294) Type: configurationAlarm (11) Package: bundle Raised on class: bundle.MultiChassisApsInterface	Severity: major Implicitly cleared: true Default probable cause: incompleteConfig (225)	Unspecified
Description: The alarm is raised when there are not exactly two APS bundles in an APS group.		
Raising condition: (('Number of members' NOT EQUAL '2'))		
Clearing condition: (('Number of members' EQUAL '2'))		
Remedial action: Configure the missing peered object.		

Table 35-262 IncompleteConfig (lag)

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfig (294) Type: configurationAlarm (11) Package: lag Raised on class: lag.MultiChassisLag	Severity: major Implicitly cleared: true Default probable cause: incompleteConfig (225)	Unspecified
Description: The alarm is raised when an MC LAG has fewer than two members.		
Raising condition: ('numberOfMembers' NOT EQUAL '2')		

(1 of 2)

35 – Unspecified NE alarms

Alarm	Attributes	Applicable major NE releases
Clearing condition: ('numberOfMembers' EQUAL '2')		
Remedial action: Configure the missing peered object.		

(2 of 2)

Table 35-263 IncompleteConfig (rmon)

Alarm	Attributes	Applicable major NE releases
Name: IncompleteConfig (294) Type: configurationAlarm (11) Package: rmon Raised on classes: <ul style="list-style-type: none"> rmon.Event rmon.Alarm 	Severity: major Implicitly cleared: true Default probable cause: incompleteConfig (225)	Unspecified
Description: The alarm is raised when an object is created with default values but not yet made active.		
Raising condition: ('Status' EQUAL 'Under Creation')		
Clearing condition: ('Status' NOT EQUAL 'Under Creation')		
Remedial action: The object is created with default values but not yet made active. Please activate.		

Table 35-264 InconsistenciesOnNode

Alarm	Attributes	Applicable major NE releases
Name: InconsistenciesOnNode (1077) Type: integrityViolation (85) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: inconsistenciesOnNode (813)	Unspecified
Description: The alarm is raised when a device detects one or more configuration inconsistencies. On a 9500 MPR, this can be caused by cross-connect creation failure during service creation.		
Remedial action: Please click on the clear inconsistencies button from the NE properties GUI form to clear the inconsistencies.		

Table 35-265 InstanceIdMismatch

Alarm	Attributes	Applicable major NE releases
Name: InstanceIdMismatch (416) Type: configurationAlarm (11) Package: srrp Raised on class: srrp.Instance	Severity: major Implicitly cleared: false Default probable cause: instanceIdMismatch (309)	Unspecified

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a local SRRP SAP is backed up by a different SRRP instance on a remote peer.		
Remedial action: Reconfigure the instance so that the peer SRRP instances have the same ID.		

(2 of 2)

Table 35-266 InSufficientBandwidth

Alarm	Attributes	Applicable major NE releases
Name: InSufficientBandwidth (745) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.VlanPathInstance	Severity: major Implicitly cleared: true Default probable cause: inSufficientBandwidth (521)	Unspecified
Description: The alarm is raised when there is insufficient bandwidth on a radio link between hops in a service.		
Remedial action: Information - Service cannot be deployed because insufficient bandwidth on the port. Use a different port or ensure the required bandwidth.		

Table 35-267 InterfaceDbDescriptAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDbDescriptAuthFailure (46) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> authTypeMismatch authFailure 	Unspecified
Description: The alarm is raised when an NE receives a dbDescript packet on a non-virtual interface from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a dbDescript packet has been received on a non-virtual interface from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-268 InterfaceDbDescriptConfig

Alarm	Attributes	Applicable major NE releases
Name: InterfaceDbDescriptConfig (40) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifTypeMismatch • nullRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives a dbDescript packet on a non-virtual interface from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a dbDescript packet has been received on a non-virtual interface from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-269 InterfaceHelloAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: InterfaceHelloAuthFailure (45) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives a hello packet on a non-virtual interface from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a hello packet has been received on a non-virtual interface from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-270 InterfaceHelloConfig

Alarm	Attributes	Applicable major NE releases
Name: InterfaceHelloConfig (39) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifTypeMismatch • nullRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives a hello packet on a non-virtual interface from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a hello packet has been received on a non-virtual interface from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-271 InterfaceLsAckAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: InterfaceLsAckAuthFailure (49) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives an lsAck packet on a non-virtual interface from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a lsAck packet has been received on a non-virtual interface from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-272 InterfaceLsAckConfig

Alarm	Attributes	Applicable major NE releases
Name: InterfaceLsAckConfig (43) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifTypeMismatch • nullRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives an IsAck packet on a non-virtual interface from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a IsAck packet has been received on a non-virtual interface from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-273 InterfaceLsReqAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: InterfaceLsReqAuthFailure (47) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives an IsReq packet on a non-virtual interface from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a IsReq packet has been received on a non-virtual interface from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-274 InterfaceLsReqConfig

Alarm	Attributes	Applicable major NE releases
Name: InterfaceLsReqConfig (41) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifTypeMismatch • nullRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives an IsReq packet on a non-virtual interface from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a IsReq packet has been received on a non-virtual interface from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-275 InterfaceLsUpdateAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: InterfaceLsUpdateAuthFailure (48) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives an IsUpdate packet on a non-virtual interface from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a IsUpdate packet has been received on a non-virtual interface from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-276 InterfaceLsUpdateConfig

Alarm	Attributes	Applicable major NE releases
Name: InterfaceLsUpdateConfig (42) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifTypeMismatch • nullRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives an LsUpdate packet on a non-virtual interface from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a LsUpdate packet has been received on a non-virtual interface from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-277 InterfaceNullPacketAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: InterfaceNullPacketAuthFailure (50) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives a null packet on a non-virtual interface from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a null packet has been received on a non-virtual interface from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-278 InterfaceNullPacketConfig

Alarm	Attributes	Applicable major NE releases
Name: InterfaceNullPacketConfig (44) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifTypeMismatch • nullRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives a null packet on a non-virtual interface from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a null packet has been received on a non-virtual interface from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-279 InterfaceRxBadPacket

Alarm	Attributes	Applicable major NE releases
Name: InterfaceRxBadPacket (51) Type: communicationsAlarm (4) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: hello (47) Applicable probable causes: <ul style="list-style-type: none"> • hello • dbDescript • lsReq • lsUpdate • lsAck • nullPacket 	Unspecified
Description: The alarm is raised when an NE cannot parse an OSPF packet that it receives on a non-virtual interface.		
Remedial action: Informational - an NE cannot parse an OSPF packet that it receives on a non-virtual interface.		

Table 35-280 InternalCommunicationProblem (equipment)

Alarm	Attributes	Applicable major NE releases
Name: InternalCommunicationProblem (627) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: internalCommunicationProblem (466)	Unspecified
Description: The alarm is raised when an ODU is unresponsive.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-281 InternalCommunicationProblem (mpr)

Alarm	Attributes	Applicable major NE releases
Name: InternalCommunicationProblem (627) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: internalCommunicationProblem (466)	Unspecified
Description: The alarm is raised when an MPThLv2 is unresponsive.		
Remedial action: The alarm is raised when there is a loss of communication with MPT. Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-282 InterRedundantMPTCommunicationFailure

Alarm	Attributes	Applicable major NE releases
Name: InterRedundantMPTCommunicationFailure (4826) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: InternalCommunicationProblem (1915)	Unspecified
Description: The alarm is raised when a MPT detects a Inter Redundant MPTs Communication Failure		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-283 InterXPolarizedMPTCommunicationFailure

Alarm	Attributes	Applicable major NE releases
Name: InterXPolarizedMPTCommunicationFailure (4827) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: InternalCommunicationProblem (1915)	Unspecified
Description: The alarm is raised when a MPT detects a Inter X-Polarized MPTs Communication Failure		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-284 InvalidBOFAddress

Alarm	Attributes	Applicable major NE releases
Name: InvalidBOFAddress (1141) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: false Default probable cause: invalidBOF (847)	Unspecified
Description: The alarm is raised during a network topology rescan in which the 5620 SAM does not find a previously configured NE BOF address, and the Management IP Selection of the NE is set to one of the following: - Out Of Band Preferred - In Band Preferred		
Remedial action: A configuration error has been made which must be corrected. The BOF address must be configured on the NE.		

Table 35-285 InvalidJoinPrune

Alarm	Attributes	Applicable major NE releases
Name: InvalidJoinPrune (185) Type: communicationsAlarm (4) Package: pim Raised on class: pim.Site	Severity: warning Implicitly cleared: false Default probable cause: InvalidJoinPruneReceived (145)	Unspecified
Description: The alarm is raised when the RP address in a Join Prune message is not the RP for the group specified in the message.		
Remedial action: Informational - please make sure the RP address in a Join Prune message is the RP for the group specified		

Table 35-286 InvalidRegister

Alarm	Attributes	Applicable major NE releases
Name: InvalidRegister (186) Type: communicationsAlarm (4) Package: pim Raised on class: pim.Site	Severity: warning Implicitly cleared: false Default probable cause: InvalidJoinRegisterReceived (146)	Unspecified
Description: The alarm is raised when the RP address in a Register message is not the RP for the group specified in the message.		
Remedial action: Informational - please make sure the RP address in a Register message is the RP for the group specified		

Table 35-287 invalidRPLoopbackInterfaceConfig

Alarm	Attributes	Applicable major NE releases
Name: invalidRPLoopbackInterfaceConfig (269) Type: configurationAlarm (11) Package: pim Raised on class: pim.VirtualAnyCastRP	Severity: warning Implicitly cleared: true Default probable cause: invalidRPLoopbackIfConfig (201)	Unspecified
Description: The alarm is raised when an RP loopback interface configuration is invalid.		
Remedial action: A configuration error has occurred that must be corrected. Please check the global Virtual Anycast RP configuration and its operational status flag so that the loopback is properly configured, PIM is enabled on the loopback interface.		

Table 35-288 IOReadFileFromDisk

Alarm	Attributes	Applicable major NE releases
Name: IOReadFileFromDisk (5136) Type: serverAlarm (94) Package: server Raised on class: server.SamServer	Severity: critical Implicitly cleared: false Default probable cause: diskProblem (732)	Unspecified
Description: The alarm is raised when SAM cannot read a file from disk.		
Remedial action: Check the additional text of the alarm for more details. Possible causes are insufficient file permissions, disk corruption or general disk hardware failure. The additional text will provide guidance as to the specifics of the problem.		

Table 35-289 IOWriteFileToDisk

Alarm	Attributes	Applicable major NE releases
Name: IOWriteFileToDisk (5137) Type: serverAlarm (94) Package: server Raised on class: server.SamServer	Severity: critical Implicitly cleared: false Default probable cause: diskProblem (732)	Unspecified
Description: The alarm is raised when SAM cannot write a file to disk.		
Remedial action: Check the additional text of the alarm for more details. Possible causes are lack of disk space, insufficient file permissions, disk corruption or or general disk hardware failure. The additional text will provide guidance as to the specifics of the problem.		

Table 35-290 IpAddressManaged

Alarm	Attributes	Applicable major NE releases
Name: IpAddressManaged (4388) Type: IpAddressManaged (124) Package: ptp Raised on class: ptp.SourceEntryPoint	Severity: info Implicitly cleared: false Default probable cause: IpAddressManaged (1571)	Unspecified
Description: The alarm is raised when unmanaged IP address becomes managed virtual router IP address.		
Remedial action: The source entry point unmanaged IP address becomes managed virtual router IP address. Please re-configure source entry point.		

Table 35-291 IpAddressOverlap

Alarm	Attributes	Applicable major NE releases
Name: IpAddressOverlap (3318) Type: configurationAlarm (11) Package: rtr Raised on class: rtr.VirtualRouterIpAddress	Severity: warning Implicitly cleared: true Default probable cause: IpAddressOverlap (1157)	Unspecified
Description: The alarm is raised when the IP addresses configured on different VPRN sites within same VPRN service overlap.		
Remedial action: Please check the IP Addresses configured on different VPRN sites have no overlap.		

Table 35-292 IPListMismatch

Alarm	Attributes	Applicable major NE releases
Name: IPListMismatch (282) Type: configurationAlarm (11) Package: vrrp Raised on class: vrrp.AbstractInstance	Severity: warning Implicitly cleared: true Default probable cause: nonMatchingBackupAddressList (214)	Unspecified
Description: The alarm is raised when the IP address list in an advertisement message from the current master does not match the configured IP address list.		
Remedial action: Check the configured IP addresses, make sure they match the advertised IP addresses from the master VRRP instance.		

Table 35-293 IpPathDown

Alarm	Attributes	Applicable major NE releases
Name: IpPathDown (1916) Type: topologyAlarm (34) Package: monpath Raised on class: monpath.MonitoredIpPath	Severity: major Implicitly cleared: true Default probable cause: ipPathDown (918)	Unspecified
Description: This alarm is raised when the re-calculation by the CPAA shows that no IP Path is available.		
Remedial action: Informational - The IP path record provides an Error code which provides a clue on why the path is down.		

Table 35-294 IpPathMonitorFailedRetryThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: IpPathMonitorFailedRetryThresholdCrossed (400) Type: topologyAlarm (34) Package: monpath Raised on class: monpath.MonitoredIpPath	Severity: major Implicitly cleared: true Default probable cause: ipPathCouldNotBeDetermined (299)	Unspecified
Description: The alarm is raised when the 5650 CPAM cannot set up an IP path monitor after the number of attempts specified by the cpamManagedRoute problematicThresholdAlarmAfter value in the nms-server.xml file. The alarm is raised if the cpamManagedRoute problematicRetryStrategy value in nms-server.xml is set to countdown. The default problematicRetryStrategy value of reactive prevents the alarm from being raised.		
Remedial action: Informational - The Retry strategy can be modified in nms-server.xml. This alarm is not raised for the default retry strategy, reactive.		

Table 35-295 IpPathMonitorRetryAttemptsExhausted

Alarm	Attributes	Applicable major NE releases
Name: IpPathMonitorRetryAttemptsExhausted (401) Type: topologyAlarm (34) Package: monpath Raised on class: monpath.MonitoredIpPath	Severity: major Implicitly cleared: false Default probable cause: ipPathCouldNotBeDetermined (299)	Unspecified
Description: The alarm is raised when the 5650 CPAM stops trying to set up an IP path monitor after the number of attempts specified by the cpamManagedRoute problematicDeadAfter value in the nms-server.xml file. The alarm is raised if the cpamManagedRoute problematicRetryStrategy value in nms-server.xml is set to countdown. The default problematicRetryStrategy value of reactive prevents the alarm from being raised.		
Remedial action: Informational - The Retry strategy can be modified in nms-server.xml. This alarm is not raised for the default retry strategy, reactive.		

Table 35-296 IpPathMulticastWarning

Alarm	Attributes	Applicable major NE releases
Name: IpPathMulticastWarning (1917) Type: topologyAlarm (34) Package: monpath Raised on class: monpath.MonitoredIpPath	Severity: major Implicitly cleared: true Default probable cause: IpPathSegmentNotMulticastEnabled (919)	Unspecified
Description: If IP Path is enabled for monitoring Multicast, the alarm is raised when at least one IP Path segment is not Multicast enabled. The alarm is cleared when all the segments are Multicast enabled.		
Remedial action: Informational - The segments without PIM interface enabled can be obtained from path record. PIM should be enabled on these interfaces in order for alarm to be cleared.		

Table 35-297 IPsecInterfaceBfdSessionDown

Alarm	Attributes	Applicable major NE releases
Name: IPsecInterfaceBfdSessionDown (3324) Type: bfdSessionAlarm (46) Package: service Raised on class: service.IPsecInterface	Severity: warning Implicitly cleared: true Default probable cause: bfdSessionDown (346)	Unspecified
Description: The alarm is raised when a BFD session is operationally down.		
Remedial action: This alarm is raised when a BFD session on an IPsec interface goes down. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the far end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 35-298 IPsecInterfaceBfdSessionFlapped

Alarm	Attributes	Applicable major NE releases
Name: IPsecInterfaceBfdSessionFlapped (3905) Type: bfdSessionAlarm (46) Package: service Raised on class: service.IPsecInterface	Severity: warning Implicitly cleared: true Default probable cause: bfdSessionFlapped (1491)	Unspecified
Description: The alarm is raised when a BFD session transitions from Up to Down and back to Up within the BFD operational state transition interval.		
Remedial action: The BFD session on an IPsec interface has transitioned from Up to Down and back to Up within the configured BFD Flapping Interval.		

Table 35-299 IPsecInterfaceBfdSessionMissing

Alarm	Attributes	Applicable major NE releases
Name: IPsecInterfaceBfdSessionMissing (3325) Type: bfdSessionAlarm (46) Package: service Raised on class: service.IPsecInterface	Severity: warning Implicitly cleared: true Default probable cause: bfdSessionMissing (345)	Unspecified
Description: The alarm is raised when a previously present BFD session is absent.		
Remedial action: This alarm is raised when a previously present BFD session on an IPsec interface is absent. The situation may occur if the underlying physical interface is down either because of administrative disabling or a fault on the near end port or due to a cable connection or cable failure. This alarm will also be raised if the underlying transport network fails or is unreliable. Resolving the underlying instability in the transport network will correct this problem.		

Table 35-300 IPSecRUSAFailToAddRoute

Alarm	Attributes	Applicable major NE releases
Name: IPSecRUSAFailToAddRoute (5185) Type: processingErrorAlarm (81) Package: ipsec Raised on class: ipsec.IPSecSecuredVpnManager	Severity: warning Implicitly cleared: false Default probable cause: IPSecRUSAFailToAddRoute (2101)	Unspecified
Description: The trap tIPsecRUSAFailToAddRoute is sent when adding route to tIPsecRUSARemAddr for the remote-user tunnel fails with reason indicated by tIPsecNotifReason.		
Remedial action: Informational - Please see reason for failure.		

Table 35-301 IPsecRUTnIFailToCreate

Alarm	Attributes	Applicable major NE releases
Name: IPsecRUTnIFailToCreate (5186) Type: processingErrorAlarm (81) Package: ipsec Raised on class: ipsec.IPSecGateway	Severity: warning Implicitly cleared: false Default probable cause: IPsecRUTnIFailToCreate (2102)	Unspecified
Description: 'This alarm is sent when creation of a remote-user tunnel fails with reason indicated by notifReason.'		
Remedial action: Informational - Please see reason for failure.		

Table 35-302 IsaAaGrpBitRate

Alarm	Attributes	Applicable major NE releases
Name: IsaAaGrpBitRate (2948) Type: equipmentAlarm (3) Package: isa Raised on class: isa.AaGroup	Severity: warning Implicitly cleared: false Default probable cause: isaAaGrpBitRate (1143)	Unspecified
Description: The alarm is raised when the current bit rate on the MDA in the ISA-AA group is greater than or equal to tmnxBsxBitRateHighWatermark, and the prior bit rate is less than the threshold.		
Remedial action: The current bit rate on the MDA in the ISA-AA group is greater than or equal to the configured Bit Rate High Watermark. The threshold configured should be revisited to ensure that it is not set too low. To disable the notification, set the Packet Rate High Watermark to maximum.		

Table 35-303 IsaAaGrpCapCostThres

Alarm	Attributes	Applicable major NE releases
Name: IsaAaGrpCapCostThres (835) Type: equipmentAlarm (3) Package: isa Raised on class: isa.AaGroupMember	Severity: warning Implicitly cleared: false Default probable cause: IsaAaGrpCapCostThres (595)	Unspecified
Description: The alarm is raised when the capacity cost for an MDA in an ISA-AA group reaches the configured threshold.		
Remedial action: The capacity cost high threshold for the MDA in the ISA-AA group has been reached.		

Table 35-304 IsaAaGrpFailure

Alarm	Attributes	Applicable major NE releases
Name: IsaAaGrpFailure (564) Type: equipmentAlarm (3) Package: isa Raised on class: isa.AaGroup	Severity: warning Implicitly cleared: false Default probable cause: isaAaGrpFailure (434)	Unspecified
Description: The alarm is raised when an ISA-AA Group has no configured primary MDA or the number of active MDAs is not equal to the number of configured primary MDAs.		
Remedial action: There is a failure on the ISA-AA group. Ensure that ISA-AA group has a primary MDA group member configured, and that the number of active MDAs is equal to the number of configured primary MDAs.		

Table 35-305 IsaAaGrpFlowFull

Alarm	Attributes	Applicable major NE releases
Name: IsaAaGrpFlowFull (566) Type: equipmentAlarm (3) Package: isa Raised on class: isa.AaGroup	Severity: warning Implicitly cleared: false Default probable cause: isaAaGrpFlowFull (436)	Unspecified
Description: The alarm is raised when an ISA-AA group uses a greater number of flow records than the value specified by tmnxBsxFowFullHighWatermark.		
Remedial action: The number of flow records that the ISA-AA group is using is greater than or equal to the configured Flow Full High Watermark. The threshold configured should be revisited to ensure that it is not set too low.		

Table 35-306 IsaAaGrpFlowSetup

Alarm	Attributes	Applicable major NE releases
Name: IsaAaGrpFlowSetup (2949) Type: equipmentAlarm (3) Package: isa Raised on class: isa.AaGroup	Severity: warning Implicitly cleared: false Default probable cause: isaAaGrpFlowSetup (1144)	Unspecified
Description: The alarm is raised when the current flow setup rate on the MDA in the ISA-AA group is greater than or equal to tmnxBsxFowSetupHighWatermark, and the prior bit rate is less than the threshold.		
Remedial action: The current flow setup rate on the MDA in the ISA-AA group is greater than or equal to the configured Flow Setup High Watermark. The threshold configured should be revisited to ensure that it is not set too low. To disable the notification, set the Flow Setup High Watermark to maximum.		

Table 35-307 IsaAaGrpFmSbWaSBufOvld

Alarm	Attributes	Applicable major NE releases
Name: IsaAaGrpFmSbWaSBufOvld (2950) Type: equipmentAlarm (3) Package: isa Raised on class: isa.AaGroupMember	Severity: warning Implicitly cleared: true Default probable cause: IsaAaGrpFmSbWaSBufOvld (1145)	Unspecified
Description: The alarm is raised when the current weighted average shared buffer for an ISA in the from subscriber direction is greater than or equal to a high water mark in a normal, non-overloaded, state.		
Remedial action: The ISA-AA Egress From-Subscriber buffer pool has entered an overload state as determined by the configured Buffer Utilization High Watermark. The threshold configured should be revisited to ensure it is not set too low. To disable the notification, set the Buffer Utilization High Watermark to the maximum.		

Table 35-308 IsaAaGrpNonRedundant

Alarm	Attributes	Applicable major NE releases
Name: IsaAaGrpNonRedundant (565) Type: equipmentAlarm (3) Package: isa Raised on class: isa.AaGroup	Severity: warning Implicitly cleared: false Default probable cause: isaAaGrpNonRedundant (435)	Unspecified
Description: The alarm is raised when an ISA-AA Group has a configured backup MDA but there is no standby MDA available.		
Remedial action: The ISA-AA Group has a configured backup MDA but there is no standby MDA available. Check that the configured standby MDA is active and operationally up. There may be a fault with the ISA Application Assurance MDA.		

Table 35-309 IsaAaGrpOvrldCutthru

Alarm	Attributes	Applicable major NE releases
Name: IsaAaGrpOvrldCutthru (2951) Type: equipmentAlarm (3) Package: isa Raised on class: isa.AaGroupMember	Severity: warning Implicitly cleared: true Default probable cause: IsaAaGrpOvrldCutthru (1146)	Unspecified
Description: The alarm is raised when cut through processing starts on an ISA MDA.		
Remedial action: Overload Cut-Through is enabled on the ISA-AA Group. All traffic is cut-through and the ISA-AA MDA is overloaded. Disable Overload Cut-Through if this is not required.		

35 – Unspecified NE alarms

Table 35-310 IsaAaGrpPacketRate

Alarm	Attributes	Applicable major NE releases
Name: IsaAaGrpPacketRate (2952) Type: equipmentAlarm (3) Package: isa Raised on class: isa.AaGroup	Severity: warning Implicitly cleared: false Default probable cause: isaAaGrpPacketRate (1147)	Unspecified
Description: The alarm is raised when the current packet rate on the MDA in the ISA-AA group is greater than or equal to tmnxBsxBsxPacketRateHighWatermark, and the prior rate is less than this threshold.		
Remedial action: The current packet rate on the MDA in the ISA-AA group is greater than or equal to the configured Packet Rate High Watermark. The threshold configured should be revisited to ensure that it is not set too low. To disable the notification, set the Packet Rate High Watermark to maximum.		

Table 35-311 IsaAaGrpSwitchover

Alarm	Attributes	Applicable major NE releases
Name: IsaAaGrpSwitchover (567) Type: equipmentAlarm (3) Package: isa Raised on class: isa.AaGroup	Severity: warning Implicitly cleared: false Default probable cause: isaAaGrpSwitchover (437)	Unspecified
Description: The alarm is raised when an ISA-AA group experiences an activity switch from one ISA-AA to another.		
Remedial action: The ISA-AA Group has performed an activity switch from one ISA-AA MDA to another.		

Table 35-312 IsaAaGrpToSbWaSBufOvld

Alarm	Attributes	Applicable major NE releases
Name: IsaAaGrpToSbWaSBufOvld (2953) Type: equipmentAlarm (3) Package: isa Raised on class: isa.AaGroupMember	Severity: warning Implicitly cleared: true Default probable cause: IsaAaGrpToSbWaSBufOvld (1148)	Unspecified
Description: The alarm is raised when the current weighted average shared buffer use for an ISA in the To subscriber direction, is greater than or equal to a high water mark, after being in a normal or non-overloaded state.		
Remedial action: The ISA-AA Egress To-Subscriber buffer pool has entered an overload state as determined by the configured Buffer Utilization High Watermark. The threshold configured should be revisited to ensure it is not set too low. To disable the notification, set the Buffer Utilization High Watermark to the maximum.		

Table 35-313 IsidMisconfiguration (epipe)

Alarm	Attributes	Applicable major NE releases
Name: IsidMisconfiguration (592) Type: configurationAlarm (11) Package: epipe Raised on class: epipe.Epipe	Severity: warning Implicitly cleared: true Default probable cause: isidInconsistent (446)	Unspecified
Description: The alarm is raised when Epipe service sites that are bound to a PBB backbone use different ISID values.		
Raising condition: ('operationalFlags'anyBit'ISID Inconsistent')		
Clearing condition: NOT (('operationalFlags'anyBit'ISID Inconsistent'))		
Remedial action: All service sites must use consistent I-SID values for a PBB backbone.		

Table 35-314 IsidMisconfiguration (vpls)

Alarm	Attributes	Applicable major NE releases
Name: IsidMisconfiguration (592) Type: configurationAlarm (11) Package: vpls Raised on class: vpls.AbstractVpls	Severity: warning Implicitly cleared: true Default probable cause: isidInconsistent (446)	Unspecified
Description: The alarm is raised when service sites use inconsistent I-SID values for a PBB backbone. The alarm is raised against a VPLS or M-VPLS service.		
Raising condition: ('operationalFlags'anyBit'ISID Inconsistent')		
Clearing condition: NOT (('operationalFlags'anyBit'ISID Inconsistent'))		
Remedial action: All service sites must use consistent I-SID values for a PBB backbone.		

Table 35-315 IsisAreaMismatch

Alarm	Attributes	Applicable major NE releases
Name: IsisAreaMismatch (156) Type: configurationAlarm (11) Package: isis Raised on class: isis.Site	Severity: warning Implicitly cleared: true Default probable cause: areaTypeMisconfigured (34)	Unspecified
Description: The alarm is raised when IS-IS receives a Hello PDU from an IS with which it does not share an area address.		
Remedial action: Check whether NET address is configured and the AREA ID between two adjacencies are not the same.		

Table 35-316 IsisAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: IsisAuthFailure (155) Type: authenticationAlarm (14) Package: isis Raised on class: isis.Site	Severity: warning Implicitly cleared: false Default probable cause: authFailure (46)	Unspecified
Description: The alarm is raised when IS-IS receives a PDU that contains incorrect authentication information.		
Remedial action: The authentication information on the ISIS Site needs to be changed to match its neighbours.		

Table 35-317 IsisAuthTypeFailure

Alarm	Attributes	Applicable major NE releases
Name: IsisAuthTypeFailure (154) Type: authenticationAlarm (14) Package: isis Raised on class: isis.Site	Severity: warning Implicitly cleared: true Default probable cause: authFailure (46)	Unspecified
Description: The alarm is raised when IS-IS receives a PDU that contains the wrong authentication type.		
Remedial action: The authentication information on the ISIS Site needs to be changed to match its neighbours.		

Table 35-318 IsisExportLimitDropped

Alarm	Attributes	Applicable major NE releases
Name: IsisExportLimitDropped (838) Type: configurationAlarm (11) Package: isis Raised on class: isis.Site	Severity: warning Implicitly cleared: false Default probable cause: exportLimitDropped (598)	Unspecified
Description: The alarm is raised when the number of routes exported from the route table to an IS-IS level drops below the Export Limit value for the level.		
Remedial action: Informational.		

Table 35-319 IsisExportLimitReached

Alarm	Attributes	Applicable major NE releases
Name: IsisExportLimitReached (839) Type: configurationAlarm (11) Package: isis Raised on class: isis.Site	Severity: warning Implicitly cleared: false Default probable cause: exportLimitReached (599)	Unspecified
Description: The alarm is raised when the number of routes exported from the route table to an IS-IS level is equal to the Export Limit value for the level.		
Remedial action: Informational - the number of routes exported from the route table to an IS-IS level is equal to the Export Limit value for the level		

Table 35-320 IsisExportLimitWarning

Alarm	Attributes	Applicable major NE releases
Name: IsisExportLimitWarning (840) Type: configurationAlarm (11) Package: isis Raised on class: isis.Site	Severity: warning Implicitly cleared: false Default probable cause: exportLimitWarning (600)	Unspecified
Description: The alarm is raised when the number of routes exported from the route table to an IS-IS level is equal to the Export Limit percentage specified by the Export Limit Log Percent value.		
Remedial action: Informational - the number of routes exported from the route table to an IS-IS level is equal to the Export Limit percentage specified by the Export Limit Log Percent value.		

Table 35-321 IsisLspRateThresholdExceeded

Alarm	Attributes	Applicable major NE releases
Name: IsisLspRateThresholdExceeded (376) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: unstableIGPNetwork (241)	Unspecified
Description: The alarm is raised when the IS-IS LSP rate exceeds the maximum allowed value because of an unstable IGP network.		
Remedial action: User configured alarm for monitoring purpose. IGP historical map can be used for debugging purpose.		

Table 35-322 IsisLspThresholdExceeded

Alarm	Attributes	Applicable major NE releases
Name: IsisLspThresholdExceeded (375) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: largeIGPNetwork (276)	Unspecified
Description: The alarm is raised when the number of IS-IS LSPs exceeds the maximum allowed value because of a large IGP network.		
Remedial action: User configured alarm for monitoring purpose. IGP historical map can be used for debugging purpose.		

Table 35-323 IsisManualAddressDrops

Alarm	Attributes	Applicable major NE releases
Name: IsisManualAddressDrops (157) Type: configurationAlarm (11) Package: isis Raised on class: isis.Site	Severity: warning Implicitly cleared: false Default probable cause: noError (44)	Unspecified
Description: The alarm is raised when a manual area address assigned to an IS is ignored during a route computation.		
Remedial action: Informational - no corrective action required.		

Table 35-324 IsisReachabilityThresholdExceeded

Alarm	Attributes	Applicable major NE releases
Name: IsisReachabilityThresholdExceeded (377) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: manyExternalLSAsFloodingIntoIGP (271)	Unspecified
Description: The alarm is raised when the IS-IS reachability value exceeds the maximum allowed value because too many external LSAs are flooding the IGP.		
Remedial action: User configured alarm for monitoring purpose. The advertised routes can be viewed using CPAM IGP prefix list.		

Table 35-325 IsisRejectedAdjacency

Alarm	Attributes	Applicable major NE releases
Name: IsisRejectedAdjacency (214) Type: adjacencyAlarm (31) Package: isis Raised on class: isis.Interface	Severity: minor Implicitly cleared: true Default probable cause: interfaceMismatch (170)	Unspecified
Description: The alarm is raised when the 5620 SAM receives a vRtrIsisRejectedAdjacency trap, which indicates that an adjacency cannot be established in response to a Hello PDU from an IS because of a lack of resources.		
Remedial action: Informational, might have exceeded the maximum number of adjacencies allowed.		

Table 35-326 L2AccessInterfaceChange

Alarm	Attributes	Applicable major NE releases
Name: L2AccessInterfaceChange (3933) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.VlanPathInstance	Severity: info Implicitly cleared: true Default probable cause: SAPChanged (1516)	Unspecified
Description: The alarm is raised when the SAP is changed in Service for 9500.		
Remedial action: Informational - if SAP is changed this alarm is raised.		

Table 35-327 L2tpLnsSePppSessionFailure

Alarm	Attributes	Applicable major NE releases
Name: L2tpLnsSePppSessionFailure (3901) Type: processingErrorAlarm (81) Package: rtr Raised on class: rtr.RoutingInstanceSite	Severity: major Implicitly cleared: false Default probable cause: l2tpLnsSePppSessionFailed (1492)	Unspecified
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot create a new L2TP session.		
Remedial action: The alarm is raised when an NE notifies the 5620 SAM that it cannot create a new L2TP session. Verify the configuration to have LNS group assigned to the group tunnel profile or tunnel profile. Additionally, verify the length of the auto-generated subscriber identification.		

Table 35-328 L2tpTunnelBlacklisted

Alarm	Attributes	Applicable major NE releases
Name: L2tpTunnelBlacklisted (4625) Type: processingErrorAlarm (81) Package: l2tp Raised on class: l2tp.TunnelStatus	Severity: variable Implicitly cleared: true Default probable cause: tmnxL2tpTunnelBlacklisted (1893)	Unspecified
Description: This alarm is raised when a L2TP tunnel is added to the tunnel-selection-blacklist. It is automatically cleared when the tunnel is removed from the list.		
Remedial action: In most cases the problem is a configuration mismatch between LAC and LNS, or a problem on LNS. Please refer to the additional text and enable the debug log on event lac-session-setup to figure out the root cause.		

Table 35-329 LacpExpired

Alarm	Attributes	Applicable major NE releases
Name: LacpExpired (3981) Type: equipmentAlarm (3) Package: lag Raised on class: lag.PortTermination	Severity: minor Implicitly cleared: true Default probable cause: LagSubgroupMemberStateChange (1558)	Unspecified
Description: The alarm is raised when Lacp expired on subgroup lag member due to state change.		
Remedial action: The reasons for LACP Expired alarm may vary. The following possible causes of this alarm should be investigated. The partner lag member oper state may have changed or LACP Transmit Standby may have been disabled - this can be remedied by enabling the LACP Transmit Standby on Lag. The partner lag member 802.3ah oper state may have changed - ensure that 802.3ah state is same on both ends. The partner lag member dot1ag state may have changed - ensure that dot1ag state is same on both ends.		

Table 35-330 LagDot1agStateChanged

Alarm	Attributes	Applicable major NE releases
Name: LagDot1agStateChanged (3982) Type: equipmentAlarm (3) Package: lag Raised on class: lag.PortTermination	Severity: minor Implicitly cleared: true Default probable cause: Dot1agStateChange (1559)	Unspecified
Description: The alarm is raised when the subgroup lag member dot1ag state has changed.		
Remedial action: The lag member dot1ag state may have changed - please ensure that dot1ag state is same on both ends.		

Table 35-331 LagEfmOamStateChanged

Alarm	Attributes	Applicable major NE releases
Name: LagEfmOamStateChanged (3983) Type: equipmentAlarm (3) Package: lag Raised on class: lag.PortTermination	Severity: minor Implicitly cleared: true Default probable cause: EfmOamStateChange (1560)	Unspecified
Description: The alarm is raised when the subgroup lag member efmOam state has changed.		
Remedial action: The lag member 802.3ah oper state may have changed - please ensure that 802.3ah state is same on both ends.		

Table 35-332 LagPartnerOperStateChanged

Alarm	Attributes	Applicable major NE releases
Name: LagPartnerOperStateChanged (3984) Type: equipmentAlarm (3) Package: lag Raised on class: lag.PortTermination	Severity: minor Implicitly cleared: true Default probable cause: PartnerOperStateChange (1561)	Unspecified
Description: The alarm is raised when the subgroup lag member partner oper state has changed.		
Remedial action: The lag member oper state may have changed or LACP Transmit Standby may have been disabled - this can be remedied by enabling the LACP Transmit Standby on Lag.		

Table 35-333 LanFailure

Alarm	Attributes	Applicable major NE releases
Name: LanFailure (628) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: lanFailure (467)	Unspecified
Description: The alarm is raised when a LAN failure is detected.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-334 LastHopIncorrectLabelAction

Alarm	Attributes	Applicable major NE releases
Name: LastHopIncorrectLabelAction (352) Type: configurationAlarm (11) Package: mpls Raised on class: mpls.StaticLsp	Severity: warning Implicitly cleared: true Default probable cause: LabelActionIsNotPopOnLastHop (254)	Unspecified
Description: The alarm is raised when the label action specified for the last hop in a static LSP is not a pop action.		
Remedial action: Ensure the last hop configured with a pop label action, if the last hop node is managed by SAM.		

Table 35-335 LastHopNotMatchingDestination

Alarm	Attributes	Applicable major NE releases
Name: LastHopNotMatchingDestination (351) Type: configurationAlarm (11) Package: mpls Raised on class: mpls.StaticLsp	Severity: warning Implicitly cleared: true Default probable cause: LastHopNotMatchingDestination (253)	Unspecified
Description: The alarm is raised when the last hop in a static LSP is not the destination.		
Remedial action: Ensure the last hop configured in the static LSP match the destination of the LSP, if the last hop node is managed by SAM.		

Table 35-336 LCD

Alarm	Attributes	Applicable major NE releases
Name: LCD (803) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.IMALink	Severity: major Implicitly cleared: true Default probable cause: lossOfCellDelineation (569)	Unspecified
Description: The alarm is raised when a Loss of Cell Delineation signal is detected on an ASAP MDA.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-337 LdpInterfaceDown

Alarm	Attributes	Applicable major NE releases
Name: LdpInterfaceDown (21) Type: ProtocolAlarm (1) Package: ldp Raised on class: ldp.Interface	Severity: critical Implicitly cleared: false Default probable cause: protocolDown (1)	Unspecified
Description: The alarm is raised when an LDP interface is operationally down.		
Remedial action: Check operational state down reason and state qualifier, then update accordingly.		

Table 35-338 Licensed3RouterLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: Licensed3RouterLimitExceeded (694) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: critical Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded (285)	Unspecified
Description: The alarm is raised when the number of third-party routers in the 5650 CPAM network reaches 100 percent of the license capacity.		
Raising condition: ('isLicensed3RouterLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensed3RouterLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of Third Party Router licenses purchased and available on the CPAM server is insufficient as compared to the number of third party routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-339 Licensed3RouterLimitNearing

Alarm	Attributes	Applicable major NE releases
Name: Licensed3RouterLimitNearing (695) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: warning Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing (283)	Unspecified
Description: The alarm is raised when the number of third-party routers in the 5650 CPAM network reaches 75 to 90 percent of the license capacity.		
Remedial action: Informational - The number of Third Party Router licenses purchased and available on the CPAM server is insufficient as compared to the number of third party routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

35 – Unspecified NE alarms

Table 35-340 Licensed3RouterLimitNearlyExceeded

Alarm	Attributes	Applicable major NE releases
Name: Licensed3RouterLimitNearlyExceeded (696) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: major Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded (284)	Unspecified
Description: The alarm is raised when the number of third-party routers in the 5650 CPAM network reaches 90 to 100 percent of the license capacity.		
Remedial action: Informational - The number of Third Party Router licenses purchased and available on the CPAM server is insufficient as compared to the number of third party routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-341 LicensedBgpRouteProfileLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedBgpRouteProfileLimitExceeded (5132) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: critical Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded (285)	Unspecified
Description: The alarm is raised when the number of BGP Route Profiles in the 5650 CPAM reaches 100 percent of the license capacity.		
Raising condition: ('isLicensedBgpProfileLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedBgpProfileLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of Bgp Route Profile Module licenses purchased and available on the CPAM server is insufficient as compared to the number of Bgp Route Profiles in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-342 LicensedBgpRouteProfileLimitNearing

Alarm	Attributes	Applicable major NE releases
Name: LicensedBgpRouteProfileLimitNearing (5133) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: warning Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing (283)	Unspecified
Description: The alarm is raised when the number of BGP Route Profiles in the 5650 CPAM reaches 75 to 90 percent of the license capacity.		
Remedial action: Informational - The number of Bgp Route Profile Module licenses purchased and available on the CPAM server is insufficient as compared to the number of Bgp Route Profiles in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-343 LicensedBgpRouteProfileLimitNearlyExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedBgpRouteProfileLimitNearlyExceeded (5134) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: major Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded (284)	Unspecified
Description: The alarm is raised when the number of BGP Route Profiles in the 5650 CPAM reaches 90 to 100 percent of the license capacity.		
Remedial action: Informational - The number of Bgp Route Profiles Module licenses purchased and available on the CPAM server is insufficient as compared to the number of BGP Route Profiles in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-344 LicensedBigRouterLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedBigRouterLimitExceeded (709) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: critical Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded (285)	Unspecified
Description: The alarm is raised when the number of Alcatel-Lucent large routers in the network reaches 100 percent of the 5650 CPAM license capacity.		
Raising condition: ('isLicensedBigRouterLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedBigRouterLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of Big Router licenses purchased and available on the CPAM server is insufficient as compared to the number of big routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-345 LicensedBigRouterLimitNearing

Alarm	Attributes	Applicable major NE releases
Name: LicensedBigRouterLimitNearing (710) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: warning Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing (283)	Unspecified
Description: The alarm is raised when the number of Alcatel-Lucent large routers in the network reaches 75 to 90 percent of the 5650 CPAM license capacity.		
Remedial action: Informational - The number of Big Router licenses purchased and available on the CPAM server is insufficient as compared to the number of big routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

35 – Unspecified NE alarms

Table 35-346 LicensedBigRouterLimitNearlyExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedBigRouterLimitNearlyExceeded (711) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: major Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded (284)	Unspecified
Description: The alarm is raised when the number of Alcatel-Lucent large routers in the network reaches 90 to 100 percent of the 5650 CPAM license capacity.		
Remedial action: Informational - The number of Big Router licenses purchased and available on the CPAM server is insufficient as compared to the number of big routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-347 LicensedImpactAnalysisRouterLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedImpactAnalysisRouterLimitExceeded (712) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicenseScenario	Severity: critical Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded (285)	Unspecified
Description: The alarm is raised when the number of routers in a simulation scenario reaches 100 percent of the license capacity.		
Raising condition: ('isLicensedRouterLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedRouterLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of licenses purchased and available on the CPAM server for routers in a simulation scenario is insufficient as compared to the number of routers in a simulation scenario. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-348 LicensedImpactAnalysisRouterLimitNearing

Alarm	Attributes	Applicable major NE releases
Name: LicensedImpactAnalysisRouterLimitNearing (713) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicenseScenario	Severity: warning Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing (283)	Unspecified
Description: The alarm is raised when the number of routers in a simulation scenario reaches 75 to 90 percent of the license capacity.		
Remedial action: Informational - The number of licenses purchased and available on the CPAM server for routers in a simulation scenario is insufficient as compared to the number of routers in a simulation scenario. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-349 LicensedImpactAnalysisRouterLimitNearlyExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedImpactAnalysisRouterLimitNearlyExceeded (714) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicenseScenario	Severity: major Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded (284)	Unspecified
Description: The alarm is raised when the number of routers in a simulation scenario reaches 90 to 100 percent of the license capacity.		
Remedial action: Informational - The number of licenses purchased and available on the CPAM server for routers in a simulation scenario is insufficient as compared to the number of routers in a simulation scenario. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-350 LicensedIpPathLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedIpPathLimitExceeded (715) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: critical Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded (285)	Unspecified
Description: The alarm is raised when the number of IP path monitors in the 5650 CPAM reaches 100 percent of the license capacity.		
Raising condition: ('isLicensedIpPathLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedIpPathLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of Path Computation Module licenses purchased and available on the CPAM server is insufficient as compared to the number of PCA paths in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-351 LicensedIpPathLimitNearing

Alarm	Attributes	Applicable major NE releases
Name: LicensedIpPathLimitNearing (716) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: warning Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing (283)	Unspecified
Description: The alarm is raised when the number of IP path monitors in the 5650 CPAM reaches 75 to 90 percent of the license capacity.		
Remedial action: Informational - The number of Path Computation Module licenses purchased and available on the CPAM server is insufficient as compared to the number of PCA paths in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

35 – Unspecified NE alarms

Table 35-352 LicensedIpPathLimitNearlyExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedIpPathLimitNearlyExceeded (717) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: major Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded (284)	Unspecified
Description: The alarm is raised when the number of IP path monitors in the 5650 CPAM reaches 90 to 100 percent of the license capacity.		
Remedial action: Informational - The number of Path Computation Module licenses purchased and available on the CPAM server is insufficient as compared to the number of PCA paths in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-353 LicensedMcRouterLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedMcRouterLimitExceeded (718) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: critical Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded (285)	Unspecified
Description: The alarm is raised when the number of multicast routers in the 5650 CPAM reaches 100 percent of the license capacity.		
Raising condition: ('isLicensedMcRouterLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedMcRouterLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of Multicast Router licenses purchased and available on the CPAM server is insufficient as compared to the number of multicast routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-354 LicensedMcRouterLimitNearing

Alarm	Attributes	Applicable major NE releases
Name: LicensedMcRouterLimitNearing (719) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: warning Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing (283)	Unspecified
Description: The alarm is raised when the number of multicast routers in the 5650 CPAM reaches 75 to 90 percent of the license capacity.		
Remedial action: Informational - The number of Multicast Router licenses purchased and available on the CPAM server is insufficient as compared to the number of multicast routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-355 LicensedMcRouterLimitNearlyExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedMcRouterLimitNearlyExceeded (720) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: major Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded (284)	Unspecified
Description: The alarm is raised when the number of multicast routers in the 5650 CPAM reaches 90 to 100 percent of the license capacity.		
Remedial action: Informational - The number of Multicast Router licenses purchased and available on the CPAM server is insufficient as compared to the number of multicast routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-356 LicensedSmallRouterLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedSmallRouterLimitExceeded (727) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: critical Implicitly cleared: true Default probable cause: cpamLicensedLimitExceeded (285)	Unspecified
Description: The alarm is raised when the number of Alcatel-Lucent small routers in the network reaches 100 percent of the 5650 CPAM license capacity.		
Raising condition: ('isLicensedSmallRouterLimitExceeded' EQUAL 'true')		
Clearing condition: ('isLicensedSmallRouterLimitExceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of Small Router licenses purchased and available on the CPAM server is insufficient as compared to the number of small routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-357 LicensedSmallRouterLimitNearing

Alarm	Attributes	Applicable major NE releases
Name: LicensedSmallRouterLimitNearing (728) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: warning Implicitly cleared: true Default probable cause: cpamLicensedLimitNearing (283)	Unspecified
Description: The alarm is raised when the number of Alcatel-Lucent small routers in the network reaches 75 to 90 percent of the 5650 CPAM license capacity.		
Remedial action: Informational - The number of Small Router licenses purchased and available on the CPAM server is insufficient as compared to the number of small routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

35 – Unspecified NE alarms

Table 35-358 LicensedSmallRouterLimitNearlyExceeded

Alarm	Attributes	Applicable major NE releases
Name: LicensedSmallRouterLimitNearlyExceeded (729) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: major Implicitly cleared: true Default probable cause: cpamLicensedLimitNearlyExceeded (284)	Unspecified
Description: The alarm is raised when the number of Alcatel-Lucent small routers in the network reaches 90 to 100 percent of the 5650 CPAM license capacity.		
Remedial action: Informational - The number of Small Router licenses purchased and available on the CPAM server is insufficient as compared to the number of small routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-359 licenseExpiration

Alarm	Attributes	Applicable major NE releases
Name: licenseExpiration (2911) Type: configurationAlarm (11) Package: ranlicense Raised on class: ranlicense.RANLicense	Severity: variable Implicitly cleared: true Default probable cause: licenseExpired (1117)	Unspecified
Description: The alarm is raised when a RAN license expires.		
Remedial action: Provide a new LKDI license file with a further expiration date.		

Table 35-360 LicenseMisMatch

Alarm	Attributes	Applicable major NE releases
Name: LicenseMisMatch (693) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: critical Implicitly cleared: false Default probable cause: cpamLicenseMisMatch (507)	Unspecified
Description: The alarm is raised when the primary 5650 CPAM server license does not match the standby 5650 CPAM server license.		
Remedial action: Informational - Please ensure that the same license key is installed on both the active and standby SAM/CPAM servers		

Table 35-361 licenseViolation

Alarm	Attributes	Applicable major NE releases
Name: licenseViolation (2912) Type: configurationAlarm (11) Package: ranlicense Raised on class: ranlicense.RANLicense	Severity: critical Implicitly cleared: true Default probable cause: noMoreTokens (1118)	Unspecified
Description: The alarm is raised when a RAN license is in violation due to insufficient tokens.		
Remedial action: Provide a new LKDI license file with more tokens.		

Table 35-362 liDestinationChangeReject

Alarm	Attributes	Applicable major NE releases
Name: liDestinationChangeReject (551) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Implicitly cleared: false Default probable cause: tMirrorDestinationChangeReject (421)	Unspecified
Description: The alarm is raised when an operator tries to modify a mirror destination that is in use by an LI mirror.		
Remedial action: Informational - no corrective action required.		

Table 35-363 liDestinationEnabled

Alarm	Attributes	Applicable major NE releases
Name: liDestinationEnabled (550) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Implicitly cleared: false Default probable cause: tMirrorDestinationEnabled (420)	Unspecified
Description: The alarm is raised when a mirror destination Operational State changes from Down to Up.		
Remedial action: Informational - no corrective action required.		

Table 35-364 LIF

Alarm	Attributes	Applicable major NE releases
Name: LIF (804) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.IMALink	Severity: major Implicitly cleared: true Default probable cause: lossOfIMAFrame (570)	Unspecified

(1 of 2)

35 – Unspecified NE alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a Loss of IMA Frame signal is detected on an ASAP MDA.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

(2 of 2)

Table 35-365 liFilterAssignToltfWarn

Alarm	Attributes	Applicable major NE releases
Name: liFilterAssignToltfWarn (556) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Implicitly cleared: false Default probable cause: tMirrorFilterAssignToltfWarn (426)	Unspecified
Description: The alarm is raised when an operator tries to assign a filter that is in use by LI to an interface.		
Remedial action: Informational - no corrective action required.		

Table 35-366 liFilterAssignToSapWarn

Alarm	Attributes	Applicable major NE releases
Name: liFilterAssignToSapWarn (554) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Implicitly cleared: false Default probable cause: tMirrorFilterAssignToSapWarn (424)	Unspecified
Description: The alarm is raised when an operator tries to assign a filter that is in use by LI to a SAP.		
Remedial action: Informational - no corrective action required.		

Table 35-367 liFilterAssignToSdpWarn

Alarm	Attributes	Applicable major NE releases
Name: liFilterAssignToSdpWarn (555) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Implicitly cleared: false Default probable cause: tMirrorFilterAssignToSdpWarn (425)	Unspecified
Description: The alarm is raised when an operator tries to assign a filter that is in use by LI to an SDP.		
Remedial action: Informational - no corrective action required.		

Table 35-368 LinkAggMemberMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: LinkAggMemberMisconfigured (652) Type: InkaggAlarm (56) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagMemberMisconfigured (483)	Unspecified
Description: The alarm is raised when one or more misconfigured LAG members are detected, for example, when some LAG members are in access mode and some are in network mode.		
Remedial action: A configuration error has occurred which must be corrected. The configuration of the LAG port member should be checked and the configuration error corrected,		

Table 35-369 LinkAggModeMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: LinkAggModeMisconfigured (653) Type: InkaggAlarm (56) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagModeMisconfigured (484)	Unspecified
Description: The alarm is raised when the LAG mode differs from the mode of one or more LAG members, for example, when the LAG mode is access and the LAG members are in network mode.		
Remedial action: A configuration error has occurred which must be corrected. The configuration of the LAG port member should be checked and the configuration error corrected,		

Table 35-370 LinkAggPortJoin

Alarm	Attributes	Applicable major NE releases
Name: LinkAggPortJoin (654) Type: InkaggAlarm (56) Package: lag Raised on class: lag.Interface	Severity: info Implicitly cleared: false Default probable cause: lagPortJoin (485)	Unspecified
Description: The alarm is raised when a LAG port joins a LAG by entering the attached state.		
Remedial action: Informational.		

Table 35-371 LinkAggPortLeave

Alarm	Attributes	Applicable major NE releases
Name: LinkAggPortLeave (655) Type: InkaggAlarm (56) Package: lag Raised on class: lag.Interface	Severity: info Implicitly cleared: false Default probable cause: lagPortLeave (486)	Unspecified
Description: The alarm is raised when a LAG port leaves a LAG by exiting the attached state.		
Remedial action: Informational.		

Table 35-372 LinkAggPortRemove

Alarm	Attributes	Applicable major NE releases
Name: LinkAggPortRemove (656) Type: InkaggAlarm (56) Package: lag Raised on class: lag.Interface	Severity: warning Implicitly cleared: false Default probable cause: lagPortRemove (487)	Unspecified
Description: The alarm is raised when a LAG port is removed from a LAG because of an invalid configuration.		
Remedial action: A configuration error has occurred which must be corrected. Please check the configuration of the port in question.		

Table 35-373 LinkIdentifierMismatch (mwa)

Alarm	Attributes	Applicable major NE releases
Name: LinkIdentifierMismatch (686) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: LinkIdentifierMismatch (1916)	Unspecified
Description: The alarm is raised when a MPT detects a link identifier mismatch.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-374 LinkIdentifierMismatch (radioequipment)

Alarm	Attributes	Applicable major NE releases
Name: LinkIdentifierMismatch (686) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: linkIdentifierMismatch (501)	Unspecified
Description: The alarm is raised when an MSS detects a link identifier mismatch.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-375 liSourceDisabled

Alarm	Attributes	Applicable major NE releases
Name: liSourceDisabled (563) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LISourceCfg	Severity: warning Implicitly cleared: false Default probable cause: tMirrorSourceDisabled (433)	Unspecified
Description: The alarm is raised when an LI mirror source Operational State changes from Up to Down.		
Remedial action: Informational - no corrective action required.		

Table 35-376 liSourceEnabled

Alarm	Attributes	Applicable major NE releases
Name: liSourceEnabled (562) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LISourceCfg	Severity: warning Implicitly cleared: false Default probable cause: tMirrorSourceEnabled (432)	Unspecified
Description: The alarm is raised when an LI mirror source Operational State changes from Down to Up.		
Remedial action: Informational - no corrective action required.		

Table 35-377 liSourceFilterAssignReject

Alarm	Attributes	Applicable major NE releases
Name: liSourceFilterAssignReject (557) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LIMgmtSite	Severity: warning Implicitly cleared: false Default probable cause: tMirrorSourceFilterAssignReject (427)	Unspecified

(1 of 2)

35 – Unspecified NE alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when an operator tries to modify a filter that is in use by LI.		
Remedial action: Informational - no corrective action required.		

(2 of 2)

Table 35-378 liSourceFilterAssignWarn

Alarm	Attributes	Applicable major NE releases
Name: liSourceFilterAssignWarn (559) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LIMgmtSite	Severity: warning Implicitly cleared: false Default probable cause: tMirrorSourceFilterAssignWarn (429)	Unspecified
Description: The alarm is raised when an operator assigns a mirror filter that is in use by LI and the assignment may be overruled.		
Remedial action: Informational - no corrective action required.		

Table 35-379 liSourceFilterChanged

Alarm	Attributes	Applicable major NE releases
Name: liSourceFilterChanged (3313) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LIMgmtSite	Severity: warning Implicitly cleared: false Default probable cause: tMirrorSourceLiFilterChanged (1152)	Unspecified
Description: The alarm is raised when a parameter of a filter which is referenced by Lawful Intercept (LI), or a parameter of one of its entry is changed. This notification may be triggered only if the LI filter lock is overruled, and one of the following actions occurs: -a filter referenced by LI has been deleted. -one of the parameters (default-action, scope) of a filter which is referenced by LI has been changed. -a filter which is referenced by LI is overwritten. -a new entry is created for a filter which is referenced by LI. -an entry of a filter which is referenced by LI is activated. -an entry is removed from a filter which is referenced by LI. -an entry of a filter which is referenced by LI is renumbered. -one of the parameters of an entry in a filter which is referenced by LI is changed.		
Remedial action: Informational - no corrective action required.		

Table 35-380 liSourceFilterOverruled

Alarm	Attributes	Applicable major NE releases
Name: liSourceFilterOverruled (558) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LIMgmtSite	Severity: warning Implicitly cleared: false Default probable cause: tMirrorSourceFilterOverruled (428)	Unspecified
Description: The alarm is raised when the assignment of a mirror filter is overruled by another filter assignment.		
Remedial action: Informational - no corrective action required.		

Table 35-381 liSourceIP6FltrChangeReject

Alarm	Attributes	Applicable major NE releases
Name: liSourceIP6FltrChangeReject (4377) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Implicitly cleared: false Default probable cause: tMirrorSourceIP6FltrChangeReject (1562)	Unspecified
Description: The alarm is raised when an operator tries to modify an IPv6 filter or an IPv6 filter entry that is in use by LI.		
Remedial action: Informational - no corrective action required.		

Table 35-382 liSourceIPFltrChangeReject

Alarm	Attributes	Applicable major NE releases
Name: liSourceIPFltrChangeReject (552) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Implicitly cleared: false Default probable cause: tMirrorSourceIPFltrChangeReject (422)	Unspecified
Description: The alarm is raised when an operator tries to modify an IP filter or an IP filter entry that is in use by LI.		
Remedial action: Informational - no corrective action required.		

Table 35-383 liSourceMacFltrChangeReject

Alarm	Attributes	Applicable major NE releases
Name: liSourceMacFltrChangeReject (553) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LIMirrorSiteCfg	Severity: warning Implicitly cleared: false Default probable cause: tMirrorSourceMacFltrChangeReject (423)	Unspecified
Description: The alarm is raised when an operator tries to modify a MAC filter or a MAC filter entry that is in use by LI.		
Remedial action: Informational - no corrective action required.		

Table 35-384 liSourceSapChange

Alarm	Attributes	Applicable major NE releases
Name: liSourceSapChange (560) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.liSourceInterface	Severity: warning Implicitly cleared: false Default probable cause: tMirrorSourceSapChange (430)	Unspecified

(1 of 2)

35 – Unspecified NE alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a SAP that is associated with LI is modified or deleted.		
Remedial action: Informational - no corrective action required.		

(2 of 2)

Table 35-385 liSourceSubscriberChange

Alarm	Attributes	Applicable major NE releases
Name: liSourceSubscriberChange (561) Type: ConfigurationAlarm (15) Package: mirrorli Raised on class: mirrorli.LISourceSubscriberHost	Severity: warning Implicitly cleared: false Default probable cause: tMirrorSourceSubChange (431)	Unspecified
Description: The alarm is raised when a subscriber that is associated with LI is modified or deleted.		
Remedial action: Informational - no corrective action required.		

Table 35-386 LocalRadioTxMuteAbnormalState

Alarm	Attributes	Applicable major NE releases
Name: LocalRadioTxMuteAbnormalState (3941) Type: localRadioTxMuteABNAlarm (117) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: LocalRadioTxMuteABNProblem (1523)	Unspecified
Description: The alarm is raised when abnormal state resulted due to local radio Tx is muted manually.		
Remedial action: The alarm is raised when abnormal state resulted due to local radio Tx is muted manually.		

Table 35-387 LODS

Alarm	Attributes	Applicable major NE releases
Name: LODS (805) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.IMALink	Severity: major Implicitly cleared: true Default probable cause: lossOfDelaySynchronization (571)	Unspecified
Description: The alarm is raised when a Loss of Delay Synchronization signal is detected on an ASAP MDA.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-388 LoopbackActivateAbnormalState (equipment)

Alarm	Attributes	Applicable major NE releases
Name: LoopbackActivateAbnormalState (3942) Type: loopbackActivateABNAlarm (118) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: LoopbackActivateABNProblem (1524)	Unspecified
Description: The alarm is raised when abnormal state resulted due to loopback activated.		
Remedial action: The alarm is raised when abnormal state resulted due to manual loopback activation by user.		

Table 35-389 LoopbackActivateAbnormalState (radioequipment)

Alarm	Attributes	Applicable major NE releases
Name: LoopbackActivateAbnormalState (3942) Type: loopbackActivateABNAlarm (118) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: LoopbackActivateABNProblem (1524)	Unspecified
Description: The alarm is raised when abnormal state resulted due to loopback activated.		
Remedial action: The alarm is raised when abnormal state resulted due to manual loopback activation by user.		

Table 35-390 LoopProblem

Alarm	Attributes	Applicable major NE releases
Name: LoopProblem (1145) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: loopProblem (851)	Unspecified
Description: The alarm is raised when there is a loss of communication command path between far end transmitter and local receiver .		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

35 – Unspecified NE alarms

Table 35-391 LossOfAlignment

Alarm	Attributes	Applicable major NE releases
Name: LossOfAlignment (629) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: lossOfAlignment (468)	Unspecified
Description: The alarm is raised when a Loss of Alignment signal is detected.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-392 LossOfCESoEthFrames

Alarm	Attributes	Applicable major NE releases
Name: LossOfCESoEthFrames (1168) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: lossOfCESoEthFrames (870)	Unspecified
Description: The alarm is raised when an Ethernet frame loss is detected on a CES.		
Remedial action: The alarm is raised when a loss occurs on CES over Ethernet Frames.		

Table 35-393 LossOfESMC

Alarm	Attributes	Applicable major NE releases
Name: LossOfESMC (2939) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: lossOfESMC (1131)	Unspecified
Description: The alarm is raised when a loss of ESMC signal failure is detected.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-394 LossOfFrame (equipment)

Alarm	Attributes	Applicable major NE releases
Name: LossOfFrame (630) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: lossOfFrame (97)	Unspecified
Description: The alarm is raised when an LOF is detected on a port.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-395 LossOfPointer

Alarm	Attributes	Applicable major NE releases
Name: LossOfPointer (3623) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: lossOfPointer (612)	Unspecified
Description: The alarm is raised when a loss of pointer occurs		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-396 LossOfProtection (equipment)

Alarm	Attributes	Applicable major NE releases
Name: LossOfProtection (1169) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: lossOfProtection (871)	Unspecified
Description: The alarm is raised when an MPT radio protection loss occurs.		
Remedial action: The alarm is raised when a protection loss occurs on MPT Radio.		

35 – Unspecified NE alarms

Table 35-397 LossOfProtection (mpr)

Alarm	Attributes	Applicable major NE releases
Name: LossOfProtection (1169) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.VlanPathInstance	Severity: variable Implicitly cleared: true Default probable cause: lossOfProtection (871)	Unspecified
Description: The alarm is raised when a Loss of Protection occurs		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-398 LossOfRadioFrame

Alarm	Attributes	Applicable major NE releases
Name: LossOfRadioFrame (4828) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: LossOfFrame (1904)	Unspecified
Description: The alarm is raised when a MPT detects a Loss of Radio Frame from Radio Path		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-399 LossOfRadioFramesAlignment

Alarm	Attributes	Applicable major NE releases
Name: LossOfRadioFramesAlignment (4829) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: LossOfAlignment (1917)	Unspecified
Description: The alarm is raised when a MPT detects a Loss of Radio Frames Alignment		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-400 LossOfSignal (equipment)

Alarm	Attributes	Applicable major NE releases
Name: LossOfSignal (631) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: lossOfSignal (99)	Unspecified

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a Loss of Signal is detected on a port.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

(2 of 2)

Table 35-401 LowSwitchFabricCap

Alarm	Attributes	Applicable major NE releases
Name: LowSwitchFabricCap (5178) Type: hardwareAnomaly (55) Package: equipment Raised on class: equipment.Card	Severity: major Implicitly cleared: true Default probable cause: LowSwitchFabricCapacity (2094)	Unspecified
Description: The alarm is raised when the total switch fabric capacity becomes less than the line card capacity due to link failures. At least one of the taps on the Card is below 100% capacity.		
Remedial action: 1. Make sure that the hardware switching fabric capacity is more than the line card capacity. 2. Please reboot the card and check if it resolves the problem. If problem persists after reboot, please contact Alcatel-Lucent support for assistance.		

Table 35-402 LpsLearnMac

Alarm	Attributes	Applicable major NE releases
Name: LpsLearnMac (519) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LearnedPortSecurity	Severity: warning Implicitly cleared: true Default probable cause: portLearnedBridgedMAC (394)	Unspecified
Description: The alarm is raised when an LPS port learns a bridged MAC address.		
Remedial action: Informational - no corrective action required.		

Table 35-403 LpsPortUpAfterLearningWindowExpired

Alarm	Attributes	Applicable major NE releases
Name: LpsPortUpAfterLearningWindowExpired (517) Type: learnedPortSecurityAlarm (51) Package: lps Raised on class: lps.LPSConfiguration	Severity: warning Implicitly cleared: true Default probable cause: portUpAfterLearningWindowExpired (392)	Unspecified
Description: The alarm is raised either when an LPS port is enabled after the learning window expires and MAC address learning on the port is disabled, or when the learning window expires with slice and port values of 0.		
Remedial action: Informational - no corrective action required.		

35 – Unspecified NE alarms

Table 35-404 LsdbOverflow

Alarm	Attributes	Applicable major NE releases
Name: LsdbOverflow (53) Type: equipmentAlarm (3) Package: ospf Raised on class: ospf.Site	Severity: major Implicitly cleared: false Default probable cause: resourceFull (53)	Unspecified
Description: The alarm is raised when the number of received external LSAs exceeds the configured number allowed. By default, there is no limit. The alarm information includes the configured LSDB limit and one of the following LSDB overflow states: - 0, which means no overflow - 1, which means nearing limit - 2, which means limit exceeded		
Remedial action: Informational - the number of received external LSAs exceeds the configured number allowed. The alarm will also be raised when external LSAs is nearing limit.		

Table 35-405 LudbDhcpHostGroupIfTooLong

Alarm	Attributes	Applicable major NE releases
Name: LudbDhcpHostGroupIfTooLong (4627) Type: LudbDhcpHostGroupIfTooLongAlarm (129) Package: localuserdb Raised on class: localuserdb.DhcpHost	Severity: major Implicitly cleared: false Default probable cause: ludbDhcpHostGroupIfTooLong (1895)	Unspecified
Description: The alarm is raised when the default MSAP group interface name of a DHCP Host, concatenated with the port ID is longer than 32 characters.		
Remedial action: The string configured in DHCP Host as default MSAP Group Interface Name concatenated with the port-id is longer than 32 characters. It is an invalid configuration since it exceeds the length allowed for a Group Interface Name. (Please) Reconfigure the MSAP Group Interface Name or refer to the Local User Database documentation for assistance.		

Table 35-406 LudbPppHostGroupIfTooLong

Alarm	Attributes	Applicable major NE releases
Name: LudbPppHostGroupIfTooLong (4628) Type: LudbPppHostGroupIfTooLongAlarm (130) Package: localuserdb Raised on class: localuserdb.PppHost	Severity: major Implicitly cleared: false Default probable cause: ludbPppHostGroupIfTooLong (1896)	Unspecified
Description: The alarm is raised when the default MSAP group interface name of a PPP host, concatenated with the port ID is longer than 32 characters.		
Remedial action: The string configured in PPP Host as default MSAP Group Interface Name concatenated with the port-id is longer than 32 characters. It is an invalid configuration since it exceeds the length allowed for a Group Interface Name. (Please) Reconfigure the MSAP Group Interface Name or refer to the Local User Database documentation for assistance.		

Table 35-407 MacAccountingLimitReached (rtr)

Alarm	Attributes	Applicable major NE releases
Name: MacAccountingLimitReached (4907) Type: macAccountingAlarm (132) Package: rtr Raised on class: rtr.NetworkInterface	Severity: warning Implicitly cleared: true Default probable cause: macAccountingLimitReached (1964)	Unspecified
Description: The alarm is raised when the system detects that the MAC accounting table is full.		
Remedial action: This alarm can be cleared when the used MAC entries are deleted by disabling MAC accounting on a particular interface or through manual intervention with a user command such as clear router interface mac.		

Table 35-408 MacAccountingLimitReached (service)

Alarm	Attributes	Applicable major NE releases
Name: MacAccountingLimitReached (4907) Type: macAccountingAlarm (132) Package: service Raised on class: service.L3AccessInterface	Severity: warning Implicitly cleared: true Default probable cause: macAccountingLimitReached (1964)	Unspecified
Description: The alarm is raised when the system detects that the MAC accounting table is full.		
Remedial action: This alarm can be cleared when the used MAC entries are deleted by disabling MAC accounting on a particular interface or through manual intervention with a user command such as clear router interface mac.		

Table 35-409 MacPinningViolation

Alarm	Attributes	Applicable major NE releases
Name: MacPinningViolation (443) Type: serviceAlarm (16) Package: vpls Raised on class: vpls.AbstractSite	Severity: warning Implicitly cleared: false Default probable cause: macAddressPinned (348)	Unspecified
Description: The alarm is raised when an attempt is made to assign a pinned MAC address to another L2 access interface or spoke SDP binding in an M-VPLS or VPLS.		
Remedial action: Use a MAC address that is not already pinned.		

35 – Unspecified NE alarms

Table 35-410 ManagedRouteAddFailed

Alarm	Attributes	Applicable major NE releases
Name: ManagedRouteAddFailed (5130) Type: processingErrorAlarm (81) Package: rtr Raised on class: rtr.RoutingInstanceSite	Severity: minor Implicitly cleared: false Default probable cause: tmnxVRtrManagedRouteAddFailed (2060)	Unspecified
Description: The alarm is raised when a managed route could not be installed.		
Remedial action: Check the additional text of the alarm for more details.		

Table 35-411 ManagedRouteFailedRetryThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: ManagedRouteFailedRetryThresholdCrossed (397) Type: topologyAlarm (34) Package: topology Raised on class: topology.RouteManager	Severity: major Implicitly cleared: true Default probable cause: managedRouteCouldNotBeSetup (298)	Unspecified
Description: The alarm is raised when the 5650 CPAM cannot set up a managed route after the number of attempts specified by the cpamManagedRoute problematicThresholdAlarmAfter value in the nms-server.xml file. The alarm is raised if the cpamManagedRoute problematicRetryStrategy value in nms-server.xml is set to countdown. The alarm is not raised if the problematicRetryStrategy value is set to the default of reactive.		
Remedial action: Informational - The Retry strategy can be modified in nms-server.xml. This alarm is not raised for the default retry strategy, reactive.		

Table 35-412 ManagedRouteRetryAttemptsExhausted

Alarm	Attributes	Applicable major NE releases
Name: ManagedRouteRetryAttemptsExhausted (398) Type: topologyAlarm (34) Package: topology Raised on class: topology.RouteManager	Severity: major Implicitly cleared: false Default probable cause: managedRouteCouldNotBeSetup (298)	Unspecified
Description: The alarm is raised when the 5650 CPAM stops trying to set up a managed route after the number of attempts specified by the cpamManagedRoute problematicDeadAfter value in the nms-server.xml file. The alarm is raised if the cpamManagedRoute problematicRetryStrategy value in nms-server.xml is set to countdown. The alarm is not raised if the problematicRetryStrategy value is set to the default value of reactive.		
Remedial action: Informational - The Retry strategy can be modified in nms-server.xml. This alarm is not raised for the default retry strategy, reactive.		

Table 35-413 ManagementVlanConflict

Alarm	Attributes	Applicable major NE releases
Name: ManagementVlanConflict (215) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Vlan	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	Unspecified
Description: The alarm is raised when a management VLAN ID is in use by another service type.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		
Remedial action: Ensure that the VLAN ID of this Management Service is not used on any other type of VLAN Service.		

Table 35-414 ManualCpaaSwitchover

Alarm	Attributes	Applicable major NE releases
Name: ManualCpaaSwitchover (5143) Type: configurationAlarm (11) Package: topology Raised on class: topology.Cpaa	Severity: warning Implicitly cleared: false Default probable cause: CPAASwitchover (2066)	Unspecified
Description: The alarm is raised when an operator has manually initiated a switchover. This alarm is not self clearing. Another switchover will not be permitted for 10 mins.		
Remedial action: Manual Switchover has been executed.		

Table 35-415 MaxNumExportRoutesReached

Alarm	Attributes	Applicable major NE releases
Name: MaxNumExportRoutesReached (1116) Type: ProtocolAlarm (1) Package: vprn Raised on class: vprn.AbstractSite	Severity: minor Implicitly cleared: true Default probable cause: MaxNumExportRoutesReached (828)	Unspecified
Description: The alarm is raised when the number of routes exported from a route table to a VRF reaches the configured maximum.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE or VRF instance in the network. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-416 MaxNumIpv6RoutesReached

Alarm	Attributes	Applicable major NE releases
Name: MaxNumIpv6RoutesReached (505) Type: ProtocolAlarm (1) Package: I3fwd Raised on class: I3fwd.ServiceSite	Severity: major Implicitly cleared: true Default probable cause: MaxNumIpv6RouteReached (389)	Unspecified
Description: The alarm is raised when the number of IPv6 routes in a VPRN exceeds the configured maximum.		
Remedial action: The number of IPv6 routes has exceeded the configured maximum for the VPRN - the route table must be examined to ensure that all of the routes in the table are valid and not the result of a misconfiguration in the VPRN service. If all of the routes appear to be valid then the value used as the maximum value should be revisited.		

Table 35-417 MaxNumMcastRoutes

Alarm	Attributes	Applicable major NE releases
Name: MaxNumMcastRoutes (206) Type: ProtocolAlarm (1) Package: I3fwd Raised on class: I3fwd.Site	Severity: major Implicitly cleared: true Default probable cause: MaxNumMcastRoutesReached (160)	Unspecified
Description: The alarm is raised when the number of multicast routes in a VPRN exceeds the configured maximum.		
Remedial action: Informational. The number of multicast routes in a VPRN exceeds the configured maximum. The value used as the threshold value should be revisited.		

Table 35-418 MaxNumRoutesReached

Alarm	Attributes	Applicable major NE releases
Name: MaxNumRoutesReached (1198) Type: ProtocolAlarm (1) Package: I3fwd Raised on class: I3fwd.ServiceSite	Severity: major Implicitly cleared: false Default probable cause: MaxNumRoutesReached (898)	Unspecified
Description: The alarm is raised when the number of routes in a VPRN reaches the maximum number of routes specified in the VPRN configuration. The alarm information includes the number of routes, the specified maximum, and the route type, which is either IPv4 or IPv6.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE or VRF instance in the network. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-419 MaxNumV6ExportRoutesReached

Alarm	Attributes	Applicable major NE releases
Name: MaxNumV6ExportRoutesReached (4398) Type: ProtocolAlarm (1) Package: vprn Raised on class: vprn.AbstractSite	Severity: minor Implicitly cleared: true Default probable cause: MaxNumV6ExportRoutesReached (1575)	Unspecified
Description: The alarm is raised when the number of IPv6 routes exported from a route table to a VRF reaches the configured maximum.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE or VRF instance in the network. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-420 MaxPdnConnections

Alarm	Attributes	Applicable major NE releases
Name: MaxPdnConnections (4795) Type: EpcAlarm (59) Package: lte Raised on class: lte.PdnApn	Severity: major Implicitly cleared: true Default probable cause: thresholdCrossed (12)	Unspecified
Description: The alarm is generated when the maximum number of Packet Data Network (PDN) connections for this Access Point Name (APN) on the gateway is reached.		
Remedial action: Maximum number of PDN connections for this APN on the gateway is reached. To accept new PDN connections, system has to wait until the number of PDN connections goes below the value of PdnApnMaxPdnConnections.		

Table 35-421 McacPolicyDropped (igmp)

Alarm	Attributes	Applicable major NE releases
Name: McacPolicyDropped (341) Type: communicationsAlarm (4) Package: igmp Raised on class: igmp.Interface	Severity: major Implicitly cleared: false Default probable cause: igmpGroupOnSapDropped (246)	Unspecified
Description: The alarm is raised when an IGMP group is dropped because a multicast CAC policy is applied.		
Remedial action: Informational - no corrective action required.		

Table 35-422 McacPolicyDropped (pim)

Alarm	Attributes	Applicable major NE releases
Name: McacPolicyDropped (341) Type: communicationsAlarm (4) Package: pim Raised on class: pim.Interface	Severity: major Implicitly cleared: false Default probable cause: pimGroupOnSapDropped (266)	Unspecified
Description: The alarm is raised when a PIM group is dropped because a multicast CAC policy is applied.		
Remedial action: Informational only.		

Table 35-423 McacPolicyDropped (svt)

Alarm	Attributes	Applicable major NE releases
Name: McacPolicyDropped (341) Type: communicationsAlarm (4) Package: svt Raised on class: svt.SdpBindingIgmppSnpGCfg	Severity: major Implicitly cleared: false Default probable cause: igmpGroupOnSdpBindDropped (265)	Unspecified
Description: The alarm is raised when an IGMP group is dropped because a multicast CAC policy is applied to an SDP binding.		
Remedial action: Informational only.		

Table 35-424 McacPolicyDropped (vpls)

Alarm	Attributes	Applicable major NE releases
Name: McacPolicyDropped (341) Type: communicationsAlarm (4) Package: vpls Raised on class: vpls.L2AccessInterfaceIgmppSnpGCfg	Severity: major Implicitly cleared: false Default probable cause: igmpGroupOnSapDropped (246)	Unspecified
Description: The alarm is raised when an IGMP group is removed from a SAP because a multicast CAC policy is applied.		
Remedial action: Informational only.		

Table 35-425 McastRoutesMidLevelThresholdReached

Alarm	Attributes	Applicable major NE releases
Name: McastRoutesMidLevelThresholdReached (207) Type: ProtocolAlarm (1) Package: I3fwd Raised on class: I3fwd.Site	Severity: minor Implicitly cleared: false Default probable cause: MidLevelThresholdReached (161)	Unspecified
Description: The alarm is raised when the number of multicast routes in a VPRN exceeds the configured threshold value. The alarm information includes the number of multicast routes and the threshold value.		
Remedial action: the number of multicast routes in a VPRN exceeds the configured threshold value. The value used as the threshold value should be revisited.		

Table 35-426 McIPsecTunnelGroupSyncTagMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: McIPsecTunnelGroupSyncTagMisconfigured (4817) Type: redundancyAlarm (52) Package: multichassis Raised on class: multichassis.MultiChassisIPSecGroup	Severity: major Implicitly cleared: true Default probable cause: ipsecGroupSyncTagMisconfigure (1902)	Unspecified
Description: The alarm is raised when a peer of MC IPsec tunnel groups has unconfigured or mismatched synchronization tag.		
Raising condition: (('Synchronization Tag' NOT EQUAL 'Synchronization Tag') OR (('Synchronization Tag' EQUAL '\\"') OR ('Synchronization Tag' EQUAL '\\"'))		
Clearing condition: (('Synchronization Tag' EQUAL 'Synchronization Tag') AND (('Synchronization Tag' NOT EQUAL '\\"') AND ('Synchronization Tag' NOT EQUAL '\\"'))		
Remedial action: Check if the synchronization tag has been configured for the MC IPsec tunnel group peer and they matches.		

Table 35-427 McLagSourceBMacLsbMisconfigured (lag)

Alarm	Attributes	Applicable major NE releases
Name: McLagSourceBMacLsbMisconfigured (776) Type: configurationAlarm (11) Package: lag Raised on class: lag.MultiChassisLag	Severity: major Implicitly cleared: true Default probable cause: McLagSourceBMacLsbMisconfigured (551)	Unspecified
Description: The alarm is raised when the 5620 SAM detects a mismatch in the last 16 bits of the source backbone MAC address on the peer device. This mismatch prevents PBB access dual homing from operating.		
Raising condition: ('srcBMacLSBMisconfigured' EQUAL 'true')		
Clearing condition: ('srcBMacLSBMisconfigured' EQUAL 'false')		
Remedial action: Check the MAC Address LSB is correct for source backbone address.		

35 – Unspecified NE alarms

Table 35-428 McLagSourceBMacLsbMisconfigured (multichassis)

Alarm	Attributes	Applicable major NE releases
Name: McLagSourceBMacLsbMisconfigured (776) Type: configurationAlarm (11) Package: multichassis Raised on class: multichassis.MultiChassisLag	Severity: major Implicitly cleared: true Default probable cause: McLagSourceBMacLsbMisconfigured (551)	Unspecified
Description: The alarm is raised when the 5620 SAM detects a mismatch in the last 16 bits of the source backbone MAC address on the peer device. This mismatch prevents PBB access dual homing from operating.		
Raising condition: ('srcBMacLSBMisconfigured' EQUAL 'true')		
Clearing condition: ('srcBMacLSBMisconfigured' EQUAL 'false')		
Remedial action: Check the MAC Address LSB is correct for source backbone address.		

Table 35-429 McMobileGeoRedChgInfo

Alarm	Attributes	Applicable major NE releases
Name: McMobileGeoRedChgInfo (4380) Type: equipmentAlarm (3) Package: multichassis Raised on class: multichassis.MultiChassisPeerMobileGateway	Severity: warning Implicitly cleared: false Default probable cause: equipmentAlarm (1565)	Unspecified
Description: The alarm is raised when the mobile-gateway or the CPM has changed its geo-redundancy state or the peer's connection status has changed.		
Remedial action: Check what caused this state change. Bring the peer and/or peer-link up and ensure that the chassis and CPM geo-redundancy states are 'hot'.		

Table 35-430 McMobileIssuStateChange

Alarm	Attributes	Applicable major NE releases
Name: McMobileIssuStateChange (5119) Type: integrityViolation (85) Package: multichassis Raised on class: multichassis.MultiChassisPeerMobileSpecifics	Severity: warning Implicitly cleared: true Default probable cause: mismatchPeerSets (199)	Unspecified
Description: The alarm is raised when ISSU state between the mobile-gateways participating in the geo-redundancy changes		
Remedial action: Check what caused this change in ISSU state and correct the issue for geo-redundancy to work.		

Table 35-431 McPathBlackHole

Alarm	Attributes	Applicable major NE releases
Name: McPathBlackHole (2940) Type: resourceAlarm (28) Package: equipment Raised on class: equipment.DaughterCard	Severity: critical Implicitly cleared: true Default probable cause: resourceLimitReached (131)	Unspecified
Description: The alarm is raised when a multicast (S,G) specification enters a black-hole state.		
Remedial action: The alarm is raised when a source, group (S,G) goes into a black-hole state. The situation may occur when a certain source, group(S,G) has a bandwidth higher than it's configured maximum and no path/plane that can accommodate for the bandwidth of the new stream. This can be remedied by increasing the path limit(iom2 and older) or plane limit (iom3 and newer) at the Daughter Card tab or by modifying Ingress Multicast Path Management policy which assigned to the card.		

Table 35-432 McPathsBlackHole

Alarm	Attributes	Applicable major NE releases
Name: McPathsBlackHole (4903) Type: resourceAlarm (28) Package: equipment Raised on class: equipment.DaughterCard	Severity: critical Implicitly cleared: false Default probable cause: resourceLimitReached (131)	Unspecified
Description: The alarm is raised when one or more multicast (S,G) specifications enters a black-hole state.		
Remedial action: The alarm is raised when one or more source, group (S,G) goes into a black-hole state. The situation may occur when a certain source, group (S,G) has a bandwidth higher than it's configured maximum and no path/plane that can accommodate for the bandwidth of the new stream. This can be remedied by increasing the path limit(iom2 and older) or plane limit (iom3 and newer) at the Daughter Card tab or by modifying Ingress Multicast Path Management policy which assigned to the card.		

Table 35-433 MD5AuthFailure

Alarm	Attributes	Applicable major NE releases
Name: MD5AuthFailure (2934) Type: communicationsAlarm (4) Package: bgp Raised on class: bgp.Md5Key	Severity: major Implicitly cleared: false Default probable cause: md5AuthFailure (1128)	Unspecified
Description: The alarm is raised when an incoming packet is dropped because of BGP MD5 key authentication failure.		
Remedial action: A configuration error has been made which must be corrected. The MD5 authentication key configured is incorrect.		

35 – Unspecified NE alarms

Table 35-434 MFibTableSizeLimitReached

Alarm	Attributes	Applicable major NE releases
Name: MFibTableSizeLimitReached (190) Type: resourceAlarm (28) Package: vpls Raised on classes: <ul style="list-style-type: none"> vpls.AbstractTlsSite vpls.AbstractBSite 	Severity: warning Implicitly cleared: true Default probable cause: resourceLimitReached (131)	Unspecified
Description: The alarm is raised when the 5620 SAM receives a svcTlsMfibTableFullAlarmRaised trap for a VPLS site. The alarm clears when the 5620 SAM receives a svcTlsMfibTableFullAlarmCleared trap for the site.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why		

Table 35-435 MGMCSwitchOverStatusNotify

Alarm	Attributes	Applicable major NE releases
Name: MGMCSwitchOverStatusNotify (4814) Type: processingErrorAlarm (81) Package: multichassis Raised on class: multichassis.MultiChassisPeerMobileGateway	Severity: info Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	Unspecified
Description: The alarm is raised when the status of switchover enforced on the mobile-gateway in geo-redundancy changes		
Remedial action: Check switchover failure reason and correct the issue in order to perform switchover.		

Table 35-436 MgwPeerConnectionStateAlarm

Alarm	Attributes	Applicable major NE releases
Name: MgwPeerConnectionStateAlarm (4399) Type: connectionStateChangeAlarm (125) Package: wlangw Raised on class: wlangw.MgwPeer	Severity: minor Implicitly cleared: false Default probable cause: MgwPeerConnectionStateAlarm (1576)	Unspecified
Description: This alarm is raised when the state of a connection with a Mobile Gateway has changed. [CAUSE] The state of a connection with a Mobile Gateway has changed to Fault. [EFFECT] The effect depends on the new state. [RECOVERY] No recovery is required on this system.		
Remedial action: Fault occurred on the connection with Mobile Gateway. Check the physical connection and interfaces between Mobile Gateway and WLAN Gateway.		

Table 35-437 MgwPeerGtpMismatchAlarm

Alarm	Attributes	Applicable major NE releases
Name: MgwPeerGtpMismatchAlarm (5144) Type: configurationAlarm (11) Package: wlangw Raised on class: wlangw.MgwPeer	Severity: minor Implicitly cleared: false Default probable cause: MgwPeerGtpMismatchAlarm (2067)	Unspecified
Description: This alarm is raised when the Negotiated QoS profile RADIUS attribute contains a release indicator either for GGSN or PGW that does not correspond to the interface type actually used in GTP. e.g. the release indicator is for GGSN and the interface type used in GTP is S2a/S2b while it should be Gn.		
Remedial action: The RADIUS Server configuration should be corrected to match the MgwPeer interface type actually used in GTP.		

Table 35-438 MicroBFDSessionDown

Alarm	Attributes	Applicable major NE releases
Name: MicroBFDSessionDown (4997) Type: InkaggAlarm (56) Package: lag Raised on class: lag.Interface	Severity: minor Implicitly cleared: true Default probable cause: LagMemberMicroBfdSessionStateChanged (2051)	Unspecified
Description: The alarm is raised when there is a change in the state of the micro-BFD session of a link (port) of the LAG. When the state is 'idle', 'failed', 'waitingFwd', 'up', then the port is forwarding traffic. When the state is 'waiting', 'down', then the port is not forwarding traffic.		
Remedial action: Micro BFD Session state of one of the LAG links is changed. Please check the LAG's BFD configuration or the configuration of the LAG and the Ports in it.		

Table 35-439 MidLevelIPv6RoutesReached

Alarm	Attributes	Applicable major NE releases
Name: MidLevelIPv6RoutesReached (506) Type: ProtocolAlarm (1) Package: I3fwd Raised on class: I3fwd.ServiceSite	Severity: minor Implicitly cleared: false Default probable cause: MidLevelIPv6RoutesReached (390)	Unspecified
Description: The alarm is raised when the number of IPv6 routes in a VPRN exceeds the configured threshold value. The alarm information includes the number of IPv6 routes and the threshold value.		
Remedial action: The number of IPv6 routes has exceeded the configured maximum for the VPRN - the route table must be examined to ensure that all of the routes in the table are valid and not the result of a misconfiguration in the VPRN service. If all of the routes appear to be valid then the value used as the threshold value should be revisited.		

35 – Unspecified NE alarms

Table 35-440 MidLevelRoutesReached

Alarm	Attributes	Applicable major NE releases
Name: MidLevelRoutesReached (1199) Type: ProtocolAlarm (1) Package: I3fwd Raised on class: I3fwd.ServiceSite	Severity: minor Implicitly cleared: false Default probable cause: MidLevelRoutesReached (899)	Unspecified
Description: The alarm is raised when the number of routes in a VPRN exceeds the threshold specified in the VPRN configuration. The threshold value is a percentage of the maximum number of routes specified in the VPRN configuration. The alarm information includes the number of routes and the threshold value.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE or VRF instance in the network. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-441 MirrorDestinationMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: MirrorDestinationMisconfigured (209) Type: configurationAlarm (11) Package: mirror Raised on class: mirror.Mirror	Severity: major Implicitly cleared: true Default probable cause: mirrorDestinationMisconfigured (162)	Unspecified
Description: The alarm is raised when more than two destination Sites are configured for a service mirror.		
Raising condition: ('destinationMisconfigured' EQUAL 'true')		
Clearing condition: ('destinationMisconfigured' EQUAL 'false')		
Remedial action: Delete destination site so that there are two or less destination sites in one Mirror service.		

Table 35-442 MirrorEncapsulationTypeInconsistent

Alarm	Attributes	Applicable major NE releases
Name: MirrorEncapsulationTypeInconsistent (217) Type: configurationAlarm (11) Package: mirror Raised on class: mirror.Mirror	Severity: major Implicitly cleared: true Default probable cause: mirrorEncapsulationTypeInconsistent (171)	Unspecified
Description: The alarm is raised when the encapsulation types of the mirror sites differ.		
Raising condition: ('encapsulationTypeInconsistent' EQUAL 'true')		
Clearing condition: ('encapsulationTypeInconsistent' EQUAL 'false')		
Remedial action: Reconfigure the 'Encapsulation Type' for the sites (delete and re-add the sites if not configurable) so that the 'Encapsulation Type' are the same in one Mirror service.		

Table 35-443 MisconfiguredInflow

Alarm	Attributes	Applicable major NE releases
Name: MisconfiguredInflow (1067) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.VlanPathInstance	Severity: major Implicitly cleared: true Default probable cause: misconfiguredInflow (809)	Unspecified
Description: The alarm is raised when the ports in a service use different inflow clock sources.		
Remedial action: Configured inflow is not in sync with the configuration on the NE. Please check for Mismatch.		

Table 35-444 mismatchAnyCastRPTypes

Alarm	Attributes	Applicable major NE releases
Name: mismatchAnyCastRPTypes (270) Type: configurationAlarm (11) Package: pim Raised on class: pim.AnyCastRP	Severity: warning Implicitly cleared: false Default probable cause: mismatchAnyCastRPTypes (202)	Unspecified
Description: The alarm is raised when there is an anycast RP type mismatch.		
Remedial action: A configuration error has occurred that must be corrected. Please check to make sure the global Virtual Anycast RP service type and this PIM Anycast RP service type are consistent.		

Table 35-445 mismatchBackupAddress

Alarm	Attributes	Applicable major NE releases
Name: mismatchBackupAddress (279) Type: configurationAlarm (11) Package: vrrp Raised on class: vrrp.VRInstance	Severity: minor Implicitly cleared: false Default probable cause: mismatchBackupAddress (212)	Unspecified
Description: The alarm is raised when two VR instances in a VR have different backup addresses.		
Remedial action: Reconfigure the backup addresses for the peer VRRP instances so that they are the same.		

Table 35-446 mismatchSubnets

Alarm	Attributes	Applicable major NE releases
Name: mismatchSubnets (280) Type: configurationAlarm (11) Package: vrrp Raised on class: vrrp.VRInstance	Severity: major Implicitly cleared: true Default probable cause: mismatchSubnets (213)	Unspecified
Description: The alarm is raised when two VR Instances in a VR have backup addresses that are in different subnets.		
Remedial action: Reconfigure the ip addresses for the peer VRRP instances so that they are in the same subnets.		

Table 35-447 mismatchVrrpTypes

Alarm	Attributes	Applicable major NE releases
Name: mismatchVrrpTypes (278) Type: configurationAlarm (11) Package: vrrp Raised on class: vrrp.VRInstance	Severity: minor Implicitly cleared: true Default probable cause: mismatchVrrpTypes (211)	Unspecified
Description: The alarm is raised when two VR instances in a VR are of different types, for example, when one VR instance type is Network and the other is IES.		
Raising condition: (('VRRP Type' NOT EQUAL 'VRRP Type'))		
Clearing condition: (('VRRP Type' EQUAL 'VRRP Type'))		
Remedial action: Reconfigure the VRRP instance peers so that they are from the same type of interfaces (Network, IES or VPRN).		

Table 35-448 MissingFallingEvent

Alarm	Attributes	Applicable major NE releases
Name: MissingFallingEvent (414) Type: configurationAlarm (11) Package: rmon Raised on class: rmon.Alarm	Severity: major Implicitly cleared: false Default probable cause: incompleteConfig (225)	Unspecified
Description: The alarm is raised when the 5620 SAM cannot find the falling event object that is named in an RMON policy alarm definition.		
Raising condition: ('Missing Falling Event' EQUAL 'true')		
Clearing condition: ('Missing Falling Event' EQUAL 'false')		
Remedial action: Cannot find the falling event object that is named in an RMON policy alarm definition. Please create the required event.		

Table 35-449 MissingHopConfiguration

Alarm	Attributes	Applicable major NE releases
Name: MissingHopConfiguration (350) Type: configurationAlarm (11) Package: mpls Raised on class: mpls.StaticLsp	Severity: warning Implicitly cleared: true Default probable cause: MissingHopConfiguration (252)	Unspecified
Description: The alarm is raised when a static LSP is created without hops.		
Remedial action: Need to configure static hops to the destination.		

Table 35-450 MissingNESelfConfigPolicy

Alarm	Attributes	Applicable major NE releases
Name: MissingNESelfConfigPolicy (1944) Type: communicationsAlarm (4) Package: netw Raised on class: netw.TopologyDiscoveryRule	Severity: major Implicitly cleared: false Default probable cause: noNESelfConfigPolicyFound (932)	Unspecified
Description: The alarm is raised when an identifier of a shadow NE matches the identifier of a node being discovered by a scan of this discovery rule, but there is no NE self-config policy for the node type set in this discovery rule.		
Remedial action: A configuration error has been made which must be corrected. Create a NE self-config policy and assign it to the discovery rule associated with the node being discovered.		

Table 35-451 MissingPreProvisionedNode

Alarm	Attributes	Applicable major NE releases
Name: MissingPreProvisionedNode (1945) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: noPreProvisionedNodeFound (933)	Unspecified
Description: The alarm is raised when there is no pre-provisioned NE with which to associate the discovered candidate target NE.		
Remedial action: A configuration error has been made which must be corrected. Create a pre-provisioned NE for the node being discovered.		

35 – Unspecified NE alarms

Table 35-452 MissingRisingEvent

Alarm	Attributes	Applicable major NE releases
Name: MissingRisingEvent (413) Type: configurationAlarm (11) Package: rmon Raised on class: rmon.Alarm	Severity: major Implicitly cleared: false Default probable cause: incompleteConfig (225)	Unspecified
Description: The alarm is raised when the 5620 SAM cannot find the rising event object that is named in an RMON policy alarm definition.		
Raising condition: ('Missing Rising Event' EQUAL 'true')		
Clearing condition: ('Missing Rising Event' EQUAL 'false')		
Remedial action: Cannot find the rising event object that is named in an RMON policy alarm definition. Please create the required event.		

Table 35-453 missingStaticRPConfigurations

Alarm	Attributes	Applicable major NE releases
Name: missingStaticRPConfigurations (268) Type: configurationAlarm (11) Package: pim Raised on class: pim.VirtualAnyCastRP	Severity: warning Implicitly cleared: true Default probable cause: missingStaticRPConfigurations (200)	Unspecified
Description: The alarm is raised when a static RP configuration is missing.		
Remedial action: A configuration error has occurred that must be corrected. Please check the global Virtual Anycast RP configuration and its operational status flag so that the Static RP and Group Range(s) are all configured.		

Table 35-454 MissSpokeConfiguration

Alarm	Attributes	Applicable major NE releases
Name: MissSpokeConfiguration (218) Type: configurationAlarm (11) Package: vpls Raised on class: vpls.AbstractVpls	Severity: warning Implicitly cleared: true Default probable cause: missSpokeConfiguration (172)	Unspecified
Description: The alarm is raised when the 5620 SAM detects a spoke SDP binding between two sites in one M-VPLS or VPLS. The alarm is not raised by the 5620 SAM, Release 4.0 or later.		
Raising condition: ('missSpokeConfiguration' EQUAL 'true')		
Clearing condition: ('missSpokeConfiguration' EQUAL 'false')		
Remedial action: Deprecated since Rel. 4.0		

Table 35-455 MldGrpIfSapCModeRxQueryMism

Alarm	Attributes	Applicable major NE releases
Name: MldGrpIfSapCModeRxQueryMism (5390) Type: configurationAlarm (11) Package: mld Raised on class: mld.GrpInterfaceSap	Severity: warning Implicitly cleared: false Default probable cause: InvalidCompatibilityModeofQueryReceived (2106)	Unspecified
Description: The alarm is raised when there is a mismatch between the compatible mode of the MLD SAP and the version of the received query. It is generated when the SAP is in MLDv1 compatible mode but it receives an MLDv2. It will include information on the configured version of the compatibility mode of the SAP, and the version of the received query.		
Remedial action: Change the MLD Version attribute on the MLD Group Interface to match the MLD host version.		

Table 35-456 MldGrpIfSapMaxGroupsLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: MldGrpIfSapMaxGroupsLimitExceeded (5391) Type: configurationAlarm (11) Package: mld Raised on class: mld.GrpInterfaceSap	Severity: warning Implicitly cleared: false Default probable cause: MldGrpIfSapMaxGroupsLimitExceeded (2107)	Unspecified
Description: 'This alarm is raised when an attempt is made to configure a group when the number of groups configured on the SAP, is equal to the 'Maximum Number of Groups' supported on the SAP.'		
Remedial action: Increase the value of the 'Maximum Number of Groups' attribute in the parent MLD group interface so that the number of active MLD groups stays under the configured threshold.		

Table 35-457 MldGrpIfSapMaxGrpSrcLimExcd

Alarm	Attributes	Applicable major NE releases
Name: MldGrpIfSapMaxGrpSrcLimExcd (5392) Type: configurationAlarm (11) Package: mld Raised on class: mld.GrpInterfaceSap	Severity: warning Implicitly cleared: false Default probable cause: MldGrpIfSapMaxGrpSrcLimExcd (2108)	Unspecified
Description: This alarm is raised when an attempt is made to configure a group source for a group when the number of group sources is equal to the 'Maximum Number of Group Sources' per group supported on the SAP.		
Remedial action: Increase the value of the 'Maximum Number Of Group Sources' attribute in the parent MLD group interface so that the number of active MLD Group sources stays under the configured threshold.		

Table 35-458 MldGrpIfSapMaxSourcesLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: MldGrpIfSapMaxSourcesLimitExceeded (5393) Type: configurationAlarm (11) Package: mld Raised on class: mld.GrpInterfaceSap	Severity: warning Implicitly cleared: false Default probable cause: MldGrpIfSapMaxSourcesLimitExceeded (2109)	Unspecified
Description: 'This alarm is raised when an attempt is made to configure a source for a group when the number of sources for this group is equal to the 'Maximum Number of Sources' per group supported on the SAP.'		
Remedial action: Increase the value of the 'Maximum Number Of Sources' attribute in the parent MLD group interface so that the number of active MLD sources stays under the configured threshold.		

Table 35-459 MldGrpIfSapRxQueryVerMism

Alarm	Attributes	Applicable major NE releases
Name: MldGrpIfSapRxQueryVerMism (5394) Type: configurationAlarm (11) Package: mld Raised on class: mld.GrpInterfaceSap	Severity: warning Implicitly cleared: false Default probable cause: InvalidVersionofQueryMessageReceived (129)	Unspecified
Description: The alarm is raised when the MLD host SAP is configured as MLDv2 but receives an MLDv1 Query. It will include information on the configured version of the SAP, and the version of the received query.		
Remedial action: Change the MLD Version attribute on the MLD Group Interface to match the MLD host version.		

Table 35-460 MldSnpgGrpDroppedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: MldSnpgGrpDroppedLimitExceeded (537) Type: AccessInterfaceAlarm (32) Package: vpls Raised on class: vpls.L2AccessInterfaceMldSnpgCfg	Severity: warning Implicitly cleared: false Default probable cause: mldSnpgGrpMaxNbrGrpsReached (406)	Unspecified
Description: The alarm is raised when a SAP drops an MLD group because the configurable maximum number of MLD groups on the SAP is reached.		
Remedial action: Increasing the maximum number of MLD Groups to prevent groups from being dropped.		

Table 35-461 MlpppBundleInterleavingDisabled

Alarm	Attributes	Applicable major NE releases
Name: MlpppBundleInterleavingDisabled (4383) Type: other (123) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: mlpppBundleInterleavingDisabled (1567)	Unspecified
Description: The alarm is raised when the 'Link Fragmentation and LFI' bit is set but LFI isn't active for MLPPP Bundle. It is cleared for other cases. If LFI is not desired, disable it in the L2TP MLPPP configuration of the related routing instance. Or, ensure that the MLPPP bundle only contains a single link.		
Remedial action: If LFI is not desired, disable it in the L2TP MLPPP configuration of the related routing instance. Or, ensure that the MLPPP bundle only contains a single link.		

Table 35-462 MobGwSysGrpWriteCdrToCfAlarm

Alarm	Attributes	Applicable major NE releases
Name: MobGwSysGrpWriteCdrToCfAlarm (3634) Type: MgGroupAlarm (75) Package: isa Raised on class: isa.MgIsaGroup	Severity: major Implicitly cleared: true Default probable cause: MobGwSysGrpWriteCdrToCfStop (1418)	Unspecified
Description: The alarm is raised when the SGW or PGW writes Charging Data Record (CDR) packets to the local compact flash for the mobile system group.		
Remedial action: Retrieve Charging Data Record (CDR) files from compact flash.		

Table 35-463 ModFail

Alarm	Attributes	Applicable major NE releases
Name: ModFail (1171) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: modFail (872)	Unspecified
Description: The alarm is raised when a modulation failure is detected.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

35 – Unspecified NE alarms

Table 35-464 ModLOS

Alarm	Attributes	Applicable major NE releases
Name: ModLOS (1172) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: modLOS (873)	Unspecified
Description: The alarm is raised when a modulation loss of signal is detected.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-465 ModuleOutOfMemory

Alarm	Attributes	Applicable major NE releases
Name: ModuleOutOfMemory (180) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: false Default probable cause: outOfMemory (142)	Unspecified
Description: The alarm is raised when the available NE memory is insufficient for allocation to a task.		
Remedial action: Informational - If the alarm persists please contact Alcatel-Lucent support for assistance		

Table 35-466 MplsResignalTimerExpired

Alarm	Attributes	Applicable major NE releases
Name: MplsResignalTimerExpired (1121) Type: ProtocolAlarm (1) Package: mpls Raised on class: mpls.Site	Severity: info Implicitly cleared: false Default probable cause: resignalTimerExpired (833)	Unspecified
Description: The alarm is raised when an MPLS instance resignal timer expires.		
Remedial action: Informational only.		

Table 35-467 MprVIIDown

Alarm	Attributes	Applicable major NE releases
Name: MprVIIDown (1139) Type: serviceDown (88) Package: mpr Raised on class: mpr.MprVII	Severity: major Implicitly cleared: true Default probable cause: vlanPathInstanceDown (524)	Unspecified

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the Operational State of a VLAN path instance is Down. It could be caused by one of the following conditions: - The radio link is down. - A cross connect is deleted. - The Operational State of one or more ports in the cross connect is Down.		
Remedial action: Components of the VLL service, site, ports and or links may be down. Please check the components for root cause.		

(2 of 2)

Table 35-468 MPTCardFailure

Alarm	Attributes	Applicable major NE releases
Name: MPTCardFailure (4830) Type: equipmentAlarm (3) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: ReplaceableUnitProblem (1905)	Unspecified
Description: This alarm is raised when MPT card failure is detected.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-469 MPTPlugInCardFailure

Alarm	Attributes	Applicable major NE releases
Name: MPTPlugInCardFailure (4831) Type: equipmentAlarm (3) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: ReplaceableUnitProblem (1905)	Unspecified
Description: This alarm is raised when RPS/XPIC Plug-in card failure is detected.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-470 MPTPowerSupplyFailure

Alarm	Attributes	Applicable major NE releases
Name: MPTPowerSupplyFailure (1170) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: powerSupplyFailure (117)	Unspecified
Description: The alarm is raised when an MPT radio power source has a power supply failure.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

35 – Unspecified NE alarms

Table 35-471 msapCreationFailure

Alarm	Attributes	Applicable major NE releases
Name: msapCreationFailure (740) Type: ConfigurationAlarm (15) Package: vpls Raised on class: vpls.L2AccessInterface	Severity: warning Implicitly cleared: false Default probable cause: creationFailure (515) Applicable probable causes: <ul style="list-style-type: none"> creationFailure radiusAuthFailed 	Unspecified
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot create an MSAP.		
Remedial action: This warning is raised when the NE fails to create an MSAP. Please review the alarm's additional text to obtain information about the error condition. Possible problems can be mis-configuration of the capture SAP, authentication failures, a missing target service or interface, illegal trigger packets and more.		

Table 35-472 MsdpActSrcLimExcd

Alarm	Attributes	Applicable major NE releases
Name: MsdpActSrcLimExcd (380) Type: communicationsAlarm (4) Package: msdp Raised on class: msdp.Site	Severity: warning Implicitly cleared: false Default probable cause: MsdpActiveSourcesLimitExceeded (279)	Unspecified
Description: The alarm is raised when an MSDP site receives a number of source active messages that exceeds the configured maximum.		
Remedial action: Increase the configurable maximum number of source active messages if possible.		

Table 35-473 MsdpGroupSrcActMsgsExcd

Alarm	Attributes	Applicable major NE releases
Name: MsdpGroupSrcActMsgsExcd (378) Type: communicationsAlarm (4) Package: msdp Raised on class: msdp.PeerGroup	Severity: warning Implicitly cleared: false Default probable cause: MsdpGroupActiveSourcesLimitExceeded (277)	Unspecified
Description: The alarm is raised when an MSDP group receives a number of source active messages that exceeds the configured maximum.		
Remedial action: Increase the configurable maximum number of source active messages if possible.		

Table 35-474 MsdpPeerActSrcLimExcd

Alarm	Attributes	Applicable major NE releases
Name: MsdpPeerActSrcLimExcd (379) Type: communicationsAlarm (4) Package: msdp Raised on classes: <ul style="list-style-type: none"> msdp.GroupPeer msdp.Peer 	Severity: warning Implicitly cleared: false Default probable cause: MsdpPeerActiveSourcesLimitExceeded (278)	Unspecified
Description: The alarm is raised when an MSDP peer receives a number of source active messages that exceeds the configured maximum.		
Remedial action: Increase the configurable maximum number of source active messages if possible.		

Table 35-475 MsdpRPFFailure

Alarm	Attributes	Applicable major NE releases
Name: MsdpRPFFailure (354) Type: communicationsAlarm (4) Package: msdp Raised on class: msdp.Site	Severity: warning Implicitly cleared: false Default probable cause: MsdpRPFFailure (275)	Unspecified
Description: The alarm is raised when an MSDP site experiences an RPF failure.		
Remedial action: Informational.		

Table 35-476 MsdpSourceSrcActMsgsExcd

Alarm	Attributes	Applicable major NE releases
Name: MsdpSourceSrcActMsgsExcd (381) Type: communicationsAlarm (4) Package: msdp Raised on class: msdp.Source	Severity: warning Implicitly cleared: false Default probable cause: MsdpSourceActiveSourcesLimitExceeded (280)	Unspecified
Description: The alarm is raised when an MSDP source receives a number of source active messages that exceeds the configured maximum.		
Remedial action: Increase the configurable maximum number of source active messages if possible.		

35 – Unspecified NE alarms

Table 35-477 MsPwFecMisConfig

Alarm	Attributes	Applicable major NE releases
Name: MsPwFecMisConfig (3691) Type: serviceAlarm (16) Package: svt Raised on class: svt.SpokeSdpFec	Severity: major Implicitly cleared: true Default probable cause: msPwFecMisConfig (1430)	Unspecified
Description: The alarm is raised when a misconfiguration is discovered between two signaling multi-segment pseudowires. For example, configuring both multi-segment pseudowires as master would cause this notification.		
Clearing condition: ('Administrative State' EQUAL 'Up')		
Remedial action: Configure multi-segment pseudo-wires such that both are not configured to be master.		

Table 35-478 MultiChassisStpBlockingStatus

Alarm	Attributes	Applicable major NE releases
Name: MultiChassisStpBlockingStatus (4902) Type: communicationsAlarm (4) Package: aosredundancy Raised on class: aosredundancy.AOSMultiChassis	Severity: minor Implicitly cleared: false Default probable cause: PrimarybridgeSTPPriorityishigherthansecondarybridge (1959)	Unspecified
Description: Primary bridge STP Priority is higher than secondary bridge		
Remedial action: This Alarm can be cleared by setting primary bridge STP Priority lower then secondary bridge stp priority		

Table 35-479 MultipleOwners

Alarm	Attributes	Applicable major NE releases
Name: MultipleOwners (283) Type: configurationAlarm (11) Package: vrrp Raised on class: vrrp.AbstractInstance	Severity: major Implicitly cleared: false Default probable cause: multipleOwnersConfigured (215)	Unspecified
Description: The alarm is raised when an owner VR instance detects another instance that advertises itself as an owner.		
Remedial action: Shut down one of the peer VRRP instances and change the owner to false and then turn it up.		

Table 35-480 multipleRPLOwner

Alarm	Attributes	Applicable major NE releases
Name: multipleRPLOwner (2946) Type: configurationAlarm (11) Package: ethring Raised on class: ethring.Element	Severity: major Implicitly cleared: false Default probable cause: multiplerpl (1135)	Unspecified
Description: The alarm is raised on RPL elements configured as RPL owners, when there are multiple RPL owners detected in the ring topology.		
Remedial action: A configuration error has been made which must be corrected. The duplicate RPL owners must be deleted.		

Table 35-481 MVPNDuplicateVrfPolicy

Alarm	Attributes	Applicable major NE releases
Name: MVPNDuplicateVrfPolicy (649) Type: configurationAlarm (11) Package: I3fwd Raised on classes: <ul style="list-style-type: none"> I3fwd.ServiceSiteMVPNImportPolicy I3fwd.ServiceSiteMVPNExportPolicy 	Severity: warning Implicitly cleared: true Default probable cause: duplicateVrfPolicyExists (177)	Unspecified
Description: The alarm is raised when the 5620 SAM detects a duplicate VRF policy in a multicast VPRN. The alarm information includes the VRF policy ID and type, and information about the service site. Note: starting from SAM 12.0 R1, SAM no longer raise this alarm since it is not much useful but has performance issue.		
Remedial action: A configuration error has occurred which must be corrected. The duplicate VRF policy must be removed. Note: starting from SAM 12.0 R1, SAM no longer raises this alarm.		

Table 35-482 MVPNExportPolicyNotFound

Alarm	Attributes	Applicable major NE releases
Name: MVPNExportPolicyNotFound (650) Type: configurationAlarm (11) Package: I3fwd Raised on class: I3fwd.ServiceSiteMVPNExportPolicy	Severity: major Implicitly cleared: true Default probable cause: exportPolicyDoesNotExist (179)	Unspecified
Description: The alarm is raised when a VRF export policy for a multicast VPRN cannot be found. The alarm information includes the policy ID. Note: starting from SAM 12.0 R1, SAM no longer raise this alarm since it is not much useful but has performance issue.		
Remedial action: A configuration error has occurred which must be corrected. A VRF export policy with the appropriate ID must be configured. Note: starting from SAM 12.0 R1, SAM no longer raises this alarm.		

Table 35-483 MVPNImportPolicyNotFound

Alarm	Attributes	Applicable major NE releases
Name: MVPNImportPolicyNotFound (651) Type: configurationAlarm (11) Package: I3fwd Raised on class: I3fwd.ServiceSiteMVPNImportPolicy	Severity: major Implicitly cleared: true Default probable cause: importPolicyDoesNotExist (180)	Unspecified
Description: The alarm is raised when a VRF import policy for a multicast VPRN cannot be found. The alarm information includes the policy ID. Note: starting from SAM 12.0 R1, SAM no longer raise this alarm since it is not much useful but has performance issue.		
Remedial action: A configuration error has occurred which must be corrected. A VRF import policy with the appropriate ID must be configured. Note: starting from SAM 12.0 R1, SAM no longer raises this alarm.		

Table 35-484 MwLinkEPSActivityChange

Alarm	Attributes	Applicable major NE releases
Name: MwLinkEPSActivityChange (4945) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.MwLink	Severity: major Implicitly cleared: false Default probable cause: EPSActivityChange (2002)	Unspecified
Description: This alarm is raised when a microwave link changes activity for EPS.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-485 MwLinkMaintenanceChange

Alarm	Attributes	Applicable major NE releases
Name: MwLinkMaintenanceChange (4946) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.MwLink	Severity: info Implicitly cleared: false Default probable cause: MaintenanceCommandChange (2003)	Unspecified
Description: This alarm is raised when a microwave link maintenance command changes.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-486 MwLinkPeerChange

Alarm	Attributes	Applicable major NE releases
Name: MwLinkPeerChange (4832) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.MwLink	Severity: major Implicitly cleared: false Default probable cause: PeerChange (1918)	Unspecified
Description: This alarm is raised when a microwave link discovered peer changes.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-487 MwLinkRPSActivityChange

Alarm	Attributes	Applicable major NE releases
Name: MwLinkRPSActivityChange (4947) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.MwLink	Severity: major Implicitly cleared: false Default probable cause: RPSActivityChange (2004)	Unspecified
Description: This alarm is raised when a microwave link changes activity for RPS.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-488 MwLinkTPSActivityChange

Alarm	Attributes	Applicable major NE releases
Name: MwLinkTPSActivityChange (4948) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.MwLink	Severity: major Implicitly cleared: false Default probable cause: TPSActivityChange (2005)	Unspecified
Description: This alarm is raised when a microwave link changes activity for TPS.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-489 NatIsaMemberSessionUsageHi

Alarm	Attributes	Applicable major NE releases
Name: NatIsaMemberSessionUsageHi (3937) Type: equipmentAlarm (3) Package: nat Raised on class: nat.IsaMember	Severity: major Implicitly cleared: true Default probable cause: resourceFull (53)	Unspecified

(1 of 2)

35 – Unspecified NE alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the session usage of an ISA-NAT group member reaches the high watermark. The alarm clears when the session usage reaches the low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

(2 of 2)

Table 35-490 NatIsaMemberSessionUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: NatIsaMemberSessionUsageHigh (1070) Type: equipmentAlarm (3) Package: nat Raised on class: nat.IsaMda	Severity: major Implicitly cleared: true Default probable cause: resourceFull (53)	Unspecified
Description: Deprecated in 10.0, Use {NatIsaMemberSessionUsageHi on nat.IsaMember} instead. The alarm is raised when the session usage of an ISA-NAT group member reaches the high watermark. The alarm clears when the session usage reaches the low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 35-491 NatL2AwSublcmpPortUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: NatL2AwSublcmpPortUsageHigh (1086) Type: equipmentAlarm (3) Package: ressubscr Raised on class: ressubscr.ResidentialSubscriberInstance	Severity: major Implicitly cleared: true Default probable cause: resourceFull (53)	Unspecified
Description: The alarm is raised when the ICMP port usage of an L2-aware NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of the network. If required, deploy extra equipment to deal with the demand.		

Table 35-492 NatL2AwSubSessionUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: NatL2AwSubSessionUsageHigh (1087) Type: equipmentAlarm (3) Package: ressubscr Raised on class: ressubscr.ResidentialSubscriberInstance	Severity: major Implicitly cleared: true Default probable cause: resourceFull (53)	Unspecified

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the session usage of an L2-aware NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

(2 of 2)

Table 35-493 NatL2AwSubTcpPortUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: NatL2AwSubTcpPortUsageHigh (1088) Type: equipmentAlarm (3) Package: ressubscr Raised on class: ressubscr.ResidentialSubscriberInstance	Severity: major Implicitly cleared: true Default probable cause: resourceFull (53)	Unspecified
Description: The alarm is raised when the TCP port usage of an L2-aware NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 35-494 NatL2AwSubUdpPortUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: NatL2AwSubUdpPortUsageHigh (1089) Type: equipmentAlarm (3) Package: ressubscr Raised on class: ressubscr.ResidentialSubscriberInstance	Severity: major Implicitly cleared: true Default probable cause: resourceFull (53)	Unspecified
Description: The alarm is raised when the UDP port usage of an L2-aware NAT subscriber reaches the high or low watermark.		
Remedial action: Review the watermarks configuration to make sure it matches the capacity of your network. If required, deploy extra equipment to deal with the demand.		

Table 35-495 NatPIL2AwBlockUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: NatPIL2AwBlockUsageHigh (1074) Type: equipmentAlarm (3) Package: nat Raised on class: nat.NatPool	Severity: major Implicitly cleared: true Default probable cause: resourceFull (53)	Unspecified
Description: The alarm is raised when the block usage of an L2-aware NAT address pool reaches the high watermark. The alarm clears when the block usage reaches the low watermark.		

(1 of 2)

35 – Unspecified NE alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: This alarm indicates the block usage of a L2-aware NAT address pool reaches its threshold on a particular member MDA of its ISA group. Please ensure the address pool block usage configuration adequate for the system requirement. This alarm will be cleared automatically once the block usage is below the watermark.		

(2 of 2)

Table 35-496 NatPILsnMemberBlockUsageHigh

Alarm	Attributes	Applicable major NE releases
Name: NatPILsnMemberBlockUsageHigh (1075) Type: equipmentAlarm (3) Package: nat Raised on class: nat.NatPool	Severity: major Implicitly cleared: true Default probable cause: resourceFull (53)	Unspecified
Description: The alarm is raised when the block usage of a large-scale NAT address pool reaches the high watermark. The alarm clears when the block usage reaches the low watermark.		
Remedial action: This alarm indicates the block usage of a Large Scale NAT address pool reaches its threshold on a particular member MDA of its ISA group. Please ensure the address pool block usage configuration adequate for the system requirement. This alarm will be cleared automatically once the block usage is below the watermark.		

Table 35-497 NeDatafileSizeAboveThreshold

Alarm	Attributes	Applicable major NE releases
Name: NeDatafileSizeAboveThreshold (4975) Type: databaseAlarm (29) Package: db Raised on class: db.DatabaseManager	Severity: critical Implicitly cleared: false Default probable cause: HighNumberOfRecords (526)	Unspecified
Description: The alarm is raised when a tablespace data file size exceeds the used space threshold. This may indicate that the number of stored NE backups or software images is too high.		
Remedial action: The probable cause of this alarm is the storage of too many NE backup or software image files. Purge old backup or extra software image files from the SAM database to resolve the problem. If the alarm persists please contact Alcatel-Lucent support for assistance.		

Table 35-498 NeighborLoss (pim)

Alarm	Attributes	Applicable major NE releases
Name: NeighborLoss (188) Type: communicationsAlarm (4) Package: pim Raised on class: pim.Interface	Severity: warning Implicitly cleared: true Default probable cause: NeighborConnectionLost (148)	Unspecified
Description: The alarm is raised when the connection to a neighbor is lost.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: Informational - please check the connection to the neighbor is fine, e.g the peer is not in shutdown state. The alarm will be cleared when the neighbor is discovered up.		

(2 of 2)

Table 35-499 NeighborLoss (vpIs)

Alarm	Attributes	Applicable major NE releases
Name: NeighborLoss (188) Type: communicationsAlarm (4) Package: vpIs Raised on class: vpIs.InterfacePimSnooping	Severity: warning Implicitly cleared: true Default probable cause: NeighborConnectionLost (148)	Unspecified
Description: The alarm is raised when the 5620 SAM detects a loss of connection to a PIM neighbor.		
Remedial action: There is a lost connection to the PIM Neighbor. Check the PIM Neighbor to ensure it is still operational and that underlying transport of the SAP or SDP is operationally up.		

Table 35-500 NetConfEventSubscriptionProblem

Alarm	Attributes	Applicable major NE releases
Name: NetConfEventSubscriptionProblem (4864) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: NetConfEventSubscriptionFailed (1932)	Unspecified
Description: The alarm is raised when the 5620 SAM is unable to subscribe for Netconf event notification from a network element. For a WMM: if this problem persists it may result in a loss of PM file collection.		
Remedial action: Informational -if the alarm persists or is occurring frequently then investigation is required to understand why the Netconf event subscription configuration is failing.		

Table 35-501 NetworkElementChassisTypeMismatch

Alarm	Attributes	Applicable major NE releases
Name: NetworkElementChassisTypeMismatch (1946) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: mismatchOfNetworkElementChassisType (934)	Unspecified
Description: The alarm is raised when the chassis type of the shadow network element does not match with the chassis type of the discovered NE.		
Remedial action: A configuration error has been made which must be corrected. The pre-provisioned NE chassis type defined must match the chassis type of the node being discovered.		

Table 35-502 NetworkElementTypeMismatch

Alarm	Attributes	Applicable major NE releases
Name: NetworkElementTypeMismatch (1947) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: mismatchOfNetworkElementType (935)	Unspecified
Description: The alarm is raised when the type of the shadow network element does not match with the type of the discovered NE.		
Remedial action: A configuration error has been made which must be corrected. The pre-provisioned NE type defined must match the type of the node being discovered.		

Table 35-503 NetworkElementVersionMismatch

Alarm	Attributes	Applicable major NE releases
Name: NetworkElementVersionMismatch (1948) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: mismatchOfNetworkElementVersion (936)	Unspecified
Description: The alarm is raised when the version of the shadow network element does not match with the version of the discovered NE.		
Remedial action: A configuration error has been made which must be corrected. The pre-provisioned NE version defined must match the version of the node being discovered.		

Table 35-504 NodeDatabaseCorruptionDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeDatabaseCorruptionDetected (1961) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: nodeDatabaseCorrupted (948)	Unspecified
Description: This alarm is raised when an error in the node causes the node to lose its configuration and come up in an inconsistent/incomplete state. To overcome this it might be necessary to reconfigure the node.		
Remedial action: The node configuration is inconsistent. You may have to do a Reconfigure. However if it's a first discovery, you have to delete the node, then create a pre-provisioned NE instance, create a new discovery rule with a self-configuration policy and discover the node.		

Table 35-505 NodeSoftwareMisalignmentDetected

Alarm	Attributes	Applicable major NE releases
Name: NodeSoftwareMisalignmentDetected (4906) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: nodeSoftwareMisalignment (1962)	Unspecified
Description: The alarm is raised when a software misalignment has been detected on the node and comes back up with an unexpected software version (software change triggered by external tool) To correct this situation it is necessary to download and activate on the node the software referenced by SAM and then reconfigure the node with the 5620 SAM's current configuration.		
Remedial action: the NE software is misaligned. Perform a Download and Activate Software operation with the software version known by SAM which is the reference.		

Table 35-506 noFunctioningScript

Alarm	Attributes	Applicable major NE releases
Name: noFunctioningScript (275) Type: configurationAlarm (11) Package: subscrident Raised on class: subscrident.Policy	Severity: critical Implicitly cleared: true Default probable cause: primaryBackupDown (207)	Unspecified
Description: The alarm is raised when all subscriber identification scripts are operationally down.		
Raising condition: (('isLocal' EQUAL 'true') AND ('Primary Script Operational State' NOT EQUAL 'Up') AND ('Secondary Script Operational State' NOT EQUAL 'Up') AND ('Tertiary Script Operational State' NOT EQUAL 'Up'))		
Clearing condition: (('isLocal' EQUAL 'true') AND (('Primary Script Operational State' EQUAL 'Up') OR ('Secondary Script Operational State' EQUAL 'Up') OR ('Tertiary Script Operational State' EQUAL 'Up')))		
Remedial action: If the DHCP ACK Python script processing behaviour is desired, please make sure that primary, secondary and tertiary scripts are installed and operationally up.		

Table 35-507 NoRPLOwner

Alarm	Attributes	Applicable major NE releases
Name: NoRPLOwner (3700) Type: configurationAlarm (11) Package: ethring Raised on class: ethring.RadioRing	Severity: major Implicitly cleared: false Default probable cause: norpltype (1438)	Unspecified
Description: The alarm is raised when there is No RPL Owner selected on a Radio Ring.		
Remedial action: Operator has to configure at least one of the Elements belonging to a Radio Ring as RPL Owner.		

Table 35-508 NotEnoughContiguousBlocks

Alarm	Attributes	Applicable major NE releases
Name: NotEnoughContiguousBlocks (4987) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.LocalDhcp6Server	Severity: warning Implicitly cleared: false Default probable cause: notEnoughContiguousBlocks (2042)	Unspecified
Description: The alarm is raised when a lease cannot be created because not enough contiguous blocks are found for the requested delegated prefix size.		
Remedial action: This alarm is raised when a lease cannot be created because not enough contiguous blocks are found for the requested delegated prefix size. Please adjust the associated pools.		

Table 35-509 NTPNoServersAvail

Alarm	Attributes	Applicable major NE releases
Name: NTPNoServersAvail (4878) Type: communicationsAlarm (4) Package: ntp Raised on class: ntp.NTP	Severity: major Implicitly cleared: true Default probable cause: NTPNoServersAvail (1942)	Unspecified
Description: The alarm is generated when no NTP Servers are available.		
Remedial action: Please check if the configured servers are physically reachable (IP ping) from the node (Or) check if the configured servers are enabled as NTP Server (NTP Server attribute on General Tab) and their Operational state is Up (Or) check if the authentication keys are correctly defined on the client and the NTP server node.		

Table 35-510 NTPServerChange

Alarm	Attributes	Applicable major NE releases
Name: NTPServerChange (4880) Type: communicationsAlarm (4) Package: ntp Raised on class: ntp.NTP	Severity: info Implicitly cleared: false Default probable cause: NTPServerChange (1944)	Unspecified
Description: The alarm generated when more than one NTP servers are configured in a system and a different NTP server is selected because the operational status of the earlier NTP server has changed.		
Remedial action: This is informational alarm to indicate that the current clock source has changed for the node. Alarm needs to be manually cleared.		

Table 35-511 OCHTrailDown

Alarm	Attributes	Applicable major NE releases
Name: OCHTrailDown (3891) Type: communicationsAlarm (4) Package: optical Raised on class: optical.OCHTrail	Severity: critical Implicitly cleared: true Default probable cause: OperationalStateDown (1963)	Unspecified
Description: The alarm is raised when the termination point(s) of the OCH trail are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 35-512 OCHTrailMisConfigured

Alarm	Attributes	Applicable major NE releases
Name: OCHTrailMisConfigured (5125) Type: communicationsAlarm (4) Package: optical Raised on class: optical.OCHTrail	Severity: critical Implicitly cleared: false Default probable cause: OchCrossConnectionTrailNameMismatch (1391)	Unspecified
Description: The alarm is raised when all the OCh cross connections (XCs) of an OCh trail do not have the same trail name. In order for the auto wavekey processing to work properly, the XC name should be the same on all NEs of the OCh trail.		
Remedial action: Recreate the OCH Cross Connects with same OCH Trail name else Wave Tracker doesn't work properly.		

Table 35-513 ODUTrailDown

Alarm	Attributes	Applicable major NE releases
Name: ODUTrailDown (3892) Type: communicationsAlarm (4) Package: optical Raised on class: optical.ODUTrail	Severity: critical Implicitly cleared: true Default probable cause: OperationalStateDown (1963)	Unspecified
Description: The alarm is raised when the termination point(s) of the ODU trail are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 35-514 ODUTrailMisConfigured

Alarm	Attributes	Applicable major NE releases
Name: ODUTrailMisConfigured (3893) Type: communicationsAlarm (4) Package: optical Raised on class: optical.ODUTrail	Severity: critical Implicitly cleared: false Default probable cause: OChCrossConnectionTrailNameMismatch (1391)	Unspecified
Description: The alarm is raised when all the OCh cross connections (XCs) of an OCh trail do not have the same trail name. In order for the auto wavekey processing to work properly, the XC name should be the same on all NEs of the OCh trail.		
Remedial action: Recreate the OCH Cross Connects with same OCH Trail name else Wave Tracker doesn't work properly.		

Table 35-515 OlcStateChangeAlarm

Alarm	Attributes	Applicable major NE releases
Name: OlcStateChangeAlarm (3740) Type: communicationsAlarm (4) Package: generic Raised on class: generic.GenericObject	Severity: info Implicitly cleared: false Default probable cause: unknown (1097)	Unspecified
Description: The alarm is raised to notify the user, when an OLC State change takes place at the specified revert time.		
Remedial action: Informational - This is a notification alarm to indicate that the object will revert it's OLC state.		

Table 35-516 OpticalAmplifierLossOfInputOpticalPower

Alarm	Attributes	Applicable major NE releases
Name: OpticalAmplifierLossOfInputOpticalPower (1185) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Implicitly cleared: true Default probable cause: AmplifierLossOfInputOpticalPower (886)	Unspecified
Description: The alarm is raised when a device reports an Amplifier Loss of input optical power on an optical amplifier interface.		
Remedial action: Ensure that the input optical power at the face plate is greater than the minimum required		

Table 35-517 OpticalAmplifierLossOfOutputPower

Alarm	Attributes	Applicable major NE releases
Name: OpticalAmplifierLossOfOutputPower (1186) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Implicitly cleared: true Default probable cause: AmplifierLossOfOutputPower (887)	Unspecified
Description: The alarm is raised when a device reports an Amplifier Loss of output power on an optical amplifier interface.		
Remedial action: If the alarm is persistent: 1. clear the mda, 2. clear card 3. replace the card		

Table 35-518 OpticalAmplifierModuleCaseTemperatureHigh

Alarm	Attributes	Applicable major NE releases
Name: OpticalAmplifierModuleCaseTemperatureHigh (1180) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Implicitly cleared: true Default probable cause: AmplifierModuleCaseTemperatureHigh (881)	Unspecified
Description: The alarm is raised when a device reports an Amplifier Module Case Temperature High on an optical amplifier interface.		
Remedial action: Decrease the ambient temperature		

Table 35-519 OpticalAmplifierModuleCaseTemperatureLow

Alarm	Attributes	Applicable major NE releases
Name: OpticalAmplifierModuleCaseTemperatureLow (1181) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Implicitly cleared: true Default probable cause: AmplifierModuleCaseTemperatureLow (882)	Unspecified
Description: The alarm is raised when a device reports an Amplifier Module Case Temperature Low on an optical amplifier interface.		
Remedial action: Increase the ambient temperature		

35 – Unspecified NE alarms

Table 35-520 OpticalAmplifierModuleCommunicationFailure

Alarm	Attributes	Applicable major NE releases
Name: OpticalAmplifierModuleCommunicationFailure (1187) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Implicitly cleared: true Default probable cause: AmplifierModuleCommunicationFailure (888)	Unspecified
Description: The alarm is raised when a device reports an Amplifier Module Communication Failure on a tunable dispersion compensation module's interface.		
Remedial action: If the alarm is persistent: 1. clear the mda, 2. clear card 3. replace the card		

Table 35-521 OpticalAmplifierPumpCurrent

Alarm	Attributes	Applicable major NE releases
Name: OpticalAmplifierPumpCurrent (1188) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Implicitly cleared: true Default probable cause: AmplifierPumpcurrent (889)	Unspecified
Description: The alarm is raised when a device reports an Amplifier Pump over current on an optical amplifier interface.		
Remedial action: If the alarm is persistent: 1. clear the mda, 2. clear card 3. replace the card		

Table 35-522 OpticalAmplifierPumpTemperature

Alarm	Attributes	Applicable major NE releases
Name: OpticalAmplifierPumpTemperature (1182) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.WaveLengthTracker	Severity: major Implicitly cleared: true Default probable cause: AmplifierPumpTemperature (883)	Unspecified
Description: The alarm is raised when a device reports an Amplifier Pump Temperature on an optical amplifier interface.		
Remedial action: Decrease the ambient temperature		

Table 35-523 OpticalTdcmeEPROMInvalid

Alarm	Attributes	Applicable major NE releases
Name: OpticalTdcmeEPROMInvalid (1189) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.WavelengthTracker	Severity: major Implicitly cleared: true Default probable cause: TdcmeEPROMInvalid (890)	Unspecified
Description: The alarm is raised when a device reports a Tdcme EEPROM invalid on a tunable dispersion compensation module's interface.		
Remedial action: Replace the card		

Table 35-524 OpticalTdcmeModuleCommunicationFailure

Alarm	Attributes	Applicable major NE releases
Name: OpticalTdcmeModuleCommunicationFailure (1190) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.WavelengthTracker	Severity: major Implicitly cleared: true Default probable cause: TdcmeModuleCommunicationFailure (891)	Unspecified
Description: The alarm is raised when a device reports a Tdcme Module Communication Failure on a tunable dispersion compensation module's interface.		
Remedial action: If the alarm is persistent: 1. clear the mda, 2. clear card 3. replace the card		

Table 35-525 OpticalTdcmeModuleTemperatureHigh

Alarm	Attributes	Applicable major NE releases
Name: OpticalTdcmeModuleTemperatureHigh (1183) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.WavelengthTracker	Severity: major Implicitly cleared: true Default probable cause: TdcmeModuleTemperatureHigh (884)	Unspecified
Description: The alarm is raised when a device reports a Tdcme Module Temperature High on a tunable dispersion compensation module's interface.		
Remedial action: Decrease the ambient temperature		

35 – Unspecified NE alarms

Table 35-526 OpticalTdcModuleTemperatureLow

Alarm	Attributes	Applicable major NE releases
Name: OpticalTdcModuleTemperatureLow (1184) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.WavelengthTracker	Severity: major Implicitly cleared: true Default probable cause: TdcModuleTemperatureLow (885)	Unspecified
Description: The alarm is raised when a device reports a Tdc Module Temperature Low on a tunable dispersion compensation module's interface.		
Remedial action: Increase the ambient temperature		

Table 35-527 OpticalTdcNotReady

Alarm	Attributes	Applicable major NE releases
Name: OpticalTdcNotReady (1191) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.WavelengthTracker	Severity: major Implicitly cleared: true Default probable cause: TdcNotReady (892)	Unspecified
Description: The alarm is raised when a device reports a Tdc Not Ready on a tunable dispersion compensation module's interface.		
Remedial action: This is a transient condition that should clear under normal operation but if it causes the link to fail and persists: 1. clear the mda, 2. clear card 3. replace the card		

Table 35-528 OpticalTdcThermalControlTemperatureLimit

Alarm	Attributes	Applicable major NE releases
Name: OpticalTdcThermalControlTemperatureLimit (1192) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.WavelengthTracker	Severity: major Implicitly cleared: true Default probable cause: TdcThermalControlTemperatureLimit (893)	Unspecified
Description: The alarm is raised when a device reports a Tdc Thermal Control Temperature Limit on a tunable dispersion compensation module's interface.		
Remedial action: If this alarm persists: 1. clear the mda, 2. clear card 3. replace the card		

Table 35-529 OpticalTdcMThermalControlUnlocked

Alarm	Attributes	Applicable major NE releases
Name: OpticalTdcMThermalControlUnlocked (1193) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.WaveLengthTracker	Severity: major Implicitly cleared: true Default probable cause: TdcMThermalControlUnlocked (894)	Unspecified
Description: The alarm is raised when a device reports a TdcM Thermal Control Unlocked on a tunable dispersion compensation module's interface.		
Remedial action: This is a transient condition that should clear under normal operation but if it causes the link to fail and persists: 1. clear the mda, 2. clear card 3. replace the card		

Table 35-530 OspfExportLimitDropped

Alarm	Attributes	Applicable major NE releases
Name: OspfExportLimitDropped (1924) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Site	Severity: warning Implicitly cleared: false Default probable cause: exportLimitDropped (598)	Unspecified
Description: The alarm is raised when the total number of exported routes to the OSPF level, drops below the configured limit.		
Remedial action: Informational - the total number of exported routes from the route table to this OSPF level drops below the configured export limit.		

Table 35-531 OspfExportLimitReached

Alarm	Attributes	Applicable major NE releases
Name: OspfExportLimitReached (1925) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Site	Severity: warning Implicitly cleared: false Default probable cause: exportLimitReached (599)	Unspecified
Description: The alarm is raised when the total number of routes to the OSPF level is equal to the configured limit for exported routes.		
Remedial action: Informational - the total number of routes for the level is equal to the configured limit for exported routes		

Table 35-532 OspfExportLimitWarning

Alarm	Attributes	Applicable major NE releases
Name: OspfExportLimitWarning (1926) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Site	Severity: warning Implicitly cleared: false Default probable cause: exportLimitWarning (600)	Unspecified
Description: The alarm is raised when the total number of exported routes to the OSPF level is equal to the configured percentage, vRtrIsExportLimitLogPercent of the export limit.		
Remedial action: Informational - the total number of exported routes or the level is equal to the configured Export Limit Log Percent		

Table 35-533 OspfExternalLsaThresholdExceeded

Alarm	Attributes	Applicable major NE releases
Name: OspfExternalLsaThresholdExceeded (372) Type: topologyAlarm (34) Package: topology Raised on class: topology.Cpaa	Severity: major Implicitly cleared: true Default probable cause: manyExternalLSAsFloodingIntoIGP (271)	Unspecified
Description: The alarm is raised when the number of OSPF external LSAs exceeds the maximum threshold because a large number of external LSAs flooding into the IGP.		
Remedial action: User configured alarm for monitoring purpose. The advertised external routes can be viewed using CPAM IGP prefix list.		

Table 35-534 OspfIfTxRetransmit

Alarm	Attributes	Applicable major NE releases
Name: OspfIfTxRetransmit (662) Type: communicationsAlarm (4) Package: ospf Raised on class: ospf.Interface	Severity: warning Implicitly cleared: false Default probable cause: hello (47) Applicable probable causes: <ul style="list-style-type: none"> • hello • dbDescript • IsReq • IsUpdate • IsAck • nullPacket 	Unspecified
Description: The alarm is raised when an NE retransmits an OSPF packet. The alarm information includes the NE ID of the OSPF neighbor. The alarm is not raised against a Release 4.0 or later NE.		
Remedial action: Informational - an NE retransmits an OSPF packet. The alarm information includes the NE ID of the OSPF neighbor. The alarm is not raised against a Release 4.0 or later NE.		

Table 35-535 OspfInternalLsaRateThresholdExceededPerArea

Alarm	Attributes	Applicable major NE releases
Name: OspfInternalLsaRateThresholdExceededPerArea (310) Type: topologyAlarm (34) Package: topology Raised on class: topology.Area	Severity: major Implicitly cleared: true Default probable cause: unstableIGPNetwork (241)	Unspecified
Description: The alarm is raised when the OSPF internal LSA rate for an area exceeds the maximum allowed value because of an unstable IGP network.		
Remedial action: User configured alarm for monitoring purpose. IGP historical map can be used for debugging purpose.		

Table 35-536 OspfInternalLsaThresholdExceededPerArea

Alarm	Attributes	Applicable major NE releases
Name: OspfInternalLsaThresholdExceededPerArea (309) Type: topologyAlarm (34) Package: topology Raised on class: topology.Area	Severity: major Implicitly cleared: true Default probable cause: largeIgpNetwork (240)	Unspecified
Description: The alarm is raised when the number of OSPF internal LSAs for an area exceeds the maximum allowed value because of a large IGP network.		
Remedial action: User configured alarm for monitoring purpose. IGP historical map can be used for debugging purpose.		

Table 35-537 OspfLsaRateThresholdExceededPerRouter

Alarm	Attributes	Applicable major NE releases
Name: OspfLsaRateThresholdExceededPerRouter (308) Type: topologyAlarm (34) Package: topology Raised on class: topology.Router	Severity: major Implicitly cleared: true Default probable cause: unstableLinksOnRouter (239)	Unspecified
Description: The alarm is raised when the OSPF LSA rate for an NE exceeds the maximum allowed value because of an unstable NE link.		
Remedial action: User configured alarm for monitoring purpose. IGP historical map can be used for debugging purpose.		

Table 35-538 OspfLsaThresholdExceededPerRouter

Alarm	Attributes	Applicable major NE releases
Name: OspfLsaThresholdExceededPerRouter (374) Type: topologyAlarm (34) Package: topology Raised on class: topology.Router	Severity: major Implicitly cleared: true Default probable cause: routerAdvertisingManyLSAs (273)	Unspecified
Description: The alarm is raised when the number of OSPF LSAs for an NE exceeds the maximum allowed value because the NE advertises too many LSAs.		
Remedial action: User configured alarm for monitoring purpose. IGP historical map can be used for debugging purpose.		

Table 35-539 OTUAlarmIndicationSignal

Alarm	Attributes	Applicable major NE releases
Name: OTUAlarmIndicationSignal (755) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: AlarmIndicationSignal (531)	Unspecified
Description: The alarm is raised when a device reports an AIS on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-540 OTUBackwardDefectIndication

Alarm	Attributes	Applicable major NE releases
Name: OTUBackwardDefectIndication (756) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: BackwardDefectIndication (532)	Unspecified
Description: The alarm is raised when a device reports a BDI on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-541 OTUBackwardIncomingAlignmentError

Alarm	Attributes	Applicable major NE releases
Name: OTUBackwardIncomingAlignmentError (815) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: BackwardIncomingAlignmentError (578)	Unspecified
Description: The alarm is raised when a device reports an ODU alarm indication signal on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-542 OTUBitErrorRateSignalDegradation

Alarm	Attributes	Applicable major NE releases
Name: OTUBitErrorRateSignalDegradation (757) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: BitErrorRateSignalDegradation (533)	Unspecified
Description: The alarm is raised when a device reports a BER-SD on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-543 OTUBitErrorRateSignalFail

Alarm	Attributes	Applicable major NE releases
Name: OTUBitErrorRateSignalFail (758) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.OtuInterface	Severity: critical Implicitly cleared: true Default probable cause: BitErrorRateSignalFail (534)	Unspecified
Description: The alarm is raised when a device reports a BER-SF on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-544 OTUFECRxTxModeMismatch

Alarm	Attributes	Applicable major NE releases
Name: OTUFECRxTxModeMismatch (759) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.OtuInterface	Severity: critical Implicitly cleared: true Default probable cause: FECRxTxModeMismatch (535)	Unspecified
Description: The alarm is raised when a device reports a FEC Rx/Tx mode mismatch on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-545 OTUFECSignalDegradation

Alarm	Attributes	Applicable major NE releases
Name: OTUFECSignalDegradation (760) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: FECSignalDegradation (536)	Unspecified
Description: The alarm is raised when a device reports a FEC-SD on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-546 OTUFECSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: OTUFECSignalFailure (761) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: FECSignalFailure (537)	Unspecified
Description: The alarm is raised when a device reports a FEC-SF on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-547 OTUIncomingAlignmentError

Alarm	Attributes	Applicable major NE releases
Name: OTUIncomingAlignmentError (816) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: IncomingAlignmentError (579)	Unspecified
Description: The alarm is raised when a device reports an ODU open connection indication on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-548 OTULossOfClock

Alarm	Attributes	Applicable major NE releases
Name: OTULossOfClock (762) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.OtuInterface	Severity: critical Implicitly cleared: true Default probable cause: LossOfClock (538)	Unspecified
Description: The alarm is raised when a device reports an LOC on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-549 OTULossOfFraming

Alarm	Attributes	Applicable major NE releases
Name: OTULossOfFraming (763) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.OtuInterface	Severity: critical Implicitly cleared: true Default probable cause: LossOfFraming (539)	Unspecified
Description: The alarm is raised when a device reports an LOF on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

35 – Unspecified NE alarms

Table 35-550 OTULossOfMultiFrame

Alarm	Attributes	Applicable major NE releases
Name: OTULossOfMultiFrame (764) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: LossOfMultiFrame (540)	Unspecified
Description: The alarm is raised when a device reports an LOM on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-551 OTULossOfSignal

Alarm	Attributes	Applicable major NE releases
Name: OTULossOfSignal (765) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.OtuInterface	Severity: critical Implicitly cleared: true Default probable cause: LossOfSignal (541)	Unspecified
Description: The alarm is raised when a device reports an LOS on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-552 OTUODUAlarmIndicationSignal

Alarm	Attributes	Applicable major NE releases
Name: OTUODUAlarmIndicationSignal (766) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: ODUAlarmIndicationSignal (542)	Unspecified
Description: The alarm is raised when a device reports an ODU AIS on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-553 OTUODULocked

Alarm	Attributes	Applicable major NE releases
Name: OTUODULocked (767) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.OtuInterface	Severity: critical Implicitly cleared: true Default probable cause: ODULocked (543)	Unspecified
Description: The alarm is raised when a device reports an ODU locked on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-554 OTUODUOpenConnectionIndication

Alarm	Attributes	Applicable major NE releases
Name: OTUODUOpenConnectionIndication (768) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.OtuInterface	Severity: critical Implicitly cleared: true Default probable cause: ODUOpenConnectionIndication (544)	Unspecified
Description: The alarm is raised when a device reports an ODU-OCI on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-555 OTUOPUSIPayloadTypeMismatch

Alarm	Attributes	Applicable major NE releases
Name: OTUOPUSIPayloadTypeMismatch (817) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: OPUSIPayloadTypeMismatch (580)	Unspecified
Description: The alarm is raised when a device reports a PM backward defect indication on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

35 – Unspecified NE alarms

Table 35-556 OTUOPUPSITraceMismatch

Alarm	Attributes	Applicable major NE releases
Name: OTUOPUPSITraceMismatch (818) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: OPUPSITraceMismatch (581)	Unspecified
Description: The alarm is raised when a device reports an ODU locked indication on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-557 OTUPMBackwardDefectIndication

Alarm	Attributes	Applicable major NE releases
Name: OTUPMBackwardDefectIndication (769) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: PMBackwardDefectIndication (545)	Unspecified
Description: The alarm is raised when a device reports a PM BDI on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-558 OTUPMTraceIDMismatch

Alarm	Attributes	Applicable major NE releases
Name: OTUPMTraceIDMismatch (819) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: PMTraceIDMismatch (582)	Unspecified
Description: The alarm is raised when a device reports an ODU open connection indication on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-559 OTUTraceIdMismatch

Alarm	Attributes	Applicable major NE releases
Name: OTUTraceIdMismatch (820) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: TraceIdMismatch (583)	Unspecified
Description: The alarm is raised when a device reports a trace ID mismatch on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-560 OTUTrailDown

Alarm	Attributes	Applicable major NE releases
Name: OTUTrailDown (5126) Type: communicationsAlarm (4) Package: optical Raised on class: optical.OTUTrail	Severity: critical Implicitly cleared: true Default probable cause: OperationalStateDown (1963)	Unspecified
Description: The alarm is raised when the termination point(s) of the OTU trail are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 35-561 OTUTrailMisConfigured

Alarm	Attributes	Applicable major NE releases
Name: OTUTrailMisConfigured (5127) Type: communicationsAlarm (4) Package: optical Raised on class: optical.OTUTrail	Severity: critical Implicitly cleared: false Default probable cause: OchCrossConnectionTrailNameMisMatch (1391)	Unspecified
Description: The alarm is raised when all the OCh cross connections (XCs) of an OTU trail do not have the same trail name. In order for the auto wavekey processing to work properly, the XC name should be the same on all NEs of the OTU trail.		
Remedial action: Recreate the OCH Cross Connects with same Trail name else Wave Tracker doesn't work properly.		

Table 35-562 OTUUncorrectableFECErrors

Alarm	Attributes	Applicable major NE releases
Name: OTUUncorrectableFECErrors (770) Type: communicationsAlarm (4) Package: ethernetEquipment Raised on class: ethernetEquipment.OtuInterface	Severity: major Implicitly cleared: true Default probable cause: UncorrectableFECErrors (546)	Unspecified
Description: The alarm is raised when a device reports one or more uncorrectable FEC errors on an OTU-enabled interface.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-563 OutOfSlots

Alarm	Attributes	Applicable major NE releases
Name: OutOfSlots (462) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: false Default probable cause: noAvailableSlotNumbers (352)	Unspecified
Description: The alarm is raised when a stack element enters pass-through mode because there is no slot number for the element.		
Remedial action: Login to switch console, correct the slot number and reload stack.		

Table 35-564 ParentTemplateInvalid

Alarm	Attributes	Applicable major NE releases
Name: ParentTemplateInvalid (194) Type: configurationAlarm (11) Package: template Raised on class: template.TemplateBinding	Severity: major Implicitly cleared: true Default probable cause: referencedObjectInvalid (152)	Unspecified
Description: The alarm is raised when a parent template in a template binding is invalid. The alarm is deprecated in the 5620 SAM, Release 6.0 and later.		
Raising condition: ('parentTemplateInvalidReference' EQUAL 'true')		
Clearing condition: ('parentTemplateInvalidReference' EQUAL 'false')		
Remedial action: Informational - deprecated 6.0		

Table 35-565 PathReoptimized

Alarm	Attributes	Applicable major NE releases
Name: PathReoptimized (28) Type: pathAlarm (12) Package: mpls Raised on class: mpls.Tunnel	Severity: warning Implicitly cleared: false Default probable cause: pathReoptimized (21)	Unspecified
Description: The alarm is raised when an MPLS path generates an mplsTunnelReoptimized trap.		
Remedial action: Informational only.		

Table 35-566 PathRerouted

Alarm	Attributes	Applicable major NE releases
Name: PathRerouted (29) Type: pathAlarm (12) Package: mpls Raised on class: mpls.Tunnel	Severity: warning Implicitly cleared: false Default probable cause: pathRerouted (22)	Unspecified
Description: The alarm is raised when an MPLS path generates an mplsTunnelRerouted trap.		
Remedial action: Informational only.		

Table 35-567 PbbSiteMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: PbbSiteMisconfiguration (571) Type: configurationAlarm (11) Package: vpls Raised on class: vpls.AbstractVpls	Severity: warning Implicitly cleared: true Default probable cause: includeBothBAndISite (440)	Unspecified
Description: The alarm is raised when a VPLS contains a B-Site and an I-Site.		
Raising condition: (('Include B-Site(s)' EQUAL 'true') AND ('Include I-Site(s)' EQUAL 'true'))		
Clearing condition: (('Include B-Site(s)' NOT EQUAL 'true') OR ('Include I-Site(s)' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which needs to be corrected. The service can have only an I-site or a B-site but not both.		

Table 35-568 PChipCAMEvent

Alarm	Attributes	Applicable major NE releases
Name: PChipCAMEvent (814) Type: hardwareAnomaly (55) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: camError (577)	Unspecified
Description: The alarm is raised when an IOM or CPM experiences a P-chip CAM error.		
Remedial action: Informational - if the condition persists then the card indicated in the alarm should be replaced.		

Table 35-569 PChipError

Alarm	Attributes	Applicable major NE releases
Name: PChipError (593) Type: hardwareAnomaly (55) Package: equipment Raised on class: equipment.BaseCard	Severity: minor Implicitly cleared: true Default probable cause: pChipError (447)	Unspecified
Description: The alarm is raised when persistent FCS errors are detected on the specified complex in the specified direction.		
Remedial action: A fault has been detected in the hardware. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-570 PChipMemoryEvent

Alarm	Attributes	Applicable major NE releases
Name: PChipMemoryEvent (608) Type: hardwareAnomaly (55) Package: equipment Raised on class: equipment.BaseCard	Severity: warning Implicitly cleared: true Default probable cause: memoryParityError (451)	Unspecified
Description: The alarm is raised when a P chip detects a memory parity error. The alarm is raised against a 7450 ESS, 7710 SR, or 7750 SR. The alarm is raised against a Release 6.0 NE at R10 or later and a Release 6.1 NE at R5 or later.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-571 peerSetConfigurationIssue

Alarm	Attributes	Applicable major NE releases
Name: peerSetConfigurationIssue (267) Type: configurationAlarm (11) Package: pim Raised on class: pim.VirtualAnyCastRP	Severity: major Implicitly cleared: true Default probable cause: mismatchPeerSets (199)	Unspecified
Description: The alarm is raised when a peer set is misconfigured.		
Remedial action: A configuration error has occurred that must be corrected. Please check the global Virtual Anycast RP configuration and its operational status flag so that the Inconsistent Peer Sets and Only one peer bits are reset.		

Table 35-572 PeerUnreachable

Alarm	Attributes	Applicable major NE releases
Name: PeerUnreachable (842) Type: ProtocolAlarm (1) Package: l2tp Raised on class: l2tp.Peer	Severity: variable Implicitly cleared: true Default probable cause: protocolDown (1)	Unspecified
Description: The alarm is raised when an L2TP peer becomes unreachable.		
Remedial action: This alarm is raised when L2TP peer is unreachable. Please verify the L2TP tunnel profile configuration to ensure that the peer is properly configured. Also verify that the peer is actually reachable from this network element. This alarm is cleared automatically when L2TP Peer becomes reachable.		

Table 35-573 PersistenceRestoreProblem

Alarm	Attributes	Applicable major NE releases
Name: PersistenceRestoreProblem (5141) Type: processingErrorAlarm (81) Package: sw Raised on class: sw.NodePersistence	Severity: minor Implicitly cleared: false Default probable cause: persistenceRestoreProblem (2064)	Unspecified
Description: The alarm is raised when an error is detected while processing a persistence record.		
Remedial action: Check the node persistence configuration.		

Table 35-574 PersistencyFileSysThresRaised

Alarm	Attributes	Applicable major NE releases
Name: PersistencyFileSysThresRaised (5142) Type: equipmentAlarm (3) Package: sw Raised on class: sw.NodePersistence	Severity: major Implicitly cleared: true Default probable cause: persistencyFileSysThresRaised (2065)	Unspecified
Description: The alarm is raised when the filesystem reaches 90 percent usage.		
Remedial action: Delete unnecessary files on the compact flash disk. This operation must be executed using CLI interface on the NE.		

Table 35-575 PhysicalLinkDown

Alarm	Attributes	Applicable major NE releases
Name: PhysicalLinkDown (1140) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.VlanPath	Severity: major Implicitly cleared: true Default probable cause: PhysicalLinkDown (846)	Unspecified
Description: The alarm is raised when the physical link between two hops of a VLAN path is down.		
Remedial action: Check if the port that is used in the physical link is operationally up.		

Table 35-576 PkiCertVerificationFailed

Alarm	Attributes	Applicable major NE releases
Name: PkiCertVerificationFailed (3743) Type: configurationAlarm (11) Package: ipsec Raised on class: ipsec.IPSecBaseEntity	Severity: major Implicitly cleared: true Default probable cause: pkiCertInvalid (1478)	Unspecified
Description: The alarm is raised when an attempt to verify the certificate fails.		
Remedial action: An attempt to verify the certificate fails. Please make sure the certificate specified exists under the node cf3:system-pki and is a valid certificate		

Table 35-577 PkiFileReadFailed (ipsec)

Alarm	Attributes	Applicable major NE releases
Name: PkiFileReadFailed (3744) Type: configurationAlarm (11) Package: ipsec Raised on class: ipsec.IPSecBaseEntity	Severity: major Implicitly cleared: true Default probable cause: pkiFileReadCorrupted (1479)	Unspecified
Description: The alarm is raised when an attempt to read the file fails.		
Remedial action: An attempt to read the PKI file fails. Please make sure the path specified is correct and the file exists under the node cf3:system-pki		

Table 35-578 PkiFileReadFailed (sitesec)

Alarm	Attributes	Applicable major NE releases
Name: PkiFileReadFailed (3744) Type: configurationAlarm (11) Package: sitesec Raised on class: sitesec.CertificateAuthProfile	Severity: major Implicitly cleared: true Default probable cause: pkiFileReadCorrupted (1479)	Unspecified
Description: The alarm is raised when an attempt to read the file fails.		
Remedial action: An attempt to read the PKI file fails. Please make sure the path specified is correct and the file exists under the node cf3:system-pki		

Table 35-579 PMFileRecovery

Alarm	Attributes	Applicable major NE releases
Name: PMFileRecovery (4867) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: netconfDown (1935)	Unspecified
Description: The alarm is raised when a 5620 SAM main server loses connectivity to an NE and as a result retrieves PM files that were not previously collected.		
Remedial action: Informational		

35 – Unspecified NE alarms

Table 35-580 PoolMinFreeExc

Alarm	Attributes	Applicable major NE releases
Name: PoolMinFreeExc (3696) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.AddressPool	Severity: warning Implicitly cleared: false Default probable cause: actualFreeAddrBelowPoolMin (1434)	Unspecified
Description: The alarm is raised when the actual number of free addresses in a pool falls below the desired minimum number specified in the address pool configuration.		
Remedial action: The alarm is raised when the actual number of free addresses in a pool falls below the desired minimum number specified in the address pool configuration.		

Table 35-581 PortsSeggregated

Alarm	Attributes	Applicable major NE releases
Name: PortsSeggregated (746) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.VlanPathInstance	Severity: major Implicitly cleared: true Default probable cause: portsSeggregated (522)	Unspecified
Description: The alarm is raised when the two ports that are to be part of a service cross-connect are segregated.		
Remedial action: Seggregated ports are being used in service. Remove the port from Seggregation or use a port that is not involved in Seggregation.		

Table 35-582 PostDiscoveryScriptExecutionFailed

Alarm	Attributes	Applicable major NE releases
Name: PostDiscoveryScriptExecutionFailed (4868) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: major Implicitly cleared: false Default probable cause: scriptExecutionError (1936)	Unspecified
Description: The alarm is raised when the execution of the post discovery script failed. At this point, the NE is successfully discovered, only the auto configuration of the NE defined in the script failed. Manual intervention is required.		
Remedial action: The post discovery NE auto configuration script execution failed. run the script manually, or configure the NE manually. To clear the Failed post discovery script execution status, click the "Clear" button on the Node Discovery Control configuration form: Administration->Discovery Manager->Managed State tab. Clearing the script execution status will also clear the associated alarm.		

Table 35-583 PostDiscoveryScriptNotExecuted

Alarm	Attributes	Applicable major NE releases
Name: PostDiscoveryScriptNotExecuted (4869) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: false Default probable cause: resyncFailed (24)	Unspecified
Description: The alarm is raised when the post discovery script is not executed. This is normally due to NE discovery failure. Manual intervention is required.		
Remedial action: The post discovery NE auto configuration script was not executed. Run the script manually, or configure the NE manually. This is normally due to NE discovery failure. Fix the node resync issue associated with the PollerProblem alarm, unmanage and delete the node from the network, then rescan the discovery rule.		

Table 35-584 PowerSupplyACRectifierFailure

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyACRectifierFailure (5181) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupplyTray	Severity: minor Implicitly cleared: true Default probable cause: PowerSupplyACRectifierFailedorMissing (2097)	Unspecified
Description: This alarm is generated if any one of the AC rectifiers for a given power supply is in a failed state or is missing. When the alarm is raised during device discovery, one or both AC Rectifiers of the Power Supply Tray may be not equipped. When the alarm is raised while the device is in the managed state, one or both AC Rectifiers of the Power Supply Tray might be removed or they have a fault condition. The alarm clears when the status changes to OK.		
Remedial action: Ensure that the NE is properly connected to power. There is an increased risk of the power supply failing, causing insufficient power to the system. Please bring the AC rectifiers back online by equipping them properly. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-585 PowerSupplyVoltageAlarm

Alarm	Attributes	Applicable major NE releases
Name: PowerSupplyVoltageAlarm (1129) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PowerSupply	Severity: variable Implicitly cleared: false Default probable cause: powerSupplyFailure (117)	Unspecified
Description: The alarm is raised when the power supply voltage alarm state changes to a value other than Normal.		
Remedial action: Check the status of the site power supply.		

Table 35-586 PPPFail

Alarm	Attributes	Applicable major NE releases
Name: PPPFail (632) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: pppFail (469)	Unspecified
Description: The alarm is raised when a PPP IP Fail condition is detected.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-587 PppNcpFailure

Alarm	Attributes	Applicable major NE releases
Name: PppNcpFailure (3689) Type: processingErrorAlarm (81) Package: service Raised on class: service.ServiceAccessPoint	Severity: major Implicitly cleared: false Default probable cause: sapAtmPppNcpFailure (1428)	Unspecified
Description: The alarm is raised when there is an NCP phase setup problem.		
Remedial action: This alarm indicates the NCP phase setup failed, thus IP protocol can not be configured for the user that attempted to set up the PPP session. Please verify NCP setup configuration.		

Table 35-588 PPPoASessionFailure

Alarm	Attributes	Applicable major NE releases
Name: PPPoASessionFailure (3688) Type: processingErrorAlarm (81) Package: service Raised on class: service.AccessInterface	Severity: major Implicitly cleared: false Default probable cause: sapAtmPppSessionFailure (1427)	Unspecified
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot create a PPPoA Session.		
Remedial action: This alarm indicates the problem encountered by NE while trying to create a new PPPoA session. Please review the alarm's additional text to obtain information about the error condition. Possible problems include authentication failures, LCP or IPCP layer problems during the session establishment, or possible mis-configuration on the service interface or PPP policy.		

Table 35-589 PPPoESessionFailure

Alarm	Attributes	Applicable major NE releases
Name: PPPoESessionFailure (2915) Type: processingErrorAlarm (81) Package: service Raised on class: service.ServiceAccessPoint	Severity: major Implicitly cleared: false Default probable cause: pppoeSessionFailed (1119)	Unspecified
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot create a PPPoE Session.		
Remedial action: This alarm indicates the problem encountered by NE while trying to create a new PPPoE session. Please review the alarm's additional text to obtain information about the error condition. Possible problems include authentication failures, LCP or IPCP layer problems during the session establishment, or possible mis-configuration on the service interface or PPP policy.		

Table 35-590 PrefixLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: PrefixLimitExceeded (4) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Peer	Severity: critical Implicitly cleared: false Default probable cause: prefixLimitExceeded (4)	Unspecified
Description: The alarm is raised when a BGP instance learns the maximum number of peer routes.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of peer routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE in the network. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-591 PrefixLimitNearing

Alarm	Attributes	Applicable major NE releases
Name: PrefixLimitNearing (3) Type: ProtocolAlarm (1) Package: bgp Raised on class: bgp.Peer	Severity: major Implicitly cleared: false Default probable cause: prefixLimitNearing (3)	Unspecified
Description: The alarm is raised when a BGP instance exceeds the threshold percentage of the configured maximum.		
Remedial action: Informational. The threshold configured should be revisited to ensure that it is not set to low given the number of peer routes that are being received. If the threshold is set close to the maximum number of routes supported by the NE then it is probable that there is an issue with another NE in the network. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-592 ProbeFailedAlarm (atm)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: atm Raised on class: atm.PvcConnection	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-593 ProbeFailedAlarm (bgp)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: bgp Raised on class: bgp.Site	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-594 ProbeFailedAlarm (ethernetoam)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: ethernetoam Raised on class: ethernetoam.MaintAssociation	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAMtest on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-595 ProbeFailedAlarm (Idp)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: Idp Raised on class: Idp.Site	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-596 ProbeFailedAlarm (Ite)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: Ite Raised on class: Ite.EPSPath	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when ProbeFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-597 ProbeFailedAlarm (Iteservice)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: Iteservice Raised on class: Iteservice.MobileService	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-598 ProbeFailedAlarm (mirror)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: mirror Raised on class: mirror.Mirror	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-599 ProbeFailedAlarm (monpath)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: monpath Raised on class: monpath.MonitoredIpPath	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-600 ProbeFailedAlarm (mpls)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: mpls Raised on class: mpls.Lsp	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-601 ProbeFailedAlarm (mplstp)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: mplstp Raised on class: mplstp.TPLsp	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-602 ProbeFailedAlarm (netw)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-603 ProbeFailedAlarm (pim)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: pim Raised on class: pim.Site	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-604 ProbeFailedAlarm (rtr)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: rtr Raised on class: rtr.VirtualRouter	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAMtest on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-605 ProbeFailedAlarm (service)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: service Raised on class: service.SpokeConnector	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when ProbeFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-606 ProbeFailedAlarm (svt)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: svt Raised on class: svt.Tunnel	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-607 ProbeFailedAlarm (vll)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: vll Raised on class: vll.Vll	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-608 ProbeFailedAlarm (vpls)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: vpls Raised on class: vpls.AbstractVpls	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-609 ProbeFailedAlarm (vprn)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm (3707) Type: oamAlarm (18) Package: vprn Raised on class: vprn.Vprn	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-610 ProbeFailedAlarm2 (ethernetoam)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm (18) Package: ethernetoam Raised on class: ethernetoam.Mep	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-611 ProbeFailedAlarm2 (lte)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm (18) Package: lte Raised on class: lte.EPSPeer	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when ProbeFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-612 ProbeFailedAlarm2 (mpls)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm (18) Package: mpls Raised on class: mpls.P2MPDynamicLsp	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-613 ProbeFailedAlarm2 (rtr)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm (18) Package: rtr Raised on class: rtr.LDPTunnelInterface	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-614 ProbeFailedAlarm2 (service)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm (18) Package: service Raised on class: service.Site	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when ProbeFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-615 ProbeFailedAlarm2 (svt)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm2 (3738) Type: oamAlarm (18) Package: svt Raised on class: svt.SdpBinding	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAMtest on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-616 ProbeFailedAlarm3 (mpls)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm3 (3885) Type: oamAlarm (18) Package: mpls Raised on class: mpls.LspPath	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-617 ProbeFailedAlarm3 (service)

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailedAlarm3 (3885) Type: oamAlarm (18) Package: service Raised on class: service.CompositeService	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports a probe failure.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-618 ProbeFailureAlarm

Alarm	Attributes	Applicable major NE releases
Name: ProbeFailureAlarm (3902) Type: oamAlarm (18) Package: sas Raised on class: sas.Test	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: This alarm is raised when a probe failure trap is received from the node.		
Remedial action: Fix network connections issues.		

Table 35-619 ProvisioningMismatch

Alarm	Attributes	Applicable major NE releases
Name: ProvisioningMismatch (634) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: provisioningMismatch (470)	Unspecified
Description: The alarm is raised when a license mismatch is detected for provisioned equipment.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-620 PTPCardNotSupportedAlarm

Alarm	Attributes	Applicable major NE releases
Name: PTPCardNotSupportedAlarm (3603) Type: equipmentAlarm (3) Package: ptp Raised on class: ptp.IEEEPTPClock	Severity: minor Implicitly cleared: true Default probable cause: PTPCardNotSupported (1392)	Unspecified
Description: The alarm is raised when the Precision Timing Protocol (PTP) is enabled on a card that does not support clock recovery.		
Remedial action: Please enable PTP on CPM which supports OCX0 oscillator type		

Table 35-621 PTPClockRecoveryStateAlarm

Alarm	Attributes	Applicable major NE releases
Name: PTPClockRecoveryStateAlarm (3605) Type: communicationsAlarm (4) Package: ptp Raised on class: ptp.IEEEPTPClock	Severity: info Implicitly cleared: false Default probable cause: PTPClockRecoveryStateChange (1394)	Unspecified
Description: The alarm is raised when the aluPtpClockRecoveryState changes for an IEEE 1588 Precision Timing Protocol (PTP) clock.		
Remedial action: Informational		

35 – Unspecified NE alarms

Table 35-622 PTPMasterChangeAlarm

Alarm	Attributes	Applicable major NE releases
Name: PTPMasterChangeAlarm (3606) Type: communicationsAlarm (4) Package: ptp Raised on class: ptp.IEEEPTPClock	Severity: info Implicitly cleared: false Default probable cause: PTPMasterChange (1395)	Unspecified
Description: The alarm is raised when there is a change in the synchronization source for a Precision Timing Protocol (PTP) clock.		
Remedial action: Informational		

Table 35-623 PTPOutOfResourcesAlarm

Alarm	Attributes	Applicable major NE releases
Name: PTPOutOfResourcesAlarm (3607) Type: equipmentAlarm (3) Package: ptp Raised on class: ptp.IEEEPTPClock	Severity: minor Implicitly cleared: true Default probable cause: PTPOutOfResources (1396)	Unspecified
Description: The alarm is raised when the Precision Timing Protocol (PTP) process on the card is out of resources. This may occur in either of two situations: 1. The number of PTP peers exceeds the system limit. 2. The total unicast packet rate negotiated with all PTP peers reaches the maximum packet rate supported by the system.		
Remedial action: Informational		

Table 35-624 PTPPortDSPortStateAlarm

Alarm	Attributes	Applicable major NE releases
Name: PTPPortDSPortStateAlarm (3610) Type: communicationsAlarm (4) Package: ptp Raised on class: ptp.IEEETPPort	Severity: info Implicitly cleared: true Default probable cause: PTPPortDSPortState (1399)	Unspecified
Description: The alarm is raised when the aluPtpPortDSPortState changes for an IEEE 1588 Precision Timing Protocol (PTP) port.		
Remedial action: Informational.		

Table 35-625 PTPQualityLevelChangedAlarm

Alarm	Attributes	Applicable major NE releases
Name: PTPQualityLevelChangedAlarm (3612) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: false Default probable cause: PTPQualityLevelChanged (1401)	Unspecified
Description: The alarm is raised when there is a change of the received quality level on the Precision Timing Protocol (PTP).		
Remedial action: Informational only.		

Table 35-626 QChipBufferMemoryEvent

Alarm	Attributes	Applicable major NE releases
Name: QChipBufferMemoryEvent (4990) Type: hardwareAnomaly (55) Package: equipment Raised on class: equipment.Card	Severity: minor Implicitly cleared: true Default probable cause: bufMemoryError (2044)	Unspecified
Description: The alarm is raised when a Q-chip experiences an occurrence of a buffer memory error on IOM or CPM.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-627 QChipIfCellEvent

Alarm	Attributes	Applicable major NE releases
Name: QChipIfCellEvent (4991) Type: hardwareAnomaly (55) Package: equipment Raised on class: equipment.Card	Severity: minor Implicitly cleared: true Default probable cause: ifCellError (2045)	Unspecified
Description: The alarm is raised when an inter-chip interface (XPL2 bundle) experiences internal datapath cell errors on IOM or CPM.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-628 QChipIfDownEvent

Alarm	Attributes	Applicable major NE releases
Name: QChipIfDownEvent (4992) Type: hardwareAnomaly (55) Package: equipment Raised on class: equipment.Card	Severity: minor Implicitly cleared: true Default probable cause: ifDownError (2046)	Unspecified
Description: The alarm is raised when an inter-chip interface (XPL2 bundle) experiences an internal datapath problem on IOM or CPM.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-629 QChipIntMemoryEvent

Alarm	Attributes	Applicable major NE releases
Name: QChipIntMemoryEvent (4993) Type: hardwareAnomaly (55) Package: equipment Raised on class: equipment.Card	Severity: minor Implicitly cleared: true Default probable cause: intMemoryError (2047)	Unspecified
Description: The alarm is raised when a Q-chip experiences an occurrence of an internal memory error on IOM or CPM.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-630 QChipStatsMemoryEvent

Alarm	Attributes	Applicable major NE releases
Name: QChipStatsMemoryEvent (4994) Type: hardwareAnomaly (55) Package: equipment Raised on class: equipment.Card	Severity: minor Implicitly cleared: true Default probable cause: statsMemoryError (2048)	Unspecified
Description: The alarm is raised when a Q-chip experiences an occurrence of a statistics memory error on IOM or CPM.		
Remedial action: A fault has been detected in the hardware if the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-631 QueryVerMismatch

Alarm	Attributes	Applicable major NE releases
Name: QueryVerMismatch (159) Type: configurationAlarm (11) Package: igmp Raised on class: igmp.Interface	Severity: warning Implicitly cleared: false Default probable cause: InvalidVersionOfQueryMessageReceived (129)	Unspecified
Description: The alarm is raised when an interface configured for IGMPv3 receives a query message for an earlier IGMP version. The interface subsequently enters an IGMP mode that is compatible with the earlier version. The alarm information includes the IGMP version on the interface and the IGMP version of the received query.		
Remedial action: Informational - no corrective action required.		

Table 35-632 RadAcctOnOngoing

Alarm	Attributes	Applicable major NE releases
Name: RadAcctOnOngoing (4971) Type: radiusAccountingPolicyAlarm (38) Package: aaa Raised on class: aaa.RadiusServerPolicy	Severity: minor Implicitly cleared: false Default probable cause: TooManyUnacknowledgedRadiusAccountingOnMessages (2025) Applicable probable causes: <ul style="list-style-type: none"> • TooManyUnacknowledgedRadiusAccountingOnMessages • MisconfiguredPolicy • RadiusServerUnreachable • MissingClientInformation 	Unspecified
Description: The alarm is raised each time when the RADIUS client has sent 10 RADIUS Accounting-On messages without receiving any acknowledgement from the RADIUS server.		
Remedial action: Ensure that: 1.The RADIUS server is up and running. 2.The RADIUS server policy configuration is correct. Please note that this system will keep on retrying indefinitely until it receives an acknowledgement from the RADIUS server.		

Table 35-633 RadioHop15TCA

Alarm	Attributes	Applicable major NE releases
Name: RadioHop15TCA (4835) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: ThresholdCrossed (1920)	Unspecified
Description: The alarm is raised when a MPT detects a threshold crossing - Radio hop 15 minutes TCA		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-634 RadioHop15UAT

Alarm	Attributes	Applicable major NE releases
Name: RadioHop15UAT (4836) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: UnavailableTime (1921)	Unspecified
Description: The alarm is raised when a MPT detects a threshold crossing - Radio hop 15 minutes UAT		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-635 RadioHop24TCA

Alarm	Attributes	Applicable major NE releases
Name: RadioHop24TCA (4837) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: ThresholdCrossed (1920)	Unspecified
Description: The alarm is raised when a MPT detects a threshold crossing - Radio hop 24 Hours TCA		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-636 RadioHop24UAT

Alarm	Attributes	Applicable major NE releases
Name: RadioHop24UAT (4838) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: UnavailableTime (1921)	Unspecified
Description: The alarm is raised when a MPT detects a threshold crossing - Radio hop 24 Hours UAT		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-637 RadioLink15TCA

Alarm	Attributes	Applicable major NE releases
Name: RadioLink15TCA (4839) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: ThresholdCrossed (1920)	Unspecified

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a MPT detects a threshold crossing - Radio Link 15 minutes TCA		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

(2 of 2)

Table 35-638 RadioLink15UAT

Alarm	Attributes	Applicable major NE releases
Name: RadioLink15UAT (4840) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: UnavailableTime (1921)	Unspecified
Description: The alarm is raised when a MPT detects a threshold crossing - Radio Link 15 minutes UAT		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-639 RadioLink24TCA

Alarm	Attributes	Applicable major NE releases
Name: RadioLink24TCA (4841) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: ThresholdCrossed (1920)	Unspecified
Description: The alarm is raised when a MPT detects a threshold crossing - Radio Link 24 Hours TCA		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-640 RadioLink24UAT

Alarm	Attributes	Applicable major NE releases
Name: RadioLink24UAT (4842) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: UnavailableTime (1921)	Unspecified
Description: The alarm is raised when a MPT detects a threshold crossing - Radio Link 24 Hours UAT		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-641 RadioLinkAMAbnormalState

Alarm	Attributes	Applicable major NE releases
Name: RadioLinkAMAbnormalState (3943) Type: radiolinkAMABNAlarm (119) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: RadiolinkAMABNProblem (1525)	Unspecified
Description: The alarm is raised when abnormal state resulted due to Radio link AM mode.		
Remedial action: The alarm is raised when abnormal state resulted due to Radio link AM mode.		

Table 35-642 RadioLinkDown

Alarm	Attributes	Applicable major NE releases
Name: RadioLinkDown (747) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.VlanPath	Severity: major Implicitly cleared: true Default probable cause: radioLinkDown (523)	Unspecified
Description: The alarm is raised when the radio link between two hops of a VLAN path is down.		
Remedial action: Check if the port that is used in the Radio link is operationally up.		

Table 35-643 RadioLoopProblemCh1

Alarm	Attributes	Applicable major NE releases
Name: RadioLoopProblemCh1 (4843) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: LoopProblem (1922)	Unspecified
Description: The alarm is raised when a MPT detects a ATPC/ACM Loop problem - CH1 Radio Loop Problem		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-644 RadioLoopProblemChx

Alarm	Attributes	Applicable major NE releases
Name: RadioLoopProblemChx (4844) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: LoopProblem (1922)	Unspecified

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a MPT detects a ATPC/ACM Loop problem - CHX Radio Loop Problem		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

(2 of 2)

Table 35-645 RadioRdi

Alarm	Attributes	Applicable major NE releases
Name: RadioRdi (4846) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: major Implicitly cleared: true Default probable cause: Rdi (1888)	Unspecified
Description: The alarm is raised when a microwave radio device receives a remote defect indication from the far end microwave radio.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-646 RadioSwPackageMissing

Alarm	Attributes	Applicable major NE releases
Name: RadioSwPackageMissing (4848) Type: integrityViolation (85) Package: mwa Raised on class: mwa.PortTermination	Severity: warning Implicitly cleared: true Default probable cause: SwPackageMissing (1925)	Unspecified
Description: The alarm is raised when a valid microwave radio software package is not present at startup.		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-647 RadiusAcctPlcyFailure

Alarm	Attributes	Applicable major NE releases
Name: RadiusAcctPlcyFailure (363) Type: radiusAccountingPolicyAlarm (38) Package: radiusaccounting Raised on class: radiusaccounting.Policy	Severity: major Implicitly cleared: false Default probable cause: radiusAccountingRequestFailure (260)	Unspecified
Description: The alarm is raised when a RADIUS accounting request is not successfully sent to any of the RADIUS servers specified in the RADIUS accounting policy.		
Remedial action: The Radius server(s) which are configured in the accounting policy are unreachable. This may occur in a number of different scenarios. The server(s) may have become unresponsive - please refer to the Radius server documentation for assistance. The network connectivity to the server(s) may have been lost - please investigate why the underlying transport network is unreliable.		

Table 35-648 RadiusInsertedFiltrEntryDropped

Alarm	Attributes	Applicable major NE releases
Name: RadiusInsertedFiltrEntryDropped (1152) Type: configurationAlarm (11) Package: acfilter Raised on class: acfilter.FilterDefinition	Severity: warning Implicitly cleared: false Default probable cause: FilterEntryDropped (856)	Unspecified
Description: The alarm is raised when a request to insert a filter entry is not successful for a RADIUS application.		
Remedial action: A Configuration error has occurred. The request to insert a filter entry was not successful for Radius application. Check the configuration filter entry.		

Table 35-649 RadiusInsertSpaceThresholdAlarm

Alarm	Attributes	Applicable major NE releases
Name: RadiusInsertSpaceThresholdAlarm (1151) Type: configurationAlarm (11) Package: acfilter Raised on class: acfilter.FilterDefinition	Severity: major Implicitly cleared: true Default probable cause: UtilizationExceedConfiguredLimit (855)	Unspecified
Description: The alarm is raised when the utilization of a filter entry range that is reserved for filter entry insertion increases to the configured maximum value for a RADIUS application insert range.		
Remedial action: The filter entry range reserved for filter entry insertion has increased to the configured high watermark for Radius application. Make an adjusted to the watermarks or to the filter.		

Table 35-650 radiusServerOverloaded

Alarm	Attributes	Applicable major NE releases
Name: radiusServerOverloaded (3913) Type: communicationsAlarm (4) Package: subscrauth Raised on class: subscrauth.RadiusEntry	Severity: major Implicitly cleared: true Default probable cause: radiusServerRequestLimitReached (1499)	Unspecified
Description: The alarm is raised when the RADIUS server is overloaded.		
Raising condition: (('Operational State' EQUAL 'Over Loaded'))		
Clearing condition: (('Operational State' NOT EQUAL 'Over Loaded'))		
Remedial action: Verify the RADIUS server is properly configured to process pending authentication requests at the desired rate and ensure that this rate matches the authentication request limit defined for this RADIUS server on the network element.		

Table 35-651 RadRouteDownloadFailed

Alarm	Attributes	Applicable major NE releases
Name: RadRouteDownloadFailed (4418) Type: communicationsAlarm (4) Package: aaa Raised on class: aaa.RouteDownloadPolicy	Severity: warning Implicitly cleared: false Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when a RADIUS route-download process fails.		
Remedial action: Ensure that: 1.The routes defined in the RADIUS Server have a valid syntax. 2.The number of downloaded routes is less than the maximum. 3.There are no issues affecting the node's ability to populate the routes into the routing table.		

Table 35-652 RDI (mpr)

Alarm	Attributes	Applicable major NE releases
Name: RDI (806) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.IMALink	Severity: minor Implicitly cleared: true Default probable cause: remoteDefectIndication (572)	Unspecified
Description: The alarm is raised when a Remote Defect Indication signal is detected on an ASAP MDA.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-653 RDICH1

Alarm	Attributes	Applicable major NE releases
Name: RDICH1 (4833) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: RemoteDefectIndication (1919)	Unspecified
Description: The alarm is raised when a MPT receives a remote MPT CH1 remote defect indication		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-654 RDICHx

Alarm	Attributes	Applicable major NE releases
Name: RDICHx (4834) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: RemoteDefectIndication (1919)	Unspecified
Description: The alarm is raised when a MPT receives a remote MPT CHX remote defect indication		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.		

Table 35-655 ReceivedHigherBridgePriority

Alarm	Attributes	Applicable major NE releases
Name: ReceivedHigherBridgePriority (504) Type: SdpBindingAlarm (30) Package: I2fwd Raised on class: I2fwd.CircuitStp	Severity: warning Implicitly cleared: false Default probable cause: customerDeviceMisconfigured (332)	Unspecified
Description: The alarm is raised when a customer NE is configured with a bridge priority of zero. The SDP binding that connects to the customer device is subsequently blocked.		
Remedial action: Remove the customer's device or reconfigure the customer's bridge priority with value greater than zero.		

Table 35-656 RedundancySwitchover

Alarm	Attributes	Applicable major NE releases
Name: RedundancySwitchover (181) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: false Default probable cause: CPMSwitchover (1440)	Unspecified
Description: The alarm is raised when a 5620 SAM main server receives a CPMSwitchover trap from an NE, which indicates that the standby CPM detects an active CPM failure and is preparing to take over as the new active CPM.		
Remedial action: Informational.		

Table 35-657 RedundantIfMismatch

Alarm	Attributes	Applicable major NE releases
Name: RedundantIfMismatch (419) Type: configurationAlarm (11) Package: srrp Raised on class: srrp.Instance	Severity: major Implicitly cleared: false Default probable cause: redundantIfNotProperlyPaired (312)	Unspecified
Description: The alarm is raised when the local and remote redundant interfaces are not correctly paired.		
Remedial action: Reconfigure the redundant interfaces for the peer SRRP instances so that they match each other.		

Table 35-658 RedundantRadioLink

Alarm	Attributes	Applicable major NE releases
Name: RedundantRadioLink (1081) Type: configurationAlarm (11) Package: netw Raised on class: netw.RadioPhysicalLink	Severity: minor Implicitly cleared: false Default probable cause: redundantRadioLinkConfigured (819)	Unspecified
Description: The alarm is raised when a radio link is discovered between two nodes when there is already a physical link(s) between the same nodes.		
Remedial action: Informational-this alarm indicates that there is another radio link between the nodes involved.		

Table 35-659 ReferenceOneLossOfSignal

Alarm	Attributes	Applicable major NE releases
Name: ReferenceOneLossOfSignal (1953) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: ReferenceOneLossOfSignal (941)	Unspecified
Description: The alarm is raised when the Timing Reference One on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT (('Not Qualified Due To'anyBit'LOS'))		
Remedial action: Make sure that peer connected to Reference One is properly configured.		

Table 35-660 ReferenceOneOutOfFrequency

Alarm	Attributes	Applicable major NE releases
Name: ReferenceOneOutOfFrequency (1954) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: ReferenceOneOutOfFrequency (942)	Unspecified
Description: The alarm is raised when the Timing Reference One on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT (('Not Qualified Due To'anyBit'OOF'))		
Remedial action: Check the communication path is up between the local PTP slave clock and its selected master		

Table 35-661 ReferenceOneOutOfPollInRange

Alarm	Attributes	Applicable major NE releases
Name: ReferenceOneOutOfPollInRange (1955) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: ReferenceOneOutOfPollInRange (943)	Unspecified
Description: The alarm is raised when the Timing Reference One on an NE is not qualified due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT (('Not Qualified Due To'anyBit'OOPIR'))		
Remedial action: Check the timing reference is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Call customer support if necessary.		

Table 35-662 ReferenceTwoLossOfSignal

Alarm	Attributes	Applicable major NE releases
Name: ReferenceTwoLossOfSignal (1956) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: ReferenceTwoLossOfSignal (944)	Unspecified
Description: The alarm is raised when the Timing Reference Two on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT (('Not Qualified Due To'anyBit'LOS'))		
Remedial action: Make sure that peer connected to Reference Two is properly configured.		

Table 35-663 ReferenceTwoOutOfFrequency

Alarm	Attributes	Applicable major NE releases
Name: ReferenceTwoOutOfFrequency (1957) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: ReferenceTwoOutOfFrequency (945)	Unspecified
Description: The alarm is raised when the Timing Reference Two on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOFF'))		
Clearing condition: NOT (((('Not Qualified Due To'anyBit'OOFF'))))		
Remedial action: Make sure that frequency configured for Reference Two is correct.		

Table 35-664 ReferenceTwoOutOfPollInRange

Alarm	Attributes	Applicable major NE releases
Name: ReferenceTwoOutOfPollInRange (1958) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: ReferenceTwoOutOfPollInRange (946)	Unspecified
Description: The alarm is raised when the Timing Reference Two on an NE is not qualified due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT (((('Not Qualified Due To'anyBit'OOPIR'))))		
Remedial action: Check the timing reference is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Call customer support if necessary.		

Table 35-665 RemoteDefectIndication

Alarm	Attributes	Applicable major NE releases
Name: RemoteDefectIndication (2942) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: remoteDefectIndication (572)	Unspecified
Description: The alarm is raised when a RDI occurs.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-666 RemoteNEFailure

Alarm	Attributes	Applicable major NE releases
Name: RemoteNEFailure (1173) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: remoteNEFailure (874)	Unspecified
Description: The alarm is raised when a remote NE failure is detected.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-667 ReplaceableUnitMissing

Alarm	Attributes	Applicable major NE releases
Name: ReplaceableUnitMissing (635) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: cardMissing (471)	Unspecified
Description: The alarm is raised when a device detects that a provisioned card is not physically present.		
Remedial action: Informational - no corrective action required.		

Table 35-668 ReplaceableUnitProblem (equipment)

Alarm	Attributes	Applicable major NE releases
Name: ReplaceableUnitProblem (636) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: cardFail (472)	Unspecified
Description: The alarm is raised when a card fails.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-669 ReplaceableUnitProblem (mpr)

Alarm	Attributes	Applicable major NE releases
Name: ReplaceableUnitProblem (636) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: cardFail (472)	Unspecified

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a card fails.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

(2 of 2)

Table 35-670 ReplaceableUnitTypeMismatch (equipment)

Alarm	Attributes	Applicable major NE releases
Name: ReplaceableUnitTypeMismatch (637) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: equipmentMismatch (473)	Unspecified
Description: The alarm is raised when there is a mismatch between the installed card type and the expected card type.		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 35-671 ReplaceableUnitTypeMismatch (mpr)

Alarm	Attributes	Applicable major NE releases
Name: ReplaceableUnitTypeMismatch (637) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: equipmentMismatch (473)	Unspecified
Description: The alarm is raised when there is a mismatch between the installed equipment type and the expected equipment type.		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 35-672 ReplicationLmtExceeded

Alarm	Attributes	Applicable major NE releases
Name: ReplicationLmtExceeded (3968) Type: resourceAlarm (28) Package: equipment Raised on class: equipment.BaseCard	Severity: info Implicitly cleared: false Default probable cause: resourceLimitReached (131)	Unspecified
Description: The alarm is raised when an IOM fails to program an OIF for an (S,G) record because the replication limit for that (S,G) on that IOM has been reached. The replication limit per (S,G) entry on an IOM is currently 127.		
Remedial action: Informational - no corrective action required		

Table 35-673 ResiliencySapDeleted

Alarm	Attributes	Applicable major NE releases
Name: ResiliencySapDeleted (688) Type: resiliencyAlarm (58) Package: resiliency Raised on class: resiliency.HsdpaResiliency	Severity: major Implicitly cleared: true Default probable cause: resiliencySapDeleted (503)	Unspecified
Description: The alarm is raised when a SAP that is used for resiliency is deleted.		
Remedial action: Informational.		

Table 35-674 ResiliencyServiceSwitch

Alarm	Attributes	Applicable major NE releases
Name: ResiliencyServiceSwitch (689) Type: resiliencyAlarm (58) Package: resiliency Raised on class: resiliency.HsdpaResiliency	Severity: major Implicitly cleared: true Default probable cause: secondaryServiceSiteActive (504)	Unspecified
Description: The alarm is raised when a secondary service becomes active.		
Remedial action: Informational.		

Table 35-675 ResiliencySiteDeleted

Alarm	Attributes	Applicable major NE releases
Name: ResiliencySiteDeleted (690) Type: resiliencyAlarm (58) Package: resiliency Raised on class: resiliency.HsdpaResiliency	Severity: major Implicitly cleared: true Default probable cause: secondaryServiceSiteDeleted (505)	Unspecified
Description: The alarm is raised when a secondary service site is deleted.		
Remedial action: Informational.		

Table 35-676 restoreFailureAlarm

Alarm	Attributes	Applicable major NE releases
Name: restoreFailureAlarm (535) Type: softwareAlarm (19) Package: sw Raised on class: sw.SoftwareControlModule	Severity: major Implicitly cleared: false Default probable cause: restoreFailureAlarm (404)	Unspecified

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the software restore process on an NE fails.		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

(2 of 2)

Table 35-677 RetimingBufferOverflow

Alarm	Attributes	Applicable major NE releases
Name: RetimingBufferOverflow (1130) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: bufferOverflow (839)	Unspecified
Description: The alarm is raised when an retiming buffer overflow occurs.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-678 RevertiveMismatch

Alarm	Attributes	Applicable major NE releases
Name: RevertiveMismatch (4899) Type: pathAlarm (12) Package: mplstp Raised on class: mplstp.PathMep	Severity: warning Implicitly cleared: true Default probable cause: RevertiveMismatch (1956)	Unspecified
Description: This alarm is generated when an MPLS-TP LSP revertive mode mismatch is detected on the protection MEP. The revertive mode must match on the local node and the far-end node.		
Remedial action: This alarm is generated when an MPLS-TP LSP revertive mode mismatch is detected on the protection MEP. The revertive mode must match on the local node and the far-end node.		

Table 35-679 RFSwitchFail

Alarm	Attributes	Applicable major NE releases
Name: RFSwitchFail (5425) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: rFSwitchFail (2128)	Unspecified
Description: The alarm is raised when a RF switch failure is detected.		
Remedial action: The alarm is raised when RF switch failure is detected. Refer 9500 Node Maintenance manual for remedial action information		

Table 35-680 RingAuditProblem

Alarm	Attributes	Applicable major NE releases
Name: RingAuditProblem (4995) Type: configurationAlarm (11) Package: ethring Raised on class: ethring.Ring	Severity: major Implicitly cleared: false Default probable cause: invalidConfiguration (2049)	Unspecified
Description: The alarm is raised when the Ring Audit has detected a problem.		
Remedial action: A configuration error has been made which must be corrected. Please see the additional test for more details.		

Table 35-681 RipAuthenticationFailure

Alarm	Attributes	Applicable major NE releases
Name: RipAuthenticationFailure (70) Type: authenticationAlarm (14) Package: rip Raised on class: rip.Interface	Severity: warning Implicitly cleared: false Default probable cause: authFailure (46)	Unspecified
Description: The alarm is raised when a peer authentication failure occurs. The alarm information includes the peer address.		
Remedial action: Informational - please check that RIP neighbor is sending the RIPv2 packet with the matching authentication key with this router.		

Table 35-682 RipAuthenticationMismatch

Alarm	Attributes	Applicable major NE releases
Name: RipAuthenticationMismatch (71) Type: authenticationAlarm (14) Package: rip Raised on class: rip.Interface	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45)	Unspecified
Description: The alarm is raised when a peer authentication mismatch occurs. The alarm indicates the peer address.		
Remedial action: Informational - please check that RIP neighbor is sending the RIPv2 packet with the matching authentication type with this router.		

Table 35-683 RipExportLimitDropped

Alarm	Attributes	Applicable major NE releases
Name: RipExportLimitDropped (1927) Type: configurationAlarm (11) Package: rip Raised on class: rip.Site	Severity: warning Implicitly cleared: false Default probable cause: exportLimitDropped (598)	Unspecified
Description: The alarm is raised when the total number of exported routes from the route table to this RIP level drops below the configured export limit		
Remedial action: Informational.		

Table 35-684 RipExportLimitReached

Alarm	Attributes	Applicable major NE releases
Name: RipExportLimitReached (1928) Type: configurationAlarm (11) Package: rip Raised on class: rip.Site	Severity: warning Implicitly cleared: false Default probable cause: exportLimitReached (599)	Unspecified
Description: The alarm is raised when the total number of routes for the level is equal to the configured limit for exported routes		
Remedial action: Informational - Additional routes would not be exported into RIP from the route table.		

Table 35-685 RipExportLimitWarning

Alarm	Attributes	Applicable major NE releases
Name: RipExportLimitWarning (1929) Type: configurationAlarm (11) Package: rip Raised on class: rip.Site	Severity: warning Implicitly cleared: false Default probable cause: exportLimitWarning (600)	Unspecified
Description: The alarm is raised when the number of exported routes for the RIP level equals the percentage of the export limit configured in the Export Limit Log Percent parameter.		
Remedial action: Informational - Additional routes will continue to be exported into RIP from the route table till the export limit is reached.		

Table 35-686 ripRouteMaxLimitReached

Alarm	Attributes	Applicable major NE releases
Name: ripRouteMaxLimitReached (1090) Type: ProtocolAlarm (1) Package: rip Raised on class: rip.Site	Severity: warning Implicitly cleared: true Default probable cause: maxRouteReached (825)	Unspecified
Description: The alarm is raised when the number of RIP routes learned by an NE exceeds the maximum specified in the RIP configuration of the NE.		
Remedial action: Informational - no corrective action required		

Table 35-687 RootDirMaxFilesReached

Alarm	Attributes	Applicable major NE releases
Name: RootDirMaxFilesReached (3699) Type: storageAlarm (25) Package: equipment Raised on class: equipment.FlashMemory	Severity: variable Implicitly cleared: false Default probable cause: rootDirMaxFilesReached (1437)	Unspecified
Description: The alarm is raised when the number of files in the root directory reaches the maximum.		
Remedial action: This alarm has been raised due the fact that the number of files in the root directory of the compact flash has gone beyond the pre-defined limit. To rectify this issue please remove unused files from the root directory.		

Table 35-688 RouterLimitExceedDueToMultiAdditions

Alarm	Attributes	Applicable major NE releases
Name: RouterLimitExceedDueToMultiAdditions (602) Type: cpamLicensingAlarm (39) Package: security Raised on class: security.CpamLicense	Severity: critical Implicitly cleared: true Default probable cause: cpamRouterLimitExceedDueToMultiAdditions (448)	Unspecified
Description: The alarm is raised when the 5650 CPAM cannot discover one or more routers because the license capacity is reached.		
Raising condition: ('License violation due to multiple routers addition' EQUAL 'true')		
Clearing condition: ('License violation due to multiple routers addition' EQUAL 'false')		
Remedial action: Informational - The number of router (Big/Small/Multicast/Third Party) licenses purchased and available on the CPAM server is insufficient as compared to the number of big/small/multicast/third party routers under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 35-689 RPSAbnormalState

Alarm	Attributes	Applicable major NE releases
Name: RPSAbnormalState (3934) Type: rpsAbnormalConditionAlarm (114) Package: mpr Raised on class: mpr.MPRProtection	Severity: variable Implicitly cleared: true Default probable cause: RPSProblem (1517)	Unspecified
Description: The alarm is raised when abnormal state resulted due to force switch/lockout operation in RPS mode.		
Remedial action: This alarm is raised when forced-switch/lockout command in RPS mode which led to an abnormal condition.		

Table 35-690 RPSFail

Alarm	Attributes	Applicable major NE releases
Name: RPSFail (1085) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: receiverProtectionFail (824)	Unspecified
Description: The alarm is raised when a receiver protection switchover fails.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-691 RxFail

Alarm	Attributes	Applicable major NE releases
Name: RxFail (687) Type: communicationsAlarm (4) Package: radioequipment Raised on class: radioequipment.RadioPortSpecifics	Severity: variable Implicitly cleared: true Default probable cause: rxFail (502)	Unspecified
Description: The alarm is raised when an MSS detects a receive failure.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-692 SapDHCPLeaseEntriesExceeded

Alarm	Attributes	Applicable major NE releases
Name: SapDHCPLeaseEntriesExceeded (386) Type: communicationsAlarm (4) Package: service Raised on class: service.AccessInterface	Severity: major Implicitly cleared: false Default probable cause: sapDHCPLeaseEntriesExceeded (290)	Unspecified

(1 of 2)

35 – Unspecified NE alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when the number of DHCP lease-state entries on a SAP reaches the configured maximum value. This value is defined by sapTlsDhcpLeasePopulate for a TLS VLAN service, and by vRtrIfDHCPLeasePopulate for an IES or VPRN service.		
Remedial action: The Number of DHCP lease-state entries (e.g. subscribers) on the affected interface has crossed the leasePopulate threshold defined in the DHCP Relay configuration of that interface. Please review the DHCP leasePopulate configuration and adjust the number of allowed leases to meet the network requirements. Alternately, the DHCP leases can be spread out across extra interfaces.		

(2 of 2)

Table 35-693 sapDHCPLeaseStatePopulateErr

Alarm	Attributes	Applicable major NE releases
Name: sapDHCPLeaseStatePopulateErr (3908) Type: processingErrorAlarm (81) Package: service Raised on class: service.AccessInterface	Severity: major Implicitly cleared: false Default probable cause: sapDHCPLeaseStatePopulateError (1495)	Unspecified
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot update the DHCP Lease State table upon reception of a DHCP ACK message.		
Remedial action: The alarm is raised when an NE notifies the 5620 SAM that it cannot update the DHCP Lease State table upon reception of a DHCP ACK message. Verify the local DHCP server configuration or the DHCP relay configuration. Additionally, verify the length of the auto-generated subscriber identification.		

Table 35-694 sapDHCPProxyServerError

Alarm	Attributes	Applicable major NE releases
Name: sapDHCPProxyServerError (387) Type: communicationsAlarm (4) Package: service Raised on class: service.AccessInterface	Severity: major Implicitly cleared: false Default probable cause: UnableProxyDHCPRequest (291)	Unspecified
Description: The alarm is raised when the 5620 SAM is unable to proxy a DHCP request.		
Remedial action: Please verify your DHCP relay configuration. The local proxy server will not become operational without the emulated-server address being specified. Also ensure the Proxy server state is enabled on this SAP.		

Table 35-695 SapMismatch

Alarm	Attributes	Applicable major NE releases
Name: SapMismatch (417) Type: configurationAlarm (11) Package: srrp Raised on class: srrp.Instance	Severity: major Implicitly cleared: false Default probable cause: remoteSapMismatch (310)	Unspecified
Description: The alarm is raised when the SRRP SAPs on the local interface do not match the SRRP SAPs on the remote interface.		
Remedial action: Reconfigure the Service Access Interfaces for the Group Interface so that they connecting to each other for the peer SRRPs.		

Table 35-696 sapReceivedProtSrcMac

Alarm	Attributes	Applicable major NE releases
Name: sapReceivedProtSrcMac (393) Type: accessInterfaceAlarm (40) Package: l2fwd Raised on class: l2fwd.AccessInterfaceFib	Severity: minor Implicitly cleared: false Default probable cause: ProtectedSourceMacLearned (294)	Unspecified
Description: The alarm is raised when a restricted SAP receives a re-learn request for a protected MAC address.		
Remedial action: Informational - no corrective action required.		

Table 35-697 SapStaticHostDynamicMacConflict

Alarm	Attributes	Applicable major NE releases
Name: SapStaticHostDynamicMacConflict (313) Type: configurationAlarm (11) Package: antispoof Raised on class: antispoof.AntiSpoofingStaticHosts	Severity: minor Implicitly cleared: false Default probable cause: LearnedDynamicMacAlreadyLearned (243)	Unspecified
Description: The alarm is raised when an NE tries to learn a dynamic MAC address from an IP-only static host.		
Remedial action: Informational - The NE has detected an existing FIB entry with the same MAC address, created for another static host. Clearing the FIB entries could fix it.		

Table 35-698 SapTagMismatch

Alarm	Attributes	Applicable major NE releases
Name: SapTagMismatch (418) Type: configurationAlarm (11) Package: srrp Raised on class: srrp.Instance	Severity: major Implicitly cleared: false Default probable cause: remoteSyncTagMismatch (311)	Unspecified
Description: The alarm is raised when the tag of a local SAP does not match the tag of a remote SAP.		
Remedial action: Reconfigure the SAPs for the peer SRRP instances so that their tags match each other.		

Table 35-699 SapVlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: SapVlanSubTypeConflict (290) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: false Default probable cause: topologyMisconfigured (81)	Unspecified
Description: The alarm is raised when a SAP resynchronization indicates that the VLAN subtype of the SAP is different from the site subtype. The alarm information includes the ID of the associated port.		
Remedial action: Ensure that the VLAN Subtype of the SAP matches the VLAN Subtype of the Site.		

Table 35-700 SasAccountingAlarm

Alarm	Attributes	Applicable major NE releases
Name: SasAccountingAlarm (691) Type: oamAlarm (18) Package: sas Raised on class: sas.TestSuite	Severity: minor Implicitly cleared: true Default probable cause: noAccountingPolicy (506)	Unspecified
Description: The alarm is raised when the 5620 SAM cannot find an SAA Accounting Policy.		
Remedial action: A configuration error has been made which must be corrected. An SAA Accounting policy is required but has not been configured - please perform the required configuration.		

Table 35-701 SasPmBinAlarmLimitReached

Alarm	Attributes	Applicable major NE releases
Name: SasPmBinAlarmLimitReached (5413) Type: configurationAlarm (11) Package: server Raised on class: server.SamServer	Severity: variable Implicitly cleared: false Default probable cause: tooManyAlarmsRaisedByBinStats (2121)	Unspecified
Description: The alarm is raised when PM Bin Statistics has exceeded the limit of alarms for an interval.		
Remedial action: Informational - the maximum number of bin threshold alarms that can be raised in the reset interval has been reached. After the Bin alarm reset interval has passed, alarms can be raised again for the next interval until the number of alarms reaches the limit again.		

Table 35-702 SasPmBinStatThresholdExceeded

Alarm	Attributes	Applicable major NE releases
Name: SasPmBinStatThresholdExceeded (5412) Type: misConfiguration (53) Package: sas Raised on class: sas.TestManager	Severity: variable Implicitly cleared: false Default probable cause: SasPmBinStatThresholdExceeded (2120)	Unspecified
Description: The alarm is raised if sas pm bin stats count exceeds threshold limit. This Alarm has to be cleared Manually.		
Remedial action: The alarm is raised if sas pm bin stats count exceeds Threshold Limit.This Alarm has to be cleared Manually.		

Table 35-703 SasResultCollectionThresholdExceeded

Alarm	Attributes	Applicable major NE releases
Name: SasResultCollectionThresholdExceeded (5158) Type: misConfiguration (53) Package: sas Raised on class: sas.TestManager	Severity: major Implicitly cleared: false Default probable cause: sasResultCollectionThresholdExceeded (2078)	Unspecified
Description: The alarm is raised if test result count exceeds maximum allowed Limit.		
Remedial action: collection Rate Greater Than expected.		

35 – Unspecified NE alarms

Table 35-704 SasThresholdExceededAlarm

Alarm	Attributes	Applicable major NE releases
Name: SasThresholdExceededAlarm (272) Type: oamAlarm (18) Package: sas Raised on class: sas.Test	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when a rising or falling threshold is crossed by a jitter, latency, or loss value. The alarm is raised only against a scheduled test. The alarm information includes the threshold type, the threshold setting, and the current rising or falling value.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-705 SasTooManyTestsOnNodeAlarm

Alarm	Attributes	Applicable major NE releases
Name: SasTooManyTestsOnNodeAlarm (287) Type: oamAlarm (18) Package: sas Raised on class: sas.NeAgent	Severity: major Implicitly cleared: true Default probable cause: tooManyTestsDeployedOnNode (220)	Unspecified
Description: The alarm is raised when an NE reaches 60 percent of the allowed number of created or simultaneously executed OAM tests. An attempt to create or execute an NE schedulable test on an NE fails when the number of tests reaches 95 percent of the NE capacity. The alarm information includes the following: - the NE ID - the number of deployed tests on the NE - the allowed number of deployed tests on the NE		
Remedial action: Informational - 5620 SAM is close to or at the maximum number of OAM tests it can support.		

Table 35-706 ScriptAlarm

Alarm	Attributes	Applicable major NE releases
Name: ScriptAlarm (5131) Type: serverAlarm (94) Package: script Raised on class: script.AbstractScript	Severity: variable Implicitly cleared: false Default probable cause: ScriptAlarm (2061)	Unspecified
Description: This alarm was raised from within a SAM user script when certain conditions were met, as implemented by the script author. See the alarm's 'Additional Text' for any informative details the script author may have supplied.		
Remedial action: This is an alarm generated from within a SAM user script, and therefore the remedial action will vary. See the alarm's "Additional Text" for any remedial action the script author may have supplied.		

Table 35-707 scriptBackupLost

Alarm	Attributes	Applicable major NE releases
Name: scriptBackupLost (273) Type: configurationAlarm (11) Package: subscriber Raised on class: subscriber.Policy	Severity: warning Implicitly cleared: true Default probable cause: backupDown (205)	Unspecified
Description: The alarm is raised when the primary subscriber identification script URL is operationally up, but a lower-priority script or URL is operationally down.		
Raising condition: (('isLocal' EQUAL 'true') AND ('Primary Script Operational State' EQUAL 'Up') AND (('Secondary Script Operational State' NOT EQUAL 'Up') OR ('Tertiary Script Operational State' NOT EQUAL 'Up')))		
Clearing condition: (('isLocal' EQUAL 'true') AND (('Primary Script Operational State' NOT EQUAL 'Up') OR (('Secondary Script Operational State' EQUAL 'Up') AND ('Tertiary Script Operational State' EQUAL 'Up'))))		
Remedial action: If the DHCP ACK Python script processing behaviour is desired, please make sure that primary, secondary and tertiary scripts are installed and operationally up.		

Table 35-708 SdpBindingMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: SdpBindingMisconfigured (293) Type: SdpBindingAlarm (30) Package: svt Raised on class: svt.SdpBinding	Severity: critical Implicitly cleared: true Default probable cause: returnSdpBindingTypeMismatch (224)	Unspecified
Description: The alarm is raised when the return SDP binding type does not match the originating SDP binding type, for example, when the return SDP binding is spoke and the originating SDP binding is mesh.		
Remedial action: A configuration error has occurred which must be corrected. The configuration on the endpoints of the SDP does not match causing the SDP to be down. Correct the configuration error and the SDP will come up.		

Table 35-709 sdpBindReceivedProtSrcMac

Alarm	Attributes	Applicable major NE releases
Name: sdpBindReceivedProtSrcMac (3746) Type: SdpBindingAlarm (30) Package: I2fwd Raised on class: I2fwd.AbstractCircuitFib	Severity: minor Implicitly cleared: false Default probable cause: ProtectedSourceMacLearned (294)	Unspecified
Description: The alarm is raised when a restricted SDP receives a re-learn request for a protected MAC address.		
Remedial action: Informational - no corrective action required.		

Table 35-710 SdpMldSnpgGrpDroppedLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: SdpMldSnpgGrpDroppedLimitExceeded (738) Type: SdpBindingAlarm (30) Package: vpls Raised on class: vpls.SdpBindingMldSnpgCfg	Severity: warning Implicitly cleared: false Default probable cause: igmpSnpgGrpMaxNbrGrpsReached (292)	Unspecified
Description: The alarm is raised when an SDP binding drops an MLD group because the configurable maximum number of MLD groups on the SDP binding is reached.		
Remedial action: Increase the maximum number of MLD groups for the SDP binding.		

Table 35-711 sdpPbbActvPwWithNonActvCtrlPwChg

Alarm	Attributes	Applicable major NE releases
Name: sdpPbbActvPwWithNonActvCtrlPwChg (5416) Type: processingErrorAlarm (81) Package: svt Raised on class: svt.Tunnel	Severity: warning Implicitly cleared: true Default probable cause: sdpPbbActvPwWithNonActvCtrlPwChg (2123)	Unspecified
Description: The alarm is raised when last pseudo-wire (PW) goes standby or down and when first PW becomes active on the Backbone Edge Bridge (BEB) where control PW is standby or down on that SDP.		
Remedial action: sdpPbbActvPwWithNonActvCtrlPwChg event with sdpPbbActvPwWithNonActvCtrlPw set to 'false' indicate clearing of sdpPbbActvPwWithNonActvCtrlPwChg with sdpPbbActvPwWithNonActvCtrlPw set to 'true'.		

Table 35-712 SecondaryBatteryFail (equipment)

Alarm	Attributes	Applicable major NE releases
Name: SecondaryBatteryFail (3624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: secondaryBatteryFail (1412)	Unspecified
Description: The alarm is raised when a secondary battery failure is detected.		
Remedial action: The battery on the CPM should be replaced or re-installed.		

Table 35-713 SecondaryBatteryFail (mpr)

Alarm	Attributes	Applicable major NE releases
Name: SecondaryBatteryFail (3624) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: secondaryBatteryFail (1412)	Unspecified
Description: The alarm is raised when a secondary battery failure is detected.		
Remedial action: The battery on the subrack element(MPT) should be replaced or re-installed.		

Table 35-714 secondExpirationThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: secondExpirationThresholdCrossed (2913) Type: configurationAlarm (11) Package: ranlicense Raised on class: ranlicense.RANLicense	Severity: major Implicitly cleared: true Default probable cause: ageingLicense (1113)	Unspecified
Description: The alarm is raised when the specified Second Expiration Threshold for RAN licensing is crossed.		
Remedial action: Ask for a new LKDI license file with a further expiration date.		

Table 35-715 secondUsageThresholdCrossed

Alarm	Attributes	Applicable major NE releases
Name: secondUsageThresholdCrossed (2914) Type: configurationAlarm (11) Package: ranlicense Raised on class: ranlicense.RANLicense	Severity: major Implicitly cleared: true Default probable cause: insufficientPurchasedLicenses (1114)	Unspecified
Description: The alarm is raised when the specified Second Usage Threshold for RAN licensing is crossed.		
Remedial action: Ask for a new LKDI license file with more tokens.		

Table 35-716 SectionTraceMismatch

Alarm	Attributes	Applicable major NE releases
Name: SectionTraceMismatch (2943) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: sectionTraceMismatch (1133)	Unspecified

(1 of 2)

35 – Unspecified NE alarms

Alarm	Attributes	Applicable major NE releases
Description: The alarm is raised when a trace mismatch is detected on a SONET section.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

(2 of 2)

Table 35-717 SerialChannelLoopback

Alarm	Attributes	Applicable major NE releases
Name: SerialChannelLoopback (807) Type: configurationAlarm (11) Package: tdmequipment Raised on class: tdmequipment.SerialChannelSpecifics	Severity: warning Implicitly cleared: false Default probable cause: serialChannelLoopback (573)	Unspecified
Description: The alarm is raised when an NE reports that a serial channel has a loopback alarm condition.		
Remedial action: Informational only.		

Table 35-718 ServerDeclineStaticAddr

Alarm	Attributes	Applicable major NE releases
Name: ServerDeclineStaticAddr (3951) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.AbstractDhcpServer	Severity: warning Implicitly cleared: false Default probable cause: DhcpClientHasStaticIpAddress (1530)	Unspecified
Description: The tmnxDhcpSvrDeclineStaticAddr notification is generated when a DHCP decline message is received from a DHCP client that has a static IP address assigned.		
Remedial action: DHCP client has a static IP address. Make sure that the DHCP client has a dynamic IP address		

Table 35-719 ServerLeaseDefaultTimers

Alarm	Attributes	Applicable major NE releases
Name: ServerLeaseDefaultTimers (2937) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.AbstractDhcpServer	Severity: warning Implicitly cleared: false Default probable cause: LeaseTimerInconsistent (1129)	Unspecified
Description: The alarm is raised when the system has reverted to default lease timer values for a particular DHCP client because the configuration of the lease timers was inconsistent.		

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Remedial action: This warning is generated when configuration of the lease timers of a particular DHCP client is inconsistent; the system has reverted to default lease timer values. The lease renew time T1 and lease rebind time T2 have been reverted to the default value of 1/2 and 2/3 of the lease time. Please check the lease timers configuration on the local DHCP server to ensure the timers are compatible.		

(2 of 2)

Table 35-720 ServerMaxLeasesReached

Alarm	Attributes	Applicable major NE releases
Name: ServerMaxLeasesReached (3316) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: false Default probable cause: DhcpSvrMaxLeasesReached (1155)	Unspecified
Description: The alarm is raised when the maximum number of leases allocated by local DHCP server is reached.		
Remedial action: Informational - this alarm indicates that the maximum number of leases allocated by a local DHCP server was reached. The address ranges for existing address pools should be extended or a new address pool should be configured for the local DHCP server.		

Table 35-721 ServerMsgTooLong

Alarm	Attributes	Applicable major NE releases
Name: ServerMsgTooLong (2938) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.AbstractDhcpServer	Severity: warning Implicitly cleared: false Default probable cause: DhcpSvrMsgTooLong (1130)	Unspecified
Description: The alarm is raised when a DHCP message is generated but the message size exceeds either the maximum DHCP message size, or the size provided by the client in the option maximum DHCP message size.		
Remedial action: Review the access network DHCP configuration to ensure all parties send DHCP packets with appropriate message size.		

Table 35-722 ServerUserDatabaseUnknown

Alarm	Attributes	Applicable major NE releases
Name: ServerUserDatabaseUnknown (3952) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.AbstractDhcpServer	Severity: warning Implicitly cleared: false Default probable cause: CannotFindUserDatabase (1531)	Unspecified
Description: The tmnxDhcpSvrUserDbUnknown notification is generated when the local DHCP server instance drops a DHCP message because a local user database with the name specified for this server instance could not be found.		

(1 of 2)

35 – Unspecified NE alarms

Alarm	Attributes	Applicable major NE releases
Remedial action: Please specify a valid local user database for this server instance.		

(2 of 2)

Table 35-723 SGLimitExceeded

Alarm	Attributes	Applicable major NE releases
Name: SGLimitExceeded (456) Type: resourceAlarm (28) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: false Default probable cause: pimSnpgSGGroupMaxSupportedLimitExceeded (350)	Unspecified
Description: The alarm is raised when the number of PIM snooping source group records on a card exceeds the maximum.		
Remedial action: Informational - The alarm is raised when the number of PIM snooping source group records on a card exceeds the maximum. To rectify this issue please increase the max number of groups for the pim snooping associated with the card. The maximum number allowed is 16,000 (S,G) entries.		

Table 35-724 ShamLinkDbDescriptAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkDbDescriptAuthFailure (663) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> authTypeMismatch authFailure 	Unspecified
Description: The alarm is raised when an NE receives a dbDescript packet on a sham link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a dbDescript packet has been received on a sham link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-725 ShamLinkDbDescriptConfig

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkDbDescriptConfig (664) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives a dbDescript packet on a sham link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a dbDescript packet has been received on a sham link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-726 ShamLinkHelloAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkHelloAuthFailure (666) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives a hello packet on a sham link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a hello packet has been received on a sham link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-727 ShamLinkHelloConfig

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkHelloConfig (667) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives a hello packet on a sham link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a hello packet has been received on a sham link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-728 ShamLinkLsAckAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkLsAckAuthFailure (668) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives an lsAck packet on a sham link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a lsAck packet has been received on a sham link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-729 ShamLinkLsAckConfig

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkLsAckConfig (669) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives an IsAck packet on a sham link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a IsAck packet has been received on a sham link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-730 ShamLinkLsReqAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkLsReqAuthFailure (670) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives an IsReq packet on a sham link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a IsReq packet has been received on a sham link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-731 ShamLinkLsReqConfig

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkLsReqConfig (671) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives an IsReq packet on a sham link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a IsReq packet has been received on a sham link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-732 ShamLinkLsUpdateAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkLsUpdateAuthFailure (672) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives an IsUpdate packet on a sham link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a IsUpdate packet has been received on a sham link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-733 ShamLinkLsUpdateConfig

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkLsUpdateConfig (673) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives an IsUpdate packet on a sham link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a IsUpdate packet has been received on a sham link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-734 ShamLinkNullPacketAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkNullPacketAuthFailure (674) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives a null packet on a sham link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a null packet has been received on a sham link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-735 ShamLinkNullPacketConfig

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkNullPacketConfig (675) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives a null packet on a sham link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a null packet has been received on a sham link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-736 ShamLinkRxBadPacket

Alarm	Attributes	Applicable major NE releases
Name: ShamLinkRxBadPacket (676) Type: communicationsAlarm (4) Package: ospf Raised on class: ospf.ShamLink	Severity: warning Implicitly cleared: false Default probable cause: hello (47) Applicable probable causes: <ul style="list-style-type: none"> • hello • dbDescript • lsReq • lsUpdate • lsAck • nullPacket 	Unspecified
Description: The alarm is raised when an NE cannot parse an OSPF packet that it receives on a sham link.		
Remedial action: Informational - an NE cannot parse an OSPF packet that it receives on a sham link.		

Table 35-737 ShelfCPUAboveThreshold

Alarm	Attributes	Applicable major NE releases
Name: ShelfCPUAboveThreshold (638) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.HealthMonitoring	Severity: major Implicitly cleared: false Default probable cause: ShelfCPUUtilizationCrossedAboveThreshold (474)	Unspecified
Description: The alarm is raised when shelf CPU usage exceeds the threshold value.		
Remedial action: Informational - Please contact Alcatel-Lucent support for assistance.		

Table 35-738 ShelfMemoryAboveThreshold

Alarm	Attributes	Applicable major NE releases
Name: ShelfMemoryAboveThreshold (639) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.HealthMonitoring	Severity: major Implicitly cleared: false Default probable cause: ShelfMemoryUtilizationCrossedAboveThreshold (475)	Unspecified
Description: The alarm is raised when shelf memory usage exceeds the threshold value.		
Remedial action: Informational - Please contact Alcatel-Lucent support for assistance.		

Table 35-739 ShelfRxAboveThreshold

Alarm	Attributes	Applicable major NE releases
Name: ShelfRxAboveThreshold (640) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.HealthMonitoring	Severity: major Implicitly cleared: false Default probable cause: ShelfRxUtilizationCrossedAboveThreshold (476)	Unspecified
Description: The alarm is raised when shelf Rx exceeds the threshold value.		
Remedial action: Informational - Please contact Alcatel-Lucent support for assistance.		

Table 35-740 ShelfRxTxAboveThreshold

Alarm	Attributes	Applicable major NE releases
Name: ShelfRxTxAboveThreshold (641) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.HealthMonitoring	Severity: major Implicitly cleared: false Default probable cause: ShelfRxTxUtilizationCrossedAboveThreshold (477)	Unspecified
Description: The alarm is raised when shelf Tx exceeds the threshold value.		
Remedial action: Informational - Please contact Alcatel-Lucent support for assistance.		

Table 35-741 ShelfTemperatureAboveThreshold

Alarm	Attributes	Applicable major NE releases
Name: ShelfTemperatureAboveThreshold (642) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.HealthMonitoring	Severity: major Implicitly cleared: false Default probable cause: ShelfTemperatureUtilizationCrossedAboveThreshold (478)	Unspecified
Description: The alarm is raised when shelf temperature exceeds the threshold value.		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 35-742 SignalLabelMismatch

Alarm	Attributes	Applicable major NE releases
Name: SignalLabelMismatch (3625) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: signalLabelMismatch (619)	Unspecified
Description: The alarm is raised when a signal label mismatch is detected.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-743 SiteBgpAdVplsIdMisconfiguration

Alarm	Attributes	Applicable major NE releases
Name: SiteBgpAdVplsIdMisconfiguration (739) Type: configurationAlarm (11) Package: vpls Raised on class: vpls.BgpAdSite	Severity: major Implicitly cleared: true Default probable cause: bgpAdVplsIdInconsistent (439)	Unspecified
Description: The alarm is raised when the configured VPLS ID on a BGP AD object differs from the VPLS ID configured for the VPLS site.		
Remedial action: The VPLS ID on a BGP AD object must match the VPLS ID configured for the VPLS site.		

Table 35-744 SiteSyncDeploymentFailure

Alarm	Attributes	Applicable major NE releases
Name: SiteSyncDeploymentFailure (589) Type: equipmentAlarm (3) Package: sonet Raised on class: sonet.SiteSync	Severity: major Implicitly cleared: false Default probable cause: siteSyncFailure (441)	Unspecified
Description: The alarm is raised when the 5620 SAM tries to deploy a value for an object when a transaction that involves the object is in progress from a different context.		
Remedial action: Another transaction is updating the object, Please try after some time.		

Table 35-745 SoftwareBootFailure

Alarm	Attributes	Applicable major NE releases
Name: SoftwareBootFailure (107) Type: softwareAlarm (19) Package: sw Raised on class: sw.CardSoftware	Severity: major Implicitly cleared: true Default probable cause: softwareBootProblem (91)	Unspecified
Description: The alarm is raised when an NE fails to boot because of a software problem.		
Remedial action: Please contact Alcatel-Lucent support for assistance.		

Table 35-746 SoftwareDownloading

Alarm	Attributes	Applicable major NE releases
Name: SoftwareDownloading (109) Type: softwareAlarm (19) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: softwareDownloading (93)	Unspecified
Description: The alarm is raised when an NE begins to download software to a IOM or CPM card.		
Remedial action: Informational		

Table 35-747 SoftwareFailureAlarm

Alarm	Attributes	Applicable major NE releases
Name: SoftwareFailureAlarm (149) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: loadFailed (124)	Unspecified
Description: The alarm is raised when the CPM fails to load the software from the specified location. The alarm information includes the software location.		
Remedial action: The CPM card did not find the SW in the expected location. Reinstall the SW using 5620 SAM.		

Table 35-748 SoftwareInitialized

Alarm	Attributes	Applicable major NE releases
Name: SoftwareInitialized (111) Type: softwareAlarm (19) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: softwareInitialized (95)	Unspecified
Description: The alarm is raised when software initialization on an IOM or CPM card completes.		
Remedial action: Informational		

Table 35-749 SoftwareInitializing

Alarm	Attributes	Applicable major NE releases
Name: SoftwareInitializing (110) Type: softwareAlarm (19) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: softwareInitializing (94)	Unspecified
Description: The alarm is raised when software initialization on an IOM or CPM card begins.		
Remedial action: Informational		

Table 35-750 SoftwareUpgradeDownloadFailed

Alarm	Attributes	Applicable major NE releases
Name: SoftwareUpgradeDownloadFailed (3695) Type: communicationsAlarm (4) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Implicitly cleared: true Default probable cause: linkFailure (740)	Unspecified
Description: This alarm is raised when the transfer of software scheduled by a Self Config policy fails due to communication problem (communication timeout, cable disconnected). It is automatically cleared before starting a new upgrade scheduled by a Self Config policy.		
Remedial action: Check what happened during the File Transfer. Possible issues: Loss of NE Connectivity, FTP daemon down, FTP credential issues		

Table 35-751 SoftwareUpgradeOperationNotAttempted

Alarm	Attributes	Applicable major NE releases
Name: SoftwareUpgradeOperationNotAttempted (1963) Type: communicationsAlarm (4) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Implicitly cleared: true Default probable cause: bsCommunicationOffline (904)	Unspecified
Description: This alarm is raised when the BS Communication State goes 'offline'. While BS communication state is 'offline' none of the Software Upgrade Operations can be attempted		
Clearing condition: (('bsCommunicationState' EQUAL 'Online') OR ('bsCommunicationState' EQUAL 'OMC Managed'))		
Remedial action: Release NEM sessions		

Table 35-752 SonetSDHLoopback

Alarm	Attributes	Applicable major NE releases
Name: SonetSDHLoopback (407) Type: configurationAlarm (11) Package: sonetequipment Raised on class: sonetequipment.SonetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: sonetSDHLoopback (303)	Unspecified
Description: The alarm is raised when a loopback test is provisioned on a SONET/SDH port.		
Remedial action: Remove the loopback test from the SONET/SDH port.		

Table 35-753 SONEventsProcessingDelayed

Alarm	Attributes	Applicable major NE releases
Name: SONEventsProcessingDelayed (3874) Type: integrityViolation (85) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Implicitly cleared: true Default probable cause: UnableToAcquireLock (949)	Unspecified
Description: This alarm is raised when a SON events cannot be handled (CM session is running). It is automatically cleared.		
Remedial action: Informational only - self-correcting condition.		

Table 35-754 sourceSapChange

Alarm	Attributes	Applicable major NE releases
Name: sourceSapChange (4813) Type: ConfigurationAlarm (15) Package: mirror Raised on class: mirror.SourceInterface	Severity: warning Implicitly cleared: false Default probable cause: tMirrorSourceSapChange (430)	Unspecified
Description: The alarm is raised when a SAP that is associated with this mirror source is modified or deleted.		
Remedial action: Informational - no corrective action required.		

Table 35-755 SpbNbrMultAdjExists

Alarm	Attributes	Applicable major NE releases
Name: SpbNbrMultAdjExists (4394) Type: configurationAlarm (11) Package: spb Raised on class: spb.Site	Severity: major Implicitly cleared: true Default probable cause: multiAdj (1573)	Unspecified

(1 of 2)

Alarm	Attributes	Applicable major NE releases
Description: The alarm is sent when IS-IS SPB instance detects a neighbor to which it already has a direct adjacency on another interface.		
Remedial action: Check number of links to neighbor to make sure there is only one SPB link.		

(2 of 2)

Table 35-756 SpbRejectedAdjacency

Alarm	Attributes	Applicable major NE releases
Name: SpbRejectedAdjacency (4395) Type: adjacencyAlarm (31) Package: spb Raised on class: spb.AbstractInterface	Severity: minor Implicitly cleared: true Default probable cause: interfaceMismatch (170)	Unspecified
Description: The alarm is raised when the 5620 SAM receives a vRtrIsisRejectedAdjacency trap, which indicates that an adjacency cannot be established in response to a Hello PDU from an IS because of a lack of resources.		
Remedial action: Informational, might have exceeded the maximum number of adjacencies allowed.		

Table 35-757 SSHLoginMaxAttempts

Alarm	Attributes	Applicable major NE releases
Name: SSHLoginMaxAttempts (3702) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: false Default probable cause: sshLoginMaxAttempts (1441)	Unspecified
Description: The alarm is raised when the number of CLI login failures due incorrect user name or password using SSH session exceeds the configured value.		
Remedial action: Informational		

Table 35-758 SSLKeystoreCertificateExpired

Alarm	Attributes	Applicable major NE releases
Name: SSLKeystoreCertificateExpired (5138) Type: serverAlarm (94) Package: server Raised on class: server.SamServer	Severity: critical Implicitly cleared: true Default probable cause: SSLKeystoreCertificateHasExpired (2062)	Unspecified
Description: The alarm is raised when the SSL Keystore certificate for 5620 SAM has expired.		
Remedial action: Please reconfigure 5620 SAM with an unexpired SSL Keystore Certificate. Please refer to the 5620 SAM Installation and Upgrade guide.		

Table 35-759 SSLKeystoreCertificateExpiring

Alarm	Attributes	Applicable major NE releases
Name: SSLKeystoreCertificateExpiring (5139) Type: serverAlarm (94) Package: server Raised on class: server.SamServer	Severity: warning Implicitly cleared: true Default probable cause: SSLKeystoreCertificateAboutToExpire (2063)	Unspecified
Description: This alarm is raised when the 5620 SAM SSL Keystore certificate is expiring soon.		
Remedial action: Please reconfigure 5620 SAM with a newer SSL Keystore Certificate. Please refer to the 5620 SAM Installation and Upgrade guide.		

Table 35-760 StandbyVersionMismatch (equipment)

Alarm	Attributes	Applicable major NE releases
Name: StandbyVersionMismatch (1174) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: standbyVersionMismatch (875)	Unspecified
Description: The alarm is raised when a standby device software version mismatch is detected.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-761 StandbyVersionMismatch (mpr)

Alarm	Attributes	Applicable major NE releases
Name: StandbyVersionMismatch (1174) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: standbyVersionMismatch (875)	Unspecified
Description: The alarm is raised when a standby device software version mismatch is detected.		
Remedial action: This alarm is raised when standby Software version on the MPT does not match the software version on the core. Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-762 StatsPollerProblem

Alarm	Attributes	Applicable major NE releases
Name: StatsPollerProblem (5404) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: resyncFailed (24)	Unspecified
Description: The alarm is raised when the 5620 SAM is unable to poll a network stats object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 35-763 STMSysMultiAuxAvailable

Alarm	Attributes	Applicable major NE releases
Name: STMSysMultiAuxAvailable (527) Type: misConfiguration (53) Package: sas Raised on class: sas.TestManager	Severity: critical Implicitly cleared: false Default probable cause: multiAuxiliaryServersAvailable (399)	Unspecified
Description: The alarm is raised when the 5620 SAM detects multiple available auxiliary servers for test execution.		
Remedial action: Reserved for future use		

Table 35-764 STMSysNotAvailable

Alarm	Attributes	Applicable major NE releases
Name: STMSysNotAvailable (526) Type: communicationsAlarm (4) Package: sas Raised on class: sas.TestManager	Severity: critical Implicitly cleared: false Default probable cause: noAuxiliaryServersAvailable (256)	Unspecified
Description: The alarm is raised when the 5620 SAM detects no available auxiliary servers for test execution.		
Remedial action: Reserved for future use		

Table 35-765 STMTesIdRangeMismatch

Alarm	Attributes	Applicable major NE releases
Name: STMTesIdRangeMismatch (792) Type: oamAlarm (18) Package: sas Raised on class: sas.TestManager	Severity: major Implicitly cleared: true Default probable cause: testIdRangeMismatch (560)	Unspecified
Description: The alarm is raised when the 5620 SAM detects an STM test ID range mismatch between the primary and standby main servers.		
Remedial action: The configuration on the primary and standby servers must be aligned to resolve this problem. Please contact Alcatel-Lucent support for assistance.		

Table 35-766 STMTestsOutsideRange

Alarm	Attributes	Applicable major NE releases
Name: STMTestsOutsideRange (793) Type: oamAlarm (18) Package: sas Raised on class: sas.TestManager	Severity: major Implicitly cleared: false Default probable cause: testsOutsideRange (561)	Unspecified
Description: The alarm is raised when the 5620 SAM detects one or more STM Tests that have IDs outside the specified range.		
Remedial action: A configuration error has been made which must be corrected. The testId in a STM test definition must be within the testId range specified within the nms-server.xml file		

Table 35-767 subHostInconsistentAtmTdOvr

Alarm	Attributes	Applicable major NE releases
Name: subHostInconsistentAtmTdOvr (3685) Type: configurationAlarm (11) Package: ressubscr Raised on class: ressubscr.ResidentialSubscriberInstance	Severity: minor Implicitly cleared: false Default probable cause: tmnxSubHostInconsistentAtmTdOvr (1424)	Unspecified
Description: The alarm is raised when an AAA server (e.g. a RADIUS server) specifies an ATM Traffic Descriptor override for a subscriber host while it has already specified another one for another host on the same ATM Virtual Circuit.		
Remedial action: Modify the AAA configuration so that all subscriber hosts sharing the same ATM Virtual circuit use the same ATM Traffic Descriptor Override VSA. If different overrides are required, then the subscribers must be in different ATM Virtual Circuits.		

Table 35-768 SubnetBindingFailed

Alarm	Attributes	Applicable major NE releases
Name: SubnetBindingFailed (4988) Type: processingErrorAlarm (81) Package: dhcp Raised on class: dhcp.AddressPool	Severity: major Implicitly cleared: false Default probable cause: tmnxDhcpSvrSubnetBindingFailed (2043)	Unspecified
Description: This alarm is raised when a DHCP server instance cannot offer an IP address to a host, because a subnet binding with its access node (service) is required but not available anymore in the pool.		
Remedial action: The configuration of the Local DHCP Server IP Address Pool and/or the access node (service) must be changed in order to make more subnets available.		

Table 35-769 SubnetFailCtrlError

Alarm	Attributes	Applicable major NE releases
Name: SubnetFailCtrlError (5156) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.Subnet	Severity: major Implicitly cleared: false Default probable cause: leaseWithInconsistentFailoverConfiguration (2075)	Unspecified
Description: The alarm is raised each time a lease is created in a subnet with an inconsistent failover configuration		
Remedial action: A subnet lease has an inconsistent failover configuration, where the failover control type is not identical for all subnet ranges while the pool subnet binding key is not equal to 'none'. Please restore consistency of the failover control configuration for all subnet ranges in this subnet.		

Table 35-770 SubnetMinFreeExc

Alarm	Attributes	Applicable major NE releases
Name: SubnetMinFreeExc (516) Type: configurationAlarm (11) Package: dhcp Raised on class: dhcp.Subnet	Severity: warning Implicitly cleared: false Default probable cause: actualFreeAddrBelowSubnetMin (391)	Unspecified
Description: The alarm is raised when the actual number of free addresses in a subnet falls below the desired minimum number specified in the subnet configuration		
Remedial action: Please ensure that an adequate free address threshold is configured or create a new subnet to meet the system requirements. This warning is raised on IPv4 DHCP servers only.		

Table 35-771 SubnetMismatch

Alarm	Attributes	Applicable major NE releases
Name: SubnetMismatch (415) Type: configurationAlarm (11) Package: srrp Raised on class: srrp.Instance	Severity: major Implicitly cleared: true Default probable cause: ipAddressListMismatch (308)	Unspecified
Description: The alarm is raised when the IP address list received from the master does not match the local IP address list.		
Remedial action: Check the IP address of the Subscriber interface and make sure the address for the peer SRRP instances are in the same subnet.		

Table 35-772 SubRackBatteryFail

Alarm	Attributes	Applicable major NE releases
Name: SubRackBatteryFail (5426) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRack	Severity: variable Implicitly cleared: true Default probable cause: batteryFail (457)	Unspecified
Description: The alarm is raised when the battery fails or is missing on SubRack.		
Remedial action: The battery on the subrack should be replaced or re-installed.		

Table 35-773 SubRackSecondaryBatteryFail

Alarm	Attributes	Applicable major NE releases
Name: SubRackSecondaryBatteryFail (5427) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRack	Severity: variable Implicitly cleared: true Default probable cause: secondaryBatteryFail (1412)	Unspecified
Description: The alarm is raised when a secondary battery failure is detected on SubRack.		
Remedial action: The battery on the subrack should be replaced or re-installed.		

Table 35-774 SubscrAuthPolicyMisconfigured (rtr)

Alarm	Attributes	Applicable major NE releases
Name: SubscrAuthPolicyMisconfigured (271) Type: ConfigurationAlarm (15) Package: rtr Raised on class: rtr.VirtualInterfaceConfiguration	Severity: warning Implicitly cleared: true Default probable cause: SubscrAuthPolicyNotFound (203)	Unspecified
Description: The alarm is raised when a subscriber authentication policy for DHCP relay is misconfigured.		
Remedial action: This alarm is raised on L2 and L3 access interfaces when the authentication policy specified for DHCP Relay does not exist. Please make sure to select an authentication policy that exists or to configure a new authentication policy with that name.		

Table 35-775 SubscrAuthPolicyMisconfigured (vpls)

Alarm	Attributes	Applicable major NE releases
Name: SubscrAuthPolicyMisconfigured (271) Type: ConfigurationAlarm (15) Package: vpls Raised on class: vpls.L2AccessItfDhcpRelayCfg	Severity: warning Implicitly cleared: true Default probable cause: SubscrAuthPolicyNotFound (203)	Unspecified
Description: The alarm is raised when a subscriber authentication policy for DHCP relay is misconfigured.		
Remedial action: Check the local and global configuration for the subscriber authentication policy for DHCP relay.		

Table 35-776 SubSlaacOverride

Alarm	Attributes	Applicable major NE releases
Name: SubSlaacOverride (5414) Type: processingErrorAlarm (81) Package: service Raised on class: service.ServiceAccessPoint	Severity: major Implicitly cleared: true Default probable cause: subSlaacAddressOverlap (2122)	Unspecified
Description: The alarm is raised when an NE notifies the 5620 SAM that an IPv6 client requests a DHCPv6 non-temporary address (IA_NA) which overrides an existing SLAAC prefix that is assigned to a host. This configuration causes the SLAAC host to be removed from the system.		
Remedial action: Provide a non-overlapping IPv6 Address for the SLAAC host.		

Table 35-777 SubSlaacSetupFailure

Alarm	Attributes	Applicable major NE releases
Name: SubSlaacSetupFailure (3906) Type: processingErrorAlarm (81) Package: service Raised on class: service.ServiceAccessPoint	Severity: major Implicitly cleared: false Default probable cause: SubSlaacSetupFailure (1494)	Unspecified
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot create or update a SLAAC host in the tmnxSubSlaacTable.		
Remedial action: The alarm is raised when an NE notifies SAM that it cannot create or update a SLAAC host in the tmnxSubSlaacTable. Verify the service configuration.		

Table 35-778 SubVirtualSubnetHostsDeleted

Alarm	Attributes	Applicable major NE releases
Name: SubVirtualSubnetHostsDeleted (5411) Type: configurationAlarm (11) Package: ressubscr Raised on class: ressubscr.ResidentialSubscriberInstance	Severity: warning Implicitly cleared: false Default probable cause: subVirtualSubnetHostsDeleted (2119)	Unspecified
Description: This alarm is raised when the NE deletes all existing hosts for a subscriber associated with a virtual subnet because a new default router and/or subnet were assigned. This is the consequence of a configuration change on the server that assigns the subnet.		
Remedial action: The hosts must transmit DHCP requests if they require a connection.		

Table 35-779 svcArpHostPopulateErr

Alarm	Attributes	Applicable major NE releases
Name: svcArpHostPopulateErr (3909) Type: processingErrorAlarm (81) Package: service Raised on class: service.AccessInterface	Severity: major Implicitly cleared: false Default probable cause: svcArpHostPopulateError (1496)	Unspecified
Description: The alarm is raised when an NE notifies the 5620 SAM that it cannot update the ARP Host table upon reception of an ARP message.		
Remedial action: The alarm is raised when an NE notifies the 5620 SAM that it cannot update the ARP Host table upon reception of an ARP message. Verify the service configuration. Additionally, verify the length of the auto-generated subscriber identification.		

Table 35-780 svcFdbMimDestTableFull

Alarm	Attributes	Applicable major NE releases
Name: svcFdbMimDestTableFull (588) Type: resourceAlarm (28) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resourceLimitReached (131)	Unspecified
Description: The alarm is raised when the number of backbone MAC address indices on an NE reaches the maximum allowed value. The alarm clears when the number of backbone MAC address indices on the NE falls below 95 percent of the maximum allowed value.		
Remedial action: Informational		

Table 35-781 SWIncompatibility

Alarm	Attributes	Applicable major NE releases
Name: SWIncompatibility (471) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.StackConfiguration	Severity: major Implicitly cleared: false Default probable cause: elementNotCompatibleWithExistingStack (357)	Unspecified
Description: The alarm is raised when a slot is not compatible with the current stack. The slot subsequently enters pass-through mode.		
Remedial action: Login to switch console, and install same software load on primary and secondary slot and synchronize them and reload switch.		

Table 35-782 SynchronizationLossOfSignal

Alarm	Attributes	Applicable major NE releases
Name: SynchronizationLossOfSignal (799) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: lossOfSignal (99)	Unspecified
Description: The alarm is raised when an SLOS signal is detected on a PDH tributary.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

35 – Unspecified NE alarms

Table 35-783 SyncCertFailed

Alarm	Attributes	Applicable major NE releases
Name: SyncCertFailed (3912) Type: equipmentAlarm (3) Package: sitesec Raised on class: sitesec.SiteSystemSecurityPublicKey	Severity: major Implicitly cleared: true Default probable cause: SyncCertFailed (1498)	Unspecified
Description: The alarm is raised when the synchronization of certificate files between the primary and secondary CPMs is stopped due to errors.		
Remedial action: The synchronization of certificate files between the primary and secondary CPMs is stopped due to errors. Depending on the reason specified, corrective action should be taken		

Table 35-784 synchroFailureAlarm

Alarm	Attributes	Applicable major NE releases
Name: synchroFailureAlarm (534) Type: softwareAlarm (19) Package: sw Raised on class: sw.SoftwareControlModule	Severity: major Implicitly cleared: false Default probable cause: synchroFailureAlarm (403)	Unspecified
Description: The alarm is raised when the flash card synchronization on an NE fails.		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 35-785 SynchronizationSignalFailure

Alarm	Attributes	Applicable major NE releases
Name: SynchronizationSignalFailure (2944) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: synchronizationSignalFailure (1134)	Unspecified
Description: The alarm is raised when a synchronization signal failure is detected.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-786 SystemModeChange

Alarm	Attributes	Applicable major NE releases
Name: SystemModeChange (1923) Type: equipmentAlarm (3) Package: optical Raised on class: optical.OpticalNeProperties	Severity: major Implicitly cleared: false Default probable cause: systemModeChange (923)	Unspecified
Description: The alarm is raised when an NE undergoes a system mode change, for example, from SONET to SDH mode. The alarm information includes the Site ID, old system mode value and new system mode value.		
Remedial action: Informational. The alarm is raised when an NE undergoes a system mode change, for ex. from SONET to SDH mode.		

Table 35-787 TChipMemoryError

Alarm	Attributes	Applicable major NE releases
Name: TChipMemoryError (5183) Type: hardwareAnomaly (55) Package: equipment Raised on class: equipment.BaseCard	Severity: minor Implicitly cleared: true Default probable cause: tchipMemoryParityError (2099)	Unspecified
Description: This Alarm is raised when a T-chip experiences an occurrence of an internal memory parity error.		
Remedial action: A fault has been detected in the hardware. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 35-788 TemporaryCommunicationFailure

Alarm	Attributes	Applicable major NE releases
Name: TemporaryCommunicationFailure (800) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: temporaryCommunicationProblem (566)	Unspecified
Description: The alarm is raised when a temporary communication failure is detected.		
Remedial action: 5620 SAM has temporarily lost contact with an NE. This may have been caused by the NE restarting, the NE being taken off-line via operator intervention or by a loss of connectivity to the NE. If the NE restarted then there will be an alarm indicating th		

Table 35-789 TestFailedAlarm (atm)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: atm Raised on class: atm.PvcConnection	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-790 TestFailedAlarm (bgp)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: bgp Raised on class: bgp.Site	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-791 TestFailedAlarm (ethernetoam)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: ethernetoam Raised on class: ethernetoam.MaintAssociation	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-792 TestFailedAlarm (ldp)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: ldp Raised on class: ldp.Site	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-793 TestFailedAlarm (lte)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: lte Raised on class: lte.EPSPPath	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when TestFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-794 TestFailedAlarm (lteservice)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: lteservice Raised on class: lteservice.MobileService	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-795 TestFailedAlarm (mirror)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: mirror Raised on class: mirror.Mirror	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-796 TestFailedAlarm (monpath)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: monpath Raised on class: monpath.MonitoredIpPath	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-797 TestFailedAlarm (mpls)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: mpls Raised on class: mpls.Lsp	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-798 TestFailedAlarm (mplstp)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: mplstp Raised on class: mplstp.TPLsp	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-799 TestFailedAlarm (netw)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when TestFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-800 TestFailedAlarm (pim)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: pim Raised on class: pim.Site	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-801 TestFailedAlarm (rtr)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: rtr Raised on class: rtr.VirtualRouter	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-802 TestFailedAlarm (service)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: service Raised on class: service.SpokeConnector	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when TestFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-803 TestFailedAlarm (svt)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: svt Raised on class: svt.Tunnel	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-804 TestFailedAlarm (vll)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: vll Raised on class: vll.Vll	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-805 TestFailedAlarm (vppls)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: vppls Raised on class: vppls.AbstractVppls	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-806 TestFailedAlarm (vprn)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm (3708) Type: oamAlarm (18) Package: vprn Raised on class: vprn.Vprn	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-807 TestFailedAlarm2 (ethernetoam)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm2 (3739) Type: oamAlarm (18) Package: ethernetoam Raised on class: ethernetoam.Mep	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-808 TestFailedAlarm2 (lte)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm2 (3739) Type: oamAlarm (18) Package: lte Raised on class: lte.EPSPeer	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when TestFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-809 TestFailedAlarm2 (mpls)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm2 (3739) Type: oamAlarm (18) Package: mpls Raised on class: mpls.P2MPDynamicLsp	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-810 TestFailedAlarm2 (rtr)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm2 (3739) Type: oamAlarm (18) Package: rtr Raised on class: rtr.LDPTunnelInterface	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-811 TestFailedAlarm2 (service)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm2 (3739) Type: oamAlarm (18) Package: service Raised on class: service.Site	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when TestFailedAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-812 TestFailedAlarm2 (svt)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm2 (3739) Type: oamAlarm (18) Package: svt Raised on class: svt.SdpBinding	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-813 TestFailedAlarm3 (mpls)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm3 (3886) Type: oamAlarm (18) Package: mpls Raised on class: mpls.LspPath	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-814 TestFailedAlarm3 (service)

Alarm	Attributes	Applicable major NE releases
Name: TestFailedAlarm3 (3886) Type: oamAlarm (18) Package: service Raised on class: service.CompositeService	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object fails.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-815 TestFailureAlarm

Alarm	Attributes	Applicable major NE releases
Name: TestFailureAlarm (3903) Type: oamAlarm (18) Package: sas Raised on class: sas.Test	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: This alarm is raised when a test failure trap is received from the node.		
Remedial action: Fix network connections issues.		

Table 35-816 TestThresholdExceededAlarm (atm)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: atm Raised on class: atm.PvcConnection	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-817 TestThresholdExceededAlarm (bgp)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: bgp Raised on class: bgp.Site	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-818 TestThresholdExceededAlarm (ethernetoam)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: ethernetoam Raised on class: ethernetoam.MaintAssociation	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-819 TestThresholdExceededAlarm (ldp)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: ldp Raised on class: ldp.Site	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-820 TestThresholdExceededAlarm (lte)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: lte Raised on class: lte.EPSPath	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-821 TestThresholdExceededAlarm (lteservice)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: lteservice Raised on class: lteservice.MobileService	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-822 TestThresholdExceededAlarm (mirror)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: mirror Raised on class: mirror.Mirror	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-823 TestThresholdExceededAlarm (monpath)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: monpath Raised on class: monpath.MonitoredIpPath	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-824 TestThresholdExceededAlarm (mpls)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: mpls Raised on class: mpls.Lsp	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-825 TestThresholdExceededAlarm (mplstp)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: mplstp Raised on class: mplstp.TPLsp	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-826 TestThresholdExceededAlarm (netw)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-827 TestThresholdExceededAlarm (pim)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: pim Raised on class: pim.Site	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-828 TestThresholdExceededAlarm (rtr)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: rtr Raised on class: rtr.VirtualRouter	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports that the test threshold has been exceeded.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-829 TestThresholdExceededAlarm (service)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: service Raised on class: service.SpokeConnector	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-830 TestThresholdExceededAlarm (svt)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: svt Raised on class: svt.Tunnel	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-831 TestThresholdExceededAlarm (vlan)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: vlan Raised on class: vlan.Vlan	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-832 TestThresholdExceededAlarm (vll)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: vll Raised on class: vll.Vll	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-833 TestThresholdExceededAlarm (vpls)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: vpls Raised on class: vpls.AbstractVpls	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-834 TestThresholdExceededAlarm (vprn)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm (1154) Type: oamAlarm (18) Package: vprn Raised on class: vprn.Vprn	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-835 TestThresholdExceededAlarm2 (ethernetoam)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm (18) Package: ethernetoam Raised on class: ethernetoam.Mep	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports that the test threshold has been exceeded.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-836 TestThresholdExceededAlarm2 (lte)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm (18) Package: lte Raised on class: lte.EPSPeer	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is un-reliable.		

Table 35-837 TestThresholdExceededAlarm2 (mpls)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm (18) Package: mpls Raised on class: mpls.P2MPDynamicLsp	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports that the test threshold has been exceeded.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-838 TestThresholdExceededAlarm2 (rtr)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm (18) Package: rtr Raised on class: rtr.LDPTunnelInterface	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-839 TestThresholdExceededAlarm2 (service)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm (18) Package: service Raised on class: service.Site	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-840 TestThresholdExceededAlarm2 (svt)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm2 (1918) Type: oamAlarm (18) Package: svt Raised on class: svt.SdpBinding	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports that the test threshold has been exceeded.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-841 TestThresholdExceededAlarm3 (mpls)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm3 (1919) Type: oamAlarm (18) Package: mpls Raised on class: mpls.LspPath	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when an OAM test on the object reports that a test threshold is exceeded.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-842 TestThresholdExceededAlarm3 (service)

Alarm	Attributes	Applicable major NE releases
Name: TestThresholdExceededAlarm3 (1919) Type: oamAlarm (18) Package: service Raised on class: service.CompositeService	Severity: major Implicitly cleared: true Default probable cause: networkDegradation (204)	Unspecified
Description: The alarm is raised when SasThresholdExceededAlarm is raised for any test on this object.		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the underlying transport network is unreliable.		

Table 35-843 ThresholdCrossingAlarmCard

Alarm	Attributes	Applicable major NE releases
Name: ThresholdCrossingAlarmCard (2097) Type: thresholdCrossed (6) Package: equipment Raised on class: equipment.BaseCard	Severity: warning Implicitly cleared: false Default probable cause: thresholdCrossed (12)	Unspecified
Description: The alarm is raised when a card value crosses a TCA threshold.		
Remedial action: A condition set when a counter exceeds a user-selected high or low threshold. A TCA does not generate an alarm but is available on demand through the CIT. Please refer 1830 PSS TroubleShooting guide for more details.		

Table 35-844 ThresholdCrossingAlarmOduk

Alarm	Attributes	Applicable major NE releases
Name: ThresholdCrossingAlarmOduk (4949) Type: thresholdCrossed (6) Package: oth Raised on class: oth.Oduk	Severity: warning Implicitly cleared: false Default probable cause: thresholdCrossed (12)	Unspecified
Description: The alarm is raised when a ODUK value crosses a TCA threshold.		
Remedial action: A condition set when a counter exceeds a user-selected high or low threshold. A TCA does not generate an alarm but is available on demand through the CIT. Please refer 1830 PSS TroubleShooting guide for more details.		

Table 35-845 ThresholdCrossingAlarmOtuk

Alarm	Attributes	Applicable major NE releases
Name: ThresholdCrossingAlarmOtuk (4950) Type: thresholdCrossed (6) Package: oth Raised on class: oth.Otuk	Severity: warning Implicitly cleared: false Default probable cause: thresholdCrossed (12)	Unspecified
Description: The alarm is raised when a OTUK value crosses a TCA threshold.		
Remedial action: A condition set when a counter exceeds a user-selected high or low threshold. A TCA does not generate an alarm but is available on demand through the CIT. Please refer 1830 PSS TroubleShooting guide for more details.		

Table 35-846 ThresholdCrossingAlarmPort

Alarm	Attributes	Applicable major NE releases
Name: ThresholdCrossingAlarmPort (2098) Type: thresholdCrossed (6) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: false Default probable cause: thresholdCrossed (12)	Unspecified
Description: The alarm is raised when a port value crosses a TCA threshold.		
Remedial action: A condition set when a counter exceeds a user-selected high or low threshold. A TCA does not generate an alarm but is available on demand through the CIT. Please refer 1830 PSS TroubleShooting guide for more details.		

Table 35-847 ThresholdCrossingMDAResvCBSAlarm

Alarm	Attributes	Applicable major NE releases
Name: ThresholdCrossingMDAResvCBSAlarm (3626) Type: thresholdCrossed (6) Package: equipment Raised on class: equipment.DaughterCard	Severity: variable Implicitly cleared: true Default probable cause: thresholdCrossed (12)	Unspecified
Description: The alarm is raised when the reserved CBS of an MDA crosses a threshold.		
Remedial action: This alarm is raised when the traffic rates being received on an MDA are exceeding the amount of buffer allocated for the MDA in the committed burst size configuration parameter. In all probability the QoS being delivered by the MDA is degraded. Steps must be taken to shed traffic from the ports/links associated with the MDA.		

Table 35-848 ThresholdCrossingPortResvCBSAlarm

Alarm	Attributes	Applicable major NE releases
Name: ThresholdCrossingPortResvCBSAlarm (3627) Type: thresholdCrossed (6) Package: equipment Raised on class: equipment.PhysicalPort	Severity: variable Implicitly cleared: true Default probable cause: thresholdCrossed (12)	Unspecified
Description: The alarm is raised when the reserved CBS of a port crosses a threshold.		
Remedial action: This alarm is raised when the traffic rates being received on a port are exceeding the amount of buffer allocated for the port in the committed burst size configuration parameter. In all probability the QoS being delivered by the port is degraded. Steps must be taken to shed traffic from the port in question..		

35 – Unspecified NE alarms

Table 35-849 TimingHoldover

Alarm	Attributes	Applicable major NE releases
Name: TimingHoldover (734) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: major Implicitly cleared: true Default probable cause: timingHoldover (511)	Unspecified
Description: The alarm is raised when the timing of an NE is in the Holdover state.		
Raising condition: (('Status' EQUAL 'Master Holdover'))		
Clearing condition: (('Status' NOT EQUAL 'Master Holdover'))		
Remedial action: Informational only.		

Table 35-850 TimingReferenceOneNotQualified

Alarm	Attributes	Applicable major NE releases
Name: TimingReferenceOneNotQualified (545) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: timingReferenceNotQualified (418)	Unspecified
Description: The alarm is raised when Timing Reference One on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Make sure that Timing Reference One is qualified.		

Table 35-851 TimingReferenceTwoNotQualified

Alarm	Attributes	Applicable major NE releases
Name: TimingReferenceTwoNotQualified (546) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: timingReferenceNotQualified (418)	Unspecified
Description: The alarm is raised when Timing Reference Two on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Make sure that Timing Reference Two is qualified.		

Table 35-852 TMNLossofSignal

Alarm	Attributes	Applicable major NE releases
Name: TMNLossofSignal (1920) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.MprTMN	Severity: variable Implicitly cleared: true Default probable cause: tmnLOS (920)	Unspecified
Description: The alarm is raised when a Loss of Signal occurs on the TMN Interface.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-853 tmnxMcSyncClientAlarm

Alarm	Attributes	Applicable major NE releases
Name: tmnxMcSyncClientAlarm (423) Type: communicationsAlarm (4) Package: multichassis Raised on class: multichassis.PeerSynchronizationProtocol	Severity: warning Implicitly cleared: true Default probable cause: locallyDeletedEntryInMCSyncDatabase (407)	Unspecified
Description: The alarm is raised when a MC synchronization database entry is deleted locally.		
Remedial action: Informational only.		

Table 35-854 TooManyCpaaPerIsisArea

Alarm	Attributes	Applicable major NE releases
Name: TooManyCpaaPerIsisArea (385) Type: configurationAlarm (11) Package: topology Raised on class: topology.Cpaa	Severity: critical Implicitly cleared: true Default probable cause: tooManyCpaaPelsisArea (930)	Unspecified
Description: The alarm is raised when there are too many 7701 CPAA's for an ISIS L1 area.		
Remedial action: Check the configuration of CPAA and make sure there is at most one CPAA configured for an ISIS area within an administrative domain.		

Table 35-855 TopologyIsisSystemError

Alarm	Attributes	Applicable major NE releases
Name: TopologyIsisSystemError (373) Type: topologyAlarm (34) Package: topology Raised on class: topology.AutonomousSystem	Severity: major Implicitly cleared: true Default probable cause: isisSystemNotAdvertisingTeRouterId (272)	Unspecified
Description: The alarm is raised when an IS-IS topology system error is detected.		
Remedial action: Alarm contains the systemId of the router which is not advertising ISIS TE RouterId. User should either configure the ISIS TE routerId on the node or configure a routerId for that system in "ISIS System ID Mapping" menu. Configuring the routerId in systemId mapping will not clear the alarm.		

Table 35-856 TopologyMisconfigured

Alarm	Attributes	Applicable major NE releases
Name: TopologyMisconfigured (95) Type: configurationAlarm (11) Package: service Raised on class: service.Service	Severity: critical Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	Unspecified
Description: This alarm is raised when service sites are not fully connected.		
Raising condition: ('topologyMisconfigured' EQUAL 'true')		
Clearing condition: ('topologyMisconfigured' EQUAL 'false')		
Remedial action: Connect the service sites with SDP Bindings, Vlan Uplinks, or PBB tunnels.		

Table 35-857 TPSAbnormalState

Alarm	Attributes	Applicable major NE releases
Name: TPSAbnormalState (3935) Type: tpsAbnormalConditionAlarm (115) Package: mpr Raised on class: mpr.MPRProtection	Severity: variable Implicitly cleared: true Default probable cause: TPSProblem (1518)	Unspecified
Description: The alarm is raised when abnormal state resulted due to force switch/lockout operation in TPS mode.		
Remedial action: This alarm is raised when forced-switch/lockout command in TPS mode which led to an abnormal condition.		

Table 35-858 TrailPathDown

Alarm	Attributes	Applicable major NE releases
Name: TrailPathDown (5128) Type: communicationsAlarm (4) Package: optical Raised on class: optical.TrailPath	Severity: critical Implicitly cleared: true Default probable cause: OperationalStateDown (1963)	Unspecified
Description: The alarm is raised when the termination point(s) of the trail path are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 35-859 TrailSignalFail

Alarm	Attributes	Applicable major NE releases
Name: TrailSignalFail (798) Type: communicationsAlarm (4) Package: bundle Raised on class: bundle.Interface	Severity: major Implicitly cleared: true Default probable cause: trailSignalFailure (565)	Unspecified
Description: The alarm is raised when a a local or remote failure in an IMA group generates a Trail Signal Fail message.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-860 TransportServiceDown

Alarm	Attributes	Applicable major NE releases
Name: TransportServiceDown (2906) Type: communicationsAlarm (4) Package: optical Raised on class: optical.TransportService	Severity: critical Implicitly cleared: true Default probable cause: OperationalStateDown (1963)	Unspecified
Description: The alarm is raised when: 1. The termination point(s) or VTS XC's of the service path(s) are operationally down. 2. There are missing VTS XCs in any of the service path(s) of this transport service.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 35-861 TransportServicePathDown

Alarm	Attributes	Applicable major NE releases
Name: TransportServicePathDown (4402) Type: communicationsAlarm (4) Package: optical Raised on class: optical.ServicePath	Severity: critical Implicitly cleared: true Default probable cause: OperationalStateDown (1963)	Unspecified
Description: The alarm is raised when the termination point(s) of the service path are operationally down.		
Remedial action: Informational - If the alarm persists or is occurring frequently then investigation is required by looking at the active alarms on the hops to understand why the underlying transport network is unreliable.		

Table 35-862 TunnelOverbooked

Alarm	Attributes	Applicable major NE releases
Name: TunnelOverbooked (590) Type: resourceAlarm (28) Package: svt Raised on class: svt.Tunnel	Severity: warning Implicitly cleared: false Default probable cause: tunnelOverbooked (442)	Unspecified
Description: The alarm is raised when the allocated SDP binding bandwidth specified by sdpBookedBandwidth exceeds the sdpMaxBookableBandwidth value.		
Clearing condition: ('SDP Available Bandwidth' NOT EQUAL '0')		
Remedial action: Please set the maximum bookable bandwidth parameter to a more appropriate value or offload traffic from the SDP in question to another SDP.		

Table 35-863 TunnelSelBlacklistFull

Alarm	Attributes	Applicable major NE releases
Name: TunnelSelBlacklistFull (4626) Type: processingErrorAlarm (81) Package: l2tp Raised on class: l2tp.Site	Severity: major Implicitly cleared: true Default probable cause: tmnxL2tpTunnelSelBlacklistFull (1894)	Unspecified
Description: This alarm is raised when the number of tunnels and peers in the tunnel-selection-blacklist reaches the limit configured on the L2TP Site, and is cleared when the limit is no longer reached.		
Remedial action: Either increase Max List Length in Tunnel Selection Blacklist configuration or fix blacklisted tunnels or peers.		

Table 35-864 TwampSrvInactivityTimeout

Alarm	Attributes	Applicable major NE releases
Name: TwampSrvInactivityTimeout (3319) Type: communicationsAlarm (4) Package: sas Raised on class: sas.TwampSrv	Severity: major Implicitly cleared: true Default probable cause: TWAMPServerInactivityTimeout (1158)	Unspecified
Description: The alarm is raised when a TWAMP control connection is disconnected by the TWAMP server due to the connection being inactive for a period exceeding the server's inactivity timeout, which generates a TWAMP Server InactivityTimeout notification.		
Remedial action: Verify the value of the inactivity-timeout parameter and modify it according to the operational needs.		

Table 35-865 TwampSrvMaxConnsExceeded

Alarm	Attributes	Applicable major NE releases
Name: TwampSrvMaxConnsExceeded (3320) Type: communicationsAlarm (4) Package: sas Raised on class: sas.TwampSrv	Severity: major Implicitly cleared: true Default probable cause: TWAMPServerMaxConnsExceeded (1159)	Unspecified
Description: The alarm is raised when the maximum number of concurrent TWAMP control connections for the server has been reached. [EFFECT] The TWAMP client cannot request test runs on the rejected connection. [RECOVERY] Configure the system-level maximum number of concurrent TWAMP control connections to a larger value, or disconnect any TWAMP control connection.'		
Remedial action: Verify the value of the max-conn-server parameter and modify it according to the operational needs.		

Table 35-866 TwampSrvMaxSessExceeded

Alarm	Attributes	Applicable major NE releases
Name: TwampSrvMaxSessExceeded (3321) Type: communicationsAlarm (4) Package: sas Raised on class: sas.TwampSrv	Severity: major Implicitly cleared: true Default probable cause: TWAMPServerMaxSessExceeded (1160)	Unspecified
Description: The alarm is raised when the maximum number of concurrent TWAMP sessions for the server has been reached. [EFFECT] The TWAMP client cannot request test runs on the rejected session. [RECOVERY] Configure the system-level maximum number of concurrent TWAMP sessions to a larger value, or disconnect any TWAMP session.'		
Remedial action: Verify the max-sess-server parameter and modify it according to the operational needs.		

35 – Unspecified NE alarms

Table 35-867 TwampSrvPfxMaxConnsExceeded

Alarm	Attributes	Applicable major NE releases
Name: TwampSrvPfxMaxConnsExceeded (3322) Type: communicationsAlarm (4) Package: sas Raised on class: sas.TwampSrv	Severity: major Implicitly cleared: true Default probable cause: TWAMPServerPrefixMaxConnsExceeded (1161)	Unspecified
Description: The alarm is raised when the maximum number of concurrent TWAMP control connections for a TWAMP client prefix has been reached. [EFFECT] The TWAMP client cannot request test runs on the rejected connection. [RECOVERY] Configure the prefix's maximum number of concurrent TWAMP control connections to a larger value, or disconnect a TWAMP control connection which uses the prefix.		
Remedial action: Verify the max-conn-prefix parameter and modify it according to the operational needs.		

Table 35-868 TwampSrvPfxMaxSessExceeded

Alarm	Attributes	Applicable major NE releases
Name: TwampSrvPfxMaxSessExceeded (3323) Type: communicationsAlarm (4) Package: sas Raised on class: sas.TwampSrv	Severity: major Implicitly cleared: true Default probable cause: TWAMPServerPrefixMaxSessExceeded (1162)	Unspecified
Description: The alarm is raised when the maximum number of concurrent TWAMP sessions for a TWAMP client prefix has been reached. [EFFECT] The TWAMP client cannot request test runs on the rejected session. [RECOVERY] Configure the prefix's maximum number of concurrent TWAMP sessions to a larger value, or disconnect a TWAMP session which uses the prefix.'		
Remedial action: Verify the max sess-prefix parameter and modify it according to the operational needs.		

Table 35-869 TxFail

Alarm	Attributes	Applicable major NE releases
Name: TxFail (1175) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: txFail (876)	Unspecified
Description: The alarm is raised when a transmission failure is detected.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-870 TxFailure

Alarm	Attributes	Applicable major NE releases
Name: TxFailure (3931) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: txFail (876)	Unspecified
Description: The alarm is raised when a txFail (a fail of the Tx subfunction) defect raise.		
Remedial action: The alarm is raised when a txFail (a fail of the Tx subfunction) defect raise.		

Table 35-871 TxRetransmit

Alarm	Attributes	Applicable major NE releases
Name: TxRetransmit (266) Type: communicationsAlarm (4) Package: ospf Raised on classes: <ul style="list-style-type: none"> ospf.ShamLink ospf.VirtualLink 	Severity: warning Implicitly cleared: false Default probable cause: hello (47) Applicable probable causes: <ul style="list-style-type: none"> hello dbDescript IsReq IsUpdate IsAck nullIPacket 	Unspecified
Description: The alarm is raised when an NE retransmits an OSPF packet on a non-virtual interface. The alarm information includes the NE ID of the OSPF neighbor.		
Remedial action: Informational - an NE retransmits an OSPF packet on a non-virtual interface. The alarm information includes the NE ID of the OSPF neighbor.		

Table 35-872 TypeMismatch

Alarm	Attributes	Applicable major NE releases
Name: TypeMismatch (96) Type: configurationAlarm (11) Package: service Raised on class: service.Service	Severity: critical Implicitly cleared: true Default probable cause: serviceSiteTypeMisconfigured (82)	Unspecified
Description: The alarm is raised when a VLAN type for a Site doesn't match what has been configured on the Service.		
Raising condition: ('serviceTypeInconsistent' EQUAL 'true')		
Clearing condition: ('serviceTypeInconsistent' EQUAL 'false')		
Remedial action: Configure the VLAN subtype on the site same as the service VLAN subtype.		

Table 35-873 UnableGetArchivedLogDiskInfo

Alarm	Attributes	Applicable major NE releases
Name: UnableGetArchivedLogDiskInfo (4976) Type: databaseAlarm (29) Package: db Raised on class: db.DatabaseManager	Severity: critical Implicitly cleared: true Default probable cause: archivedLogsIssue (154)	Unspecified
Description: The alarm is raised when the 5620 SAM is unable to get the archive log filesystem information.		
Remedial action: Informational - Please check archive logs file system. The 5620 SAM cannot access the file system. If the problem persists then please contact Alcatel-Lucent support for assistance.		

Table 35-874 UnavailableTime

Alarm	Attributes	Applicable major NE releases
Name: UnavailableTime (644) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: unavailableTime (480)	Unspecified
Description: The alarm is raised when a port experiences 10 consecutive SES.		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 35-875 UnconfiguredEquipmentPresent

Alarm	Attributes	Applicable major NE releases
Name: UnconfiguredEquipmentPresent (645) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: unconfiguredEquipmentPresent (481)	Unspecified
Description: The alarm is raised when unconfigured equipment is detected.		
Remedial action: A configuration error has occurred which must be corrected. The card slot has not been configured		

Table 35-876 UndefinedSchedulerReference

Alarm	Attributes	Applicable major NE releases
Name: UndefinedSchedulerReference (118) Type: configurationAlarm (11) Package: vs Raised on class: vs.ServiceTypeDefinition	Severity: warning Implicitly cleared: true Default probable cause: undefinedSchedulerReference (101)	Unspecified
Description: The alarm is raised when a queue specified in the access ingress or access egress policy of an L2 access interface is not referenced by the scheduler policy for the interface.		
Raising condition: (('numberReferences' > '0') AND ('numberOfDefinitions' EQUAL '0'))		
Clearing condition: (('numberReferences' EQUAL '0') OR ('numberOfDefinitions' > '0'))		
Remedial action: A queue specified in the access ingress/egress policy used by an L2 access interface is not referencing a scheduler policy. Ensure all required queues created in the access ingress/egress policy is referencing a scheduler.		

Table 35-877 UnderlyingResourceDegrade

Alarm	Attributes	Applicable major NE releases
Name: UnderlyingResourceDegrade (1176) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: underlyingResourceDegrade (877)	Unspecified
Description: The alarm is raised when degradation of an underlying radio interface resource is detected.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-878 UnderlyingResourceUnavailable

Alarm	Attributes	Applicable major NE releases
Name: UnderlyingResourceUnavailable (1131) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: underlyingResourceUnavailable (724)	Unspecified
Description: The alarm is raised when an underlying resource is unavailable on an E1, radio, or Ethernet interface.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-879 UnderlyingResourceUnavailableService

Alarm	Attributes	Applicable major NE releases
Name: UnderlyingResourceUnavailableService (1177) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: underlyingResourceUnavailableService (878)	Unspecified
Description: The alarm is raised when an underlying E1, radio, or Ethernet interface resource service is unavailable.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-880 UpgradeApplicationLockNotObtained

Alarm	Attributes	Applicable major NE releases
Name: UpgradeApplicationLockNotObtained (1964) Type: integrityViolation (85) Package: lte Raised on class: lte.ENBEquipment	Severity: warning Implicitly cleared: true Default probable cause: UnableToAcquireLock (949)	Unspecified
Description: This alarm is raised when the Software Upgrade Application is unable to acquire lock to start the operation. Retry the Software Upgrade Operation once the lock is released by the other application.		
Remedial action: Retry the Software Management Operation once the lock is released by the other application.		

Table 35-881 VersionMismatch (equipment)

Alarm	Attributes	Applicable major NE releases
Name: VersionMismatch (646) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: versionMismatch (405)	Unspecified
Description: The alarm is raised when an ODU software version mismatch is detected.		
Remedial action: Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-882 VersionMismatch (mpr)

Alarm	Attributes	Applicable major NE releases
Name: VersionMismatch (646) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: versionMismatch (405)	Unspecified
Description: The alarm is raised when an ODU software version mismatch is detected.		
Remedial action: This alarm is raised when the software version on the MPT doesn't match the software version on the core. Please refer 9500 Node Maintenance manual for remedial action information.		

Table 35-883 VirtualLinkDbDescriptAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkDbDescriptAuthFailure (61) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> authTypeMismatch authFailure 	Unspecified
Description: The alarm is raised when an NE receives a dbDescript packet on a virtual link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a dbDescript packet has been received on a virtual link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-884 VirtualLinkDbDescriptConfig

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkDbDescriptConfig (55) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives a dbDescript packet on a virtual link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a dbDescript packet has been received on a virtual link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-885 VirtualLinkHelloAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkHelloAuthFailure (60) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives a hello packet on a virtual link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a hello packet has been received on a virtual link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-886 VirtualLinkHelloConfig

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkHelloConfig (54) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives a hello packet on a virtual link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a hello packet has been received on a virtual link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-887 VirtualLinkLsAckAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkLsAckAuthFailure (64) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives an lsAck packet on a virtual link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a lsAck packet has been received on a virtual link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-888 VirtualLinkLsAckConfig

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkLsAckConfig (58) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives an IsAck packet on a virtual link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a IsAck packet has been received on a virtual link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-889 VirtualLinkLsReqAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkLsReqAuthFailure (62) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives an IsReq packet on a virtual link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a IsReq packet has been received on a virtual link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-890 VirtualLinkLsReqConfig

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkLsReqConfig (56) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives an IsReq packet on a virtual link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a IsReq packet has been received on a virtual link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-891 VirtualLinkLsUpdateAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkLsUpdateAuthFailure (63) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives an IsReq packet on a virtual link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a IsUpdate packet has been received on a virtual link from the network whose authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-892 VirtualLinkLsUpdateConfig

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkLsUpdateConfig (57) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives an LsUpdate packet on a virtual link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a LsUpdate packet has been received on a virtual link from the network whose configuration parameters conflict with the local NE's configurations.		

Table 35-893 VirtualLinkNullPacketAuthFailure

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkNullPacketAuthFailure (65) Type: authenticationAlarm (14) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: authTypeMismatch (45) Applicable probable causes: <ul style="list-style-type: none"> • authTypeMismatch • authFailure 	Unspecified
Description: The alarm is raised when an NE receives a null packet on a virtual link from an NE whose authentication key or authentication type conflicts with the local NE authentication key or authentication type.		
Remedial action: Informational - The alarm signifies that a null packet has been received on a virtual link which authentication key or authentication type conflicts with the local NE's configuration.		

Table 35-894 VirtualLinkNullPacketConfig

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkNullPacketConfig (59) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: badVersion (35) Applicable probable causes: <ul style="list-style-type: none"> • badVersion • areaMismatch • unknownNbmaNbr • unknownVirtualNbr • netMaskMismatch • helloIntervalMismatch • deadIntervalMismatch • optionMismatch • mtuMismatch • noError • duplicateRouterId • ifAdminDown • ifPassive 	Unspecified
Description: The alarm is raised when an NE receives a null packet on a virtual link from an NE whose configuration parameters conflict with the local NE configuration parameters.		
Remedial action: Informational - The alarm signifies that a null packet has been received on a virtual link which configuration parameters conflict with the local NE's configurations.		

Table 35-895 VirtualLinkRxBadPacket

Alarm	Attributes	Applicable major NE releases
Name: VirtualLinkRxBadPacket (66) Type: communicationsAlarm (4) Package: ospf Raised on class: ospf.VirtualLink	Severity: warning Implicitly cleared: false Default probable cause: hello (47) Applicable probable causes: <ul style="list-style-type: none"> • hello • dbDescript • lsReq • lsUpdate • lsAck • nullPacket 	Unspecified
Description: The alarm is raised when an NE cannot parse an OSPF packet that it receives on a virtual interface.		
Remedial action: Informational - an NE cannot parse an OSPF packet that it receives on a virtual interface.		

35 – Unspecified NE alarms

Table 35-896 VirtualMachineDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualMachineDown (4909) Type: vmAlarm (134) Package: dctr Raised on class: dctr.VirtualMachine	Severity: info Implicitly cleared: true Default probable cause: VirtualMachineShutDownOrDeletedOrCrashed (1966)	Unspecified
Description: The alarm is raised when VM is shutdown.		
Raising condition: (('Virtual Machine State' EQUAL 'No State'))		
Clearing condition: (('Virtual Machine State' NOT EQUAL 'No State'))		
Remedial action: This alarm can be cleared when virtual machine is up.		

Table 35-897 VirtualMachineMigration

Alarm	Attributes	Applicable major NE releases
Name: VirtualMachineMigration (4910) Type: vmAlarm (134) Package: dctr Raised on class: dctr.VirtualMachine	Severity: info Implicitly cleared: true Default probable cause: VirtualMachineMigrationInitiated (1967)	Unspecified
Description: The alarm is raised when migration of VM starts on this object.		
Raising condition: (('Virtual Machine State' EQUAL 'Paused') AND ('Virtual Machine State Reason' EQUAL '\migration\'))		
Clearing condition: (('Virtual Machine State' EQUAL 'Running') AND ('Virtual Machine State Reason' EQUAL '\migrated\'))		
Remedial action: This alarm can be cleared when virtual machine migration is completed.		

Table 35-898 VirtualMachineSuspended

Alarm	Attributes	Applicable major NE releases
Name: VirtualMachineSuspended (4911) Type: vmAlarm (134) Package: dctr Raised on class: dctr.VirtualMachine	Severity: info Implicitly cleared: true Default probable cause: UserInitiatedOrRequiredResourceIdBeingBlocked (1968)	Unspecified
Description: The alarm is raised when VM state changes to Paused on this object.		
Raising condition: (('Virtual Machine State' EQUAL 'Paused') AND ('Virtual Machine State Reason' NOT EQUAL '\migration\'))		
Clearing condition: (('Virtual Machine State' NOT EQUAL 'Paused'))		
Remedial action: This alarm can be cleared when the virtual machine is resumed.		

Table 35-899 VirtualNodeDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualNodeDown (5155) Type: communicationsAlarm (4) Package: dctr Raised on class: dctr.VirtualNode	Severity: major Implicitly cleared: true Default probable cause: ControllerDownOrSwitchDown (2074)	Unspecified
Description: The alarm is raised when either the VSC or the VS is down.		
Raising condition: (('Aggregated Operational State' EQUAL 'Down'))		
Clearing condition: (('Aggregated Operational State' EQUAL 'Up'))		
Remedial action: This alarm can be cleared when both virtual switch controller and virtual switch is operationally up.		

Table 35-900 VirtualRouterDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualRouterDown (277) Type: configurationAlarm (11) Package: vrrp Raised on class: vrrp.VrrpVirtualRouter	Severity: major Implicitly cleared: true Default probable cause: virtualRouterDown (210)	Unspecified
Description: The alarm is raised when the aggregated Operational State of a VR is Down.		
Raising condition: (('Aggregated Operational State' EQUAL 'Down'))		
Clearing condition: (('Aggregated Operational State' NOT EQUAL 'Down'))		
Remedial action: Check the configuration of both VRRP instances for the VRRP virtual router.		

Table 35-901 VirtualSwitchControllerDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualSwitchControllerDown (4912) Type: virtualSwitchControllerAlarm (135) Package: dctr Raised on class: dctr.VirtualSwitchController	Severity: major Implicitly cleared: true Default probable cause: ControllerNotOperationallyUp (1969)	Unspecified
Description: The alarm is raised when Virtual Switch Controller is not operationally up.		
Raising condition: (('Operational State' EQUAL 'Down'))		
Clearing condition: (('Operational State' EQUAL 'Up'))		
Remedial action: This alarm can be cleared when virtual switch controller is operationally up.		

35 – Unspecified NE alarms

Table 35-902 VirtualSwitchDown

Alarm	Attributes	Applicable major NE releases
Name: VirtualSwitchDown (4913) Type: virtualSwitchAlarm (136) Package: dctr Raised on class: dctr.VirtualSwitch	Severity: major Implicitly cleared: true Default probable cause: ControllerDownOrPhysicalPortDownOrInterfaceDown (1970)	Unspecified
Description: The alarm is raised when Openflow session to the VS is down.		
Raising condition: (('Active' EQUAL 'false') AND ('Operational State' EQUAL 'unspecified'))		
Clearing condition: (('Active' EQUAL 'true') AND ('Operational State' EQUAL 'Up'))		
Remedial action: This alarm can be cleared when virtual switch is operationally up.		

Table 35-903 VlanPathModified (mpr)

Alarm	Attributes	Applicable major NE releases
Name: VlanPathModified (3936) Type: communicationsAlarm (4) Package: mpr Raised on class: mpr.MprVII	Severity: minor Implicitly cleared: true Default probable cause: PathChanged (1519)	Unspecified
Description: The alarm is raised when the radio link between two hops of a VLAN path is down.		
Remedial action: Informational - If VLAN Path changed.alarmRemedialAction.mpr.		

Table 35-904 VlanPathModified (vlan)

Alarm	Attributes	Applicable major NE releases
Name: VlanPathModified (3936) Type: communicationsAlarm (4) Package: vlan Raised on class: vlan.Vlan	Severity: minor Implicitly cleared: true Default probable cause: PathChanged (1519)	Unspecified
Description: The alarm is raised when the radio link between two hops of a VLAN path is down.		
Remedial action: Informational - if the VLAN Path Changed.		

Table 35-905 VlanSubTypeConflict

Alarm	Attributes	Applicable major NE releases
Name: VlanSubTypeConflict (227) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Vlan	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	Unspecified
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a service.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that the VLAN Subtype of the Site matches the VLAN Subtype of the Service.		

Table 35-906 VlanUplinkDown

Alarm	Attributes	Applicable major NE releases
Name: VlanUplinkDown (1146) Type: VlanUplinkAlarm (89) Package: service Raised on class: service.VlanUplink	Severity: major Implicitly cleared: true Default probable cause: VlanUplinkDown (852)	Unspecified
Description: The alarm is raised when a VLAN uplink is operationally down.		
Raising condition: (('Aggregation Operational State' EQUAL 'Partially Down') OR ('Aggregation Operational State' EQUAL 'Down'))		
Clearing condition: (('Aggregation Operational State' NOT EQUAL 'Partially Down') AND ('Aggregation Operational State' NOT EQUAL 'Down'))		
Remedial action: Check the underlying physical link for the SAPs.		

Table 35-907 VlanUplinkNotCreated

Alarm	Attributes	Applicable major NE releases
Name: VlanUplinkNotCreated (1147) Type: VlanUplinkAlarm (89) Package: service Raised on class: service.Service	Severity: major Implicitly cleared: true Default probable cause: VlanUplinkNotCreated (853)	Unspecified
Description: The alarm is raised when an expected VLAN uplink does not exist.		
Remedial action: Make sure the two participating ports which hold the uplink SAPs of the service are physically connected and operationally up. And make sure a physical link is created and is operationally up either by enabling LLDP or manually creating a physical link between those ports. If the physical link already exists and operationally up, make sure the uplink SAPs has been created with matching encapsulation values, in case the uplink SAPs has already been created with different encapsulation values, please delete those uplink SAPs and create the uplink SAPs with same encapsulation values.		

Table 35-908 VoiceChannelLoopback

Alarm	Attributes	Applicable major NE releases
Name: VoiceChannelLoopback (1148) Type: configurationAlarm (11) Package: tdmequipment Raised on class: tdmequipment.VoiceChannelSpecifics	Severity: warning Implicitly cleared: true Default probable cause: voiceChannelLoopback (854)	Unspecified
Description: The alarm is raised when an NE reports that a voice channel has a loopback alarm condition.		
Remedial action: Informational only.		

Table 35-909 vPortHostMatchFailure

Alarm	Attributes	Applicable major NE releases
Name: vPortHostMatchFailure (3628) Type: configurationAlarm (11) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: false Default probable cause: tPortEgrVPortHostMatchFailure (1413)	Unspecified
Description: The alarm is raised when a host match lookup fails to resolve the egress virtual port.		
Remedial action: This alarm is raised when the subscriber host with an intermediate destination ID that does not match the host-match destination set under the V-port. Modify the intermediate destination ID of the subscriber host to match the host-match defined in the v-port; Or modify the host-match destination ID to match the intermediate destination ID of the subscriber host.		

Table 35-910 VwmShelfMismatch

Alarm	Attributes	Applicable major NE releases
Name: VwmShelfMismatch (4941) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.VwmShelf	Severity: major Implicitly cleared: true Default probable cause: VwmShelfMismatch (2000)	Unspecified
Description: The alarm is raised when the configured vwm shelf id is different than the equipped vwm shelf.		
Remedial action: This alarm is raised when the detected VWM shelf id does not match the provisioned id. Please follow the below steps to clear this alarm: a. Check the id on the rotary dial on the VWM SHelf. b. Use any of the following commands to clear the alarm. c. To change the VWM shelf id("config system vwm-shelf <shelf-id> . d. To delete an existing shelf("config system no vwm-shelf <shelf-id>").		

Table 35-911 VwmShelfRemoved

Alarm	Attributes	Applicable major NE releases
Name: VwmShelfRemoved (4942) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.VwmShelf	Severity: major Implicitly cleared: true Default probable cause: VwmShelfRemoved (2001)	Unspecified
Description: The alarm is raised when a vwm shelf is removed.		
Remedial action: Informational - a vwm shelf has been removed from the NE		

Table 35-912 WlanGwTuQosProblem

Alarm	Attributes	Applicable major NE releases
Name: WlanGwTuQosProblem (3915) Type: resourceAlarm (28) Package: wlangw Raised on class: wlangw.IsaMember	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	Unspecified
Description: The alarm is raised when a resource issue occurs while creating a WLAN Gateway tunnel QoS infrastructure instance.		
Remedial action: This may be a temporary phenomenon. If it persists, the QoS configuration or the scaling may have to be modified to ensure enough resources are available for the UE QoS.		

Table 35-913 WppHostAuthenticationFailed

Alarm	Attributes	Applicable major NE releases
Name: WppHostAuthenticationFailed (3916) Type: processingErrorAlarm (81) Package: wpp Raised on class: wpp.Portal	Severity: major Implicitly cleared: false Default probable cause: portalWppHostAuthenticationFailure (1501)	Unspecified
Description: The alarm is raised when a WPP host cannot be authenticated.		
Remedial action: The recovery action will depend on the exact failure cause as given by the failureReason.		

35 – Unspecified NE alarms

Table 35-914 WppPortalUnreachable

Alarm	Attributes	Applicable major NE releases
Name: WppPortalUnreachable (5421) Type: ProtocolAlarm (1) Package: wpp Raised on class: wpp.Portal	Severity: minor Implicitly cleared: false Default probable cause: protocolDown (1)	Unspecified
Description: This alarm is raised when WPP protocol messages are sent out after a node is restarted but no route to the web portal is available. This notification is sent every minute while the portal remains unreachable up to a certain time. After that, all WPP messages to that portal are dropped.		
Remedial action: Initially no recovery is required as it is expected that the WPP portal can be unreachable for some time after a node restart. When the problem remains, the operator should check the routing table.		

Table 35-915 XPICCableLoss

Alarm	Attributes	Applicable major NE releases
Name: XPICCableLoss (4851) Type: communicationsAlarm (4) Package: mwa Raised on class: mwa.PortTermination	Severity: variable Implicitly cleared: true Default probable cause: DemodulatorXPICLossOfSignal (1928)	Unspecified
Description: The alarm is raised when a MPT detects a XPIC plug-in cable loss		
Remedial action: Please refer to either 9500 or 7705 Node Maintenance manual for remedial action information.
