Table 22-129 functionsfirmwareupdate

Alarm	Attributes	Applicable major releases
Name: functionsfirmwareupdate (6287) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of firmwareupdate function		
Remedial action: See the nodal documentation for more information.		

Table 22-130 functionsgetoptions

Alarm	Attributes	Applicable major releases
Name: functionsgetoptions (6288) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of getoptions function		
Remedial action: See the nodal documentation for more information.		

Table 22-131 functionsgetparameterattributes

Alarm	Attributes	Applicable major releases
Name: functionsgetparameterattributes (6289) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of getparameterattributes function		
Remedial action: See the nodal documentation for more information.		

Table 22-132 functionsgetparameternames

Alarm	Attributes	Applicable major releases
Name: functionsgetparameternames (6290) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of getparameternames function		
Remedial action: See the nodal documentation for more information.		

Table 22-133 functionsgetparametervalues

Alarm	Attributes	Applicable major releases
Name: functionsgetparametervalues (6291) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of getparametervalues function		
Remedial action: See the nodal documentation for more information.		

Table 22-134 functionsgetqueuedtransfers

Alarm	Attributes	Applicable major releases
Name: functionsgetqueuedtransfers (6292) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

22 – Alcatel-Lucent 936x/996x SC access point alarms

Alarm	Attributes	Applicable major releases
Description: The number of getqueuedtransfers function		
Remedial action: See the nodal documentation for more information.		

(2 of 2)

Table 22-135 functionsgetrpcmethods

Alarm	Attributes	Applicable major releases
Name: functionsgetrpcmethods (6293) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of getrpcmethods function		
Remedial action: See the nodal documentation for more information.		

Table 22-136 functionsreboot

Alarm	Attributes	Applicable major releases
Name: functionsreboot (6294) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of reboot function		
Remedial action: See the nodal documentation for more information.		

Table 22-137 functionsrestore

Alarm	Attributes	Applicable major releases
Name: functionsrestore (6295) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of restore function		
Remedial action: See the nodal documentation for more information.		

Table 22-138 functionsscheduleinform

Alarm	Attributes	Applicable major releases
Name: functionsscheduleinform (6296) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of scheduleinform function		
Remedial action: See the nodal documentation for more information.		

Table 22-139 functionssetparameterattributes

Alarm	Attributes	Applicable major releases
Name: functionssetparameterattributes (6297) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of setparameterattributes function		
Remedial action: See the nodal documentation for more information.		

Table 22-140 functionssetparametervalues

Alarm	Attributes	Applicable major releases
Name: functionssetparametervalues (6298) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of setparametervalues function		
Remedial action: See the nodal documentation for more information.		

Table 22-141 functionssnmpgetparametervalues

Alarm	Attributes	Applicable major releases
Name: functionssnmpgetparametervalues (6299) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

22 – Alcatel-Lucent 936x/996x SC access point alarms

Alarm	Attributes	Applicable major releases
Description: The number of snmpgetparametervalues function		
Remedial action: See the nodal documentation for more information.		

(2 of 2)

Description: number of inform upload		
Remedial action: See the nodal documentation for more information.		

Table 22-197 informvaluechange

Alarm	Attributes	Applicable major releases
Name: informvaluechange (6342) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: number of inform valueChange		
Remedial action: See the nodal documentation for more information.		

Table 22-198 invalidloginattemptstotalcount

Alarm	Attributes	Applicable major releases
Name: invalidloginattemptstotalcount (6343) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: Invalid login attempt occurred on the current server		
Remedial action: See the nodal documentation for more information.		

Table 22-199 ItfBGWY_itfBSGdnsFailure

Alarm	Attributes	Applicable major releases
Name: ItfBGWY_itfBSGdnsFailure (6010) Type: communicationsAlarm (4) Package: femto Raised on class: femto.ItfBGWY	Severity: major Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: This fault is sent when ItfBGWY link failure is detected when no response is received to DNS messages attempting to resolve the FGW FQDN. This may be caused by timeout or a protocol error.		
Remedial action: NA		

(2 of 2)

Table 22-200 ItfBGWY_itfFGWfailure

Alarm	Attributes	Applicable major releases
Name: ItfBGWY_itfFGWfailure (6012) Type: communicationsAlarm (4) Package: femto Raised on class: femto.ItfBGWY	Severity: major Implicitly cleared: true Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault indicates that FBSR registration in FGW is failed due to reasons other than overload.		
Remedial action: NA		

Table 22-201 ItfBGWY_itfFGWoverload

Alarm	Attributes	Applicable major releases
Name: ItfBGWY_itfFGWoverload (6013) Type: equipmentAlarm (3) Package: femto Raised on class: femto.ItfBGWY	Severity: major Implicitly cleared: true Default probable cause: congestion (694)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault indicates that FGW is overloaded and FBSR should be re-registered.		
Remedial action: NA		

Table 22-202 ItfBGWY_itfFGWRegistrationFailure

Alarm	Attributes	Applicable major releases
Name: ItfBGWY_itfFGWRegistrationFailure (6011) Type: operationalViolation (93) Package: femto Raised on class: femto.ItfBGWY	Severity: major Implicitly cleared: true Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when the lu' BSR fails to register with the FGW following SCTP establishment, or update the registration for any reason other than BSR Id Clash.		
Remedial action: NA		

22 – Alcatel-Lucent 936x/996x SC access point alarms

Table 22-203 ItfBGWY_noResponseFromBGWY

Alarm	Attributes	Applicable major releases
Name: ItfBGWY_noResponseFromBGWY (6014) Type: communicationsAlarm (4) Package: femto Raised on class: femto.ItfBGWY	Severity: major Implicitly cleared: true Default probable cause: responseTimeExcessive (716)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault indicates that communication on the interface to BSR Gateway is interrupted. It is raised when a request from BSR application on interface to BSR Gateway timed out (typically the SCTP association is up).		
Remedial action: NA		

Table 22-204 ItfBPG_itfBPGdnsFailure

Alarm	Attributes	Applicable major releases
Name: ItfBPG_itfBPGdnsFailure (6016) Type: communicationsAlarm (4) Package: femto Raised on class: femto.ItfBPG	Severity: major Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is sent when ItfBPG link failure is detected when no response is received to DNS messages attempting to resolve the BPG FQDN. This may be caused by timeout or a protocol error.		
Remedial action: NA		

Table 22-205 ItfBPG_itfBPGLinkFailure

Alarm	Attributes	Applicable major releases
Name: ItfBPG_itfBPGLinkFailure (6015) Type: communicationsAlarm (4) Package: femto Raised on class: femto.ItfBPG	Severity: major Implicitly cleared: true Default probable cause: responseTimeExcessive (716)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is sent when ItfBPG link failure is detected when no response is received for a special DPAT procedure with version ="10 after exhausting all retries, or when no response received after 6 attempts at initialization."		
Remedial action: NA		

Table 22-206 ItfBVG_itfBVGdnsFailure

Alarm	Attributes	Applicable major releases
Name: ItfBVG_itfBVGdnsFailure (6018) Type: communicationsAlarm (4) Package: femto Raised on class: femto.ItfBVG	Severity: major Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is raised when ItfBVG link failure is detected when no response is received to DNS messages attempting to resolve the BVG FQDN. This maybe caused by timeout or a protocol error.		
Remedial action: NA		

Table 22-207 ItfBVG_itfBVGLinkFailure

Alarm	Attributes	Applicable major releases
Name: ItfBVG_itfBVGLinkFailure (6017) Type: communicationsAlarm (4) Package: femto Raised on class: femto.ItfBVG	Severity: major Implicitly cleared: true Default probable cause: responseTimeExcessive (716)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is raised when ItfBVG link failure is detected when no response id is received for keealive messages on the BSR - BVG interface. This alarm is also sent when the initialising BVG binding update is not successful.		
Remedial action: NA		

Table 22-208 luCSPPrime_csCnConnectivityLost

Alarm	Attributes	Applicable major releases
Name: luCSPPrime_csCnConnectivityLost (6023) Type: communicationsAlarm (4) Package: femto Raised on class: femto.luCSPPrime	Severity: critical Implicitly cleared: true Default probable cause: remoteNodeTransmissionError (714)	<ul style="list-style-type: none"> LR14.2.SC
Description: The BSR has detected a loss of connectivity to the CS Core Network, even though the transport layer is still connected.		
Remedial action: NA

Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> LR14.2.SC
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only'))) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only'))) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only'))) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only'))) AND ('Primary Route Preference' EQUAL 'Out Of Band'))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 22-360 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

22 – Alcatel-Lucent 936x/996x SC access point alarms

Table 22-361 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 22-362 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 22-363 NodeSuspended

Alarm	Attributes	Applicable major releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 22-364 OAM_160

Alarm	Attributes	Applicable major releases
Name: OAM_160 (6158) Type: communicationsAlarm (4) Package: femto Raised on class: femto.FemtoCluster	Severity: critical Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.2.SC
Description: Loss of OAM link between OMC and HNM.		
Remedial action: No particular action is required. This notification may be required by Global Product Support for debugging purposes		

Table 22-365 OAM_161

Alarm	Attributes	Applicable major releases
Name: OAM_161 (6159) Type: qualityOfServiceAlarm (82) Package: femto Raised on class: femto.Femto	Severity: major Implicitly cleared: true Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.2.SC
Description: BSR is not operational or the OSI state is degraded		
Remedial action: Check the operationalState and availabilityStatus of the BSR MO on HDM		

Table 22-366 OAM_162

Alarm	Attributes	Applicable major releases
Name: OAM_162 (6160) Type: communicationsAlarm (4) Package: femto Raised on class: femto.FemtoCluster	Severity: critical Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.2.SC
Description: Loss of communication link between WMS and FileServer		
Remedial action: Check the communication link between WMS and FileServer. This notification may be required by Global Product Support for debugging purposes		

22 – Alcatel-Lucent 936x/996x SC access point alarms

Table 22-367 OAM_163

Alarm	Attributes	Applicable major releases
Name: OAM_163 (6161) Type: equipmentAlarm (3) Package: femto Raised on class: femto.Femto	Severity: major Implicitly cleared: true Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.2.SC
Description: Allocated license issue.		
Remedial action: Check WLM Web GUI to get more information on the current license settings.		

Table 22-368 OAM_164

Alarm	Attributes	Applicable major releases
Name: OAM_164 (6162) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.Femto	Severity: warning Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: Self optimization operation not triggered for the Femto Network Element.		
Remedial action: NA		

Table 22-369 OAM_165

Alarm	Attributes	Applicable major releases
Name: OAM_165 (6163) Type: operationalViolation (93) Package: femto Raised on class: femto.Femto	Severity: minor Implicitly cleared: true Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.2.SC
Description: Self optimization was not successfull for Femto		
Remedial action: NA		

Table 22-370 OrphanNodeDetected

Alarm	Attributes	Applicable major releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('State' EQUAL 'Orphan')		
Remedial action: The NE is not managed by any SAM.Add an discovery rule in order to managed it.		

(2 of 2)

Table 22-371 osavailableprocessercount

Alarm	Attributes	Applicable major releases
Name: osavailableprocessercount (6427) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of processer available to os		
Remedial action: See the nodal documentation for more information.		

Table 22-372 oscommittedvirtualmemory

Alarm	Attributes	Applicable major releases
Name: oscommittedvirtualmemory (6428) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The Number of committed virtual memory		
Remedial action: See the nodal documentation for more information.		

Table 22-373 osfreephysicalmemory

Alarm	Attributes	Applicable major releases
Name: osfreephysicalmemory (6429) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The Number of free memory		
Remedial action: See the nodal documentation for more information.		

22 – Alcatel-Lucent 936x/996x SC access point alarms

Table 22-374 osfreeswapSPACE

Alarm	Attributes	Applicable major releases
Name: osfreeswapSPACE (6430) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: Free swap space size		
Remedial action: See the nodal documentation for more information.		

Table 22-375 osmaxfiledescriptor

Alarm	Attributes	Applicable major releases
Name: osmaxfiledescriptor (6431) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: Maximum file descriptor		
Remedial action: See the nodal documentation for more information.		

Table 22-376 osopenfiledescriptor

Alarm	Attributes	Applicable major releases
Name: osopenfiledescriptor (6432) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of open file descriptor		
Remedial action: See the nodal documentation for more information.		

Table 22-377 osprocessuptime

Alarm	Attributes	Applicable major releases
Name: osprocessuptime (6433) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: The CPU time		
Remedial action: See the nodal documentation for more information.		

(2 of 2)

Table 22-378 ostotalphysicalmemory

Alarm	Attributes	Applicable major releases
Name: ostotalphysicalmemory (6434) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: Total Physical memory		
Remedial action: See the nodal documentation for more information.		

Table 22-379 ostotalswapspace

Alarm	Attributes	Applicable major releases
Name: ostotalswapspace (6435) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: Total number of free sawp space		
Remedial action: See the nodal documentation for more information.		

Table 22-380 PartialResyncProblem

Alarm	Attributes	Applicable major releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		

(1 of 2)

22 – Alcatel-Lucent 936x/996x SC access point alarms

Alarm	Attributes	Applicable major releases
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

(2 of 2)

Table 22-381 periodicinformpercentage

Alarm	Attributes	Applicable major releases
Name: periodicinformpercentage (6436) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: major Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: Percentage of periodic informs		
Remedial action: See the nodal documentation for more information.		

Table 22-382 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 22-383 PM_pmAuthenticationError

Alarm	Attributes	Applicable major releases
Name: PM_pmAuthenticationError (6168) Type: communicationsAlarm (4) Package: femto Raised on class: femto.PM	Severity: critical Implicitly cleared: true Default probable cause: unauthorizedAccessAttempt (800)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: The authentication error when transferring PM files.		
Remedial action: NA		

(2 of 2)

Table 22-384 PM_pmCommunicationError

Alarm	Attributes	Applicable major releases
Name: PM_pmCommunicationError (6169) Type: communicationsAlarm (4) Package: femto Raised on class: femto.PM	Severity: warning Implicitly cleared: true Default probable cause: responseTimeExcessive (716)	<ul style="list-style-type: none"> LR14.2.SC
Description: Failure to transferring PM files even after retries.		
Remedial action: NA		

Table 22-385 PollerProblem

Alarm	Attributes	Applicable major releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 22-386 PrimaryImageBootFailure

Alarm	Attributes	Applicable major releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		

(1 of 2)

22 – Alcatel-Lucent 936x/996x SC access point alarms

Alarm	Attributes	Applicable major releases
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

(2 of 2)

Table 22-387 Radio_clockSynchronisationFailure

Alarm	Attributes	Applicable major releases
Name: Radio_clockSynchronisationFailure (6195) Type: equipmentAlarm (3) Package: femto Raised on class: femto.Radio	Severity: critical Implicitly cleared: true Default probable cause: timingProblem (903)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is raised if discipline process fails, i.e. the convergence does not occur within 4 hours of convergence time. The NTP servers are reachable but the NTP Client is not in 'synced' state.		
Remedial action: NA		

Table 22-388 Radio_freqSynchronisationFailure

Alarm	Attributes	Applicable major releases
Name: Radio_freqSynchronisationFailure (8205) Type: equipmentAlarm (3) Package: femto Raised on class: femto.Radio	Severity: critical Implicitly cleared: true Default probable cause: timingProblem (903)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is raised if no discipline source is available and the oscillator holdover period has been exceeded such that frequency may no longer meet system requirements. (A separate alarm is defined for reporting phase synchronization failure).		
Remedial action: NA		

Table 22-389 Radio_gpsServiceUnavailable

Alarm	Attributes	Applicable major releases
Name: Radio_gpsServiceUnavailable (8206) Type: equipmentAlarm (3) Package: femto Raised on class: femto.Radio	Severity: major Implicitly cleared: true Default probable cause: timingProblem (903)	<ul style="list-style-type: none"> LR14.2.SC
Description: The fault is raised if the GPStiming signal is not available.		
Remedial action: NA		

Table 22-390 Radio_nIRfFailure

Alarm	Attributes	Applicable major releases
Name: Radio_nIRfFailure (8207) Type: equipmentAlarm (3) Package: femto Raised on class: femto.Radio	Severity: major Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: The Network Listen hardware has a receive path failure.		
Remedial action: NA		

Table 22-391 Radio_ntpServiceUnavailable

Alarm	Attributes	Applicable major releases
Name: Radio_ntpServiceUnavailable (6196) Type: equipmentAlarm (3) Package: femto Raised on class: femto.Radio	Severity: major Implicitly cleared: true Default probable cause: timingProblem (903)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is raised if NTP servers are initially not reachable within 5 minutes and verification of calibration value is impossible in this timeframe. This fault is also raised if the discipline process fails due to the NTP servers being unreachable. The nature of the failure will be provided in the additional text.		
Remedial action: NA		

Table 22-392 Radio_oscillatorAdjustFail

Alarm	Attributes	Applicable major releases
Name: Radio_oscillatorAdjustFail (8208) Type: equipmentAlarm (3) Package: femto Raised on class: femto.Radio	Severity: critical Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: The timing oscillator has reached its adjustment limit.		
Remedial action: NA

Table 22-400 Radio_txMalfunction

Alarm	Attributes	Applicable major releases
Name: Radio_txMalfunction (6201) Type: equipmentAlarm (3) Package: femto Raised on class: femto.Radio	Severity: critical Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: The Radio has failed to activate the transmitter, or malfunction in the radio transmitter.		
Remedial action: NA		

Table 22-401 Radio_underTemperature

Alarm	Attributes	Applicable major releases
Name: Radio_underTemperature (6202) Type: environmentalAlarm (2) Package: femto Raised on class: femto.Radio	Severity: major Implicitly cleared: true Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.2.SC
Description: The temperature is below the specified limit.		
Remedial action: NA		

Table 22-402 RadiusOperStatusDown

Alarm	Attributes	Applicable major releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 22-403 ReachabilityProblem

Alarm	Attributes	Applicable major releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 22-404 reachabledevicecount

Alarm	Attributes	Applicable major releases
Name: reachabledevicecount (6437) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: major Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: Count of reachable devices		
Remedial action: See the nodal documentation for more information.

Table 22-408 SaveConfigFailed

Alarm	Attributes	Applicable major releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 22-409 ScheduledPollerProblem

Alarm	Attributes	Applicable major releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 22-410 SCTPASSOC_associationEstablishmentFailure

Alarm	Attributes	Applicable major releases
Name: SCTPASSOC_associationEstablishmentFailure (6203) Type: communicationsAlarm (4) Package: femto Raised on class: femto.SCTPASSOC	Severity: major Implicitly cleared: true Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is raised after the number of INIT retries configured by maxInitRetransmits has failed. After the fault is raised there will be further retries after maxDelaySctpReEst delay		
Remedial action: NA		

Table 22-411 SCTPASSOC_sctpAssocAssociationDownAlarm

Alarm	Attributes	Applicable major releases
Name: SCTPASSOC_sctpAssocAssociationDownAlarm (6204) Type: communicationsAlarm (4) Package: femto Raised on class: femto.SCTPASSOC	Severity: major Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is raised when all Sctp associations with the BSG are down.		
Remedial action: NA		

22 – Alcatel-Lucent 936x/996x SC access point alarms

Table 22-412 SCTPASSOC_sctpAssocDnsFailure

Alarm	Attributes	Applicable major releases
Name: SCTPASSOC_sctpAssocDnsFailure (6205) Type: communicationsAlarm (4) Package: femto Raised on class: femto.SCTPASSOC	Severity: major Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is sent when link failure is detected when no response is received to DNS messages attempting to resolve the FGW FQDN. This may be caused by timeout or a protocol error.		
Remedial action: NA		

Table 22-413 SDM_dbDownloadFailure

Alarm	Attributes	Applicable major releases
Name: SDM_dbDownloadFailure (6209) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.SDM	Severity: major Implicitly cleared: true Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is created when the database download fails.		
Remedial action: NA		

Table 22-414 SDM_suActivationFailure

Alarm	Attributes	Applicable major releases
Name: SDM_suActivationFailure (6210) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.SDM	Severity: major Implicitly cleared: true Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is created when activation of a software image fails.		
Remedial action: NA		

Table 22-415 SDM_suDownloadFailure

Alarm	Attributes	Applicable major releases
Name: SDM_suDownloadFailure (6211) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.SDM	Severity: major Implicitly cleared: true Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is created when download of a software image fails.		
Remedial action: NA		

Table 22-416 SDM_toneFileCorrupt

Alarm	Attributes	Applicable major releases
Name: SDM_toneFileCorrupt (6212) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.SDM	Severity: minor Implicitly cleared: true Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> LR14.2.SC
Description: A downloaded tone file has invalid format.		
Remedial action: NA		

Table 22-417 SDM_toneFileDownloadFailure

Alarm	Attributes	Applicable major releases
Name: SDM_toneFileDownloadFailure (6213) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.SDM	Severity: minor Implicitly cleared: true Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is created when download of a tone file fails.		
Remedial action: NA		

Table 22-418 socketcount

Alarm	Attributes	Applicable major releases
Name: socketcount (6438) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

22 – Alcatel-Lucent 936x/996x SC access point alarms

Alarm	Attributes	Applicable major releases
Description: The number of socket		
Remedial action: See the nodal documentation for more information.		

(2 of 2)

Table 22-419 StatsRetrieveFailed

Alarm	Attributes	Applicable major releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 22-420 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 22-421 threadidlecount

Alarm	Attributes	Applicable major releases
Name: threadidlecount (6439) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of idel threads		
Remedial action: See the nodal documentation for more information.		

Table 22-422 threadpendingrequestcount

Alarm	Attributes	Applicable major releases
Name: threadpendingrequestcount (6440) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of thread in pending request state		
Remedial action: See the nodal documentation for more information.		

Table 22-423 threadqueuelength

Alarm	Attributes	Applicable major releases
Name: threadqueuelength (6441) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: The number of thread queue		
Remedial action: See the nodal documentation for more information.		

Table 22-424 threadstandbycount

Alarm	Attributes	Applicable major releases
Name: threadstandbycount (6442) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

22 – Alcatel-Lucent 936x/996x SC access point alarms

Alarm	Attributes	Applicable major releases
Description: The number of thread in stand by state.		
Remedial action: See the nodal documentation for more information.		

(2 of 2)

Table 22-425 threadthroughput

Alarm	Attributes	Applicable major releases
Name: threadthroughput (6443) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: Thread throughput		
Remedial action: See the nodal documentation for more information.		

Table 22-426 threadtotalcount

Alarm	Attributes	Applicable major releases
Name: threadtotalcount (6444) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: critical Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: Total number of Threads		
Remedial action: See the nodal documentation for more information.		

Table 22-427 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> trapDestinationMisconfigured duplicateTrapLogId 	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		

(1 of 2)

Alarm	Attributes	Applicable major releases
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

(2 of 2)

Table 22-428 TrapReceivingFailure

Alarm	Attributes	Applicable major releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> LR14.2.SC
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 22-429 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

22 – Alcatel-Lucent 936x/996x SC access point alarms

Alarm	Attributes	Applicable major releases
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

(2 of 2)

Table 22-430 UnidentifiedNode

Alarm	Attributes	Applicable major releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 22-431 UnmanageFailed

Alarm	Attributes	Applicable major releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 22-432 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 22-433 userlockouttotalcount

Alarm	Attributes	Applicable major releases
Name: userlockouttotalcount (6445) Type: equipmentAlarm (3) Package: femto Raised on class: femto.HDMCluster	Severity: minor Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: Indicates how many user locking out process is executed on the current server		
Remedial action: See the nodal documentation for more information.		

Table 22-434 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 22-435 WiFi_wifiNoSignalDetected

Alarm	Attributes	Applicable major releases
Name: WiFi_wifiNoSignalDetected (6247) Type: communicationsAlarm (4) Package: femto Raised on class: femto.WiFi	Severity: major Implicitly cleared: true Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is raised if signal of link status is not detected on the Wi-Fi Ethernet port.		
Remedial action: NA		

Table 22-436 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL \"TiMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL \"TiMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

23 – Alcatel-Lucent 9471 WMM alarms

Note – Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 41 for information about the alarm.

Table 23-1 AggregatedVFLPortDown

Alarm	Attributes	Applicable major releases
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Shelf	Severity: critical Implicitly cleared: true Default probable cause: connectivityIssue (2137)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 23-2 AuxiliaryServerStatus

Alarm	Attributes	Applicable major releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 23-3 BootParametersMisconfigured

Alarm	Attributes	Applicable major releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 23-4 ClientDelegateServerStatus

Alarm	Attributes	Applicable major releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

(2 of 2)

Table 23-5 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 23-6 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-7 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 23-8 CorruptImageFile

Alarm	Attributes	Applicable major releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 23-9 criticalErrorAlarm

Alarm	Attributes	Applicable major releases
Name: criticalErrorAlarm (3681) Type: communicationsAlarm (4) Package: Itemme Raised on class: Itemme.MmeInstance	Severity: critical Implicitly cleared: false Default probable cause: MmeInternalProcessingError (1421)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: This alarm is raised when receiving critical-error message from the network element's NetConf interface. The operator must connect to the network element using its CLI interface and verify the consistency of the network element's database and configuration and then do a full node resync once the manual intervention has been completed.		
Remedial action: The operator must connect to the network element (MME) using its CLI interface and verify the consistency of the network element's database and configuration and then do a full node resync once the manual intervention has been completed.		

(2 of 2)

Table 23-10 EPSPeerLocked

Alarm	Attributes	Applicable major releases
Name: EPSPeerLocked (3747) Type: communicationsAlarm (4) Package: lte Raised on class: lte.AbstractMmeEpsPeer	Severity: major Implicitly cleared: false Default probable cause: EPSPeerLocked (1481)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when an EPS Peer link goes into a locked state. The alarm clears when the EPS Peer Link changes to an unlocked state.		
Raising condition: (('Administrative State' EQUAL 'Locked'))		
Clearing condition: (('Administrative State' EQUAL 'Unlocked'))		
Remedial action: Informational: The EPS Peer has been manually locked.		

Table 23-11 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-12 EquipmentDegraded

Alarm	Attributes	Applicable major releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

Table 23-13 EquipmentDown

Alarm	Attributes	Applicable major releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 23-14 EquipmentFailure

Alarm	Attributes	Applicable major releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		

(1 of 2)

Alarm	Attributes	Applicable major releases
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

(2 of 2)

Table 23-15 EquipmentInTest

Alarm	Attributes	Applicable major releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 23-16 EquipmentMismatch

Alarm	Attributes	Applicable major releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-17 EquipmentRemoved

Alarm	Attributes	Applicable major releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true')))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 23-18 FanFailure

Alarm	Attributes	Applicable major releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfservice'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 23-19 FanTrayRemoved

Alarm	Attributes	Applicable major releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 23-20 LicensedLimitExceeded

Alarm	Attributes	Applicable major releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 23-21 LinkDown (equipment)

Alarm	Attributes	Applicable major releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 23-22 maintenanceStateAlarm

Alarm	Attributes	Applicable major releases
Name: maintenanceStateAlarm (4812) Type: operationalViolation (93) Package: Itemme Raised on class: Itemme.MmeInstance	Severity: info Implicitly cleared: true Default probable cause: WmmMaintenanceState (1900)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm is raised when the 9471 WMM is put into maintenance state as part of a software upgrade. While the 9471 WMM is in maintenance mode, 5620 SAM will not process any notifications other than alarms and PM file notifications. In addition, 5620 SAM will not trigger full node resyncs when it receives a Cold Start trap, when it detects that the 9471 WMM has rebooted, or when it detects that the software version of the 9471 WMM has changed. Once the 9471 WMM goes out of maintenance state, 5620 SAM will trigger a full node resync.		

(1 of 2)

23 – Alcatel-Lucent 9471 WMM alarms

Alarm	Attributes	Applicable major releases
Raising condition: ('Maintenance State' EQUAL 'True')		
Clearing condition: ('Maintenance State' EQUAL 'False')		
Remedial action: Informational - no corrective action required.		

(2 of 2)

Table 23-23 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 23-24 NodeRebooted

Alarm	Attributes	Applicable major releases
Name: NodeRebooted (32) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: false Default probable cause: nodeReboot (25)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the 5620 SAM detects an NE reboot based on the latest NE sysUpTime value.		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 23-25 NodeSuspended

Alarm	Attributes	Applicable major releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 23-26 OrphanNodeDetected

Alarm	Attributes	Applicable major releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('State' EQUAL 'Orphan')		
Remedial action: The NE is not managed by any SAM. Add an discovery rule in order to managed it.		

Table 23-27 PartialResyncProblem

Alarm	Attributes	Applicable major releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		

(1 of 2)

23 – Alcatel-Lucent 9471 WMM alarms

Alarm	Attributes	Applicable major releases
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

(2 of 2)

Table 23-28 PollerProblem

Alarm	Attributes	Applicable major releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 23-29 RcaAuditAfterNEUpgradeStatus

Alarm	Attributes	Applicable major releases
Name: RcaAuditAfterNEUpgradeStatus (5124) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: info Implicitly cleared: false Default probable cause: rcaAuditStatusAfterNEUpgrade (2058)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the 5620 SAM detects an NE software version upgrade and RCA audit performed.		
Remedial action: Information - Check audit results for details		

Table 23-30 ReachabilityProblem

Alarm	Attributes	Applicable major releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 23-31 ScheduledPollerProblem

Alarm	Attributes	Applicable major releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 23-32 StatsRetrieveFailed

Alarm	Attributes	Applicable major releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		

(1 of 2)

23 – Alcatel-Lucent 9471 WMM alarms

Alarm	Attributes	Applicable major releases
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

(2 of 2)

Table 23-33 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 23-34 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major releases
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed (6) Package: equipment Raised on class: equipment.Shelf	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 23-35 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> trapDestinationMisconfigured duplicateTrapLogId 	<ul style="list-style-type: none"> 6.0.0 7.0.0 7.1.0 8.0.0 8.1.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 23-36 UnidentifiedNode

Alarm	Attributes	Applicable major releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> 6.0.0 7.0.0 7.1.0 8.0.0 8.1.0
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 23-37 UnmanageFailed

Alarm	Attributes	Applicable major releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> 6.0.0 7.0.0 7.1.0 8.0.0 8.1.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		

(1 of 2)

23 – Alcatel-Lucent 9471 WMM alarms

Alarm	Attributes	Applicable major releases
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance

Table 23-38 WmmATCA_AggregatePowerSensor

Alarm	Attributes	Applicable major releases
Name: WmmATCA_AggregatePowerSensor (4171) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The aggregate power sensor alarm provides a summary status of all power related conditions adversely affecting a resource. When this alarm occurs, in most cases, there will be another power related alarm that provides more details about the exact resource power sensor that is reporting the condition. From the MI GUI, alarms on a resource may be retrieved by selecting the managed object for that resource and then selecting the right-click operation to display related alarms.		
Remedial action: Investigate all other temperature and power related alarms on the resource and follow those alarms fault recovery procedures. Once all of these related alarms are cleared, this alarm will clear.		

Table 23-39 WmmATCA_AggregateTemperatureSensor

Alarm	Attributes	Applicable major releases
Name: WmmATCA_AggregateTemperatureSensor (4172) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The aggregate temperatures sensor alarm provides a summary status of all temperature related conditions adversely affecting a resource. When this alarm occurs, in most cases, there will be another temperature related alarm that provides more details about the exact resource temperature sensor that is reporting the condition. From the MI GUI, alarms on a resource may be retrieved by selecting the managed object for that resource and then selecting the right-click operation to display related alarms.		
Remedial action: Investigate all other temperature and power related alarms on the resource and follow those alarms fault recovery procedures. Once all of these related alarms are cleared, this alarm will clear.		

Table 23-40 WmmATCA_BoardPower

Alarm	Attributes	Applicable major releases
Name: WmmATCA_BoardPower (4173) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: A board is either in the inactive or not present state. This means that the board has been powered down.		
Remedial action: Verify that the blade is powered on. This can be performed remotely using CLI on the shelf manager or locally by observing specific LEDs and their status. Verify that the blade is seated correctly in the chassis. Try to re-seat the blade in the chassis. Replace the blade if necessary, refer to FRU procedure. Contact Alcatel-Lucent Customer Support.		

Table 23-41 WmmATCA_CPLDState

Alarm	Attributes	Applicable major releases
Name: WmmATCA_CPLDState (4174) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates a change in the redundancy status of the shelf management cards. The specific problem of the alarm contains the specific redundancy state of the shelf management card.		
Remedial action: Verify that the shelf management card is inserted properly. If the shelf management card is inserted, reseal the shelf management card. If reseating the shelf management card does not correct the problem, replace the shelf management card.		

Table 23-42 WmmATCA_DS75Temperature

Alarm	Attributes	Applicable major releases
Name: WmmATCA_DS75Temperature (4175) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that the AMC (Advanced Mezzanine Card) temperature monitoring sensor has detected a threshold being crossed.		
Remedial action: There is a condition in which this alarm, with minor severity, is being erroneously reported by the hardware, so ignore any minor alarms pertaining to this sensor. Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first. Check that the room air conditioning system is operating properly. Check that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure. If fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.

Table 23-43 WmmATCA_ExhaustTemp

Alarm	Attributes	Applicable major releases
Name: WmmATCA_ExhaustTemp (4176) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that the ASS7BF AMC (Advanced Mezzanine Card) temperature monitoring sensor has detected a threshold being crossed.		
Remedial action: There is a condition in which this alarm, with minor severity, is being erroneously reported by the hardware, so ignore any minor alarms pertaining to this sensor. Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first. Check that the room air conditioning system is operating properly. Check that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure. If fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-44 WmmATCA_FanSpeed

Alarm	Attributes	Applicable major releases
Name: WmmATCA_FanSpeed (4178) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that a fan's speed has crossed a threshold.		
Remedial action: Replace the faulty fan unit according to the appropriate replacement procedure.		

Table 23-45 WmmATCA_FanTrayPresence

Alarm	Attributes	Applicable major releases
Name: WmmATCA_FanTrayPresence (4179) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that one of the fan trays is not present in the chassis. The fan tray in question will be identified in the additionalText field of the alarm.		
Remedial action: Insert the fan tray.		

Table 23-46 WmmATCA_FanTraysFRU

Alarm	Attributes	Applicable major releases
Name: WmmATCA_FanTraysFRU (4180) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates a problem with one or more of the fan trays.		
Remedial action: Verify that all Fan Trays are properly seated in the chassis. Verify that the type of Fan Trays are compatible. Contact Alcatel-Lucent Customer Support if incompatible. Verify that the cooling parameters are set correctly. Contact Alcatel-Lucent Customer Support to adjust parameters.		

Table 23-47 WmmATCA_FilterPresence

Alarm	Attributes	Applicable major releases
Name: WmmATCA_FilterPresence (4181) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: A filter is not present in the chassis. The additional text field of the alarm will indicate which filter is not present.		
Remedial action: Insert the filter that is not present.		

Table 23-48 WmmATCA_FPGATemp

Alarm	Attributes	Applicable major releases
Name: WmmATCA_FPGATemp (4177) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that the DCI AMC (Advanced Mezzanine Card) FPGA Temp monitoring sensor has detected a threshold being crossed. This indicates there is a problem with the die temperature of the DCI FPGA.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first. Check that the room air conditioning system is operating properly. Check that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure. If fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-49 WmmATCA_I2CLocalBus

Alarm	Attributes	Applicable major releases
Name: WmmATCA_I2CLocalBus (4182) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm reports an abnormal condition in the hardware state of the I2C Local Bus.		
Remedial action: If the condition does not clear, contact Alcatel-Lucent Customer Support		

Table 23-50 WmmATCA_InletTemp

Alarm	Attributes	Applicable major releases
Name: WmmATCA_InletTemp (4184) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that the AMC (Advanced Mezzanine Card) Inlet Temp monitoring sensor at the upper edge of the AMC has detected a threshold being crossed.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first. Check that the room air conditioning system is operating properly. Check that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure. If fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-51 WmmATCA_IPMblink

Alarm	Attributes	Applicable major releases
Name: WmmATCA_IPMblink (4183) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates a problem with the IPMB(Intelligent Platform Management Bus) Link between the shelf manager and the board. This alarm may be reported by the shelf manager for the portion of the link that it monitors, or by the board for the portion of the link it monitors.		
Remedial action: If the Link has been manually disabled, try to enable the link from the active shelf manager card with the command, 'clia setipmbstate <IPMB address> [AB] 1'. If the board is reporting a link failure, replace the board. If the shelf is reporting a link failure, replace the shelf management card. If replacing the board and shelf management card do not solve the problem, replace the shelf. Contact Alcatel-Lucent Customer Support.		

Table 23-52 WmmATCA_LM75Temperature

Alarm	Attributes	Applicable major releases
Name: WmmATCA_LM75Temperature (4185) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates a temperature problem with a board.		
Remedial action: There is a condition in which this alarm, with minor severity, is being erroneously reported by the hardware, so ignore any minor alarms pertaining to this sensor. Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first. Check that the room air conditioning system is operating properly. Check that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure. If fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-53 WmmATCA_LM83Temperature

Alarm	Attributes	Applicable major releases
Name: WmmATCA_LM83Temperature (4186) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates a temperature problem with a board. There are 5 LM83 sensors(LM83_1 Local,LM83_1 DBG,LM83_1 BASE,LM83_1 LSI,LM83_2 Local) that monitor the temperature of the board.		
Remedial action: There is a condition in which this alarm, with minor severity, is being erroneously reported by the hardware, so ignore any minor alarms pertaining to this sensor. Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first. Check that the room air conditioning system is operating properly. Check that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure. If fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-54 WmmATCA_LMeUC75Temperature

Alarm	Attributes	Applicable major releases
Name: WmmATCA_LMeUC75Temperature (4188) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that the ASS7NB AMC (Advanced Mezzanine Card) temperature monitoring sensor has detected a threshold being crossed.		

(1 of 2)

23 – Alcatel-Lucent 9471 WMM alarms

Alarm	Attributes	Applicable major releases
<p>Remedial action: There is a condition in which this alarm, with minor severity, is being erroneously reported by the hardware, so ignore any minor alarms pertaining to this sensor. Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first. Check that the room air conditioning system is operating properly. Check that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure. If fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.</p>

If fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.</p>		

Table 23-57 WmmATCA_LocalTemperature

Alarm	Attributes	Applicable major releases
Name: WmmATCA_LocalTemperature (4189) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates a temperature problem with a board.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first. Check that the room air conditioning system is operating properly. Check that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure. If fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-58 WmmATCA_m48vSensor

Alarm	Attributes	Applicable major releases
Name: WmmATCA_m48vSensor (4198) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates a problem with the -48V shelf power supply A and/or B feeds.		
Remedial action: Check the top rack power distribution unit's LED and circuit breakers. Replace the faulty power supply according to the appropriate replacement procedures. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-59 WmmATCA_MMCTemp

Alarm	Attributes	Applicable major releases
Name: WmmATCA_MMCTemp (4190) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that the DCI AMC (Advanced Mezzanine Card) MMC Temp monitoring sensor has detected a threshold being crossed. This indicates there is a problem with the die temperature of the MMC FPGA.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first. Check that the room air conditioning system is operating properly. Check that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure. If fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-60 WmmATCA_OcteonTemperature

Alarm	Attributes	Applicable major releases
Name: WmmATCA_OcteonTemperature (4191) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates a temperature problem with the Octeon module.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first. Check that the room air conditioning system is operating properly. Check that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure. If fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-61 WmmATCA_OutletTemp

Alarm	Attributes	Applicable major releases
Name: WmmATCA_OutletTemp (4192) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that the AMC (Advanced Mezzanine Card) Outlet Temp monitoring sensor at the lower edge of the AMC has detected a threshold being crossed.		
Remedial action: Check if there are other alarms that could explain the rise in temperature, especially fan alarms. If there are, troubleshoot these alarms first. Check that the room air conditioning system is operating properly. Check that the fan units of the suspect chassis are operating correctly. If they are not, replace the fan units according to the replacement procedure. If fans are operating properly and if there is no other alarm, replace faulty FRU according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-62 WmmATCA_PayloadCurrent

Alarm	Attributes	Applicable major releases
Name: WmmATCA_PayloadCurrent (4193) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates a current problem on a board, resulting from the Payload Amps sensor threshold being crossed.		
Remedial action: Check if other cards in the chassis have a similar alarm. If this is the case, there may be a problem with the power supply unit(s). Replace the faulty card according to the appropriate replacement procedure. Replace the interface unit located behind the faulty card according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-63 WmmATCA_PayloadVoltage

Alarm	Attributes	Applicable major releases
Name: WmmATCA_PayloadVoltage (4194) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates a voltage problem with a board.		
Remedial action: Check if all of the cards in the chassis have the same alarm. If this is the case, replace the power supply unit(s) according to the appropriate replacement procedure. Replace the faulty card according to the appropriate replacement procedure. Replace the interface unit located behind the faulty card according to the appropriate replacement procedure. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-64 WmmATCA_PowerOk

Alarm	Attributes	Applicable major releases
Name: WmmATCA_PowerOk (4195) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates state of power ok signal from ISPPAC.		
Remedial action: Verify that the blade is powered on. Verify that the blade is seated correctly in the chassis. Try to re-seat the blade in the chassis. Replace the blade if necessary, refer to FRU procedure. Contact Alcatel-Lucent Customer Support.		

Table 23-65 WmmATCA_ShelfFRUs

Alarm	Attributes	Applicable major releases
Name: WmmATCA_ShelfFRUs (4196) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates a problem with the shelf FRU information stored in the EEPROMs (located on the NFATCAV2 back panel and accessed via the I2C local bus). The EEPROMS contents are validated when a shelf manager is initialized as the active shelf manager, and periodically by the active shelf manager.		
Remedial action: A firmware upgrade may be needed, contact Alcatel-Lucent Customer Support.		

Table 23-66 WmmATCA_UnexpectedDeact

Alarm	Attributes	Applicable major releases
Name: WmmATCA_UnexpectedDeact (4197) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This sensor reports unexpected deactivation (transition to INACTIVE state) origin. It is asserted		
Remedial action: Look at sensor alarms to see why the card was deactivated and resolve underlying problems.		

Table 23-67 WmmLSS_cardConnectionLost

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cardConnectionLost (4199) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: REM detected a problem with its connectivity to a service member under its control, or a service member has missed a heartbeat to REM.		
Remedial action: Verify the status on the service on the MI GUI. It should be 'Out of Service'. If it is active, or standby hot, with its mate being active, or manually out-of-service (unlocked/disabled/idle) then the alarm condition is not valid. If communication to the service does not come back within several minutes (e.g. the cardConnectionLost alarm does not clear), it may be necessary to connect to the card's console-port to get the status of the service. Consult card specific documentation about the console commands to obtain the card service state. If you are not successful in connecting to the console, this could be due to either a networking problem, or a fault in the card. If the card is inaccessible via console, it can be recovered via the reset button, or by power cycling. Continued trouble may mean the card is having some hardware difficulty; and Alcatel-Lucent Customer Support should be contacted to determine the next step(s). Try to ping the internal fixed service ip address of the service member from the host which is running the active CNFG service. If pinging the service member from the CNFG host succeeds, then go to Step 4; else go to Step 5. Determine if REM has a connection to the service member via the use of the netstat command on the host which has the active CNFG service. The following command will give a list of IP addresses that REM has connected to via well-known port 20000: netstat -a grep 20000. Look for an 'Established' connection to the service's IP address in the output of the above command. If the service's IP address is not found in the output and this is the first time you have visited this step, then go to Step 6. If the service's IP address is not found in the output and this is the second time you have visited this step, then go to Step 7. Check the IP connections from the host that has the active CNFG service member to the switches and the routers. Check the connection to the card. If connection problems are found, they must be fixed. One can also verify that the appropriate service IP addresses have been plumbed and the appropriate service image has been downloaded to the card. Try switching the CNFG service to its currently standby hot member via MI GUI. Stop and start the CNFG service via the stopCNFG and startCNFG commands, respectively. This will stop the REM process and restart it, among others within the CNFG service. Once the CNFG service is active, the virtual cluster can be switched back. Note that error recovery and provisioning ability will be affected if the CNFG service is not operational. Restart/reload the service. This may be done via the MI GUI.		

Table 23-68 WmmLSS_cardError

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cardError (4200) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that a hardware diagnostic failure has been detected. Depending on the criticality of the checks, alarms with various severities are generated.		
Remedial action: For the Critical Alarm, the card should be taken OOS and replaced. For the Major Alarm, the card should be taken OOS and rebooted to see if the alarm clears. If it does not clear or there are other reports from the card (such as Asserts) reporting problems, the card should be left OOS and Alcatel-Lucent Customer Support should be contacted. For the Minor Alarm, contact Alcatel-Lucent Customer Support for the correction procedure.		

Table 23-69 WmmLSS_cdrFileStorageSpaceThreshold

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cdrFileStorageSpaceThreshold (5388) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 8.0.0 • 8.1.0
Description: CDRs file storage space threshold reached		
Remedial action: Continue to the next action only if the system does not clear the alarm: test the accessibility to the Charging Gateway (ping command); trace the route to the Charging Gateway (traceroute command). If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-70 WmmLSS_cdrStorageSpaceThreshold

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cdrStorageSpaceThreshold (4405) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: CDRs storage space threshold reached		
Remedial action: Continue to the next action only if the system does not clear the alarm: test the accessibility to the Charging Gateway (ping command); trace the route to the Charging Gateway (traceroute command). If the problem persists, contact Alcatel-Lucent Customer Support.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-71 WmmLSS_cgfNotResponding

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cgfNotResponding (4406) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: SGSN/CGF interface: CGF not responding		
Remedial action: Continue to the next action only if the system does not clear the alarm: test the accessibility to the Charging Gateway (ping command); trace the route to the Charging Gateway (traceroute command); If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-72 WmmLSS_cgfServiceNotSupported

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cgfServiceNotSupported (4407) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The Charging Gateway is not able to process the CDRs transmitted by the SGSN		
Remedial action: Continue to the next action only if the system does not clear the alarm: If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-73 WmmLSS_cgfSystemFailure

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cgfSystemFailure (4408) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: SGSN/CGF interface: 'system failure' response		
Remedial action: Continue to the next action only if the system does not clear the alarm: If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-74 WmmLSS_cgfVersionNotSupported

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cgfVersionNotSupported (4409) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The version of GTP' supported by the SGSN is not supported by the Charging Gateway.		
Remedial action: Continue to the next action only if the system does not clear the alarm: check GTP' version at Charging Gateway. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-75 WmmLSS_cmasFailure

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cmasFailure (4800) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that there is software failure in s1mme or sbc modules, related to CMAS.		
Remedial action: Contact Alcatel-Lucent Customer Support.		

Table 23-76 WmmLSS_cmasReceiveFailure

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cmasReceiveFailure (4801) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that MME failed to receive an acknowledgement to a CMAS message.		
Remedial action: Verify that the S1mme links are up. Alarm can only be cleared manually by running 'alarm_cli --clear alarmName="LSS_cmasReceiveFailure' from the active MI. If condition persists, contact Alcatel-Lucent Customer Support."		

Table 23-77 WmmLSS_cmasSendFailure

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cmasSendFailure (4802) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that there is a failure in sending a CMAS message over s1mme or sbc interfaces.		
Remedial action: Verify that the S1mme and sbc links are up. Alarm can only be cleared manually by running 'alarm_cli --clear alarmName="LSS_cmasSendFailure' from the active MI. If condition persists, contact Alcatel-Lucent Customer Support."		

Table 23-78 WmmLSS_connectionLostToLDPpeer

Alarm	Attributes	Applicable major releases
Name: WmmLSS_connectionLostToLDPpeer (5151) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.1.0 • 8.0.0 • 8.1.0
Description: There is no LDP session with a peer (SDP far-end).		
Remedial action: Check configuration: SDP administrative state, SDP far-end IP address. Check IP connectivity between SAF and LDP peer IP address. Manually clear the alarm.		

Table 23-79 WmmLSS_cpiAlrmCritical

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiAlrmCritical (4201) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiAlrmCritical indicates the value of the VS.alrmCritical measurement monitored by the Critical Alarms Count CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: Using the Maintenance Interface, examine the set of critical alarms or any other alarms recently raised and address them. This alarm will clear automatically if the rate of critical alarm generation drops below the threshold.		

Table 23-80 WmmLSS_cpiAlrmMajor

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiAlrmMajor (4202) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiAlrmMajor indicates the value of the VS.almMajor measurement monitored by the Major Alarms Count CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: Using the Maintenance Interface, examine the set of major alarms or any other alarms recently raised and address them. This alarm will clear automatically if the rate of major alarm generation drops below the threshold.		

Table 23-81 WmmLSS_cpiAlrmMinor

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiAlrmMinor (4203) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiAlrmMinor indicates the value of the VS.almMinor measurement monitored by the Minor Alarms Count CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: Using the Maintenance Interface, examine the set of minor alarms or any other alarms recently raised and address them. This alarm will clear automatically if the rate of minor alarm generation drops below the threshold.		

Table 23-82 WmmLSS_cpiAlrmWarning

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiAlrmWarning (4204) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiAlrmWarning indicates the value of the VS.almWarning measurement monitored by the Warning Alarms Count CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: Using the Maintenance Interface, examine the set of warning alarms or any other alarms recently raised and address them. This alarm will clear automatically if the rate of warning alarm generation drops below the threshold.		

Table 23-83 WmmLSS_cpiAsrtEsc

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiAsrtEsc (4205) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiAsrtEsc indicates the value of the VS.asrtESC measurement monitored by the Escalating Asserts CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: This alarm will clear automatically if the rate of escalating assert generation drops below the threshold. An automatic escalation would result in a switch over and should also drop the rate of assert generation. Determine if any other alarms have been recently raised on the resource reported and address them. Examine the recent Performance (PM) counts on the resource reported; they may suggest more regarding this issue. If a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem. If a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact Alcatel-Lucent Customer Support. If the PM counts indicates degradation of service and a switch over has not occurred, switch the service to its redundant mate. If the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service. In all cases, contact customer support regarding this alarm.		

Table 23-84 WmmLSS_cpiAsrtNonEsc

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiAsrtNonEsc (4206) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiAsrtNonEsc indicates the value of the VS.asrtNonESC measurement monitored by the Non-Escalating Asserts CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: This alarm will clear automatically if the rate of non-escalating assert generation drops below the threshold. Determine if any other alarms have been recently raised on the resource reported and address them. Examine the recent Performance (PM) counts on the resource reported; they may suggest more regarding this issue. If a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem. If a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact Alcatel-Lucent Customer Support. If the PM counts indicates degradation of service, switch the service to its redundant mate. If the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service. In all cases, contact customer support regarding this alarm.		

Table 23-85 WmmLSS_cpiAsrtNonEscCritical

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiAsrtNonEscCritical (4207) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiAsrtNonEscCritical indicates the value of the VS.asrtNonESCCritical measurement monitored by the Critical Non-Escalating Asserts CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: This alarm will clear automatically if the rate of non-escalating assert generation drops below the threshold. Determine if any other alarms have been recently raised on the resource reported and address them. Examine the recent Performance (PM) counts on the resource reported; they may suggest more regarding this issue. If a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem. If a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact Alcatel-Lucent Customer Support. If the PM counts indicates degradation of service, switch the service to its redundant mate. If the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service. In all cases, contact customer support regarding this alarm.		

Table 23-86 WmmLSS_cpiAsrtNonEscMajor

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiAsrtNonEscMajor (4208) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiAsrtNonEscMajor indicates the value of the VS.asrtNonESCMajor measurement monitored by the Major Non-Escalating Asserts CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: This alarm will clear automatically if the rate of non-escalating assert generation drops below the threshold. Determine if any other alarms have been recently raised on the resource reported and address them. Examine the recent Performance (PM) counts on the resource reported; they may suggest more regarding this issue. If a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem. If a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact Alcatel-Lucent Customer Support. If the PM counts indicates degradation of service, switch the service to its redundant mate. If the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service. In all cases, contact customer support regarding this alarm.		

Table 23-87 WmmLSS_cpiAsrtNonEscMinor

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiAsrtNonEscMinor (4209) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0

(1 of 2)

23 – Alcatel-Lucent 9471 WMM alarms

Alarm	Attributes	Applicable major releases
<p>Description: The raised alarm LSS_cpiAsrtNonEscMinor indicates the value of the VS.asrtNonESCMInor measurement monitored by the Minor Non-Escalating Asserts CPI exceeded a threshold in the last 15 minute interval.</p>		
<p>Remedial action: This alarm will clear automatically if the rate of non-escalating assert generation drops below the threshold. Determine if any other alarms have been recently raised on the resource reported and address them. Examine the recent Performance (PM) counts on the resource reported; they may suggest more regarding this issue. If a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem. If a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact Alcatel-Lucent Customer Support. If the PM counts indicates degradation of service, switch the service to its redundant mate. If the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service. In all cases, contact customer support regarding this alarm.</p>		

(2 of 2)

Table 23-88 WmmLSS_cpiAudErrCount

Alarm	Attributes	Applicable major releases
<p>Name: WmmLSS_cpiAudErrCount (4210) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry</p>	<p>Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)</p>	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
<p>Description: The raised alarm LSS_cpiAudErrCount indicates the value of the VS.audErrCount measurement monitored by the Audit Errors CPI exceeded a threshold in the last 15 minute interval. Audits run at low priority to recover lost or stuck resources. Audits generate error reports describing any problems they find. The VS.audErrCnt measurement reports the number of individual errors found by audits during the interval.</p>		
<p>Remedial action: Although audits take recovery for each error they find, use the Maintenance Interface to examine the set of audit errors reported. If this alarm recurs or is ongoing due to the same set of audits, contact Alcatel-Lucent Customer Support. If this alarm is new and coincides with the introduction of a software update, contact Alcatel-Lucent Customer Support immediately. This alarm will clear automatically if the rate of audit detected errors drops below the threshold.</p>		

Table 23-89 WmmLSS_cpiAudManAct

Alarm	Attributes	Applicable major releases
<p>Name: WmmLSS_cpiAudManAct (4211) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry</p>	<p>Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)</p>	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
<p>Description: The raised alarm, LSS_cpiAudManAct, indicates the value of the VS.audManAct measurement monitored by the Audit Errors Requiring Manual Action CPI exceeded a threshold in the last 15 minute interval. Audits run at low priority to recover lost or stuck resources. Audits generate error reports describing any problems they find.. The VS.audManAct measurement reports the number of individual errors found by audits during the interval that require manual action for recovery.</p>		
<p>Remedial action: Using the Maintenance Interface, examine the set of audit errors reported and address them. Audit error reports requiring manual action should specify the actions needed to perform recovery. If this alarm is new and coincides with the introduction of a software update, contact Alcatel-Lucent Customer Support immediately. This alarm will clear automatically if the rate of audit detected errors requiring manual action drops below the threshold. However, this will not happen until the required manual recovery steps have been taken.</p>		

Table 23-90 WmmLSS_cpiAudNewEvent

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiAudNewEvent (4212) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
<p>Description: The raised alarm LSS_cpiAudNewEvent indicates the value of the VS.audNewEvent measurement monitored by the Audit Initiated Events CPI exceeded a threshold in the last 15 minute interval. Audits run at low priority to recover lost or stuck resources. Audits generate error reports describing any problems they find. The VS.audNewEvent measurement reports the number of times during the interval that an audit that ran without being part of an escalated recovery and found at least one error.</p>		
<p>Remedial action: Although audits take recovery for each error they find, use the Maintenance Interface to examine the set of audit errors reported. If this alarm recurs or is ongoing due to the same set of audits, contact Alcatel-Lucent Customer Support. If this alarm is new and coincides with the introduction of a software update, contact Alcatel-Lucent Customer Support immediately. This alarm will clear automatically if the rate of audit invocations that detect errors drops below the threshold.</p>		

Table 23-91 WmmLSS_cpiExceptionService

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiExceptionService (4213) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
<p>Description: The raised alarm LSS_cpiExceptionService indicates the value of the VS.exceptionService measurement monitored by the Service Exceptions CPI exceeded a threshold in the last 15 minute interval.</p>		
<p>Remedial action: The value of the VS.exceptionService measurement monitored by the Service Exceptions CPI exceeded a threshold in the last 15 minute interval. This alarm will clear automatically if the rate of exceptions drops below the threshold. Determine if any other alarms have been recently raised on the resource reported and address them. Examine the recent Performance (PM) counts on the resource reported; they may suggest more regarding this issue. If a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem. If a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact Alcatel-Lucent Customer Support. If the PM counts indicates degradation of service and a switch-over has not already occurred, switch the service to its redundant mate. If the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service. If the situation persists after two or more switch-overs of the pair within the service, then attempt to duplex fail the service. In all cases, contact customer support regarding this alarm.</p>		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-92 WmmLSS_cpiFileSysUsage

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiFileSysUsage (4214) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiFileSysUsage indicates the value of resource usage count VS.fileSysUsage monitored by the File System Usage CPI exceeded a threshold in the last 5-minute interval.		
Remedial action: Remove outdated and obsolete files to free the file system space. Move the important data files to other disks to free the file system space. When CPI alarm LSS_cpiFileSysUsage is fired for CDR host, don't remove CDR record files (under /app1/data0/cdrdata) and PCMD record files (under /app1/data0/pcmddata). Furthermore, double check timestamp of CDR records files under /app1/data0/cdrdata/app2/charging/stream1/primary. If many files are older than two PULL/PUSH intervals, then there might be CDR records file transfer issue, which should be fixed firstly. For non-CDR record or non-PCMD record files, follow step 1 or step 2.		

Table 23-93 WmmLSS_cpiGTPcResponseTOGn

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiGTPcResponseTOGn (4215) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_cpiGTPcResponseTOGn, indicates that the value of VS.cpiGTPcResponseTOGn has exceeded a threshold in the last 15 minute interval. This counter monitors the percentage of GTP Requests sent over a Gn interface for which no Response is received by the MME. The Gn interface connects the MME with one or more SGSNs. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring SGSNs for error conditions or ongoing problems. Verify network connectivity and proper configuration between MME and SGSNs. If SGSNs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact next level of support.		

Table 23-94 WmmLSS_cpiGTPcResponseTOS3

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiGTPcResponseTOS3 (4216) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: The raised alarm, LSS_cpiGTPcResponseTOS3, indicates meeting a threshold of GTP response failure rate in the last 5 minute interval. This failure rate monitors the percentage of GTP Requests sent over an S3 interface for which no Response is received by the MME. The S3 interface connects the MME with one or more SGSNs. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring SGSNs for error conditions or ongoing problems. Verify network connectivity and proper configuration between MME and SGSNs. If SGSNs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the S3 interface have been reported. Contact next level of support.		

(2 of 2)

Table 23-95 WmmLSS_cpiGTPcResponseTOSv

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiGTPcResponseTOSv (4217) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiGTPcResponseTOSv indicates meeting a threshold of the GTPc Response Time out over Sv CPI (requests sent over an Sv interface for which no response is received).		
Remedial action: Check neighboring LVI(s) for error conditions or ongoing problems. Verify network connectivity and proper configuration between MME and LVI(s). If LVI(s) and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact next level of support.		

Table 23-96 WmmLSS_cpiHOfailuresFrom2g3goverGn

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiHOfailuresFrom2g3goverGn (8028) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 8.1.0
Description: The raised alarm, LSS_cpiHOfailuresFrom2g3goverGn, indicates that the value of $(100 - (100 * (VS.NbrHOTOtoLTSUCCESSGn / VS.AttNbrHOTOtoLTEGn)))$ has exceeded a threshold in the last 5 minute interval. This value monitors the percentage of failure rate of attempted handovers from GERAN/UTRAN to MME using the Gn interface. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures. For failures attributed to the MME, check the Gn link status and MME service status. Check fs.log for error indications related to Gn interface procedures, contact next level of support if internal MME errors are indicated.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-97 WmmLSS_cpiHOfailuresFromGERANoverS3

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiHOfailuresFromGERANoverS3 (4219) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_cpiHOfailuresFromGERANoverS3, indicates that the value of VS.cpiHOfailuresFromGERANoverS3 has exceeded a threshold in the last 5 minute interval. This counter monitors the failure rate of attempted handovers from GERAN to a E-UTRAN SGSN using the S3 interface. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures. For failures attributed to the MME, check the S3 link status and MME service status. Check fs.log for error indications related to S3 interface procedures, contact next level of support if internal MME errors are indicated.		

Table 23-98 WmmLSS_cpiHOfailuresFromUTRANoverS3

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiHOfailuresFromUTRANoverS3 (4220) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_cpiHOfailuresFromUTRANoverS3, indicates that the value of VS.cpiHOfailuresFromUTRANoverS3 has exceeded a threshold in the last 5 minute interval. This counter monitors the failure rate of attempted handovers from UTRAN to a E-UTRAN SGSN using the S3 interface. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures. For failures attributed to the MME, check the S3 link status and MME service status. Check fs.log for error indications related to S3 interface procedures, contact next level of support if internal MME errors are indicated.		

Table 23-99 WmmLSS_cpiHOfailuresRAUto2G3GnewSgwOverS3

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiHOfailuresRAUto2G3GnewSgwOverS3 (4222) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0

(1 of 2)

Alarm	Attributes	Applicable major releases
<p>Description: The raised alarm, LSS_cpiHOfailuresRAUto2G3GnewSgwOverS3, indicates that the value of VS.cpiHOfailuresRAUto2G3GnewSgwOverS3 has exceeded a threshold in the last 5 minute interval. This counter monitors the failure rate of attempted RAU-based handovers from E-UTRAN to a UTRAN/GERAN SGSN using the S3 interface with SGW Relocation. This is Routing Area Update procedures. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.</p>		
<p>Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures. For failures attributed to the MME, check the S3 link status and MME service status. Check fs.log for error indications related to S3 interface procedures, contact next level of support if internal MME errors are indicated.</p>

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-102 WmmLSS_cpiHOFailuresTo3G2GOverGn

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiHOFailuresTo3G2GOverGn (4218) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_cpiHOFailuresTo3G2GOverGn, indicates that the value of VS.cpiHOFailuresTo3G2GOverGn has exceeded a threshold in the last 15 minute interval. This counter monitors the failure rate of attempted handovers from E-UTRAN to a UTRAN/GERAN SGSN using the Gn interface. This includes Routing Area Update procedures. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures. For failures attributed to the MME, check the Gn link status and MME service status. Check fs.log for error indications related to Gn interface procedures, contact next level of support if internal MME errors are indicated.		

Table 23-103 WmmLSS_cpiHOfailuresToGERANoverS3

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiHOfailuresToGERANoverS3 (4224) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_cpiHOfailuresToGERANoverS3, indicates that the value of VS.cpiHOfailuresToGERANoverS3 has exceeded a threshold in the last 5 minute interval. This counter monitors the failure rate of attempted handovers from E-UTRAN to a GERAN SGSN using the S3 interface. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures. For failures attributed to the MME, check the S3 link status and MME service status. Check fs.log for error indications related to S3 interface procedures, contact next level of support if internal MME errors are indicated.		

Table 23-104 WmmLSS_cpiHOfailuresToUTRANoverS3

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiHOfailuresToUTRANoverS3 (4225) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_cpiHOfailuresToUTRANoverS3, indicates that the value of VS.cpiHOfailuresToUTRANoverS3 has exceeded a threshold in the last 5 minute interval. This counter monitors the failure rate of attempted handovers from E-UTRAN to a UTRAN SGSN using the S3 interface. The failure rate is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: For failures attributed to the SGSN, check the target UTRAN/GERAN network for errors related to inter-system mobility procedures. For failures attributed to the MME, check the S3 link status and MME service status. Check fs.log for error indications related to S3 interface procedures, contact next level of support if internal MME errors are indicated.

Table 23-111 WmmLSS_cpiMafAttachFailuresSysRelated

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMafAttachFailuresSysRelated (4233) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> 6.0.0 7.0.0 7.1.0 8.0.0 8.1.0
Description: The raised alarm, LSS_cpiMafAttachFailuresSysRelated, indicates meeting/exceeding a threshold of the rate of system-related failures for Attach procedures, which is calculated every 5 minutes.		
Remedial action: Verify that the S1, S6a and S11 links are in-service/normal, using the link_cli command. Verify that no overload alarms exist on the MME. Contact Alcatel-Lucent Customer Support		

Table 23-112 WmmLSS_cpiMafAttachWithPGWreselection

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMafAttachWithPGWreselection (4803) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> 7.0.0 7.1.0 8.0.0 8.1.0
Description: The raised alarm cpiAttachWithPGWreselection indicates meeting a threshold of the rate of PGW reselection during Attach procedures CPI.		
Remedial action: Contact Alcatel-Lucent Customer Support.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-113 WmmLSS_cpiMafAttachWithSGWreselection

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMafAttachWithSGWreselection (4804) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm cpiAttachWithSGWreselection indicates meeting a threshold of the rate of SGW reselection during Attach procedures CPI.		
Remedial action: Contact Alcatel-Lucent Customer Support.		

Table 23-114 WmmLSS_cpiMAFCommunicationFailureRate

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMAFCommunicationFailureRate (4226) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, cpiMAFCommunicationFailureRate, indicates meeting a threshold of MAF communication failure rate on a per MAF service basis in the last 5 minutes. The failure rate is calculated from the measurement count VS.TotalMsgsRcvdFromMAF and VS.TotalMsgsSentToMAF in every interval of 5 minutes. On the MI GUI the alarm resource will indicate which MAF service has the problem in the MAF pool.		
Remedial action: Check the overload status of the MAF service firing this alarm. Check if there is any hung process in the MAF service firing this alarm. If the MAF service is duplex, try to switch the active MAF service. Contact Alcatel-Lucent Technical Support if problem still persists.		

Table 23-115 WmmLSS_cpiMafEIRfailuresS13

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMafEIRfailuresS13 (4234) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_cpiMafEIRfailuresS13, indicates that the value of VS.LSS_cpiMafEIRfailuresS13 has exceeded a threshold in the last 5 minute interval. This counter monitors the percentage of unsuccessful EquipmentCheckRequest (ECR) to the number of ECRs attempted. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Verify the far end HSS (EIR) is functioning properly. Check fs.log for any ECR/ECA/S13 related errors to aid in determining the cause. Contact next level of support.		

Table 23-116 WmmLSS_cpiMafExtServiceReqFailuresSysRelated

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMafExtServiceReqFailuresSysRelated (4235) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiMafExtServiceReqFailuresSysRelated indicates meeting a threshold of the Extended Service Request System Related Failure CPI.		
Remedial action: Verify that S1, S6a, S11 and SGs links are Unlocked/Enabled using link_cli Verify that there are no overload alarms on MME Contact Customer Support		

Table 23-117 WmmLSS_cpiMafExtServiceRequestFailures

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMafExtServiceRequestFailures (4236) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiMafExtServiceRequestFailures indicates meeting a threshold of the Extended Service Request Failure CPI.		
Remedial action: Verify MME provisioning data, especially PLMN, TAI-LAI-Mapping, LAI tables Verify that S1, S6a, S11 and SGs links are Unlocked/Enabled using link_cli Verify that there are no overload alarms on MME Contact Customer Support		

Table 23-118 WmmLSS_cpiMafFailuresOverSGs

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMafFailuresOverSGs (4237) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_cpiMafFailuresOverSGs, indicates meeting/exceeding a threshold of the rate of failure for handling messages from the SGs interface, which is calculated every 5 minutes.		
Remedial action: Verify that the SGs links are in-service/normal, using the link_cli command. Contact Alcatel-Lucent Customer Support

Description: The raised alarm, LSS_cpiMafTauFailuresInterSgw, indicates meeting/exceeding a threshold of the rate of failure of Tracking Area Update procedures involving SGW relocation, which is calculated every 5 minutes.		
Remedial action: Verify that the eNB, and SGW links are in-service/normal, using the link_cli command. Contact Alcatel-Lucent Customer Support to determine the status of the serving eNB and the SGW Pools serving the eNB that is involved in the TAU procedure		

Table 23-126 WmmLSS_cpiMBMSSessionStartM3FailureRate

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMBMSSessionStartM3FailureRate (4227) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiMBMSSessionStartM3FailureRate indicates meeting a threshold of the MBMS Session Start M3 Failure Rate CPI.		
Remedial action: For failures attributed to the MCE, check the MCE/eNB and network connections for errors. For failures attributed to the MME, check the M3 link status and MME service status. Check fs.log for error indications related to M3 interface procedures, contact Alcatel-Lucent Customer Support if internal MME errors are indicated.		

Table 23-127 WmmLSS_cpiMBMSSessionStartSmFailureRate

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMBMSSessionStartSmFailureRate (4228) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiMBMSSessionStartSmFailureRate indicates meeting a threshold of the MBMS Session Start Sm Failure Rate CPI.		
Remedial action: For failures attributed to the MBMS-GW, check the MBMS-GW and network for errors. For failures attributed to the MME, check the Sm link status and MME service status. Check fs.log for error indications related to Sm interface procedures, contact Alcatel-Lucent Customer Support if internal MME errors are indicated.		

Table 23-128 WmmLSS_cpiMBMSSessionStopM3FailureRate

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMBMSSessionStopM3FailureRate (4229) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiMBMSSessionStopM3FailureRate indicates meeting a threshold of the MBMS Session Stop M3 Failure Rate CPI.		
Remedial action: For failures attributed to the MCE, check the MCE/eNB and network connections for errors. For failures attributed to the MME, check the M3 link status and MME service status. Check fs.log for error indications related to M3 interface procedures, contact Alcatel-Lucent Customer Support if internal MME errors are indicated.		

Table 23-129 WmmLSS_cpiMBMSSessionStopSmFailureRate

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMBMSSessionStopSmFailureRate (4230) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiMBMSSessionStopSmFailureRate indicates meeting a threshold of the MBMS Session Stop Sm Failure Rate CPI.		
Remedial action: For failures attributed to the MBMS-GW, check the MBMS-GW and network for errors. For failures attributed to the MME, check the Sm link status and MME service status. Check fs.log for error indications related to Sm interface procedures, contact Alcatel-Lucent Customer Support if internal MME errors are indicated.		

Table 23-130 WmmLSS_cpiMBMSSessionUpdateM3FailureRate

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMBMSSessionUpdateM3FailureRate (4231) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiMBMSSessionUpdateM3FailureRate indicates meeting a threshold of the MBMS Session Update M3 Failure Rate CPI.		
Remedial action: For failures attributed to the MCE, check the MCE/eNB and network connections for errors. For failures attributed to the MME, check the M3 link status and MME service status. Check fs.log for error indications related to M3 interface procedures, contact Alcatel-Lucent Customer Support if internal MME errors are indicated.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-131 WmmLSS_cpiMBMSSessionUpdateSmFailureRate

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMBMSSessionUpdateSmFailureRate (4232) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiMBMSSessionUpdateSmFailureRate indicates meeting a threshold of the MBMS Session Update Sm Failure Rate CPI.		
Remedial action: For failures attributed to the MBMS-GW, check the MBMS-GW and network for errors. For failures attributed to the MME, check the Sm link status and MME service status. Check fs.log for error indications related to Sm interface procedures, contact Alcatel-Lucent Customer Support if internal MME errors are indicated.		

Table 23-132 WmmLSS_cpiMemAllocFail

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiMemAllocFail (4243) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_cpiMemAllocFail, indicates the value of the VS.memAllocFail measurement monitored by the failed memory allocation attempts CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: Investigate the amount of load being handled by this service and take steps to reduce it if it is excessive. Otherwise contact Alcatel-Lucent Customer Support. If this alarm coincides with the introduction of a software update, contact Alcatel-Lucent Customer Support immediately. This alarm will clear automatically if the rate of memory allocation failures drops below the threshold.		

Table 23-133 WmmLSS_cpiNoPSHOFailuresOverSv

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiNoPSHOFailuresOverSv (4244) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiNoPSHOFailuresOverSv indicates meeting a threshold of the Hand Down to UTRAN/GERAN via the Sv interface without PSHO Failure Rate CPI.		
Remedial action: Check counters and alarms related to the Sv interface. Verify network connectivity and proper configuration between the MME and LVI(s). Check the target UTRAN/GERAN network for configuration problems that could cause the handover preparation attempts to be rejected. Check the source E-UTRAN network and target UTRAN/GERAN network for handover failure conditions. Check fs.log for error indications related to Sv interface procedures. Contact next level of support if internal MME errors are indicated.		

Table 23-134 WmmLSS_cpiPSHOFailuresOverSv

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiPSHOFailuresOverSv (4245) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiPSHOFailuresOverSv indicates meeting a threshold of the Hand Down to UTRAN/GERAN via the Sv interface with PSHO Failure Rate CPI.		
Remedial action: Check counters and alarms related to the Sv interface. Verify network connectivity and proper configuration between the MME and MSC(s). Check the target UTRAN/GERAN network for configuration problems that could cause the handover preparation attempts to be rejected. Check the source E-UTRAN network and target UTRAN/GERAN network for handover failure conditions. Check fs.log for error indications related to Sv interface procedures. Contact next level of support if internal MME errors are indicated.		

Table 23-135 WmmLSS_cpiReinitServiceSelf

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiReinitServiceSelf (4246) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiReinitServiceSelf indicates the value of the VS.reinitServiceSelf measurement monitored by the Automatic Service Re-initialization CPI exceeded a threshold in the last 15 minute interval.		
Remedial action: This alarm will clear automatically if the rate of re-initializations drops below the threshold. Check that a switch over has successfully occurred. Determine if any other alarms have been recently raised on the resource reported and address them. As this is likely the result of recovery escalation, one or more of these alarms may also be raised: LSS_cpiAsrtEsc, LSS_cpiExceptionService, LSS_cpiRestartTask. If a provisioning or configuration change was executed just before the alarm was raised, consider that the change is causing the problem. If a Software Update (SU) or Patch is being soaked, then this could indicate a problem with the software delivered; immediately contact Alcatel-Lucent Customer Support. If the situation persists after a switch-over, be sure that the prior active host of the service was removed from service and restored completely. Attempt another switch over to the original active host for the service if that has not already occurred. If the situation persists after two or more switch-overs of the pair within the service, then attempt to duplex fail the service. Attempt to power down the card providing the service and then restore it. If the problem clears, this suggests faulty hardware. In all cases, contact customer support regarding this alarm.		

Table 23-136 WmmLSS_cpiS3TauFailures

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiS3TauFailures (4247) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0

(1 of 2)

23 – Alcatel-Lucent 9471 WMM alarms

Alarm	Attributes	Applicable major releases
Description: The raised alarm, LSS_cpiS3TauFailures, indicates meeting/exceeding a threshold of the rate of failure of Tracking Area Update procedures from an SGSN to the MME over an S3 link.		
Remedial action: Verify that the eNB, SGW, HSS, and SGSN S3 links are in-service/normal, using link_cli. Verify the operational status of the SGSN and that the SGSN is responding to messages over the S3 link. Verify the operational status of the DNS server and that the DNS entries for the SGW are correct. Contact Alcatel-Lucent Customer Support to determine the status of the serving eNB, the HSS and the SGW serving the eNB that is involved in the TAU procedure.		

(2 of 2)

Table 23-137 WmmLSS_cpiS3TauFailuresInterSgw

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiS3TauFailuresInterSgw (4248) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_cpiS3TauFailuresInterSGW, indicates meeting/exceeding a threshold of the rate of failure of Tracking Area Update procedures from an SGSN to the MME over an S3 link that involves a change of serving SGW.		
Remedial action: Verify that the eNB, SGW, HSS, and SGSN S3 links are in-service/normal, using link_cli. Verify the operational status of the SGSN and that the SGSN is responding to messages over the S3 link. Verify the operational status of the DNS server and that the DNS entries for the SGW are correct. Contact Alcatel-Lucent Customer Support to determine the status of the serving eNB, the HSS and the SGW serving the eNB that is involved in the TAU procedure.		

Table 23-138 WmmLSS_cpiS3TauFailuresIntraSGW

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiS3TauFailuresIntraSGW (4249) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_cpiS3TauFailuresIntraSGW, indicates meeting/exceeding a threshold of the rate of failure of Tracking Area Update procedures from an SGSN to the MME over an S3 link that do not involve a change of serving SGW.		
Remedial action: Verify that the eNB, SGW, HSS, and SGSN S3 links are in-service/normal, using link_cli. Verify the operational status of the SGSN and that the SGSN is responding to messages over the S3 link. Verify the operational status of the DNS server and that the DNS entries for the SGW are correct. Contact Alcatel-Lucent Customer Support to determine the status of the serving eNB, the HSS and the SGW serving the eNB that is involved in the TAU procedure.		

Table 23-139 WmmLSS_cpiSgsn2GattachFailures

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiSgsn2GattachFailures (8037) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> 8.1.0
Description: The raised alarm, LSS_cpiSgsn2GattachFailures, indicates that the 2G value of VS.Gmm_succGprsAttach has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN Attach Procedure. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check EIR and/or HSS for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and EIR and/or HSS. Examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact next level of support.		

Table 23-140 WmmLSS_cpiSgsn2GpagingFailures

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiSgsn2GpagingFailures (8038) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> 8.1.0
Description: The raised alarm, LSS_cpiSgsn2GpagingFailures, indicates that the 2G value of VS.Gmm_unsuccPacketSwitchingPaging has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN Paging Procedure. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check GERAN for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and GERAN. Contact next level of support.		

Table 23-141 WmmLSS_cpiSgsn2GpdpActivationFailures

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiSgsn2GpdpActivationFailures (8039) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> 8.1.0
Description: The raised alarm, LSS_cpiSgsn2GpdpActivationFailures, indicates that the 2G value of VS.Sm_succActPDPctxMSPerSgsn has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN PDP Context Activation. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check neighboring SGW and GGSN for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and SGW and GGSN. If WMM and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Contact next level of support.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-142 WmmLSS_cpiSgsn2GpdpDeactNwFailures

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiSgsn2GpdpDeactNwFailures (8040) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> 8.1.0
<p>Description: The raised alarm, LSS_cpiSgsn2GpdpDeactNwFailures, indicates that the 2G sum of VS.Sm_succGgsnDeactPDPCTX_G and VS.Sm_succSgsnDeactPDPCTX_G has crossed a threshold in the last 15 minute interval. This counter monitors the percentage of failed SGSN PDP Context Deactivation NW. The calculated percentage is compared against provisioned thresholds for Minor, Major, and Critical alarm conditions.</p>		
<p>Remedial action: Check neighboring GERANs for error conditions or ongoing problems. Verify network connectivity and proper configuration between WMM and GERANs. If WMMs and network connectivity are verified, examine all the GTP failure counters to determine if one failure cause predominates, and check fs.log to determine if errors related to the Gn interface have been reported. Table 23-151 WmmLSS_cpiSS7DropSCTPPktsRcvd

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiSS7DropSCTPPktsRcvd (8035) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> 8.1.0
Description: This alarm, LSS_cpiSS7DropSCTPPktsRcvd, indicates the drop rate for transmitting SCTP packets (VS.SctplnSCTPPacks).		
Remedial action: Check to see if the IP network is experiencing congestion. If so, resolve the congestion and check if the alarm clear. If the alarm is not cleared, there is possibly an inconsistency with the provisioned data for the SS7 connections. Verify the consistency of the provisioned data on the local system and the remote system. If the alarm is not cleared, contact Alcatel-Lucent Customer Support. It is possible that there is data corruption which may require deleting and re-growing the SS7 connections or initializing the SS7 card		

Table 23-152 WmmLSS_cpiSS7FailSCTPFastRetransRate

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiSS7FailSCTPFastRetransRate (8036) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> 8.1.0
Description: This alarm indicates the SCTP Fast Retransmit Count on a given card, is in a high percentage of the total outgoing SCTP packet count. The SCTP Fast Retransmit Rate CPI (Component Performance Indicator), is calculated every 5 minutes.		
Remedial action: Check to see if the IP network is experiencing congestion. If so, resolve the congestion and check if the alarm clear. If the alarm is not cleared, contact Alcatel-Lucent Customer Support.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-153 WmmLSS_cpiStopWarnMsgDeliveryS1MMEFailureRate

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiStopWarnMsgDeliveryS1MMEFailureRate (4250) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiStopWarnMsgDeliveryS1MMEFailureRate indicates meeting a threshold of the Stop Warning Message Delivery S1MME Failure Rate CPI.		
Remedial action: Verify that the S1MME links are in-service/normal, using link_cli. Verify the operational status of the eNBs and that the eNBs are responding to messages over the S1MME link. Contact Alcatel-Lucent Customer Support to determine the status of the eNBs that are involved in the Stop Warning Message procedure.		

Table 23-154 WmmLSS_cpiStopWarnMsgDeliverySbcFailureRate

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiStopWarnMsgDeliverySbcFailureRate (4251) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiStopWarnMsgDeliverySbcFailureRate indicates meeting a threshold of the Stop Warning Message Delivery Sbc Failure Rate CPI.		
Remedial action: Verify that the SBC links are in-service/normal, using link_cli. Verify that the S1MME links are in-service/normal, using link_cli. Verify the operational status of the CBC. Verify the operational status of the eNBs and that the eNBs are responding to messages over the S1MME link. Contact Alcatel-Lucent Customer Support to determine the status of the CBC and eNBs that are involved in the Stop Warning Message procedure.		

Table 23-155 WmmLSS_cpiUECapacityUsage

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiUECapacityUsage (4252) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, cpiUECapacityUsage, indicates meeting a threshold of a UE capacity utilization rate on a per MAF service basis in the last 5 minutes.		
Remedial action: Check how many MAF services the MME has and consider to install more MAF services to increase the MME capacity.		

Table 23-156 WmmLSS_cpiWarnMsgDeliveryS1MMEFailureRate

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiWarnMsgDeliveryS1MMEFailureRate (4253) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiWarnMsgDeliveryS1MMEFailureRate indicates meeting a threshold of the Warning Message Delivery S1MME Failure Rate CPI.		
Remedial action: Verify that the S1MME links are in-service/normal, using link_cli. Verify the operational status of the eNBs and that the eNBs are responding to messages over the S1MME link. Contact Alcatel-Lucent Customer Support to determine the status of the eNBs that are involved in the Write Replace Warning Message procedure.		

Table 23-157 WmmLSS_cpiWarnMsgDeliverySBcFailureRate

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpiWarnMsgDeliverySBcFailureRate (4254) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_cpiWarnMsgDeliverySBcFailureRate indicates meeting a threshold of the Warning Message Delivery Sbc Failure Rate CPI.		
Remedial action: Verify that the SBC links are in-service/normal, using link_cli. Verify that the S1MME links are in-service/normal, using link_cli. Verify the operational status of the CBC. Verify the operational status of the eNBs and that the eNBs are responding to messages over the S1MME link. Contact Alcatel-Lucent Customer Support to determine the status of the CBC and eNBs that are involved in the Write Replace Warning Message procedure.		

Table 23-158 WmmLSS_cpuOverload

Alarm	Attributes	Applicable major releases
Name: WmmLSS_cpuOverload (4255) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that the CPU utilization on a service has exceeded the threshold. The overload could be caused by one or more of the following reasons: base overload, per-service quota restriction overload or thread level CPU overload. The 'Additional Info' field of the alarm report will list the contributing causes. When thread level CPU overload level changes, a corresponding profile report is also generated.		

(1 of 2)

23 – Alcatel-Lucent 9471 WMM alarms

Alarm	Attributes	Applicable major releases
<p>Remedial action: Verify that no running debug or testing tool is running that uses a lot of CPU. If CPU utilization regularly exceeds thresholds, investigate how the call traffic load can be reduced: Reengineer so less traffic is directed to this office or card. If your application supports higher-capacity cards, consider replacing them. Verify if there are enough call servers, device servers, etc., to handle the expected load and add additional cards as appropriate.</p>		

(2 of 2)

Table 23-159 WmmLSS_databaseConnectionLost

Alarm	Attributes	Applicable major releases
<p>Name: WmmLSS_databaseConnectionLost (4257) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry</p>	<p>Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)</p>	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
<p>Description: This alarm can be displayed during the initiation of CNFG server (startFS or startCNFG), when the host_manager fails to connect to the database.</p>		
<p>Remedial action: Stop and restart the database using the following commands: stopFS sudo RCCmachoffline -u sudo RCCmachonline startFS If this alarm is fired from CDR host and not cleared, contact Alcatel-Lucent Customer Support.</p>		

Table 23-160 WmmLSS_databaseReplicationLinkDown

Alarm	Attributes	Applicable major releases
<p>Name: WmmLSS_databaseReplicationLinkDown (4258) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry</p>	<p>Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)</p>	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
<p>Description: This alarm will be displayed when a database replication link is down.</p>		
<p>Remedial action: The host on one end of the bad link should be brought gracefully offline and online. Any active services on the blade should be switched to the mate host prior to bring the host offline. When the host is back online check replications links using 'lss login, type dbcli -R'.</p>		

Table 23-161 WmmLSS_databaseSizeExhausted

Alarm	Attributes	Applicable major releases
<p>Name: WmmLSS_databaseSizeExhausted (4259) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry</p>	<p>Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)</p>	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: This alarm is raised when a database approaches full capacity.		
Remedial action: If the alarm is a warning (84% full), the system impact on the specified database reaching capacity should be investigated. In some instances, a database at 84% capacity is acceptable. Contact Alcatel-Lucent Customer Support for additional details. If the alarm becomes Major (96% full), field support should be contacted. In most cases, steps to reduce the size of the database should be implemented. Alcatel-Lucent Customer Support should be contacted to assist in the investigation to reduce the size of the impacted database.		

(2 of 2)

Table 23-162 WmmLSS_dataMismatch

Alarm	Attributes	Applicable major releases
Name: WmmLSS_dataMismatch (4256) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: A data mismatch has been detected, which indicates that there has been an error in provisioning. The additionalText field of the event provides the details of the data mismatch.		
Remedial action: A data mismatch has been detected, which indicates that there has been an error in provisioning. The mismatch is most probably between the configurations of the SCTP profile and Interface profile and between the network interface types. Another probable cause is that provisioned for an interface do not match the IP addresses learned from the remote end in the SCTP INIT-ACK message. This alarm must be manually cleared after the provisioned data is corrected.		

Table 23-163 WmmLSS_dbHighCpuUtilization

Alarm	Attributes	Applicable major releases
Name: WmmLSS_dbHighCpuUtilization (4260) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates very high CPU time usage by a database system process.		
Remedial action: The host and pid of the process are printed in the alarm. Monitor CPU usage of this pid and contact Alcatel-Lucent Customer Support. This condition can generally be cleared by stopping and then starting RCC VM on the affected host.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-164 WmmLSS_dbOffline

Alarm	Attributes	Applicable major releases
Name: WmmLSS_dbOffline (4261) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm will be displayed when the database is offline.		
Remedial action: Normally the alarm will be cleared automatically when Datablitz servers recover; If this alarm is not cleared, please contact Alcatel-Lucent Customer Support.		

Table 23-165 WmmLSS_dbStatusUnexpected

Alarm	Attributes	Applicable major releases
Name: WmmLSS_dbStatusUnexpected (4262) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm will be displayed when the DataBlitz database can not be accessed.		
Remedial action: Normally the alarm will be cleared automatically when Datablitz database(s) becomes accessible. If this alarm is not cleared, please contact Alcatel-Lucent Customer Support.		

Table 23-166 WmmLSS_degradedResource

Alarm	Attributes	Applicable major releases
Name: WmmLSS_degradedResource (4263) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: A Critical Application Resource (CAR) has reached a degraded condition that indicates some aspect of the switch is not performing as expected. The affected service member is indicated in the alarm by the PoolType, PoolId, and PoolMemberId.		
Remedial action: The root cause depends on the specific resource that is degraded. From the alarm, determine the service member that is degraded, as shown by the PoolType, PoolId, and PoolMemberId. On the MI GUI, go to the Management Interface window. Under the appropriate shelf, click Service Members. In the Service Members window, right click the appropriate service member, and choose Display Degraded Critical Resources. A pop-up window will display the 'Resource name' for each resource that is causing the service member to be degraded. In most cases, when a resource is degraded, the associated alarm will be firing. See the entry for this alarm in the '9471 Mobility Management Entity Alarm Dictionary 418-111-208' for a list of resources and the associated alarms.		

Table 23-167 WmmLSS_degrow

Alarm	Attributes	Applicable major releases
Name: WmmLSS_degrow (4264) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: When performing SIM degrow procedure, failures that occur will result in the generation of DEGROW alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the DEGROW alarm is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 23-168 WmmLSS_deviceServerCxnLost

Alarm	Attributes	Applicable major releases
Name: WmmLSS_deviceServerCxnLost (5077) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm is generated when the mate-to-mate connection is lost for some service instance pairs. The service instance pairs that this alarm applies to includes: AMMS, H248, IMS, and the MPH.		
Remedial action: The alarm clears automatically when the switch-over is completed. If the alarm is not the result of a manual action, then the alarm will automatically clear within a minute. Customer Technical Support should be contacted if the alarm does not clear automatically. If the alarm is the result of a manual action, such as taking a host out of service, then the alarm will clear when the host is manually placed back into service.		

Table 23-169 WmmLSS_diskGoingDown

Alarm	Attributes	Applicable major releases
Name: WmmLSS_diskGoingDown (4265) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that the Smart Monitor Tool Set (smartmontools) has determined that the Disk Drive for this LCP Host is going down, and is predicting failure in the next 24 hours.		
Remedial action: Backup Recovery actions for this LCP Host should be immediately executed. Alcatel-Lucent Customer Support should be immediately contacted		

Table 23-170 WmmLSS_diskSector

Alarm	Attributes	Applicable major releases
Name: WmmLSS_diskSector (4266) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that the Smart Monitor Tool Set (smartmontools) has determined that the Disk Drive for this LCP Host has a bad sector.		
Remedial action: The card reporting the problem should be replaced, following the card replacement procedures.		

Table 23-171 WmmLSS_dnsThreshold

Alarm	Attributes	Applicable major releases
Name: WmmLSS_dnsThreshold (4267) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates returned number of IP addresses in DNS query of diameter fully-qualified domain name (FQDN) exceeds its number threshold.		
Remedial action: Verify that destination FQDN is correctly provisioned on the GUI Verify that FQDN is correctly provisioned on the external DNS server(IP addresses count should be less than threshold value).		

Table 23-172 WmmLSS_ethernetError

Alarm	Attributes	Applicable major releases
Name: WmmLSS_ethernetError (4268) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: One of the two Ethernet Links on a Service Host has failed.		
Remedial action: Regardless of the cause of the Ethernet Link alarm, integrity software running on the affected Service Host should automatically initiate a switch to redundant hardware to ensure that the effects of the failure are minimized. The following recovery actions may, in fact, be automatically initiated: Service Host switch, if multiple Ethernet Links are affected Ethernet Link switch, if a single Active Ethernet Link is affected None, if the hardware failure affects a Standby Ethernet Link The reason for the failure needs to be understood and corrected. It is possible that the Service Host Ethernet Port failed, the cabling that interconnects the Ethernet Port to the network is cut, the Routers and/or Ethernet Switches that make up the Alcatel-Lucent SoftSwitch Network failed. Investigate each of these reasons and discount or correct. Once corrected, the alarm will be cleared.		

Table 23-173 WmmLSS_ethernetLinkDown

Alarm	Attributes	Applicable major releases
Name: WmmLSS_ethernetLinkDown (4269) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The redundant Ethernet link has gone down on one of the diskless hosts. A link switchover may have occurred to move communication for that host to the remaining link, which is now simplex.		
Remedial action: Determine if any related alarms are also present, such as on the ESC, chassis, or board itself. Correct those alarms first and see if this alarm clears as a result. On Alcatel-Lucent CP 1000: Verify that the cable from the corresponding faceplate port to the external Ethernet router is connected and is good. Replace as necessary. On other Alcatel-Lucent Products: Verify that the ESC corresponding to this link is operational by viewing its status at MI, and by telnet to the ESC card. Correct or replace ESC as necessary. On Alcatel-Lucent 5400 LCP: Verify that the hub corresponding to this link is operational by viewing its status at MI, and by telnet to the Hub. Correct or replace Hub as necessary. On Alcatel-Lucent CP 1000: Verify that the external Ethernet router is operational. Correct or replace as necessary. On other Alcatel-Lucent Products: On the ESC verify that the Ethernet port corresponding to the card for this host is operational. Re-enable port as necessary. On Alcatel-Lucent 5400 LCP: On the hub verify that the Ethernet port corresponding to the card for this host is operational. Re-enable port as necessary. Replace the card used for this host using the appropriate FRU procedure as necessary. On Alcatel-Lucent CP 1000: Replace the card used for this host using the appropriate FRU procedure. If the above steps do not clear the alarm, contact Alcatel-Lucent Customer Support.		

Table 23-174 WmmLSS_excessiveExternalLinksDown

Alarm	Attributes	Applicable major releases
Name: WmmLSS_excessiveExternalLinksDown (4807) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: An excessive number of links of a given type (e.g. s1mme, s11, etc.) are down. This is usually due to a network connectivity problem and not the individual links between the WMM and the external entity. Once this alarm is triggered the WMM will stop reporting alarms and status for links of the given type. Once the network problem is resolved and the number of links down is no longer excessive, this alarm will clear and the status of all links of the given type will be updated. This alarm is raised when at least 100 links of a given type are down. This alarm clears when 95 or fewer links are down.		
Remedial action: Determine that there are no errors within the IP network. If the network entity data is provisioned on MME, verify the data is correct. Verify the network entity that MME fails to communicate with is in service.		

Table 23-175 WmmLSS_externalConnectivity

Alarm	Attributes	Applicable major releases
Name: WmmLSS_externalConnectivity (4270) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0

(1 of 2)

23 – Alcatel-Lucent 9471 WMM alarms

Alarm	Attributes	Applicable major releases
Description: The system detected a problem or a state change to external connectivity.		
Remedial action: For INFO alarm, there is no action needed. For MAJOR and CRITICAL alarm, verify the cable connections from both HUB cards to customer layer 2 switches, check if the cables are plugged properly. For MAJOR and CRITICAL alarm, verify the port status on HUB cards, the port connect to the customer network should be in service. For MAJOR and CRITICAL alarm, verify the individual Ethernet port status on the HUB card for the given host with the alarm. For the CRITICAL alarm, verify connectivity to/from each of the IPs listed in the ARP list from the given host with the alarm. Check the next hop reported as failing. Contact Alcatel-Lucent Customer Support for the correction procedure if previous steps do not correct it.		

(2 of 2)

Table 23-176 WmmLSS_externalLinkConfigurationLimit

Alarm	Attributes	Applicable major releases
Name: WmmLSS_externalLinkConfigurationLimit (4410) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The maximum number of links for a given link type has been reached. When this limit is reached, it is not possible to create any new links of the given link type. Every 15 minutes a check will be performed in an attempt to recover any links which have not been used or have been disabled due to lack of far-end response. A configurable parameter, TdynMO, is used to control the aging algorithm for link recovery.		
Remedial action: Wait at least TdynMO time interval to allow the system to recover inactive or disabled links. If the system does not recover any links after TdynMO time interval, contact Alcatel-Lucent Customer Support.		

Table 23-177 WmmLSS_externalLinkDown

Alarm	Attributes	Applicable major releases
Name: WmmLSS_externalLinkDown (4271) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: Communication between WMM and another network entity can not be established.		
Remedial action: Verify the network entity that WMM fails to communicate with is in service. Determine that there are no errors within the IP network. If the network entity data is provisioned on WMM, verify the data is correct. If multiple links that terminate on the MIF (X1_1 or X2) are down, try switching MIF to hot-standby mate. If multiple links that terminate on the MPH (non-X1_1 and non-X2) are down, try switching MPH to hot-standby mate.		

Table 23-178 WmmLSS_failedAttachReqsRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedAttachReqsRateExceeded (4272) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedAttachReqsRateExceeded, indicates the value of the VS.cpiAttachFailures measurement, monitored when failure Attach request CPI exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the UE Attach procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions		
Remedial action: Verify that the eNB, HSS and SGW links are in-service/normal, using the link_cli command. If the links look normal, and the alarm persists, contact Alcatel-Lucent Customer Support.		

Table 23-179 WmmLSS_failedAuthRequestsHSSRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedAuthRequestsHSSRateExceeded (4273) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedAuthRequestsHSSRateExceeded, indicates the value of VS.cpiHSSauthFailures measurement, monitored when HSS failed Authentication requests exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Authentication procedure between the MME and the HSS, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions		
Remedial action: Clearance options include: Ensure communication between the MME and HSS (ping) If the HSS (S6a) link looks normal (using the link_cli command), and alarm persists, contact Alcatel-Lucent Customer Support.		

Table 23-180 WmmLSS_failedAuthRequestsUERateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedAuthRequestsUERateExceeded (4274) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedAuthRequestsUERateExceeded, indicates the value of VS.cpiUEauthFailures measurement, monitored when UE failed Authentication requests exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Authentication procedure between the MME and the UE and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		

(1 of 2)

23 – Alcatel-Lucent 9471 WMM alarms

Alarm	Attributes	Applicable major releases
Remedial action: Verify HSS and UE authentication data, using ueadmin_cli. If the authentication data looks good, and the alarm persists, contact Alcatel-Lucent Customer Support.		

(2 of 2)

Table 23-181 WmmLSS_failedCrDedBearerReqsRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedCrDedBearerReqsRateExceeded (4275) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedCrDedBearerReqsRateExceeded, indicates the value of VS.cpiCreateDedicatedBearerFailures measurement, monitored when failure on Create Dedicated Bearer request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Create Dedicated Bearer procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Contact Alcatel-Lucent Customer Support.		

Table 23-182 WmmLSS_failedDeactDedBearerReqsRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedDeactDedBearerReqsRateExceeded (4276) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedDeactDedBearerReqsRateExceeded, indicates the value of VS.cpiDeactivateDedBearerFailures measurement, monitored when failure on Deactivate Dedicated Bearer request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Deactivate Dedicated Bearer procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Contact Alcatel-Lucent Customer Support.		

Table 23-183 WmmLSS_failedHRPDhandoverRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedHRPDhandoverRateExceeded (4277) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedHRPDhandoverRateExceeded, indicates the value of VS.cpiHRPDHoFailures measurement, monitored when failure on a HRPD Handover request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Handover to HRPD procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Look at all the failure counters for the Handover to HRPD procedure in the PMC XML files to determine if one failure cause predominates. If one is found, check User Documentation for any remedies specific to the found cause.		

Table 23-184 WmmLSS_failedMobileTermLocRequestRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedMobileTermLocRequestRateExceeded (4278) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_failedMobileTermLocRequestRateExceeded indicates meeting a threshold of the Mobile Termination Location Request Failure CPI.		
Remedial action: Verify that the S1-MME and SLs links are in-service/normal, using link_cli. Refer to the Location Based Services failure counters to get a more specific failure reason. Contact Alcatel-Lucent Customer Support to determine the status of the SMLC that are involved in the LCS procedure.		

Table 23-185 WmmLSS_failedNetwrkInducedLocRequestRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedNetwrkInducedLocRequestRateExceeded (4279) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_failedNetwrkInducedLocRequestRateExceeded indicates meeting a threshold of the Network Induced Location Request Failure CPI.		
Remedial action: Verify that the S1-MME and SLs links are in-service/normal, using link_cli. Refer to the Location Based Services failure counters to get a more specific failure reason. Contact Alcatel-Lucent Customer Support to determine the status of the SMLC that are involved in the LCS procedure.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-186 WmmLSS_failedNumHOFwdRelocRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedNumHOFwdRelocRateExceeded (4280) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedNumHOFwdRelocRateExceeded, indicates the value of VS.cpiHOMMErelocFailures_atTarget measurement, monitored when failure on Handover request, with MME forward relocation, exceeded a threshold in the last 15 minute interval. This value computes the failure rate at the Target MME for the Handover procedure with MME relocation, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Look at all the failure counters for the Handover procedure with MME relocation (at the Target MME) in the PMC XML files to determine if one failure cause predominates. If one is found, check User Documentation for any remedies specific to the found cause.		

Table 23-187 WmmLSS_failedNumHOPathSwNewSgwRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedNumHOPathSwNewSgwRateExceeded (4281) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedNumHOPathSwNewSgwRateExceeded, indicates the value of VS.cpiHOSGWrelocFailures measurement, monitored when failure on Handover Path Switch request, to a different Serving Gateway, exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Handover procedure without MME relocation and with SGW relocation, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Look at all the failure counters for the Handover procedure without MME relocation and with SGW relocation in the PMC XML files to determine if one failure cause predominates. If one is found, check User Documentation for any remedies specific to the found cause.		

Table 23-188 WmmLSS_failedNumHOPathSwSameSgwRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedNumHOPathSwSameSgwRateExceeded (4282) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: The raised alarm, LSS_failedNumHOPathSwSameSgwRateExceeded, indicates the value of VS.cpiHwNoRelocFailures measurement, monitored when failure on Handover Path Switch request, to same Serving Gateway, exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Handover procedure without MME relocation and without SGW relocation, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Contact Alcatel-Lucent Customer Support.		

(2 of 2)

Table 23-189 WmmLSS_failedNumHORequiredRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedNumHORequiredRateExceeded (4283) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedNumHORequiredRateExceeded, indicates the value of VS.cpiHwMMERelocFailures_atSource measurement, monitored when failure on Handover request, with MME relocation, exceeded a threshold in the last 15 minute interval. This value computes the failure rate at the source MME for the Handover procedure with MME relocation, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Look at all the failure counters for the Handover procedure with MME relocation (at the Source MME) in the PMC XML files to determine if one failure cause predominates. If one is found, check User Documentation for any remedies specific to the found cause.		

Table 23-190 WmmLSS_failedS1MMEconnEstRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedS1MMEconnEstRateExceeded (4284) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedS1MMEconnEstRateExceeded, indicates the value of VS.cpiS1MMEconnFailures measurement, monitored when failed S1MME Connect request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the eNB connection over S1-MME, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Verify PLMN or TAI provisioning data, via the MME provisioning GUI. After validation of the data, if the problem persists, contact Alcatel-Lucent Customer Support.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-191 WmmLSS_failedServiceReqsRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedServiceReqsRateExceeded (4285) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedServiceReqsRateExceeded, indicates the value of cpiServiceRequestFailures measurement, monitored when failure on Service request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the UE Service Request procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Ensure the S11 links to the SGW are normal, using the link_cli command. If the links look normal, and the alarm persists, contact Alcatel-Lucent Customer Support.		

Table 23-192 WmmLSS_failedTAURateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedTAURateExceeded (4286) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedTAURateExceeded, indicates the value of VS.cpiTauFailures measurement, monitored when failure on Tracking Area Update request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the TAU procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Contact Alcatel-Lucent Customer Support.		

Table 23-193 WmmLSS_failedUpdBearerReqsRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedUpdBearerReqsRateExceeded (4287) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedUpdBearerReqsRateExceeded, indicates the value of cpiUpdateBearerFailures measurement, monitored when failure on Update Bearer request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Update Bearer procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Ensure S11 links are normal, using the link_cli command. If the links are normal, and the alarm persists, contact Alcatel-Lucent Customer Support.		

Table 23-194 WmmLSS_failedUpdDedBearerReqsRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_failedUpdDedBearerReqsRateExceeded (4288) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_failedUpdDedBearerReqsRateExceeded, indicates the value of VS.cpiUpdateDedicatedBearerFailures measurement, monitored when failure on Update Dedicated Bearer request exceeded a threshold in the last 15 minute interval. This value computes the failure rate for the Update Dedicated Bearer procedure, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Verify that S11 links are normal, using the link_cli command. If links are normal, and the alarm persists, contact Alcatel-Lucent Customer Support.		

Table 23-195 WmmLSS_fru

Alarm	Attributes	Applicable major releases
Name: WmmLSS_fru (4289) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: When performing SIM fru procedure, failures that occur will result in the generation of FRU alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the FRU alarm is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 23-196 WmmLSS_ggsnDnsError

Alarm	Attributes	Applicable major releases
Name: WmmLSS_ggsnDnsError (4290) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: GGSN DNS Selection unable to retrieve IP Address. This alarm must be manually cleared.		
Remedial action: Verify that the GGSN IP Address is provisioned correctly on DNS server. Manually clear the alarm.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-197 WmmLSS_grow

Alarm	Attributes	Applicable major releases
Name: WmmLSS_grow (4291) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: When performing SIM grow procedure, failures that occur will result in the generation of GROW alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the GROW alarm is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 23-198 WmmLSS_hostDown

Alarm	Attributes	Applicable major releases
Name: WmmLSS_hostDown (4292) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: A Service Host abnormally transitioned to an out-of-service state. (Note, this alarm will only be generated if the mate Service Host is in-service.)		
Remedial action: In general, the first few occurrences of the abnormal termination is automatically recovered by integrity software on the Service Host, in which case no manual action is necessary. When automatic recovery occurs the alarm clears automatically as well. However, if the unexpected event causing the abnormal termination occurs at a frequent enough rate, the Service Host can be left in a permanent Unavailable state. If in this state the alarm will not be cleared automatically and manual action is necessary to restore the Service Host. Bringing a Service Host software back to an In-Service state can be initiated from the MI. Ultimately, the reason for the abnormal termination needs to be determined and a fix provided. Fortunately, debugging output is sent to the MI Log File and core files are typically generated when these conditions occur. To aid Alcatel-Lucent Customer Support in providing a fix, the storage of the MI Log File and the collection of any core files at the time the error occurred should be done and made available. The location of generated core files is /var/core on the Service host that experienced the abnormal termination.		

Table 23-199 WmmLSS_internalCommunicationFailure

Alarm	Attributes	Applicable major releases
Name: WmmLSS_internalCommunicationFailure (4293) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: Communication between active MIF member and active MAF/SAF member failed or communications between active MIF member and active MPH member failed.		

(1 of 2)

Alarm	Attributes	Applicable major releases
<p>Remedial action: Verify MPH, MIF and/or MAF have not been forced out-of-service. If communication is lost between the MPH and the MIF and it does not come back automatically, and MPH pool is in Active / Hot-standby state, try switching MPH to the standby member. If communication is lost between the MAF and the MIF and it does not come back automatically, and MAF pool is in Active / Hot-standby state, try switching MAF to the standby member. If communication is lost between the MIF and MPH and the MIF and MAFs and it does not come back automatically, and MIF pool is in Active / Hot-standby state, try switching MIF to the standby member.</p>		

(2 of 2)

Table 23-200 WmmLSS_ippuBusError

Alarm	Attributes	Applicable major releases
Name: WmmLSS_ippuBusError (4294) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
<p>Description: There is a bus error on the indicated host between the HSPP4 hardware (IPPU) in the AMC slot and the host hardware.</p>		
<p>Remedial action: Determine if any related alarms are also present, such as on the ESC, chassis, or board itself. Correct those alarms first and see if this alarm clears as a result. On Alcatel-Lucent 9471 WMM: Utilize <code>ippu_cli</code> to print the status of the board on the OAM host. On Alcatel-Lucent 9471 WMM: Verify the appropriate FRUID via shelf manager is present in the given ShelfId CardId. On Alcatel-Lucent 9471 WMM: Visually verify HSPP4 hardware is present in the AMC slot of the alarm indicated with a ShelfId and CardId. On Alcatel-Lucent 9471 WMM: On the Shelf Manager, verify the shelf and card in the alarm has an HSPP4 IPPU in the AMC slot. If HSPP4 is not detected, attempt to powercycle the card. On Alcatel-Lucent 9471 WMM: On the Shelf Manager, verify the shelf and card in the alarm has an HSPP4 IPPU in the AMC slot. If HSPP4 is not detected, attempt to re-seat the card in the alarm by ShelfId and CardId. On Alcatel-Lucent 9471 WMM: On the Shelf Manager, verify the shelf and card in the alarm has an HSPP4 IPPU in the AMC slot. If HSPP4 is not detected, replace the card used for this host using the appropriate FRU procedure as necessary. On Alcatel-Lucent 9471 WMM: Attempt to reset the entire host (ShelfId/CardId) via appropriate CLI or MI. Before attempting this action, verify that there is an ACTIVE or STAND BY mate present in the system. If the above steps do not clear the alarm, contact Alcatel-Lucent Customer Support.</p>		

Table 23-201 WmmLSS_ippuDegraded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_ippuDegraded (8049) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 8.1.0
<p>Description: This alarm will be displayed when the IPPU is either not working or incorrectly configured.</p>		
<p>Remedial action: Reboot the MAF blade hosting the IPPU. If the alarm persists after 30 minutes, contact field support.</p>		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-202 WmmLSS_ippuResourceReset

Alarm	Attributes	Applicable major releases
Name: WmmLSS_ippuResourceReset (4295) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: There was a software reset on the iPPU in the HSPP4 AMC or a restart by the PMB process in the host identified by ShelfId and CardId.		
Remedial action: Determine if any related alarms are present. Correct those alarms first and see if this alarm clears as a result. On Alcatel-Lucent 9471 WMM: Utilize ippu_cli to print the status of the board on the OAM host. On Alcatel-Lucent 9471 WMM: Before attempting this action, verify that there is an ACTIVE or STAND BY mate present in the system. Attempt to reset the entire card (shelf/slot) via appropriate CLI interface or MI. If the above steps do not clear the alarm, contact Alcatel-Lucent Customer Support.		

Table 23-203 WmmLSS_liNearingCapacityLimit

Alarm	Attributes	Applicable major releases
Name: WmmLSS_liNearingCapacityLimit (4296) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The number of lawful interceptions has reached 80% of MAF/SAF capacity.		
Remedial action: Use the query option of the li_target_cli command to verify that the appropriate set of UEs are selected for lawful interception.		

Table 23-204 WmmLSS_lostOfSDP

Alarm	Attributes	Applicable major releases
Name: WmmLSS_lostOfSDP (5152) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.1.0 • 8.0.0 • 8.1.0
Description: SDP is operationally down.		
Remedial action: Check SDP configuration. Use sdp-ping to check accessibility far-end. Manually clear the alarm.		

Table 23-205 WmmLSS_lostOfSpokeSDP

Alarm	Attributes	Applicable major releases
Name: WmmLSS_lostOfSpokeSDP (5153) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.1.0 • 8.0.0 • 8.1.0
Description: Spoke-SDP is operationally down.		
Remedial action: Check ingress and egress label mapping. Manually clear the alarm.		

Table 23-206 WmmLSS_maxDurationExpiredOnHRPDhandover

Alarm	Attributes	Applicable major releases
Name: WmmLSS_maxDurationExpiredOnHRPDhandover (4297) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_maxDurationExpiredOnHRPDhandover, indicates the value of VS.cpiMaxDurationHRPDhandover measurement, monitored when timed out on HRPD handover request exceeded a threshold in the last 15 minute interval. This value is the maximum time taken to perform a Handover to HRPD.		
Remedial action: Check the network routers for possible network delay. When the MME is programmed to include internal delay measurements, check these PMC values.		

Table 23-207 WmmLSS_memoryOverload

Alarm	Attributes	Applicable major releases
Name: WmmLSS_memoryOverload (4298) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates the memory utilization on a diskless service has exceeded a threshold or a memory allocation failure has occurred. The current default thresholds are: Minor - 80, Major - 85, Critical - 90.		
Remedial action: If memory usage regularly exceeds thresholds, investigate how the call traffic load can be reduced. If it does not clear after step 1, contact Alcatel-Lucent Customer Support to check if there is a memory leak occurring.		

Table 23-208 WmmLSS_mmeDnsError

Alarm	Attributes	Applicable major releases
Name: WmmLSS_mmeDnsError (4299) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: MME DNS Selection unable to retrieve MME IP Address associated with FQDN. This alarm must be manually cleared.		
Remedial action: Verify that the FQDN is provisioned correctly in DNS server. Manually clear the alarm.		

Table 23-209 WmmLSS_mmeExternalLinkDown

Alarm	Attributes	Applicable major releases
Name: WmmLSS_mmeExternalLinkDown (4300) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0
Description: Communication between MME and another network entity can not be established.		
Remedial action: Verify the network entity that the MME fails to communicate with is in service. Determine that no errors exist within the IP network. If the network entity data is provisioned on MME, verify that the data is correct. If multiple links that terminate on the MIF (X1_1 or X2) are down, try switching the MIF to its hot-standby mate. If multiple links that terminate on the MPH (non-X1_1 and non-X2) are down, try switching the MPH to its hot-standby mate.		

Table 23-210 WmmLSS_mmeInternalCommunicationFailure

Alarm	Attributes	Applicable major releases
Name: WmmLSS_mmeInternalCommunicationFailure (4301) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0
Description: Communication between active MIF member and active MAF member failed or communications between active MIF member and active MPH member failed.		
Remedial action: Verify MPH, MIF and/or MAF have not been forced out-of-service. If communication is lost between the MPH and the MIF and it does not come back automatically, and MPH pool is in Active / Hot-standby state, try switching MPH to the standby member. If communication is lost between the MAF and the MIF and it does not come back automatically, and MAF pool is in Active / Hot-standby state, try switching MAF to the standby member. If communication is lost between the MIF and MPH and the MIF and MAFs and it does not come back automatically, and MIF pool is in Active / Hot-standby state, try switching MIF to the standby member.		

Table 23-211 WmmLSS_mmeLiNearingCapacityLimit

Alarm	Attributes	Applicable major releases
Name: WmmLSS_mmeLiNearingCapacityLimit (4302) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> 6.0.0
Description: The number of lawful interceptions has reached 80% of MAF capacity.		
Remedial action: Use the query option of the li_target_cli command to verify that the appropriate set of UEs are selected for lawful interception.		

Table 23-212 WmmLSS_mmeNoResetAckReceived

Alarm	Attributes	Applicable major releases
Name: WmmLSS_mmeNoResetAckReceived (4303) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> 6.0.0
Description: No RESET ACKNOWLEDGEMENT message was received from the RNC after the MME/SGSN has sent and resent a RESET message.		
Remedial action: Verify the RNC that MME/SGSN fails to get the message from with is in service. Determine that no errors exist within the IP network.		

Table 23-213 WmmLSS_mmeTaiFqdnError

Alarm	Attributes	Applicable major releases
Name: WmmLSS_mmeTaiFqdnError (4304) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> 6.0.0
Description: SGW DNS Selection unable to retrieve SGW IP Address associated with TAI FQDN.		
Remedial action: Verify that the MCC, MNC, and TAC are provisioned correctly.		

Table 23-214 WmmLSS_msThreshold

Alarm	Attributes	Applicable major releases
Name: WmmLSS_msThreshold (4411) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: Number of attached MS or UE threshold reached		
Remedial action: If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-215 WmmLSS_nodeGroupOOS

Alarm	Attributes	Applicable major releases
Name: WmmLSS_nodeGroupOOS (4808) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0
Description: This Major alarm occurs when a Node Group state enters Redundancy. This Critical alarm occurs when a Node Group state enters Fault.		
Remedial action: The alarm is cleared when the node group state changed to Normal, i.e. all the nodes in this node group enter In Service(unblocked) state. Determine that there are no errors within the IP network. If errors exist, follow the operating procedures to correct these errors. Determine that the Ethernet Switch Card (ESC) is in service. If not, follow the local operating procedures to restore the ESC to service. Determine that the DNS is provisioned with correct IP addresses for the Destination URI. If not, correctly provision the DNS with the correct IP addresses for the Destination URI.		

Table 23-216 WmmLSS_nodeOOS

Alarm	Attributes	Applicable major releases
Name: WmmLSS_nodeOOS (4809) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0
Description: This alarm indicates the state of a Node has changed from in-service to out-of-service.		
Remedial action: Determine if the destination URI is in service and is able to respond to the SIP heartbeat. If not, follow the operating procedures to restore the destination URI to service. Determine that there are no errors within the IP network. If errors exist, follow the operating procedures to correct these errors. Determine that the Ethernet Switch Card (ESC) is in service. If not, follow the local operating procedures to restore the ESC to service. Determine that the DNS is provisioned with correct IP addresses for the Destination URI. If not, correctly provision the DNS with the correct IP addresses for the Destination URI.		

Table 23-217 WmmLSS_noResetAckReceived

Alarm	Attributes	Applicable major releases
Name: WmmLSS_noResetAckReceived (4305) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: No RESET ACKNOWLEDGEMENT message was received from the RNC after the WMM has sent and resent a RESET message.		
Remedial action: Verify the RNC that WMM fails to get the message from with is in service. Determine that there are no errors within the IP network.		

Table 23-218 WmmLSS_nseBandwidthThreshold

Alarm	Attributes	Applicable major releases
Name: WmmLSS_nseBandwidthThreshold (4412) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: NSE bandwidth threshold reached		
Remedial action: Analyze the operation context of the alarm. Determine if this alarm is structural or conjectural. Analyze the figures reported by the observation counters to evaluate how quick the NSE bandwidth has increased. Depending on the result of the investigations: If the NSE bandwidth remains over this threshold most of the time, and if alarm with major severity also appears, upgrade of the SGSN configuration must be performed. Please contact Alcatel-Lucent Customer Support.		

Table 23-219 WmmLSS_numberOfTuplesInUse

Alarm	Attributes	Applicable major releases
Name: WmmLSS_numberOfTuplesInUse (4309) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_numberOfTuplesInUse indicates that the number of tuples currently in use in a DA (data access) table used to store dynamic database information, has reached a threshold. The DA table in question is specified in the 'Resource'. The threshold is indicated in the 'Additional Information'.		
Remedial action: Contact Alcatel-Lucent Customer Support.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-220 WmmLSS_numTOS10gtpcRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_numTOS10gtpcRateExceeded (4306) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_numTOS10gtpcRateExceeded, indicates the value of VS.cpiGTPcResponseTO_S10 measurement, monitored when missing replies to S10(gtpc) request exceeded a threshold in the last 15 minute interval. This value computes the cpiage of Response messages that are not received over S10, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Check the network routers for any problems. Check to determine if any other MME elements are having problems.		

Table 23-221 WmmLSS_numTOS11gtpcRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_numTOS11gtpcRateExceeded (4307) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_numTOS11gtpcRateExceeded, indicates the value of VS.cpiGTPcResponseTO_S11 measurement, monitored when missing replies to S11(gtpc) request exceeded a threshold in the last 15 minute interval. This value computes the cpiage of Response messages that are not received over S11, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Verify that S11 links are normal, using the link_cli command. If links are normal, and the alarm persists, contact Alcatel-Lucent Customer Support.		

Table 23-222 WmmLSS_numTOS3gtpcRateExceeded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_numTOS3gtpcRateExceeded (4308) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm, LSS_numTOS3gtpcRateExceeded, indicates the value of VS.numTOS3gtpcRateExceeded measurement, monitored when missing replies to S3(gtpc) request exceeded a threshold in the last 5 minute interval. This value computes the percentage of Response messages that are not received over S3, and compares the calculation against provisioned thresholds for Minor, Major, and Critical alarm conditions.		
Remedial action: Verify that S3 links are normal, using the link_cli command. If links are normal, and the alarm persists, contact Alcatel-Lucent Customer Support.		

Table 23-223 WmmLSS_osSecInfoModificationDetected

Alarm	Attributes	Applicable major releases
Name: WmmLSS_osSecInfoModificationDetected (4310) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that an unexpected modification on the security information of a host operating system has been detected by the security audit program.		
Remedial action: Access MI GUI for the detailed information of this security alarm. Investigate the problematic file identified in the additionalText string. Correct any errors found during the investigation the problem. Contact Alcatel-Lucent Customer Support as needed. Once the error has been corrected, clear the alarm from the MI GUI.		

Table 23-224 WmmLSS_osSecInformationMissing

Alarm	Attributes	Applicable major releases
Name: WmmLSS_osSecInformationMissing (4311) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that the security information Golden copy of a host operating system has been deleted. The Golden copy is the initial snapshot of the host operating system, which is used by the security audit program to identify possible security violations of the host operating system.		
Remedial action: Access MI GUI for the detailed information of this security alarm. Investigate the problematic file identified in the additionalText string. Correct the problem by performing a Security Audit on this host from MI GUI to re-create the Golden copy. Contact Alcatel-Lucent Customer Support as needed. Once the error has been corrected, clear the alarm from MI GUI.		

Table 23-225 WmmLSS_osSecUnexpectedInformation

Alarm	Attributes	Applicable major releases
Name: WmmLSS_osSecUnexpectedInformation (4312) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that security audit program has detected an unexpected program currently running on a host.		
Remedial action: First access MI GUI for the detailed information about this security alarm. Investigation is needed to find out how the offending service/program got installed. The alarm can be manually cleared after removing the service/program and verifying the system integrity.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-226 WmmLSS_patch

Alarm	Attributes	Applicable major releases
Name: WmmLSS_patch (4313) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0
Description: When performing SIM patch procedure, failures that occur will result in the generation of PATCH alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the PATCH alarm is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 23-227 WmmLSS_pathAvailability

Alarm	Attributes	Applicable major releases
Name: WmmLSS_pathAvailability (4314) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm is raised when SCTP path becomes unavailable. The local and remote provisioned addresses need to be checked for use of the correct 2 sub-networks provided. If the provisioned addresses match the 2 physical subnets, and if all address provisioned are also correct, then the physical network that carries the subnet used in the path 'unavailable' alarm needs to be investigated for trouble. The specifics of the path are documented in the 'additionalText' field of the alarm. These alarms may need to be cleared manually: as alarms are reported when path connectivity is established, however their contents are a function of provisioned addresses (paths) that may be wrong and changed when the connection is down, and may no longer match with the path that was originally alarmed.		
Remedial action: Verify that the endpoints IP addresses on the MME are the remote entity are provisioned correctly. Verify that the network between the MME and the remote entity is functioning correctly.		

Table 23-228 WmmLSS_pdpThreshold

Alarm	Attributes	Applicable major releases
Name: WmmLSS_pdpThreshold (4413) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: Number of activated PDP context threshold reached.		
Remedial action: Analyze the operation context of the alarm. Determine if this alarm is structural or conjectural. Analyze the observation counters values to evaluate how quick the number of activated PDP contexts has increased. Depending on the result of the investigations: If the activated PDP contexts overload corresponds to a specific peak, you don't need to perform any upgrade of the SGSN. If alarm LSS_pdpThreshold is present as major, the activated PDP contexts overload is constant. There is a gap between the demand of PS services and the SGSN processing capacity. You need to upgrade the SGSN configuration. Please contact Alcatel-Lucent Customer Support.		

Table 23-229 WmmLSS_pgwDnsError

Alarm	Attributes	Applicable major releases
Name: WmmLSS_pgwDnsError (4315) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: MME DNS Selection unable to retrieve PGW IP Address associated with FQDN. This alarm must be manually cleared.		
Remedial action: Verify that the FQDN is provisioned correctly in DNS server. Manually clear the alarm.		

Table 23-230 WmmLSS_pktCorruptionDetectedViaRCCLANCheck

Alarm	Attributes	Applicable major releases
Name: WmmLSS_pktCorruptionDetectedViaRCCLANCheck (4316) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The LANCHECK audit has identified corrupted packets being transmitted through the network.		
Remedial action: The reason for the data corruption needs to be understood and corrected. It is possible that the Service Host Ethernet Port failed, the cabling that interconnects the Ethernet Port to the network is damaged, the Routers and/or Ethernet Switches that make up the Alcatel-Lucent SoftSwitch Network failed. Investigate each of these reasons and discount or correct. Once corrected, the alarm will be cleared.		

Table 23-231 WmmLSS_platformCommandFailure

Alarm	Attributes	Applicable major releases
Name: WmmLSS_platformCommandFailure (4317) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that a linux command started via crond has failed to execute on a host.		
Remedial action: Access MI GUI for the detailed information of this security alarm. Investigate the specific offending file identified in additionalText string and correct the problem. Contact Alcatel-Lucent Customer Support as needed. Once the file has been corrected, clear the alarm from the MI GUI.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-232 WmmLSS_pmDataNotCollected

Alarm	Attributes	Applicable major releases
Name: WmmLSS_pmDataNotCollected (4318) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The raised alarm LSS_pmDataNotCollected indicates that the PM process on CNFG card could not receive PM data from a service in a interval(5 minutes).		
Remedial action: Check if the card is in the network congestion status. if it could not be pinged through, please restart the card. Check if the card is in the init status. if yes, please wait for a while. If the above steps do not correct the problem, contact Alcatel-Lucent Customer Support.		

Table 23-233 WmmLSS_processDown

Alarm	Attributes	Applicable major releases
Name: WmmLSS_processDown (4319) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that an application process that should be running has terminated.		
Remedial action: Recovery software should automatically recover from the abnormal or maintenance event that has caused the process termination, without any manual involvement. The automatic recovery will restart just that process or will reboot the card as necessary. If the alarm does not clear or if it occurs repeatedly, contact Alcatel-Lucent Customer Support.		

Table 23-234 WmmLSS_processNotStarted

Alarm	Attributes	Applicable major releases
Name: WmmLSS_processNotStarted (4320) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm is LSS_processNotStarted as raised by the MME system		

(1 of 2)

Alarm	Attributes	Applicable major releases
<p>Remedial action: IPM: Based on the type of failure encountered, recovery actions may vary. If the ipmStartupFailure is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, the startup of the ipm process will automatically clear the alarm. DHCPD: Based on the type of failure encountered, recovery actions vary. If the dhcpdStartupFailure is generated, contact Alcatel-Lucent Customer Support. Once the failure is correct, the startup of the dhcpd process will automatically clear the alarm. DNSPROXY: Based on the type of failure encountered, recovery actions may vary. If the dnsproxyStartupFailure is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, the startup of the dnsproxy process will automatically clear the alarm. PDNS SERVER: Based on the type of failure encountered, recovery actions may vary. If the pdnsStartupFailure is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, the startup of the pdns process will automatically clear the alarm. UNBOUND: Based on the type of failure encountered, recovery actions may vary. If the unboundStartupFailure is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, the startup of the unbound process will automatically clear the alarm. LIGHTTPD: Based on the type of failure encountered, recovery actions may vary. If the lighttpdStartupFailure is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, the startup of the lighttpd process will automatically clear the alarm. SSHD: Based on the type of failure encountered, recovery actions may vary. If the sshdStartupFailure is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, the startup of the sshd process will automatically clear the alarm. NTPD: Based on the type of failure encountered, recovery actions may vary. If the ntpdStartupFailure is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, the startup of the ntpd process will automatically clear the alarm.</p>		

(2 of 2)

Table 23-235 WmmLSS_provisioningError

Alarm	Attributes	Applicable major releases
Name: WmmLSS_provisioningError (4321) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
<p>Description: Missing provisioning of TAI-to-LAI mapping to MSC in 2G/3G operator for SGS based CSFB/SMS.</p>		
<p>Remedial action: Provision missing entries in TAI-LAI mapping table utilizing LAI in 2G/3G operator. Refer to user text in alarm.</p>		

Table 23-236 WmmLSS_rcclnhibitedMode

Alarm	Attributes	Applicable major releases
Name: WmmLSS_rcclnhibitedMode (4810) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0
<p>Description: This alarm will be raised when RCC is set to inhibited mode on a host. Inhibited mode will prevent any service on that host from being switched over to its mate, or from failing over to its mate, and is typically used only during maintenance activities such as software upgrade or patching.</p>		
<p>Remedial action: The alarm will clear automatically when the RCC inhibit flag is cleared on the affected host. 1. To display the RCC inhibit flag on a host, run this command on the MI: For ATCA: rcc_adm --action disp_inhibit --host <amp value="It"/>hostname<amp value='gt'/> For cPSB: rcclnhibit -d <amp value='It'/>hostname<amp value='gt'/> where <amp value='It'/>hostname<amp value='gt'/> is the affected host name 2. To clear the RCC inhibit flag on a host, run this command from the MI: For ATCA: rcc_adm --action clr_inhibit --host <amp value='It'/>hostname<amp value='gt'/> For cPSB: rcclnhibit -a CLEAR <amp value='It'/>hostname<amp value='gt'/> where <amp value='It'/>hostname<amp value='gt'/> is the affected host name If the alarm does not clear after clearing the RCC inhibit flag, contact Alcatel-Lucent Customer Support"</p>		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-237 WmmLSS_remotedbLinkDown

Alarm	Attributes	Applicable major releases
Name: WmmLSS_remotedbLinkDown (4323) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm will be displayed when the remotedb trigger function connection does not exist.		
Remedial action: Normally the alarm will be cleared automatically when a remote service restarts and re-connects to the remotedb database; If this alarm is not cleared, please contact Alcatel-Lucent Customer Support.		

Table 23-238 WmmLSS_remoteQueryServerFailure

Alarm	Attributes	Applicable major releases
Name: WmmLSS_remoteQueryServerFailure (4322) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that a host has lost connection to a remote DNS/ENUM server.		
Remedial action: The user needs to check the failed DNS server as to the nature of the server failure		

Table 23-239 WmmLSS_restore

Alarm	Attributes	Applicable major releases
Name: WmmLSS_restore (4324) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: When performing SIM restore procedure, failures that occur will result in the generation of RESTOR E alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the RESTOR E alarm is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 23-240 WmmLSS_serviceOnewayCommunication

Alarm	Attributes	Applicable major releases
Name: WmmLSS_serviceOnewayCommunication (4325) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: A service might have one way communication to the Redundancy Manager and possibly other network elements.		
Remedial action: Wait approximately 1 minute 30 seconds; if the alarm does not clear autonomously, one will need to investigate why the alarm does not clear. Check and see if there are other outstanding alarms on this service that might trump the onewayCommunication alarm. Those alarms would be of type connectionLost; or any other alarms associated to the state of the service. Other alarms would indicate that a more severe problem exists on the service; and onewayCommunication could optionally be cleared at this point; as the other service based alarms most likely supersede the onewayCommunication alarm.		

Table 23-241 WmmLSS_sgsnDnsError

Alarm	Attributes	Applicable major releases
Name: WmmLSS_sgsnDnsError (4326) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: SGSN DNS Selection unable to retrieve SGSN IP Address associated with FQDN. This alarm must be manually cleared.		
Remedial action: Verify that the FQDN is provisioned correctly in DNS server. Manually clear the alarm.		

Table 23-242 WmmLSS_sgwResourceDegraded

Alarm	Attributes	Applicable major releases
Name: WmmLSS_sgwResourceDegraded (8050) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 8.1.0
Description: The raised LSS_sgwResourceDegraded alarm indicates the WMM selection on SGW or SGW-PGW pair has been degraded.		
Remedial action: Determine that there are no errors within the IP network. Determine that the SGW and/or SGW PGW pair are in service. Check if the invocation of wmm_cli tool was intentional.		

Table 23-243 WmmLSS_sgwSelectionFailure

Alarm	Attributes	Applicable major releases
Name: WmmLSS_sgwSelectionFailure (5106) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.1.0 • 8.0.0 • 8.1.0
Description: SGSN fails to select a SGW either due to failure to select SGW S5 service, SGW S8 service, or SGW S4 service. This alarm shall be manually cleared.		
Remedial action: Verify that the SGW is provisioned, configured correctly. Manually clear the alarm.		

Table 23-244 WmmLSS_sheddingOverload

Alarm	Attributes	Applicable major releases
Name: WmmLSS_sheddingOverload (4327) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates the message shedding severity under system overload. The two severity levels indicate the degree of shedding severity. The types of messages/calls that are shed is specific to the application and there tends to be additional types of messages impacted by the shedding as the severity increases. Currently the default thresholds between Major and Critical is 70.		
Remedial action: Verify that there is no running debug or testing tool that uses a lot of CPU/memory. If CPU or memory utilization regularly exceeds thresholds, investigate how the call traffic load can be reduced: Reengineer so less traffic is directed to this office or card. Consider replacing the overloaded card pair with higher-capacity cards. Verify if there are enough cards to handle the expected load and add additional cards as appropriate.		

Table 23-245 WmmLSS_shmcEthernetError

Alarm	Attributes	Applicable major releases
Name: WmmLSS_shmcEthernetError (4328) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The Ethernet link to the Shelf Management Card (ShMC) has failed.		
Remedial action: Verify the hub port corresponding to this server by telnet to the hub card. Correct or replace the hub as necessary. Verify that the shelf management cards are running on active/standby status by 'clia shmstatus' command on shelf management card. Correct the status as necessary.		

Table 23-246 WmmLSS_simxml

Alarm	Attributes	Applicable major releases
Name: WmmLSS_simxml (4329) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: When performing simxml procedure, failures that occur will result in the generation of SIMXML alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the SIMXML alarm is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 23-247 WmmLSS_sipLinkSetMaxQuarantineList

Alarm	Attributes	Applicable major releases
Name: WmmLSS_sipLinkSetMaxQuarantineList (4811) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.0.0
Description: This alarm occurs when the maximum number of out of service SIP linkset has been reached in the quarantine list.		
Remedial action: need manual procedure to clear the alarm		

Table 23-248 WmmLSS_softwareAllocatedResourceOverload

Alarm	Attributes	Applicable major releases
Name: WmmLSS_softwareAllocatedResourceOverload (4330) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates that the utilization of a pre-allocated resource by software has exceeded thresholds. The resource could be internal buffer, data structure array, table entries, etc.		
Remedial action: Consider reengineering so that less traffic is directed to this service. If condition persists, contact Alcatel-Lucent Customer Support.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-249 WmmLSS_softwareComponentDown

Alarm	Attributes	Applicable major releases
Name: WmmLSS_softwareComponentDown (5145) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.1.0 • 8.0.0 • 8.1.0
Description: Software that is executing on the Service Host has terminated abnormally.		
Remedial action: Generally, no manual action is necessary. Integrity software on the Service Host takes care of automatic recovery from the abnormal termination. When automatic recovery occurs the alarm will be cleared automatically as well. The affected software gets in a permanent unavailable state after frequent abnormal terminations. In this state, the alarm will not be cleared automatically and manual action will be necessary to restore the software. Bringing Service Host software back to an in-service state can be initiated from the MI. Use the MI GUI virtual host screen, initialization control option. If the problem reoccurs, contact Alcatel-Lucent Customer Support.		

Table 23-250 WmmLSS_softwareComponentStandbyNotReady

Alarm	Attributes	Applicable major releases
Name: WmmLSS_softwareComponentStandbyNotReady (4331) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The state of the software component, Virtual Machine (VM) that is executing on the Service Host is standby-cold or standby-cool		
Remedial action: Generally, no manual action is necessary. Integrity software on the Service Host takes care of automatic recovery from the standby-cold/standby-cool state. When automatic recovery occurs the alarm clears automatically as well. The timing for each VM to come up is different. Since this alarm will fire during the NOR MAL init time, it should not treat as a problem until 10 minutes later. If the alarm does not clear after one interval, contact Alcatel-Lucent Customer Support.		

Table 23-251 WmmLSS_svcdegrow

Alarm	Attributes	Applicable major releases
Name: WmmLSS_svcdegrow (4332) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: When performing SIM service degrow (svcdegrow) procedure, failures that occur will result in the generation of SVCDEGROW alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the SVCDEGROW alarm is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 23-252 WmmLSS_svcgrow

Alarm	Attributes	Applicable major releases
Name: WmmLSS_svcgrow (4333) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: When performing SIM service grow (svcgrow) procedure, failures that occur will result in the generation of SVCGROW alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the SVCGROW alarm is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, a resumption of the SIM procedures will automatically clear the alarm.		

Table 23-253 WmmLSS_swVersionMismatch

Alarm	Attributes	Applicable major releases
Name: WmmLSS_swVersionMismatch (4334) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The software version running on this service member does not match the version that should be running according to the database table IPCFG_POOL_MEMBERS, field build_sec.		
Remedial action: On the MI, run the remVersCheck command. It should show that for this service member, build_sec disagrees between the database and the running binary. Check whether either of them agrees with the service zip file. If the database and zip agree, initialize the service member. Otherwise, contact Alcatel-Lucent Customer Support.		

Table 23-254 WmmLSS_taiFqdnError

Alarm	Attributes	Applicable major releases
Name: WmmLSS_taiFqdnError (4335) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: MME DNS Selection unable to retrieve SGW IP Address associated with FQDN. this alarm must be manually cleared.		
Remedial action: Verify that the FQDN is provisioned correctly in DNS server. Manually clear the alarm.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-255 WmmLSS_tftpDownloadCorrupt

Alarm	Attributes	Applicable major releases
Name: WmmLSS_tftpDownloadCorrupt (4336) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm can be fired due to two different problems. Alarm information is given specific sub-section below.		
Remedial action: If the Additional Info field looks like TftpOpen() Failure Ret(hexadecimal error number), IOR et(hexadecimal error number), File(service application zip file name and path), IP(hexadecimal version of the CNFG host IP) continue on to step 2. Otherwise, go to step 3. Check the file name and path on the indicated CNFG host and ensure that is readable by all. If not performing SU or Path, recover file from mate CNFG host. reboot the host issuing the alarm If the alarm persists. Contact the Alcatel-Lucent Customer Support		

Table 23-256 WmmLSS_threadsExhausted

Alarm	Attributes	Applicable major releases
Name: WmmLSS_threadsExhausted (5111) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 7.1.0 • 8.0.0 • 8.1.0
Description: One or more critical CP Tasks have been un-responsive to regular Integrity Monitor - IMON Heartbeats. IMON attempted to restart them and multiple restarts have escalated to a Process Init on the Standby Card or a Switch Over to the Standby Card from the Active Card where the target stuck task was running.		
Remedial action: NOT APPLICABLE		

Table 23-257 WmmLSS_upgrade

Alarm	Attributes	Applicable major releases
Name: WmmLSS_upgrade (4337) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: When performing Software Upgrade (SU) related activities (which includes bkupSys and SIM upgrade procedure), failures that occur will result in generation of SU alarm.		
Remedial action: Based on the type of failure encountered, recovery actions may vary. If the SU alarm is generated, contact Alcatel-Lucent Customer Support. Once the failure is corrected, a resume of the SIM procedures will automatically clear the alarm. For bkupSys, once the failure is corrected re-executing bkupSys will automatically clear the alarm.		

Table 23-258 WmmLSS_virtualClusterDown

Alarm	Attributes	Applicable major releases
Name: WmmLSS_virtualClusterDown (4338) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: A Virtual Cluster spanning a pair of Service Hosts abnormally transitioned to an out-of-service state. (Note, a Virtual Cluster is a logical grouping of a pair of Software Components. Each Software Component executes on a separate Service Host and typically runs Active and Standby.)		
Remedial action: If this alarm persists, contact Alcatel-Lucent Customer Support.		

Table 23-259 WmmRALARM_Loop

Alarm	Attributes	Applicable major releases
Name: WmmRALARM_Loop (4339) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm is RALARM_Loop as raised by the MME system		
Remedial action: loop 1 - Verify/replace circuit breakers/fuses. loop 2 - Depends on what device (e.g. temperature sensor) is connected to the external input. loops unavailable - contact Alcatel-Lucent Customer Support. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-260 WmmRALARM_Power

Alarm	Attributes	Applicable major releases
Name: WmmRALARM_Power (4340) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm indicates a problem with the -48V, A feed or B feed, power to the Power Distribution Unit.		
Remedial action: Check the Power Distribution Units LEDs, circuit breakers, fuses, and power feeds. Replace the faulty alarm card, circuit breakers, fuses, or power feeds. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-261 WmmSYS_BackupFailure

Alarm	Attributes	Applicable major releases
Name: WmmSYS_BackupFailure (4341) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The backup of an SNE has failed. On the next successful backup, this alarm will clear.		
Remedial action: If the additionalText of the alarm states 'Fail to get AccessKey for ESCHost/LNG application...', you need to set up userid/password on corresponding esc/Ing in 'Configuration Management' --> 'Backup Management' --> 'Login Administration' panel on MI GUI first. Attempt another backup. If the problem persists, contact Alcatel-Lucent Customer Support.		

Table 23-262 WmmSYS_Configuration

Alarm	Attributes	Applicable major releases
Name: WmmSYS_Configuration (4344) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: A possible configuration problem has been detected on the MI.		
Remedial action: If the specificProblem is MissingScheduledBackups: Run mi_audit -a sched_backups on the active MI to get a list of the devices that do not have a scheduled backup. For those devices, schedule a backup job using the MI GUI, Configuration Management->Backup Management->Scheduling Run mi_audit -a sched_backups on the active MI to clear the alarm once all required backups are scheduled. If the specificProblem is PMDisabled: Run PMcontrol --master start on the active MI to enable PM collection This will enable PM collection on the MI and automatically clear this alarm. If the specificProblem is NTPServerNotConfigured: Configure at least one NTP server. For ATCA, to add and configure an NTP server, refer to the section 'To add or delete remote NTP servers IP addresses' in the Alcatel-Lucent 5400 Linux Control Platform Configuration Management, 270-702-014 and 'To setup secure NTP configuration' in the Alcatel-Lucent 5400 Linux Control Platform Security Management, 270-702-015. For CPSB, to add and configure an NTP server, refer to the section 'To add or delete NTP server IP address' and 'Setup secure NTP configuration' in the Alcatel-Lucent Control Platform 1800 Operations, Administration, Maintenance and Provisioning, 270-900-872. Run mi_audit -a ntp on the active MI to clear the alarm. If the specificProblem is NTPServerNotReachable: Run ntpconf_admin --action show_server to see the configured NTP server IP address(es). Resolve the connectivity problem to the intended NTP server. The NTP server should be pingable from the MI. Run mi_audit -a ntp on the active MI to clear the alarm. If the specificProblem is MaintModeEnabled: This alarm will be raised when the MI is placed into maintenance mode for any maintenance activity using the mi_maint on cmd. It will be cleared when taken out of maintenance mode, using the mi_maint off cmd. If for some reason the alarm is not cleared and the maintenance flag is off (verify with mi_maint status cmd), run mi_audit -a maint_mode on the active MI to clear the alarm.		

Table 23-263 WmmSYS_CPM_USERDATA_INCONSITENCY

Alarm	Attributes	Applicable major releases
Name: WmmSYS_CPM_USERDATA_INCONSITENCY (4342) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: A possible CPM user data inconsistency problem has been detected on the MI.		
Remedial action: Login to active MI as root execute 'mividstat -a' Make sure CPM is enabled and Connection Health Check is Yes. If not, please refer to CDOC 270-702-015 section 'CPM and RBAC' to enable CPM. If CPM status is OK and there is such alarm. Please contact Alcatel-Lucent Customer Support for further support. Once the issue is resolved, this alarm should be cleared manually from the MI GUI.		

Table 23-264 WmmSYS_CPM_USERDATA_RESTORED

Alarm	Attributes	Applicable major releases
Name: WmmSYS_CPM_USERDATA_RESTORED (4343) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: CPM audit restore user's data after it finds issue.		
Remedial action: Login to active MI as root execute 'mividstat -a' Make sure CPM is enabled and Connection Health Check is Yes. If not, please refer to CDOC 270-702-015 section 'CPM and RBAC' to enable CPM. If CPM status is OK and there is such alarm. Please contact Alcatel-Lucent Customer Support for further support. Once the issue is resolved, this alarm should be cleared manually from the MI GUI.		

Table 23-265 WmmSYS_EventQueueCapacity

Alarm	Attributes	Applicable major releases
Name: WmmSYS_EventQueueCapacity (4345) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The MI event queue is nearing or has exceeded it's capacity.		
Remedial action: If the problem persists, contact Alcatel-Lucent Customer Support.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-266 WmmSYS_ICMPFailure

Alarm	Attributes	Applicable major releases
Name: WmmSYS_ICMPFailure (4346) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The MI was unable to communicate to a host via its IP interface.		
Remedial action: Verify that the ethernet cable is connected and in working order. Verify that the routers/switches are configured correctly. If the problem persists over several polling cycles, contact Alcatel-Lucent Customer Support.		

Table 23-267 WmmSYS_IPsecConfig

Alarm	Attributes	Applicable major releases
Name: WmmSYS_IPsecConfig (4347) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: Missing or obsolete SNMP Trap subnets found in the IPsec configuration file on the MI-Agent.		
Remedial action: A change to the IPsec configuration is needed. Please refer to the procedure described in the section titled 'To configure IPsec SNMP trap entries' in the 'Alcatel-Lucent 5400 Linux Control Platform, Security Management' guide for the ATCA platform, or in the 'Alcatel-Lucent Control Platform 1800 OAMP' guide for the CPSB platform.		

Table 23-268 WmmSYS_LinkDown

Alarm	Attributes	Applicable major releases
Name: WmmSYS_LinkDown (4348) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: A linkDown alarm signifies that the operational status for one of the communication links is about to enter the down state. The name/index of the interface is identified in the specificProblem of the alarm.		
Remedial action: Verify the cabling. Verify the far-end of the link.		

Table 23-269 WmmSYS_NotifyDisabled

Alarm	Attributes	Applicable major releases
Name: WmmSYS_NotifyDisabled (4349) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
<p>Description: This alarm occurs when a user login is temporarily disabled, yet the user during this period attempts to login with the correct userid and password. User Intervention by a Security Administrator is not required when an user is temporarily disabled as long as no more logins are attempted within fifteen minutes interval. If a user becomes locked then an additional alarm (SYS_NotifyLocked) will be generated thus Security Administrator intervention will be required.</p>		
<p>Remedial action: Contact the user of this userid to determine if they are aware of these attempts to log on to the system using this userid. Determine whether any security violations occurred and report accordingly. Manually clear this alarm from the MI Alarm Browser.</p>		

Table 23-270 WmmSYS_NotifyLocked

Alarm	Attributes	Applicable major releases
Name: WmmSYS_NotifyLocked (4350) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
<p>Description: This alarm occurs when a user is locked out from being able to Log in due to repeated consecutive login failures. User Intervention by a Security Administrator is required to unlock the account.</p>		
<p>Remedial action: Contact the user of this userid to determine if they are aware of these attempts to log on to the system using this userid. Determine whether any security violations occurred and report accordingly Log onto NavisID GUI and unlock this user's account if appropriate. Manually clear this alarm from the MI Alarm Browser.</p>		

Table 23-271 WmmSYS_RADIUS_TO_LDAP_FAILURE

Alarm	Attributes	Applicable major releases
Name: WmmSYS_RADIUS_TO_LDAP_FAILURE (4351) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
<p>Description: This alarm occurs when RADIUS fails to connect to LDAP during user authentication attempt</p>		
<p>Remedial action: This Alarm clears automatically when the fault condition is no longer present. Log in to active MI (ATCA) as root execute 'mividstat -a' Make sure that Radius/LDAP Connection Health Check is Yes Check the /var/log/auth.log for detailed information. You may also use the Security and Audit Trail Log Viewer on the MI-agent GUI to view this log.</p>		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-272 WmmSYS_ROOT_ACCESS_DENIED

Alarm	Attributes	Applicable major releases
Name: WmmSYS_ROOT_ACCESS_DENIED (4352) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm occurs when a user makes three attempts within a 30 minute period to log onto the LCP hosts as root user id from a restricted domain. This alarm must be manually cleared		
Remedial action: This Alarm should be cleared manually. Need to find out where the user is trying to log in from to further verify whether this is a legitimate user. Check the /var/log/auth.log for detailed information. You may also use the Security and Audit Trail Log Viewer on the MI-agent GUI to view this log.		

Table 23-273 WmmSYS_ROOT_FTP_VIOLATION

Alarm	Attributes	Applicable major releases
Name: WmmSYS_ROOT_FTP_VIOLATION (4353) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm occurs when an user try to login the system three times as root with wrong password in less 30 seconds. This alarm must be manually cleared.		
Remedial action: Need to find out where is the user attempted to log in. Check the /var/log/auth.log for detailed information.		

Table 23-274 WmmSYS_ROOT_LOGIN_VIOLATION

Alarm	Attributes	Applicable major releases
Name: WmmSYS_ROOT_LOGIN_VIOLATION (4354) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm occurs when an user try to login the system three times as root with wrong password in less 30 seconds. This alarm must be manually cleared.		
Remedial action: Need to find out where is the user attempted to log in. Check the /var/log/auth.log for detailed information.		

Table 23-275 WmmSYS_ROOT_SSH_LOGIN_VIOLATION

Alarm	Attributes	Applicable major releases
Name: WmmSYS_ROOT_SSH_LOGIN_VIOLATION (4355) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm occurs when a user unsuccessfully attempts to ssh as root user onto the LCP host three times within 30 minutes. NOTE: If Disable Root SSH External Access feature is enabled, any external ssh as root attempt to the LCP host will be rejected and treated as a login failure. This alarm must be manually cleared.		
Remedial action: Need to check the /var/log/auth.log to identify the IP of the originating ssh request and attempt to identify the user attempting access the LCP host as root userid. Check the /var/log/auth.log for detailed information. The alarm must be manually cleared on the MI GUI.		

Table 23-276 WmmSYS_SetupAAAFailure

Alarm	Attributes	Applicable major releases
Name: WmmSYS_SetupAAAFailure (4361) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: A possible CPM configuration problem has been detected on the MI.		
Remedial action: Login to active MI as root execute 'mividstat -a' Make sure CPM is enabled and Connection Health Check is Yes. If not, please refer to CDOC 270-702-015 section 'CPM and RBAC' to enable CPM. Check all the diskful and diskless blades are in service. Please contact Alcatel-Lucent Customer Support for further support. Once the issue is resolved, this alarm should be cleared manually from the MI GUI.		

Table 23-277 WmmSYS_SNETrapOverload

Alarm	Attributes	Applicable major releases
Name: WmmSYS_SNETrapOverload (4356) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The SNMP trap rate threshold for a particular SNE to the MI-Agent has been exceeded.		
Remedial action: Verify the sanity of the SNE to determine what is causing it to send excessive SNMP traps to the MI-Agent. As the cause for excessive traps can vary by instance, use standard fault detection techniques such as viewing alarms and/or network events at the MI-Agent, visual inspection of the SNE for external alarms and/or loose cables, and running diagnostic test to assist in determining the cause.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-278 WmmSYS_SNMPAuthenticationFailure

Alarm	Attributes	Applicable major releases
Name: WmmSYS_SNMPAuthenticationFailure (4357) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: Signifies that an SNE managed by the MI is the addressee of an improperly authenticated network protocol message. SNMP community name and client authentication failures cause the Element Manager to generate this trap.		
Remedial action: Verify that the individual trying to access the system is a legitimate user, and that the SNMP community strings are set correctly. This alarm may be disabled by turning off the SNMP authentication traps on the SNE (providing the SNE supports this capability).		

Table 23-279 WmmSYS_SNMPFailure

Alarm	Attributes	Applicable major releases
Name: WmmSYS_SNMPFailure (4358) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The MI was unable to communicate to a host via its SNMP interface.		
Remedial action: Verify that the ethernet cable is connected and in working order. Verify that the SNE may be ICMP-pinged over the same interface to determine whether it is an SNMP problem or a more general IP problem. If the problem is an IP problem, verify that the routers/switches are configured correctly. If the problem is only an SNMP problem and persists over several polling cycles, contact Alcatel-Lucent Customer Support.		

Table 23-280 WmmSYS_SU_TO_ROOT_FAILURE

Alarm	Attributes	Applicable major releases
Name: WmmSYS_SU_TO_ROOT_FAILURE (4359) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm occurs when a user makes three failed attempts within a 30 minute period to su to become root user. This alarm will occur if you entered the wrong password for root three times during the 30 minute interval when attempting to su to root user.		
Remedial action: This Alarm should be cleared manually. Need to find out where the user is trying to log in from to further verify whether this is a legitimate user. Need to check the user's CLI shell history to investigate for possible suspicious activity. Check the /var/log/auth.log for detailed access information. Check the /var/log/bash.log to investigate the user's cli activity. You may also use the Security and Audit Trail Log Viewer on the MI-agent GUI to view these logs.		

Table 23-281 WmmSYS_SYSTEMTrapOverload

Alarm	Attributes	Applicable major releases
Name: WmmSYS_SYSTEMTrapOverload (4360) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The SNMP trap rate threshold for a collection of SNEs to the MI-Agent has been exceeded.		
Remedial action: Verify the sanity of all SNEs in the system to determine which ones are sending excessive SNMP traps to the MI-Agent. As the cause for excessive traps can vary by instance, use standard fault detection techniques such as viewing alarms and/or network events at the MI-Agent, visual inspection of the SNE for external alarms and/or loose cables, and running diagnostic test to assist in determining the cause.		

Table 23-282 WmmSYS_TestAlarm

Alarm	Attributes	Applicable major releases
Name: WmmSYS_TestAlarm (4362) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: This alarm is for testing only. There is no problem being reported. It is used to test the alarm handling functionality on the MI, from creation of an alarm on the MI to forwarding out through the MI's northbound interface. This alarm should be manually cleared when testing is completed.		
Remedial action: There is no recovery needed, as this is just a test alarm. The alarm can be cleared manually on the MI GUI, or by running mi_testalarm -s Clear on the active MI.		

Table 23-283 WmmSYS_ThresholdCrossed

Alarm	Attributes	Applicable major releases
Name: WmmSYS_ThresholdCrossed (4363) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The measurement data is not meeting the specified performance thresholds and the measurement data has reported errors that may indicate loss or degradation of functionality or capacity.		
Remedial action: Pay attention to the measurement data for which the alarm is reported. Study the state of the system to decide on a course of action.		

23 – Alcatel-Lucent 9471 WMM alarms

Table 23-284 WmmSYS_UndiscoveredObject

Alarm	Attributes	Applicable major releases
Name: WmmSYS_UndiscoveredObject (4364) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: true Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: One or more undiscovered objects have been detected on the MI.		
Remedial action: On the MI GUI, run Tools->Global Discovery. If this does not clear the alarm, run the following command on the active MI host: If specificProblem is MissingSNE: <ip address>: mi_audit -a disc_sne If specificProblem is MissingHardware: mi_audit -a disc_hw If specificProblem is MissingServices: mi_audit -a disc_services If specificProblem is MissingHosts: mi_audit -a disc_hosts Contact Alcatel-Lucent Customer Support with the alarm details and the output of the mi_audit cmd.		

Table 23-285 WmmSYS_WriteAAAFailure

Alarm	Attributes	Applicable major releases
Name: WmmSYS_WriteAAAFailure (4365) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: mmeUnspecifiedReason (607)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: CPM tools failed to create scripts that are used for pump data into blades.		
Remedial action: Login to active MI (ATCA) as root execute 'midvstat -a' Make sure CPM is enabled and Connection Health Check is Yes. If not, please refer to CDOC 270-702-015 section 'CPM and RBAC' to enable CPM. Check all the diskful and diskless blades are in service. Check existence and permission(Owner:root, permission:755) for the directory /var/opt/lib/cpm/fg on active MI. Please contact Alcatel-Lucent Customer Support for further support. Once the issue is resolved, this alarm should be cleared manually from the MI GUI.		

Table 23-286 WmmUnknownAlarm

Alarm	Attributes	Applicable major releases
Name: WmmUnknownAlarm (4366) Type: mmeAlarm (77) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: alarmIndicationSignal (96)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when an unknown alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 23-287 WmmUnknownCommunicationsAlarm

Alarm	Attributes	Applicable major releases
Name: WmmUnknownCommunicationsAlarm (4367) Type: communicationsAlarm (4) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: UnspecifiedReason (803)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when an unknown communications alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 23-288 WmmUnknownEnvironmentalAlarm

Alarm	Attributes	Applicable major releases
Name: WmmUnknownEnvironmentalAlarm (4368) Type: environmentalAlarm (2) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when an unknown environmental alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 23-289 WmmUnknownEquipmentAlarm

Alarm	Attributes	Applicable major releases
Name: WmmUnknownEquipmentAlarm (4369) Type: equipmentAlarm (3) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when an unknown equipment alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 23-290 WmmUnknownIntegrityViolationAlarm

Alarm	Attributes	Applicable major releases
Name: WmmUnknownIntegrityViolationAlarm (4370) Type: integrityViolationAlarm (78) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when an unknown integrity violation alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 23-291 WmmUnknownOperationalViolationAlarm

Alarm	Attributes	Applicable major releases
Name: WmmUnknownOperationalViolationAlarm (4371) Type: operationalViolationAlarm (79) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when an unknown operational alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 23-292 WmmUnknownPhysicalViolationAlarm

Alarm	Attributes	Applicable major releases
Name: WmmUnknownPhysicalViolationAlarm (4372) Type: physicalViolationAlarm (80) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when an unknown physical violation alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 23-293 WmmUnknownProcessingErrorAlarm

Alarm	Attributes	Applicable major releases
Name: WmmUnknownProcessingErrorAlarm (4373) Type: processingErrorAlarm (81) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when an unknown processing error alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 23-294 WmmUnknownQualityOfServiceAlarm

Alarm	Attributes	Applicable major releases
Name: WmmUnknownQualityOfServiceAlarm (4374) Type: qualityOfServiceAlarm (82) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when an unknown quality of service alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 23-295 WmmUnknownSecurityServiceOrMechanismViolationAlarm

Alarm	Attributes	Applicable major releases
Name: WmmUnknownSecurityServiceOrMechanismViolationAlarm (4375) Type: securityServiceOrMechanismViolationAlarm (83) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when an unknown mechanical violation alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

Table 23-296 WmmUnknownTimeDomainViolationAlarm

Alarm	Attributes	Applicable major releases
Name: WmmUnknownTimeDomainViolationAlarm (4376) Type: timeDomainViolationAlarm (84) Package: Itemme Raised on class: Itemme.MmeAlarmEntry	Severity: variable Implicitly cleared: false Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> • 6.0.0 • 7.0.0 • 7.1.0 • 8.0.0 • 8.1.0
Description: The alarm is raised when an unknown time domain violation alarm is received from the WMM system.		
Remedial action: Obtain the native WMM alarm name from the additional text field. Open the 9471 WMM MI GUI and locate the corresponding WMM alarm. Refer to the Fault Clearance Procedure in the help documentation for the alarm.		

24 – Alcatel-Lucent 9500 MPR alarms

Note – Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 41 for information about the alarm.

Table 24-1 AccessInterfaceDown

Alarm	Attributes	Applicable major releases
Name: AccessInterfaceDown (249) Type: AccessInterfaceAlarm (32) Package: service Raised on class: service.AccessInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an L2 or L3 interface operational state is Down. The alarm is not raised against an L2 access interface that is associated with an MC ring or MC LAG in the standby state.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'Standby For MC-Ring') AND ('State Cause' NOT EQUAL 'Standby For MC-Lag') AND ('State Cause' NOT EQUAL 'Standby For BGP Multi-homing'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'Standby For MC-Ring') OR ('State Cause' EQUAL 'Standby For MC-Lag') OR ('State Cause' EQUAL 'Standby For BGP Multi-homing'))		
Remedial action: The condition exists because the physical interface is down either because it is administratively disabled, faulty or a cabling fault has occurred. Ensure that the interface is administratively up. Check for a poor cable connection to the port or for a faulty cable/fiber. If neither appears to be the problem run diagnostics on the port to determine if it is faulty.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-2 ActiveAbnormalCondition

Alarm	Attributes	Applicable major releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 24-3 AggregatedVFLPortDown

Alarm	Attributes	Applicable major releases
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Shelf	Severity: critical Implicitly cleared: true Default probable cause: connectivityIssue (2137)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 24-4 AGWDiameterPeerDown

Alarm	Attributes	Applicable major releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: Ite Raised on class: Ite.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 24-5 AreaTypeMismatch

Alarm	Attributes	Applicable major releases
Name: AreaTypeMismatch (38) Type: configurationAlarm (11) Package: ospf Raised on class: ospf.Area	Severity: warning Implicitly cleared: true Default probable cause: areaTypeMisconfigured (34)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an OSPF area on one NE is configured as an NSSA and the same OSPF area on another NE is configured as a stub area.		
Raising condition: ('Type Mismatch' EQUAL 'true')		
Clearing condition: ('Type Mismatch' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The OSPF area type configured for the NE does not match with the same OSPF area configured on another NE. Compare the configuration on the endpoint and correct the mismatch.		

Table 24-6 AuxiliaryServerStatus

Alarm	Attributes	Applicable major releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 24-7 BandwidthDegradeForProtectionSwitch

Alarm	Attributes	Applicable major releases
Name: BandwidthDegradeForProtectionSwitch (4414) Type: equipmentAlarm (3) Package: ethring Raised on class: ethring.Element	Severity: major Implicitly cleared: true Default probable cause: bandwidthDegradeERP (1580)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised on Element instance for 9500 when there are two instance per Radio Component (topology) and when one of the instance is enabled.		
Remedial action: Operator has Unconfigure the protection on ERPS instance.		

Table 24-8 BerLineSignalDegradation

Alarm	Attributes	Applicable major releases
Name: BerLineSignalDegradation (88) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: berLineSignalDegradation (74)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a SONET port reports a line signal degradation BER error. The alarm corresponds to the lb2er-sd alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'BER Line Signal Degradation') AND ('Report Alarms'anyBit'BER Line Signal Degradation'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'BER Line Signal Degradation') AND ('Report Alarms'anyBit'BER Line Signal Degradation'))		
Remedial action: Informational only.		

Table 24-9 BerLineSignalFailure

Alarm	Attributes	Applicable major releases
Name: BerLineSignalFailure (89) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: berLineSignalFailure (75)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a SONET port reports a line signal degradation BER error. The alarm corresponds to the lb2er-sf alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'BER Line Signal Failure') AND ('Report Alarms'anyBit'BER Line Signal Failure'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'BER Line Signal Failure') AND ('Report Alarms'anyBit'BER Line Signal Failure'))		
Remedial action: Informational only.		

Table 24-10 BITS2NotQualified

Alarm	Attributes	Applicable major releases
Name: BITS2NotQualified (1941) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: timingReferenceNotQualified (418)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the BITS-2 timing reference on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Input Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Input Administrative State' EQUAL 'Down'))		
Remedial action: Make sure that BITS2 is qualified		

Table 24-11 BITSNotQualified

Alarm	Attributes	Applicable major releases
Name: BITSNotQualified (547) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: timingReferenceNotQualified (418)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the BITS timing reference on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Output Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Output Administrative State' EQUAL 'Down'))		
Remedial action: Make sure that BITS is qualified		

Table 24-12 BITSReferenceLossOfSignal

Alarm	Attributes	Applicable major releases
Name: BITSReferenceLossOfSignal (1950) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: BITSReferenceLossOfSignal (938)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the BITS reference on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT (('Not Qualified Due To'anyBit'LOS'))		
Remedial action: Make sure that peer connected to BITS is properly configured.		

Table 24-13 BITSReferenceOutOfFrequency

Alarm	Attributes	Applicable major releases
Name: BITSReferenceOutOfFrequency (1951) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: BITSReferenceOutOfFrequency (939)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the BITS Reference on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT (('Not Qualified Due To'anyBit'OOF'))		
Remedial action: Make sure that frequency configured for BITS is correct.		

Table 24-14 BITSReferenceOutOfPollInRange

Alarm	Attributes	Applicable major releases
Name: BITSReferenceOutOfPollInRange (1952) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: BITSReferenceOutOfPollInRange (940)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the BITS Reference on an NE is not qualified state due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT (('Not Qualified Due To'anyBit'OOPIR'))		
Remedial action: Check the BITS is configured correctly. Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Call customer support if necessary		

Table 24-15 BootableConfigBackupFailed

Alarm	Attributes	Applicable major releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 24-16 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 24-17 BootParametersMisconfigured

Alarm	Attributes	Applicable major releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 24-18 BundleDown

Alarm	Attributes	Applicable major releases
Name: BundleDown (152) Type: equipmentAlarm (3) Package: bundle Raised on class: bundle.Interface	Severity: critical Implicitly cleared: true Default probable cause: bundleDown (128)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the bundle Administrative State is Up and the Operational State is Down.		
Raising condition: (('Protection Type' EQUAL 'None') AND ('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up') AND ('specificCardType' NOT EQUAL '16 x E1 (ASAP)'))		
Clearing condition: (('Protection Type' NOT EQUAL 'None') OR ('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: Informational - no corrective action required.		

Table 24-19 ClientDelegateServerStatus

Alarm	Attributes	Applicable major releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 24-20 CombinerLossOfAlignment (equipment)

Alarm	Attributes	Applicable major releases
Name: CombinerLossOfAlignment (5604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: CombinerLossOfAlignment (2359)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when there is no alignment between Main and Diversity signal.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 24-21 CombinerLossOfAlignment (mpr)

Alarm	Attributes	Applicable major releases
Name: CombinerLossOfAlignment (5604) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: CombinerLossOfAlignment (2359)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when there is no alignment between Main and Diversity signal.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 24-22 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0

(1 of 2)

24 – Alcatel-Lucent 9500 MPR alarms

Alarm	Attributes	Applicable major releases
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

(2 of 2)

Table 24-23 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 24-24 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

(2 of 2)

Table 24-25 CorruptImageFile

Alarm	Attributes	Applicable major releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 24-26 CrossconnectDown

Alarm	Attributes	Applicable major releases
Name: CrossconnectDown (744) Type: CrossconnectAlarm (60) Package: mpr Raised on class: mpr.Crossconnect	Severity: major Implicitly cleared: true Default probable cause: crossconnectDown (520)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the Operational State of an L2 or L3 interface is Down, and the Administrative State of the associated site is Up. The alarm is not raised against an L2 access interface that is in the MC ring standby state.		
Raising condition: ('xcRowStatus' NOT EQUAL 'Active')		
Clearing condition: ('xcRowStatus' EQUAL 'Active')		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-27 DAD

Alarm	Attributes	Applicable major releases
Name: DAD (4416) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: duplicatedAddressDetected (1582)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is reported when MPR 9500 detects a duplicated IP address.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 24-28 DialogFailure (equipment)

Alarm	Attributes	Applicable major releases
Name: DialogFailure (1163) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: dialogFailure (866)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an MPT has a temporary communication failure.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 24-29 DialogFailure (mpr)

Alarm	Attributes	Applicable major releases
Name: DialogFailure (1163) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: dialogFailure (866)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an MPT has a temporary communication failure.		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: The alarm is raised upon temporary loss of communication with MPT. Refer to the 9500 Node Maintenance manual for remedial action information		

(2 of 2)

Table 24-30 downgradedCardAlarm

Alarm	Attributes	Applicable major releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 24-31 DS1E1AlarmIndicationSignal

Alarm	Attributes	Applicable major releases
Name: DS1E1AlarmIndicationSignal (112) Type: communicationsAlarm (4) Package: tdmequipment Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Implicitly cleared: true Default probable cause: alarmIndicationSignal (96)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an AIS alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Alarm Indication Signal') AND ('Report Alarms'anyBit'Alarm Indication Signal'))		
Clearing condition: NOT (((('Outstanding Alarms'anyBit'Alarm Indication Signal') AND ('Report Alarms'anyBit'Alarm Indication Signal'))))		
Remedial action: Informational only.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-32 DS1E1Looped

Alarm	Attributes	Applicable major releases
Name: DS1E1Looped (126) Type: communicationsAlarm (4) Package: tdmequipment Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Implicitly cleared: true Default probable cause: farEndLoopback (102)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has a remote loopback alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Far end wants the near end to loopback') AND ('Report Alarms'anyBit'Far end wants the near end to loopback'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Far end wants the near end to loopback') AND ('Report Alarms'anyBit'Far end wants the near end to loopback'))		
Remedial action: Informational only.		

Table 24-33 DS1E1LossOfSignal

Alarm	Attributes	Applicable major releases
Name: DS1E1LossOfSignal (124) Type: communicationsAlarm (4) Package: tdmequipment Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Implicitly cleared: true Default probable cause: lossOfSignal (99)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an LOS alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Loss of Signal') AND ('Report Alarms'anyBit'Loss of Signal'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Loss of Signal') AND ('Report Alarms'anyBit'Loss of Signal'))		
Remedial action: Informational only.		

Table 24-34 DS1E1OutOfFrame

Alarm	Attributes	Applicable major releases
Name: DS1E1OutOfFrame (125) Type: communicationsAlarm (4) Package: tdmequipment Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Implicitly cleared: true Default probable cause: outOfFrame (100)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an OOF alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Out Of Frame') AND ('Report Alarms'anyBit'Out Of Frame'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Out Of Frame') AND ('Report Alarms'anyBit'Out Of Frame'))		
Remedial action: Informational only.		

Table 24-35 DS1E1ResourceAvailabilityIndicator

Alarm	Attributes	Applicable major releases
Name: DS1E1ResourceAvailabilityIndicator (114) Type: communicationsAlarm (4) Package: tdmequipment Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Implicitly cleared: true Default probable cause: resourceAvailabilityIndicator (98)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an RAI alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Resource Availability Indicator') AND ('Report Alarms'anyBit'Resource Availability Indicator'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Resource Availability Indicator') AND ('Report Alarms'anyBit'Resource Availability Indicator'))		
Remedial action: Informational only.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-36 DS1E1SignalDegradation

Alarm	Attributes	Applicable major releases
Name: DS1E1SignalDegradation (500) Type: communicationsAlarm (4) Package: tdmequipment Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Implicitly cleared: true Default probable cause: signalDegradation (386)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an SD alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Degradation') AND ('Report Alarms'anyBit'Signal Degradation'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Signal Degradation') AND ('Report Alarms'anyBit'Signal Degradation'))		
Remedial action: Informational only.		

Table 24-37 DS1E1SignalFailure

Alarm	Attributes	Applicable major releases
Name: DS1E1SignalFailure (501) Type: communicationsAlarm (4) Package: tdmequipment Raised on class: tdmequipment.DS1E1ChannelSpecifics	Severity: major Implicitly cleared: true Default probable cause: signalFailure (387)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an NE reports that a specific DS1 or E1 channel has an SF alarm condition.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Remedial action: Informational only.		

Table 24-38 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

Table 24-39 EquipmentDegraded

Alarm	Attributes	Applicable major releases
Name: EquipmentDegraded (604) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: minor Implicitly cleared: true Default probable cause: singleFanFailure (450)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a single fan fails. The chassis attempts to continue operating within the normal temperature range using only the remaining fans.		
Raising condition: ('Device State' EQUAL 'MinorFailure')		
Clearing condition: ('Device State' NOT EQUAL 'MinorFailure')		
Remedial action: The failed fan unit should be replaced.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-40 EquipmentDown

Alarm	Attributes	Applicable major releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 24-41 EquipmentFailure

Alarm	Attributes	Applicable major releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 24-42 EquipmentInTest

Alarm	Attributes	Applicable major releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 24-43 EquipmentMismatch

Alarm	Attributes	Applicable major releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-44 EquipmentRemoved

Alarm	Attributes	Applicable major releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (((isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 24-45 EthernetPortConfiguredLoopback

Alarm	Attributes	Applicable major releases
Name: EthernetPortConfiguredLoopback (801) Type: configurationAlarm (11) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: warning Implicitly cleared: true Default probable cause: ethernetPortConfiguredLoopback (567)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a timed loopback is in effect for an Ethernet port.		
Raising condition: (('Type' NOT EQUAL 'None'))		
Clearing condition: (('Type' EQUAL 'None'))		
Remedial action: This alarm has been raised by the node because "Timed Loopback" option of the specific port's Ethernet property has been enabled. To resolve this problem from "Ethernet" tab of "Physical Port" properties form configure "Timed Loopback" Type property as "None".		

Table 24-46 EthernetPortDuplicateLane

Alarm	Attributes	Applicable major releases
Name: EthernetPortDuplicateLane (3557) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: DuplicateLane (1387)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a device reports a Duplicate Lane on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Duplicate Lane') AND ('Report Alarms'anyBit'Duplicate Lane'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 24-47 EthernetPortHighBer

Alarm	Attributes	Applicable major releases
Name: EthernetPortHighBer (307) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a device reports a high bit-error rate on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'High Bit Error Rate') AND ('Report Alarms'anyBit'High Bit Error Rate'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 24-48 EthernetPortLocalFault

Alarm	Attributes	Applicable major releases
Name: EthernetPortLocalFault (305) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: LocalFault (236)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a device reports a local fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Local Fault') AND ('Report Alarms'anyBit'Local Fault'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 24-49 EthernetPortNoAmLock

Alarm	Attributes	Applicable major releases
Name: EthernetPortNoAmLock (3558) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoAmLock (1388)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a device reports a No Am Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No AM Lock') AND ('Report Alarms'anyBit'No AM Lock'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 24-50 EthernetPortNoBlockLock

Alarm	Attributes	Applicable major releases
Name: EthernetPortNoBlockLock (3559) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoBlockLock (1389)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a device reports a No Block Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No Block Lock') AND ('Report Alarms'anyBit'No Block Lock'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault. If the problem cannot be resolved swap the card containing the port with a card which is known be functional.		

Table 24-51 EthernetPortNoFrameLock

Alarm	Attributes	Applicable major releases
Name: EthernetPortNoFrameLock (306) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: NoFrameLock (237)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a device reports No Frame Lock on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'No Frame Lock') AND ('Report Alarms'anyBit'No Frame Lock'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 24-52 EthernetPortRemoteFault

Alarm	Attributes	Applicable major releases
Name: EthernetPortRemoteFault (304) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: RemoteFault (235)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a device reports a remote fault on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Remote Fault') AND ('Report Alarms'anyBit'Remote Fault'))		
Remedial action: One of the following conditions exists on the remote physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 24-53 EthernetPortSignalFailure

Alarm	Attributes	Applicable major releases
Name: EthernetPortSignalFailure (303) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: SignalFailure (234)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a device reports a signal failure on an Ethernet port.		
Raising condition: (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Signal Failure') AND ('Report Alarms'anyBit'Signal Failure'))		
Remedial action: One of the following conditions exists on the physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected. The port is faulty - run diagnostics on the port to determine the nature of the fault.		

Table 24-54 ExternalTimingReferenceNotQualified

Alarm	Attributes	Applicable major releases
Name: ExternalTimingReferenceNotQualified (548) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: timingReferenceNotQualified (418)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the External timing reference on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified') AND ('Administrative State' NOT EQUAL 'Down'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified') OR ('Administrative State' EQUAL 'Down'))		
Remedial action: Informational		

Table 24-55 FanFail

Alarm	Attributes	Applicable major releases
Name: FanFail (5609) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: FanFail (2372)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when there is fan fail for MPTHLC.		
Remedial action: The alarm is raised when MPTHLC fan fails. Refer 9500 Node Maintenance manual for remedial action information.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-56 FanFailure

Alarm	Attributes	Applicable major releases
Name: FanFailure (624) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: fanFailure (116)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the associated fan is not operationally Up.		
Raising condition: (('Device State' EQUAL 'Failed') OR ('Device State' EQUAL 'Unknown') OR ('Device State' EQUAL 'OutOfservice'))		
Clearing condition: ('Device State' EQUAL 'OK')		
Remedial action: Remove and reset the fan unit. If this does not resolve the problem replace the fan.		

Table 24-57 FanTrayRemoved

Alarm	Attributes	Applicable major releases
Name: FanTrayRemoved (569) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.FanTray	Severity: critical Implicitly cleared: true Default probable cause: FanTrayRemoved (438)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the deviceState attribute has a value of deviceNotEquipped.		
Raising condition: ('Device State' EQUAL 'Not Equipped')		
Clearing condition: ('Device State' NOT EQUAL 'Not Equipped')		
Remedial action: Informational - a fan tray has been removed from the NE.		

Table 24-58 FlashCardFailure

Alarm	Attributes	Applicable major releases
Name: FlashCardFailure (8161) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: flashCardFailure (2553)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when there is Flash card failure.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 24-59 FlashCardRealignmentInProgress

Alarm	Attributes	Applicable major releases
Name: FlashCardRealignmentInProgress (8162) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: flashCardRealignmentInProgress (2554)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when MPR Flash card realignment is in progress.		
Remedial action: Please refer to the 9500 Node Maintenance manual for remedial action information.		

Table 24-60 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		

(1 of 2)

24 – Alcatel-Lucent 9500 MPR alarms

Alarm	Attributes	Applicable major releases
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

(2 of 2)

Table 24-61 GaPeerDown

Alarm	Attributes	Applicable major releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggnsn Raised on class: Iteggnsn.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 24-62 IfVlanSubTypeConflict

Alarm	Attributes	Applicable major releases
Name: IfVlanSubTypeConflict (213) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.L2AccessInterface	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when more than one type of VLAN service is configured with the same VLAN ID. The alarm is raised against an L2 access interface.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Interface.		

(2 of 2)

Table 24-63 IncompleteConfiguration

Alarm	Attributes	Applicable major releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

Table 24-64 InterfaceDown (netw)

Alarm	Attributes	Applicable major releases
Name: InterfaceDown (36) Type: InterfaceAlarm (13) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: interfaceDown (32)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an interface or underlying resource fails, as indicated by an interface compositeState attribute value of failed or underlyingResourceFailed.		
Raising condition: (('compositeState' EQUAL 'Inoperable') OR ('compositeState' EQUAL 'Underlying Resource Inoperable'))		
Clearing condition: (('compositeState' NOT EQUAL 'Inoperable') AND ('compositeState' NOT EQUAL 'Underlying Resource Inoperable'))		
Remedial action: A physical port (physical interface, LAG, channel) associated with the network interface in not operation. Ensure that the interface is cabled and that there is not a configuration error (i.e. MTU size set incorrectly) on the interface. Once the issue w		

Table 24-65 LagDown

Alarm	Attributes	Applicable major releases
Name: LagDown (20) Type: equipmentAlarm (3) Package: lag Raised on class: lag.Interface	Severity: critical Implicitly cleared: true Default probable cause: lagDown (17)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when all ports in a LAG are operationally down.		
Raising condition: (('Administrative State' EQUAL 'Up') AND ('operationalState' NOT EQUAL 'Up'))		
Clearing condition: (('operationalState' EQUAL 'Up') OR ('Administrative State' NOT EQUAL 'Up'))		
Remedial action: This alarm indicates that all physical Ethernet links associated with a LAG are operationally down. The reasons for the links to be down may vary from link to link. The following possible causes of this alarm should be investigated. The physical port (near end or far end may have failed - this can be remedied by replacing the interface card in question. The physical links may have been turned down administratively - re-enable the links. A cable failure or disconnect may have occurred - please ensure that the cables are properly connected to the physical port and and that the cable has not been damaged.		

Table 24-66 LagPortAddFailed

Alarm	Attributes	Applicable major releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 24-67 LicensedLimitExceeded

Alarm	Attributes	Applicable major releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 24-68 LineAlarmIndicationSignal

Alarm	Attributes	Applicable major releases
Name: LineAlarmIndicationSignal (84) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: lineAlarmIndicationSignal (70)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a SONET port reports an LAIS error. The alarm corresponds to the lais alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Line Alarm Indication Signal') AND ('Report Alarms'anyBit'Line Alarm Indication Signal'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Line Alarm Indication Signal') AND ('Report Alarms'anyBit'Line Alarm Indication Signal'))		
Remedial action: Informational only.		

Table 24-69 LineErrorCondition

Alarm	Attributes	Applicable major releases
Name: LineErrorCondition (94) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: lineErrorCondition (80)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a SONET port reports a line error condition that a remote NE raises because of b1 errors received from the local NE. The alarm corresponds to the Irei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Line Error Condition') AND ('Report Alarms'anyBit'Line Error Condition'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Line Error Condition') AND ('Report Alarms'anyBit'Line Error Condition'))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Call customer support if necessary.		

Table 24-70 LineRemoteDefectIndication

Alarm	Attributes	Applicable major releases
Name: LineRemoteDefectIndication (85) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: lineRemoteDefectIndication (71)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a SONET port reports a line remote defect indication error caused by an LOF, LOC, or LOS condition. The alarm corresponds to the Irdi alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Line Remote Defect Indication') AND ('Report Alarms'anyBit'Line Remote Defect Indication'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Line Remote Defect Indication') AND ('Report Alarms'anyBit'Line Remote Defect Indication'))		
Remedial action: Informational only.		

Table 24-71 LinkDown (equipment)

Alarm	Attributes	Applicable major releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 24-72 LossOfClock (sonetequipment)

Alarm	Attributes	Applicable major releases
Name: LossOfClock (83) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: lossOfClock (69)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a SONET port reports an LOC condition, which causes the NE to set the port Operational State to Down.		
Raising condition: (('Outstanding Alarms'anyBit'Loss of Clock') AND ('Report Alarms'anyBit'Loss of Clock'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Loss of Clock') AND ('Report Alarms'anyBit'Loss of Clock'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-73 LossOfMultiFrame (equipment)

Alarm	Attributes	Applicable major releases
Name: LossOfMultiFrame (3930) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Port	Severity: variable Implicitly cleared: true Default probable cause: lossOfMultiFrame (1514)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: This alarm is raised when a loss of multiple frames occurs on the SDH port.		
Remedial action: This alarm is raised when there is a loss of multiple frames on the SDH port.		

Table 24-74 LowTemperatureDetected

Alarm	Attributes	Applicable major releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 24-75 macMoveRateExceeded (service)

Alarm	Attributes	Applicable major releases
Name: macMoveRateExceeded (3690) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: minor Implicitly cleared: true Default probable cause: MacMoveRateExceeded (1429)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational.		

Table 24-76 macMoveRateExceededNonBlock (service)

Alarm	Attributes	Applicable major releases
Name: macMoveRateExceededNonBlock (4893) Type: accessInterfaceAlarm (40) Package: service Raised on class: service.AccessInterface	Severity: info Implicitly cleared: true Default probable cause: MacMoveRateExceededNonBlock (1951)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the SAP exceeds the MAC Move Frequency of the service site when limitMacMove(sapTIsLimitMacMove) is set to 'nonBlocking'.		
Raising condition: ('State Cause'anyBit'Relearn Limit Exceeded')		
Clearing condition: NOT (('State Cause'anyBit'Relearn Limit Exceeded'))		
Remedial action: Informational - User can adjust the value of 'MAC Move Maximum Rate' to reduce the frequency of this alarm.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-77 MobileConnectorDown

Alarm	Attributes	Applicable major releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\')		
Clearing condition: ('EPS Path' NOT EQUAL '\')		
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

Table 24-78 MvrSiteDown

Alarm	Attributes	Applicable major releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 24-79 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only')) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only')) AND ('Primary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 24-80 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 24-81 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 24-82 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 24-83 NodeSuspended

Alarm	Attributes	Applicable major releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 24-84 OrphanNodeDetected

Alarm	Attributes	Applicable major releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('State' EQUAL 'Orphan')		
Remedial action: The NE is not managed by any SAM. Add an discovery rule in order to managed it.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-85 OverTemperatureDetected

Alarm	Attributes	Applicable major releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 24-86 PartialResyncProblem

Alarm	Attributes	Applicable major releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 24-87 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

Table 24-88 PollerProblem

Alarm	Attributes	Applicable major releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 24-89 PortEtherSymMonSDAlarm

Alarm	Attributes	Applicable major releases
Name: PortEtherSymMonSDAlarm (5662) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: etherPortSymMonSDThresholdExceededAlarm (2439)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an Ethernet port Symbol Monitor Failure alarm condition is detected (Signal Degradation Threshold exceeded).		
Raising condition: ('Symbol Alarm Reason' EQUAL 'SD Threshold Exceeded')		
Clearing condition: ('Symbol Alarm Reason' NOT EQUAL 'SD Threshold Exceeded')		
Remedial action: Symbol monitor signal degradation alarm could be cleared by changing/disabling the associated threshold/multiplier values or it is self clearing and will clear once the error rate drops below 1/10th of the configured rate.		

Table 24-90 PortEtherSymMonSFAlarm

Alarm	Attributes	Applicable major releases
Name: PortEtherSymMonSFAlarm (5663) Type: communicationsAlarm (4) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: etherPortSymMonSFThresholdExceededAlarm (2440)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an Ethernet port Symbol Monitor Failure alarm condition is detected (Signal Failure Threshold exceeded).		
Raising condition: ('Symbol Alarm Reason' EQUAL 'SF Threshold Exceeded')		
Clearing condition: ('Symbol Alarm Reason' NOT EQUAL 'SF Threshold Exceeded')		
Remedial action: Symbol monitor signal failure alarm could be cleared by changing/disabling the associated threshold/multiplier values or by taking the port out of service (eg. shutdown, card/mda reset, physical link loss).		

Table 24-91 PrimaryImageBootFailure

Alarm	Attributes	Applicable major releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 24-92 PTPNotQualified

Alarm	Attributes	Applicable major releases
Name: PTPNotQualified (3611) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: PTPNotQualified (1400)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when PTP on an NE is not in the Qualified state.		
Raising condition: (('Qualified For Use' EQUAL 'Not Qualified'))		
Clearing condition: (('Qualified For Use' NOT EQUAL 'Not Qualified'))		
Remedial action: Check the communication path is up between the local PTP slave clock and its selected master		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-93 PTPReferenceLossOfSignal

Alarm	Attributes	Applicable major releases
Name: PTPReferenceLossOfSignal (3613) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: PTPReferenceLossOfSignal (1402)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the PTP reference on an NE is not qualified due to Loss of Signal.		
Raising condition: (('Not Qualified Due To'anyBit'LOS'))		
Clearing condition: NOT (('Not Qualified Due To'anyBit'LOS'))		
Remedial action: Check the communication path is up between the local PTP slave clock and its selected master		

Table 24-94 PTPReferenceOutOfFrequency

Alarm	Attributes	Applicable major releases
Name: PTPReferenceOutOfFrequency (3614) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: PTPReferenceOutOfFrequency (1403)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the PTP Reference on an NE is not qualified due to Out of frequency.		
Raising condition: (('Not Qualified Due To'anyBit'OOF'))		
Clearing condition: NOT (('Not Qualified Due To'anyBit'OOF'))		
Remedial action: Make sure that frequency configured for Reference One is correct.		

Table 24-95 PTPReferenceOutOfPollInRange

Alarm	Attributes	Applicable major releases
Name: PTPReferenceOutOfPollInRange (3615) Type: communicationsAlarm (4) Package: sonet Raised on class: sonet.SiteSync	Severity: minor Implicitly cleared: true Default probable cause: PTPReferenceOutOfPollInRange (1404)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the PTP Reference on an NE is not qualified state due to Out of poll in range.		
Raising condition: (('Not Qualified Due To'anyBit'OOPIR'))		
Clearing condition: NOT (('Not Qualified Due To'anyBit'OOPIR'))		
Remedial action: If there is packet flow, the PTP slave clock is in it's initial acquiring states where the sync-if-timing reference does not qualify just wait.		

Table 24-96 RadiusOperStatusDown

Alarm	Attributes	Applicable major releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-97 ReachabilityProblem

Alarm	Attributes	Applicable major releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
<p>Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.</p>		
<p>Raising condition: ('SNMP Reachability' EQUAL 'Down')</p>		
<p>Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.</p>		

Table 24-98 ReconfigFailure

Alarm	Attributes	Applicable major releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
<p>Description: This alarm is raised when the reconfig action failed.</p>		
<p>Raising condition: ('State' EQUAL 'Failed')</p>		
<p>Clearing condition: ('State' NOT EQUAL 'Failed')</p>		
<p>Remedial action: Verify that the object is configured as expected.</p>		

Table 24-99 RxDivMissing

Alarm	Attributes	Applicable major releases
Name: RxDivMissing (5646) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: variable Implicitly cleared: true Default probable cause: RxDivMissing (2422)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an MPT is attached with combiner enabled and Rx Diversity module is missing.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 24-100 rxDivMissing

Alarm	Attributes	Applicable major releases
Name: rxDivMissing (8372) Type: equipmentAlarm (3) Package: mpr Raised on class: mpr.SubRackElements	Severity: variable Implicitly cleared: true Default probable cause: RxDivMissing (2422)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an MPT is attached with combiner enabled and Rx Diversity module is missing.		
Remedial action: Please refer MPR documentation for Corrective actions.		

Table 24-101 RxSectionSynchronizationError

Alarm	Attributes	Applicable major releases
Name: RxSectionSynchronizationError (93) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: rxSectionSynchronizationError (79)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0

(1 of 2)

24 – Alcatel-Lucent 9500 MPR alarms

Alarm	Attributes	Applicable major releases
Description: The alarm is raised when a SONET port reports a section synchronization failure. A section synchronization failure occurs when the S1 byte is inconsistent for eight consecutive frames.		
Raising condition: (('Outstanding Alarms'anyBit'RX Section Synchronization Error') AND ('Report Alarms'anyBit'RX Section Synchronization Error'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'RX Section Synchronization Error') AND ('Report Alarms'anyBit'RX Section Synchronization Error'))		
Remedial action: Check the link status between SONET Port and the source.		

(2 of 2)

Table 24-102 SaveConfigFailed

Alarm	Attributes	Applicable major releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 24-103 ScheduledPollerProblem

Alarm	Attributes	Applicable major releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		

(1 of 2)

Alarm	Attributes	Applicable major releases
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

(2 of 2)

Table 24-104 SectionB1Error

Alarm	Attributes	Applicable major releases
Name: SectionB1Error (87) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: sectionB1Error (73)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a SONET port reports a section error condition that a remote NE raises because of b1 errors received from the local NE. The alarm corresponds to the lrei alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section B1 Error') AND ('Report Alarms'anyBit'Section B1 Error'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Section B1 Error') AND ('Report Alarms'anyBit'Section B1 Error'))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Call customer support if necessary.		

Table 24-105 SectionLossOfFrame

Alarm	Attributes	Applicable major releases
Name: SectionLossOfFrame (90) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: sectionLossOfFrame (76)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a SONET port reports a SLOF error. The alarm corresponds to the slof alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section Loss of Frame') AND ('Report Alarms'anyBit'Section Loss of Frame'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Section Loss of Frame') AND ('Report Alarms'anyBit'Section Loss of Frame'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-106 SectionLossOfSignal

Alarm	Attributes	Applicable major releases
Name: SectionLossOfSignal (91) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: sectionLossOfSignal (77)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a SONET port reports a SLOS error. The alarm corresponds to the slos alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'Section Loss of Signal') AND ('Report Alarms'anyBit'Section Loss of Signal'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Section Loss of Signal') AND ('Report Alarms'anyBit'Section Loss of Signal'))		
Remedial action: One of the following conditions exists on the referenced physical interface which must be corrected. A cable/fiber fault exists which must be corrected - check to ensure that the cable is not faulty and is properly connected.		

Table 24-107 SectionS1Failure

Alarm	Attributes	Applicable major releases
Name: SectionS1Failure (86) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: sectionS1Failure (72)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a SONET port reports a section synchronization failure. A section synchronization failure occurs when the S1 byte is inconsistent for eight consecutive frames.		
Raising condition: (('Outstanding Alarms'anyBit'Section S1 Failure') AND ('Report Alarms'anyBit'Section S1 Failure'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'Section S1 Failure') AND ('Report Alarms'anyBit'Section S1 Failure'))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Call customer support if necessary.		

Table 24-108 ServiceSiteDown

Alarm	Attributes	Applicable major releases
Name: ServiceSiteDown (97) Type: serviceAlarm (16) Package: service Raised on class: service.Site	Severity: critical Implicitly cleared: true Default probable cause: siteDown (83)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when all SAPs on a site are operationally down, or when the service tunnels for the site are operationally down.		
Raising condition: (('Operational State' NOT EQUAL 'Up') AND ('State Cause' NOT EQUAL 'All Spoke SDP Bindings are Standby'))		
Clearing condition: (('Operational State' EQUAL 'Up') OR ('State Cause' EQUAL 'All Spoke SDP Bindings are Standby'))		
Remedial action: The network resources (i.e. physical ports for SAPs, or physical ports/LSP) associated with the service site should be examined to determine if/why they are operationally down. The underlying transport network supporting the site may also be unreliable.		

Table 24-109 SiteManagementVlanConflict

Alarm	Attributes	Applicable major releases
Name: SiteManagementVlanConflict (223) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: warning Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the management VLAN ID is used for another type of service.		
Raising condition: ('managementVlanConflict' EQUAL 'true')		
Clearing condition: ('managementVlanConflict' EQUAL 'false')		
Remedial action: Ensure that the VLAN ID of this Management Service Site is not used on any other type of VLAN Service Site.		

24 – Alcatel-Lucent 9500 MPR alarms

Table 24-110 SiteVlanSubTypeConflict

Alarm	Attributes	Applicable major releases
Name: SiteVlanSubTypeConflict (224) Type: configurationAlarm (11) Package: vlan Raised on class: vlan.Site	Severity: major Implicitly cleared: true Default probable cause: topologyMisconfigured (81)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when more than one type of VLAN service has the same VLAN ID. The alarm is raised against a site.		
Raising condition: ('vlanSubTypeConflict' EQUAL 'true')		
Clearing condition: ('vlanSubTypeConflict' EQUAL 'false')		
Remedial action: Ensure that only one type of VLAN Service is configured with the VLAN ID used by this Site.		

Table 24-111 StatsRetrieveFailed

Alarm	Attributes	Applicable major releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 24-112 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 24-113 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major releases
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed (6) Package: equipment Raised on class: equipment.Shelf	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

Table 24-114 TmnxEqPortEtherLoopDetected

Alarm	Attributes	Applicable major releases
Name: TmnxEqPortEtherLoopDetected (461) Type: portEtherLoopDetected (48) Package: ethernetequipment Raised on class: ethernetequipment.EthernetPortSpecifics	Severity: major Implicitly cleared: true Default probable cause: HighBer (238)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a device detects a physical loop on an Ethernet port.		
Raising condition: (('Down When Looped Status' EQUAL 'Loop Detected'))		
Clearing condition: (('Down When Looped Status' EQUAL 'No Loop Detected'))		
Remedial action: An Ethernet port has been mis-cabled - please remove the loopback cable on the port.		

Table 24-115 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> • trapDestinationMisconfigured • duplicateTrapLogId 	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 24-116 TrapReceivingFailure

Alarm	Attributes	Applicable major releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 24-117 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		

(1 of 2)

24 – Alcatel-Lucent 9500 MPR alarms

Alarm	Attributes	Applicable major releases
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

(2 of 2)

Table 24-118 TxSectionSynchronizationError

Alarm	Attributes	Applicable major releases
Name: TxSectionSynchronizationError (92) Type: communicationsAlarm (4) Package: sonetequipment Raised on class: sonetequipment.SonetPortMonitorSpecifics	Severity: major Implicitly cleared: true Default probable cause: txSectionSynchronizationError (78)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when a SONET port reports an SS1F error. The alarm corresponds to the ss1f alarm on an NE.		
Raising condition: (('Outstanding Alarms'anyBit'TX Section Synchronization Error') AND ('Report Alarms'anyBit'TX Section Synchronization Error'))		
Clearing condition: NOT (('Outstanding Alarms'anyBit'TX Section Synchronization Error') AND ('Report Alarms'anyBit'TX Section Synchronization Error'))		
Remedial action: Check the SONET port is configured correctly and that the physical layer cabling is operating correctly. Call customer support if necessary.		

Table 24-119 UnidentifiedNode

Alarm	Attributes	Applicable major releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

(2 of 2)

Table 24-120 UnmanageFailed

Alarm	Attributes	Applicable major releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 24-121 unsupportedPortUsage

Alarm	Attributes	Applicable major releases
Name: unsupportedPortUsage (5184) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: warning Implicitly cleared: true Default probable cause: incompatiblePortUsage (2100)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised in case unsupported port type is configured		
Remedial action: This alarm indicates unsupported port usage. Port usage configured on the NE is not supported by SAM.		

Table 24-122 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 24-123 upgradedCardAlarm

Alarm	Attributes	Applicable major releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 24-124 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 24-125 VlanPathInstanceDown

Alarm	Attributes	Applicable major releases
Name: VlanPathInstanceDown (748) Type: VlanPathInstanceAlarm (61) Package: mpr Raised on class: mpr.VlanPathInstance	Severity: major Implicitly cleared: true Default probable cause: vlanPathInstanceDown (524)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the Operational State of a VLAN path instance is Down, for example, because of one of the following conditions: - The radio link is down. - A cross connect is deleted. - The Operational State of one or more ports in the cross connect is Down.		
Raising condition: ('Operational State' NOT EQUAL 'Up')		
Clearing condition: ('Operational State' EQUAL 'Up')		
Remedial action: Ports and or links may be down. Please check the ports or links of the vlan path for root cause.		

Table 24-126 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 3.2.0 • 3.3.0 • 3.4.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0 • 5.1.0 • 5.2.0
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL \"TIMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL \"TIMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

25 – Alcatel-Lucent 9500 MPre alarms

Note – Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 41 for information about the alarm.

Table 25-1 ActiveAbnormalCondition

Alarm	Attributes	Applicable major releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

25 – Alcatel-Lucent 9500 MPre alarms

Table 25-2 AggregatedVFLPortDown

Alarm	Attributes	Applicable major releases
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Shelf	Severity: critical Implicitly cleared: true Default probable cause: connectivityIssue (2137)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 25-3 AGWDiameterPeerDown

Alarm	Attributes	Applicable major releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 25-4 AuxiliaryServerStatus

Alarm	Attributes	Applicable major releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		

(1 of 2)

Alarm	Attributes	Applicable major releases
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

(2 of 2)

Table 25-5 BootableConfigBackupFailed

Alarm	Attributes	Applicable major releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 25-6 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 25-7 BootParametersMisconfigured

Alarm	Attributes	Applicable major releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> • persistentIndexFailure • configFileBootFailure 	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (((('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 25-8 ClientDelegateServerStatus

Alarm	Attributes	Applicable major releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 25-9 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

(2 of 2)

Table 25-10 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 25-11 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

25 – Alcatel-Lucent 9500 MPre alarms

Table 25-12 CorruptImageFile

Alarm	Attributes	Applicable major releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 25-13 downgradedCardAlarm

Alarm	Attributes	Applicable major releases
Name: downgradedCardAlarm (256) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: downgradedCard (195)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when an IOM is not upgraded or reset after a device software upgrade of both CPMs. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Downgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 25-14 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		

(1 of 2)

Alarm	Attributes	Applicable major releases
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

(2 of 2)

Table 25-15 EquipmentDown

Alarm	Attributes	Applicable major releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 25-16 EquipmentFailure

Alarm	Attributes	Applicable major releases
Name: EquipmentFailure (145) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.ReplaceableUnit	Severity: critical Implicitly cleared: true Default probable cause: cardFailure (123)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a control processor or power-supply tray reports a failure. When the object type is ControlProcessor, a CPM may be unable to boot. When the object type is Power Supply Tray and the alarm is raised during device discovery, a power-supply tray may be out of service. When the object type is a Power Supply Tray and the device is in the managed state, a power-supply tray may be out of service or the AC power shelf has a fault condition. The alarm clears when the status changes to OK.		
Raising condition: ('operationalState' EQUAL 'Failed')		
Clearing condition: ('operationalState' NOT EQUAL 'Failed')		
Remedial action: If the alarm indicates that the CPM card has a fault, remove the card and reset it. If this does not clear the alarm then please contact Alcatel-Lucent support for assistance. If the alarm indicates that the Power Supply tray is out of service ensure that the NE is properly connected to power. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 25-17 EquipmentInTest

Alarm	Attributes	Applicable major releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 25-18 EquipmentMismatch

Alarm	Attributes	Applicable major releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 25-19 EquipmentRemoved

Alarm	Attributes	Applicable major releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true')))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 25-20 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

Table 25-21 GaPeerDown

Alarm	Attributes	Applicable major releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggsn Raised on class: Iteggsn.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 25-22 IncompleteConfiguration

Alarm	Attributes	Applicable major releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\\"'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\\"'))		

(1 of 2)

25 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major releases
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

(2 of 2)

Table 25-23 LagPortAddFailed

Alarm	Attributes	Applicable major releases
Name: LagPortAddFailed (422) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.PhysicalPort	Severity: warning Implicitly cleared: true Default probable cause: linkDown (315)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the Lag Port Add function Fails.		
Raising condition: (('state' EQUAL 'Link Down') AND ('LAG ID' > '0'))		
Clearing condition: (('state' NOT EQUAL 'Link Down') OR ('LAG ID' EQUAL '0'))		
Remedial action: A configuration error has occurred which must be corrected. The link that was to be added to the LAG group may be of the wrong type (i.e. non ethernet) or the limit of the number of links supported in a LAG may have been reached.		

Table 25-24 LicensedLimitExceeded

Alarm	Attributes	Applicable major releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NEs/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 25-25 LinkDown (equipment)

Alarm	Attributes	Applicable major releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 25-26 LowTemperatureDetected

Alarm	Attributes	Applicable major releases
Name: LowTemperatureDetected (1127) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOvercooled (838)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the chassis temperature falls below the minimum threshold.		
Raising condition: ('Low Temperature State' EQUAL 'Low')		
Clearing condition: ('Low Temperature State' NOT EQUAL 'Low')		
Remedial action: The NE has detected internal temperatures which are abnormally low. This may happen when the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 25-27 MobileConnectorDown

Alarm	Attributes	Applicable major releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL '\\"')		
Clearing condition: ('EPS Path' NOT EQUAL '\\"')		

(1 of 2)

25 – Alcatel-Lucent 9500 MPRe alarms

Alarm	Attributes	Applicable major releases
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

(2 of 2)

Table 25-28 MvrSiteDown

Alarm	Attributes	Applicable major releases
Name: MvrSiteDown (162) Type: ProtocolAlarm (1) Package: layer2 Raised on class: layer2.MvrSite	Severity: warning Implicitly cleared: true Default probable cause: protocolDown (1)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when MVR is disabled on an NE and a TLS VLAN or MVR VLAN service is provisioned on the NE.		
Raising condition: ('MVR Admin Status' EQUAL 'Disabled')		
Clearing condition: ('MVR Admin Status' EQUAL 'Enabled')		
Remedial action: To clear the alarm, enable MVR Admin Status under the Bridge Instance.		

Table 25-29 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only'))) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only'))) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only'))) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only'))) AND ('Primary Route Preference' EQUAL 'Out Of Band'))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 25-30 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 25-31 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 25-32 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		

(1 of 2)

25 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major releases
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

(2 of 2)

Table 25-33 NodeSuspended

Alarm	Attributes	Applicable major releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 25-34 OrphanNodeDetected

Alarm	Attributes	Applicable major releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('State' EQUAL 'Orphan')		
Remedial action: The NE is not managed by any SAM. Add an discovery rule in order to managed it.		

Table 25-35 OverTemperatureDetected

Alarm	Attributes	Applicable major releases
Name: OverTemperatureDetected (388) Type: environmentalAlarm (2) Package: equipment Raised on class: equipment.Shelf	Severity: major Implicitly cleared: true Default probable cause: equipmentOverheated (5)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the chassis temperature exceeds the maximum threshold value.		
Raising condition: ('Over Temperature State' EQUAL 'Over')		
Clearing condition: ('Over Temperature State' NOT EQUAL 'Over')		
Remedial action: The NE has detected internal temperatures which are abnormally high. This could be caused by a failed fan unit or one or more dirty fan filters. Replacing the failed unit or filters should resolve the problem. Alternately the environment that the NE is operating in may not be within specifications found in the NE user guides.		

Table 25-36 PartialResyncProblem

Alarm	Attributes	Applicable major releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 25-37 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when persistence is set to Off in the NE BOF.		

(1 of 2)

25 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major releases
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

(2 of 2)

Table 25-38 PollerProblem

Alarm	Attributes	Applicable major releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 25-39 PrimaryImageBootFailure

Alarm	Attributes	Applicable major releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 25-40 RadiusOperStatusDown

Alarm	Attributes	Applicable major releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 25-41 ReachabilityProblem

Alarm	Attributes	Applicable major releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 25-42 ReconfigFailure

Alarm	Attributes	Applicable major releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		

(1 of 2)

25 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major releases
Clearing condition: ('State' NOT EQUAL 'Failed')		
Remedial action: Verify that the object is configured as expected.		

(2 of 2)

Table 25-43 SaveConfigFailed

Alarm	Attributes	Applicable major releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 25-44 ScheduledPollerProblem

Alarm	Attributes	Applicable major releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 25-45 StatsRetrieveFailed

Alarm	Attributes	Applicable major releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 25-46 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 25-47 SubSysChassMemoryUsageHi

Alarm	Attributes	Applicable major releases
Name: SubSysChassMemoryUsageHi (5656) Type: thresholdCrossed (6) Package: equipment Raised on class: equipment.Shelf	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: This alarm is raised when the memory usage by subscriber management on this system or chassis reaches its high watermark ('true').		

(1 of 2)

25 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major releases
Raising condition: ('Memory Usage High' EQUAL 'True')		
Clearing condition: (('Memory Usage High' EQUAL 'False') OR ('Memory Usage High' EQUAL 'unspecified'))		
Remedial action: The memory usage by subscriber management on this system has reached its high watermark. Please check your memory usage.		

(2 of 2)

Table 25-48 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> • trapDestinationMisconfigured • duplicateTrapLogId 	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

Table 25-49 TrapReceivingFailure

Alarm	Attributes	Applicable major releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		

(1 of 2)

Alarm	Attributes	Applicable major releases
<p>Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))</p>		
<p>Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.</p>		

(2 of 2)

Table 25-50 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major releases
<p>Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement</p>	<p>Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)</p>	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
<p>Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.</p>		
<p>Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))</p>		
<p>Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))</p>		
<p>Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.</p>		

Table 25-51 UnidentifiedNode

Alarm	Attributes	Applicable major releases
<p>Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode</p>	<p>Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)</p>	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
<p>Description: The alarm is raised when the node being discovered can not be properly identified.</p>		
<p>Raising condition: ('State' EQUAL 'Pending Identification')</p>		

(1 of 2)

25 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major releases
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

(2 of 2)

Table 25-52 UnmanageFailed

Alarm	Attributes	Applicable major releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 25-53 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 25-54 upgradedCardAlarm

Alarm	Attributes	Applicable major releases
Name: upgradedCardAlarm (255) Type: softwareAlarm (19) Package: equipment Raised on class: equipment.Card	Severity: warning Implicitly cleared: true Default probable cause: upgradedCard (194)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the standby CPM is rebooted and operational after a software upgrade. A device resets an IOM automatically after 120 minutes if the IOM is not manually reset after a CPM upgrade.		
Raising condition: ('operationalState' EQUAL 'Upgrade')		
Clearing condition: ('operationalState' EQUAL 'Up')		
Remedial action: Informational - no corrective action required.		

Table 25-55 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 25-56 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> • 3.3.0 • 4.0.0 • 4.1.0 • 4.2.0 • 5.0.0
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\TIMOS-B-3.0.Generic \') AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\TIMOS-B-3.0.Generic \') AND ('Chassis Type' EQUAL '7701 CPAA'))		

(1 of 2)

25 – Alcatel-Lucent 9500 MPre alarms

Alarm	Attributes	Applicable major releases
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

(2 of 2)

26 – Alcatel-Lucent 9774 LMG alarms

Note – Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 41 for information about the alarm.

Table 26-1 ActiveAbnormalCondition

Alarm	Attributes	Applicable major releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-2 AGWDiameterPeerDown

Alarm	Attributes	Applicable major releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 26-3 AuxiliaryServerStatus

Alarm	Attributes	Applicable major releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 26-4 BootableConfigBackupFailed

Alarm	Attributes	Applicable major releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

(2 of 2)

Table 26-5 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 26-6 BootParametersMisconfigured

Alarm	Attributes	Applicable major releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> persistentIndexFailure configFileBootFailure 	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 26-7 ClientDelegateServerStatus

Alarm	Attributes	Applicable major releases
Name: ClientDelegateServerStatus (731) Type: communicationsAlarm (4) Package: server Raised on class: server.ClientDelegateServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when a client delegate server is unreachable.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the client delegate platform and SAM servers is unreliable or the client delegate server itself is unreliable.		

Table 26-8 ContainingEquipmentAdministrativelyDown

Alarm	Attributes	Applicable major releases
Name: ContainingEquipmentAdministrativelyDown (466) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: minor Implicitly cleared: true Default probable cause: containingEquipmentAdministrativelyDown (330)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentAdministrativelyDown.		
Raising condition: (('Status' EQUAL 'Parent Admin Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Admin Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: Informational - no corrective action required.		

Table 26-9 ContainingEquipmentMismatch

Alarm	Attributes	Applicable major releases
Name: ContainingEquipmentMismatch (464) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentMismatch (328)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentMismatch.		
Raising condition: (('Status' EQUAL 'Parent Type Mismatch') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Type Mismatch') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

Table 26-10 ContainingEquipmentOperationallyDown

Alarm	Attributes	Applicable major releases
Name: ContainingEquipmentOperationallyDown (465) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Port	Severity: major Implicitly cleared: true Default probable cause: containingEquipmentDown (329)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of containingEquipmentOperationallyDown.		
Raising condition: (('Status' EQUAL 'Parent Oper Down') AND ('isTerminatable' EQUAL 'true'))		
Clearing condition: (('Status' NOT EQUAL 'Parent Oper Down') OR ('isTerminatable' NOT EQUAL 'true'))		
Remedial action: The operational state of the equipment element indicated in the alarm is down. This may be due to the element's administrative state or it may indicate that the element has failed.		

Table 26-11 CorruptImageFile

Alarm	Attributes	Applicable major releases
Name: CorruptImageFile (171) Type: configurationAlarm (11) Package: mediation Raised on class: mediation.AbstractSoftwareFolderDescriptor	Severity: critical Implicitly cleared: true Default probable cause: invalidOrCorruptImageFile (134)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when one or more files in the 5620 SAM software image specified for a device software upgrade is invalid, corrupt or absent. The 5620 SAM validates a device software file set before it imports the file set and distributes it to an NE. Ensure that the file set downloads properly to the NE and is not tampered with before you re-attempt the upgrade. The alarm clears when a valid file set is on the NE and the 5620 SAM activates the software image in the file set.		
Raising condition: ('isImageValid' EQUAL 'false')		
Clearing condition: ('isImageValid' EQUAL 'true')		
Remedial action: The existing SW image in the SAM database should be replaced with an image that is known to be complete and valid.		

Table 26-12 EquipmentAdministrativelyDown

Alarm	Attributes	Applicable major releases
Name: EquipmentAdministrativelyDown (455) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: minor Implicitly cleared: true Default probable cause: equipmentAdministrativelyDown (326)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentAdministrativelyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Admin Down')		

(1 of 2)

26 – Alcatel-Lucent 9774 LMG alarms

Alarm	Attributes	Applicable major releases
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Admin Down')		
Remedial action: Informational - no corrective action required.		

(2 of 2)

Table 26-13 EquipmentDown

Alarm	Attributes	Applicable major releases
Name: EquipmentDown (10) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: inoperableEquipment (8)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentOperationallyDown.		
Raising condition: ('compositeEquipmentState' EQUAL 'Oper Down')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Oper Down')		
Remedial action: This alarm indicates that a card in the NE has failed. The card must be replaced.		

Table 26-14 EquipmentInTest

Alarm	Attributes	Applicable major releases
Name: EquipmentInTest (11) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: warning Implicitly cleared: true Default probable cause: equipmentInTest (9)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when equipment enters a diagnostic state.		
Raising condition: ('compositeEquipmentState' EQUAL 'In Test')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'In Test')		
Remedial action: Informational - no corrective action required.		

Table 26-15 EquipmentMismatch

Alarm	Attributes	Applicable major releases
Name: EquipmentMismatch (9) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: equipmentTypeMismatch (7)	<ul style="list-style-type: none"> LR14.3.MG

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMismatch.		
Raising condition: ('compositeEquipmentState' EQUAL 'Type Mismatch')		
Clearing condition: ('compositeEquipmentState' NOT EQUAL 'Type Mismatch')		
Remedial action: A configuration error has occurred which must be corrected. The card type configured for the slot identified in the alarm must match the installed card type.		

(2 of 2)

Table 26-16 EquipmentRemoved

Alarm	Attributes	Applicable major releases
Name: EquipmentRemoved (8) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: replaceableEquipmentRemoved (6)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the compositeEquipmentState attribute has a value of equipmentMissing.		
Raising condition: (((('isEquipped' EQUAL 'false') OR ('compositeEquipmentState' EQUAL 'Removed')) AND ('isEquipmentInserted' EQUAL 'true')))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Removed') AND ('isEquipped' EQUAL 'true'))		
Remedial action: Informational - this alarm is raised when a card is removed.		

Table 26-17 FrameSizeProblem (netw)

Alarm	Attributes	Applicable major releases
Name: FrameSizeProblem (37) Type: configurationAlarm (11) Package: netw Raised on class: netw.StatefullConnectableInterface	Severity: critical Implicitly cleared: true Default probable cause: frameSizeProblem (33)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when a provisioned MTU size value is greater than the supported MTU size value.		
Raising condition: (('mtuMismatch' EQUAL 'true') AND ('portId' NOT EQUAL '0L'))		
Clearing condition: (('mtuMismatch' EQUAL 'false') OR ('portId' EQUAL '0L'))		
Remedial action: A configuration error has been made which must be corrected. The MTU value must be changed such that is less than or equal to the supported MTU size value.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-18 GaPeerDown

Alarm	Attributes	Applicable major releases
Name: GaPeerDown (3303) Type: EpcAlarm (59) Package: Iteggnsn Raised on class: Iteggnsn.GaPeer	Severity: major Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the path management state of a Ga peer changes to a state other than Up.		
Raising condition: ('Path Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 26-19 IK8000001 - I/O NAS access error

Alarm	Attributes	Applicable major releases
Name: IK8000001 (6450) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: I/O NAS access error (1406) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised in case of right access problem, full disk or network error. Alarm to be cleared by the operator at the management system. Reason: applicationSubsystemFailure		
Remedial action: Check the directory right or NAS status		

Table 26-20 IK8000002 - DataBase access error

Alarm	Attributes	Applicable major releases
Name: IK8000002 (6451) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: DataBase access error (1407) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised in case there is no connection with the database. Alarm is cleared by the system. Reason: applicationSubsystemFailure		
Remedial action: Check the state of the database		

Table 26-21 IK8000003 - HTTP communication failure

Alarm	Attributes	Applicable major releases
Name: IK8000003 (6452) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: HTTP communication failure (1408) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised in case of connection failure to the remote module. Alarm is cleared by the system. Reason: communicationsSubsystemFailure		
Remedial action: Check the status of the target server		

Table 26-22 IK8000005 - Provision

Alarm	Attributes	Applicable major releases
Name: IK8000005 (6453) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Provision (1940) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: This is a spare for future use Reason: configurationOrCustomizationError		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-23 IK8000006 - Max allowed resources reached

Alarm	Attributes	Applicable major releases
Name: IK8000006 (8250) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Max allowed resources reached (1941) Implicitly cleared: false Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised in case there are no more resource available. Alarm to be cleared by the operator at the management system. Reason: resourceAtOrNearingCapacity		
Remedial action: Check licence or provisioning file		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-24 IK8000008 - Session preparation error

Alarm	Attributes	Applicable major releases
Name: IK8000008 (6454) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Session preparation error (1410) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised in case of bearer activation error. Alarm to be cleared by the operator at the management system. Reason: applicationSubsystemFailure		
Remedial action: Check method used, other alarms for further info		

Table 26-25 IK8000012 - Data Backup Failure

Alarm	Attributes	Applicable major releases
Name: IK8000012 (6455) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Data Backup Failure (1411) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised when a scheduled lmgbackup fails. Alarm is cleared by the system. Reason: applicationSubsystemFailure		
Remedial action: See the Backup log file to have details on the Data backup operation failure, correct the potential error before retrying the operation or contact Alcatel-Lucent Technical Support.		

Table 26-26 IK8000013 - Provision

Alarm	Attributes	Applicable major releases
Name: IK8000013 (8251) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Provision (1940) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: This is a spare for future use Reason: communicationsSubsystemFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-27 IK8000014 - Provision

Alarm	Attributes	Applicable major releases
Name: IK8000014 (8252) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Provision (1940) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: This is a spare for future use\nReason: communicationsSubsystemFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-28 IK8000015 - Provision

Alarm	Attributes	Applicable major releases
Name: IK8000015 (8253) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Provision (1940) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: This is a spare for future use\nReason: communicationsSubsystemFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-29 IK8000100 - MME not responding

Alarm	Attributes	Applicable major releases
Name: IK8000100 (6456) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: MME not responding (1412) Implicitly cleared: true Default probable cause: externalEquipmentFailure (770)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised in case of no response from primary MME. Alarm is cleared by the system.\nReason: externalEquipmentFailure		
Remedial action: Check MME and network status		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-30 IK8000101 - MME not responding

Alarm	Attributes	Applicable major releases
Name: IK8000101 (8254) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: MME not responding (1412) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised in case of no response from all MME of a pool. Alarm to be cleared by the operator at the management system. Reason: externalEquipmentFailure		
Remedial action: Check MME and network status		

Table 26-31 IK8000102 - mb interface

Alarm	Attributes	Applicable major releases
Name: IK8000102 (6457) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: mb interface (1413) Implicitly cleared: true Default probable cause: externalEquipmentFailure (770)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised when diameter peer failure is detected by BMSC on SG-mb interface. Alarm is cleared by the system. Reason: externalEquipmentFailure		
Remedial action: Check Diameter configuration and network access		

Table 26-32 IK8000103 - mb interface

Alarm	Attributes	Applicable major releases
Name: IK8000103 (6458) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: mb interface (1413) Implicitly cleared: true Default probable cause: externalEquipmentFailure (770)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised when diameter peer failure is detected by MBMS-GW on SG-mb interface. Alarm is cleared by the system. Reason: externalEquipmentFailure		
Remedial action: Check Diameter configuration and network access		

Table 26-33 IK8000106 - Provision

Alarm	Attributes	Applicable major releases
Name: IK8000106 (6459) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Provision (1940) Implicitly cleared: true Default probable cause: externalEquipmentFailure (770)	<ul style="list-style-type: none"> LR14.3.MG
Description: This is a spare for future use Reason: externalEquipmentFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-34 IK8000107 - OnDemand file download failure

Alarm	Attributes	Applicable major releases
Name: IK8000107 (6460) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: OnDemand file download failure (1415) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised in case of failure to download OnDemand file. Alarm to be cleared by the operator at the management system. Reason: applicationSubsystemFailure		
Remedial action: Check the URI file access		

Table 26-35 IK8000108 - Missing socket

Alarm	Attributes	Applicable major releases
Name: IK8000108 (6461) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Missing socket (1416) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised when there are no more socket available for SGI-mb interface. Alarm is cleared by the system. Reason: applicationSubsystemFailure		
Remedial action: Check system resources on the MBMS-GW		

Table 26-36 IK8000110 - HTTP basic authentication error

Alarm	Attributes	Applicable major releases
Name: IK8000110 (6462) Type: securityServiceOrMechanismViolation (92) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: HTTP basic authentication error (1417) Implicitly cleared: true Default probable cause: authenticationFailure (786)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised in case of authentication error - DownloadAgent. Alarm is cleared by the system. Reason: authenticationFailure		
Remedial action: Check right or authentication parameters		

Table 26-37 IK8000113 - Problem with File Uri, or unreachable DNS

Alarm	Attributes	Applicable major releases
Name: IK8000113 (6463) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Problem with File Uri, or unreachable DNS (1418) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised when the File Uri domain name cannot be resolved, or the file Uri cannot be found. Alarm is cleared by the system. Reason: applicationSubsystemFailure		
Remedial action: Check DNS status, check content server or file availability		

Table 26-38 IK8000117 - No successful RAA Diameter message received

Alarm	Attributes	Applicable major releases
Name: IK8000117 (6464) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: No successful RAA Diameter message received (1419) Implicitly cleared: true Default probable cause: externalEquipmentFailure (770)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised when no successful RAA (start session/stop session) Diameter message is received from MBMS-GW. Alarm is cleared by the system. Reason: externalEquipmentFailure		
Remedial action: Check MBMS-GW and network status		

Table 26-39 IK8000120 - Provision

Alarm	Attributes	Applicable major releases
Name: IK8000120 (8255) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Provision (1940) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: This is a spare for future use\nReason: excessiveErrorRate		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.

Description: This is a spare for future use Reason: applicationSubsystemFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-72 IK8100004 - GSEM cannot interrogate this equipment

Alarm	Attributes	Applicable major releases
Name: IK8100004 (6465) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: GSEM cannot interrogate this equipment (1420) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: . Alarm is cleared by the system.\nReason: Communication problem with equipment		
Remedial action: Check the equipment status and the GSEM/NE connection		

Table 26-73 IK8100005 - Monitored object status change

Alarm	Attributes	Applicable major releases
Name: IK8100005 (6466) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Monitored object status change (1421) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: a configurable string is displayed. Alarm is cleared by the system.\nReason: Monitoring		
Remedial action: Check the object		

Table 26-74 IK8100006 - Change of consolidated status of a submap

Alarm	Attributes	Applicable major releases
Name: IK8100006 (6467) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Change of consolidated status of a submap (1422) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Map Name and new status are displayed. Alarm is cleared by the system.\nReason: Map Status Change		
Remedial action: Check the submap		

Table 26-75 IK8100007 - Change of Icon status

Alarm	Attributes	Applicable major releases
Name: IK8100007 (6468) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Change of Icon status (1423) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Icon Name and status change reason are displayed. Alarm is cleared by the system.\nReason: Icon Status Change		
Remedial action: Check the object attached to the icon		

Table 26-76 IK8100046 - GSEM starts

Alarm	Attributes	Applicable major releases
Name: IK8100046 (6469) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: GSEM starts (1424) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server startup. Alarm is automatically ack'ed and cleared after 2 minutes.\nReason: Security log		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-77 IK8100068 - GSEM Server

Alarm	Attributes	Applicable major releases
Name: IK8100068 (6470) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: GSEM Server (1425) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: The GSEM server licence will expire. Alarm to be cleared by the operator at the management system.\nReason: Licence trap		
Remedial action: Check the date, order a licence		

Table 26-78 IK8100076 - graph data directory

Alarm	Attributes	Applicable major releases
Name: IK8100076 (6471) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: graph data directory (1426) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: . Alarm is cleared by the system.\nReason: Graph Data Size Overflow		
Remedial action: Check the configured graph data directory (by default etc/graphData)		

Table 26-79 IK8100077 - log directory

Alarm	Attributes	Applicable major releases
Name: IK8100077 (6472) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: log directory (1427) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: . Alarm is cleared by the system.\nReason: Log Data Size Overflow		
Remedial action: Check the log directory (by default etc/log)		

Table 26-80 IK8200982 - Cluster Node Failed

Alarm	Attributes	Applicable major releases
Name: IK8200982 (6473) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Node Failed (1428) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 26-81 IK8200984 - Cluster Resource Failed

Alarm	Attributes	Applicable major releases
Name: IK8200984 (6474) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Resource Failed (1429) Implicitly cleared: false Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 26-82 IK8200986 - Cluster Network Failed

Alarm	Attributes	Applicable major releases
Name: IK8200986 (6475) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Network Failed (1430) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 26-83 IK8201008 - The primary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8201008 (6476) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The primary controller in the subsystem has failed (1431) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed. Alarm to be cleared by the operator at the management system. Reason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-84 IK8201010 - The secondary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8201010 (6477) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The secondary controller in the subsystem has failed (1432) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-85 IK8201013 - A RAIDset has failed

Alarm	Attributes	Applicable major releases
Name: IK8201013 (6478) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A RAIDset has failed (1433) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 26-86 IK8201018 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8201018 (6479) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-87 IK8201023 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8201023 (6480) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: false Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-88 IK8201030 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8201030 (6481) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-89 IK8201033 - Primary enclosure temperature critical!

Alarm	Attributes	Applicable major releases
Name: IK8201033 (6482) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Primary enclosure temperature critical! (1436) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-90 IK8201037 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8201037 (6483) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-91 IK8201040 - cpqCrExpCabTemperatureCriticalTrap

Alarm	Attributes	Applicable major releases
Name: IK8201040 (6484) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: cpqCrExpCabTemperatureCriticalTrap (1437) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 26-92 IK8201060 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8201060 (6485) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-93 IK8201073 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8201073 (6486) Type: environmentalAlarm (2) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-94 IK8201098 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8201098 (6487) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-95 IK8201102 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8201102 (6488) Type: environmentalAlarm (2) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-96 IK8201105 - System Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8201105 (6489) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: System Fan Failure (1441) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the failed fan.		

Table 26-97 IK8201112 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8201112 (6490) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-98 IK8201116 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8201116 (6491) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIPowerSupplyFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-99 IK8201121 - Fan Failed

Alarm	Attributes	Applicable major releases
Name: IK8201121 (6492) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fan Failed (1443) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIFanFailed		
Remedial action: Replace the failed fan.		

Table 26-100 IK8201125 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8201125 (6493) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-101 IK8201129 - Power Converter Failed

Alarm	Attributes	Applicable major releases
Name: IK8201129 (6494) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Converter Failed (1444) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 26-102 IK8201135 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8201135 (6495) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FitToIPowerSupplyFailed		
Remedial action: Replace the failed power supply.		

Table 26-103 IK8201144 - Memory Board or Cartridge Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8201144 (6496) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected (1445) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 26-104 IK8201148 - Management processor failed reset

Alarm	Attributes	Applicable major releases
Name: IK8201148 (6497) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Management processor failed reset (1446) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 26-105 IK8201152 - Memory Board or Cartridge or Riser Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8201152 (6498) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected (1447) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based. Alarm to be cleared by the operator at the management system. Reason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 26-106 IK8201154 - Power Supply AC Power Loss

Alarm	Attributes	Applicable major releases
Name: IK8201154 (6499) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply AC Power Loss (1448) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location. Alarm to be cleared by the operator at the management system. Reason: cpqHe4FitToIPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 26-107 IK8201156 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8201156 (6500) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc. Alarm to be cleared by the operator at the management system. Reason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-108 IK8201158 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8201158 (6501) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-109 IK8201163 - Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8201163 (6502) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Status Trap (1450) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 26-110 IK8201172 - Power Threshold Exceeded

Alarm	Attributes	Applicable major releases
Name: IK8201172 (6503) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Threshold Exceeded (1451) Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-111 IK8202265 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8202265 (6504) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-112 IK8202272 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8202272 (6505) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-113 IK8202279 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8202279 (6506) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-114 IK8202291 - Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8202291 (6507) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Bad Data (1453) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-115 IK8202292 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8202292 (6508) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-116 IK8202295 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8202295 (6509) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-117 IK8202302 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8202302 (6510) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-118 IK8202337 - NIC Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8202337 (6511) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Status Trap (1455) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-119 IK8202341 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8202341 (6512) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-120 IK8202343 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8202343 (6513) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-121 IK8202347 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8202347 (6514) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-122 IK8202349 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8202349 (6515) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

(2 of 2)

Table 26-123 IK8202360 - Enclosure temperature failed

Alarm	Attributes	Applicable major releases
Name: IK8202360 (6516) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure temperature failed (1458) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 26-124 IK8202363 - Enclosure fan failed

Alarm	Attributes	Applicable major releases
Name: IK8202363 (6517) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure fan failed (1459) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 26-125 IK8202368 - Rack power supply failed

Alarm	Attributes	Applicable major releases
Name: IK8202368 (6518) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Rack power supply failed (1460) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG

(1 of 2)

26 – Alcatel-Lucent 9774 LMG alarms

Alarm	Attributes	Applicable major releases
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

(2 of 2)

Table 26-126 IK8202369 - Rack power supply degraded

Alarm	Attributes	Applicable major releases
Name: IK8202369 (6519) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply degraded (1461) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 26-127 IK8202374 - Rack power supply input voltage problem

Alarm	Attributes	Applicable major releases
Name: IK8202374 (6520) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply input voltage problem (1462) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 26-128 IK8202375 - Rack power subsystem overload condition

Alarm	Attributes	Applicable major releases
Name: IK8202375 (6521) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power subsystem overload condition (1463) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power subsystem overload condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemOverloadCondition		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

(2 of 2)

Table 26-129 IK8202376 - Server shutdown due to power shedding

Alarm	Attributes	Applicable major releases
Name: IK8202376 (6522) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Server shutdown due to power shedding (1464) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 26-130 IK8202377 - Server power on prevented to preserve redundancy

Alarm	Attributes	Applicable major releases
Name: IK8202377 (6523) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Server power on prevented to preserve redundancy (1465) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 26-131 IK8202378 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8202378 (6524) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 26-132 IK8202379 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8202379 (6525) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 26-133 IK8202380 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8202380 (6526) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedPowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 26-134 IK8202382 - Fuse open

Alarm	Attributes	Applicable major releases
Name: IK8202382 (6527) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fuse open (1467) Implicitly cleared: false Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fuse open. The fuse has been tripped.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 26-135 IK8202386 - Power subsystem DC power problem

Alarm	Attributes	Applicable major releases
Name: IK8202386 (6528) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power subsystem DC power problem (1468) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-136 IK8202387 - Power subsystem AC facility input power exceeded

Alarm	Attributes	Applicable major releases
Name: IK8202387 (6529) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power subsystem AC facility input power exceeded (1469) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisAcFacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-137 IK8202388 - Unknown power consumption

Alarm	Attributes	Applicable major releases
Name: IK8202388 (6530) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Unknown power consumption (1470) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-138 IK8202391 - Power subsystem improperly configured

Alarm	Attributes	Applicable major releases
Name: IK8202391 (6531) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem improperly configured (1471) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 26-139 IK8202401 - Interconnect failed

Alarm	Attributes	Applicable major releases
Name: IK8202401 (6532) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Interconnect failed (1472) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 26-140 IK8202408 - Server blade health status degraded

Alarm	Attributes	Applicable major releases
Name: IK8202408 (6533) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade health status degraded (1473) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-141 IK8202409 - Server blade health status critical

Alarm	Attributes	Applicable major releases
Name: IK8202409 (6534) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Server blade health status critical (1474) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-142 IK8202411 - Server blade unexpected shutdown

Alarm	Attributes	Applicable major releases
Name: IK8202411 (6535) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Server blade unexpected shutdown (1475) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An unexpected shutdown has occurred for this server blade.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-143 IK8202428 - Generic EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8202428 (6536) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap (1476) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-144 IK8202429 - Generic EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8202429 (6537) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic EAE Critical trap (1477) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-145 IK8202431 - Generic Power Subsystem EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8202431 (6538) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic Power Subsystem EAE Major trap (1478) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-146 IK8202432 - Generic Power Subsystem EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8202432 (6539) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap (1479) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-147 IK8202436 - Generic WSMAN Major trap

Alarm	Attributes	Applicable major releases
Name: IK8202436 (6540) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic WSMAN Major trap (1480) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-148 IK8202437 - Generic WSMAN Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8202437 (6541) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic WSMAN Critical trap (1481) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-149 IK8202439 - Standby Recovery Server Interconnect Failure

Alarm	Attributes	Applicable major releases
Name: IK8202439 (6542) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure (1482) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-150 IK8202559 - Critical Alarm

Alarm	Attributes	Applicable major releases
Name: IK8202559 (6543) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: critical Specific problem: Critical Alarm (1483) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 26-151 IK8202609 - Monitor Condition Failed

Alarm	Attributes	Applicable major releases
Name: IK8202609 (6544) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Monitor Condition Failed (1484) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-152 IK8202610 - Excessive Correctable Memory Errors

Alarm	Attributes	Applicable major releases
Name: IK8202610 (6545) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Excessive Correctable Memory Errors (1485) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-153 IK8202615 - Hot Plug Slot Board Failed

Alarm	Attributes	Applicable major releases
Name: IK8202615 (6546) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Hot Plug Slot Board Failed (1486) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 26-154 IK8202616 - Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8202616 (6547) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Failure (235) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 26-155 IK8202617 - Battery Charging Degradation

Alarm	Attributes	Applicable major releases
Name: IK8202617 (6548) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Charging Degradation (1487) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 26-156 IK8202620 - Server Power Outage

Alarm	Attributes	Applicable major releases
Name: IK8202620 (6549) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server Power Outage (1488) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 26-157 IK8202622 - Remote Insight Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8202622 (6550) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight Battery Failed (1489) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 26-158 IK8202628 - Remote Insight external power cable disconnected

Alarm	Attributes	Applicable major releases
Name: IK8202628 (6551) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight external power cable disconnected (1490) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 26-159 IK8202632 - Server Fatal Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8202632 (6552) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server Fatal Error Detected (1491) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-160 IK8202633 - The iLO NIC Link is Down

Alarm	Attributes	Applicable major releases
Name: IK8202633 (6553) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The iLO NIC Link is Down (1492) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 26-161 IK8202648 - PC Card Thermal Failure Status

Alarm	Attributes	Applicable major releases
Name: IK8202648 (6554) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: PC Card Thermal Failure Status (1493) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-162 IK8202657 - Storage System Temperature Failure

Alarm	Attributes	Applicable major releases
Name: IK8202657 (6555) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Storage System Temperature Failure (1494) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-163 IK8204762 - linkDown

Alarm	Attributes	Applicable major releases
Name: IK8204762 (6556) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: linkDown (1495) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-164 IK8250982 - Cluster Node Failed

Alarm	Attributes	Applicable major releases
Name: IK8250982 (6557) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Node Failed (1428) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 26-165 IK8250984 - Cluster Resource Failed

Alarm	Attributes	Applicable major releases
Name: IK8250984 (6558) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Resource Failed (1429) Implicitly cleared: false Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 26-166 IK8250986 - Cluster Network Failed

Alarm	Attributes	Applicable major releases
Name: IK8250986 (6559) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Network Failed (1430) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 26-167 IK8251008 - The primary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8251008 (6560) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The primary controller in the subsystem has failed (1431) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed. Alarm to be cleared by the operator at the management system. Reason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-168 IK8251010 - The secondary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8251010 (6561) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The secondary controller in the subsystem has failed (1432) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-169 IK8251013 - A RAIDset has failed

Alarm	Attributes	Applicable major releases
Name: IK8251013 (6562) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A RAIDset has failed (1433) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 26-170 IK8251018 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8251018 (6563) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-171 IK8251023 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8251023 (6564) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: false Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-172 IK8251030 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8251030 (6565) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-173 IK8251033 - Primary enclosure temperature critical!

Alarm	Attributes	Applicable major releases
Name: IK8251033 (6566) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Primary enclosure temperature critical! (1436) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 26-174 IK8251037 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8251037 (6567) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-175 IK8251040 - cpqCrExpCabTemperatureCriticalTrap

Alarm	Attributes	Applicable major releases
Name: IK8251040 (6568) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: cpqCrExpCabTemperatureCriticalTrap (1437) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 26-176 IK8251060 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8251060 (6569) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-177 IK8251073 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8251073 (6570) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-178 IK8251098 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8251098 (6571) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-179 IK8251102 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8251102 (6572) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-180 IK8251105 - System Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8251105 (6573) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: System Fan Failure (1441) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the failed fan.		

Table 26-181 IK8251112 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8251112 (6574) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-182 IK8251116 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8251116 (6575) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIPowerSupplyFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-183 IK8251121 - Fan Failed

Alarm	Attributes	Applicable major releases
Name: IK8251121 (6576) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fan Failed (1443) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIFanFailed		
Remedial action: Replace the failed fan.		

Table 26-184 IK8251125 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8251125 (6577) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-185 IK8251129 - Power Converter Failed

Alarm	Attributes	Applicable major releases
Name: IK8251129 (6578) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Converter Failed (1444) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 26-186 IK8251135 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8251135 (6579) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FitToIPowerSupplyFailed		
Remedial action: Replace the failed power supply.		

Table 26-187 IK8251144 - Memory Board or Cartridge Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8251144 (6580) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected (1445) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 26-188 IK8251148 - Management processor failed reset

Alarm	Attributes	Applicable major releases
Name: IK8251148 (6581) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Management processor failed reset (1446) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 26-189 IK8251152 - Memory Board or Cartridge or Riser Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8251152 (6582) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected (1447) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based. Alarm to be cleared by the operator at the management system. Reason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 26-190 IK8251154 - Power Supply AC Power Loss

Alarm	Attributes	Applicable major releases
Name: IK8251154 (6583) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply AC Power Loss (1448) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location. Alarm to be cleared by the operator at the management system. Reason: cpqHe4FitToIPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 26-191 IK8251156 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8251156 (6584) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc. Alarm to be cleared by the operator at the management system. Reason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-192 IK8251158 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8251158 (6585) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-193 IK8251163 - Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8251163 (6586) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Status Trap (1450) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 26-194 IK8251172 - Power Threshold Exceeded

Alarm	Attributes	Applicable major releases
Name: IK8251172 (6587) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Threshold Exceeded (1451) Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-195 IK8252265 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8252265 (6588) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-196 IK8252272 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8252272 (6589) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-197 IK8252279 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8252279 (6590) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-198 IK8252291 - Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8252291 (6591) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Bad Data (1453) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-199 IK8252292 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8252292 (6592) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-200 IK8252295 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8252295 (6593) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-201 IK8252302 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8252302 (6594) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-202 IK8252337 - NIC Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8252337 (6595) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Status Trap (1455) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-203 IK8252341 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8252341 (6596) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-204 IK8252343 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8252343 (6597) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-205 IK8252347 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8252347 (6598) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-206 IK8252349 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8252349 (6599) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

(2 of 2)

Table 26-207 IK8252360 - Enclosure temperature failed

Alarm	Attributes	Applicable major releases
Name: IK8252360 (6600) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure temperature failed (1458) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 26-208 IK8252363 - Enclosure fan failed

Alarm	Attributes	Applicable major releases
Name: IK8252363 (6601) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure fan failed (1459) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 26-209 IK8252368 - Rack power supply failed

Alarm	Attributes	Applicable major releases
Name: IK8252368 (6602) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Rack power supply failed (1460) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG

(1 of 2)

26 – Alcatel-Lucent 9774 LMG alarms

Alarm	Attributes	Applicable major releases
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

(2 of 2)

Table 26-210 IK8252369 - Rack power supply degraded

Alarm	Attributes	Applicable major releases
Name: IK8252369 (6603) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply degraded (1461) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 26-211 IK8252374 - Rack power supply input voltage problem

Alarm	Attributes	Applicable major releases
Name: IK8252374 (6604) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply input voltage problem (1462) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 26-212 IK8252375 - Rack power subsystem overload condition

Alarm	Attributes	Applicable major releases
Name: IK8252375 (6605) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power subsystem overload condition (1463) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power subsystem overload condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemOverloadCondition		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

(2 of 2)

Table 26-213 IK8252376 - Server shutdown due to power shedding

Alarm	Attributes	Applicable major releases
Name: IK8252376 (6606) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server shutdown due to power shedding (1464) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 26-214 IK8252377 - Server power on prevented to preserve redundancy

Alarm	Attributes	Applicable major releases
Name: IK8252377 (6607) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server power on prevented to preserve redundancy (1465) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 26-215 IK8252378 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8252378 (6608) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 26-216 IK8252379 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8252379 (6609) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 26-217 IK8252380 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8252380 (6610) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedPowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 26-218 IK8252382 - Fuse open

Alarm	Attributes	Applicable major releases
Name: IK8252382 (6611) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fuse open (1467) Implicitly cleared: false Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fuse open. The fuse has been tripped.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 26-219 IK8252386 - Power subsystem DC power problem

Alarm	Attributes	Applicable major releases
Name: IK8252386 (6612) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power subsystem DC power problem (1468) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-220 IK8252387 - Power subsystem AC facility input power exceeded

Alarm	Attributes	Applicable major releases
Name: IK8252387 (6613) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power subsystem AC facility input power exceeded (1469) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisAcFacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-221 IK8252388 - Unknown power consumption

Alarm	Attributes	Applicable major releases
Name: IK8252388 (6614) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Unknown power consumption (1470) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-222 IK8252391 - Power subsystem improperly configured

Alarm	Attributes	Applicable major releases
Name: IK8252391 (6615) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem improperly configured (1471) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured. Alarm to be cleared by the operator at the management system. Reason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 26-223 IK8252401 - Interconnect failed

Alarm	Attributes	Applicable major releases
Name: IK8252401 (6616) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Interconnect failed (1472) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The interconnect status has been set to failed. This alarm signifies that an interconnect has failed. Alarm to be cleared by the operator at the management system. Reason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 26-224 IK8252408 - Server blade health status degraded

Alarm	Attributes	Applicable major releases
Name: IK8252408 (6617) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade health status degraded (1473) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded. Alarm to be cleared by the operator at the management system. Reason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-225 IK8252409 - Server blade health status critical

Alarm	Attributes	Applicable major releases
Name: IK8252409 (6618) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Server blade health status critical (1474) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-226 IK8252411 - Server blade unexpected shutdown

Alarm	Attributes	Applicable major releases
Name: IK8252411 (6619) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Server blade unexpected shutdown (1475) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An unexpected shutdown has occurred for this server blade.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-227 IK8252428 - Generic EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8252428 (6620) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap (1476) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-228 IK8252429 - Generic EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8252429 (6621) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic EAE Critical trap (1477) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-229 IK8252431 - Generic Power Subsystem EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8252431 (6622) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic Power Subsystem EAE Major trap (1478) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-230 IK8252432 - Generic Power Subsystem EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8252432 (6623) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap (1479) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-231 IK8252436 - Generic WSMAN Major trap

Alarm	Attributes	Applicable major releases
Name: IK8252436 (6624) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic WSMAN Major trap (1480) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-232 IK8252437 - Generic WSMAN Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8252437 (6625) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic WSMAN Critical trap (1481) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-233 IK8252439 - Standby Recovery Server Interconnect Failure

Alarm	Attributes	Applicable major releases
Name: IK8252439 (6626) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure (1482) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-234 IK8252559 - Critical Alarm

Alarm	Attributes	Applicable major releases
Name: IK8252559 (6627) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: critical Specific problem: Critical Alarm (1483) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 26-235 IK8252609 - Monitor Condition Failed

Alarm	Attributes	Applicable major releases
Name: IK8252609 (6628) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Monitor Condition Failed (1484) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-236 IK8252610 - Excessive Correctable Memory Errors

Alarm	Attributes	Applicable major releases
Name: IK8252610 (6629) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Excessive Correctable Memory Errors (1485) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-237 IK8252615 - Hot Plug Slot Board Failed

Alarm	Attributes	Applicable major releases
Name: IK8252615 (6630) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Hot Plug Slot Board Failed (1486) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 26-238 IK8252616 - Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8252616 (6631) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Failure (235) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 26-239 IK8252617 - Battery Charging Degradation

Alarm	Attributes	Applicable major releases
Name: IK8252617 (6632) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Charging Degradation (1487) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 26-240 IK8252620 - Server Power Outage

Alarm	Attributes	Applicable major releases
Name: IK8252620 (6633) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server Power Outage (1488) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 26-241 IK8252622 - Remote Insight Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8252622 (6634) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight Battery Failed (1489) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 26-242 IK8252628 - Remote Insight external power cable disconnected

Alarm	Attributes	Applicable major releases
Name: IK8252628 (6635) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight external power cable disconnected (1490) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 26-243 IK8252632 - Server Fatal Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8252632 (6636) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server Fatal Error Detected (1491) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-244 IK8252633 - The iLO NIC Link is Down

Alarm	Attributes	Applicable major releases
Name: IK8252633 (6637) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The iLO NIC Link is Down (1492) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 26-245 IK8252648 - PC Card Thermal Failure Status

Alarm	Attributes	Applicable major releases
Name: IK8252648 (6638) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: PC Card Thermal Failure Status (1493) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-246 IK8252657 - Storage System Temperature Failure

Alarm	Attributes	Applicable major releases
Name: IK8252657 (6639) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Storage System Temperature Failure (1494) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-247 IK8254762 - linkDown

Alarm	Attributes	Applicable major releases
Name: IK8254762 (6640) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: linkDown (1495) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-248 IK8300982 - Cluster Node Failed

Alarm	Attributes	Applicable major releases
Name: IK8300982 (6641) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Node Failed (1428) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 26-249 IK8300984 - Cluster Resource Failed

Alarm	Attributes	Applicable major releases
Name: IK8300984 (6642) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Resource Failed (1429) Implicitly cleared: false Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 26-250 IK8300986 - Cluster Network Failed

Alarm	Attributes	Applicable major releases
Name: IK8300986 (6643) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Network Failed (1430) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 26-251 IK8301008 - The primary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8301008 (6644) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The primary controller in the subsystem has failed (1431) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed. Alarm to be cleared by the operator at the management system. Reason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-252 IK8301010 - The secondary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8301010 (6645) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The secondary controller in the subsystem has failed (1432) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-253 IK8301013 - A RAIDset has failed

Alarm	Attributes	Applicable major releases
Name: IK8301013 (6646) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A RAIDset has failed (1433) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 26-254 IK8301018 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8301018 (6647) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-255 IK8301023 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8301023 (6648) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: false Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-256 IK8301030 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8301030 (6649) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-257 IK8301033 - Primary enclosure temperature critical!

Alarm	Attributes	Applicable major releases
Name: IK8301033 (6650) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Primary enclosure temperature critical! (1436) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 26-258 IK8301037 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8301037 (6651) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-259 IK8301040 - cpqCrExpCabTemperatureCriticalTrap

Alarm	Attributes	Applicable major releases
Name: IK8301040 (6652) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: cpqCrExpCabTemperatureCriticalTrap (1437) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 26-260 IK8301060 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8301060 (6653) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-261 IK8301073 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8301073 (6654) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-262 IK8301098 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8301098 (6655) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-263 IK8301102 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8301102 (6656) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-264 IK8301105 - System Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8301105 (6657) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: System Fan Failure (1441) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the failed fan.		

Table 26-265 IK8301112 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8301112 (6658) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-266 IK8301116 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8301116 (6659) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIPowerSupplyFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-267 IK8301121 - Fan Failed

Alarm	Attributes	Applicable major releases
Name: IK8301121 (6660) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fan Failed (1443) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIFanFailed		
Remedial action: Replace the failed fan.		

Table 26-268 IK8301125 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8301125 (6661) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-269 IK8301129 - Power Converter Failed

Alarm	Attributes	Applicable major releases
Name: IK8301129 (6662) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Converter Failed (1444) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 26-270 IK8301135 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8301135 (6663) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FitToIPowerSupplyFailed		
Remedial action: Replace the failed power supply.		

Table 26-271 IK8301144 - Memory Board or Cartridge Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8301144 (6664) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected (1445) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 26-272 IK8301148 - Management processor failed reset

Alarm	Attributes	Applicable major releases
Name: IK8301148 (6665) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Management processor failed reset (1446) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 26-273 IK8301152 - Memory Board or Cartridge or Riser Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8301152 (6666) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected (1447) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based. Alarm to be cleared by the operator at the management system. Reason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 26-274 IK8301154 - Power Supply AC Power Loss

Alarm	Attributes	Applicable major releases
Name: IK8301154 (6667) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply AC Power Loss (1448) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location. Alarm to be cleared by the operator at the management system. Reason: cpqHe4FitToIPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 26-275 IK8301156 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8301156 (6668) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc. Alarm to be cleared by the operator at the management system. Reason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-276 IK8301158 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8301158 (6669) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-277 IK8301163 - Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8301163 (6670) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Status Trap (1450) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 26-278 IK8301172 - Power Threshold Exceeded

Alarm	Attributes	Applicable major releases
Name: IK8301172 (6671) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Threshold Exceeded (1451) Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-279 IK8302265 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8302265 (6672) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-280 IK8302272 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8302272 (6673) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-281 IK8302279 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8302279 (6674) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-282 IK8302291 - Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8302291 (6675) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Bad Data (1453) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-283 IK8302292 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8302292 (6676) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-284 IK8302295 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8302295 (6677) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-285 IK8302302 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8302302 (6678) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-286 IK8302337 - NIC Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8302337 (6679) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Status Trap (1455) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-287 IK8302341 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8302341 (6680) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-288 IK8302343 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8302343 (6681) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-289 IK8302347 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8302347 (6682) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-290 IK8302349 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8302349 (6683) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

(2 of 2)

Table 26-291 IK8302360 - Enclosure temperature failed

Alarm	Attributes	Applicable major releases
Name: IK8302360 (6684) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure temperature failed (1458) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 26-292 IK8302363 - Enclosure fan failed

Alarm	Attributes	Applicable major releases
Name: IK8302363 (6685) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure fan failed (1459) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 26-293 IK8302368 - Rack power supply failed

Alarm	Attributes	Applicable major releases
Name: IK8302368 (6686) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Rack power supply failed (1460) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG

(1 of 2)

26 – Alcatel-Lucent 9774 LMG alarms

Alarm	Attributes	Applicable major releases
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

(2 of 2)

Table 26-294 IK8302369 - Rack power supply degraded

Alarm	Attributes	Applicable major releases
Name: IK8302369 (6687) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply degraded (1461) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 26-295 IK8302374 - Rack power supply input voltage problem

Alarm	Attributes	Applicable major releases
Name: IK8302374 (6688) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply input voltage problem (1462) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 26-296 IK8302375 - Rack power subsystem overload condition

Alarm	Attributes	Applicable major releases
Name: IK8302375 (6689) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power subsystem overload condition (1463) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power subsystem overload condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemOverloadCondition		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

(2 of 2)

Table 26-297 IK8302376 - Server shutdown due to power shedding

Alarm	Attributes	Applicable major releases
Name: IK8302376 (6690) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server shutdown due to power shedding (1464) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 26-298 IK8302377 - Server power on prevented to preserve redundancy

Alarm	Attributes	Applicable major releases
Name: IK8302377 (6691) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server power on prevented to preserve redundancy (1465) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 26-299 IK8302378 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8302378 (6692) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 26-300 IK8302379 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8302379 (6693) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 26-301 IK8302380 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8302380 (6694) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedPowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 26-302 IK8302382 - Fuse open

Alarm	Attributes	Applicable major releases
Name: IK8302382 (6695) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fuse open (1467) Implicitly cleared: false Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fuse open. The fuse has been tripped.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 26-303 IK8302386 - Power subsystem DC power problem

Alarm	Attributes	Applicable major releases
Name: IK8302386 (6696) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem DC power problem (1468) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-304 IK8302387 - Power subsystem AC facility input power exceeded

Alarm	Attributes	Applicable major releases
Name: IK8302387 (6697) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem AC facility input power exceeded (1469) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisAcFacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-305 IK8302388 - Unknown power consumption

Alarm	Attributes	Applicable major releases
Name: IK8302388 (6698) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Unknown power consumption (1470) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-306 IK8302391 - Power subsystem improperly configured

Alarm	Attributes	Applicable major releases
Name: IK8302391 (6699) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem improperly configured (1471) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 26-307 IK8302401 - Interconnect failed

Alarm	Attributes	Applicable major releases
Name: IK8302401 (6700) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Interconnect failed (1472) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 26-308 IK8302408 - Server blade health status degraded

Alarm	Attributes	Applicable major releases
Name: IK8302408 (6701) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade health status degraded (1473) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-309 IK8302409 - Server blade health status critical

Alarm	Attributes	Applicable major releases
Name: IK8302409 (6702) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server blade health status critical (1474) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-310 IK8302411 - Server blade unexpected shutdown

Alarm	Attributes	Applicable major releases
Name: IK8302411 (6703) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade unexpected shutdown (1475) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An unexpected shutdown has occurred for this server blade.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-311 IK8302428 - Generic EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8302428 (6704) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic EAE Major trap (1476) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-312 IK8302429 - Generic EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8302429 (6705) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic EAE Critical trap (1477) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-313 IK8302431 - Generic Power Subsystem EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8302431 (6706) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic Power Subsystem EAE Major trap (1478) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-314 IK8302432 - Generic Power Subsystem EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8302432 (6707) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap (1479) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-315 IK8302436 - Generic WSMAN Major trap

Alarm	Attributes	Applicable major releases
Name: IK8302436 (6708) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic WSMAN Major trap (1480) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-316 IK8302437 - Generic WSMAN Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8302437 (6709) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic WSMAN Critical trap (1481) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-317 IK8302439 - Standby Recovery Server Interconnect Failure

Alarm	Attributes	Applicable major releases
Name: IK8302439 (6710) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure (1482) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-318 IK8302559 - Critical Alarm

Alarm	Attributes	Applicable major releases
Name: IK8302559 (6711) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: critical Specific problem: Critical Alarm (1483) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 26-319 IK8302609 - Monitor Condition Failed

Alarm	Attributes	Applicable major releases
Name: IK8302609 (6712) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Monitor Condition Failed (1484) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-320 IK8302610 - Excessive Correctable Memory Errors

Alarm	Attributes	Applicable major releases
Name: IK8302610 (6713) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Excessive Correctable Memory Errors (1485) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-321 IK8302615 - Hot Plug Slot Board Failed

Alarm	Attributes	Applicable major releases
Name: IK8302615 (6714) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Hot Plug Slot Board Failed (1486) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 26-322 IK8302616 - Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8302616 (6715) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Failure (235) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 26-323 IK8302617 - Battery Charging Degradation

Alarm	Attributes	Applicable major releases
Name: IK8302617 (6716) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Charging Degradation (1487) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-324 IK8302620 - Server Power Outage

Alarm	Attributes	Applicable major releases
Name: IK8302620 (6717) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server Power Outage (1488) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 26-325 IK8302622 - Remote Insight Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8302622 (6718) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight Battery Failed (1489) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 26-326 IK8302628 - Remote Insight external power cable disconnected

Alarm	Attributes	Applicable major releases
Name: IK8302628 (6719) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight external power cable disconnected (1490) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 26-327 IK8302632 - Server Fatal Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8302632 (6720) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server Fatal Error Detected (1491) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-328 IK8302633 - The iLO NIC Link is Down

Alarm	Attributes	Applicable major releases
Name: IK8302633 (6721) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The iLO NIC Link is Down (1492) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 26-329 IK8302648 - PC Card Thermal Failure Status

Alarm	Attributes	Applicable major releases
Name: IK8302648 (6722) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: PC Card Thermal Failure Status (1493) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-330 IK8302657 - Storage System Temperature Failure

Alarm	Attributes	Applicable major releases
Name: IK8302657 (6723) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Storage System Temperature Failure (1494) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-331 IK8304762 - linkDown

Alarm	Attributes	Applicable major releases
Name: IK8304762 (6724) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: linkDown (1495) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-332 IK8350982 - Cluster Node Failed

Alarm	Attributes	Applicable major releases
Name: IK8350982 (6725) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Node Failed (1428) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 26-333 IK8350984 - Cluster Resource Failed

Alarm	Attributes	Applicable major releases
Name: IK8350984 (6726) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Resource Failed (1429) Implicitly cleared: false Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 26-334 IK8350986 - Cluster Network Failed

Alarm	Attributes	Applicable major releases
Name: IK8350986 (6727) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Network Failed (1430) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 26-335 IK8351008 - The primary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8351008 (6728) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The primary controller in the subsystem has failed (1431) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed. Alarm to be cleared by the operator at the management system. Reason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-336 IK8351010 - The secondary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8351010 (6729) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The secondary controller in the subsystem has failed (1432) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-337 IK8351013 - A RAIDset has failed

Alarm	Attributes	Applicable major releases
Name: IK8351013 (6730) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A RAIDset has failed (1433) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 26-338 IK8351018 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8351018 (6731) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-339 IK8351023 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8351023 (6732) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: false Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-340 IK8351030 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8351030 (6733) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-341 IK8351033 - Primary enclosure temperature critical!

Alarm	Attributes	Applicable major releases
Name: IK8351033 (6734) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Primary enclosure temperature critical! (1436) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 26-342 IK8351037 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8351037 (6735) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-343 IK8351040 - cpqCrExpCabTemperatureCriticalTrap

Alarm	Attributes	Applicable major releases
Name: IK8351040 (6736) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: cpqCrExpCabTemperatureCriticalTrap (1437) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 26-344 IK8351060 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8351060 (6737) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-345 IK8351073 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8351073 (6738) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-346 IK8351098 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8351098 (6739) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-347 IK8351102 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8351102 (6740) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-348 IK8351105 - System Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8351105 (6741) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: System Fan Failure (1441) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the failed fan.		

Table 26-349 IK8351112 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8351112 (6742) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-350 IK8351116 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8351116 (6743) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIPowerSupplyFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-351 IK8351121 - Fan Failed

Alarm	Attributes	Applicable major releases
Name: IK8351121 (6744) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fan Failed (1443) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIFanFailed		
Remedial action: Replace the failed fan.		

Table 26-352 IK8351125 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8351125 (6745) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-353 IK8351129 - Power Converter Failed

Alarm	Attributes	Applicable major releases
Name: IK8351129 (6746) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Converter Failed (1444) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 26-354 IK8351135 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8351135 (6747) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FitToIPowerSupplyFailed		
Remedial action: Replace the failed power supply.		

Table 26-355 IK8351144 - Memory Board or Cartridge Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8351144 (6748) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected (1445) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 26-356 IK8351148 - Management processor failed reset

Alarm	Attributes	Applicable major releases
Name: IK8351148 (6749) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Management processor failed reset (1446) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 26-357 IK8351152 - Memory Board or Cartridge or Riser Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8351152 (6750) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected (1447) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based. Alarm to be cleared by the operator at the management system. Reason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 26-358 IK8351154 - Power Supply AC Power Loss

Alarm	Attributes	Applicable major releases
Name: IK8351154 (6751) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply AC Power Loss (1448) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location. Alarm to be cleared by the operator at the management system. Reason: cpqHe4FitToIPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 26-359 IK8351156 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8351156 (6752) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc. Alarm to be cleared by the operator at the management system. Reason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-360 IK8351158 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8351158 (6753) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-361 IK8351163 - Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8351163 (6754) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Status Trap (1450) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 26-362 IK8351172 - Power Threshold Exceeded

Alarm	Attributes	Applicable major releases
Name: IK8351172 (6755) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Threshold Exceeded (1451) Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-363 IK8352265 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8352265 (6756) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-364 IK8352272 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8352272 (6757) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-365 IK8352279 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8352279 (6758) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-366 IK8352291 - Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8352291 (6759) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Bad Data (1453) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-367 IK8352292 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8352292 (6760) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-368 IK8352295 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8352295 (6761) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-369 IK8352302 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8352302 (6762) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-370 IK8352337 - NIC Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8352337 (6763) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Status Trap (1455) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-371 IK8352341 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8352341 (6764) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-372 IK8352343 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8352343 (6765) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-373 IK8352347 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8352347 (6766) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-374 IK8352349 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8352349 (6767) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic3RedundancyReduced		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

(2 of 2)

Table 26-375 IK8352360 - Enclosure temperature failed

Alarm	Attributes	Applicable major releases
Name: IK8352360 (6768) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure temperature failed (1458) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 26-376 IK8352363 - Enclosure fan failed

Alarm	Attributes	Applicable major releases
Name: IK8352363 (6769) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure fan failed (1459) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 26-377 IK8352368 - Rack power supply failed

Alarm	Attributes	Applicable major releases
Name: IK8352368 (6770) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Rack power supply failed (1460) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG

(1 of 2)

26 – Alcatel-Lucent 9774 LMG alarms

Alarm	Attributes	Applicable major releases
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

(2 of 2)

Table 26-378 IK8352369 - Rack power supply degraded

Alarm	Attributes	Applicable major releases
Name: IK8352369 (6771) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply degraded (1461) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 26-379 IK8352374 - Rack power supply input voltage problem

Alarm	Attributes	Applicable major releases
Name: IK8352374 (6772) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply input voltage problem (1462) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 26-380 IK8352375 - Rack power subsystem overload condition

Alarm	Attributes	Applicable major releases
Name: IK8352375 (6773) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power subsystem overload condition (1463) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power subsystem overload condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemOverloadCondition		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

(2 of 2)

Table 26-381 IK8352376 - Server shutdown due to power shedding

Alarm	Attributes	Applicable major releases
Name: IK8352376 (6774) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server shutdown due to power shedding (1464) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 26-382 IK8352377 - Server power on prevented to preserve redundancy

Alarm	Attributes	Applicable major releases
Name: IK8352377 (6775) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server power on prevented to preserve redundancy (1465) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 26-383 IK8352378 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8352378 (6776) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 26-384 IK8352379 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8352379 (6777) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 26-385 IK8352380 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8352380 (6778) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedPowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 26-386 IK8352382 - Fuse open

Alarm	Attributes	Applicable major releases
Name: IK8352382 (6779) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fuse open (1467) Implicitly cleared: false Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fuse open. The fuse has been tripped.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 26-387 IK8352386 - Power subsystem DC power problem

Alarm	Attributes	Applicable major releases
Name: IK8352386 (6780) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem DC power problem (1468) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-388 IK8352387 - Power subsystem AC facility input power exceeded

Alarm	Attributes	Applicable major releases
Name: IK8352387 (6781) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem AC facility input power exceeded (1469) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisAcFacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-389 IK8352388 - Unknown power consumption

Alarm	Attributes	Applicable major releases
Name: IK8352388 (6782) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Unknown power consumption (1470) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-390 IK8352391 - Power subsystem improperly configured

Alarm	Attributes	Applicable major releases
Name: IK8352391 (6783) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem improperly configured (1471) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured. Alarm to be cleared by the operator at the management system. Reason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 26-391 IK8352401 - Interconnect failed

Alarm	Attributes	Applicable major releases
Name: IK8352401 (6784) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Interconnect failed (1472) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The interconnect status has been set to failed. This alarm signifies that an interconnect has failed. Alarm to be cleared by the operator at the management system. Reason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 26-392 IK8352408 - Server blade health status degraded

Alarm	Attributes	Applicable major releases
Name: IK8352408 (6785) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade health status degraded (1473) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded. Alarm to be cleared by the operator at the management system. Reason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-393 IK8352409 - Server blade health status critical

Alarm	Attributes	Applicable major releases
Name: IK8352409 (6786) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server blade health status critical (1474) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-394 IK8352411 - Server blade unexpected shutdown

Alarm	Attributes	Applicable major releases
Name: IK8352411 (6787) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade unexpected shutdown (1475) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An unexpected shutdown has occurred for this server blade.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-395 IK8352428 - Generic EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8352428 (6788) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic EAE Major trap (1476) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-396 IK8352429 - Generic EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8352429 (6789) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic EAE Critical trap (1477) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-397 IK8352431 - Generic Power Subsystem EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8352431 (6790) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic Power Subsystem EAE Major trap (1478) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-398 IK8352432 - Generic Power Subsystem EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8352432 (6791) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap (1479) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-399 IK8352436 - Generic WSMAN Major trap

Alarm	Attributes	Applicable major releases
Name: IK8352436 (6792) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic WSMAN Major trap (1480) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-400 IK8352437 - Generic WSMAN Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8352437 (6793) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic WSMAN Critical trap (1481) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-401 IK8352439 - Standby Recovery Server Interconnect Failure

Alarm	Attributes	Applicable major releases
Name: IK8352439 (6794) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure (1482) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-402 IK8352559 - Critical Alarm

Alarm	Attributes	Applicable major releases
Name: IK8352559 (6795) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: critical Specific problem: Critical Alarm (1483) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 26-403 IK8352609 - Monitor Condition Failed

Alarm	Attributes	Applicable major releases
Name: IK8352609 (6796) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Monitor Condition Failed (1484) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-404 IK8352610 - Excessive Correctable Memory Errors

Alarm	Attributes	Applicable major releases
Name: IK8352610 (6797) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Excessive Correctable Memory Errors (1485) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-405 IK8352615 - Hot Plug Slot Board Failed

Alarm	Attributes	Applicable major releases
Name: IK8352615 (6798) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Hot Plug Slot Board Failed (1486) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 26-406 IK8352616 - Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8352616 (6799) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Failure (235) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 26-407 IK8352617 - Battery Charging Degradation

Alarm	Attributes	Applicable major releases
Name: IK8352617 (6800) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Charging Degradation (1487) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-408 IK8352620 - Server Power Outage

Alarm	Attributes	Applicable major releases
Name: IK8352620 (6801) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server Power Outage (1488) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 26-409 IK8352622 - Remote Insight Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8352622 (6802) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight Battery Failed (1489) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 26-410 IK8352628 - Remote Insight external power cable disconnected

Alarm	Attributes	Applicable major releases
Name: IK8352628 (6803) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight external power cable disconnected (1490) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 26-411 IK8352632 - Server Fatal Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8352632 (6804) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server Fatal Error Detected (1491) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-412 IK8352633 - The iLO NIC Link is Down

Alarm	Attributes	Applicable major releases
Name: IK8352633 (6805) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The iLO NIC Link is Down (1492) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 26-413 IK8352648 - PC Card Thermal Failure Status

Alarm	Attributes	Applicable major releases
Name: IK8352648 (6806) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: PC Card Thermal Failure Status (1493) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-414 IK8352657 - Storage System Temperature Failure

Alarm	Attributes	Applicable major releases
Name: IK8352657 (6807) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Storage System Temperature Failure (1494) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-415 IK8354762 - linkDown

Alarm	Attributes	Applicable major releases
Name: IK8354762 (6808) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: linkDown (1495) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-416 IK8400982 - Cluster Node Failed

Alarm	Attributes	Applicable major releases
Name: IK8400982 (6809) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Node Failed (1428) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 26-417 IK8400984 - Cluster Resource Failed

Alarm	Attributes	Applicable major releases
Name: IK8400984 (6810) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Resource Failed (1429) Implicitly cleared: false Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 26-418 IK8400986 - Cluster Network Failed

Alarm	Attributes	Applicable major releases
Name: IK8400986 (6811) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Network Failed (1430) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 26-419 IK8401008 - The primary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8401008 (6812) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The primary controller in the subsystem has failed (1431) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed. Alarm to be cleared by the operator at the management system. Reason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-420 IK8401010 - The secondary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8401010 (6813) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The secondary controller in the subsystem has failed (1432) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-421 IK8401013 - A RAIDset has failed

Alarm	Attributes	Applicable major releases
Name: IK8401013 (6814) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A RAIDset has failed (1433) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 26-422 IK8401018 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8401018 (6815) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-423 IK8401023 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8401023 (6816) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: false Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-424 IK8401030 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8401030 (6817) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-425 IK8401033 - Primary enclosure temperature critical!

Alarm	Attributes	Applicable major releases
Name: IK8401033 (6818) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Primary enclosure temperature critical! (1436) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 26-426 IK8401037 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8401037 (6819) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-427 IK8401040 - cpqCrExpCabTemperatureCriticalTrap

Alarm	Attributes	Applicable major releases
Name: IK8401040 (6820) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: cpqCrExpCabTemperatureCriticalTrap (1437) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 26-428 IK8401060 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8401060 (6821) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-429 IK8401073 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8401073 (6822) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-430 IK8401098 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8401098 (6823) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-431 IK8401102 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8401102 (6824) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-432 IK8401105 - System Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8401105 (6825) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: System Fan Failure (1441) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the failed fan.		

Table 26-433 IK8401112 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8401112 (6826) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-434 IK8401116 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8401116 (6827) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIPowerSupplyFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-435 IK8401121 - Fan Failed

Alarm	Attributes	Applicable major releases
Name: IK8401121 (6828) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fan Failed (1443) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIFanFailed		
Remedial action: Replace the failed fan.		

Table 26-436 IK8401125 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8401125 (6829) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-437 IK8401129 - Power Converter Failed

Alarm	Attributes	Applicable major releases
Name: IK8401129 (6830) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Converter Failed (1444) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 26-438 IK8401135 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8401135 (6831) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FitToIPowerSupplyFailed		
Remedial action: Replace the failed power supply.		

Table 26-439 IK8401144 - Memory Board or Cartridge Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8401144 (6832) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected (1445) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 26-440 IK8401148 - Management processor failed reset

Alarm	Attributes	Applicable major releases
Name: IK8401148 (6833) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Management processor failed reset (1446) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 26-441 IK8401152 - Memory Board or Cartridge or Riser Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8401152 (6834) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected (1447) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based. Alarm to be cleared by the operator at the management system. Reason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 26-442 IK8401154 - Power Supply AC Power Loss

Alarm	Attributes	Applicable major releases
Name: IK8401154 (6835) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply AC Power Loss (1448) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location. Alarm to be cleared by the operator at the management system. Reason: cpqHe4FitToIPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 26-443 IK8401156 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8401156 (6836) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc. Alarm to be cleared by the operator at the management system. Reason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-444 IK8401158 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8401158 (6837) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-445 IK8401163 - Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8401163 (6838) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Status Trap (1450) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 26-446 IK8401172 - Power Threshold Exceeded

Alarm	Attributes	Applicable major releases
Name: IK8401172 (6839) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Threshold Exceeded (1451) Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-447 IK8402265 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8402265 (6840) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-448 IK8402272 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8402272 (6841) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-449 IK8402279 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8402279 (6842) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-450 IK8402291 - Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8402291 (6843) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Bad Data (1453) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-451 IK8402292 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8402292 (6844) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-452 IK8402295 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8402295 (6845) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-453 IK8402302 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8402302 (6846) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-454 IK8402337 - NIC Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8402337 (6847) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Status Trap (1455) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-455 IK8402341 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8402341 (6848) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.

Table 26-462 IK8402369 - Rack power supply degraded

Alarm	Attributes	Applicable major releases
Name: IK8402369 (6855) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply degraded (1461) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 26-463 IK8402374 - Rack power supply input voltage problem

Alarm	Attributes	Applicable major releases
Name: IK8402374 (6856) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply input voltage problem (1462) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 26-464 IK8402375 - Rack power subsystem overload condition

Alarm	Attributes	Applicable major releases
Name: IK8402375 (6857) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power subsystem overload condition (1463) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power subsystem overload condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemOverloadCondition		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

(2 of 2)

Table 26-465 IK8402376 - Server shutdown due to power shedding

Alarm	Attributes	Applicable major releases
Name: IK8402376 (6858) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server shutdown due to power shedding (1464) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 26-466 IK8402377 - Server power on prevented to preserve redundancy

Alarm	Attributes	Applicable major releases
Name: IK8402377 (6859) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server power on prevented to preserve redundancy (1465) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 26-467 IK8402378 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8402378 (6860) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 26-468 IK8402379 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8402379 (6861) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 26-469 IK8402380 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8402380 (6862) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedPowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 26-470 IK8402382 - Fuse open

Alarm	Attributes	Applicable major releases
Name: IK8402382 (6863) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fuse open (1467) Implicitly cleared: false Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fuse open. The fuse has been tripped.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 26-471 IK8402386 - Power subsystem DC power problem

Alarm	Attributes	Applicable major releases
Name: IK8402386 (6864) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem DC power problem (1468) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-472 IK8402387 - Power subsystem AC facility input power exceeded

Alarm	Attributes	Applicable major releases
Name: IK8402387 (6865) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem AC facility input power exceeded (1469) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisAcFacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-473 IK8402388 - Unknown power consumption

Alarm	Attributes	Applicable major releases
Name: IK8402388 (6866) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Unknown power consumption (1470) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-474 IK8402391 - Power subsystem improperly configured

Alarm	Attributes	Applicable major releases
Name: IK8402391 (6867) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem improperly configured (1471) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 26-475 IK8402401 - Interconnect failed

Alarm	Attributes	Applicable major releases
Name: IK8402401 (6868) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Interconnect failed (1472) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 26-476 IK8402408 - Server blade health status degraded

Alarm	Attributes	Applicable major releases
Name: IK8402408 (6869) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade health status degraded (1473) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-477 IK8402409 - Server blade health status critical

Alarm	Attributes	Applicable major releases
Name: IK8402409 (6870) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Server blade health status critical (1474) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-478 IK8402411 - Server blade unexpected shutdown

Alarm	Attributes	Applicable major releases
Name: IK8402411 (6871) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Server blade unexpected shutdown (1475) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An unexpected shutdown has occurred for this server blade.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-479 IK8402428 - Generic EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8402428 (6872) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap (1476) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-480 IK8402429 - Generic EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8402429 (6873) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic EAE Critical trap (1477) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-481 IK8402431 - Generic Power Subsystem EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8402431 (6874) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic Power Subsystem EAE Major trap (1478) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-482 IK8402432 - Generic Power Subsystem EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8402432 (6875) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap (1479) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-483 IK8402436 - Generic WSMAN Major trap

Alarm	Attributes	Applicable major releases
Name: IK8402436 (6876) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic WSMAN Major trap (1480) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-484 IK8402437 - Generic WSMAN Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8402437 (6877) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic WSMAN Critical trap (1481) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-485 IK8402439 - Standby Recovery Server Interconnect Failure

Alarm	Attributes	Applicable major releases
Name: IK8402439 (6878) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure (1482) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-486 IK8402559 - Critical Alarm

Alarm	Attributes	Applicable major releases
Name: IK8402559 (6879) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Critical Alarm (1483) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 26-487 IK8402609 - Monitor Condition Failed

Alarm	Attributes	Applicable major releases
Name: IK8402609 (6880) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Monitor Condition Failed (1484) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-488 IK8402610 - Excessive Correctable Memory Errors

Alarm	Attributes	Applicable major releases
Name: IK8402610 (6881) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Excessive Correctable Memory Errors (1485) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-489 IK8402615 - Hot Plug Slot Board Failed

Alarm	Attributes	Applicable major releases
Name: IK8402615 (6882) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Hot Plug Slot Board Failed (1486) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 26-490 IK8402616 - Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8402616 (6883) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Failure (235) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 26-491 IK8402617 - Battery Charging Degradation

Alarm	Attributes	Applicable major releases
Name: IK8402617 (6884) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Charging Degradation (1487) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 26-492 IK8402620 - Server Power Outage

Alarm	Attributes	Applicable major releases
Name: IK8402620 (6885) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server Power Outage (1488) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 26-493 IK8402622 - Remote Insight Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8402622 (6886) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight Battery Failed (1489) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 26-494 IK8402628 - Remote Insight external power cable disconnected

Alarm	Attributes	Applicable major releases
Name: IK8402628 (6887) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight external power cable disconnected (1490) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 26-495 IK8402632 - Server Fatal Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8402632 (6888) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server Fatal Error Detected (1491) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-496 IK8402633 - The iLO NIC Link is Down

Alarm	Attributes	Applicable major releases
Name: IK8402633 (6889) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The iLO NIC Link is Down (1492) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 26-497 IK8402648 - PC Card Thermal Failure Status

Alarm	Attributes	Applicable major releases
Name: IK8402648 (6890) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: PC Card Thermal Failure Status (1493) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-498 IK8402657 - Storage System Temperature Failure

Alarm	Attributes	Applicable major releases
Name: IK8402657 (6891) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Storage System Temperature Failure (1494) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-499 IK8404762 - linkDown

Alarm	Attributes	Applicable major releases
Name: IK8404762 (6892) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: linkDown (1495) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-500 IK8450931 - bt2SwFwDownloadFailure

Alarm	Attributes	Applicable major releases
Name: IK8450931 (6893) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: bt2SwFwDownloadFailure (1496) Implicitly cleared: true Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: A bt2SwFwDownloadFailure signifies that firmware downloaded failed to [image1 image2 boot image].\nAlarm is cleared by the system.\nReason: bt2SwFwDownloadFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-501 IK8450959 - The switch has failed a TFTP transfer

Alarm	Attributes	Applicable major releases
Name: IK8450959 (6894) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The switch has failed a TFTP transfer (1497) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The switch has failed a TFTP transfer.\nAlarm is cleared by the system.\nReason: switchTFTPTTransferFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-502 IK8450961 - The switch fan has failed

Alarm	Attributes	Applicable major releases
Name: IK8450961 (6895) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The switch fan has failed (1498) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The switch fan has failed.\nAlarm is cleared by the system.\nReason: switchFanFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-503 IK8450963 - switchTempSensorDegraded

Alarm	Attributes	Applicable major releases
Name: IK8450963 (6896) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: switchTempSensorDegraded (1499) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The switch temperature sensor indicates a high temperature condition.\nAlarm to be cleared by the operator at the management system.\nReason: switchTempSensorDegraded		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-504 IK8450971 - overheat

Alarm	Attributes	Applicable major releases
Name: IK8450971 (6897) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: overheat (1500) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A overheat alarm indicates that the on board temperature sensor has reported a overheat condition. System will shutdown until unit has sufficiently cooled such that operation may begin again. A cold start alarm will be issued when the unit has come back on line. Alarm to be cleared by the operator at the management system. Reason: overheat		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-505 IK8450975 - powerSupplyFail

Alarm	Attributes	Applicable major releases
Name: IK8450975 (6898) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: powerSupplyFail (1501) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more sources of power to this agent has failed. Presumably a redundant power-supply has taken over. Alarm is cleared by the system. Reason: powerSupplyFail		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-506 IK8450977 - rpsAlarm

Alarm	Attributes	Applicable major releases
Name: IK8450977 (6899) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: rpsAlarm (1502) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Attached Redundant Power Supply device is indicating an alarm condition. Alarm is cleared by the system. Reason: rpsAlarm		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-507 IK8450982 - Cluster Node Failed

Alarm	Attributes	Applicable major releases
Name: IK8450982 (6900) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Node Failed (1428) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 26-508 IK8450984 - Cluster Resource Failed

Alarm	Attributes	Applicable major releases
Name: IK8450984 (6901) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Resource Failed (1429) Implicitly cleared: false Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 26-509 IK8450986 - Cluster Network Failed

Alarm	Attributes	Applicable major releases
Name: IK8450986 (6902) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Network Failed (1430) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 26-510 IK8451008 - The primary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8451008 (6903) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The primary controller in the subsystem has failed (1431) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-511 IK8451010 - The secondary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8451010 (6904) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The secondary controller in the subsystem has failed (1432) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-512 IK8451013 - A RAIDset has failed

Alarm	Attributes	Applicable major releases
Name: IK8451013 (6905) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A RAIDset has failed (1433) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 26-513 IK8451018 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8451018 (6906) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-514 IK8451023 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8451023 (6907) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: false Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-515 IK8451030 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8451030 (6908) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-516 IK8451033 - Primary enclosure temperature critical!

Alarm	Attributes	Applicable major releases
Name: IK8451033 (6909) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Primary enclosure temperature critical! (1436) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 26-517 IK8451037 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8451037 (6910) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-518 IK8451040 - cpqCrExpCabTemperatureCriticalTrap

Alarm	Attributes	Applicable major releases
Name: IK8451040 (6911) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: cpqCrExpCabTemperatureCriticalTrap (1437) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 26-519 IK8451042 - High Priority Alert

Alarm	Attributes	Applicable major releases
Name: IK8451042 (6912) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: High Priority Alert (1503) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A high priority alert has occurred.\nAlarm to be cleared by the operator at the management system.\nReason: trapDceHighPriority		
Remedial action: Check the Trap Details for more information.		

Table 26-520 IK8451052 - Critical Alarm

Alarm	Attributes	Applicable major releases
Name: IK8451052 (6913) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Critical Alarm (1483) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A critical alarm has occurred.\nAlarm to be cleared by the operator at the management system.\nReason: trapDscCritical		
Remedial action: Check the Trap Description for more information.		

Table 26-521 IK8451060 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8451060 (6914) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-522 IK8451073 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8451073 (6915) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-523 IK8451098 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8451098 (6916) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-524 IK8451102 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8451102 (6917) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-525 IK8451105 - System Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8451105 (6918) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: System Fan Failure (1441) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the failed fan.		

Table 26-526 IK8451112 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8451112 (6919) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-527 IK8451116 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8451116 (6920) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIPowerSupplyFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-528 IK8451121 - Fan Failed

Alarm	Attributes	Applicable major releases
Name: IK8451121 (6921) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fan Failed (1443) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIFanFailed		
Remedial action: Replace the failed fan.		

Table 26-529 IK8451125 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8451125 (6922) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-530 IK8451129 - Power Converter Failed

Alarm	Attributes	Applicable major releases
Name: IK8451129 (6923) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Converter Failed (1444) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 26-531 IK8451135 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8451135 (6924) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FitToIPowerSupplyFailed		
Remedial action: Replace the failed power supply.		

Table 26-532 IK8451144 - Memory Board or Cartridge Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8451144 (6925) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected (1445) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 26-533 IK8451148 - Management processor failed reset

Alarm	Attributes	Applicable major releases
Name: IK8451148 (6926) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Management processor failed reset (1446) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 26-534 IK8451152 - Memory Board or Cartridge or Riser Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8451152 (6927) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected (1447) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based. Alarm to be cleared by the operator at the management system. Reason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 26-535 IK8451154 - Power Supply AC Power Loss

Alarm	Attributes	Applicable major releases
Name: IK8451154 (6928) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply AC Power Loss (1448) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location. Alarm to be cleared by the operator at the management system. Reason: cpqHe4FitToIPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 26-536 IK8451156 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8451156 (6929) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc. Alarm to be cleared by the operator at the management system. Reason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-537 IK8451158 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8451158 (6930) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-538 IK8451163 - Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8451163 (6931) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Status Trap (1450) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 26-539 IK8451172 - Power Threshold Exceeded

Alarm	Attributes	Applicable major releases
Name: IK8451172 (6932) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Threshold Exceeded (1451) Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-540 IK8451182 - StorageCell Event

Alarm	Attributes	Applicable major releases
Name: IK8451182 (6933) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: StorageCell Event (1504) Implicitly cleared: false Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.3.MG
<p>Description: The physical disk drive identified by the device field has been rendered inoperable. If the flags.quorum_disk flag is nonzero, the physical disk drive is the Storage System Quorum disk identified in the quorum_sequence field. . If the flags.inq_state flag is nonzero, the content of the inq_data and capacity fields is valid. . If the rss_flags.member_abnormal flag is nonzero, the content of the member_state field is valid. . The rack_num field will not be valid until a future release. The reason_code field contains a code giving the reason the physical disk drive has been rendered inoperable: . 0x001 = " CS IO failure . 0x002 = Scrubber IO failure . 0x003 = Attempt to set CBIT on normal drive . 0x004 = Attempt to set CBIT on merging drive . 0x100 = The Target Discovery Service Descriptor retry count has been exceeded . 0x101 = Inoperable for Bad Block Replacement . 0x102 = The soft error count has been exceeded . 0x103 = The number of exchange timeouts permitted was exceeded . 0x104 = Communication with drive has failed an excessive number of times . 0x105 = The number of retries has been exceeded . 0x106 = Medium/Hardware Errors encountered on this physical disk drive . 0x107 = The number of Directed LIP's has surpassed the threshold . 0x200 = Smart event from a physical disk drive not in Storage System . 0x201 = Smart event from a physical disk drive not a Volume . 0x202 = Smart event from a physical disk drive not a RSS . 0x203 = Failure predicted from physical disk drive . 0x204 = Can't read from physical disk drive from the poll . 0x205 = Failure predicted from physical disk drive while deleting Disk Group . 0x206 = physical disk drive forced inoperative from maintenance command for temporary POID . 0x207 = physical disk drive forced inoperative from maintenance command for POID . 0x208 = Bad block recovery failed or can't read FPAB . 0x209 = Failure to remove volume from Storage System . 0x20A = Failure to update metadata .\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_3_1"</p>		
<p>Remedial action: If the problem persists, contact Alcatel-Lucent customer support.</p>		

Table 26-541 IK8451192 - StorageCell Event

Alarm	Attributes	Applicable major releases
Name: IK8451192 (6934) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: StorageCell Event (1504) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
<p>Description: A machine check occurred while a termination event was being processed. The post-termination operation being performed at the time the event occurred can be derived from the lter.reuea_index field. Note: The lteihd and lter fields may not describe the event that caused the HSV110 controller to terminate operation depending on how far termination processing got before the machine check occurred.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_4_2</p>		
<p>Remedial action: If the problem persists, contact Alcatel-Lucent customer support.</p>

<p>Description: A Drive Enclosure Environmental Monitoring Unit has failed to assign an address to a physical disk drive on the loop. This has occurred because another physical disk drive has already obtained this AL_PA. The device field contains the identity of the enclosure. The Fibre Channel port used to communicate with the physical disk drive is contained in the cerp_id field. The HSV110 controller internal Fibre Channel port number used to communicate with the physical disk drive is contained in the port field. The al_pa field contains the AL_PA that was stolen. The missing_port and missing_cerp_id fields are unused. The location of the physical disk drive is determined by the content of the dencl_num field as follows: . If dencl_num is less than 99, the location is as indicated by the content of the rack_num, dencl_num, and bay fields. . If dencl_num is equal to 99, the location is unknown. Note that the content of the rack_num and bay fields is undefined in this case. . If dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the rack_num, dencl_num, and bay fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. The identity contained in the device field should be used to confirm the last known location. . Note that the content of the rack_num field will not be valid until a future release. Note also that in this case the content of the fed_class and num_times fields is undefined. The enclosures array shows the drive enclosures available on the Fibre Channel port identified in the cerp_id field. The location of an available drive enclosure is determined by the content of the enclosures.dencl_num field as follows: . If enclosures.dencl_num is less than 99, the location is as indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. . If enclosures.dencl_num is equal to 99, the enclosures array entry is not used. Note that the content of the enclosures.rack_num field is undefined in this case. . If enclosures.dencl_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the enclosures.rack_num and enclosures.dencl_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the enclosures.rack_num field will not be valid until a future release.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_6_26</p>		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.

Alarm	Attributes	Applicable major releases
<p>Description: A drive enclosure blower is not operating properly. This could affect the drive enclosure air flow and cause an over temperature condition. The handle field contains the WWN of the drive enclosure containing the Drive Enclosure Environmental Monitoring Unit. This problem was detected by the Drive Enclosure Environmental Monitoring Unit located in the drive enclosure determined by the content of the dencI_num field as follows: . If dencI_num is less than 99, the location is as indicated by the content of the rack_num and dencI_num fields. . If dencI_num is equal to 99, the location is unknown. Note that the content of the rack_num field is undefined in this case. . If dencI_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the rack_num and dencI_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the rack_num field will not be valid until a future release. The location of the affected blower (1 or 2) is identified in the alarm_error_code.field.en field. The cause of the improper operation is described by the content of the alarm_error_code.field.ec field as follows: . 1 = " The blower is operating at a speed that is outside of the Drive Enclosure Environmental Monitoring Unit specified range, possibly because of a bearing problem. . 2 = The blower is operating at a speed that is significantly outside of the Drive Enclosure Environmental Monitoring Unit specified range, possibly because of a bearing problem. . 3 = The blower has stopped. NOTE: The other blower (if operational) now operates at high speed and is a single point of failure. A single blower operating at high speed can provide sufficient air flow to cool an enclosure and the elements for up to 100 hours. However, operating an enclosure at temperatures approaching an overheating threshold can damage elements and may reduce the MTBF of a specific element. Hewlett-Packard therefore recommends immediate replacement of the defective blower. . 4 = The power supply reported an internal blower error. . The enclosures array shows the drive enclosures available on the Fibre Channel loop pair (0 = Loop A, 1 = Loop B) identified in the loop field. The location of an available drive enclosure is determined by the content of the enclosures.dencI_num field as follows: . If enclosures.dencI_num is less than 99, the location is as indicated by the content of the enclosures.rack_num and enclosures.dencI_num fields. . If enclosures.dencI_num is equal to 99, the enclosures array entry is not used. Note that the content of the enclosures.rack_num field is undefined in this case. . If enclosures.dencI_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the enclosures.rack_num and enclosures.dencI_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Table 26-600 IK8451426 - StorageCell Event

Alarm	Attributes	Applicable major releases
Name: IK8451426 (6993) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: StorageCell Event (1504) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
<p>Description: A drive enclosure I/O module error has occurred. The handle field contains the WWN of the drive enclosure containing the Drive Enclosure Environmental Monitoring Unit. This problem was detected by the Drive Enclosure Environmental Monitoring Unit located in the drive enclosure determined by the content of the denc1_num field as follows: . If denc1_num is less than 99, the location is as indicated by the content of the rack_num and denc1_num fields. . If denc1_num is equal to 99, the location is unknown. Note that the content of the rack_num field is undefined in this case. . If denc1_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the rack_num and denc1_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the rack_num field will not be valid until a future release. The location of the I/O module (A (01) and B (02)) is identified in the alarm_error_code.field.en field. The cause of the improper operation is described by the content of the alarm_error_code.field.ec field as follows: . 1 = " The I/O module's Fibre Channel link speed is not supported by the backplane. This error prevents the controller from establishing a link with enclosure drives and eliminates the enclosure dual-loop capability. . 11 = Unable to write data to the I/O module NVRAM. . 12 = Unable to read data from the I/O module NVRAM. . 13 = The I/O module that was in this location has been removed. . The enclosures array shows the drive enclosures available on the Fibre Channel loop pair (0 = Loop A, 1 = Loop B) identified in the loop field. The location of an available drive enclosure is determined by the content of the enclosures.denc1_num field as follows: . If enclosures.denc1_num is less than 99, the location is as indicated by the content of the enclosures.rack_num and enclosures.denc1_num fields. . If enclosures.denc1_num is equal to 99, the enclosures array entry is not used. Note that the content of the enclosures.rack_num field is undefined in this case. . If enclosures.denc1_num is greater than 99, the HSV110 controller does not have proof of the current location but the last known location is indicated by the content of the enclosures.rack_num and enclosures.denc1_num fields. Subtract 100 from the content of those fields to determine the actual last known location. If there have been no configuration changes, the last known location values will be accurate. . Note that the content of the enclosures.rack_num field will not be valid until a future release.\nAlarm to be cleared by the operator at the management system.\nReason: sCellEventTrap_d_dd"</p>		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-601 IK8451435 - StorageCell Event

Alarm	Attributes	Applicable major releases
Name: IK8451435 (6994) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: StorageCell Event (1504) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG

Name: IK8452379 (7027) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedEnclosureNotFound		

(1 of 2)

26 – Alcatel-Lucent 9774 LMG alarms

Alarm	Attributes	Applicable major releases
Remedial action: Check server enclosure connections or add power supplies.		

(2 of 2)

Table 26-635 IK8452380 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8452380 (7028) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedPowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 26-636 IK8452382 - Fuse open

Alarm	Attributes	Applicable major releases
Name: IK8452382 (7029) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fuse open (1467) Implicitly cleared: false Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fuse open. The fuse has been tripped.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 26-637 IK8452386 - Power subsystem DC power problem

Alarm	Attributes	Applicable major releases
Name: IK8452386 (7030) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem DC power problem (1468) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-638 IK8452387 - Power subsystem AC facility input power exceeded

Alarm	Attributes	Applicable major releases
Name: IK8452387 (7031) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem AC facility input power exceeded (1469) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisAcFacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-639 IK8452388 - Unknown power consumption

Alarm	Attributes	Applicable major releases
Name: IK8452388 (7032) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Unknown power consumption (1470) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-640 IK8452391 - Power subsystem improperly configured

Alarm	Attributes	Applicable major releases
Name: IK8452391 (7033) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem improperly configured (1471) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 26-641 IK8452401 - Interconnect failed

Alarm	Attributes	Applicable major releases
Name: IK8452401 (7034) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Interconnect failed (1472) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 26-642 IK8452408 - Server blade health status degraded

Alarm	Attributes	Applicable major releases
Name: IK8452408 (7035) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade health status degraded (1473) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-643 IK8452409 - Server blade health status critical

Alarm	Attributes	Applicable major releases
Name: IK8452409 (7036) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server blade health status critical (1474) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-644 IK8452411 - Server blade unexpected shutdown

Alarm	Attributes	Applicable major releases
Name: IK8452411 (7037) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade unexpected shutdown (1475) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An unexpected shutdown has occurred for this server blade.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-645 IK8452428 - Generic EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8452428 (7038) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic EAE Major trap (1476) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-646 IK8452429 - Generic EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8452429 (7039) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic EAE Critical trap (1477) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-647 IK8452431 - Generic Power Subsystem EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8452431 (7040) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic Power Subsystem EAE Major trap (1478) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-648 IK8452432 - Generic Power Subsystem EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8452432 (7041) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap (1479) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-649 IK8452436 - Generic WSMAN Major trap

Alarm	Attributes	Applicable major releases
Name: IK8452436 (7042) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic WSMAN Major trap (1480) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-650 IK8452437 - Generic WSMAN Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8452437 (7043) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic WSMAN Critical trap (1481) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-651 IK8452439 - Standby Recovery Server Interconnect Failure

Alarm	Attributes	Applicable major releases
Name: IK8452439 (7044) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure (1482) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-652 IK8452559 - Critical Alarm

Alarm	Attributes	Applicable major releases
Name: IK8452559 (7045) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Critical Alarm (1483) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 26-653 IK8452609 - Monitor Condition Failed

Alarm	Attributes	Applicable major releases
Name: IK8452609 (7046) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Monitor Condition Failed (1484) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced. Alarm to be cleared by the operator at the management system. Reason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-654 IK8452610 - Excessive Correctable Memory Errors

Alarm	Attributes	Applicable major releases
Name: IK8452610 (7047) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Excessive Correctable Memory Errors (1485) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded. Alarm to be cleared by the operator at the management system. Reason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-655 IK8452615 - Hot Plug Slot Board Failed

Alarm	Attributes	Applicable major releases
Name: IK8452615 (7048) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Hot Plug Slot Board Failed (1486) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot. Alarm to be cleared by the operator at the management system. Reason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 26-656 IK8452616 - Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8452616 (7049) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Failure (235) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced. \nAlarm to be cleared by the operator at the management system. \nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 26-657 IK8452617 - Battery Charging Degradation

Alarm	Attributes	Applicable major releases
Name: IK8452617 (7050) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Charging Degradation (1487) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged. \nAlarm to be cleared by the operator at the management system. \nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 26-658 IK8452620 - Server Power Outage

Alarm	Attributes	Applicable major releases
Name: IK8452620 (7051) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server Power Outage (1488) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure. \nAlarm to be cleared by the operator at the management system. \nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 26-659 IK8452622 - Remote Insight Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8452622 (7052) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight Battery Failed (1489) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 26-660 IK8452628 - Remote Insight external power cable disconnected

Alarm	Attributes	Applicable major releases
Name: IK8452628 (7053) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight external power cable disconnected (1490) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 26-661 IK8452632 - Server Fatal Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8452632 (7054) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server Fatal Error Detected (1491) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-662 IK8452633 - The iLO NIC Link is Down

Alarm	Attributes	Applicable major releases
Name: IK8452633 (7055) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The iLO NIC Link is Down (1492) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 26-663 IK8452648 - PC Card Thermal Failure Status

Alarm	Attributes	Applicable major releases
Name: IK8452648 (7056) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: PC Card Thermal Failure Status (1493) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-664 IK8452657 - Storage System Temperature Failure

Alarm	Attributes	Applicable major releases
Name: IK8452657 (7057) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Storage System Temperature Failure (1494) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-665 IK8452707 - UPS Battery Low

Alarm	Attributes	Applicable major releases
Name: IK8452707 (7058) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: UPS Battery Low (1510) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: UPS Battery Low. The server will soon lose power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqUpsBatteryLow		
Remedial action: Check the UPS Battery		

Table 26-666 IK8452712 - UPS Battery Low

Alarm	Attributes	Applicable major releases
Name: IK8452712 (7059) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: UPS Battery Low (1510) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: UPS Battery Low. The server will soon lose power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqUps2BatteryLow		
Remedial action: Check the UPS Battery		

Table 26-667 IK8452714 - UPS Pending Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8452714 (7060) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: UPS Pending Battery Failure (1511) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: The UPS battery is about to fail. Replace as soon as possible.\nAlarm to be cleared by the operator at the management system.\nReason: cpqUpsPendingBatteryFailure		
Remedial action: Replace the failing UPS battery		

Table 26-668 IK8452715 - UPS Critical Alarm

Alarm	Attributes	Applicable major releases
Name: IK8452715 (7061) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: UPS Critical Alarm (1512) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Generic UPS critical alarm.\nAlarm to be cleared by the operator at the management system.\nReason: cpqUpsGenericCritical		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-669 IK8452986 - hpTempHighCritical753

Alarm	Attributes	Applicable major releases
Name: IK8452986 (7062) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: hpTempHighCritical753 (1513) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: One of the temperature sensors crossed its upper critical threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hpTempHighCritical753		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-670 IK8452989 - Temperature Emergency

Alarm	Attributes	Applicable major releases
Name: IK8452989 (7063) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Temperature Emergency (1514) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: One of the temperature sensors crossed its upper critical threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hPTemperature5		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-671 IK8452992 - hpTemperature756

Alarm	Attributes	Applicable major releases
Name: IK8452992 (7064) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: hpTemperature756 (1515) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: One of the temperature sensors crossed its upper critical threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hpTemperature756		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-672 IK8452998 - Voltage reached critical level

Alarm	Attributes	Applicable major releases
Name: IK8452998 (7065) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Voltage reached critical level (1516) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Voltage degraded to critical level from less severe -\nAlarm to be cleared by the operator at the management system.\nReason: hpEnvironment728		
Remedial action: Check all boards with this voltage		

Table 26-673 IK8453000 - Power Pod Voltage Fault

Alarm	Attributes	Applicable major releases
Name: IK8453000 (7066) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Power Pod Voltage Fault (1517) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Voltage becomes non-recoverable from either critical level or less severe level -\nAlarm to be cleared by the operator at the management system.\nReason: hpEnvironment706		
Remedial action: Check all boards with this voltage		

Table 26-674 IK8453025 - time critical shutdown

Alarm	Attributes	Applicable major releases
Name: IK8453025 (7067) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: time critical shutdown (1518) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: OS run-time critical shutdown\nAlarm to be cleared by the operator at the management system.\nReason: hpSystemHW748		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-675 IK8454220 - N The device's health has changed to critical

Alarm	Attributes	Applicable major releases
Name: IK8454220 (7068) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: N The device's health has changed to critical (1519) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: N The device's health has changed to critical.\nAlarm to be cleared by the operator at the management system.\nReason: hpHttpMgCriticalHealthTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-676 IK8454221 - Recoverable

Alarm	Attributes	Applicable major releases
Name: IK8454221 (7069) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Recoverable (1520) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: N The device's health has changed to Non-Recoverable.\nAlarm to be cleared by the operator at the management system.\nReason: hpHttpMgNonRecoverableHealthTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-677 IK8454370 - Corrupt Devices File

Alarm	Attributes	Applicable major releases
Name: IK8454370 (7070) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Corrupt Devices File (1521) Implicitly cleared: false Default probable cause: corruptData (910)	<ul style="list-style-type: none"> LR14.3.MG
Description: Device Database has been corrupted.\nAlarm to be cleared by the operator at the management system.\nReason: adaptecSCSI1		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-678 IK8454371 - Corrupt Devices File

Alarm	Attributes	Applicable major releases
Name: IK8454371 (7071) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Corrupt Devices File (1521) Implicitly cleared: false Default probable cause: corruptData (910)	<ul style="list-style-type: none"> LR14.3.MG
Description: Device Database has been corrupted.\nAlarm to be cleared by the operator at the management system.\nReason: adaptecSCSI2		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-679 IK8454418 - HPDA Logical Drive: Critical

Alarm	Attributes	Applicable major releases
Name: IK8454418 (7072) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: HPDA Logical Drive: Critical (1522) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: HPDA Logical Drive: Critical\nAlarm to be cleared by the operator at the management system.\nReason: hPRaid3		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-680 IK8454423 - HPDA Hard Disk Failed

Alarm	Attributes	Applicable major releases
Name: IK8454423 (7073) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: HPDA Hard Disk Failed (1523) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: HPDA Hard Disk Failed\nAlarm to be cleared by the operator at the management system.\nReason: hPRaid8		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-681 IK8454424 - HPDA Hard Disk Failed

Alarm	Attributes	Applicable major releases
Name: IK8454424 (7074) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: HPDA Hard Disk Failed (1523) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: HPDA Hard Disk Failed\nAlarm to be cleared by the operator at the management system.\nReason: hPRaid9		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-682 IK8454429 - HPDA Threshold Exceeded: Hardware Errors

Alarm	Attributes	Applicable major releases
Name: IK8454429 (7075) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: HPDA Threshold Exceeded: Hardware Errors (1524) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: HPDA Threshold Exceeded: Hardware Errors\nAlarm to be cleared by the operator at the management system.\nReason: hPRaid14		
Remedial action: check HPDA		

Table 26-683 IK8454430 - HPDA Threshold Exceeded: Hardware Errors

Alarm	Attributes	Applicable major releases
Name: IK8454430 (7076) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: HPDA Threshold Exceeded: Hardware Errors (1524) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: HPDA Threshold Exceeded: Hardware Errors\nAlarm to be cleared by the operator at the management system.\nReason: hPRaid15		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-684 IK8454441 - Voltage Warning

Alarm	Attributes	Applicable major releases
Name: IK8454441 (7077) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Voltage Warning (1525) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One of the voltage sensors crossed its upper non-critical threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hPEnvironment4		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-685 IK8454442 - Voltage Emergency

Alarm	Attributes	Applicable major releases
Name: IK8454442 (7078) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Voltage Emergency (1526) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One of the voltage sensors crossed its upper critical threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hPEnvironment5		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-686 IK8454443 - Voltage Emergency

Alarm	Attributes	Applicable major releases
Name: IK8454443 (7079) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Voltage Emergency (1526) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One of the voltage sensors crossed its upper non-recoverable threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hPEEnvironment6		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-687 IK8454444 - Voltage Regulating Module

Alarm	Attributes	Applicable major releases
Name: IK8454444 (7080) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Voltage Regulating Module (1527) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Voltage Regulating Module (VRM) on the indicated processor module had failed.\nAlarm to be cleared by the operator at the management system.\nReason: hPEEnvironment7		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-688 IK8454449 - Fan Emergency

Alarm	Attributes	Applicable major releases
Name: IK8454449 (7081) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Fan Emergency (1528) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: One of the fan sensors crossed its upper critical threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hPFan5		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-689 IK8454450 - Fan Emergency

Alarm	Attributes	Applicable major releases
Name: IK8454450 (7082) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Fan Emergency (1528) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: One of the fan sensors crossed its upper non-recoverable threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hPFan6		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-690 IK8454452 - Processor/PCI Fan Tray failure

Alarm	Attributes	Applicable major releases
Name: IK8454452 (7083) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Processor/PCI Fan Tray failure (1529) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: Two or more of the fans in the Processor/PCI Fan Tray have stopped or have been removed.\nAlarm to be cleared by the operator at the management system.\nReason: hPFan8		
Remedial action: Check the fans in the Processor/PCI Fan Tray		

Table 26-691 IK8454454 - Memory Fan Error

Alarm	Attributes	Applicable major releases
Name: IK8454454 (7084) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Fan Error (1530) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: One of the fans in the Memory Fan Tray stopped.\nAlarm to be cleared by the operator at the management system.\nReason: hPFan10		
Remedial action: check the fans in the Memory Fan Tray		

Table 26-692 IK8454455 - Memory Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8454455 (7085) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Fan Failure (1531) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: Two or more of the fans in the Memory Fan Tray have stopped or been removed.\nAlarm to be cleared by the operator at the management system.\nReason: hPFan11		
Remedial action: Check the fans in the Memory Fan Tray		

Table 26-693 IK8454481 - Alignment Errors exceeded threshold

Alarm	Attributes	Applicable major releases
Name: IK8454481 (7086) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Alignment Errors exceeded threshold (1532) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The total number of alignment and CRC errors has exceeded the threshold.\nAlarm to be cleared by the operator at the management system.\nReason: networkCard13		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-694 IK8454541 - Warning NOS hang

Alarm	Attributes	Applicable major releases
Name: IK8454541 (7087) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Warning NOS hang (1533) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: ASR has stopped notifying the HP Remote Assistant Card that the system is running correctly (the server probably hung or crashed).\nAlarm to be cleared by the operator at the management system.\nReason: rAASR1		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-695 IK8454560 - Automatic power shutdown due to critical condition

Alarm	Attributes	Applicable major releases
Name: IK8454560 (7088) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Automatic power shutdown due to critical condition (1534) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Automatic power shutdown due to critical condition.\nAlarm to be cleared by the operator at the management system.\nReason: rAOther15		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-696 IK8454591 - Remote Control Card battery low

Alarm	Attributes	Applicable major releases
Name: IK8454591 (7089) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Control Card battery low (1535) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The TopTools Remote Control backup battery has discharged to a level where it will not be able to power the card\nAlarm to be cleared by the operator at the management system.\nReason: rAOther46		
Remedial action: check the TopTools Remote Control backup battery		

Table 26-697 IK8454595 - Temperature Graceful Shutdown

Alarm	Attributes	Applicable major releases
Name: IK8454595 (7090) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Temperature Graceful Shutdown (1536) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The server temperature measured on the HP Remote Assistant Card has exceeded the configured threshold and the server has been automatically shut down.\nAlarm to be cleared by the operator at the management system.\nReason: rATemp2		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-698 IK8454596 - Automatic graceful shutdown of NOS

Alarm	Attributes	Applicable major releases
Name: IK8454596 (7091) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Automatic graceful shutdown of NOS (1537) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The server temperature or voltage levels measured by the remote management hardware has exceeded the configured threshold. The server has been automatically shut down.\nAlarm to be cleared by the operator at the management system.\nReason: rATemp3		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-699 IK8454597 - Temperature Critical

Alarm	Attributes	Applicable major releases
Name: IK8454597 (7092) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Temperature Critical (1538) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The server temperature measured on the HP Remote Assistant Card has exceeded the configured Graceful Shutdown threshold value by 5 degrees C and the server has been automatically shut down.\nAlarm to be cleared by the operator at the management system.\nReason: rATemp4		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-700 IK8454598 - Server power failure

Alarm	Attributes	Applicable major releases
Name: IK8454598 (7093) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server power failure (1539) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The server has lost the power completely.\nAlarm to be cleared by the operator at the management system.\nReason: rAVoltage1		
Remedial action: check the server power		

Table 26-701 IK8454599 - 12V Upper Threshold upper threshold warning

Alarm	Attributes	Applicable major releases
Name: IK8454599 (7094) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: 12V Upper Threshold upper threshold warning (1540) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Voltage measured in the server has gone outside of -12V Upper Threshold.\nAlarm to be cleared by the operator at the management system.\nReason: rAVoltage2		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-702 IK8454600 - +33 Upper Threshold Warning

Alarm	Attributes	Applicable major releases
Name: IK8454600 (7095) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: +33 Upper Threshold Warning (1541) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Voltage measured in the server has gone outside of +3.3V Upper Threshold.\nAlarm to be cleared by the operator at the management system.\nReason: rAVoltage3		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-703 IK8454601 - +5V Upper Threshold Warning

Alarm	Attributes	Applicable major releases
Name: IK8454601 (7096) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: +5V Upper Threshold Warning (1542) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Voltage measured in the server has gone outside of +5V Upper Threshold.\nAlarm to be cleared by the operator at the management system.\nReason: rAVoltage4		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-704 IK8454602 - +12V Upper Threshold Warning

Alarm	Attributes	Applicable major releases
Name: IK8454602 (7097) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: +12V Upper Threshold Warning (1543) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Voltage measured in the server has gone outside of +12V Upper Threshold.\nAlarm to be cleared by the operator at the management system.\nReason: rAVoltage5		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-705 IK8454621 - Power System failure A/C Lost

Alarm	Attributes	Applicable major releases
Name: IK8454621 (7098) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power System failure A/C Lost (1544) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power System failure A/C Lost\nAlarm to be cleared by the operator at the management system.\nReason: redundantPower14		
Remedial action: Check Power system AC		

Table 26-706 IK8454623 - Power Supply Over Temperature

Alarm	Attributes	Applicable major releases
Name: IK8454623 (7099) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Over Temperature (1545) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Temperature alert on designated Power Supply.\nAlarm to be cleared by the operator at the management system.\nReason: redundantPower16		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-707 IK8454624 - Power Supply Over Temperature

Alarm	Attributes	Applicable major releases
Name: IK8454624 (7100) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Over Temperature (1545) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Temperature alert on designated Power Supply.\nAlarm to be cleared by the operator at the management system.\nReason: redundantPower17

Alarm	Attributes	Applicable major releases
Name: IK8454698 (7114) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: System critical limit exceeded (1557) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An event of critical severity has occurred in the system. For example, both system fans have failed\nAlarm to be cleared by the operator at the management system.\nReason: systemHW44		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-722 IK8454708 - Control Board System reset

Alarm	Attributes	Applicable major releases
Name: IK8454708 (7115) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Control Board System reset (1558) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system has been reset because Control Board detected a critical error.\nAlarm to be cleared by the operator at the management system.\nReason: systemHW54		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-723 IK8454710 - Processor Card Missing or not terminated

Alarm	Attributes	Applicable major releases
Name: IK8454710 (7116) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Processor Card Missing or not terminated (1559) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Processor Card is missing or not properly terminated in indicated processor module.\nAlarm to be cleared by the operator at the management system.\nReason: systemHW56		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-724 IK8454712 - Violation

Alarm	Attributes	Applicable major releases
Name: IK8454712 (7117) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Violation (1560) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Front Panel Button Violation\nAlarm to be cleared by the operator at the management system.\nReason: systemHW58		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-725 IK8454730 - ACPI hardware failure

Alarm	Attributes	Applicable major releases
Name: IK8454730 (7118) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: ACPI hardware failure (1561) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: ACPI hardware failure\nAlarm to be cleared by the operator at the management system.\nReason: systemHW77		
Remedial action: check ACPI		

Table 26-726 IK8454735 - The battery cycles have gone beyond the upper critical range

Alarm	Attributes	Applicable major releases
Name: IK8454735 (7119) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: The battery cycles have gone beyond the upper critical range (1562) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Battery cycles have gone beyond the upper critical range\nAlarm to be cleared by the operator at the management system.\nReason: systemHW81		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-727 IK8454743 - Generic trap for Critical or Fatal type E0 event from system firmware

Alarm	Attributes	Applicable major releases
Name: IK8454743 (7120) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic trap for Critical or Fatal type E0 event from system firmware (1563) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Generic alarm for Critical or Fatal type E0 event from system firmware\nAlarm to be cleared by the operator at the management system.\nReason: systemFW1		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-728 IK8454749 - Temperature Emergency

Alarm	Attributes	Applicable major releases
Name: IK8454749 (7121) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Temperature Emergency (1514) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server temperature has exceeded the emergency temperature threshold.\nAlarm to be cleared by the operator at the management system.\nReason: temperature3		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-729 IK8454752 - Hot Swap: Temperature emergency

Alarm	Attributes	Applicable major releases
Name: IK8454752 (7122) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Hot Swap: Temperature emergency (1564) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Hot Swap Cage : Emergency temperature exceeded!\nAlarm to be cleared by the operator at the management system.\nReason: temperature6		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-730 IK8454755 - Hot Swap Cage: Temperature emergency

Alarm	Attributes	Applicable major releases
Name: IK8454755 (7123) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Hot Swap Cage: Temperature emergency (1565) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Hot Swap Cage : Emergency temperature exceeded!\nAlarm to be cleared by the operator at the management system.\nReason: temperature9		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-731 IK8454762 - linkDown

Alarm	Attributes	Applicable major releases
Name: IK8454762 (7124) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: linkDown (1495) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-732 IK8456033 - hpOVISMajorAlarm

Alarm	Attributes	Applicable major releases
Name: IK8456033 (7125) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: hpOVISMajorAlarm (1566) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Major alarm\nAlarm to be cleared by the operator at the management system.\nReason: hpOVISMajorAlarm		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-733 IK8456034 - hpOVISCriticalAlarm

Alarm	Attributes	Applicable major releases
Name: IK8456034 (7126) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: hpOVISCriticalAlarm (1567) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Critical alarm\nAlarm to be cleared by the operator at the management system.\nReason: hpOVISCriticalAlarm		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-734 IK8457327 - hh3cEntityExtTemperatureThresholdNotification

Alarm	Attributes	Applicable major releases
Name: IK8457327 (7127) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: hh3cEntityExtTemperatureThresholdNotification (1568) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The hh3cEntityExtTemperatureThresholdNotification indicates the temperature exceeded the threshold.\nAlarm to be cleared by the operator at the management system.\nReason: hh3cEntityExtTemperatureThresholdNotification		
Remedial action: Check the status and the environment of the entity, sometimes it happens because of the failure of air-condition.		

Table 26-735 IK8457329 - hh3cEntityExtVoltageHighThresholdNotification

Alarm	Attributes	Applicable major releases
Name: IK8457329 (7128) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: hh3cEntityExtVoltageHighThresholdNotification (1569) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The hh3cEntityExtVoltageHighThresholdNotification indicates the voltage is higher than the threshold. If the voltage is higher too much than the entity needs, The entity may be damaged by the high voltage.\nAlarm to be cleared by the operator at the management system.\nReason: hh3cEntityExtVoltageHighThresholdNotification		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-736 IK8457331 - hh3cEntityExtMemUsageThresholdNotification

Alarm	Attributes	Applicable major releases
Name: IK8457331 (7129) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: hh3cEntityExtMemUsageThresholdNotification (1570) Implicitly cleared: true Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: The hh3cEntityExtMemUsageThresholdNotification indicates the entity is overloaded.\nAlarm is cleared by the system.\nReason: hh3cEntityExtMemUsageThresholdNotification		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-737 IK8457334 - hh3cEntityExtCriticalTemperatureThresholdNotification

Alarm	Attributes	Applicable major releases
Name: IK8457334 (7130) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: hh3cEntityExtCriticalTemperatureThresholdNotification (1571) Implicitly cleared: false Default probable cause: highTemperature (667)	<ul style="list-style-type: none"> LR14.3.MG
Description: The hh3cEntityExtCriticalTemperatureThresholdNotification indicates the temperature exceeds the critical temperature. \nAlarm to be cleared by the operator at the management system. \nReason: hh3cEntityExtCriticalTemperatureThresholdNotification		
Remedial action: Check the status and the environment of the entity, sometimes it happens because of the failure of air-condition.		

Table 26-738 IK8457346 - hh3cEntityExtTemperatureLower

Alarm	Attributes	Applicable major releases
Name: IK8457346 (7131) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: hh3cEntityExtTemperatureLower (1572) Implicitly cleared: true Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm indicates the temperature of a specified entity is under the lower threshold. \nAlarm is cleared by the system. \nReason: hh3cEntityExtTemperatureLower		
Remedial action: Check the status and the environment of the entity, sometimes it goes wrong for some reason.		

Table 26-739 IK8457347 - hh3cEntityExtTemperatureTooUp

Alarm	Attributes	Applicable major releases
Name: IK8457347 (7132) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: hh3cEntityExtTemperatureTooUp (1573) Implicitly cleared: false Default probable cause: highTemperature (667)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm indicates the temperature of a specified entity exceeded the shutdown threshold. \nAlarm to be cleared by the operator at the management system. \nReason: hh3cEntityExtTemperatureTooUp		
Remedial action: Check the status and the environment of the entity, sometimes it goes wrong for some reason.		

Table 26-740 IK8457354 - hh3cEntityExtECCParityAlarm

Alarm	Attributes	Applicable major releases
Name: IK8457354 (7133) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: hh3cEntityExtECCParityAlarm (1574) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm indicates the ECC(Error Correction Code) parity error alarm.\nAlarm to be cleared by the operator at the management system.\nReason: hh3cEntityExtECCParityAlarm		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-741 IK8457377 - hh3cpowerfailure

Alarm	Attributes	Applicable major releases
Name: IK8457377 (7134) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: hh3cpowerfailure (1575) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply failure\nAlarm is cleared by the system.\nReason: hh3cpowerfailure		
Remedial action: check the power supply		

Table 26-742 IK8457386 - hh3cBoardFailure

Alarm	Attributes	Applicable major releases
Name: IK8457386 (7135) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: hh3cBoardFailure (1576) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Board failed\nAlarm is cleared by the system.\nReason: hh3cBoardFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-743 IK8457391 - hh3cBoardTemperatureHigher

Alarm	Attributes	Applicable major releases
Name: IK8457391 (7136) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: hh3cBoardTemperatureHigher (1577) Implicitly cleared: true Default probable cause: highTemperature (667)	<ul style="list-style-type: none"> LR14.3.MG
Description: Board temperature high\nAlarm is cleared by the system.\nReason: hh3cBoardTemperatureHigher		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-744 IK8457394 - hh3cLoadFailure

Alarm	Attributes	Applicable major releases
Name: IK8457394 (7137) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: hh3cLoadFailure (1578) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Board load failure\nAlarm to be cleared by the operator at the management system.\nReason: hh3cLoadFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-745 IK8500002 - Temperature

Alarm	Attributes	Applicable major releases
Name: IK8500002 (7138) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Temperature (1579) Implicitly cleared: true Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Temperature exceeds the max user temperature level. Alarm is cleared by the system.\nReason: Temperature		
Remedial action: Check that the fans of the device are working properly. Check also that configured temperature threshold is not too low (under normal running conditions; approximately 45C when ambient is at 25C). Finally, check that ambient temperature is not too high.		

Table 26-746 IK8500006 - VRRP failure

Alarm	Attributes	Applicable major releases
Name: IK8500006 (7139) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: VRRP failure (1580) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: VRRP Failure Alarm ON. Alarm is cleared by the system.\nReason: VRRP failure		
Remedial action: Connect another user-plane device with the same VRRP Id and parameters on the appropriate IP interface.		

Table 26-747 IK8500103 - NTP Server Locked

Alarm	Attributes	Applicable major releases
Name: IK8500103 (7140) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NTP Server Locked (1581) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: NTP server unreachable. Alarm is cleared by the system.\nReason: NTP Server Locked		
Remedial action: Connect a NTP server with an appropriate IP address on OA&M network (reachable by the user-plane on eth0)		

Table 26-748 IK8500501 - Internal 10MHz not locked

Alarm	Attributes	Applicable major releases
Name: IK8500501 (7141) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Internal 10MHz not locked (1582) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Internal 10MHz OCXO is not locked. Alarm is cleared by the system.\nReason: Internal 10MHz Not Locked		
Remedial action: Verify the quality of the GPS antenna connection.		

Table 26-749 IK8500503 - Internal GPS not locked

Alarm	Attributes	Applicable major releases
Name: IK8500503 (7142) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Internal GPS not locked (1583) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Internal GPS is not locked. Alarm is cleared by the system.\nReason: Internal GPS Not Locked		
Remedial action: Connect a GPS antenna (3. 3V) on the appropriate device input (TNC connector).		

Table 26-750 IK8501061 - IP Data 1 link

Alarm	Attributes	Applicable major releases
Name: IK8501061 (7143) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: IP Data 1 link (1584) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: IP Data 1 link failure. Alarm is cleared by the system.\nReason: IP Data 1 link		
Remedial action: Connect eth2 ethernet port to the production network.		

Table 26-751 IK8501062 - IP Data 2 link

Alarm	Attributes	Applicable major releases
Name: IK8501062 (7144) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: IP Data 2 link (1585) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: IP Data 2 link failure. Alarm is cleared by the system.\nReason: IP Data 2 link		
Remedial action: Connect eth3 ethernet port to the production network.		

Table 26-752 IK8505555 - Output Overflow

Alarm	Attributes	Applicable major releases
Name: IK8505555 (7145) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Output Overflow (1586) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Output Overflow. Alarm is cleared by the system.\nReason: Output Overflow		
Remedial action: Reduce the overall bit rate of the user-plane by : 1) removing some bearers, 2) removing some multi-unicast outputs, 3) decreasing the GBR parameters for one or several bearers.		

Table 26-753 IK8505556 - MTU of Input Stream

Alarm	Attributes	Applicable major releases
Name: IK8505556 (7146) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: MTU of Input Stream (1587) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: MTU of Input Stream. Alarm is cleared by the system.\nReason: MTU of Input Stream		
Remedial action: Reduce the maximum size (in number of bytes) of IP packets at the input of the user-plane.		

Table 26-754 IK8505557 - Bearer Output Overflow

Alarm	Attributes	Applicable major releases
Name: IK8505557 (7147) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Bearer Output Overflow (1588) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Bearer Output Overflow (please note that BearerId is indicated in case less than 3 bearers are in overflow). Alarm is cleared by the system.\nReason: Bearer Output Overflow		
Remedial action: Reduce the bit rate of the corresponding MBMS bearers (see the list in log file)		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-755 IK8505558 - Bearer Input Missing

Alarm	Attributes	Applicable major releases
Name: IK8505558 (7148) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Bearer Input Missing (1589) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Bearer Input Missing (please note that BearerId is indicated in case less than 3 bearers are missing). Alarm is cleared by the system. Reason: Bearer Input Missing		
Remedial action: Check that a corresponding IP stream is available on the production network (Check also for possible VLAN configuration)		

Table 26-756 IK8550005 - mcdp alarm trap v1

Alarm	Attributes	Applicable major releases
Name: IK8550005 (7149) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: mcdp alarm trap v1 (1590) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: mcdp alarm alarm v1. Alarm to be cleared by the operator at the management system. Reason: alarmTrapV1		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-757 IK8550006 - Trap associated to an alarm of the managed element

Alarm	Attributes	Applicable major releases
Name: IK8550006 (7150) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Trap associated to an alarm of the managed element (1591) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Trap associated to an alarm of the managed element. Alarm to be cleared by the operator at the management system. Reason: alarmTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-758 IK8550007 - softwareFailure

Alarm	Attributes	Applicable major releases
Name: IK8550007 (7151) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: softwareFailure (1592) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Trap associated to an alarm while executing software operation (download, activation, validation, reject, backup).\nAlarm to be cleared by the operator at the management system.\nReason: softwareFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-759 IK8550981 - Cluster Node Degraded

Alarm	Attributes	Applicable major releases
Name: IK8550981 (7152) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Cluster Node Degraded (1593) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNodeDegraded		
Remedial action: Make a note of the cluster node name then check the node for the cause of the degraded condition.		

Table 26-760 IK8550982 - Cluster Node Failed

Alarm	Attributes	Applicable major releases
Name: IK8550982 (7153) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Node Failed (1428) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 26-761 IK8550983 - Cluster Resource Degraded

Alarm	Attributes	Applicable major releases
Name: IK8550983 (7154) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Cluster Resource Degraded (1594) Implicitly cleared: false Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterResourceDegraded		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the degraded condition.		

Table 26-762 IK8550984 - Cluster Resource Failed

Alarm	Attributes	Applicable major releases
Name: IK8550984 (7155) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Resource Failed (1429) Implicitly cleared: false Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 26-763 IK8550985 - Cluster Network Degraded

Alarm	Attributes	Applicable major releases
Name: IK8550985 (7156) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Cluster Network Degraded (1595) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster network becomes degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNetworkDegraded		
Remedial action: Make a note of the cluster network name then check the network for the cause of the degraded condition.		

Table 26-764 IK8550986 - Cluster Network Failed

Alarm	Attributes	Applicable major releases
Name: IK8550986 (7157) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Network Failed (1430) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 26-765 IK8550987 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8550987 (7158) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature at rack sensor 1 is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmTemp1		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 26-766 IK8550988 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8550988 (7159) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature at rack sensor 2 is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmTemp2		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-767 IK8550989 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8550989 (7160) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The status of Fan 1 has changed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmFan1		
Remedial action: Refer to Trap Details for more information.		

Table 26-768 IK8550990 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8550990 (7161) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The status of Fan 2 has changed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmFan2		
Remedial action: Refer to Trap Details for more information.		

Table 26-769 IK8550991 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8550991 (7162) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The AC voltage of the rack is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmVoltage		
Remedial action: Check the incoming power source and ensure all cables are inserted correctly.		

Table 26-770 IK8550992 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8550992 (7163) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: humidityUnacceptable (702)	<ul style="list-style-type: none"> LR14.3.MG
Description: The humidity of the rack is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmHumidity		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 26-771 IK8550993 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8550993 (7164) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: intrusionDetection (670)	<ul style="list-style-type: none"> LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #1).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput1		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 26-772 IK8550994 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8550994 (7165) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: intrusionDetection (670)	<ul style="list-style-type: none"> LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #2).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput2		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 26-773 IK8550995 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8550995 (7166) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: intrusionDetection (670)	<ul style="list-style-type: none"> LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #3).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput3		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 26-774 IK8550996 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8550996 (7167) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: intrusionDetection (670)	<ul style="list-style-type: none"> LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #4).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput4		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 26-775 IK8550997 - locking-alarm

Alarm	Attributes	Applicable major releases
Name: IK8550997 (7168) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: locking-alarm (1597) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Rack door lock #1 alarm.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock1		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 26-776 IK8550998 - locking-alarm

Alarm	Attributes	Applicable major releases
Name: IK8550998 (7169) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: locking-alarm (1597) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Rack door lock #2 alarm.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock2		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 26-777 IK8550999 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8550999 (7170) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: smoke (676)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack smoke detector has detected smoke.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmSmoke		
Remedial action: Investigate rack for an over temperature condition and refer to Trap Details for more information.		

Table 26-778 IK8551000 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8551000 (7171) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: excessiveVibration (699)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack shock detector has detected a vibration to the rack.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmShock		
Remedial action: Investigate rack.		

Table 26-779 IK8551001 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8551001 (7172) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack auxiliary alarm input #1 has been triggered.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmAux1		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-780 IK8551002 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8551002 (7173) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack auxiliary alarm input #2 has been triggered.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmAux2		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-781 IK8551003 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8551003 (7174) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Alarm 1, set from Network management\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarm1		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-782 IK8551004 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8551004 (7175) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Alarm 2, set from Network management\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarm2		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-783 IK8551005 - locking-alarm of device

Alarm	Attributes	Applicable major releases
Name: IK8551005 (7176) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: locking-alarm of device (1598) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack door locking device #1 has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock1Dev		
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 26-784 IK8551006 - locking-alarm of device

Alarm	Attributes	Applicable major releases
Name: IK8551006 (7177) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: locking-alarm of device (1598) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack door locking device #2 has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock2Dev		
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 26-785 IK8551008 - The primary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8551008 (7178) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The primary controller in the subsystem has failed (1431) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-786 IK8551010 - The secondary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8551010 (7179) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The secondary controller in the subsystem has failed (1432) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-787 IK8551013 - A RAIDset has failed

Alarm	Attributes	Applicable major releases
Name: IK8551013 (7180) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A RAIDset has failed (1433) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 26-788 IK8551015 - A RAIDset has become degraded

Alarm	Attributes	Applicable major releases
Name: IK8551015 (7181) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: minor Specific problem: A RAIDset has become degraded (1599) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A RAIDset has become degraded. Details: A RAIDset has become degraded due to a member disk device failure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrLogDriveReducedTrap		
Remedial action: Replace the failed disk device; add a spare to the system to cause a reconstruct.		

Table 26-789 IK8551018 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8551018 (7182) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-790 IK8551023 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8551023 (7183) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: false Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-791 IK8551028 - Fan has failed

Alarm	Attributes	Applicable major releases
Name: IK8551028 (7184) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Fan has failed (1600) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fan has failed. Details: One of the cooling fans in the primary enclosure has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUFanFailureTrap		
Remedial action: Replace the cooling fan. Possible causes are fan physically removed, actual hardware failure.		

Table 26-792 IK8551030 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8551030 (7185) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-793 IK8551032 - Primary enclosure temperature warning

Alarm	Attributes	Applicable major releases
Name: IK8551032 (7186) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Primary enclosure temperature warning (1601) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Primary enclosure temperature warning. Details: The temperature in the primary enclosure has triggered a warning condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUTemperatureWarningTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 26-794 IK8551033 - Primary enclosure temperature critical!

Alarm	Attributes	Applicable major releases
Name: IK8551033 (7187) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Primary enclosure temperature critical! (1436) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 26-795 IK8551035 - Fan has failed in expansion cabinet

Alarm	Attributes	Applicable major releases
Name: IK8551035 (7188) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Fan has failed in expansion cabinet (1602) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fan has failed in expansion cabinet. Details: One of the cooling fans in the expansion cabinet has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabFanFailureTrap		
Remedial action: Replace the cooling fan. Possible causes are fan physically removed, actual hardware failure.		

Table 26-796 IK8551037 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8551037 (7189) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-797 IK8551039 - Expansion cabinet temperature warning

Alarm	Attributes	Applicable major releases
Name: IK8551039 (7190) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Expansion cabinet temperature warning (1603) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Expansion cabinet temperature warning. Details: The temperature in the expansion cabinet has triggered a warning condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabTemperatureWarningTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 26-798 IK8551040 - cpqCrExpCabTemperatureCriticalTrap

Alarm	Attributes	Applicable major releases
Name: IK8551040 (7191) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: cpqCrExpCabTemperatureCriticalTrap (1437) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 26-799 IK8551059 - External Array Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8551059 (7192) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: External Array Accelerator Board Bad Data (1604) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Bad Data. This alarm signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaAccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-800 IK8551060 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8551060 (7193) Type: environmentalAlarm (2) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-801 IK8551067 - Fibre Channel Tape Drive Cleaning Tape Needs Replacing

Alarm	Attributes	Applicable major releases
Name: IK8551067 (7194) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: warning Specific problem: Fibre Channel Tape Drive Cleaning Tape Needs Replacing (1605) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fibre Channel Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcTapeDriveCleanTapeReplace		
Remedial action: Replace the failing fibre channel drive cleaning tape		

Table 26-802 IK8551068 - External Array Redundant Controller Active

Alarm	Attributes	Applicable major releases
Name: IK8551068 (7195) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: warning Specific problem: External Array Redundant Controller Active (1606) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Redundant Controller Active. This alarm signifies that the Storage Agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqFcaCntlrBoxIoSlot indicates the new active controller index.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaCntlrActive		
Remedial action: Check the partner controller for problems. If this was the result of a user initiated switch over, no action is required.		

Table 26-803 IK8551072 - External Array Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8551072 (7196) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: External Array Accelerator Board Bad Data (1604) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Bad Data. This alarm signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost. Alarm to be cleared by the operator at the management system. Reason: cpqFca2AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-804 IK8551073 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8551073 (7197) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board. Alarm to be cleared by the operator at the management system. Reason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-805 IK8551078 - External Tape Drive Cleaning Required

Alarm	Attributes	Applicable major releases
Name: IK8551078 (7198) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: External Tape Drive Cleaning Required (1607) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Tape Drive Cleaning Required. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned. Alarm to be cleared by the operator at the management system. Reason: cpqExtTapeDriveCleaningRequired		
Remedial action: a External Tape Drive Cleaning should be installed		

Table 26-806 IK8551079 - External Tape Drive Cleaning Tape Needs Replacing

Alarm	Attributes	Applicable major releases
Name: IK8551079 (7199) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: External Tape Drive Cleaning Tape Needs Replacing (1608) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape. Alarm to be cleared by the operator at the management system. Reason: cpqExtTapeDriveCleanTapeReplace		
Remedial action: Replace the External Tape Drive Cleaning Tape		

Table 26-807 IK8551089 - Thermal Status Degraded

Alarm	Attributes	Applicable major releases
Name: IK8551089 (7200) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Thermal Status Degraded (1609) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to degraded. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3). Alarm to be cleared by the operator at the management system. Reason: cpqHeThermalTempDegraded		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-808 IK8551092 - System Fan Degraded

Alarm	Attributes	Applicable major releases
Name: IK8551092 (7201) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: System Fan Degraded (1610) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to degraded. An optional system fan is not operating normally. Alarm to be cleared by the operator at the management system. Reason: cpqHeThermalSystemFanDegraded		
Remedial action: check the system fans		

Table 26-809 IK8551094 - CPU Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8551094 (7202) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: CPU Fan Failure (1611) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The CPU fan status has been set to failed. A processor fan is not operating normally. The server will be shutdown.\nAlarm is cleared by the system.\nReason: cpqHeThermalCpuFanFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-810 IK8551098 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8551098 (7203) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-811 IK8551099 - Server Power Supply Degraded

Alarm	Attributes	Applicable major releases
Name: IK8551099 (7204) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Server Power Supply Degraded (1612) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeFitToIPwrSupplyDegraded		
Remedial action: check the fault tolerant power supply		

Table 26-812 IK8551102 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8551102 (7205) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-813 IK8551103 - Temperature Degraded

Alarm	Attributes	Applicable major releases
Name: IK8551103 (7206) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Temperature Degraded (1613) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to degraded. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalTempDegraded		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-814 IK8551105 - System Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8551105 (7207) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: System Fan Failure (1441) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the failed fan.		

Table 26-815 IK8551106 - System Fan Degraded

Alarm	Attributes	Applicable major releases
Name: IK8551106 (7208) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: System Fan Degraded (1610) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to degraded. An optional system fan is not operating normally. \nAlarm to be cleared by the operator at the management system. \nReason: cpqHe3ThermalSystemFanDegraded		
Remedial action: Replace the failing fan.		

Table 26-816 IK8551108 - CPU Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8551108 (7209) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: CPU Fan Failure (1611) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The CPU fan status has been set to failed. A processor fan is not operating normally. The server will be shutdown. \nAlarm is cleared by the system. \nReason: cpqHe3ThermalCpuFanFailed		
Remedial action: Replace the failed CPU fan.		

Table 26-817 IK8551112 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8551112 (7210) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log \nAlarm to be cleared by the operator at the management system. \nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-818 IK8551113 - Server Power Supply Degraded

Alarm	Attributes	Applicable major releases
Name: IK8551113 (7211) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Server Power Supply Degraded (1612) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3FltToIPwrSupplyDegraded		
Remedial action: Check the system for a power supply failure. Replace the power supply.		

Table 26-819 IK8551114 - Corr Mem Errors Require a Replacement Memory Module

Alarm	Attributes	Applicable major releases
Name: IK8551114 (7212) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Corr Mem Errors Require a Replacement Memory Module (1614) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: A correctable memory log entry indicates a memory module needs to be replaced. The errors have been corrected, but the memory module should be replaced. The error information is reported in the variable cpqHeCorrMemErrDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3CorrMemReplaceMemModule		
Remedial action: Replace the failing memory module		

Table 26-820 IK8551116 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8551116 (7213) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FltToIPowerSupplyFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-821 IK8551117 - Power Redundancy Lost

Alarm	Attributes	Applicable major releases
Name: IK8551117 (7214) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power Redundancy Lost (1615) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Power Supplies have lost redundancy for the specified chassis.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIPowerRedundancyLost		
Remedial action: Check the system power supplies for a failure.		

Table 26-822 IK8551120 - Fan Degraded

Alarm	Attributes	Applicable major releases
Name: IK8551120 (7215) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Fan Degraded (1616) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fan condition has been set to degraded for the specified chassis and fan.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3FitToFanDegraded		
Remedial action: Replace the failing fan.		

Table 26-823 IK8551121 - Fan Failed

Alarm	Attributes	Applicable major releases
Name: IK8551121 (7216) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fan Failed (1443) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system.\nReason: cpqHe3FitToFanFailed		
Remedial action: Replace the failed fan.		

Table 26-824 IK8551122 - Fan Redundancy Lost

Alarm	Attributes	Applicable major releases
Name: IK8551122 (7217) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Fan Redundancy Lost (1617) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fans have lost redundancy for the specified chassis.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIFanRedundancyLost		
Remedial action: Check the system fans for a failure.		

Table 26-825 IK8551125 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8551125 (7218) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-826 IK8551126 - Thermal Status Degraded

Alarm	Attributes	Applicable major releases
Name: IK8551126 (7219) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Thermal Status Degraded (1609) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to degraded in the specified chassis and location. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3TemperatureDegraded		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-827 IK8551128 - Power Converter Degraded

Alarm	Attributes	Applicable major releases
Name: IK8551128 (7220) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power Converter Degraded (1618) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converter condition has been set to degraded for the specified chassis, slot and socket. Alarm to be cleared by the operator at the management system. Reason: cpqHe3PowerConverterDegraded		
Remedial action: Check for a failing power converter or for a failed power converter in a redundant pair. Replace the power converter.		

Table 26-828 IK8551129 - Power Converter Failed

Alarm	Attributes	Applicable major releases
Name: IK8551129 (7221) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Converter Failed (1444) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket. Alarm to be cleared by the operator at the management system. Reason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 26-829 IK8551130 - Power Converter Redundancy Lost

Alarm	Attributes	Applicable major releases
Name: IK8551130 (7222) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Power Converter Redundancy Lost (1619) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converters have lost redundancy for the specified chassis. Alarm to be cleared by the operator at the management system. Reason: cpqHe3PowerConverterRedundancyLost		
Remedial action: Check the power converters in the system for a failure in a redundant pair. Replace the power converter.		

Table 26-830 IK8551131 - Cache Accel Parity Errors may require a module

Alarm	Attributes	Applicable major releases
Name: IK8551131 (7223) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Cache Accel Parity Errors may require a module (1620) Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.3.MG
Description: A cache accelerator parity error indicates a cache module needs to be replaced. The error information is reported in the variable cpqHeEventLogErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3CacheAccelParityError		
Remedial action: Refer to the Integrated Management Log for details on the error. Replace the failing cache module.		

Table 26-831 IK8551132 - Online Spare Memory Engaged

Alarm	Attributes	Applicable major releases
Name: IK8551132 (7224) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Online Spare Memory Engaged (1621) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Advanced Memory Protection Online Spare Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The Online Spare Memory has been activated.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResilientMemOnlineSpareEngaged		
Remedial action: Schedule server down-time to replace the faulty memory.		

Table 26-832 IK8551134 - Power Supply Degraded

Alarm	Attributes	Applicable major releases
Name: IK8551134 (7225) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power Supply Degraded (1622) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to degraded for the specified chassis and bay location.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe4FitToIPowerSupplyDegraded		
Remedial action: Replace the failing power supply.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-833 IK8551135 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8551135 (7226) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FitToIPowerSupplyFailed		
Remedial action: Replace the failed power supply.		

Table 26-834 IK8551136 - Mirrored Memory Engaged

Alarm	Attributes	Applicable major releases
Name: IK8551136 (7227) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Mirrored Memory Engaged (1623) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Advanced Memory Protection Mirrored Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Mirrored Memory has been activated.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResilientMemMirroredMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 26-835 IK8551137 - Advanced ECC Memory Engaged

Alarm	Attributes	Applicable major releases
Name: IK8551137 (7228) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Advanced ECC Memory Engaged (1624) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Advanced Memory Protection Advanced ECC Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Advanced ECC has been activated.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResilientAdvancedECCMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 26-836 IK8551138 - Advanced XOR Memory Engaged

Alarm	Attributes	Applicable major releases
Name: IK8551138 (7229) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: warning Specific problem: Advanced XOR Memory Engaged (1625) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Advanced Memory Protection XOR Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The XOR engine has been activated. Alarm to be cleared by the operator at the management system. Reason: cpqHeResilientMemXorMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 26-837 IK8551141 - Replace Memory Module

Alarm	Attributes	Applicable major releases
Name: IK8551141 (7230) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: minor Specific problem: Replace Memory Module (1626) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Corrected Memory Errors Detected. The errors have been corrected, but the memory module should be replaced. Alarm to be cleared by the operator at the management system. Reason: cpqHe4CorrMemReplaceMemModule		
Remedial action: Replace the memory module.		

Table 26-838 IK8551142 - Memory Board or Cartridge Removed

Alarm	Attributes	Applicable major releases
Name: IK8551142 (7231) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: warning Specific problem: Memory Board or Cartridge Removed (1627) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge removed. An Advanced Memory Protection sub-system board or cartridge has been removed from the system. Alarm to be cleared by the operator at the management system. Reason: cpqHeResMemBoardRemoved		
Remedial action: Insure the board or cartridge has memory correctly installed and re-insert the memory board or cartridge back into the system.		

Table 26-839 IK8551144 - Memory Board or Cartridge Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8551144 (7232) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected (1445) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected. Alarm to be cleared by the operator at the management system. Reason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 26-840 IK8551148 - Management processor failed reset

Alarm	Attributes	Applicable major releases
Name: IK8551148 (7233) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Management processor failed reset (1446) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational. Alarm to be cleared by the operator at the management system. Reason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 26-841 IK8551149 - Replace Memory Module

Alarm	Attributes	Applicable major releases
Name: IK8551149 (7234) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Replace Memory Module (1626) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Corrected \ uncorrected Memory Errors Detected. The errors have been corrected, but the memory module should be replaced. Value 0 for CPU means memory is not Processor based Alarm to be cleared by the operator at the management system. Reason: cpqHe5CorrMemReplaceMemModule		
Remedial action: Replace the failing memory module.		

Table 26-842 IK8551150 - Memory Board or Cartridge or Riser Removed

Alarm	Attributes	Applicable major releases
Name: IK8551150 (7235) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Memory Board or Cartridge or Riser Removed (1628) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge or riser removed. An Advanced Memory Protection sub-system board or cartridge or riser has been removed from the system. Value 0 for CPU means memory is not processor based.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe5ResMemBoardRemoved		
Remedial action: Insure the board or cartridge or riser has memory correctly installed and re-insert the memory board or cartridge or CPU back into the system.		

Table 26-843 IK8551152 - Memory Board or Cartridge or Riser Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8551152 (7236) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected (1447) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 26-844 IK8551153 - Advanced LockStep Memory Engaged

Alarm	Attributes	Applicable major releases
Name: IK8551153 (7237) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Advanced LockStep Memory Engaged (1629) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Advanced Memory Protection LockStep Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The LockStep engine has been activated.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResilientMemLockStepMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 26-845 IK8551154 - Power Supply AC Power Loss

Alarm	Attributes	Applicable major releases
Name: IK8551154 (7238) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply AC Power Loss (1448) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location. \nAlarm to be cleared by the operator at the management system. \nReason: cpqHe4FitToPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 26-846 IK8551156 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8551156 (7239) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc. \nAlarm to be cleared by the operator at the management system. \nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-847 IK8551158 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8551158 (7240) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc. \nAlarm to be cleared by the operator at the management system. \nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-848 IK8551163 - Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8551163 (7241) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Status Trap (1450) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition. Alarm is cleared by the system. Reason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 26-849 IK8551164 - Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8551164 (7242) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Status Trap (1450) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the configured redundant NIC becomes the active NIC. Alarm to be cleared by the operator at the management system. Reason: cpqHo2NicSwitchoverOccurred2		
Remedial action: Examine the network connections and check for a NIC failure.		

Table 26-850 IK8551168 - Critical Software update Notification Trap

Alarm	Attributes	Applicable major releases
Name: IK8551168 (7243) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Critical Software update Notification Trap (1630) Implicitly cleared: false Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is a send to the user to notify him of a Critical Software Update. Alarm to be cleared by the operator at the management system. Reason: cpqHoCriticalSoftwareUpdateTrap		
Remedial action: Install the required software updates.		

Table 26-851 IK8551172 - Power Threshold Exceeded

Alarm	Attributes	Applicable major releases
Name: IK8551172 (7244) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Threshold Exceeded (1451) Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded. Alarm to be cleared by the operator at the management system. Reason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-852 IK8552265 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8552265 (7245) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. Alarm to be cleared by the operator at the management system. Reason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-853 IK8552272 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8552272 (7246) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. Alarm to be cleared by the operator at the management system. Reason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-854 IK8552279 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8552279 (7247) Type: environmentalAlarm (2) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-855 IK8552281 - Duplex Controller Active

Alarm	Attributes	Applicable major releases
Name: IK8552281 (7248) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: warning Specific problem: Duplex Controller Active (1631) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Controller Active. This alarm signifies that the agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqDaCntlrSlot indicates the active controller slot and cpqDaCntlrPartnerSlot indicates the backup. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDaCntlrActive		
Remedial action: Check the partner controller for problems. If this was the result of a user initiated switch over, no action is required.		

Table 26-856 IK8552284 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8552284 (7249) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: variable Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa4PhyDrvThreshPassedTrap		
Remedial action: If the physical drive is predicting failure, replace the drive.		

Table 26-857 IK8552289 - Tape Drive Cleaning Tape Needs Replacing

Alarm	Attributes	Applicable major releases
Name: IK8552289 (7250) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing (1632) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape. Alarm to be cleared by the operator at the management system. Reason: cpqDaTapeDriveCleanTapeReplace		
Remedial action: Replace the Tape Drive Cleaning Tape.		

Table 26-858 IK8552291 - Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8552291 (7251) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Bad Data (1453) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost. Alarm to be cleared by the operator at the management system. Reason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-859 IK8552292 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8552292 (7252) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. Alarm to be cleared by the operator at the management system. Reason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-860 IK8552295 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8552295 (7253) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-861 IK8552302 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8552302 (7254) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-862 IK8552304 - Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8552304 (7255) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Accelerator Board Bad Data (1453) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Cache Module Board Bad Data. This alarm signifies that the agent has detected a cache module board that has lost backup power. If data was being stored in the cache module memory when the server lost power, that data has been lost. The backup power source is indicated by cpqDaAccelBackupPowerSource.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-863 IK8552305 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8552305 (7256) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Cache Module Board Backup Power Source Failed. This alarm signifies that the agent has detected a backup power source failure associated with the cache module board. The backup power source is indicated by cpqDaAccelBackupPowerSource.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6AccelBatteryFailed		
Remedial action: Replace the Backup Power Source.		

Table 26-864 IK8552309 - Tape Drive Cleaning Required

Alarm	Attributes	Applicable major releases
Name: IK8552309 (7257) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Tape Drive Cleaning Required (1633) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6TapeDriveCleaningRequired		
Remedial action: Insert and run a cleaning tape in the tape drive.		

Table 26-865 IK8552310 - Tape Drive Cleaning Tape Needs Replacing

Alarm	Attributes	Applicable major releases
Name: IK8552310 (7258) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing (1632) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6TapeDriveCleanTapeReplace		
Remedial action: Replace the Tape Drive Cleaning Tape.		

Table 26-866 IK8552315 - IDE Drive Degraded

Alarm	Attributes	Applicable major releases
Name: IK8552315 (7259) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: IDE Drive Degraded (1634) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An IDE drive status has been set to degraded.\nAlarm is cleared by the system.\nReason: cpqIdeDriveDegraded		
Remedial action: The drive should be scheduled for replacement. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-867 IK8552317 - IDE Drive Ultra ATA Degraded

Alarm	Attributes	Applicable major releases
Name: IK8552317 (7260) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: IDE Drive Ultra ATA Degraded (1635) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An IDE drive detects an excessive number of Ultra ATA data transmission errors between the hard drive and the processor.\nAlarm to be cleared by the operator at the management system.\nReason: cpqIdeDriveUltraAtaDegraded		
Remedial action: For best performance move Ultra ATA devices to the primary controller and non Ultra ATA devices to the secondary controller. If errors still persist, consider replacing the standard 40-conductor IDE cable with an 80-conductor Ultra ATA cable.		

Table 26-868 IK8552337 - NIC Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8552337 (7261) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Status Trap (1455) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-869 IK8552339 - NIC Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8552339 (7262) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: NIC Status Trap (1455) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNicRedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-870 IK8552341 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8552341 (7263) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-871 IK8552343 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8552343 (7264) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition.\nAlarm is cleared by the system.\nReason: cpqNic2RedundancyReduced		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

(2 of 2)

Table 26-872 IK8552344 - like Activity Detected Trap

Alarm	Attributes	Applicable major releases
Name: IK8552344 (7265) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: like Activity Detected Trap (1636) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent when the Virus Throttle Filter Driver detects virus like activity.\nAlarm to be cleared by the operator at the management system.\nReason: cpqNicVirusLikeActivityDetected		
Remedial action: The system reporting this trap requires immediate attention.		

Table 26-873 IK8552347 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8552347 (7266) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. Table 26-875 IK8552360 - Enclosure temperature failed

Alarm	Attributes	Applicable major releases
Name: IK8552360 (7268) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure temperature failed (1458) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 26-876 IK8552361 - Enclosure temperature degraded

Alarm	Attributes	Applicable major releases
Name: IK8552361 (7269) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Enclosure temperature degraded (1637) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure temperature status has been set to degraded. This alarm signifies that an enclosure temperature sensor has been tripped indicating a possible overheat condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackEnclosureTempDegraded		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 26-877 IK8552363 - Enclosure fan failed

Alarm	Attributes	Applicable major releases
Name: IK8552363 (7270) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure fan failed (1459) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 26-878 IK8552364 - Enclosure fan degraded

Alarm	Attributes	Applicable major releases
Name: IK8552364 (7271) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Enclosure fan degraded (1638) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure fan status has been set to degraded. This alarm signifies that an enclosure fan has failed but other fans in the redundant fan group are still operating. This may result in overheating of the enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackEnclosureFanDegraded		
Remedial action: Replace the fan as soon as possible.		

Table 26-879 IK8552368 - Rack power supply failed

Alarm	Attributes	Applicable major releases
Name: IK8552368 (7272) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Rack power supply failed (1460) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 26-880 IK8552369 - Rack power supply degraded

Alarm	Attributes	Applicable major releases
Name: IK8552369 (7273) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply degraded (1461) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded. Alarm to be cleared by the operator at the management system. Reason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 26-881 IK8552373 - Rack power subsystem not redundant

Alarm	Attributes	Applicable major releases
Name: IK8552373 (7274) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Rack power subsystem not redundant (1639) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power subsystem is no longer in a redundant state. Alarm to be cleared by the operator at the management system. Reason: cpqRackPowerSubsystemNotRedundant		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 26-882 IK8552374 - Rack power supply input voltage problem

Alarm	Attributes	Applicable major releases
Name: IK8552374 (7275) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply input voltage problem (1462) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power supply detected an input line voltage problem. Alarm to be cleared by the operator at the management system. Reason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 26-883 IK8552375 - Rack power subsystem overload condition

Alarm	Attributes	Applicable major releases
Name: IK8552375 (7276) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power subsystem overload condition (1463) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power subsystem overload condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 26-884 IK8552376 - Server shutdown due to power shedding

Alarm	Attributes	Applicable major releases
Name: IK8552376 (7277) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server shutdown due to power shedding (1464) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 26-885 IK8552377 - Server power on prevented to preserve redundancy

Alarm	Attributes	Applicable major releases
Name: IK8552377 (7278) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server power on prevented to preserve redundancy (1465) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 26-886 IK8552378 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8552378 (7279) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. Alarm to be cleared by the operator at the management system. Reason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 26-887 IK8552379 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8552379 (7280) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found. Alarm to be cleared by the operator at the management system. Reason: cpqRackServerPowerOnFailedEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 26-888 IK8552380 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8552380 (7281) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found. Alarm to be cleared by the operator at the management system. Reason: cpqRackServerPowerOnFailedPowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 26-889 IK8552382 - Fuse open

Alarm	Attributes	Applicable major releases
Name: IK8552382 (7282) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fuse open (1467) Implicitly cleared: false Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fuse open. The fuse has been tripped.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 26-890 IK8552385 - Power subsystem not load balanced

Alarm	Attributes	Applicable major releases
Name: IK8552385 (7283) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power subsystem not load balanced (1640) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem not load balanced. The power subsystem is out of balance for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisNotLoadBalanced		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies. Add additional power supplies if needed.		

Table 26-891 IK8552386 - Power subsystem DC power problem

Alarm	Attributes	Applicable major releases
Name: IK8552386 (7284) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem DC power problem (1468) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-892 IK8552387 - Power subsystem AC facility input power exceeded

Alarm	Attributes	Applicable major releases
Name: IK8552387 (7285) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem AC facility input power exceeded (1469) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisAcFacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-893 IK8552388 - Unknown power consumption

Alarm	Attributes	Applicable major releases
Name: IK8552388 (7286) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Unknown power consumption (1470) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-894 IK8552389 - Power subsystem load balancing wire missing

Alarm	Attributes	Applicable major releases
Name: IK8552389 (7287) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power subsystem load balancing wire missing (1641) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem load balancing wire missing. The power subsystem load balancing wire missing.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisLoadBalancingWireMissing		
Remedial action: Connect the load balancing wire.		

Table 26-895 IK8552390 - Power subsystem has too may power enclosures

Alarm	Attributes	Applicable major releases
Name: IK8552390 (7288) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power subsystem has too may power enclosures (1642) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem has too may power enclosures. The maximum number of power enclosures has been exceeded. Alarm to be cleared by the operator at the management system. Reason: cpqRackPowerChassisTooManyPowerChassis		
Remedial action: Remove the extra power enclosure.		

Table 26-896 IK8552391 - Power subsystem improperly configured

Alarm	Attributes	Applicable major releases
Name: IK8552391 (7289) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem improperly configured (1471) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured. Alarm to be cleared by the operator at the management system. Reason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 26-897 IK8552392 - Enclosure manager degraded

Alarm	Attributes	Applicable major releases
Name: IK8552392 (7290) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Enclosure manager degraded (1643) Implicitly cleared: true Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Onboard Administrator or other management processor status has been set to degraded. This alarm signifies that either an Onboard Administrator has failed but the other Onboard Administrator is still operating, or one or more management processors is in a non-optimal operating state. Alarm is cleared by the system. Reason: cpqRackEnclosureManagerDegraded		
Remedial action: For C-Class enclosures, replace the Onboard Administrator as soon as possible. For all others please refer to product documentation for possible corrective actions		

Table 26-898 IK8552397 - keying failed

Alarm	Attributes	Applicable major releases
Name: IK8552397 (7291) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: keying failed (1644) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The server blade e-keying has failed. This alarm signifies that a server blade e-keying has failed and there is a port mapping problem between a server mezz card and the interconnect. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerBladeEKeyingFailed		
Remedial action: Reconfigure server blade mezz cards.		

Table 26-899 IK8552401 - Interconnect failed

Alarm	Attributes	Applicable major releases
Name: IK8552401 (7292) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Interconnect failed (1472) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 26-900 IK8552402 - Interconnect degraded

Alarm	Attributes	Applicable major releases
Name: IK8552402 (7293) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Interconnect degraded (1645) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The interconnect status has been set to degraded. This alarm signifies that a interconnect has degraded. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackNetConnectorDegraded		
Remedial action: Replace the interconnect as soon as possible.		

Table 26-901 IK8552408 - Server blade health status degraded

Alarm	Attributes	Applicable major releases
Name: IK8552408 (7294) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade health status degraded (1473) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-902 IK8552409 - Server blade health status critical

Alarm	Attributes	Applicable major releases
Name: IK8552409 (7295) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server blade health status critical (1474) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-903 IK8552410 - Server blade not responding to group capping requests

Alarm	Attributes	Applicable major releases
Name: IK8552410 (7296) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Server blade not responding to group capping requests (1646) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The server blade is not responding to the group capper. The server blade is not responding to capping requests from the enclosure group capper.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeGrpCapTimeout		
Remedial action: Reset the iLO management processor.		

Table 26-904 IK8552411 - Server blade unexpected shutdown

Alarm	Attributes	Applicable major releases
Name: IK8552411 (7297) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade unexpected shutdown (1475) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An unexpected shutdown has occurred for this server blade.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-905 IK8552427 - Generic EAE Minor trap

Alarm	Attributes	Applicable major releases
Name: IK8552427 (7298) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Generic EAE Minor trap (1647) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Minor trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMinorEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-906 IK8552428 - Generic EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8552428 (7299) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic EAE Major trap (1476) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-907 IK8552429 - Generic EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8552429 (7300) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic EAE Critical trap (1477) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-908 IK8552430 - Generic Power Subsystem EAE Minor trap

Alarm	Attributes	Applicable major releases
Name: IK8552430 (7301) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Generic Power Subsystem EAE Minor trap (1648) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Minor trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerMinorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-909 IK8552431 - Generic Power Subsystem EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8552431 (7302) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic Power Subsystem EAE Major trap (1478) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-910 IK8552432 - Generic Power Subsystem EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8552432 (7303) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap (1479) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-911 IK8552435 - Generic WSMAN Minor trap

Alarm	Attributes	Applicable major releases
Name: IK8552435 (7304) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Generic WSMAN Minor trap (1649) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Minor trap\nReason: cpqRackMinorWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-912 IK8552436 - Generic WSMAN Major trap

Alarm	Attributes	Applicable major releases
Name: IK8552436 (7305) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic WSMAN Major trap (1480) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-913 IK8552437 - Generic WSMAN Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8552437 (7306) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic WSMAN Critical trap (1481) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-914 IK8552439 - Standby Recovery Server Interconnect Failure

Alarm	Attributes	Applicable major releases
Name: IK8552439 (7307) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure (1482) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-915 IK8552443 - Device Connected

Alarm	Attributes	Applicable major releases
Name: IK8552443 (7308) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Device Connected (1650) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapDeviceConnected		
Remedial action: Perform the following steps to clear the alarm: 1. Insure all cables are seated properly. 2. check you network to insure it is functioning properly. 3. If the UPS is serially connected insure that the Serial Relay Agent is installed and running.		

Table 26-916 IK8552444 - Connection Lost

Alarm	Attributes	Applicable major releases
Name: IK8552444 (7309) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Connection Lost (1651) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a Connection Lost due to one of the following. 1. The serial cable connected to the UPS has been unplugged. 2. The Network cable connected to the UPS has been unplugged. Alarm to be cleared by the operator at the management system. Reason: cpqRPMTrapConnectionLost		
Remedial action: Perform the following steps to clear the alarm: 1. Insure all cables are seated properly. 2. check you network to insure it is functioning properly. 3. If the UPS is serially connected insure that the Serial Relay Agent is installed and running.		

Table 26-917 IK8552449 - CMC Temperature 1 Above Warning

Alarm	Attributes	Applicable major releases
Name: IK8552449 (7310) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: CMC Temperature 1 Above Warning (1652) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: A CMC device is reporting temperature 1 above warning threshold. Alarm to be cleared by the operator at the management system. Reason: cpqRPMTrapCMCTemp1AboveWarn		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-918 IK8552450 - CMC Temperature 1 Above Maximum

Alarm	Attributes	Applicable major releases

Description: A CMC device has entered an alarm condition for auxiliary input 2.\nAlarm is cleared by the system.\nReason: cpqRPMTrapCMCAux2Alarm		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-927 IK8552489 - UPS Input Voltage Above Maximum

Alarm	Attributes	Applicable major releases
Name: IK8552489 (7320) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Input Voltage Above Maximum (1662) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting input voltage above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSInputVoltageAboveMax		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-928 IK8552490 - UPS Input Voltage Normal

Alarm	Attributes	Applicable major releases
Name: IK8552490 (7321) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Input Voltage Normal (1663) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting input voltage is out of range.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSInputVoltageNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. If the UPS remains on battery for an extended period of time it will not be able to sustain the load.		

Table 26-929 IK8552492 - UPS Output Voltage Above Maximum

Alarm	Attributes	Applicable major releases
Name: IK8552492 (7322) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Output Voltage Above Maximum (1664) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting output voltage above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSOutputVoltageAboveMax		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-930 IK8552493 - UPS Output Voltage Normal

Alarm	Attributes	Applicable major releases
Name: IK8552493 (7323) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Output Voltage Normal (1665) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting output voltage is out of Range.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSOutputVoltageNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 26-931 IK8552494 - UPS Output Overload

Alarm	Attributes	Applicable major releases
Name: IK8552494 (7324) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Output Overload (1666) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting an overload condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSOutputOverload		
Remedial action: Perform the following steps to clear the alarm: 1. Reduce the load on the UPS by moving some of the load to another UPS. 2. Consider moving to a larger UPS to support the current load.		

Table 26-932 IK8552496 - UPS Battery Low

Alarm	Attributes	Applicable major releases
Name: IK8552496 (7325) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Battery Low (1510) Implicitly cleared: true Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting low battery.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryLow		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. When utility power is restored, charge the battery to it's full capacity. If the battery level continues to decrease, the UPS will not be able to sustain the output load!		

Table 26-933 IK8552499 - UPS Battery Level Normal

Alarm	Attributes	Applicable major releases
Name: IK8552499 (7326) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Battery Level Normal (1667) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting low battery.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSBatteryLevelNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. When utility power is restored, charge the battery to it's full capacity. If the battery level continues to decrease, the UPS will not be able to sustain the output load!		

Table 26-934 IK8552500 - UPS On Battery

Alarm	Attributes	Applicable major releases
Name: IK8552500 (7327) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS On Battery (1668) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting on battery condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSONBattery		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load!		

Table 26-935 IK8552502 - UPS On Buck

Alarm	Attributes	Applicable major releases
Name: IK8552502 (7328) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS On Buck (1669) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting an On Buck condition due to the following. 1. Utility power has increased above recommended utility input levels.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSONBuck		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 26-936 IK8552503 - UPS On Boost

Alarm	Attributes	Applicable major releases
Name: IK8552503 (7329) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS On Boost (1670) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting an On Boost condition due to the following. 1. Utility power has dropped below recommended utility input levels.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSONBoost		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 26-937 IK8552504 - UPS On Utility Power

Alarm	Attributes	Applicable major releases
Name: IK8552504 (7330) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS On Utility Power (1671) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting on battery condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSOnUtilityPower		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load!		

Table 26-938 IK8552506 - UPS Temperature High

Alarm	Attributes	Applicable major releases
Name: IK8552506 (7331) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Temperature High (1672) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting temperature above maximum threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSTemperatureHigh		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-939 IK8552507 - UPS Temperature Normal

Alarm	Attributes	Applicable major releases
Name: IK8552507 (7332) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Temperature Normal (1673) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting temperature is out of range.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSTemperatureNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 26-940 IK8552508 - UPS Internal Failure

Alarm	Attributes	Applicable major releases
Name: IK8552508 (7333) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Internal Failure (1674) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a general UPS failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSInternalFailure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 26-941 IK8552510 - UPS Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8552510 (7334) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Battery Failure (1675) Implicitly cleared: true Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a battery failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryFailure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support. 3. Your battery may need to be replaced. The UPS may not be capable of supporting it's load if utility power fails!		

Table 26-942 IK8552512 - UPS Diagnostic Test Failed

Alarm	Attributes	Applicable major releases
Name: IK8552512 (7335) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Diagnostic Test Failed (1676) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a diagnostic test failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSDiagnosticTestFailed		
Remedial action: Perform the following steps to clear the alarm: 1. Your battery may need to be replaced. 2. If this error persists contact technical support. 3. The UPS may not be capable of supporting it's load if utility power fails!		

Table 26-943 IK8552513 - UPS Diagnostic Test Succeeded

Alarm	Attributes	Applicable major releases
Name: IK8552513 (7336) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Diagnostic Test Succeeded (1677) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a diagnostic test failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSDiagnosticTestSucceeded		
Remedial action: Perform the following steps to clear the alarm: 1. Your battery may need to be replaced. 2. If this error persists contact technical support. 3. The UPS may not be capable of supporting it's load if utility power fails!		

Table 26-944 IK8552516 - DC Start Occurred

Alarm	Attributes	Applicable major releases
Name: IK8552516 (7337) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: DC Start Occurred (1678) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The UPS has been started on battery when AC input power is not present. This alarm is used to record the date and time of this event.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSDCStartOccurred		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-945 IK8552518 - Bypass Not Available

Alarm	Attributes	Applicable major releases
Name: IK8552518 (7338) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Bypass Not Available (1679) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting bypass not available.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSByPassNotAvailable		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-946 IK8552522 - Utility Not Present

Alarm	Attributes	Applicable major releases
Name: IK8552522 (7339) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Utility Not Present (1680) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Indicates that the utility input is not present. This differs from alarm #57 in that the detected voltage is zero in this case. Alarm is cleared by the system. Reason: cpqRPMTrapUPSUtilityNotPresent		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-947 IK8552526 - Site Wiring Fault

Alarm	Attributes	Applicable major releases
Name: IK8552526 (7340) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Site Wiring Fault (1681) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed. Alarm to be cleared by the operator at the management system. Reason: cpqRPMTrapUPSSiteWiringFault		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 26-948 IK8552527 - Site Wiring Fault Cleared

Alarm	Attributes	Applicable major releases
Name: IK8552527 (7341) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Site Wiring Fault Cleared (1682) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed. Alarm to be cleared by the operator at the management system. Reason: cpqRPMTrapUPSSiteWiringNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 26-949 IK8552528 - The UPS is no longer on manual bypass

Alarm	Attributes	Applicable major releases
Name: IK8552528 (7342) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS is no longer on manual bypass (1683) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is operating in manual bypass mode.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMtrapUPSByPassOffManual		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 26-950 IK8552529 - The UPS is on manual bypass

Alarm	Attributes	Applicable major releases
Name: IK8552529 (7343) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS is on manual bypass (1684) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is operating in manual bypass mode.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMtrapUPSByPassONManual		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 26-951 IK8552531 - The UPS was started without utility power

Alarm	Attributes	Applicable major releases
Name: IK8552531 (7344) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS was started without utility power (1685) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device has been started while on battery power. AC input power is not present.\nAlarm is cleared by the system.\nReason: cppoRPMtrapUPSStartedOnBattery		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load.		

Table 26-952 IK8552533 - Input voltage is out of range

Alarm	Attributes	Applicable major releases
Name: IK8552533 (7345) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Input voltage is out of range (1686) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting input voltage is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSInputOutOfRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. If the UPS remains on battery for an extended period of time it will not be able to sustain the load.		

Table 26-953 IK8552534 - UPS temperature out of range

Alarm	Attributes	Applicable major releases
Name: IK8552534 (7346) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS temperature out of range (1687) Implicitly cleared: true Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting temperature is out of range.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSTemperatureOutOfRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 26-954 IK8552536 - The UPS is on automatic bypass

Alarm	Attributes	Applicable major releases
Name: IK8552536 (7347) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS is on automatic bypass (1688) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is operating in auto bypass mode.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSByPassOnAuto		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 26-955 IK8552538 - Output voltage is out of range

Alarm	Attributes	Applicable major releases
Name: IK8552538 (7348) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Output voltage is out of range (1689) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting output voltage is out of Range.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMtrapUPSOutputoutofRange		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 26-956 IK8552539 - One or more UPS batteries have been disconnected

Alarm	Attributes	Applicable major releases
Name: IK8552539 (7349) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: One or more UPS batteries have been disconnected (1690) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting batteries are not connected to the UPS.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSbatteriesDisconnected		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS Batteries. The UPS will not be capable of supporting it's load if the utility power fails!		

Table 26-957 IK8552541 - The UPS batteries are in a discharged condition

Alarm	Attributes	Applicable major releases
Name: IK8552541 (7350) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS batteries are in a discharged condition (1691) Implicitly cleared: true Default probable cause: batteryDischarging (648)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting batteries are completely discharged.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSbatteryDischarged		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS to utility power to charge the batteries. The UPS will not be able to support it's load if the utility power fails!		

Table 26-958 IK8552543 - A UPS circuit breaker needs attention

Alarm	Attributes	Applicable major releases
Name: IK8552543 (7351) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: A UPS circuit breaker needs attention (1692) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting an output Breaker or Relay has failed or may be stuck open or closed with this alarm.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCheckBreaker		
Remedial action: Perform the following steps to clear the alarm: 1. Check all breakers on the UPS. 2. If this error persists contact technical support.		

Table 26-959 IK8552545 - Emergency Power Off activated

Alarm	Attributes	Applicable major releases
Name: IK8552545 (7352) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Emergency Power Off activated (1693) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting an Emergency Power Off (EPO) command has been received to shutdown the UPS immediately with out delay. This command may come from a local control panel or from a remote source.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSEPOInitiated		
Remedial action: Perform the following steps to clear the alarm: 1. Turn the UPS on to reapply power to attached equipment.		

Table 26-960 IK8552548 - A cover panel has been removed

Alarm	Attributes	Applicable major releases
Name: IK8552548 (7353) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: A cover panel has been removed (1694) Implicitly cleared: true Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a cover panel has been removed while utility power is present.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCabinetDoorOpen		
Remedial action: Perform the following steps to clear the alarm: 1. Reinstall all panels. 2. If this error persists contact technical support.		

Table 26-961 IK8552550 - The UPS has encountered an fan failure

Alarm	Attributes	Applicable major releases
Name: IK8552550 (7354) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS has encountered an fan failure (1695) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a fan failure has occurred.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSfanFailure		
Remedial action: Perform the following steps to clear the alarm: 1. If this error persists contact technical support.		

Table 26-962 IK8552552 - The UPS N+1 load has been exceeded

Alarm	Attributes	Applicable major releases
Name: IK8552552 (7355) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS N+1 load has been exceeded (1696) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a loss of redundancy due to one of the following. 1. One or more of the Electronics Modules has failed 2. One or more of the electronics modules has been manually removed. 3. The amount of load on the UPS has increased to the point that the UPS is no longer able to support an N+1 configuration.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSlossOfRedundancy		
Remedial action: Perform the following steps to clear the alarm: 1. Check the UPS to see if one of the modules has failed. 2. Make sure that all modules are securely plugged in. 3. Reduce the load to return the N+1 configuration. 4. If the amount of load is now going to exceed and N+1 configuration permanently, change the configuration on the front panel of the UPS to Capacity instead of Parallel N+1.		

Table 26-963 IK8552554 - A UPS shutdown is imminent

Alarm	Attributes	Applicable major releases
Name: IK8552554 (7356) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: A UPS shutdown is imminent (1697) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a shutdown imminent condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSshutdownImminent		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 26-964 IK8552556 - A UPS shutdown is pending

Alarm	Attributes	Applicable major releases
Name: IK8552556 (7357) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: A UPS shutdown is pending (1698) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting shutdown pending condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSShutdownPending		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 26-965 IK8552559 - Critical Alarm

Alarm	Attributes	Applicable major releases
Name: IK8552559 (7358) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Critical Alarm (1483) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 26-966 IK8552560 - Warning Alarm

Alarm	Attributes	Applicable major releases
Name: IK8552560 (7359) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Warning Alarm (1699) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A warning alarm has occurred.\nAlarm to be cleared by the operator at the management system.\nReason: cpqPMTrapWarning		
Remedial action: Check the Trap Details for more information.		

Table 26-967 IK8552585 - Tape Drive Cleaning Required

Alarm	Attributes	Applicable major releases
Name: IK8552585 (7360) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: warning Specific problem: Tape Drive Cleaning Required (1633) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.\nAlarm to be cleared by the operator at the management system.\nReason: cpqTape3PhyDrvCleaningRequired		
Remedial action: Insert and run a cleaning tape in the tape drive.		

Table 26-968 IK8552586 - Tape Drive Cleaning Tape Needs Replacing

Alarm	Attributes	Applicable major releases
Name: IK8552586 (7361) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing (1632) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm to be cleared by the operator at the management system.\nReason: cpqTape3PhyDrvCleanTapeReplace		
Remedial action: Replace the Tape Drive Cleaning Tape.		

Table 26-969 IK8552590 - Tape Library Door Opened

Alarm	Attributes	Applicable major releases
Name: IK8552590 (7362) Type: environmentalAlarm (2) Package: Img Raised on class: Img.LMGmngElement	Severity: minor Specific problem: Tape Library Door Opened (1700) Implicitly cleared: false Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: Tape Library Door Open The agent has detected that the door on an autoloader is open so the unit is not operational.\nAlarm to be cleared by the operator at the management system.\nReason: cpqTape3LibraryDoorOpen		
Remedial action: Close the door on the tape library.		

Table 26-970 IK8552606 - System hood is removed

Alarm	Attributes	Applicable major releases
Name: IK8552606 (7363) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: System hood is removed (1701) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: System hood is removed. The hood status has been set to removed. The system's hood is not in a properly installed state. This situation may result in improper cooling of the system due to air flow changes caused by the missing hood. Alarm to be cleared by the operator at the management system. Reason: cpqSiHoodRemoved		
Remedial action: Replace the cover (hood), ensure the system's cover is properly installed. Verify the system is in working order.		

Table 26-971 IK8552608 - Monitor Condition Degraded

Alarm	Attributes	Applicable major releases
Name: IK8552608 (7364) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Monitor Condition Degraded (1702) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: A fault reporting feature has exceeded normal limits for the monitor indicated by the cpqSiMonitorIndex. The monitor's condition is degraded due to the internal temperature exceeding normal operating limits. The monitor is still useable, but action should be taken to return the condition to OK. Alarm to be cleared by the operator at the management system. Reason: cpqSiMonitorConditionDegraded		
Remedial action: Physically check for obstructions to air flow around the monitor. Check the thermostat in the room that the system occupies. Allow the monitor to cool by turning off the monitor for 5 minutes then turn the monitor back on. After the monitor cools, another alarm indicating an improving condition, such as Monitor OK, will be issued.		

Table 26-972 IK8552609 - Monitor Condition Failed

Alarm	Attributes	Applicable major releases
Name: IK8552609 (7365) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Monitor Condition Failed (1484) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced. Alarm to be cleared by the operator at the management system. Reason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-973 IK8552610 - Excessive Correctable Memory Errors

Alarm	Attributes	Applicable major releases
Name: IK8552610 (7366) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Excessive Correctable Memory Errors (1485) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCstatus has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-974 IK8552612 - Memory modules have changed

Alarm	Attributes	Applicable major releases
Name: IK8552612 (7367) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Memory modules have changed (1703) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: A memory configuration change has occurred. CpqSiMemConfigChangeData will indicate which memory modules slots have changed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiMemConfigChange		
Remedial action: You may want to verify a valid reason for a memory configuration to have occurred. If system issuing the alert is a Desktop running NT, the memory configuration change information is also logged in the NT System Log.		

Table 26-975 IK8552615 - Hot Plug Slot Board Failed

Alarm	Attributes	Applicable major releases
Name: IK8552615 (7368) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Hot Plug Slot Board Failed (1486) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 26-976 IK8552616 - Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8552616 (7369) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Failure (235) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced. \nAlarm to be cleared by the operator at the management system. \nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 26-977 IK8552617 - Battery Charging Degradation

Alarm	Attributes	Applicable major releases
Name: IK8552617 (7370) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Charging Degradation (1487) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged. \nAlarm to be cleared by the operator at the management system. \nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 26-978 IK8552618 - Battery Calibration Error

Alarm	Attributes	Applicable major releases
Name: IK8552618 (7371) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Battery Calibration Error (1704) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Calibration is needed with battery indicated by cpqSiSysBatteryIndex. The battery can not correctly indicate capacity. \nAlarm to be cleared by the operator at the management system. \nReason: cpqSiSysBatteryCalibrationError		
Remedial action: Run the Power Conservation Utility. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 26-979 IK8552619 - Server Reset Detected

Alarm	Attributes	Applicable major releases
Name: IK8552619 (7372) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Server Reset Detected (1705) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Reset Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server reset.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerReset		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-980 IK8552620 - Server Power Outage

Alarm	Attributes	Applicable major releases
Name: IK8552620 (7373) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server Power Outage (1488) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 26-981 IK8552621 - Out Unauthorized Login Attempts

Alarm	Attributes	Applicable major releases
Name: IK8552621 (7374) Type: securityServiceOrMechanismViolation (92) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Out Unauthorized Login Attempts (1706) Implicitly cleared: false Default probable cause: unauthorizedAccessAttempt (800)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Insight/ Integrated Lights-Out Unauthorized Login Attempts. The Remote Insight/ Integrated Lights-Out firmware has detected unauthorized login attempts.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2UnauthorizedLoginAttempts		
Remedial action: Check the iLO log for more information on the login failure.		

Table 26-982 IK8552622 - Remote Insight Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8552622 (7375) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight Battery Failed (1489) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 26-983 IK8552628 - Remote Insight external power cable disconnected

Alarm	Attributes	Applicable major releases
Name: IK8552628 (7376) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight external power cable disconnected (1490) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 26-984 IK8552630 - Security override engaged

Alarm	Attributes	Applicable major releases
Name: IK8552630 (7377) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Security override engaged (1707) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Security Override Engaged. The Remote Insight/ Integrated Lights-Out firmware has detected the security override jumper has been toggled to the engaged position.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2SecurityOverrideEngaged		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-985 IK8552631 - Security override disengaged

Alarm	Attributes	Applicable major releases
Name: IK8552631 (7378) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Security override disengaged (1708) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Security Override Disengaged. The Remote Insight/ Integrated Lights-Out firmware has detected the security override jumper has been toggled to the disengaged position.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2SecurityOverrideDisengaged		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-986 IK8552632 - Server Fatal Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8552632 (7379) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server Fatal Error Detected (1491) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-987 IK8552633 - The iLO NIC Link is Down

Alarm	Attributes	Applicable major releases
Name: IK8552633 (7380) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The iLO NIC Link is Down (1492) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-988 IK8552647 - PC Card Thermal Degraded Status

Alarm	Attributes	Applicable major releases
Name: IK8552647 (7381) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: PC Card Thermal Degraded Status (1709) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for safe operations thereby causing degraded operations. This alarm will be sent when cpqSePCCardStatus transitions from Normal (1) to Thermal Degraded (2). The manufacturer and product information strings as well as the slot number for the degraded PC Card is provided as parameters for this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSePCCardThermalDegraded		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-989 IK8552648 - PC Card Thermal Failure Status

Alarm	Attributes	Applicable major releases
Name: IK8552648 (7382) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: PC Card Thermal Failure Status (1493) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-990 IK8552657 - Storage System Temperature Failure

Alarm	Attributes	Applicable major releases
Name: IK8552657 (7383) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Storage System Temperature Failure (1494) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-991 IK8552658 - Storage System Temp Degraded

Alarm	Attributes	Applicable major releases
Name: IK8552658 (7384) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Storage System Temp Degraded (1710) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range. \nAlarm to be cleared by the operator at the management system. \nReason: cpqSsTempDegraded		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-992 IK8552661 - Storage System side panel is removed

Alarm	Attributes	Applicable major releases
Name: IK8552661 (7385) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Storage System side panel is removed (1711) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel. \nAlarm is cleared by the system. \nReason: cpqSsSidePanelRemoved		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-993 IK8552662 - Power Supply Degraded

Alarm	Attributes	Applicable major releases
Name: IK8552662 (7386) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power Supply Degraded (1622) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A storage system power supply status has been set to degraded. \nAlarm to be cleared by the operator at the management system. \nReason: cpqSsPwrSupplyDegraded		
Remedial action: check the storage system power supply		

Table 26-994 IK8552664 - Storage System Temperature Failure

Alarm	Attributes	Applicable major releases
Name: IK8552664 (7387) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Storage System Temperature Failure (1494) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSs3TempFailed		
Remedial action: Shutdown the storage system as soon as possible. Insure that the storage system environment is being cooled properly and that no components are overheated.		

Table 26-995 IK8552665 - Storage System Temp Degraded

Alarm	Attributes	Applicable major releases
Name: IK8552665 (7388) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Storage System Temp Degraded (1710) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSs3TempDegraded		
Remedial action: Shutdown the storage system as soon as possible. Insure that the storage system environment is being cooled properly and that no components are overheated.		

Table 26-996 IK8552668 - Storage System side panel is removed

Alarm	Attributes	Applicable major releases
Name: IK8552668 (7389) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Storage System side panel is removed (1711) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSs3SidePanelRemoved		
Remedial action: Replace the storage system side panel.		

Table 26-997 IK8552669 - Power Supply Degraded

Alarm	Attributes	Applicable major releases
Name: IK8552669 (7390) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power Supply Degraded (1622) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A storage system power supply status has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSs3PwrSupplyDegraded		
Remedial action: check the storage system power supply		

Table 26-998 IK8552670 - Power Supply Degraded

Alarm	Attributes	Applicable major releases
Name: IK8552670 (7391) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Power Supply Degraded (1622) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A storage system power supply status has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSs4PwrSupplyDegraded		
Remedial action: Take action to restore power or replace any failed storage system power supply.		

Table 26-999 IK8552695 - Rising Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8552695 (7392) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Rising Threshold Passed (1712) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMeRisingAlarm		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1000 IK8552697 - Rising Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8552697 (7393) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Rising Threshold Passed (1712) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMe2RisingAlarm		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1001 IK8552699 - Rising Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8552699 (7394) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Rising Threshold Passed (1712) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMeRisingAlarmExtended		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1002 IK8552700 - Falling Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8552700 (7395) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Falling Threshold Passed (1713) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Falling Threshold passed. An alarm entry has crossed its falling threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqMeFallingAlarmExtended		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1003 IK8552701 - Critical Rising Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8552701 (7396) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Critical Rising Threshold Passed (1714) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Critical Rising Threshold passed. An alarm entry has crossed its Critical rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqMeCriticalRisingAlarmExtended		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1004 IK8552702 - Critical Falling Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8552702 (7397) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Critical Falling Threshold Passed (1715) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Critical Falling Threshold passed. An alarm entry has crossed its Critical falling threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqMeCriticalFallingAlarmExtended		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1005 IK8552748 - fluteModuleAlarm

Alarm	Attributes	Applicable major releases
Name: IK8552748 (7398) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: fluteModuleAlarm (1716) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Alarm notification\nAlarm to be cleared by the operator at the management system.\nReason: fluteModuleAlarm		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1006 IK8554762 - linkDown

Alarm	Attributes	Applicable major releases
Name: IK8554762 (7399) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: linkDown (1495) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1007 IK8600124 - Error when trying to add content

Alarm	Attributes	Applicable major releases
Name: IK8600124 (7400) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Error when trying to add content (1717) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to watch the webdav folder for Delivery Instance ID (variable parameters such as webdav folder, DeliveryInstancelid and cause are also indicated). Alarm is cleared by the system.\nReason: Webdav folder deleted by a third party OR delivery instance deleted by a concurrent request		
Remedial action: Check if the delivery instance has been deleted. Check if the instance is still existing on the Broadcast Delivery Server, and that a Delete has not been concurrently performed.		

Table 26-1008 IK8600132 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8600132 (7401) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 1 (1718) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to remove webdav folder for Delivery Instance ID (variable parameters such as webdav folder, DeliveryInstancelid are also indicated). Alarm to be cleared by the operator at the management system.\nReason: webdav folder could not be deleted		
Remedial action: Check that the Broadcast Delivery Server has rights to delete the folder, and that there is no concurrent writing.		

Table 26-1009 IK8600137 - Issue occurs when trying to create a BmscEvent

Alarm	Attributes	Applicable major releases
Name: IK8600137 (7402) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Issue occurs when trying to create a BmscEvent (1719) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Error when generating bmsc event string. Alarm is cleared by the system.\nReason: No identified cause		
Remedial action: No action is required.		

Table 26-1010 IK8600141 - Issue occurs when trying to get DeliverySession from database

Alarm	Attributes	Applicable major releases
Name: IK8600141 (7403) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Issue occurs when trying to get DeliverySession from database (1720) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get the delivery session from database (variable parameters such as deliverySessionId, cause are also indicated). Alarm to be cleared by the operator at the management system.\nReason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1011 IK8600142 - Issue occurs when trying to get the DeliveryInstance from database

Alarm	Attributes	Applicable major releases
Name: IK8600142 (7404) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Issue occurs when trying to get the DeliveryInstance from database (1721) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get the delivery instance from database (variable parameters such as deliveryInstanceId, cause are also indicated). Alarm to be cleared by the operator at the management system.\nReason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1012 IK8600143 - Issue occurs when trying to get DeliveryInstances from database

Alarm	Attributes	Applicable major releases
Name: IK8600143 (7405) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Issue occurs when trying to get DeliveryInstances from database (1722) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get Delivery Instances for the Delivery Session (variable parameters such as DeliverySessionId, cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1013 IK8600146 - Issue occurs when trying to get OnDemandContent from database

Alarm	Attributes	Applicable major releases
Name: IK8600146 (7406) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Issue occurs when trying to get OnDemandContent from database (1723) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get the OnDemand content from database (variable parameters such as ContentId, cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1014 IK8600152 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8600152 (7407) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: case 1 (1718) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to initialize FluteSender library (variable parameters such as DeliveryInstanceId are also indicated). Alarm to be cleared by the operator at the management system. Reason: Broadcast Delivery Server deployment error		
Remedial action: Stop and reinstall the Broadcast Delivery Server.		

Table 26-1015 IK8600159 - Error when trying to create the webdav folder for an instance

Alarm	Attributes	Applicable major releases
Name: IK8600159 (7408) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Error when trying to create the webdav folder for an instance (1724) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to create webdav folder for Delivery Instance ID (variable parameters such as webdavPath, deliveryInstanceID are also indicated). Alarm is cleared by the system. Reason: Webdav folder could not be created: no rights OR webdav folders path not existing		
Remedial action: Check existence of the base path and that the Broadcast Delivery Server has the creation rights		

Table 26-1016 IK8600164 - Issue occurs when trying to get DeliverySession with given TSI from database

Alarm	Attributes	Applicable major releases
Name: IK8600164 (7409) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Issue occurs when trying to get DeliverySession with given TSI from database (1725) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get the DeliverySession with tsi (variable parameters such as tsi, cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1017 IK8600168 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8600168 (7410) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 1 (1718) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get the delivery instances - database failure (variable parameters such as cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1018 IK8600169 - The jnotify listener could not be created

Alarm	Attributes	Applicable major releases
Name: IK8600169 (7411) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The jnotify listener could not be created (1726) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to watch webdav folder for Delivery Instance ID (variable parameters such as webdavFolder, DeliveryInstanceid, cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: No identified cause (issue with Jnotify)		
Remedial action: No action is required.		

Table 26-1019 IK8600170 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8600170 (7412) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 2 (1727) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to update DeliveryInstance ID (variable parameters such as DeliveryInstanceid, webdavFolder, cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1020 IK8600172 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8600172 (7413) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 2 (1727) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to remove webdav folder (variable parameters such as deliveryInstanceid, webdavFolder are also indicated). Alarm is cleared by the system. Reason: webdav folder could not be deleted		
Remedial action: Check that the Broadcast Delivery Server has rights to delete the folder, and that there is no concurrent writing		

Table 26-1021 IK8600174 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8600174 (7414) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 1 (1718) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to send delivery instance event (variable parameters such as DeliveryInstanceId, cause are also indicated). Alarm is cleared by the system. Reason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 26-1022 IK8600175 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8600175 (7415) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 2 (1727) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to send event File_Continuous_Failed (variable parameters such as cause are also indicated). Alarm is cleared by the system. Reason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 26-1023 IK8600179 - Error when trying to delete the directory for a live session

Alarm	Attributes	Applicable major releases
Name: IK8600179 (7416) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Error when trying to delete the directory for a live session (1728) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to remove webdav folder after delete instance (variable parameters such as deliveryInstanceid, webdavFolder are also indicated). Alarm is cleared by the system. Reason: webdav folder could not be deleted		
Remedial action: Check that the Broadcast Delivery Server has rights to delete the folder, and that there is no concurrent writing		

Table 26-1024 IK8600211 - case 3

Alarm	Attributes	Applicable major releases
Name: IK8600211 (7417) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 3 (1729) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails send event File_Ready_For_Delivery (variable parameters such as cause are also indicated). Alarm is cleared by the system. Reason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 26-1025 IK8600214 - case 4

Alarm	Attributes	Applicable major releases
Name: IK8600214 (7418) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 4 (1730) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to create index (variable parameters such as index, cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1026 IK8600216 - case 5

Alarm	Attributes	Applicable major releases
Name: IK8600216 (7419) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 5 (1731) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get the delivery sessions from database - database failure (variable parameters such as cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1027 IK8600217 - case 6

Alarm	Attributes	Applicable major releases
Name: IK8600217 (7420) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 6 (1732) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get the OnDemand files from database (variable parameters such as cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1028 IK8600234 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8600234 (7421) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 1 (1718) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of intparameter Use default value instead (variable parameters such as key authorized values, default value are also indicated). Alarm is cleared only after the server restart. Reason: An int parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1029 IK8600236 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8600236 (7422) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 2 (1727) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of key parameter Use default value instead (variable parameters such as key, authorized values, default value are also indicated). Alarm is cleared only after the server restart. Reason: An parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1030 IK8600238 - Problem with server. Properties. Server. Multicast. Networkinterface is not found

Alarm	Attributes	Applicable major releases
Name: IK8600238 (7423) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Problem with server. Properties. Server. Multicast. Networkinterface is not found (1733) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Missing broadcast IP in server. Properties Use default IP (variable parameters such as ipbroadcast are also indicated). Alarm is cleared only after the server restart. Reason: server.multicast.networkinterface is not found in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1031 IK8600239 - case 3

Alarm	Attributes	Applicable major releases
Name: IK8600239 (7424) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: case 3 (1729) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Network interface not found. Use default loopback interface (variable parameters such as ip, iploopback are also indicated). Alarm is cleared only after the server restart. Reason: can not occur		
Remedial action: No action is required.		

Table 26-1032 IK8600240 - Server. Multicast. Networkinterface does not correspond to an existing network interface

Alarm	Attributes	Applicable major releases
Name: IK8600240 (7425) Type: communicationsAlarm (4) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Server. Multicast. Networkinterface does not correspond to an existing network interface (1734) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The given local IP is not one of available server addressIP (variable parameters such as localIP, addressIP are also indicated). Alarm is cleared only after the server restart. Reason: server.multicast.networkinterface does not correspond to an existing network interface		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1033 IK8600241 - Problem with the server network interfaces

Alarm	Attributes	Applicable major releases
Name: IK8600241 (7426) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Problem with the server network interfaces (1735) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The given local IP is unknown (variable parameters such as IP are also indicated). Alarm is cleared only after the server restart.\nReason: server.multicast.networkinterface is not a valid IP address		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1034 IK8600242 - Problem with local IPs

Alarm	Attributes	Applicable major releases
Name: IK8600242 (7427) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Problem with local IPs (1736) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Cannot get Local IPs. Alarm to be cleared by the operator at the management system.\nReason: Unknown cause		
Remedial action: No action is required.		

Table 26-1035 IK8600248 - case 4

Alarm	Attributes	Applicable major releases
Name: IK8600248 (7428) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 4 (1730) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of parameter Use default value instead (variable parameters such as key, default value are also indicated). Alarm is cleared only after the server restart.\nReason: An parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1036 IK8600250 - case 5

Alarm	Attributes	Applicable major releases
Name: IK8600250 (7429) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 5 (1731) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of long parameter inferior to the min authorized value Use default value instead (variable parameters such as key, minimum value, default value are also indicated). Alarm is cleared only after the server restart.\nReason: An parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1037 IK8600251 - case 6

Alarm	Attributes	Applicable major releases
Name: IK8600251 (7430) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 6 (1732) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of parameter superior to the max authorized value. Use default value instead (variable parameters such as key, maximum value, default value are also indicated). Alarm is cleared only after the server restart.\nReason: An parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1038 IK8600252 - case 7

Alarm	Attributes	Applicable major releases
Name: IK8600252 (7431) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 7 (1737) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of parameter: not an integer Use default value instead (variable parameters such as key, default value are also indicated). Alarm is cleared only after the server restart.\nReason: An parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1039 IK8600254 - case 8

Alarm	Attributes	Applicable major releases
Name: IK8600254 (7432) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 8 (1738) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of integer parameter inferior to the min authorized value Use default value instead (variable parameters such as key, minimum value, default value are also indicated). Alarm is cleared only after the server restart.\nReason: An parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1040 IK8600258 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8600258 (7433) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 1 (1718) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to remove on-demand folder for DeliveryInstance ID (variable parameters such as instanceFolder, deliveryInstanceld are also indicated). Alarm is cleared by the system.\nReason: A third party has deleted manually the folder Or the folder is locked by another process		
Remedial action: Check the folder state.		

Table 26-1041 IK8600259 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8600259 (7434) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 1 (1718) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to remove on-demand cache folder or DeliveryInstance ID (variable parameters such as instanceFolder, deliveryInstanceld are also indicated). Alarm is cleared by the system.\nReason: A third party has deleted manually the folder Or the folder is locked by another process		
Remedial action: Check the folder state.		

Table 26-1042 IK8600262 - Old flutesession not remove from flutesession list

Alarm	Attributes	Applicable major releases
Name: IK8600262 (7435) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Old flutesession not remove from flutesession list (1739) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Obsolete flute session found Delete flute session (variable parameters such as deliveryInstanceid are also indicated). Alarm to be cleared by the operator at the management system.\nReason: Unknown cause		
Remedial action: No action is required.		

Table 26-1043 IK8600269 - Problem with cache folder

Alarm	Attributes	Applicable major releases
Name: IK8600269 (7436) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Problem with cache folder (1740) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unable to write FDT file on disk (variable parameters such as xmlFilePath are also indicated). Alarm to be cleared by the operator at the management system.\nReason: The cache folder is unreachable or lock		
Remedial action: Check the folder state.		

Table 26-1044 IK8600271 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8600271 (7437) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: case 2 (1727) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to initialize FluteEngine library (variable parameters such as deliveryInstanceid are also indicated). Alarm to be cleared by the operator at the management system.\nReason: Unknown cause. Can be an error in installation		
Remedial action: Reinstall the Broadcast Delivery Server.		

Table 26-1045 IK8600273 - case 5

Alarm	Attributes	Applicable major releases
Name: IK8600273 (7438) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 5 (1731) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to send event File_Delivery_Started (variable parameters such as cause are also indicated). Alarm is cleared by the system. Reason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 26-1046 IK8600274 - case 6

Alarm	Attributes	Applicable major releases
Name: IK8600274 (7439) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 6 (1732) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to send event File_Delivered (variable parameters such as cause are also indicated). Alarm is cleared by the system. Reason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 26-1047 IK8600275 - case 7

Alarm	Attributes	Applicable major releases
Name: IK8600275 (7440) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 7 (1737) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to send event File_Transmission_stopped (variable parameters such as cause are also indicated). Alarm is cleared by the system. Reason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1048 IK8600276 - Error when generator the xml in response to the request get Delivery Session Info

Alarm	Attributes	Applicable major releases
Name: IK8600276 (7441) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Error when generator the xml in response to the request get Delivery Session Info (1741) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to create delivery session info (variable parameters such as cause are also indicated). Alarm to be cleared by the operator at the management system.\nReason: Unknown cause		
Remedial action: No action is required.		

Table 26-1049 IK8600286 - up

Alarm	Attributes	Applicable major releases
Name: IK8600286 (7442) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: up (1742) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server config file not found in the indicated path. Alarm is cleared only after the server restart.\nReason: server.properties is missing		
Remedial action: Add the server. Properties and restart.		

Table 26-1050 IK8600287 - Server. Properties can not be parsed

Alarm	Attributes	Applicable major releases
Name: IK8600287 (7443) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server. Properties can not be parsed (1743) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server config file invalid. Alarm is cleared only after the server restart.\nReason: server.properties format is not valid		
Remedial action: Correction the server. Properties file and restart.		

Table 26-1051 IK8600288 - Server. Properties can not be read

Alarm	Attributes	Applicable major releases
Name: IK8600288 (7444) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server. Properties can not be read (1744) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: exception_msg. Alarm is cleared only after the server restart.\nReason: server.properties is written or deleted while the Broadcast Delivery Server is reading it		
Remedial action: Restart the Broadcast Delivery Server.		

Table 26-1052 IK8600289 - case 8

Alarm	Attributes	Applicable major releases
Name: IK8600289 (7445) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 8 (1738) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to send event File_Transmission_stopped (variable parameters such as cause are also indicated). Alarm is cleared by the system.\nReason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 26-1053 IK8600295 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8600295 (7446) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 2 (1727) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to remove automatically on-demand folder for DeliveryInstance ID (variable parameters such as instanceFolder, deliveryInstanceid are also indicated). Alarm is cleared by the system.\nReason: A third party has deleted manually the folder Or the folder is locked by another process		
Remedial action: Check the folder state.		

Table 26-1054 IK8600296 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8600296 (7447) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 2 (1727) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to remove automatically on-demand cache folder for DeliveryInstance ID (variable parameters such as instanceFolder, deliveryInstanceCld are also indicated). Alarm is cleared by the system. Reason: A third party has deleted manually the folder Or the folder is locked by another process		
Remedial action: Check the folder state.		

Table 26-1055 IK8600297 - The jnotify listener could not be created, when reloading all sessions after a restart

Alarm	Attributes	Applicable major releases
Name: IK8600297 (7448) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The jnotify listener could not be created, when reloading all sessions after a restart (1745) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Delivery Instance ID not loaded Could not create webdav listener (variable parameters such as deliveryInstanceCld are also indicated). Alarm is cleared only after the server restart. Reason: No identified cause (issue with Jnotify)		
Remedial action: No action is required.		

Table 26-1056 IK8600319 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8600319 (7449) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 1 (1718) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to set add file to flute library for Flute session continuous Skip delivering file (variable parameters such as filePath, deliveryInstanceCld are also indicated). Alarm to be cleared by the operator at the management system. Reason: Unknown cause		
Remedial action: No action is required.		

Table 26-1057 IK8600320 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8600320 (7450) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: minor Specific problem: case 2 (1727) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to set FDT Expire for Flute session continuous (variable parameters such deliveryInstancedId are also indicated). Alarm to be cleared by the operator at the management system. Reason: Unknown cause		
Remedial action: No action is required.		

Table 26-1058 IK8600328 - The multiFEC library is missing or can be loaded

Alarm	Attributes	Applicable major releases
Name: IK8600328 (7451) Type: communicationsAlarm (4) Package: Img Raised on class: Img.LMGmngElement	Severity: critical Specific problem: The multiFEC library is missing or can be loaded (1746) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Multi FEC library not found (variable parameters such as path are also indicated). Alarm is cleared only after the server restart. Reason: the multiFEC library is missing or can be loaded (libFECEncoder.so)		
Remedial action: Check the presence of the multiFEC library (libFECEncoder. So)		

Table 26-1059 IK8600333 - Problem with existence of the mime. Types file in the /config directory

Alarm	Attributes	Applicable major releases
Name: IK8600333 (7452) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: minor Specific problem: Problem with existence of the mime. Types file in the /config directory (1747) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Error when loading MIME_TYPES_FILE Default mime types will be used instead (variable parameters such as MimeTypes file are also indicated). Alarm is cleared only after the server restart. Reason: the mime.types is missing.		
Remedial action: Check the format of this file. Add the mime. Types config file and restart the Broadcast Delivery Server.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1060 IK8600334 - License file not found or not valid

Alarm	Attributes	Applicable major releases
Name: IK8600334 (7453) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: License file not found or not valid (1748) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: License file not found or not valid. Alarm is cleared only after the server restart.\nReason: License file not found, or can not be parsed		
Remedial action: Check licence file existence.		

Table 26-1061 IK8600335 - Problem with license

Alarm	Attributes	Applicable major releases
Name: IK8600335 (7454) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Problem with license (1749) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: exception_msg. New License to be ordered. Alarm is cleared only after the server restart.\nReason: The license doesn't authorize to run the Broadcast Delivery Server		
Remedial action: Order a new license .		

Table 26-1062 IK8600336 - Check delivery instance id

Alarm	Attributes	Applicable major releases
Name: IK8600336 (7455) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Check delivery instance id (1750) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: control fragment session fails to start. Delivery Instance not found (variable parameters such as deliveryInstanceid, cause are also indicated). Alarm to be cleared by the operator at the management system.\nReason: The instance id referenced in the request doesn't exist		
Remedial action: Check the instance Id existence.		

Table 26-1063 IK8600338 - case 3

Alarm	Attributes	Applicable major releases
Name: IK8600338 (7456) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 3 (1729) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to initialize FluteSender library for control fragments (variable parameters such as deliveryInstanceCld are also indicated). Alarm to be cleared by the operator at the management system. Reason: Broadcast Delivery Server deployment error		
Remedial action: Stop and reinstall the Broadcast Delivery Server		

Table 26-1064 IK8600339 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8600339 (7457) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 1 (1718) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to add fragment to flute library for fragment session. Skip delivering fragment (variable parameters such as file path, deliveryInstanceCld are also indicated). Alarm to be cleared by the operator at the management system. Reason: Unknown cause		
Remedial action: No action is required.		

Table 26-1065 IK8600340 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8600340 (7458) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 2 (1727) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to add fragment to flute library for fragment session. Skip delivering fragment (variable parameters such as file path, deliveryInstanceCld are also indicated). Alarm to be cleared by the operator at the management system. Reason: Unknown cause		
Remedial action: No action is required.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1066 IK8600341 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8600341 (7459) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 1 (1718) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to start transmission cycle for fragment session, Stopping Flute session (variable parameters such as deliveryInstanceId are also indicated). Alarm to be cleared by the operator at the management system.\nReason: Unknown cause		
Remedial action: No action is required.		

Table 26-1067 IK8600343 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8600343 (7460) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 2 (1727) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fragments session start failed (variable parameters such as deliveryInstanceId are also indicated). Alarm to be cleared by the operator at the management system.\nReason: Unknown cause		
Remedial action: No action is required.		

Table 26-1068 IK8600346 - OriginatorUserName can not be blank and can not contains spaces

Alarm	Attributes	Applicable major releases
Name: IK8600346 (7461) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: OriginatorUserName can not be blank and can not contains spaces (1751) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of server. Multicast. SDP. Originator parameter (variable parameters such as invalid parameter value, default value are also indicated). Alarm is cleared only after the server restart.\nReason: server.multicast.SDP.originator is not found or incorrect in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1069 IK8600347 - No namespace for the control fragments has been configured

Alarm	Attributes	Applicable major releases
Name: IK8600347 (7462) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: No namespace for the control fragments has been configured (1752) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: No namespace for the control fragments has been configured (variable parameters are also indicated). Alarm is cleared only after the server restart. Reason: No namespace configured		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1070 IK8600351 - case 8

Alarm	Attributes	Applicable major releases
Name: IK8600351 (7463) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: case 8 (1738) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Can not queue file for delivery. Cause Fails to get OnDemandFile from database (variable parameters such as file path, cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1071 IK8600352 - A file in delivery queue is no more available in database

Alarm	Attributes	Applicable major releases
Name: IK8600352 (7464) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: A file in delivery queue is no more available in database (1753) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Can not queue file for delivery. Cause OnDemandFile not found in database (variable parameters such as file path are also indicated). Alarm to be cleared by the operator at the management system. Reason: Unknown cause		
Remedial action: No action is required.		

Table 26-1072 IK8600353 - Problem with stream file and time offset

Alarm	Attributes	Applicable major releases
Name: IK8600353 (7465) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Problem with stream file and time offset (1754) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: File not send. Cause FluteEngine fails to read stream (variable parameters such as file path are also indicated). File stream removed from the cache folder, or the delivery of a content, whose delivery should be ended has been restarted. Alarm to be cleared by the operator at the management system. Reason: File stream removed from the cache folder		
Remedial action: Check the stream file in the cache folder. If the Broadcast Delivery Server has been recently restarted after a long pause, no action to perform.		

Table 26-1073 IK8600354 - case 9

Alarm	Attributes	Applicable major releases
Name: IK8600354 (7466) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 9 (1755) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: File not updated. Cause Fails to get OnDemandFile from database (variable parameters such as file path are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1074 IK8600355 - A file in delivery is no more available in database

Alarm	Attributes	Applicable major releases
Name: IK8600355 (7467) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A file in delivery is no more available in database (1756) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: File not updated. Cause OnDemandFile not found in database (variable parameters such as file path are also indicated). Alarm to be cleared by the operator at the management system. Reason: Unknown cause		
Remedial action: No action is required.		

Table 26-1075 IK8600356 - case 10

Alarm	Attributes	Applicable major releases
Name: IK8600356 (7468) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 10 (1757) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to update the OnDemandFile to database (variable parameters such as fileURI, cause are also indicated). Alarm to be cleared by the operator at the management system.\nReason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1076 IK8600363 - The MIB could not be initialized

Alarm	Attributes	Applicable major releases
Name: IK8600363 (7469) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: The MIB could not be initialized (1758) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Error when initializing the MIB (variable parameters such as exception are also indicated). Alarm is cleared only after the server restart.\nReason: Various possible causes, to be analyzed according the message		
Remedial action: No action is required.		

Table 26-1077 IK8600369 - The on demand session failed to start

Alarm	Attributes	Applicable major releases
Name: IK8600369 (7470) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The on demand session failed to start (1759) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to start transmission cycle for Flute session on-demand. Stopping Flute session (variable parameters such as deliveryInstanceId are also indicated). Alarm to be cleared by the operator at the management system.\nReason: Unknown cause		
Remedial action: No action is required.		

Table 26-1078 IK8600370 - The continuous session failed to start

Alarm	Attributes	Applicable major releases
Name: IK8600370 (7471) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The continuous session failed to start (1760) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to start transmission cycle for Flute session continuous . Stopping Flute session (variable parameters such as deliveryInstanceId are also indicated). Alarm to be cleared by the operator at the management system.\nReason: Unknown cause		
Remedial action: No action is required.		

Table 26-1079 IK8600390 - Problem with FDTRepetitionPeriod and bitrate parameters

Alarm	Attributes	Applicable major releases
Name: IK8600390 (7472) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Problem with FDTRepetitionPeriod and bitrate parameters (1761) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: FDT repetition period shorter than FDT transmission duration (variable parameters such as FDT period, FDT transmission duration, ContentId, . . . Are also indicated). Alarm is cleared only after the server restart.\nReason: The FDT can not be sent as many times as required with the instance bitrate		
Remedial action: FDTRepetitionPeriod may be too important comparing to the bitrate and FDT size. Check the bitrate of the instance, and the FDT period. Delete the delivery instance. Create another delivery instance with the correct parameters.		

Table 26-1080 IK8600391 - Problem with server. Properties parameter server. Content. Continuous. Queue. Size

Alarm	Attributes	Applicable major releases
Name: IK8600391 (7473) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Problem with server. Properties parameter server. Content. Continuous. Queue. Size (1762) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: File delivery queue for Flute session continuous is full. Files not queued (variable parameters such as deliveryInstanceId are also indicated). Alarm is cleared only after the server restart.\nReason: The bitrate of the instance is not enough		
Remedial action: Check if files are pushed in the webdav folder too fast comparing to the bitrate, create a instance with a bigger bitrate and delete this one.		

Table 26-1081 IK8600398 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8600398 (7474) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: case 1 (1718) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Delivery Session reload aborted. Cause Authorized maximum number of sessions reached. Alarm is cleared only after the server restart. Reason: The number of sessions in database exceed the authorized number in the licence		
Remedial action: Check the number of registered sessions from database. Use only the right licence.		

Table 26-1082 IK8600399 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8600399 (7475) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: case 2 (1727) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Delivery Instance reload aborted. Cause Authorized maximum bitrate reached. Alarm is cleared only after the server restart. Reason: The total bitrate size for delivery instances exceed the authorized number in the licence		
Remedial action: Check the number of registered instances from database. Use only the right licence.		

Table 26-1083 IK8600407 - An unexpected error occurred during delivery. The delivery is killed

Alarm	Attributes	Applicable major releases
Name: IK8600407 (7476) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: An unexpected error occurred during delivery. The delivery is killed (1763) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Delivery interrupted for unexpected reason. Alarm is cleared only after the server restart. Reason: Unknown cause		
Remedial action: Check the message in the error. Perform a deleteContent(abort true) to clean the delivery instance and add again the content to the instance		

Table 26-1084 IK8600408 - The file processing request returns BAD REQUEST

Alarm	Attributes	Applicable major releases
Name: IK8600408 (7477) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The file processing request returns BAD REQUEST (1764) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: File preparation forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 26-1085 IK8600409 - The file processing abort request returns BAD REQUEST

Alarm	Attributes	Applicable major releases
Name: IK8600409 (7478) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The file processing abort request returns BAD REQUEST (1765) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Abort file preparation forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 26-1086 IK8603228 - License is expired, contact the support to renew the license

Alarm	Attributes	Applicable major releases
Name: IK8603228 (7479) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: License is expired, contact the support to renew the license (1766) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: License is expired.. Alarm is cleared only after the server restart.\nReason: License is expired		
Remedial action: Contact the support to renew the license.		

Table 26-1087 IK8603229 - License is invalid. Make sure that all the network interfaces are activated and retry

Alarm	Attributes	Applicable major releases
Name: IK8603229 (7480) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: License is invalid. Make sure that all the network interfaces are activated and retry (1767) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Copy protection verification fails.. Alarm is cleared only after the server restart.\nReason: Copy protection verification fails		
Remedial action: Check the server is installed correctly and connected on the network. Contact the support.		

Table 26-1088 IK8603267 - License is invalid, contact the support

Alarm	Attributes	Applicable major releases
Name: IK8603267 (7481) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: License is invalid, contact the support (1768) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unknown license for this server. Alarm is cleared only after the server restart.\nReason: The license doesn't authorize to run the Broadcast Delivery Server		
Remedial action: Order a new license.		

Table 26-1089 IK8610137 - Issue occurs when trying to create a BmscEvent

Alarm	Attributes	Applicable major releases
Name: IK8610137 (7482) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Issue occurs when trying to create a BmscEvent (1719) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Error when generating bmsc event string. Alarm is cleared by the system.\nReason: No identified cause		
Remedial action: No action is required.		

Table 26-1090 IK8610142 - Issue occurs when trying to get the DeliveryInstance from database

Alarm	Attributes	Applicable major releases
Name: IK8610142 (7483) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Issue occurs when trying to get the DeliveryInstance from database (1721) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get the delivery instance from database (variable parameters such as deliveryInstanceid, cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1091 IK8610168 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8610168 (7484) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 1 (1718) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get the delivery instances - database failure (variable parameters such as cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1092 IK8610174 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8610174 (7485) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 1 (1718) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to send delivery instance event (variable parameters such as DeliveryInstanceid, cause are also indicated). Alarm is cleared by the system. Reason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 26-1093 IK8610190 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8610190 (7486) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 1 (1718) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Error while saving file to database (variable parameters such as filePath are also indicated). Alarm to be cleared by the operator at the management system.\nReason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1094 IK8610196 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8610196 (7487) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 2 (1727) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get OnDemandFile from database (variable parameters such as URI, fileURI are also indicated). Alarm to be cleared by the operator at the management system.\nReason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1095 IK8610197 - Fails to get the file MD5 from database

Alarm	Attributes	Applicable major releases
Name: IK8610197 (7488) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fails to get the file MD5 from database (1769) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get file uri and MD5 (variable parameters such as URI are also indicated). Alarm to be cleared by the operator at the management system.\nReason: Unknown cause		
Remedial action: No action is required.		

Table 26-1096 IK8610200 - case 3

Alarm	Attributes	Applicable major releases
Name: IK8610200 (7489) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 3 (1729) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to create index. Files not prepared (variable parameters such as index, cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1097 IK8610211 - case 3

Alarm	Attributes	Applicable major releases
Name: IK8610211 (7490) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 3 (1729) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails send event File_Ready_For_Delivery (variable parameters such as cause are also indicated). Alarm is cleared by the system. Reason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 26-1098 IK8610214 - case 4

Alarm	Attributes	Applicable major releases
Name: IK8610214 (7491) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 4 (1730) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to create index (variable parameters such as index, cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1099 IK8610215 - The cache folder is not found, when the Broadcast Delivery Server need to check its free space

Alarm	Attributes	Applicable major releases
Name: IK8610215 (7492) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The cache folder is not found, when the Broadcast Delivery Server need to check its free space (1770) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Cache folder is not found or doesn't exists any more. Alarm is cleared by the system.\nReason: the cache folder is not found or doesn't exists any more		
Remedial action: Check the configuration: server. Content. Ondemand. Cache. Basepath, and the existence of this folder		

Table 26-1100 IK8610216 - case 5

Alarm	Attributes	Applicable major releases
Name: IK8610216 (7493) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 5 (1731) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get the delivery sessions from database - database failure (variable parameters such as cause are also indicated). Alarm to be cleared by the operator at the management system.\nReason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1101 IK8610217 - case 6

Alarm	Attributes	Applicable major releases
Name: IK8610217 (7494) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 6 (1732) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get the OnDemand files from database (variable parameters such as cause are also indicated). Alarm to be cleared by the operator at the management system.\nReason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1102 IK8610232 - case 4

Alarm	Attributes	Applicable major releases
Name: IK8610232 (7495) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 4 (1730) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to send event File deleted (variable parameters such as cause are also indicated). Alarm is cleared by the system. Reason: The event could not be sent to the configured URL.		
Remedial action: Check if the URL is correct, and if the orchestrator is correctly started		

Table 26-1103 IK8610234 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8610234 (7496) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 1 (1718) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of intparameter Use default value instead (variable parameters such as key authorized values, default value are also indicated). Alarm is cleared only after the server restart. Reason: An int parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1104 IK8610236 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8610236 (7497) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 2 (1727) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of key parameter Use default value instead (variable parameters such as key, authorized values, default value are also indicated). Alarm is cleared only after the server restart. Reason: An parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1105 IK8610238 - Problem with server. Properties. Server. Multicast. Networkinterface is not found

Alarm	Attributes	Applicable major releases
Name: IK8610238 (7498) Type: communicationsAlarm (4) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Problem with server. Properties. Server. Multicast. Networkinterface is not found (1733) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Missing broadcast IP in server. Properties Use default IP (variable parameters such as ipbroadcast are also indicated). Alarm is cleared only after the server restart.\nReason: server.multicast.networkinterface is not found in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1106 IK8610239 - case 3

Alarm	Attributes	Applicable major releases
Name: IK8610239 (7499) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: case 3 (1729) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Network interface not found. Use default loopback interface (variable parameters such as ip, iploopback are also indicated). Alarm is cleared only after the server restart.\nReason: can not occur		
Remedial action: No action is required.		

Table 26-1107 IK8610240 - Server. Multicast. Networkinterface does not correspond to an existing network interface

Alarm	Attributes	Applicable major releases
Name: IK8610240 (7500) Type: communicationsAlarm (4) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Server. Multicast. Networkinterface does not correspond to an existing network interface (1734) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The given local IPis not one of available server addressIP (variable parameters such as localIP, addressIP are also indicated). Alarm is cleared only after the server restart.\nReason: server.multicast.networkinterface does not correspond to an existing network interface		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1108 IK8610241 - Problem with the server network interfaces

Alarm	Attributes	Applicable major releases
Name: IK8610241 (7501) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Problem with the server network interfaces (1735) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The given local IP is unknown (variable parameters such as IP are also indicated). Alarm is cleared only after the server restart.\nReason: server.multicast.networkinterface is not a valid IP address		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1109 IK8610242 - Problem with local IPs

Alarm	Attributes	Applicable major releases
Name: IK8610242 (7502) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Problem with local IPs (1736) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Cannot get Local IPs. Alarm to be cleared by the operator at the management system.\nReason: Unknown cause		
Remedial action: No action is required.		

Table 26-1110 IK8610248 - case 4

Alarm	Attributes	Applicable major releases
Name: IK8610248 (7503) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 4 (1730) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of parameter Use default value instead (variable parameters such as key, default value are also indicated). Alarm is cleared only after the server restart.\nReason: An parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1111 IK8610250 - case 5

Alarm	Attributes	Applicable major releases
Name: IK8610250 (7504) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 5 (1731) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of long parameter inferior to the min authorized value Use default value instead (variable parameters such as key, minimum value, default value are also indicated). Alarm is cleared only after the server restart.\nReason: An parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1112 IK8610251 - case 6

Alarm	Attributes	Applicable major releases
Name: IK8610251 (7505) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 6 (1732) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of parameter superior to the max authorized value. Use default value instead (variable parameters such as key, maximum value, default value are also indicated). Alarm is cleared only after the server restart.\nReason: An parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1113 IK8610252 - case 7

Alarm	Attributes	Applicable major releases
Name: IK8610252 (7506) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 7 (1737) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of parameter: not an integer Use default value instead (variable parameters such as key, default value are also indicated). Alarm is cleared only after the server restart.\nReason: An parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1114 IK8610254 - case 8

Alarm	Attributes	Applicable major releases
Name: IK8610254 (7507) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 8 (1738) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of integer parameter inferior to the min authorized value Use default value instead (variable parameters such as key, minimum value, default value are also indicated). Alarm is cleared only after the server restart. Reason: An parameter has an invalid value in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1115 IK8610271 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8610271 (7508) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: case 2 (1727) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to initialize FluteEngine library (variable parameters such as deliveryInstanceid are also indicated). Alarm to be cleared by the operator at the management system. Reason: Unknown cause. Can be an error in installation		
Remedial action: Reinstall the Broadcast Delivery Server.		

Table 26-1116 IK8610286 - up

Alarm	Attributes	Applicable major releases
Name: IK8610286 (7509) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: up (1742) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server config file not found in the indicated path. Alarm is cleared only after the server restart. Reason: server.properties is missing		
Remedial action: Add the server. Properties and restart.		

Table 26-1117 IK8610287 - Server. Properties can not be parsed

Alarm	Attributes	Applicable major releases
Name: IK8610287 (7510) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server. Properties can not be parsed (1743) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server config file invalid. Alarm is cleared only after the server restart.\nReason: server.properties format is not valid		
Remedial action: Correction the server. Properties file and restart.		

Table 26-1118 IK8610288 - Server. Properties can not be read

Alarm	Attributes	Applicable major releases
Name: IK8610288 (7511) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server. Properties can not be read (1744) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: exception_msg. Alarm is cleared only after the server restart.\nReason: server.properties is written or deleted while the Broadcast Delivery Server is reading it		
Remedial action: Restart the Broadcast Delivery Server.		

Table 26-1119 IK8610309 - case 7

Alarm	Attributes	Applicable major releases
Name: IK8610309 (7512) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 7 (1737) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Error while removing file from database (variable parameters such as filePath are also indicated). Alarm to be cleared by the operator at the management system.\nReason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1120 IK8610321 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8610321 (7513) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 1 (1718) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to init Flute Stream Generator for OnDemandFile Skip processing file (variable parameters such as filePath, deliveryInstanceCid are also indicated). Alarm to be cleared by the operator at the management system.\nReason: Unknown cause		
Remedial action: No action is required.		

Table 26-1121 IK8610322 - case 2

Alarm	Attributes	Applicable major releases
Name: IK8610322 (7514) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 2 (1727) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to start stream generation process for file (variable parameters such as filePath, deliveryInstanceCid are also indicated). Alarm to be cleared by the operator at the management system.\nReason: Unknown cause		
Remedial action: No action is required.		

Table 26-1122 IK8610328 - The multiFEC library is missing or can be loaded

Alarm	Attributes	Applicable major releases
Name: IK8610328 (7515) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: The multiFEC library is missing or can be loaded (1746) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Multi FEC library not found (variable parameters such as path are also indicated). Alarm is cleared only after the server restart.\nReason: the multiFEC library is missing or can be loaded (libFECEncoder.so)		
Remedial action: Check the presence of the multiFEC library (libFECEncoder. So)		

Table 26-1123 IK8610333 - Problem with existence of the mime. Types file in the /config directory

Alarm	Attributes	Applicable major releases
Name: IK8610333 (7516) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Problem with existence of the mime. Types file in the /config directory (1747) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Error when loading MIME_TYPES_FILE Default mime types will be used instead (variable parameters such as MimeTypes file are also indicated). Alarm is cleared only after the server restart.\nReason: the mime.types is missing.		
Remedial action: Check the format of this file. Add the mime. Types config file and restart the Broadcast Delivery Server.		

Table 26-1124 IK8610334 - License file not found or not valid

Alarm	Attributes	Applicable major releases
Name: IK8610334 (7517) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: License file not found or not valid (1748) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: License file not found or not valid. Alarm is cleared only after the server restart.\nReason: License file not found, or can not be parsed		
Remedial action: Check licence file existence.		

Table 26-1125 IK8610335 - Problem with license

Alarm	Attributes	Applicable major releases
Name: IK8610335 (7518) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Problem with license (1749) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: exception_msg. New License to be ordered. Alarm is cleared only after the server restart.\nReason: The license doesn't authorize to run the Broadcast Delivery Server		
Remedial action: Order a new license .		

Table 26-1126 IK8610338 - case 3

Alarm	Attributes	Applicable major releases
Name: IK8610338 (7519) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 3 (1729) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to initialize FluteSender library for control fragments (variable parameters such as deliveryInstanceId are also indicated). Alarm to be cleared by the operator at the management system. Reason: Broadcast Delivery Server deployment error		
Remedial action: Stop and reinstall the Broadcast Delivery Server		

Table 26-1127 IK8610346 - OriginatorUserName can not be blank and can not contains spaces

Alarm	Attributes	Applicable major releases
Name: IK8610346 (7520) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: OriginatorUserName can not be blank and can not contains spaces (1751) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Invalid value of server. Multicast. SDP. Originator parameter (variable parameters such as invalid parameter value, default value are also indicated). Alarm is cleared only after the server restart. Reason: server.multicast.SDP.originator is not found or incorrect in server.properties		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1128 IK8610347 - No namespace for the control fragments has been configured

Alarm	Attributes	Applicable major releases
Name: IK8610347 (7521) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: No namespace for the control fragments has been configured (1752) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: No namespace for the control fragments has been configured (variable parameters are also indicated). Alarm is cleared only after the server restart. Reason: No namespace configured		
Remedial action: Correct server. Properties and restart the Broadcast Delivery Server.		

Table 26-1129 IK8610348 - case 1

Alarm	Attributes	Applicable major releases
Name: IK8610348 (7522) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: case 1 (1718) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Stop task for flute stream preparation process could not be stopped. Task not registered (variable parameters such as processId are also indicated). Alarm to be cleared by the operator at the management system.\nReason: Internal error		
Remedial action: No action is required.		

Table 26-1130 IK8610357 - case 11

Alarm	Attributes	Applicable major releases
Name: IK8610357 (7523) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 11 (1771) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to create new TOI (Transport Object Identifier) (variable parameters such as cause are also indicated). Alarm to be cleared by the operator at the management system.\nReason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1131 IK8610359 - case 12

Alarm	Attributes	Applicable major releases
Name: IK8610359 (7524) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 12 (1772) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to remove TOI (Transport Object Identifier) (variable parameters such as cause are also indicated). Alarm to be cleared by the operator at the management system.\nReason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1132 IK8610360 - case 13

Alarm	Attributes	Applicable major releases
Name: IK8610360 (7525) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 13 (1773) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get OnDemanFile count (variable parameters such as cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1133 IK8610361 - TOI range [1, 65535] are full

Alarm	Attributes	Applicable major releases
Name: IK8610361 (7526) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: TOI range [1, 65535] are full (1774) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: TOI (Transport Object Identifier) full. Alarm is cleared by the system. Reason: There are near 65535 files in base		
Remedial action: Remove some files before adding new one		

Table 26-1134 IK8610362 - case 14

Alarm	Attributes	Applicable major releases
Name: IK8610362 (7527) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: case 14 (1775) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fails to get OnDemanFile with TOI (Transport Object Identifier) (variable parameters such as toi, cause are also indicated). Alarm to be cleared by the operator at the management system. Reason: The database can not be reached		
Remedial action: Check that the mysql database is running.		

Table 26-1135 IK8610363 - The MIB could not be initialized

Alarm	Attributes	Applicable major releases
Name: IK8610363 (7528) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: critical Specific problem: The MIB could not be initialized (1758) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Error when initializing the MIB (variable parameters such as exception are also indicated). Alarm is cleared only after the server restart. Reason: Various possible causes, to be analyzed according the message		
Remedial action: No action is required.		

Table 26-1136 IK8610410 - The add content request returns BAD REQUEST

Alarm	Attributes	Applicable major releases
Name: IK8610410 (7529) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: The add content request returns BAD REQUEST (1776) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Add content forbidden. Alarm is cleared only after the server restart. Reason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 26-1137 IK8610411 - The add control fragment request returns BAD REQUEST

Alarm	Attributes	Applicable major releases
Name: IK8610411 (7530) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: The add control fragment request returns BAD REQUEST (1777) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Add control fragment forbidden. Alarm is cleared only after the server restart. Reason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 26-1138 IK8610412 - The remove content request returns BAD REQUEST

Alarm	Attributes	Applicable major releases
Name: IK8610412 (7531) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The remove content request returns BAD REQUEST (1778) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remove content forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 26-1139 IK8610413 - The create delivery instance request returns BAD REQUEST

Alarm	Attributes	Applicable major releases
Name: IK8610413 (7532) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The create delivery instance request returns BAD REQUEST (1779) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Create delivery instance forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 26-1140 IK8610414 - The create delivery session request returns BAD REQUEST

Alarm	Attributes	Applicable major releases
Name: IK8610414 (7533) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The create delivery session request returns BAD REQUEST (1780) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Create delivery session forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 26-1141 IK8610415 - The delete delivery instance request returns BAD REQUEST

Alarm	Attributes	Applicable major releases
Name: IK8610415 (7534) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The delete delivery instance request returns BAD REQUEST (1781) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Delete delivery instance forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 26-1142 IK8610416 - The delete delivery session request returns BAD REQUEST

Alarm	Attributes	Applicable major releases
Name: IK8610416 (7535) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The delete delivery session request returns BAD REQUEST (1782) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Delete delivery session forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 26-1143 IK8610417 - The display delivery session information request returns BAD REQUEST

Alarm	Attributes	Applicable major releases
Name: IK8610417 (7536) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The display delivery session information request returns BAD REQUEST (1783) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Display delivery session information forbidden. Alarm is cleared only after the server restart.\nReason: Misconfiguration		
Remedial action: Check server. Properties server. Flute. Module parameter		

Table 26-1144 IK8613228 - License is expired, contact the support to renew the license

Alarm	Attributes	Applicable major releases
Name: IK8613228 (7537) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: License is expired, contact the support to renew the license (1766) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: License is expired.. Alarm is cleared only after the server restart.\nReason: License is expired		
Remedial action: Contact the support to renew the license.		

Table 26-1145 IK8613229 - License is invalid. Make sure that all the network interfaces are activated and retry

Alarm	Attributes	Applicable major releases
Name: IK8613229 (7538) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: License is invalid. Make sure that all the network interfaces are activated and retry (1767) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Copy protection verification fails.. Alarm is cleared only after the server restart.\nReason: Copy protection verification fails		
Remedial action: Check the server is installed correctly and connected on the network. Contact the support.		

Table 26-1146 IK8613267 - License is invalid, contact the support

Alarm	Attributes	Applicable major releases
Name: IK8613267 (7539) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: License is invalid, contact the support (1768) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unknown license for this server. Alarm is cleared only after the server restart.\nReason: The license doesn't authorize to run the Broadcast Delivery Server		
Remedial action: Order a new license.		

Table 26-1147 IK8650005 - mcdp alarm trap v1

Alarm	Attributes	Applicable major releases
Name: IK8650005 (7540) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: mcdp alarm trap v1 (1590) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: mcdp alarm alarm v1.\nAlarm to be cleared by the operator at the management system.\nReason: alarmTrapV1		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1148 IK8650006 - Trap associated to an alarm of the managed element

Alarm	Attributes	Applicable major releases
Name: IK8650006 (7541) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Trap associated to an alarm of the managed element (1591) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Trap associated to an alarm of the managed element.\nAlarm to be cleared by the operator at the management system.\nReason: alarmTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1149 IK8650007 - softwareFailure

Alarm	Attributes	Applicable major releases
Name: IK8650007 (7542) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: softwareFailure (1592) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Trap associated to an alarm while executing software operation (download, activation, validation, reject, backup).\nAlarm to be cleared by the operator at the management system.\nReason: softwareFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1150 IK8650981 - Cluster Node Degraded

Alarm	Attributes	Applicable major releases
Name: IK8650981 (7543) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Cluster Node Degraded (1593) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNodeDegraded		
Remedial action: Make a note of the cluster node name then check the node for the cause of the degraded condition.		

Table 26-1151 IK8650982 - Cluster Node Failed

Alarm	Attributes	Applicable major releases
Name: IK8650982 (7544) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Node Failed (1428) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 26-1152 IK8650983 - Cluster Resource Degraded

Alarm	Attributes	Applicable major releases
Name: IK8650983 (7545) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Cluster Resource Degraded (1594) Implicitly cleared: false Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterResourceDegraded		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the degraded condition.		

Table 26-1153 IK8650984 - Cluster Resource Failed

Alarm	Attributes	Applicable major releases
Name: IK8650984 (7546) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Resource Failed (1429) Implicitly cleared: false Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 26-1154 IK8650985 - Cluster Network Degraded

Alarm	Attributes	Applicable major releases
Name: IK8650985 (7547) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Cluster Network Degraded (1595) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster network becomes degraded. Alarm to be cleared by the operator at the management system. Reason: cpqClusterNetworkDegraded		
Remedial action: Make a note of the cluster network name then check the network for the cause of the degraded condition.		

Table 26-1155 IK8650986 - Cluster Network Failed

Alarm	Attributes	Applicable major releases
Name: IK8650986 (7548) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Network Failed (1430) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 26-1156 IK8650987 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8650987 (7549) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature at rack sensor 1 is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmTemp1		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 26-1157 IK8650988 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8650988 (7550) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature at rack sensor 2 is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmTemp2		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 26-1158 IK8650989 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8650989 (7551) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The status of Fan 1 has changed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmFan1		
Remedial action: Refer to Trap Details for more information.		

Table 26-1159 IK8650990 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8650990 (7552) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The status of Fan 2 has changed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmFan2		
Remedial action: Refer to Trap Details for more information.		

Table 26-1160 IK8650991 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8650991 (7553) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The AC voltage of the rack is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmVoltage		
Remedial action: Check the incoming power source and ensure all cables are inserted correctly.		

Table 26-1161 IK8650992 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8650992 (7554) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: humidityUnacceptable (702)	<ul style="list-style-type: none"> LR14.3.MG
Description: The humidity of the rack is outside the specified threshold.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmHumidity		
Remedial action: Check the air handling system for the rack and refer to Trap Details for more information.		

Table 26-1162 IK8650993 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8650993 (7555) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: intrusionDetection (670)	<ul style="list-style-type: none"> LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #1).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput1		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 26-1163 IK8650994 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8650994 (7556) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: intrusionDetection (670)	<ul style="list-style-type: none"> LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #2).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput2		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 26-1164 IK8650995 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8650995 (7557) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: intrusionDetection (670)	<ul style="list-style-type: none"> LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #3).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput3		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 26-1165 IK8650996 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8650996 (7558) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: intrusionDetection (670)	<ul style="list-style-type: none"> LR14.3.MG
Description: The door or sidepanel of the rack has been opened (access point #4).\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmInput4		
Remedial action: Check for unauthorized intrusion and refer to Trap Details for more information.		

Table 26-1166 IK8650997 - locking-alarm

Alarm	Attributes	Applicable major releases
Name: IK8650997 (7559) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: locking-alarm (1597) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Rack door lock #1 alarm.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock1		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

Table 26-1167 IK8650998 - locking-alarm

Alarm	Attributes	Applicable major releases
Name: IK8650998 (7560) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: locking-alarm (1597) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Rack door lock #2 alarm.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock2		
Remedial action: Ensure the door is completely closed and check for unauthorized intrusion and refer to Trap Details for more information.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1168 IK8650999 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8650999 (7561) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: smoke (676)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack smoke detector has detected smoke.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmSmoke		
Remedial action: Investigate rack for an over temperature condition and refer to Trap Details for more information.		

Table 26-1169 IK8651000 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8651000 (7562) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: excessiveVibration (699)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack shock detector has detected a vibration to the rack.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmShock		
Remedial action: Investigate rack.		

Table 26-1170 IK8651001 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8651001 (7563) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack auxiliary alarm input #1 has been triggered.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmAux1		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1171 IK8651002 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8651002 (7564) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack auxiliary alarm input #2 has been triggered.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmAux2		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1172 IK8651003 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8651003 (7565) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Alarm 1, set from Network management\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarm1		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1173 IK8651004 - alarm

Alarm	Attributes	Applicable major releases
Name: IK8651004 (7566) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: alarm (1596) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Alarm 2, set from Network management\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarm2		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1174 IK8651005 - locking-alarm of device

Alarm	Attributes	Applicable major releases
Name: IK8651005 (7567) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: locking-alarm of device (1598) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack door locking device #1 has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock1Dev		
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 26-1175 IK8651006 - locking-alarm of device

Alarm	Attributes	Applicable major releases
Name: IK8651006 (7568) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: locking-alarm of device (1598) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack door locking device #2 has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCmcalarmLock2Dev		
Remedial action: Check the device lock cable or failed battery and refer to Trap Details for more information.		

Table 26-1176 IK8651008 - The primary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8651008 (7569) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The primary controller in the subsystem has failed (1431) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-1177 IK8651010 - The secondary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8651010 (7570) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The secondary controller in the subsystem has failed (1432) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-1178 IK8651013 - A RAIDset has failed

Alarm	Attributes	Applicable major releases
Name: IK8651013 (7571) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A RAIDset has failed (1433) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 26-1179 IK8651015 - A RAIDset has become degraded

Alarm	Attributes	Applicable major releases
Name: IK8651015 (7572) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: A RAIDset has become degraded (1599) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A RAIDset has become degraded. Details: A RAIDset has become degraded due to a member disk device failure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrLogDriveReducedTrap		
Remedial action: Replace the failed disk device; add a spare to the system to cause a reconstruct.		

Table 26-1180 IK8651018 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8651018 (7573) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-1181 IK8651023 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8651023 (7574) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: false Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-1182 IK8651028 - Fan has failed

Alarm	Attributes	Applicable major releases
Name: IK8651028 (7575) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGMngElement	Severity: minor Specific problem: Fan has failed (1600) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fan has failed. Details: One of the cooling fans in the primary enclosure has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUFanFailureTrap		
Remedial action: Replace the cooling fan. Possible causes are fan physically removed, actual hardware failure.		

Table 26-1183 IK8651030 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8651030 (7576) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-1184 IK8651032 - Primary enclosure temperature warning

Alarm	Attributes	Applicable major releases
Name: IK8651032 (7577) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Primary enclosure temperature warning (1601) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Primary enclosure temperature warning. Details: The temperature in the primary enclosure has triggered a warning condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUTemperatureWarningTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 26-1185 IK8651033 - Primary enclosure temperature critical!

Alarm	Attributes	Applicable major releases
Name: IK8651033 (7578) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Primary enclosure temperature critical! (1436) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 26-1186 IK8651035 - Fan has failed in expansion cabinet

Alarm	Attributes	Applicable major releases
Name: IK8651035 (7579) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Fan has failed in expansion cabinet (1602) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fan has failed in expansion cabinet. Details: One of the cooling fans in the expansion cabinet has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabFanFailureTrap		
Remedial action: Replace the cooling fan. Possible causes are fan physically removed, actual hardware failure.		

Table 26-1187 IK8651037 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8651037 (7580) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-1188 IK8651039 - Expansion cabinet temperature warning

Alarm	Attributes	Applicable major releases
Name: IK8651039 (7581) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Expansion cabinet temperature warning (1603) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Expansion cabinet temperature warning. Details: The temperature in the expansion cabinet has triggered a warning condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabTemperatureWarningTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 26-1189 IK8651040 - cpqCrExpCabTemperatureCriticalTrap

Alarm	Attributes	Applicable major releases
Name: IK8651040 (7582) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: cpqCrExpCabTemperatureCriticalTrap (1437) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 26-1190 IK8651059 - External Array Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8651059 (7583) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: External Array Accelerator Board Bad Data (1604) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Bad Data. This alarm signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaAccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-1191 IK8651060 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8651060 (7584) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-1192 IK8651067 - Fibre Channel Tape Drive Cleaning Tape Needs Replacing

Alarm	Attributes	Applicable major releases
Name: IK8651067 (7585) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Fibre Channel Tape Drive Cleaning Tape Needs Replacing (1605) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fibre Channel Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape. Alarm to be cleared by the operator at the management system. Reason: cpqFcTapeDriveCleanTapeReplace		
Remedial action: Replace the failing fibre channel drive cleaning tape		

Table 26-1193 IK8651068 - External Array Redundant Controller Active

Alarm	Attributes	Applicable major releases
Name: IK8651068 (7586) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: External Array Redundant Controller Active (1606) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Redundant Controller Active. This alarm signifies that the Storage Agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqFcaCntlrBoxIoSlot indicates the new active controller index. Alarm to be cleared by the operator at the management system. Reason: cpqFcaCntlrActive		
Remedial action: Check the partner controller for problems. If this was the result of a user initiated switch over, no action is required.		

Table 26-1194 IK8651072 - External Array Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8651072 (7587) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: External Array Accelerator Board Bad Data (1604) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Bad Data. This alarm signifies that the agent has detected a Array Accelerator Cache Board that has lost battery power. If data was being stored in the accelerator memory when the system lost power, that data has been lost. Alarm to be cleared by the operator at the management system. Reason: cpqFca2AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-1195 IK8651073 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8651073 (7588) Type: environmentalAlarm (2) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-1196 IK8651078 - External Tape Drive Cleaning Required

Alarm	Attributes	Applicable major releases
Name: IK8651078 (7589) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: warning Specific problem: External Tape Drive Cleaning Required (1607) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Tape Drive Cleaning Required. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.\nAlarm to be cleared by the operator at the management system.\nReason: cpqExtTapeDriveCleaningRequired		
Remedial action: a External Tape Drive Cleaning should be installed		

Table 26-1197 IK8651079 - External Tape Drive Cleaning Tape Needs Replacing

Alarm	Attributes	Applicable major releases
Name: IK8651079 (7590) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: warning Specific problem: External Tape Drive Cleaning Tape Needs Replacing (1608) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm to be cleared by the operator at the management system.\nReason: cpqExtTapeDriveCleanTapeReplace		
Remedial action: Replace the External Tape Drive Cleaning Tape		

Table 26-1198 IK8651089 - Thermal Status Degraded

Alarm	Attributes	Applicable major releases
Name: IK8651089 (7591) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Thermal Status Degraded (1609) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to degraded. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeThermalTempDegraded		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1199 IK8651092 - System Fan Degraded

Alarm	Attributes	Applicable major releases
Name: IK8651092 (7592) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: System Fan Degraded (1610) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to degraded. An optional system fan is not operating normally.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeThermalSystemFanDegraded		
Remedial action: check the system fans		

Table 26-1200 IK8651094 - CPU Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8651094 (7593) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: CPU Fan Failure (1611) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The CPU fan status has been set to failed. A processor fan is not operating normally. The server will be shutdown.\nAlarm is cleared by the system.\nReason: cpqHeThermalCpuFanFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1201 IK8651098 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8651098 (7594) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-1202 IK8651099 - Server Power Supply Degraded

Alarm	Attributes	Applicable major releases
Name: IK8651099 (7595) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Server Power Supply Degraded (1612) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeFitToIPwrSupplyDegraded		
Remedial action: check the fault tolerant power supply		

Table 26-1203 IK8651102 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8651102 (7596) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-1204 IK8651103 - Temperature Degraded

Alarm	Attributes	Applicable major releases
Name: IK8651103 (7597) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Temperature Degraded (1613) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to degraded. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalTempDegraded		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-1205 IK8651105 - System Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8651105 (7598) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: System Fan Failure (1441) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the failed fan.		

Table 26-1206 IK8651106 - System Fan Degraded

Alarm	Attributes	Applicable major releases
Name: IK8651106 (7599) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: System Fan Degraded (1610) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to degraded. An optional system fan is not operating normally.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalSystemFanDegraded		
Remedial action: Replace the failing fan.		

Table 26-1207 IK8651108 - CPU Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8651108 (7600) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: CPU Fan Failure (1611) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The CPU fan status has been set to failed. A processor fan is not operating normally. The server will be shutdown.\nAlarm is cleared by the system.\nReason: cpqHe3ThermalCpuFanFailed		
Remedial action: Replace the failed CPU fan.		

Table 26-1208 IK8651112 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8651112 (7601) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-1209 IK8651113 - Server Power Supply Degraded

Alarm	Attributes	Applicable major releases
Name: IK8651113 (7602) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Server Power Supply Degraded (1612) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply sub-system condition has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3FitToIPwrSupplyDegraded		
Remedial action: Check the system for a power supply failure. Replace the power supply.		

Table 26-1210 IK8651114 - Corr Mem Errors Require a Replacement Memory Module

Alarm	Attributes	Applicable major releases
Name: IK8651114 (7603) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Corr Mem Errors Require a Replacement Memory Module (1614) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: A correctable memory log entry indicates a memory module needs to be replaced. The errors have been corrected, but the memory module should be replaced. The error information is reported in the variable cpqHeCorrMemErrDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3CorrMemReplaceMemModule		
Remedial action: Replace the failing memory module		

Table 26-1211 IK8651116 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8651116 (7604) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIPowerSupplyFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1212 IK8651117 - Power Redundancy Lost

Alarm	Attributes	Applicable major releases
Name: IK8651117 (7605) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power Redundancy Lost (1615) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Power Supplies have lost redundancy for the specified chassis.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIPowerRedundancyLost		
Remedial action: Check the system power supplies for a failure.		

Table 26-1213 IK8651120 - Fan Degraded

Alarm	Attributes	Applicable major releases
Name: IK8651120 (7606) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Fan Degraded (1616) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fan condition has been set to degraded for the specified chassis and fan.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3FitToIFanDegraded		
Remedial action: Replace the failing fan.		

Table 26-1214 IK8651121 - Fan Failed

Alarm	Attributes	Applicable major releases
Name: IK8651121 (7607) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fan Failed (1443) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIFanFailed		
Remedial action: Replace the failed fan.		

Table 26-1215 IK8651122 - Fan Redundancy Lost

Alarm	Attributes	Applicable major releases
Name: IK8651122 (7608) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Fan Redundancy Lost (1617) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fans have lost redundancy for the specified chassis.\nAlarm is cleared by the system.\nReason: cpqHe3FitToIFanRedundancyLost		
Remedial action: Check the system fans for a failure.		

Table 26-1216 IK8651125 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8651125 (7609) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-1217 IK8651126 - Thermal Status Degraded

Alarm	Attributes	Applicable major releases
Name: IK8651126 (7610) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Thermal Status Degraded (1609) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to degraded in the specified chassis and location. The server's temperature is outside of the normal operating range. The server will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3TemperatureDegraded		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-1218 IK8651128 - Power Converter Degraded

Alarm	Attributes	Applicable major releases
Name: IK8651128 (7611) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power Converter Degraded (1618) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converter condition has been set to degraded for the specified chassis, slot and socket.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PowerConverterDegraded		
Remedial action: Check for a failing power converter or for a failed power converter in a redundant pair. Replace the power converter.		

Table 26-1219 IK8651129 - Power Converter Failed

Alarm	Attributes	Applicable major releases
Name: IK8651129 (7612) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Converter Failed (1444) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket. Alarm to be cleared by the operator at the management system. Reason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 26-1220 IK8651130 - Power Converter Redundancy Lost

Alarm	Attributes	Applicable major releases
Name: IK8651130 (7613) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Power Converter Redundancy Lost (1619) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converters have lost redundancy for the specified chassis. Alarm to be cleared by the operator at the management system. Reason: cpqHe3PowerConverterRedundancyLost		
Remedial action: Check the power converters in the system for a failure in a redundant pair. Replace the power converter.		

Table 26-1221 IK8651131 - Cache Accel Parity Errors may require a module

Alarm	Attributes	Applicable major releases
Name: IK8651131 (7614) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Cache Accel Parity Errors may require a module (1620) Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.3.MG
Description: A cache accelerator parity error indicates a cache module needs to be replaced. The error information is reported in the variable cpqHeEventLogErrorDesc. Alarm to be cleared by the operator at the management system. Reason: cpqHe3CacheAccelParityError		
Remedial action: Refer to the Integrated Management Log for details on the error. Replace the failing cache module.		

Table 26-1222 IK8651132 - Online Spare Memory Engaged

Alarm	Attributes	Applicable major releases
Name: IK8651132 (7615) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Online Spare Memory Engaged (1621) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Advanced Memory Protection Online Spare Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The Online Spare Memory has been activated.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResilientMemOnlineSpareEngaged		
Remedial action: Schedule server down-time to replace the faulty memory.		

Table 26-1223 IK8651134 - Power Supply Degraded

Alarm	Attributes	Applicable major releases
Name: IK8651134 (7616) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power Supply Degraded (1622) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to degraded for the specified chassis and bay location.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe4FitToIPowerSupplyDegraded		
Remedial action: Replace the failing power supply.		

Table 26-1224 IK8651135 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8651135 (7617) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FitToIPowerSupplyFailed		
Remedial action: Replace the failed power supply.		

Table 26-1225 IK8651136 - Mirrored Memory Engaged

Alarm	Attributes	Applicable major releases
Name: IK8651136 (7618) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Mirrored Memory Engaged (1623) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Advanced Memory Protection Mirrored Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Mirrored Memory has been activated.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResilientMemMirroredMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 26-1226 IK8651137 - Advanced ECC Memory Engaged

Alarm	Attributes	Applicable major releases
Name: IK8651137 (7619) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Advanced ECC Memory Engaged (1624) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Advanced Memory Protection Advanced ECC Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. Advanced ECC has been activated.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResilientAdvancedECCMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 26-1227 IK8651138 - Advanced XOR Memory Engaged

Alarm	Attributes	Applicable major releases
Name: IK8651138 (7620) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Advanced XOR Memory Engaged (1625) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Advanced Memory Protection XOR Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The XOR engine has been activated.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResilientMemXorMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 26-1228 IK8651141 - Replace Memory Module

Alarm	Attributes	Applicable major releases
Name: IK8651141 (7621) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Replace Memory Module (1626) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Corrected Memory Errors Detected. The errors have been corrected, but the memory module should be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe4CorrMemReplaceMemModule		
Remedial action: Replace the memory module.		

Table 26-1229 IK8651142 - Memory Board or Cartridge Removed

Alarm	Attributes	Applicable major releases
Name: IK8651142 (7622) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Memory Board or Cartridge Removed (1627) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge removed. An Advanced Memory Protection sub-system board or cartridge has been removed from the system.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResMemBoardRemoved		
Remedial action: Insure the board or cartridge has memory correctly installed and re-insert the memory board or cartridge back into the system.		

Table 26-1230 IK8651144 - Memory Board or Cartridge Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8651144 (7623) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected (1445) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 26-1231 IK8651148 - Management processor failed reset

Alarm	Attributes	Applicable major releases
Name: IK8651148 (7624) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGMgrElement	Severity: major Specific problem: Management processor failed reset (1446) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational. Alarm to be cleared by the operator at the management system. Reason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management processor again or re-flash the management processor firmware.		

Table 26-1232 IK8651149 - Replace Memory Module

Alarm	Attributes	Applicable major releases
Name: IK8651149 (7625) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGMgrElement	Severity: warning Specific problem: Replace Memory Module (1626) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Corrected \ uncorrected Memory Errors Detected. The errors have been corrected, but the memory module should be replaced. Value 0 for CPU means memory is not Processor based Alarm to be cleared by the operator at the management system. Reason: cpqHe5CorrMemReplaceMemModule		
Remedial action: Replace the failing memory module.		

Table 26-1233 IK8651150 - Memory Board or Cartridge or Riser Removed

Alarm	Attributes	Applicable major releases
Name: IK8651150 (7626) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGMgrElement	Severity: warning Specific problem: Memory Board or Cartridge or Riser Removed (1628) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge or riser removed. An Advanced Memory Protection sub-system board or cartridge or riser has been removed from the system. Value 0 for CPU means memory is not processor based. Alarm to be cleared by the operator at the management system. Reason: cpqHe5ResMemBoardRemoved		
Remedial action: Insure the board or cartridge or riser has memory correctly installed and re-insert the memory board or cartridge or CPU back into the system.		

Table 26-1234 IK8651152 - Memory Board or Cartridge or Riser Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8651152 (7627) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected (1447) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based. Alarm to be cleared by the operator at the management system. Reason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 26-1235 IK8651153 - Advanced LockStep Memory Engaged

Alarm	Attributes	Applicable major releases
Name: IK8651153 (7628) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Advanced LockStep Memory Engaged (1629) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Advanced Memory Protection LockStep Engine Memory Engaged. The Advanced Memory Protection subsystem has detected a memory fault. The LockStep engine has been activated. Alarm to be cleared by the operator at the management system. Reason: cpqHeResilientMemLockStepMemoryEngaged		
Remedial action: Replace the faulty memory.		

Table 26-1236 IK8651154 - Power Supply AC Power Loss

Alarm	Attributes	Applicable major releases
Name: IK8651154 (7629) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply AC Power Loss (1448) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location. Alarm to be cleared by the operator at the management system. Reason: cpqHe4FitToIPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 26-1237 IK8651156 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8651156 (7630) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1238 IK8651158 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8651158 (7631) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1239 IK8651163 - Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8651163 (7632) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Status Trap (1450) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition.\nAlarm is cleared by the system.\nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 26-1240 IK8651164 - Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8651164 (7633) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Status Trap (1450) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the configured redundant NIC becomes the active NIC.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2NicSwitchoverOccurred2		
Remedial action: Examine the network connections and check for a NIC failure.		

Table 26-1241 IK8651168 - Critical Software update Notification Trap

Alarm	Attributes	Applicable major releases
Name: IK8651168 (7634) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGMngElement	Severity: warning Specific problem: Critical Software update Notification Trap (1630) Implicitly cleared: false Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is a send to the user to notify him of a Critical Software Update.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHoCriticalSoftwareUpdateTrap		
Remedial action: Install the required software updates.		

Table 26-1242 IK8651172 - Power Threshold Exceeded

Alarm	Attributes	Applicable major releases
Name: IK8651172 (7635) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power Threshold Exceeded (1451) Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1243 IK8652265 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8652265 (7636) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-1244 IK8652272 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8652272 (7637) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-1245 IK8652279 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8652279 (7638) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-1246 IK8652281 - Duplex Controller Active

Alarm	Attributes	Applicable major releases
Name: IK8652281 (7639) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Duplex Controller Active (1631) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Controller Active. This alarm signifies that the agent has detected that a backup array controller in a duplexed pair has switched over to the active role. The variable cpqDaCntlrSlot indicates the active controller slot and cpqDaCntlrPartnerSlot indicates the backup. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDaCntlrActive		
Remedial action: Check the partner controller for problems. If this was the result of a user initiated switch over, no action is required.		

Table 26-1247 IK8652284 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8652284 (7640) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa4PhyDrvThreshPassedTrap		
Remedial action: If the physical drive is predicting failure, replace the drive.		

Table 26-1248 IK8652289 - Tape Drive Cleaning Tape Needs Replacing

Alarm	Attributes	Applicable major releases
Name: IK8652289 (7641) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing (1632) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDaTapeDriveCleanTapeReplace		
Remedial action: Replace the Tape Drive Cleaning Tape.		

Table 26-1249 IK8652291 - Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8652291 (7642) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Accelerator Board Bad Data (1453) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-1250 IK8652292 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8652292 (7643) Type: environmentalAlarm (2) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-1251 IK8652295 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8652295 (7644) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-1252 IK8652302 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8652302 (7645) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-1253 IK8652304 - Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8652304 (7646) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Accelerator Board Bad Data (1453) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Cache Module Board Bad Data. This alarm signifies that the agent has detected a cache module board that has lost backup power. If data was being stored in the cache module memory when the server lost power, that data has been lost. The backup power source is indicated by cpqDaAccelBackupPowerSource.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-1254 IK8652305 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8652305 (7647) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Cache Module Board Backup Power Source Failed. This alarm signifies that the agent has detected a backup power source failure associated with the cache module board. The backup power source is indicated by cpqDaAccelBackupPowerSource.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6AccelBatteryFailed		
Remedial action: Replace the Backup Power Source.		

Table 26-1255 IK8652309 - Tape Drive Cleaning Required

Alarm	Attributes	Applicable major releases
Name: IK8652309 (7648) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Tape Drive Cleaning Required (1633) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned. Alarm to be cleared by the operator at the management system. Reason: cpqDa6TapeDriveCleaningRequired		
Remedial action: Insert and run a cleaning tape in the tape drive.		

Table 26-1256 IK8652310 - Tape Drive Cleaning Tape Needs Replacing

Alarm	Attributes	Applicable major releases
Name: IK8652310 (7649) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing (1632) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape. Alarm to be cleared by the operator at the management system. Reason: cpqDa6TapeDriveCleanTapeReplace		
Remedial action: Replace the Tape Drive Cleaning Tape.		

Table 26-1257 IK8652315 - IDE Drive Degraded

Alarm	Attributes	Applicable major releases
Name: IK8652315 (7650) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: IDE Drive Degraded (1634) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An IDE drive status has been set to degraded. Alarm is cleared by the system. Reason: cpqIdeDriveDegraded		
Remedial action: The drive should be scheduled for replacement. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-1258 IK8652317 - IDE Drive Ultra ATA Degraded

Alarm	Attributes	Applicable major releases
Name: IK8652317 (7651) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: IDE Drive Ultra ATA Degraded (1635) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An IDE drive detects an excessive number of Ultra ATA data transmission errors between the hard drive and the processor. Alarm to be cleared by the operator at the management system. Reason: cpqIdeDriveUltraAtaDegraded		
Remedial action: For best performance move Ultra ATA devices to the primary controller and non Ultra ATA devices to the secondary controller. If errors still persist, consider replacing the standard 40-conductor IDE cable with an 80-conductor Ultra ATA cable.		

Table 26-1259 IK8652337 - NIC Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8652337 (7652) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Status Trap (1455) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm is cleared by the system. Reason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1260 IK8652339 - NIC Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8652339 (7653) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: NIC Status Trap (1455) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm is cleared by the system. Reason: cpqNicRedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1261 IK8652341 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8652341 (7654) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm is cleared by the system. Reason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1262 IK8652343 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8652343 (7655) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm is cleared by the system. Reason: cpqNic2RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1263 IK8652344 - like Activity Detected Trap

Alarm	Attributes	Applicable major releases
Name: IK8652344 (7656) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: like Activity Detected Trap (1636) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent when the Virus Throttle Filter Driver detects virus like activity. Alarm to be cleared by the operator at the management system. Reason: cpqNicVirusLikeActivityDetected		
Remedial action: The system reporting this trap requires immediate attention.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1264 IK8652347 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8652347 (7657) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm to be cleared by the operator at the management system. Reason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1265 IK8652349 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8652349 (7658) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm is cleared by the system. Reason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1266 IK8652360 - Enclosure temperature failed

Alarm	Attributes	Applicable major releases
Name: IK8652360 (7659) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure temperature failed (1458) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition. Alarm to be cleared by the operator at the management system. Reason: cpqRackEnclosureTempFailed		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

(2 of 2)

Table 26-1267 IK8652361 - Enclosure temperature degraded

Alarm	Attributes	Applicable major releases
Name: IK8652361 (7660) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Enclosure temperature degraded (1637) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure temperature status has been set to degraded. This alarm signifies that an enclosure temperature sensor has been tripped indicating a possible overheat condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackEnclosureTempDegraded		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 26-1268 IK8652363 - Enclosure fan failed

Alarm	Attributes	Applicable major releases
Name: IK8652363 (7661) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure fan failed (1459) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 26-1269 IK8652364 - Enclosure fan degraded

Alarm	Attributes	Applicable major releases
Name: IK8652364 (7662) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Enclosure fan degraded (1638) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG

(1 of 2)

26 – Alcatel-Lucent 9774 LMG alarms

Alarm	Attributes	Applicable major releases
Description: The enclosure fan status has been set to degraded. This alarm signifies that an enclosure fan has failed but other fans in the redundant fan group are still operating. This may result in overheating of the enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackEnclosureFanDegraded		
Remedial action: Replace the fan as soon as possible.		

(2 of 2)

Table 26-1270 IK8652368 - Rack power supply failed

Alarm	Attributes	Applicable major releases
Name: IK8652368 (7663) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Rack power supply failed (1460) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 26-1271 IK8652369 - Rack power supply degraded

Alarm	Attributes	Applicable major releases
Name: IK8652369 (7664) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply degraded (1461) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 26-1272 IK8652373 - Rack power subsystem not redundant

Alarm	Attributes	Applicable major releases
Name: IK8652373 (7665) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Rack power subsystem not redundant (1639) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power subsystem is no longer in a redundant state.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemNotRedundant		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

(2 of 2)

Table 26-1273 IK8652374 - Rack power supply input voltage problem

Alarm	Attributes	Applicable major releases
Name: IK8652374 (7666) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply input voltage problem (1462) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 26-1274 IK8652375 - Rack power subsystem overload condition

Alarm	Attributes	Applicable major releases
Name: IK8652375 (7667) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power subsystem overload condition (1463) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power subsystem overload condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 26-1275 IK8652376 - Server shutdown due to power shedding

Alarm	Attributes	Applicable major releases
Name: IK8652376 (7668) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server shutdown due to power shedding (1464) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 26-1276 IK8652377 - Server power on prevented to preserve redundancy

Alarm	Attributes	Applicable major releases
Name: IK8652377 (7669) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server power on prevented to preserve redundancy (1465) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 26-1277 IK8652378 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8652378 (7670) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 26-1278 IK8652379 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8652379 (7671) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 26-1279 IK8652380 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8652380 (7672) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedPowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 26-1280 IK8652382 - Fuse open

Alarm	Attributes	Applicable major releases
Name: IK8652382 (7673) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fuse open (1467) Implicitly cleared: false Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fuse open. The fuse has been tripped.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 26-1281 IK8652385 - Power subsystem not load balanced

Alarm	Attributes	Applicable major releases
Name: IK8652385 (7674) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power subsystem not load balanced (1640) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem not load balanced. The power subsystem is out of balance for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisNotLoadBalanced		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies. Add additional power supplies if needed.		

Table 26-1282 IK8652386 - Power subsystem DC power problem

Alarm	Attributes	Applicable major releases
Name: IK8652386 (7675) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem DC power problem (1468) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-1283 IK8652387 - Power subsystem AC facility input power exceeded

Alarm	Attributes	Applicable major releases
Name: IK8652387 (7676) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem AC facility input power exceeded (1469) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisAcFacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-1284 IK8652388 - Unknown power consumption

Alarm	Attributes	Applicable major releases
Name: IK8652388 (7677) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Unknown power consumption (1470) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-1285 IK8652389 - Power subsystem load balancing wire missing

Alarm	Attributes	Applicable major releases
Name: IK8652389 (7678) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power subsystem load balancing wire missing (1641) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem load balancing wire missing. The power subsystem load balancing wire missing.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisLoadBalancingWireMissing		
Remedial action: Connect the load balancing wire.		

Table 26-1286 IK8652390 - Power subsystem has too may power enclosures

Alarm	Attributes	Applicable major releases
Name: IK8652390 (7679) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power subsystem has too may power enclosures (1642) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem has too may power enclosures. The maximum number of power enclosures has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisTooManyPowerChassis		
Remedial action: Remove the extra power enclosure.		

Table 26-1287 IK8652391 - Power subsystem improperly configured

Alarm	Attributes	Applicable major releases
Name: IK8652391 (7680) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem improperly configured (1471) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1288 IK8652392 - Enclosure manager degraded

Alarm	Attributes	Applicable major releases
Name: IK8652392 (7681) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Enclosure manager degraded (1643) Implicitly cleared: true Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Onboard Administrator or other management processor status has been set to degraded. This alarm signifies that either an Onboard Administrator has failed but the other Onboard Administrator is still operating, or one or more management processors is in a non-optimal operating state. Alarm is cleared by the system. Reason: cpqRackEnclosureManagerDegraded		
Remedial action: For C-Class enclosures, replace the Onboard Administrator as soon as possible. For all others please refer to product documentation for possible corrective actions		

Table 26-1289 IK8652397 - keying failed

Alarm	Attributes	Applicable major releases
Name: IK8652397 (7682) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: keying failed (1644) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The server blade e-keying has failed. This alarm signifies that a server blade e-keying has failed and there is a port mapping problem between a server mezz card and the interconnect. Alarm to be cleared by the operator at the management system. Reason: cpqRackServerBladeEKeyingFailed		
Remedial action: Reconfigure server blade mezz cards.		

Table 26-1290 IK8652401 - Interconnect failed

Alarm	Attributes	Applicable major releases
Name: IK8652401 (7683) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Interconnect failed (1472) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed. Alarm to be cleared by the operator at the management system. Reason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 26-1291 IK8652402 - Interconnect degraded

Alarm	Attributes	Applicable major releases
Name: IK8652402 (7684) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Interconnect degraded (1645) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The interconnect status has been set to degraded. This alarm signifies that a interconnect has degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackNetConnectorDegraded		
Remedial action: Replace the interconnect as soon as possible.		

Table 26-1292 IK8652408 - Server blade health status degraded

Alarm	Attributes	Applicable major releases
Name: IK8652408 (7685) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade health status degraded (1473) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-1293 IK8652409 - Server blade health status critical

Alarm	Attributes	Applicable major releases
Name: IK8652409 (7686) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server blade health status critical (1474) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-1294 IK8652410 - Server blade not responding to group capping requests

Alarm	Attributes	Applicable major releases
Name: IK8652410 (7687) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: minor Specific problem: Server blade not responding to group capping requests (1646) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The server blade is not responding to the group capper. The server blade is not responding to capping requests from the enclosure group capper\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeGrpCapTimeout		
Remedial action: Reset the iLO management processor.		

Table 26-1295 IK8652411 - Server blade unexpected shutdown

Alarm	Attributes	Applicable major releases
Name: IK8652411 (7688) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Server blade unexpected shutdown (1475) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An unexpected shutdown has occurred for this server blade.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-1296 IK8652427 - Generic EAE Minor trap

Alarm	Attributes	Applicable major releases

Table 26-1330 IK8652507 - UPS Temperature Normal

Alarm	Attributes	Applicable major releases
Name: IK8652507 (7723) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Temperature Normal (1673) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting temperature is out of range.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSTemperatureNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 26-1331 IK8652508 - UPS Internal Failure

Alarm	Attributes	Applicable major releases
Name: IK8652508 (7724) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Internal Failure (1674) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a general UPS failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSInternalFailure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 26-1332 IK8652510 - UPS Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8652510 (7725) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Battery Failure (1675) Implicitly cleared: true Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a battery failure.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryFailure		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support. 3. Your battery may need to be replaced. The UPS may not be capable of supporting it's load if utility power fails!		

Table 26-1333 IK8652512 - UPS Diagnostic Test Failed

Alarm	Attributes	Applicable major releases
Name: IK8652512 (7726) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Diagnostic Test Failed (1676) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a diagnostic test failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSDiagnosticTestFailed		
Remedial action: Perform the following steps to clear the alarm: 1. Your battery may need to be replaced. 2. If this error persists contact technical support. 3. The UPS may not be capable of supporting it's load if utility power fails!		

Table 26-1334 IK8652513 - UPS Diagnostic Test Succeeded

Alarm	Attributes	Applicable major releases
Name: IK8652513 (7727) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS Diagnostic Test Succeeded (1677) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a diagnostic test failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSDiagnosticTestSucceeded		
Remedial action: Perform the following steps to clear the alarm: 1. Your battery may need to be replaced. 2. If this error persists contact technical support. 3. The UPS may not be capable of supporting it's load if utility power fails!		

Table 26-1335 IK8652516 - DC Start Occurred

Alarm	Attributes	Applicable major releases
Name: IK8652516 (7728) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: DC Start Occurred (1678) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The UPS has been started on battery when AC input power is not present. This alarm is used to record the date and time of this event.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSDCStartOccurred		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1336 IK8652518 - Bypass Not Available

Alarm	Attributes	Applicable major releases
Name: IK8652518 (7729) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Bypass Not Available (1679) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting bypass not available. Alarm is cleared by the system. Reason: cpqRPMTrapUPSByPassNotAvailable		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 26-1337 IK8652522 - Utility Not Present

Alarm	Attributes	Applicable major releases
Name: IK8652522 (7730) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Utility Not Present (1680) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Indicates that the utility input is not present. This differs from alarm #57 in that the detected voltage is zero in this case. Alarm is cleared by the system. Reason: cpqRPMTrapUPSUtilityNotPresent		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1338 IK8652526 - Site Wiring Fault

Alarm	Attributes	Applicable major releases
Name: IK8652526 (7731) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Site Wiring Fault (1681) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed. Alarm to be cleared by the operator at the management system. Reason: cpqRPMTrapUPSSiteWiringFault		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 26-1339 IK8652527 - Site Wiring Fault Cleared

Alarm	Attributes	Applicable major releases
Name: IK8652527 (7732) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Site Wiring Fault Cleared (1682) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a fault in the input wiring, other than Phase Rotation: e.g., Ground/Neutral reversed. Alarm to be cleared by the operator at the management system. Reason: cpqRPMTrapUPSSiteWiringNormal		
Remedial action: Perform the following steps to clear the alarm: 1. Contact an electrician.		

Table 26-1340 IK8652528 - The UPS is no longer on manual bypass

Alarm	Attributes	Applicable major releases
Name: IK8652528 (7733) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS is no longer on manual bypass (1683) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is operating in manual bypass mode. Alarm to be cleared by the operator at the management system. Reason: cpqRPMtrapUPSByPassOffManual		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 26-1341 IK8652529 - The UPS is on manual bypass

Alarm	Attributes	Applicable major releases
Name: IK8652529 (7734) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS is on manual bypass (1684) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is operating in manual bypass mode. Alarm to be cleared by the operator at the management system. Reason: cpqRPMtrapUPSByPassONManual		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 26-1342 IK8652531 - The UPS was started without utility power

Alarm	Attributes	Applicable major releases
Name: IK8652531 (7735) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS was started without utility power (1685) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device has been started while on battery power. AC input power is not present. Alarm is cleared by the system. Reason: cppqRPMtrapUPSStartedOnBattery		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. If the UPS remains on battery for an extended time it will not be able to sustain the output load.		

Table 26-1343 IK8652533 - Input voltage is out of range

Alarm	Attributes	Applicable major releases
Name: IK8652533 (7736) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Input voltage is out of range (1686) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting input voltage is out of range. Alarm is cleared by the system. Reason: cppqRPMtrapUPSInputOutOfRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is plugged into an outlet supplied with utility power. 2. If the UPS remains on battery for an extended period of time it will not be able to sustain the load.		

Table 26-1344 IK8652534 - UPS temperature out of range

Alarm	Attributes	Applicable major releases
Name: IK8652534 (7737) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: UPS temperature out of range (1687) Implicitly cleared: true Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting temperature is out of range. Alarm is cleared by the system. Reason: cppqRPMtrapUPSTemperatureOutOfRange		
Remedial action: Perform the following steps to clear the alarm: 1. Check to make sure the UPS is in a well ventilated area. 2. Lower the ambient temperature in the area where the UPS is located.		

Table 26-1345 IK8652536 - The UPS is on automatic bypass

Alarm	Attributes	Applicable major releases
Name: IK8652536 (7738) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS is on automatic bypass (1688) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is operating in auto bypass mode.\nAlarm is cleared by the system.\nReason: cpqRPMtrapUPSByPassOnAuto		
Remedial action: Perform the following steps to clear the alarm: 1. In bypass mode, the UPS cannot support devices if there is a power failure. 2. Once maintenance has been performed return the UPS to normal mode.		

Table 26-1346 IK8652538 - Output voltage is out of range

Alarm	Attributes	Applicable major releases
Name: IK8652538 (7739) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Output voltage is out of range (1689) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting output voltage is out of Range.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMtrapUPSOutputoutofRange		
Remedial action: Perform the following steps to clear the alarm: 1. Initiate a UPS self test. 2. If this error persists contact technical support.		

Table 26-1347 IK8652539 - One or more UPS batteries have been disconnected

Alarm	Attributes	Applicable major releases
Name: IK8652539 (7740) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: One or more UPS batteries have been disconnected (1690) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting batteries are not connected to the UPS.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSbatteriesDisconnected		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS Batteries. The UPS will not be capable of supporting it's load if the utility power fails!		

Table 26-1348 IK8652541 - The UPS batteries are in a discharged condition

Alarm	Attributes	Applicable major releases
Name: IK8652541 (7741) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS batteries are in a discharged condition (1691) Implicitly cleared: true Default probable cause: batteryDischarging (648)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting batteries are completely discharged.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSBatteryDischarged		
Remedial action: Perform the following steps to clear the alarm: 1. Connect the UPS to utility power to charge the batteries. The UPS will not be able to support it's load if the utility power fails!		

Table 26-1349 IK8652543 - A UPS circuit breaker needs attention

Alarm	Attributes	Applicable major releases
Name: IK8652543 (7742) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: A UPS circuit breaker needs attention (1692) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting an output Breaker or Relay has failed or may be stuck open or closed with this alarm.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSCheckBreaker		
Remedial action: Perform the following steps to clear the alarm: 1. Check all breakers on the UPS. 2. If this error persists contact technical support.		

Table 26-1350 IK8652545 - Emergency Power Off activated

Alarm	Attributes	Applicable major releases
Name: IK8652545 (7743) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Emergency Power Off activated (1693) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting an Emergency Power Off (EPO) command has been received to shutdown the UPS immediately with out delay. This command may come from a local control panel or from a remote source.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRPMTrapUPSEPOInitiated		
Remedial action: Perform the following steps to clear the alarm: 1. Turn the UPS on to reapply power to attached equipment.		

Table 26-1351 IK8652548 - A cover panel has been removed

Alarm	Attributes	Applicable major releases
Name: IK8652548 (7744) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: A cover panel has been removed (1694) Implicitly cleared: true Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a cover panel has been removed while utility power is present. \nAlarm is cleared by the system. \nReason: cpqRPMTrapUPSCabinetDoorOpen		
Remedial action: Perform the following steps to clear the alarm: 1. Reinstall all panels. 2. If this error persists contact technical support.		

Table 26-1352 IK8652550 - The UPS has encountered a fan failure

Alarm	Attributes	Applicable major releases
Name: IK8652550 (7745) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS has encountered a fan failure (1695) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a fan failure has occurred. \nAlarm is cleared by the system. \nReason: cpqRPMTrapUPSFanFailure		
Remedial action: Perform the following steps to clear the alarm: 1. If this error persists contact technical support.		

Table 26-1353 IK8652552 - The UPS N+1 load has been exceeded

Alarm	Attributes	Applicable major releases
Name: IK8652552 (7746) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: The UPS N+1 load has been exceeded (1696) Implicitly cleared: true Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a loss of redundancy due to one of the following. 1. One or more of the Electronics Modules has failed 2. One or more of the electronics modules has been manually removed. 3. The amount of load on the UPS has increased to the point that the UPS is no longer able to support an N+1 configuration. \nAlarm is cleared by the system. \nReason: cpqRPMTrapUPSLossOfRedundancy		
Remedial action: Perform the following steps to clear the alarm: 1. Check the UPS to see if one of the modules has failed. 2. Make sure that all modules are securely plugged in. 3. Reduce the load to return the N+1 configuration. 4. If the amount of load is now going to exceed and N+1 configuration permanently, change the configuration on the front panel of the UPS to Capacity instead of Parallel N+1.		

Table 26-1354 IK8652554 - A UPS shutdown is imminent

Alarm	Attributes	Applicable major releases
Name: IK8652554 (7747) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: A UPS shutdown is imminent (1697) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting a shutdown imminent condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSShutdownImminent		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 26-1355 IK8652556 - A UPS shutdown is pending

Alarm	Attributes	Applicable major releases
Name: IK8652556 (7748) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: A UPS shutdown is pending (1698) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A UPS device is reporting shutdown pending condition.\nAlarm is cleared by the system.\nReason: cpqRPMTrapUPSShutdownPending		
Remedial action: Perform the following steps to clear the alarm: 1. Immediately restore power to the UPS. The UPS will not continue to supply power to devices following the shutdown!		

Table 26-1356 IK8652559 - Critical Alarm

Alarm	Attributes	Applicable major releases
Name: IK8652559 (7749) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Critical Alarm (1483) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 26-1357 IK8652560 - Warning Alarm

Alarm	Attributes	Applicable major releases
Name: IK8652560 (7750) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Warning Alarm (1699) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A warning alarm has occurred.\nAlarm to be cleared by the operator at the management system.\nReason: cpqPMTrapWarning		
Remedial action: Check the Trap Details for more information.		

Table 26-1358 IK8652585 - Tape Drive Cleaning Required

Alarm	Attributes	Applicable major releases
Name: IK8652585 (7751) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Tape Drive Cleaning Required (1633) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Tape Drive Cleaning Required trap. The agent has detected a tape drive that needs to have a cleaning tape inserted and run. This will cause the tape drive heads to be cleaned.\nAlarm to be cleared by the operator at the management system.\nReason: cpqTape3PhyDrvCleaningRequired		
Remedial action: Insert and run a cleaning tape in the tape drive.		

Table 26-1359 IK8652586 - Tape Drive Cleaning Tape Needs Replacing

Alarm	Attributes	Applicable major releases
Name: IK8652586 (7752) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Tape Drive Cleaning Tape Needs Replacing (1632) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Tape Drive Cleaning Tape Needs Replacing. The agent has detected that an autoloader tape unit has a cleaning tape that has been fully used and therefore needs to be replaced with a new cleaning tape.\nAlarm to be cleared by the operator at the management system.\nReason: cpqTape3PhyDrvCleanTapeReplace		
Remedial action: Replace the Tape Drive Cleaning Tape.		

Table 26-1360 IK8652590 - Tape Library Door Opened

Alarm	Attributes	Applicable major releases
Name: IK8652590 (7753) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Tape Library Door Opened (1700) Implicitly cleared: false Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: Tape Library Door Open The agent has detected that the door on an autoloader is open so the unit is not operational.\nAlarm to be cleared by the operator at the management system.\nReason: cpqTape3LibraryDoorOpen		
Remedial action: Close the door on the tape library.		

Table 26-1361 IK8652606 - System hood is removed

Alarm	Attributes	Applicable major releases
Name: IK8652606 (7754) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: System hood is removed (1701) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: System hood is removed. The hood status has been set to removed. The system's hood is not in a properly installed state. This situation may result in improper cooling of the system due to air flow changes caused by the missing hood.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiHoodRemoved		
Remedial action: Replace the cover (hood), ensure the system's cover is properly installed. Verify the system is in working order.		

Table 26-1362 IK8652608 - Monitor Condition Degraded

Alarm	Attributes	Applicable major releases
Name: IK8652608 (7755) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Monitor Condition Degraded (1702) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: A fault reporting feature has exceeded normal limits for the monitor indicated by the cpqSiMonitorIndex. The monitor's condition is degraded due to the internal temperature exceeding normal operating limits. The monitor is still useable, but action should be taken to return the condition to OK.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiMonitorConditionDegraded		
Remedial action: Physically check for obstructions to air flow around the monitor. Check the thermostat in the room that the system occupies. Allow the monitor to cool by turning off the monitor for 5 minutes then turn the monitor back on. After the monitor cools, another alarm indicating an improving condition, such as Monitor OK, will be issued.		

Table 26-1363 IK8652609 - Monitor Condition Failed

Alarm	Attributes	Applicable major releases
Name: IK8652609 (7756) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Monitor Condition Failed (1484) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced. Alarm to be cleared by the operator at the management system. Reason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-1364 IK8652610 - Excessive Correctable Memory Errors

Alarm	Attributes	Applicable major releases
Name: IK8652610 (7757) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Excessive Correctable Memory Errors (1485) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded. Alarm to be cleared by the operator at the management system. Reason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-1365 IK8652612 - Memory modules have changed

Alarm	Attributes	Applicable major releases
Name: IK8652612 (7758) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Memory modules have changed (1703) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: A memory configuration change has occurred. CpqSiMemConfigChangeData will indicate which memory modules slots have changed. Alarm to be cleared by the operator at the management system. Reason: cpqSiMemConfigChange		
Remedial action: You may want to verify a valid reason for a memory configuration to have occurred. If system issuing the alert is a Desktop running NT, the memory configuration change information is also logged in the NT System Log.		

Table 26-1366 IK8652615 - Hot Plug Slot Board Failed

Alarm	Attributes	Applicable major releases
Name: IK8652615 (7759) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Hot Plug Slot Board Failed (1486) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 26-1367 IK8652616 - Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8652616 (7760) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Failure (235) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 26-1368 IK8652617 - Battery Charging Degradation

Alarm	Attributes	Applicable major releases
Name: IK8652617 (7761) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Charging Degradation (1487) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 26-1369 IK8652618 - Battery Calibration Error

Alarm	Attributes	Applicable major releases
Name: IK8652618 (7762) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Battery Calibration Error (1704) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Calibration is needed with battery indicated by cpqSiSysBatteryIndex. The battery can not correctly indicate capacity.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryCalibrationError		
Remedial action: Run the Power Conservation Utility. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 26-1370 IK8652619 - Server Reset Detected

Alarm	Attributes	Applicable major releases
Name: IK8652619 (7763) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Server Reset Detected (1705) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Reset Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server reset.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerReset		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1371 IK8652620 - Server Power Outage

Alarm	Attributes	Applicable major releases
Name: IK8652620 (7764) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server Power Outage (1488) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 26-1372 IK8652621 - Out Unauthorized Login Attempts

Alarm	Attributes	Applicable major releases
Name: IK8652621 (7765) Type: securityServiceOrMechanismViolation (92) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Out Unauthorized Login Attempts (1706) Implicitly cleared: false Default probable cause: unauthorizedAccessAttempt (800)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Insight/ Integrated Lights-Out Unauthorized Login Attempts. The Remote Insight/ Integrated Lights-Out firmware has detected unauthorized login attempts.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2UnauthorizedLoginAttempts		
Remedial action: Check the iLO log for more information on the login failure.		

Table 26-1373 IK8652622 - Remote Insight Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8652622 (7766) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight Battery Failed (1489) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 26-1374 IK8652628 - Remote Insight external power cable disconnected

Alarm	Attributes	Applicable major releases
Name: IK8652628 (7767) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight external power cable disconnected (1490) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 26-1375 IK8652630 - Security override engaged

Alarm	Attributes	Applicable major releases
Name: IK8652630 (7768) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Security override engaged (1707) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Security Override Engaged. The Remote Insight/ Integrated Lights-Out firmware has detected the security override jumper has been toggled to the engaged position.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2SecurityOverrideEngaged		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1376 IK8652631 - Security override disengaged

Alarm	Attributes	Applicable major releases
Name: IK8652631 (7769) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Security override disengaged (1708) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Security Override Disengaged. The Remote Insight/ Integrated Lights-Out firmware has detected the security override jumper has been toggled to the disengaged position.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2SecurityOverrideDisengaged		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1377 IK8652632 - Server Fatal Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8652632 (7770) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server Fatal Error Detected (1491) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1378 IK8652633 - The iLO NIC Link is Down

Alarm	Attributes	Applicable major releases
Name: IK8652633 (7771) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The iLO NIC Link is Down (1492) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 26-1379 IK8652647 - PC Card Thermal Degraded Status

Alarm	Attributes	Applicable major releases
Name: IK8652647 (7772) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: PC Card Thermal Degraded Status (1709) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for safe operations thereby causing degraded operations. This alarm will be sent when cpqSePCCardStatus transitions from Normal (1) to Thermal Degraded (2). The manufacturer and product information strings as well as the slot number for the degraded PC Card is provided as parameters for this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSePCCardThermalDegraded		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1380 IK8652648 - PC Card Thermal Failure Status

Alarm	Attributes	Applicable major releases
Name: IK8652648 (7773) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: PC Card Thermal Failure Status (1493) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1381 IK8652657 - Storage System Temperature Failure

Alarm	Attributes	Applicable major releases
Name: IK8652657 (7774) Type: environmentalAlarm (2) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Storage System Temperature Failure (1494) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1382 IK8652658 - Storage System Temp Degraded

Alarm	Attributes	Applicable major releases
Name: IK8652658 (7775) Type: environmentalAlarm (2) Package: Img Raised on class: Img.LMGmngElement	Severity: minor Specific problem: Storage System Temp Degraded (1710) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsTempDegraded		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1383 IK8652661 - Storage System side panel is removed

Alarm	Attributes	Applicable major releases
Name: IK8652661 (7776) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: minor Specific problem: Storage System side panel is removed (1711) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel.\nAlarm is cleared by the system.\nReason: cpqSsSidePanelRemoved		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1384 IK8652662 - Power Supply Degraded

Alarm	Attributes	Applicable major releases
Name: IK8652662 (7777) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power Supply Degraded (1622) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A storage system power supply status has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsPwrSupplyDegraded		
Remedial action: check the storage system power supply		

Table 26-1385 IK8652664 - Storage System Temperature Failure

Alarm	Attributes	Applicable major releases
Name: IK8652664 (7778) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Storage System Temperature Failure (1494) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSs3TempFailed		
Remedial action: Shutdown the storage system as soon as possible. Insure that the storage system environment is being cooled properly and that no components are overheated.		

Table 26-1386 IK8652665 - Storage System Temp Degraded

Alarm	Attributes	Applicable major releases
Name: IK8652665 (7779) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Storage System Temp Degraded (1710) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature degraded. The agent has detected a temperature status that has been set to degraded. The storage system's temperature is outside of the normal operating range.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSs3TempDegraded		
Remedial action: Shutdown the storage system as soon as possible. Insure that the storage system environment is being cooled properly and that no components are overheated.		

Table 26-1387 IK8652668 - Storage System side panel is removed

Alarm	Attributes	Applicable major releases
Name: IK8652668 (7780) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Storage System side panel is removed (1711) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System side panel is removed. The side panel status has been set to removed. The storage system's side panel is not in a properly installed state. This situation may result in improper cooling of the drives in the storage system due to air flow changes caused by the missing side panel. Alarm to be cleared by the operator at the management system. Reason: cpqSs3SidePanelRemoved		
Remedial action: Replace the storage system side panel.		

Table 26-1388 IK8652669 - Power Supply Degraded

Alarm	Attributes	Applicable major releases
Name: IK8652669 (7781) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Power Supply Degraded (1622) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A storage system power supply status has been set to degraded. Alarm to be cleared by the operator at the management system. Reason: cpqSs3PwrSupplyDegraded		
Remedial action: check the storage system power supply		

Table 26-1389 IK8652670 - Power Supply Degraded

Alarm	Attributes	Applicable major releases
Name: IK8652670 (7782) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Power Supply Degraded (1622) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A storage system power supply status has been set to degraded. Alarm to be cleared by the operator at the management system. Reason: cpqSs4PwrSupplyDegraded		
Remedial action: Take action to restore power or replace any failed storage system power supply.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1390 IK8652695 - Rising Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8652695 (7783) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: minor Specific problem: Rising Threshold Passed (1712) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMeRisingAlarm		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1391 IK8652697 - Rising Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8652697 (7784) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: warning Specific problem: Rising Threshold Passed (1712) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMe2RisingAlarm		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1392 IK8652699 - Rising Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8652699 (7785) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: Rising Threshold Passed (1712) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Rising Threshold passed. An alarm entry has crossed its rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm is cleared by the system.\nReason: cpqMeRisingAlarmExtended		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1393 IK8652700 - Falling Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8652700 (7786) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: variable Specific problem: Falling Threshold Passed (1713) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Falling Threshold passed. An alarm entry has crossed its falling threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqMeFallingAlarmExtended		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1394 IK8652701 - Critical Rising Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8652701 (7787) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: variable Specific problem: Critical Rising Threshold Passed (1714) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Critical Rising Threshold passed. An alarm entry has crossed its Critical rising threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqMeCriticalRisingAlarmExtended		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1395 IK8652702 - Critical Falling Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8652702 (7788) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: variable Specific problem: Critical Falling Threshold Passed (1715) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Critical Falling Threshold passed. An alarm entry has crossed its Critical falling threshold. The instances of those objects contained within the variable list are those of the alarm entry which generated this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqMeCriticalFallingAlarmExtended		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1396 IK8652748 - fluteModuleAlarm

Alarm	Attributes	Applicable major releases
Name: IK8652748 (7789) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: variable Specific problem: fluteModuleAlarm (1716) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Alarm notification\nAlarm to be cleared by the operator at the management system.\nReason: fluteModuleAlarm		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1397 IK8654762 - linkDown

Alarm	Attributes	Applicable major releases
Name: IK8654762 (7790) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: linkDown (1495) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1398 IK8705835 - emergencyTrap

Alarm	Attributes	Applicable major releases
Name: IK8705835 (7791) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: emergencyTrap (1784) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A user-defined alarm indicating an extremely urgent situation, usually indicating that the system has failed and is shutting down.\nAlarm to be cleared by the operator at the management system.\nReason: emergencyTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1399 IK8705836 - alertTrap

Alarm	Attributes	Applicable major releases
Name: IK8705836 (7792) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: alertTrap (1785) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: A user-defined alarm indicating a condition that should be corrected immediately, such as a failed disk.\nAlarm to be cleared by the operator at the management system.\nReason: alertTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1400 IK8705837 - criticalTrap

Alarm	Attributes	Applicable major releases
Name: IK8705837 (7793) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: criticalTrap (1786) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A user-defined alarm indicating a critical condition, such as a hard device error.\nAlarm to be cleared by the operator at the management system.\nReason: criticalTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1401 IK8705843 - diskFailedShutdown

Alarm	Attributes	Applicable major releases
Name: IK8705843 (7794) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: diskFailedShutdown (1787) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: System is shutting down because the system has been running in degraded mode for 24 hours. The alarm includes a string describing the failed disk.\nAlarm is cleared by the system.\nReason: diskFailedShutdown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1402 IK8705844 - One or more disks failed

Alarm	Attributes	Applicable major releases
Name: IK8705844 (7795) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: One or more disks failed (1788) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more disks failed. The alarm includes a string describing the failed disk(s).\nAlarm is cleared by the system.\nReason: diskFailed		
Remedial action: check the disks		

Table 26-1403 IK8705846 - fanFailureShutdown

Alarm	Attributes	Applicable major releases
Name: IK8705846 (7796) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: fanFailureShutdown (1789) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: Critical chassis or cpu fans have failed and the system is shutting down.\nAlarm to be cleared by the operator at the management system.\nReason: fanFailureShutdown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1404 IK8705849 - powerSupplyFailureShutdown

Alarm	Attributes	Applicable major releases
Name: IK8705849 (7797) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: powerSupplyFailureShutdown (1790) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Critical power supplies or power rails failed and the system is shutting down.\nAlarm to be cleared by the operator at the management system.\nReason: powerSupplyFailureShutdown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1405 IK8705850 - One or more redundant power supplies failed

Alarm	Attributes	Applicable major releases
Name: IK8705850 (7798) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: One or more redundant power supplies failed (1791) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more redundant power supplies failed. Include in the alarm a string describing the failed power supply(ies).\nAlarm to be cleared by the operator at the management system.\nReason: powerSupplyFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1406 IK8705853 - CPU utilization exceeds 90%

Alarm	Attributes	Applicable major releases
Name: IK8705853 (7799) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: CPU utilization exceeds 90% (1792) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: CPU utilization exceeds 90%. This alarm is not enabled by default. To enable this alarm set the registry entry options.monitor.cpu.enable to on. Note that as the threshold for this alarm is checked once a minute it is possible to receive multiple instances of this alarm in a short time.\nAlarm is cleared by the system.\nReason: cpuTooBusy		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1407 IK8705855 - The NVRAM battery is fully discharged

Alarm	Attributes	Applicable major releases
Name: IK8705855 (7800) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: The NVRAM battery is fully discharged (1793) Implicitly cleared: false Default probable cause: batteryDischarging (648)	<ul style="list-style-type: none"> LR14.3.MG
Description: The NVRAM battery is fully discharged.\nAlarm to be cleared by the operator at the management system.\nReason: nvramBatteryDischarged		
Remedial action: Check the NVRAM battery		

Table 26-1408 IK8705856 - The charge in the NVRAM battery is low

Alarm	Attributes	Applicable major releases
Name: IK8705856 (7801) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The charge in the NVRAM battery is low (1794) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: The charge in the NVRAM battery is low.\nAlarm to be cleared by the operator at the management system.\nReason: nvramBatteryLow		
Remedial action: check the NVRAM battery		

Table 26-1409 IK8705865 - System temperature is too high to continue operating

Alarm	Attributes	Applicable major releases
Name: IK8705865 (7802) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: System temperature is too high to continue operating (1795) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: System temperature is too high to continue operating. The system is shutting down.\nAlarm to be cleared by the operator at the management system.\nReason: overTempShutdown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1410 IK8705870 - globalStatusNonRecoverable

Alarm	Attributes	Applicable major releases
Name: IK8705870 (7803) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: globalStatusNonRecoverable (1796) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The appliance's overall status changed to 'nonRecoverable', indicating a problem so severe that the appliance is shutting down.\nAlarm to be cleared by the operator at the management system.\nReason: globalStatusNonRecoverable		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1411 IK8705871 - globalStatusCritical

Alarm	Attributes	Applicable major releases
Name: IK8705871 (7804) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: globalStatusCritical (1797) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The appliance's overall status changed to 'critical', indicating a problem that needs immediate attention.\nAlarm to be cleared by the operator at the management system.\nReason: globalStatusCritical		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1412 IK8705872 - globalStatusNonCritical

Alarm	Attributes	Applicable major releases
Name: IK8705872 (7805) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: globalStatusNonCritical (1798) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The appliance's overall status changed to 'nonCritical', indicating a problem that needs attention.\nAlarm to be cleared by the operator at the management system.\nReason: globalStatusNonCritical		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1413 IK8705881 - UPS: Shutting down now: Time left on battery is exhausted

Alarm	Attributes	Applicable major releases
Name: IK8705881 (7806) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: UPS: Shutting down now: Time left on battery is exhausted (1799) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: UPS: Shutting down now: Time left on battery is exhausted.\nAlarm to be cleared by the operator at the management system.\nReason: upsShuttingDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1414 IK8705882 - UPS: Warning: Time left on battery is getting critical

Alarm	Attributes	Applicable major releases
Name: IK8705882 (7807) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: UPS: Warning: Time left on battery is getting critical (1800) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: UPS: Warning: Time left on battery is getting critical.\nAlarm to be cleared by the operator at the management system.\nReason: upsBatteryWarning		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1415 IK8705884 - appEmergency

Alarm	Attributes	Applicable major releases
Name: IK8705884 (7808) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: appEmergency (1801) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The application encountered an extremely urgent situation and requires an immediate response.\nAlarm to be cleared by the operator at the management system.\nReason: appEmergency		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1416 IK8705885 - appAlert

Alarm	Attributes	Applicable major releases
Name: IK8705885 (7809) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: appAlert (1802) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The application is in a condition that should be corrected immediately.\nAlarm to be cleared by the operator at the management system.\nReason: appAlert		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1417 IK8705900 - eccMasked

Alarm	Attributes	Applicable major releases
Name: IK8705900 (7810) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: eccMasked (1803) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory ECC: High frequency of ECC errors\nAlarm to be cleared by the operator at the management system.\nReason: eccMasked		
Remedial action: check Memory ECC		

Table 26-1418 IK8705902 - ftpdMaxConnNotice

Alarm	Attributes	Applicable major releases
Name: IK8705902 (7811) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: ftpdMaxConnNotice (1804) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Ftp daemon: number of connections hits maximum number\nAlarm to be cleared by the operator at the management system.\nReason: ftpdMaxConnNotice		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1419 IK8705907 - vifPrimaryLinkFailed

Alarm	Attributes	Applicable major releases
Name: IK8705907 (7812) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: vifPrimaryLinkFailed (1805) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Vif: The primary Interface on a Single mode vif has failed\nAlarm to be cleared by the operator at the management system.\nReason: vifPrimaryLinkFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1420 IK8705908 - vifAllLinksFailed

Alarm	Attributes	Applicable major releases
Name: IK8705908 (7813) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: vifAllLinksFailed (1806) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Vif: All the links of the vif have failed\nAlarm to be cleared by the operator at the management system.\nReason: vifAllLinksFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1421 IK8705916 - volumeRestrictedByMirrorBiglo

Alarm	Attributes	Applicable major releases
Name: IK8705916 (7814) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: volumeRestrictedByMirrorBiglo (1807) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: A volume that experienced a medium error during reconstruction is restricted and marked wafli-inconsistent, but starting wafliiron has failed. This alarm is issued to alert operator that a volume is not accessible and wafliiron must be started to allow access to it.\nAlarm to be cleared by the operator at the management system.\nReason: volumeRestrictedByMirrorBiglo		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1422 IK8705921 - rmcCardMissingCables

Alarm	Attributes	Applicable major releases
Name: IK8705921 (7815) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: rmcCardMissingCables (1808) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Management Controller card is missing its internal cable, or LAN cable or power supply cable. The alarm includes a string specifying the missing component.\nAlarm to be cleared by the operator at the management system.\nReason: rmcCardMissingCables		
Remedial action: check Remote Management Controller card and its internal cable		

Table 26-1423 IK8705935 - The chassis temperature is extreme

Alarm	Attributes	Applicable major releases
Name: IK8705935 (7816) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: critical Specific problem: The chassis temperature is extreme (1809) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The chassis temperature is extreme. The appliance has initiated a shutdown to protect itself. The operating environment should be monitored and corrected before restarting the appliance. Alarm to be cleared by the operator at the management system. Reason: chassisTemperatureShutdown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1424 IK8705939 - One or more CPU fans have stopped

Alarm	Attributes	Applicable major releases
Name: IK8705939 (7817) Type: environmentalAlarm (2) Package: Img Raised on class: Img.LMGmngElement	Severity: critical Specific problem: One or more CPU fans have stopped (1810) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more CPU fans have stopped. The appliance has initiated a shutdown to protect itself. A new motherboard may be required to correct the fan. Contact customer support for direction. Alarm to be cleared by the operator at the management system. Reason: chassisCPUFanStopped		
Remedial action: check the chassis fan		

Table 26-1425 IK8705942 - Multiple chassis power supplies failed

Alarm	Attributes	Applicable major releases
Name: IK8705942 (7818) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: critical Specific problem: Multiple chassis power supplies failed (1811) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Multiple chassis power supplies failed. Alarm is cleared by the system. Reason: chassisPowerSuppliesFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1426 IK8705943 - One or more chassis power supplies are degraded

Alarm	Attributes	Applicable major releases
Name: IK8705943 (7819) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: One or more chassis power supplies are degraded (1812) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more chassis power supplies are degraded. A description of the degraded state has been logged to the console and message log file.\nAlarm to be cleared by the operator at the management system.\nReason: chassisPowerSupplyDegraded		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1427 IK8705944 - One chassis power supply failed

Alarm	Attributes	Applicable major releases
Name: IK8705944 (7820) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: One chassis power supply failed (1813) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One chassis power supply failed.\nAlarm to be cleared by the operator at the management system.\nReason: chassisPowerSupplyFailed		
Remedial action: Check the chassis power supply		

Table 26-1428 IK8705957 - prefDCDisconnect

Alarm	Attributes	Applicable major releases
Name: IK8705957 (7821) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: prefDCDisconnect (1814) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: All connections to domain controllers in the preferred domain controllers list have been lost.\nAlarm to be cleared by the operator at the management system.\nReason: prefDCDisconnect		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1429 IK8705963 - shelfSESElectronicsFailed

Alarm	Attributes	Applicable major releases
Name: IK8705963 (7822) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: shelfSESElectronicsFailed (1815) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more of the enclosure services devices in a disk shelf has failed. Some shelf designs combine the enclosure monitoring hardware function into the module that provides the storage interface to the shelf. A failure in the enclosure monitoring section of these combined modules does not necessarily indicate a failure in disk or loop or bus operation, which may be able to continue. Alarm is cleared by the system. Reason: shelfSESElectronicsFailed		
Remedial action: Check the disk shelf		

Table 26-1430 IK8705965 - shelfIFModuleFailed

Alarm	Attributes	Applicable major releases
Name: IK8705965 (7823) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: shelfIFModuleFailed (1816) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more of the storage interface modules in a disk shelf has failed. Some shelf designs combine the enclosure monitoring hardware function into the module that operates the fibre channel loop or SCSI in the shelf. This failure is of the storage interface itself, not a failure of the enclosure monitoring, which may be able to continue. This failure may make one or more disks in the shelf or in the loop or bus unavailable. Alarm to be cleared by the operator at the management system. Reason: shelfIFModuleFailed		
Remedial action: Check the storage interface modules in the disk shelf		

Table 26-1431 IK8705971 - Power Supply Unit is removed from the system

Alarm	Attributes	Applicable major releases
Name: IK8705971 (7824) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Unit is removed from the system (1817) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power Supply Unit is removed from the system. System will be shutdown in x minutes if it is not put back. Alarm to be cleared by the operator at the management system. Reason: chassisPSRemovedxMinShutdown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.

Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed. Alarm to be cleared by the operator at the management system. Reason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-1445 IK8751010 - The secondary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8751010 (7838) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The secondary controller in the subsystem has failed (1432) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed. Alarm to be cleared by the operator at the management system. Reason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-1446 IK8751013 - A RAIDset has failed

Alarm	Attributes	Applicable major releases
Name: IK8751013 (7839) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A RAIDset has failed (1433) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 26-1447 IK8751018 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8751018 (7840) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-1448 IK8751023 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8751023 (7841) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: false Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-1449 IK8751030 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8751030 (7842) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-1450 IK8751033 - Primary enclosure temperature critical!

Alarm	Attributes	Applicable major releases
Name: IK8751033 (7843) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Primary enclosure temperature critical! (1436) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 26-1451 IK8751037 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8751037 (7844) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-1452 IK8751040 - cpqCrExpCabTemperatureCriticalTrap

Alarm	Attributes	Applicable major releases
Name: IK8751040 (7845) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: cpqCrExpCabTemperatureCriticalTrap (1437) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 26-1453 IK8751060 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8751060 (7846) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-1454 IK8751073 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8751073 (7847) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-1455 IK8751098 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8751098 (7848) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-1456 IK8751102 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8751102 (7849) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-1457 IK8751105 - System Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8751105 (7850) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: System Fan Failure (1441) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the failed fan.		

Table 26-1458 IK8751112 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8751112 (7851) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-1459 IK8751116 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8751116 (7852) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FitToPowerSupplyFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1460 IK8751121 - Fan Failed

Alarm	Attributes	Applicable major releases
Name: IK8751121 (7853) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fan Failed (1443) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system.\nReason: cpqHe3FitToFanFailed		
Remedial action: Replace the failed fan.		

Table 26-1461 IK8751125 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8751125 (7854) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-1462 IK8751129 - Power Converter Failed

Alarm	Attributes	Applicable major releases
Name: IK8751129 (7855) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Converter Failed (1444) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 26-1463 IK8751135 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8751135 (7856) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FitToIPowerSupplyFailed		
Remedial action: Replace the failed power supply.		

Table 26-1464 IK8751144 - Memory Board or Cartridge Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8751144 (7857) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected (1445) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected. Alarm to be cleared by the operator at the management system. Reason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 26-1465 IK8751148 - Management processor failed reset

Alarm	Attributes	Applicable major releases
Name: IK8751148 (7858) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Management processor failed reset (1446) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational. Alarm to be cleared by the operator at the management system. Reason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management processor again or re-flash the management processor firmware.		

Table 26-1466 IK8751152 - Memory Board or Cartridge or Riser Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8751152 (7859) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected (1447) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based. Alarm to be cleared by the operator at the management system. Reason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 26-1467 IK8751154 - Power Supply AC Power Loss

Alarm	Attributes	Applicable major releases
Name: IK8751154 (7860) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply AC Power Loss (1448) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location. \nAlarm to be cleared by the operator at the management system. \nReason: cpqHe4FitToPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 26-1468 IK8751156 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8751156 (7861) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc. \nAlarm to be cleared by the operator at the management system. \nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1469 IK8751158 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8751158 (7862) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc. \nAlarm to be cleared by the operator at the management system. \nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1470 IK8751163 - Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8751163 (7863) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Status Trap (1450) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition. \nAlarm is cleared by the system. \nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 26-1471 IK8751172 - Power Threshold Exceeded

Alarm	Attributes	Applicable major releases
Name: IK8751172 (7864) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Threshold Exceeded (1451) Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded. \nAlarm to be cleared by the operator at the management system. \nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1472 IK8752265 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8752265 (7865) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-1473 IK8752272 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8752272 (7866) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-1474 IK8752279 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8752279 (7867) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-1475 IK8752291 - Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8752291 (7868) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Bad Data (1453) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-1476 IK8752292 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8752292 (7869) Type: environmentalAlarm (2) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-1477 IK8752295 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8752295 (7870) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-1478 IK8752302 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8752302 (7871) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1479 IK8752337 - NIC Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8752337 (7872) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Status Trap (1455) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm is cleared by the system. Reason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1480 IK8752341 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8752341 (7873) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm is cleared by the system. Reason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1481 IK8752343 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8752343 (7874) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm is cleared by the system. Reason: cpqNic2RedundancyReduced		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.

Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1484 IK8752360 - Enclosure temperature failed

Alarm	Attributes	Applicable major releases
Name: IK8752360 (7877) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure temperature failed (1458) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 26-1485 IK8752363 - Enclosure fan failed

Alarm	Attributes	Applicable major releases
Name: IK8752363 (7878) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure fan failed (1459) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 26-1486 IK8752368 - Rack power supply failed

Alarm	Attributes	Applicable major releases
Name: IK8752368 (7879) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Rack power supply failed (1460) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 26-1487 IK8752369 - Rack power supply degraded

Alarm	Attributes	Applicable major releases
Name: IK8752369 (7880) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply degraded (1461) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 26-1488 IK8752374 - Rack power supply input voltage problem

Alarm	Attributes	Applicable major releases
Name: IK8752374 (7881) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply input voltage problem (1462) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 26-1489 IK8752375 - Rack power subsystem overload condition

Alarm	Attributes	Applicable major releases
Name: IK8752375 (7882) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power subsystem overload condition (1463) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power subsystem overload condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 26-1490 IK8752376 - Server shutdown due to power shedding

Alarm	Attributes	Applicable major releases
Name: IK8752376 (7883) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server shutdown due to power shedding (1464) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 26-1491 IK8752377 - Server power on prevented to preserve redundancy

Alarm	Attributes	Applicable major releases
Name: IK8752377 (7884) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server power on prevented to preserve redundancy (1465) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 26-1492 IK8752378 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8752378 (7885) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 26-1493 IK8752379 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8752379 (7886) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 26-1494 IK8752380 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8752380 (7887) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedPowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 26-1495 IK8752382 - Fuse open

Alarm	Attributes	Applicable major releases
Name: IK8752382 (7888) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fuse open (1467) Implicitly cleared: false Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fuse open. The fuse has been tripped.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 26-1496 IK8752386 - Power subsystem DC power problem

Alarm	Attributes	Applicable major releases
Name: IK8752386 (7889) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem DC power problem (1468) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-1497 IK8752387 - Power subsystem AC facility input power exceeded

Alarm	Attributes	Applicable major releases
Name: IK8752387 (7890) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem AC facility input power exceeded (1469) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisAcFacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-1498 IK8752388 - Unknown power consumption

Alarm	Attributes	Applicable major releases
Name: IK8752388 (7891) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Unknown power consumption (1470) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-1499 IK8752391 - Power subsystem improperly configured

Alarm	Attributes	Applicable major releases
Name: IK8752391 (7892) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem improperly configured (1471) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 26-1500 IK8752401 - Interconnect failed

Alarm	Attributes	Applicable major releases
Name: IK8752401 (7893) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Interconnect failed (1472) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 26-1501 IK8752408 - Server blade health status degraded

Alarm	Attributes	Applicable major releases
Name: IK8752408 (7894) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade health status degraded (1473) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-1502 IK8752409 - Server blade health status critical

Alarm	Attributes	Applicable major releases
Name: IK8752409 (7895) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server blade health status critical (1474) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-1503 IK8752411 - Server blade unexpected shutdown

Alarm	Attributes	Applicable major releases
Name: IK8752411 (7896) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade unexpected shutdown (1475) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An unexpected shutdown has occurred for this server blade.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-1504 IK8752428 - Generic EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8752428 (7897) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic EAE Major trap (1476) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1505 IK8752429 - Generic EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8752429 (7898) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic EAE Critical trap (1477) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1506 IK8752431 - Generic Power Subsystem EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8752431 (7899) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic Power Subsystem EAE Major trap (1478) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-1507 IK8752432 - Generic Power Subsystem EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8752432 (7900) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap (1479) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1508 IK8752436 - Generic WSMAN Major trap

Alarm	Attributes	Applicable major releases
Name: IK8752436 (7901) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic WSMAN Major trap (1480) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1509 IK8752437 - Generic WSMAN Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8752437 (7902) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic WSMAN Critical trap (1481) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1510 IK8752439 - Standby Recovery Server Interconnect Failure

Alarm	Attributes	Applicable major releases
Name: IK8752439 (7903) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure (1482) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1511 IK8752559 - Critical Alarm

Alarm	Attributes	Applicable major releases
Name: IK8752559 (7904) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGmngElement	Severity: critical Specific problem: Critical Alarm (1483) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 26-1512 IK8752609 - Monitor Condition Failed

Alarm	Attributes	Applicable major releases
Name: IK8752609 (7905) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Monitor Condition Failed (1484) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-1513 IK8752610 - Excessive Correctable Memory Errors

Alarm	Attributes	Applicable major releases
Name: IK8752610 (7906) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGmngElement	Severity: major Specific problem: Excessive Correctable Memory Errors (1485) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-1514 IK8752615 - Hot Plug Slot Board Failed

Alarm	Attributes	Applicable major releases
Name: IK8752615 (7907) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Hot Plug Slot Board Failed (1486) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 26-1515 IK8752616 - Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8752616 (7908) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Failure (235) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 26-1516 IK8752617 - Battery Charging Degradation

Alarm	Attributes	Applicable major releases
Name: IK8752617 (7909) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Charging Degradation (1487) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 26-1517 IK8752620 - Server Power Outage

Alarm	Attributes	Applicable major releases
Name: IK8752620 (7910) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server Power Outage (1488) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 26-1518 IK8752622 - Remote Insight Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8752622 (7911) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight Battery Failed (1489) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 26-1519 IK8752628 - Remote Insight external power cable disconnected

Alarm	Attributes	Applicable major releases
Name: IK8752628 (7912) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight external power cable disconnected (1490) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 26-1520 IK8752632 - Server Fatal Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8752632 (7913) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server Fatal Error Detected (1491) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1521 IK8752633 - The iLO NIC Link is Down

Alarm	Attributes	Applicable major releases
Name: IK8752633 (7914) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The iLO NIC Link is Down (1492) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 26-1522 IK8752648 - PC Card Thermal Failure Status

Alarm	Attributes	Applicable major releases
Name: IK8752648 (7915) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: PC Card Thermal Failure Status (1493) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1523 IK8752657 - Storage System Temperature Failure

Alarm	Attributes	Applicable major releases
Name: IK8752657 (7916) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Storage System Temperature Failure (1494) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1524 IK8754762 - linkDown

Alarm	Attributes	Applicable major releases
Name: IK8754762 (7917) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: linkDown (1495) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1525 IK8802753 - CPU temperature is too high

Alarm	Attributes	Applicable major releases
Name: IK8802753 (7918) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: CPU temperature is too high (1825) Implicitly cleared: false Default probable cause: highTemperature (667)	<ul style="list-style-type: none"> LR14.3.MG
Description: CPU temperature is too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipCpuTempHigh		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1526 IK8802755 - CPU fan speed signal not received

Alarm	Attributes	Applicable major releases
Name: IK8802755 (7919) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: CPU fan speed signal not received (1826) Implicitly cleared: false Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: CPU fan speed signal not received.\nAlarm to be cleared by the operator at the management system.\nReason: bigipCpuFanSpeedBad		
Remedial action: check the CPU fan		

Table 26-1527 IK8802756 - Chassis temperature is too high

Alarm	Attributes	Applicable major releases
Name: IK8802756 (7920) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Chassis temperature is too high (1827) Implicitly cleared: false Default probable cause: highTemperature (667)	<ul style="list-style-type: none"> LR14.3.MG
Description: Chassis temperature is too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipChassisTempHigh		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1528 IK8802758 - Chassis power supply status is bad

Alarm	Attributes	Applicable major releases
Name: IK8802758 (7921) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Chassis power supply status is bad (1828) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Chassis power supply status is bad.\nAlarm to be cleared by the operator at the management system.\nReason: bigipChassisPowerSupplyBad		
Remedial action: check the Chassis power supply		

Table 26-1529 IK8802759 - A service is detected DOWN

Alarm	Attributes	Applicable major releases
Name: IK8802759 (7922) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A service is detected DOWN (1829) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A service is detected DOWN.\nAlarm is cleared by the system.\nReason: bigipServiceDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1530 IK8802761 - A node is detected DOWN

Alarm	Attributes	Applicable major releases
Name: IK8802761 (7923) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A node is detected DOWN (1830) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A node is detected DOWN.\nAlarm is cleared by the system.\nReason: bigipNodeDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1531 IK8802778 - The system is in an unusable situation

Alarm	Attributes	Applicable major releases
Name: IK8802778 (7924) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: The system is in an unusable situation (1831) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system is in an unusable situation.\nAlarm to be cleared by the operator at the management system.\nReason: bigipLogEmerg		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1532 IK8802779 - bigipLogAlert

Alarm	Attributes	Applicable major releases
Name: IK8802779 (7925) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: bigipLogAlert (1832) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Action must be taken immediately for the system to work properly.\nAlarm to be cleared by the operator at the management system.\nReason: bigipLogAlert		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1533 IK8802780 - The system is in a critical condition

Alarm	Attributes	Applicable major releases
Name: IK8802780 (7926) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: The system is in a critical condition (1833) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system is in a critical condition.\nAlarm to be cleared by the operator at the management system.\nReason: bigipLogCrit		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1534 IK8802787 - bigipAsmRequestBlocked

Alarm	Attributes	Applicable major releases
Name: IK8802787 (7927) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: bigipAsmRequestBlocked (1834) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The HTTP request was blocked because it issued (at least one) violation(s) which is marked as blocking at the current active policy in Application Security Module.\nAlarm to be cleared by the operator at the management system.\nReason: bigipAsmRequestBlocked		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1535 IK8802788 - bigipAsmRequestViolation

Alarm	Attributes	Applicable major releases
Name: IK8802788 (7928) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: bigipAsmRequestViolation (1835) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The HTTP request issued a violation to the current active policy. This violation is marked as an alerting violation in that policy in Application Security Module. Alarm to be cleared by the operator at the management system. Reason: bigipAsmRequestViolation		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1536 IK8802806 - bigipGtmServerNotAvail

Alarm	Attributes	Applicable major releases
Name: IK8802806 (7929) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: bigipGtmServerNotAvail (1836) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A server is becoming unavailable in global traffic management module. Alarm is cleared by the system. Reason: bigipGtmServerNotAvail		
Remedial action: Check the server		

Table 26-1537 IK8802827 - bigipGtmBoxNotAvail

Alarm	Attributes	Applicable major releases
Name: IK8802827 (7930) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: bigipGtmBoxNotAvail (1837) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A gtm machine (which equates to an iquery connect to a gtm machine) has gone DOWN Alarm is cleared by the system. Reason: bigipGtmBoxNotAvail		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1538 IK8802828 - bigipAsmFtpRequestBlocked

Alarm	Attributes	Applicable major releases
Name: IK8802828 (7931) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: bigipAsmFtpRequestBlocked (1838) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The FTP request was blocked because it issued (at least one) violation(s) which is marked as blocking at the current active policy in Application Security Module. \nAlarm to be cleared by the operator at the management system. \nReason: bigipAsmFtpRequestBlocked		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1539 IK8802829 - bigipAsmFtpRequestViolation

Alarm	Attributes	Applicable major releases
Name: IK8802829 (7932) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: bigipAsmFtpRequestViolation (1839) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The FTP request issued a violation to the current active policy. This violation is marked as an alerting violation in that policy in Application Security Module. \nAlarm to be cleared by the operator at the management system. \nReason: bigipAsmFtpRequestViolation		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1540 IK8802834 - bigipAsmSmtRequestBlocked

Alarm	Attributes	Applicable major releases
Name: IK8802834 (7933) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: bigipAsmSmtRequestBlocked (1840) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The SMTP request was blocked because it issued (at least one) violation(s) which is marked as blocking at the current active policy in Application Security Module. \nAlarm to be cleared by the operator at the management system. \nReason: bigipAsmSmtRequestBlocked		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1541 IK8802835 - bigipAsmSmtRequestViolation

Alarm	Attributes	Applicable major releases
Name: IK8802835 (7934) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: bigipAsmSmtRequestViolation (1841) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: The SMTP request issued a violation to the current active policy. This violation is marked as an alerting violation in that policy in Application Security Module. Alarm to be cleared by the operator at the management system. Reason: bigipAsmSmtRequestViolation		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1542 IK8802836 - Blade temperature is too high

Alarm	Attributes	Applicable major releases
Name: IK8802836 (7935) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Blade temperature is too high (1842) Implicitly cleared: false Default probable cause: highTemperature (667)	<ul style="list-style-type: none"> LR14.3.MG
Description: Blade temperature is too high. Alarm to be cleared by the operator at the management system. Reason: bigipBladeTempHigh		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1543 IK8802837 - A blade lost power

Alarm	Attributes	Applicable major releases
Name: IK8802837 (7936) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A blade lost power (1843) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A blade lost power. The blade may be pulled out Alarm to be cleared by the operator at the management system. Reason: bigipBladeNoPower		
Remedial action: Check the Power of the blade		

Table 26-1544 IK8802839 - offline

Alarm	Attributes	Applicable major releases
Name: IK8802839 (7937) Type: equipmentAlarm (3) Package: Img Raised on class: Img.LMGElement	Severity: major Specific problem: offline (1844) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A blade has failed - offline.\nAlarm to be cleared by the operator at the management system.\nReason: bigipBladeOffline		
Remedial action: Replace the blade		

Table 26-1545 IK8802841 - Brute force attack detected by Application Security Module

Alarm	Attributes	Applicable major releases
Name: IK8802841 (7938) Type: processingErrorAlarm (81) Package: Img Raised on class: Img.LMGElement	Severity: major Specific problem: Brute force attack detected by Application Security Module (1845) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Brute force attack detected by Application Security Module.\nAlarm to be cleared by the operator at the management system.\nReason: bigipAsmBruteForceAttackDetected		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1546 IK8802842 - AOM reports the air temperature near the host CPU too high

Alarm	Attributes	Applicable major releases
Name: IK8802842 (7939) Type: environmentalAlarm (2) Package: Img Raised on class: Img.LMGElement	Severity: major Specific problem: AOM reports the air temperature near the host CPU too high (1846) Implicitly cleared: false Default probable cause: highTemperature (667)	<ul style="list-style-type: none"> LR14.3.MG
Description: AOM reports the air temperature near the host CPU too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipAomCpuTempTooHigh		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1547 IK8802845 - Disk failure in a RAID disk array

Alarm	Attributes	Applicable major releases
Name: IK8802845 (7940) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Disk failure in a RAID disk array (1847) Implicitly cleared: false Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: Disk failure in a RAID disk array.\nAlarm to be cleared by the operator at the management system.\nReason: bigipRaidDiskFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1548 IK8802857 - A VCMP guest is powered off

Alarm	Attributes	Applicable major releases
Name: IK8802857 (7941) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A VCMP guest is powered off (1848) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: A VCMP guest is powered off.\nAlarm is cleared by the system.\nReason: bigipVcmpAlertsVcmpPowerOff		
Remedial action: Check the VCMP guest		

Table 26-1549 IK8802858 - A VCMP guest heartbeat is lost

Alarm	Attributes	Applicable major releases
Name: IK8802858 (7942) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A VCMP guest heartbeat is lost (1849) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A VCMP guest heartbeat is lost.\nAlarm is cleared by the system.\nReason: bigipVcmpAlertsVcmpHBLost		
Remedial action: Check the VCMP guest		

Table 26-1550 IK8802862 - Temperature is too high

Alarm	Attributes	Applicable major releases
Name: IK8802862 (7943) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Temperature is too high (1850) Implicitly cleared: false Default probable cause: highTemperature (667)	<ul style="list-style-type: none"> LR14.3.MG
Description: Temperature is too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipSystemCheckAlertTempHigh		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1551 IK8802863 - Voltage is too high

Alarm	Attributes	Applicable major releases
Name: IK8802863 (7944) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Voltage is too high (1851) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Voltage is too high.\nAlarm to be cleared by the operator at the management system.\nReason: bigipSystemCheckAlertVoltageHigh		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1552 IK8802869 - Blade hardware sensor indicated critical alarm

Alarm	Attributes	Applicable major releases
Name: IK8802869 (7945) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Blade hardware sensor indicated critical alarm (1852) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Blade hardware sensor indicated critical alarm.\nAlarm to be cleared by the operator at the management system.\nReason: bigipLibhalSensorAlarmCritical		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1553 IK8802872 - Voltage is too low

Alarm	Attributes	Applicable major releases
Name: IK8802872 (7946) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Voltage is too low (1853) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Voltage is too low.\nAlarm to be cleared by the operator at the management system.\nReason: bigipSystemCheckAlertVoltageLow		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.

Table 26-1558 IK8802886 - Software installation has failed

Alarm	Attributes	Applicable major releases
Name: IK8802886 (7951) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Software installation has failed (1856) Implicitly cleared: true Default probable cause: softwareProgramError (720)	<ul style="list-style-type: none"> LR14.3.MG
Description: Software installation has failed.\nAlarm is cleared by the system.\nReason: emSoftwareInstallFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1559 IK8802887 - A device clock is out of sync with EM

Alarm	Attributes	Applicable major releases
Name: IK8802887 (7952) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A device clock is out of sync with EM (1857) Implicitly cleared: false Default probable cause: timingProblem (903)	<ul style="list-style-type: none"> LR14.3.MG
Description: A device clock is out of sync with EM.\nAlarm to be cleared by the operator at the management system.\nReason: emDeviceClockSkew		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1560 IK8802889 - The system memory is exceeding configured usage limits

Alarm	Attributes	Applicable major releases
Name: IK8802889 (7953) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: The system memory is exceeding configured usage limits (1858) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system memory is exceeding configured usage limits.\nAlarm to be cleared by the operator at the management system.\nReason: emMemoryUsage		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1561 IK8802892 - The cpu is exceeding configured usage limits

Alarm	Attributes	Applicable major releases
Name: IK8802892 (7954) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: The cpu is exceeding configured usage limits (1859) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The cpu is exceeding configured usage limits.\nAlarm to be cleared by the operator at the management system.\nReason: emCpuUsage		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1562 IK8802898 - The system RAID drive failure has been detected

Alarm	Attributes	Applicable major releases
Name: IK8802898 (7955) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: The system RAID drive failure has been detected (1860) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system RAID drive failure has been detected.\nAlarm is cleared by the system.\nReason: emRaidDriveFailureDetected		
Remedial action: chzck the system RAID drive		

Table 26-1563 IK8802900 - EM HA Sync has failed

Alarm	Attributes	Applicable major releases
Name: IK8802900 (7956) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: EM HA Sync has failed (1861) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: EM HA Sync has failed.\nAlarm to be cleared by the operator at the management system.\nReason: emHaSyncFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1564 IK8802905 - emPerformanceStorageDays

Alarm	Attributes	Applicable major releases
Name: IK8802905 (7957) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: emPerformanceStorageDays (1862) Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Performance storage capacity is about to fall below configured number of days.\nAlarm is cleared by the system.\nReason: emPerformanceStorageDays		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1565 IK8802908 - Scheduled performance data backup has failed

Alarm	Attributes	Applicable major releases
Name: IK8802908 (7958) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Scheduled performance data backup has failed (1863) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Scheduled performance data backup has failed.\nAlarm to be cleared by the operator at the management system.\nReason: emSchedBackupFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1566 IK8900982 - Cluster Node Failed

Alarm	Attributes	Applicable major releases
Name: IK8900982 (8288) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Node Failed (1428) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a node in the cluster becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterNodeFailed		
Remedial action: Make a note of the cluster node name then check the node for the cause of the failure.		

Table 26-1567 IK8900984 - Cluster Resource Failed

Alarm	Attributes	Applicable major releases
Name: IK8900984 (8289) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Resource Failed (1429) Implicitly cleared: false Default probable cause: underlyingResourceUnavailable (724)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster resource becomes failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqClusterResourceFailed		
Remedial action: Make a note of the cluster resource name then check the resource for the cause of the failure.		

Table 26-1568 IK8900986 - Cluster Network Failed

Alarm	Attributes	Applicable major releases
Name: IK8900986 (8290) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Cluster Network Failed (1430) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the condition of a cluster network becomes failed. Alarm to be cleared by the operator at the management system. Reason: cpqClusterNetworkFailed		
Remedial action: Make a note of the cluster network name then check the network for the cause of the failure.		

Table 26-1569 IK8901008 - The primary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8901008 (8291) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The primary controller in the subsystem has failed (1431) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The primary controller in the subsystem has failed. Details: The primary Controller has failed. Alarm to be cleared by the operator at the management system. Reason: cpqCrController1FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-1570 IK8901010 - The secondary controller in the subsystem has failed

Alarm	Attributes	Applicable major releases
Name: IK8901010 (8292) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The secondary controller in the subsystem has failed (1432) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The secondary controller in the subsystem has failed. Details: The secondary controller has failed. Alarm to be cleared by the operator at the management system. Reason: cpqCrController2FailureTrap		
Remedial action: Replace controller. Possible causes are controller physically removed, actual hardware failure.		

Table 26-1571 IK8901013 - A RAIDset has failed

Alarm	Attributes	Applicable major releases
Name: IK8901013 (8293) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A RAIDset has failed (1433) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A RAIDset has failed. Details: The RAIDset has failed and is off-line.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrLogDriveFailureTrap		
Remedial action: Possible cause is too many failed disk drives that make up the RAIDset, the OS can no longer communicate with the RAIDset for other reasons.		

Table 26-1572 IK8901018 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8901018 (8294) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: true Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm is cleared by the system.\nReason: cpqCrDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-1573 IK8901023 - A disk drive has failed

Alarm	Attributes	Applicable major releases
Name: IK8901023 (8295) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: A disk drive has failed (1434) Implicitly cleared: false Default probable cause: storageCapacityProblem (679)	<ul style="list-style-type: none"> LR14.3.MG
Description: A disk drive has failed. Details: A disk device has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrPhyDiskFailureTrap		
Remedial action: Replace the disk device.		

Table 26-1574 IK8901030 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8901030 (8296) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the primary enclosure has failed.\nAlarm is cleared by the system.\nReason: cpqCrEMUPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-1575 IK8901033 - Primary enclosure temperature critical!

Alarm	Attributes	Applicable major releases
Name: IK8901033 (8297) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Primary enclosure temperature critical! (1436) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Primary enclosure temperature critical!. Details: The temperature in the primary enclosure has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrEMUTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the primary enclosure.		

Table 26-1576 IK8901037 - Power supply has failed

Alarm	Attributes	Applicable major releases
Name: IK8901037 (8298) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Power supply has failed (1435) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power supply has failed. Details: One of the power supplies in the expansion cabinet has failed.\nAlarm is cleared by the system.\nReason: cpqCrExpCabPowerSupplyFailureTrap		
Remedial action: Replace the power supply. Possible causes are power supply physically removed, power cord unplugged, actual hardware failure.		

Table 26-1577 IK8901040 - cpqCrExpCabTemperatureCriticalTrap

Alarm	Attributes	Applicable major releases
Name: IK8901040 (8299) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: cpqCrExpCabTemperatureCriticalTrap (1437) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Expansion cabinet temperature critical! Details: The temperature in the expansion cabinet has triggered a critical condition detected by the controller.\nAlarm to be cleared by the operator at the management system.\nReason: cpqCrExpCabTemperatureCriticalTrap		
Remedial action: Check the cooling fans in the expansion cabinet.		

Table 26-1578 IK8901060 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8901060 (8300) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFcaAccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-1579 IK8901073 - External Array Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8901073 (8301) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: External Array Accelerator Board Battery Failed (1438) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Array Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the Array Accelerator Cache Board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqFca2AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-1580 IK8901098 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8901098 (8302) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHePostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-1581 IK8901102 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8901102 (8303) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed. The system will be shutdown due to this thermal condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3ThermalTempFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-1582 IK8901105 - System Fan Failure

Alarm	Attributes	Applicable major releases
Name: IK8901105 (8304) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: System Fan Failure (1441) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The system fan status has been set to failed. A required system fan is not operating normally. The system will be shutdown if the cpqHeThermalDegradedAction variable is set to shutdown(3).\nAlarm is cleared by the system.\nReason: cpqHe3ThermalSystemFanFailed		
Remedial action: Replace the failed fan.		

Table 26-1583 IK8901112 - POST Errors Occurred

Alarm	Attributes	Applicable major releases
Name: IK8901112 (8305) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: POST Errors Occurred (1439) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: One or more POST errors occurred. Power On Self-Test (POST) errors occur during the server restart process. Details of the POST error messages can be found in Integrated Management Log\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PostError		
Remedial action: Refer to the Integrated Management Log for details on the POST error.		

Table 26-1584 IK8901116 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8901116 (8306) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe3FitToPowerSupplyFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1585 IK8901121 - Fan Failed

Alarm	Attributes	Applicable major releases
Name: IK8901121 (8307) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fan Failed (1443) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Fault Tolerant Fan condition has been set to failed for the specified chassis and fan.\nAlarm is cleared by the system.\nReason: cpqHe3FitToFanFailed		
Remedial action: Replace the failed fan.		

Table 26-1586 IK8901125 - Thermal Failure

Alarm	Attributes	Applicable major releases
Name: IK8901125 (8308) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Thermal Failure (1440) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: The temperature status has been set to failed in the specified chassis and location. The system will be shutdown due to this condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3TemperatureFailed		
Remedial action: Check the system for hardware failures and verify the environment is properly cooled.		

Table 26-1587 IK8901129 - Power Converter Failed

Alarm	Attributes	Applicable major releases
Name: IK8901129 (8309) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Converter Failed (1444) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The DC-DC Power Converter condition has been set to failed for the specified chassis, slot and socket.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe3PowerConverterFailed		
Remedial action: Replace the failed power converter.		

Table 26-1588 IK8901135 - Power Supply Failed

Alarm	Attributes	Applicable major releases
Name: IK8901135 (8310) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply Failed (1442) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply condition has been set to failed for the specified chassis and bay location.\nAlarm is cleared by the system.\nReason: cpqHe4FitToIPowerSupplyFailed		
Remedial action: Replace the failed power supply.		

Table 26-1589 IK8901144 - Memory Board or Cartridge Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8901144 (8311) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge Bus Error Detected (1445) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge bus error detected. An Advanced Memory Protection sub-system board or cartridge bus error has been detected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge.		

Table 26-1590 IK8901148 - Management processor failed reset

Alarm	Attributes	Applicable major releases
Name: IK8901148 (8312) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Management processor failed reset (1446) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The Management processor failed reset The management processor was not successfully reset and is not operational.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHeManagementProcFailedReset		
Remedial action: Reset the management procesessor again or re-flash the management processor firmware.		

Table 26-1591 IK8901152 - Memory Board or Cartridge or Riser Bus Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8901152 (8313) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Memory Board or Cartridge or Riser Bus Error Detected (1447) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Memory board or cartridge or Riser bus error detected. An Advanced Memory Protection sub-system board or cartridge or Riser bus error has been detected. Value 0 for CPU means memory is not processor based.\nAlarm to be cleared by the operator at the management system.\nReason: cpqHe5ResMemBoardBusError		
Remedial action: Replace the indicated board or cartridge or Riser.		

Table 26-1592 IK8901154 - Power Supply AC Power Loss

Alarm	Attributes	Applicable major releases
Name: IK8901154 (8314) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Supply AC Power Loss (1448) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The fault tolerant power supply AC power loss for the specified chassis and bay location. \nAlarm to be cleared by the operator at the management system. \nReason: cpqHe4FitToPowerSupplyACpowerloss		
Remedial action: Check the power source for the specified power supply.		

Table 26-1593 IK8901156 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8901156 (8315) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc. \nAlarm to be cleared by the operator at the management system. \nReason: cpqHoAppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1594 IK8901158 - Application Error Trap

Alarm	Attributes	Applicable major releases
Name: IK8901158 (8316) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Application Error Trap (1449) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: An application has generated an exception. Specific error information is contained in the variable cpqHoSwPerfAppErrorDesc. \nAlarm to be cleared by the operator at the management system. \nReason: cpqHo2AppErrorTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1595 IK8901163 - Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8901163 (8317) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Status Trap (1450) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a NIC changes to the Failed condition. \nAlarm is cleared by the system. \nReason: cpqHo2NicStatusFailed2		
Remedial action: Check the network cables. Replace the failed NIC.		

Table 26-1596 IK8901172 - Power Threshold Exceeded

Alarm	Attributes	Applicable major releases
Name: IK8901172 (8318) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power Threshold Exceeded (1451) Implicitly cleared: false Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm notifies user of a power threshold breach. Power threshold exceeded. \nAlarm to be cleared by the operator at the management system. \nReason: cpqHo2PowerThresholdTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1597 IK8902265 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8902265 (8319) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDaAccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-1598 IK8902272 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8902272 (8320) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa2AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-1599 IK8902279 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8902279 (8321) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board. The current battery status is indicated by the cpqDaAccelBattery variable. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa3AccelBatteryFailed		
Remedial action: check the Accelerator Board Battery		

Table 26-1600 IK8902291 - Accelerator Board Bad Data

Alarm	Attributes	Applicable major releases
Name: IK8902291 (8322) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Bad Data (1453) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Bad Data. This alarm signifies that the agent has detected an array accelerator cache board that has lost battery power. If data was being stored in the accelerator cache memory when the server lost power, that data has been lost. \nAlarm to be cleared by the operator at the management system. \nReason: cpqDa5AccelBadDataTrap		
Remedial action: Verify that no data has been lost.		

Table 26-1601 IK8902292 - Accelerator Board Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8902292 (8323) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Accelerator Board Battery Failed (1452) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Accelerator Board Battery Failed. This alarm signifies that the agent has detected a battery failure associated with the array accelerator cache board.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5AccelBatteryFailed		
Remedial action: Replace the Accelerator Cache Board.		

Table 26-1602 IK8902295 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8902295 (8324) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa5PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

Table 26-1603 IK8902302 - Physical Drive Threshold Passed

Alarm	Attributes	Applicable major releases
Name: IK8902302 (8325) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Physical Drive Threshold Passed (1454) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: Physical Drive Threshold Passed. This alarm signifies that the agent has detected a factory threshold associated with one of the physical drive objects on a drive array has been exceeded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqDa6PhyDrvThreshPassedTrap		
Remedial action: Replace the physical drive.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1604 IK8902337 - NIC Status Trap

Alarm	Attributes	Applicable major releases
Name: IK8902337 (8326) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Status Trap (1455) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm is cleared by the system. Reason: cpqNicConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1605 IK8902341 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8902341 (8327) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm is cleared by the system. Reason: cpqNic2ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1606 IK8902343 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8902343 (8328) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm is cleared by the system. Reason: cpqNic2RedundancyReduced		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

(2 of 2)

Table 26-1607 IK8902347 - NIC Connectivity Lost Trap

Alarm	Attributes	Applicable major releases
Name: IK8902347 (8329) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Connectivity Lost Trap (1456) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time the status of a logical adapter changes to the Failed condition. This occurs when the adapter in a single adapter configuration fails, or when the last adapter in a redundant configuration fails. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm to be cleared by the operator at the management system. Reason: cpqNic3ConnectivityLost		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1608 IK8902349 - NIC Redundancy Reduced Trap

Alarm	Attributes	Applicable major releases
Name: IK8902349 (8330) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: NIC Redundancy Reduced Trap (1457) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm will be sent any time a physical adapter in a logical adapter group changes to the Failed condition, but at least one physical adapter remains in the OK condition.. This can be caused by loss of link due to a cable being removed from the adapter or the Hub or Switch. Internal adapter, Hub, or Switch failures can also cause this condition. Alarm is cleared by the system. Reason: cpqNic3RedundancyReduced		
Remedial action: Check the cables to the adapter and the Hub or Switch. If no cable problems are found, the adapter, Hub, or Switch may need replacement.		

Table 26-1609 IK8902360 - Enclosure temperature failed

Alarm	Attributes	Applicable major releases
Name: IK8902360 (8331) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure temperature failed (1458) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure temperature status has been set to failed. This alarm signifies that a enclosure temperature sensor has been tripped indicating an overheat condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackEnclosureTempFailed		
Remedial action: Shutdown the enclosure and possibly the rack as soon as possible. Ensure all fans are working properly and that air flow in the rack has not been blocked.		

Table 26-1610 IK8902363 - Enclosure fan failed

Alarm	Attributes	Applicable major releases
Name: IK8902363 (8332) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Enclosure fan failed (1459) Implicitly cleared: true Default probable cause: coolingFanFailure (651)	<ul style="list-style-type: none"> LR14.3.MG
Description: The enclosure fan status has been set to failed. This alarm signifies that an enclosure fan has failed and no other fans in the redundant fan group are operating. This may result in overheating of the enclosure.\nAlarm is cleared by the system.\nReason: cpqRackEnclosureFanFailed		
Remedial action: Replace the fan as soon as possible.		

Table 26-1611 IK8902368 - Rack power supply failed

Alarm	Attributes	Applicable major releases
Name: IK8902368 (8333) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Rack power supply failed (1460) Implicitly cleared: true Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to failed. This alarm signifies that a power supply has failed.\nAlarm is cleared by the system.\nReason: cpqRackPowerSupplyFailed		
Remedial action: Replace the power supply as soon as possible.		

Table 26-1612 IK8902369 - Rack power supply degraded

Alarm	Attributes	Applicable major releases
Name: IK8902369 (8334) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply degraded (1461) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The power supply status has been set to degraded. This alarm signifies that a power supply has degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSupplyDegraded		
Remedial action: Replace the power supply as soon as possible.		

Table 26-1613 IK8902374 - Rack power supply input voltage problem

Alarm	Attributes	Applicable major releases
Name: IK8902374 (8335) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power supply input voltage problem (1462) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power supply detected an input line voltage problem.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemLineVoltageProblem		
Remedial action: Check the power input for the power supply or replace any failed power supplies as soon as possible.		

Table 26-1614 IK8902375 - Rack power subsystem overload condition

Alarm	Attributes	Applicable major releases
Name: IK8902375 (8336) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Rack power subsystem overload condition (1463) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: The rack power subsystem overload condition.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerSubsystemOverloadCondition		
Remedial action: Replace any failed power supplies as soon as possible to return the system to a redundant state.		

Table 26-1615 IK8902376 - Server shutdown due to power shedding

Alarm	Attributes	Applicable major releases
Name: IK8902376 (8337) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server shutdown due to power shedding (1464) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server shutdown due to power shedding. The server blade was shutdown due to a lack of power. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackPowerShedAutoShutdown		
Remedial action: Check power connections or add power supplies.		

Table 26-1616 IK8902377 - Server power on prevented to preserve redundancy

Alarm	Attributes	Applicable major releases
Name: IK8902377 (8338) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server power on prevented to preserve redundancy (1465) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server power on prevented to preserve redundancy. There is not enough power to power on the server blade and maintain redundancy for the other blades in the enclosure. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotRedundant		
Remedial action: Check power connections or add power supplies.		

Table 26-1617 IK8902378 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8902378 (8339) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. \nAlarm to be cleared by the operator at the management system. \nReason: cpqRackServerPowerOnFailedNotEnoughPower		
Remedial action: Check power connections or add power supplies.		

Table 26-1618 IK8902379 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8902379 (8340) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The server enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedEnclosureNotFound		
Remedial action: Check server enclosure connections or add power supplies.		

Table 26-1619 IK8902380 - Inadequate power to power on

Alarm	Attributes	Applicable major releases
Name: IK8902380 (8341) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Inadequate power to power on (1466) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Inadequate power to power on. There is not enough power to power on the server blade. The power enclosure micro-controller was not found.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerPowerOnFailedPowerChassisNotFound		
Remedial action: Check power enclosure connections or add power supplies.		

Table 26-1620 IK8902382 - Fuse open

Alarm	Attributes	Applicable major releases
Name: IK8902382 (8342) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Fuse open (1467) Implicitly cleared: false Default probable cause: enclosureDoorOpen (900)	<ul style="list-style-type: none"> LR14.3.MG
Description: Fuse open. The fuse has been tripped.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackFuseOpen		
Remedial action: Check enclosure and / or blade power connections and reset the fuse.		

Table 26-1621 IK8902386 - Power subsystem DC power problem

Alarm	Attributes	Applicable major releases
Name: IK8902386 (8343) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem DC power problem (1468) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem DC power problem. There is a power subsystem DC power problem for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisDcPowerProblem		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-1622 IK8902387 - Power subsystem AC facility input power exceeded

Alarm	Attributes	Applicable major releases
Name: IK8902387 (8344) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem AC facility input power exceeded (1469) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem AC facility input power exceeded. There is a power subsystem Power subsystem AC facility input power exceeded for this power enclosure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisAcFacilityPowerExceeded		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-1623 IK8902388 - Unknown power consumption

Alarm	Attributes	Applicable major releases
Name: IK8902388 (8345) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Unknown power consumption (1470) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Unknown power consumption. There is an unknown power consumer drawing power.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerUnknownPowerConsumption		
Remedial action: Check the power enclosure and power supplies. Replace any failed or degraded power supplies.		

Table 26-1624 IK8902391 - Power subsystem improperly configured

Alarm	Attributes	Applicable major releases
Name: IK8902391 (8346) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Power subsystem improperly configured (1471) Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.3.MG
Description: Power subsystem improperly configured. The power subsystem has been improperly configured.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerChassisConfigError		
Remedial action: Check the cabling of the power enclosure.		

Table 26-1625 IK8902401 - Interconnect failed

Alarm	Attributes	Applicable major releases
Name: IK8902401 (8347) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Interconnect failed (1472) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The interconnect status has been set to failed. This alarm signifies that a interconnect has failed.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackNetConnectorFailed		
Remedial action: Replace the interconnect as soon as possible.		

Table 26-1626 IK8902408 - Server blade health status degraded

Alarm	Attributes	Applicable major releases
Name: IK8902408 (8348) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server blade health status degraded (1473) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Degraded. The server blade health status has changed to Degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusDegraded		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-1627 IK8902409 - Server blade health status critical

Alarm	Attributes	Applicable major releases
Name: IK8902409 (8349) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGMngElement	Severity: critical Specific problem: Server blade health status critical (1474) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server blade health status Critical. The server blade health status has changed to Critical.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeStatusCritical		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-1628 IK8902411 - Server blade unexpected shutdown

Alarm	Attributes	Applicable major releases
Name: IK8902411 (8350) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Server blade unexpected shutdown (1475) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: An unexpected shutdown has occurred for this server blade.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackServerBladeUnexpectedShutdown		
Remedial action: Check blade server and enclosure SYSLOG.		

Table 26-1629 IK8902428 - Generic EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8902428 (8351) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGMngElement	Severity: major Specific problem: Generic EAE Major trap (1476) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Major trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackMajorEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1630 IK8902429 - Generic EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8902429 (8352) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic EAE Critical trap (1477) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: EAE Critical trap\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackCriticalEAETrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1631 IK8902431 - Generic Power Subsystem EAE Major trap

Alarm	Attributes	Applicable major releases
Name: IK8902431 (8353) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic Power Subsystem EAE Major trap (1478) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Major trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerMajorEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

Table 26-1632 IK8902432 - Generic Power Subsystem EAE Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8902432 (8354) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic Power Subsystem EAE Critical trap (1479) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: FlexFabric Cmdr Power Subsystem Critical trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRackPowerCriticalEAETrap		
Remedial action: For FlexFabric Cmdr, please refer to product documentation for possible corrective actions.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1633 IK8902436 - Generic WSMAN Major trap

Alarm	Attributes	Applicable major releases
Name: IK8902436 (8355) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Generic WSMAN Major trap (1480) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Major trap\nReason: cpqRackMajorWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1634 IK8902437 - Generic WSMAN Critical trap

Alarm	Attributes	Applicable major releases
Name: IK8902437 (8356) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Generic WSMAN Critical trap (1481) Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: WSMAN Critical trap\nReason: cpqRackCriticalWSMANTrap		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1635 IK8902439 - Standby Recovery Server Interconnect Failure

Alarm	Attributes	Applicable major releases
Name: IK8902439 (8357) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Standby Recovery Server Interconnect Failure (1482) Implicitly cleared: false Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: Recovery Server serial interconnect failure. The Standby Recovery Agent reports that the local serial interconnect is not connected or has failed. The primary server is being shutdown in anticipation of the startup of the standby server.\nAlarm to be cleared by the operator at the management system.\nReason: cpqRsStandbyCableFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1636 IK8902559 - Critical Alarm

Alarm	Attributes	Applicable major releases
Name: IK8902559 (8358) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Critical Alarm (1483) Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.3.MG
Description: A critical alarm has occurred.\nAlarm is cleared by the system.\nReason: cpqPMTrapCritical		
Remedial action: Check the Trap Details for more information.		

Table 26-1637 IK8902609 - Monitor Condition Failed

Alarm	Attributes	Applicable major releases
Name: IK8902609 (8359) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Monitor Condition Failed (1484) Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.3.MG
Description: A fault reporting feature has exceeded normal limits in the monitor indicated by the cpqSiMonitorIndex. The monitor's condition has been set to failed due to an operational feature exceeding normal operating limits. The monitor will not be useable and should be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiMonitorConditionFailed		
Remedial action: Make a note of the monitor model number and serial number. Replace the monitor. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-1638 IK8902610 - Excessive Correctable Memory Errors

Alarm	Attributes	Applicable major releases
Name: IK8902610 (8360) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Excessive Correctable Memory Errors (1485) Implicitly cleared: false Default probable cause: memoryMismatch (680)	<ul style="list-style-type: none"> LR14.3.MG
Description: Correctable memory error count has exceeded the threshold for the memory module indicated by the 'cpqSiMemErrorIndex' variable. The appropriate cpqSiMemModuleECCStatus has been set to degraded.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiCorrMemErrStatusDegraded		
Remedial action: For Desktops, the System Administrator should run the F10 Diagnostics on this system and select RAM LONG TEST. If it is determined that a module needs replacing, schedule maintenance for the system and replace the failed memory module. Refer to the appropriate Maintenance and Service Guide for detailed information on a component replacement.		

Table 26-1639 IK8902615 - Hot Plug Slot Board Failed

Alarm	Attributes	Applicable major releases
Name: IK8902615 (8361) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Hot Plug Slot Board Failed (1486) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Hot Plug Slot Board Failed Power-Up. A Hot Plug Slot Board has failed to power-up in the specified chassis and slot.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiHotPlugSlotPowerUpFailed		
Remedial action: Insure the board and all cables are installed correctly and the board type and revision are the same as the replaced board.		

Table 26-1640 IK8902616 - Battery Failure

Alarm	Attributes	Applicable major releases
Name: IK8902616 (8362) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Failure (235) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: The battery indicated by cpqSiSysBatteryIndex has failed and must be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryFailure		
Remedial action: Contact your System Administrator or Authorized Reseller to order a replacement battery. Recycle your old battery. For proper disposal information, refer to the documentation that came with your computer.		

Table 26-1641 IK8902617 - Battery Charging Degradation

Alarm	Attributes	Applicable major releases
Name: IK8902617 (8363) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Battery Charging Degradation (1487) Implicitly cleared: false Default probable cause: lowBatteryThreshold (656)	<ul style="list-style-type: none"> LR14.3.MG
Description: Significant battery degradation has occurred with battery indicated by cpqSiSysBatteryIndex. The battery can no longer be fully recharged.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSiSysBatteryChargingDegraded		
Remedial action: If using multiple batteries, run the Power Conservation Utility to identify the battery location. Contact your System Administrator or Authorized Reseller to order a replacement battery.		

Table 26-1642 IK8902620 - Server Power Outage

Alarm	Attributes	Applicable major releases
Name: IK8902620 (8364) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Server Power Outage (1488) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Power Outage. The Remote Insight/ Integrated Lights-Out firmware has detected server power failure.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerPowerOutage		
Remedial action: Check the server's power source.		

Table 26-1643 IK8902622 - Remote Insight Battery Failed

Alarm	Attributes	Applicable major releases
Name: IK8902622 (8365) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight Battery Failed (1489) Implicitly cleared: false Default probable cause: batteryFailure (649)	<ul style="list-style-type: none"> LR14.3.MG
Description: Remote Insight Battery Failed. The Remote Insight battery has failed and needs to be replaced.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2BatteryFailed		
Remedial action: replace the failing Remote Insight battery.		

Table 26-1644 IK8902628 - Remote Insight external power cable disconnected

Alarm	Attributes	Applicable major releases
Name: IK8902628 (8366) Type: equipmentAlarm (3) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Remote Insight external power cable disconnected (1490) Implicitly cleared: false Default probable cause: powerProblem (911)	<ul style="list-style-type: none"> LR14.3.MG
Description: External Power Cable Disconnected. The Remote Insight external power cable has been disconnected.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ExternalPowerCableDisconnected		
Remedial action: check External Power Cable		

Table 26-1645 IK8902632 - Server Fatal Error Detected

Alarm	Attributes	Applicable major releases
Name: IK8902632 (8367) Type: processingErrorAlarm (81) Package: lmg Raised on class: lmg.LMGmngElement	Severity: critical Specific problem: Server Fatal Error Detected (1491) Implicitly cleared: false Default probable cause: softwareError (718)	<ul style="list-style-type: none"> LR14.3.MG
Description: Server Fatal Error Detected. The Remote Insight/ Integrated Lights-Out firmware has detected a server fatal error.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSm2ServerFatalError		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1646 IK8902633 - The iLO NIC Link is Down

Alarm	Attributes	Applicable major releases
Name: IK8902633 (8368) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: The iLO NIC Link is Down (1492) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: The iLO NIC Link is Down. The Remote Insight/ Integrated Lights-Out firmware has detected the loss of network link.\nAlarm is cleared by the system.\nReason: cpqSm2NicLinkDown		
Remedial action: Check the network connections for the iLO.		

Table 26-1647 IK8902648 - PC Card Thermal Failure Status

Alarm	Attributes	Applicable major releases
Name: IK8902648 (8369) Type: qualityOfServiceAlarm (82) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: PC Card Thermal Failure Status (1493) Implicitly cleared: false Default probable cause: performanceDegraded (710)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is sent when the PC Card Slot Thermal Sensor threshold has been exceeded for degraded operations thereby causing failed operations. This alarm will be sent when cpqSePCCardStatus transitions from Thermal Degraded (2) to Thermal Failure (3). The manufacturer and product information strings as well as the slot number for the failed PC Card is provided as parameters for this trap.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSePCCardThermalFailure		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1648 IK8902657 - Storage System Temperature Failure

Alarm	Attributes	Applicable major releases
Name: IK8902657 (8370) Type: environmentalAlarm (2) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: Storage System Temperature Failure (1494) Implicitly cleared: false Default probable cause: temperatureUnacceptable (721)	<ul style="list-style-type: none"> LR14.3.MG
Description: Storage System temperature failure. The agent has detected that a temperature status has been set to failed. The storage system will be shutdown.\nAlarm to be cleared by the operator at the management system.\nReason: cpqSsTempFailed		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1649 IK8904762 - linkDown

Alarm	Attributes	Applicable major releases
Name: IK8904762 (8371) Type: communicationsAlarm (4) Package: lmg Raised on class: lmg.LMGmngElement	Severity: major Specific problem: linkDown (1495) Implicitly cleared: true Default probable cause: communicationsSubsystemFailure (915)	<ul style="list-style-type: none"> LR14.3.MG
Description: A linkDown alarm signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus.\nAlarm is cleared by the system.\nReason: linkDown		
Remedial action: If the problem persists, contact Alcatel-Lucent customer support.		

Table 26-1650 IncompleteConfiguration

Alarm	Attributes	Applicable major releases
Name: IncompleteConfiguration (1942) Type: operationalViolation (93) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: incompleteConfig (225)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when a pre-provisioned NE has no objects configured beneath it.		
Raising condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' EQUAL '\'))		
Clearing condition: (('State' EQUAL 'Pre-provisioned') AND ('eNodeB Equipment' NOT EQUAL '\'))		
Remedial action: A configuration error has been made which must be corrected. The configuration of the pre-provisioned NE is incomplete. A work order was not associated with the pre-provisioned NE and as a consequence the attempt to auto-configure the NE failed.		

26 – Alcatel-Lucent 9774 LMG alarms

Table 26-1651 LicensedLimitExceeded

Alarm	Attributes	Applicable major releases
Name: LicensedLimitExceeded (127) Type: licensingAlarm (23) Package: security Raised on class: security.ProductLicense	Severity: critical Implicitly cleared: true Default probable cause: licensedLimitExceeded (106)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the license items in the network exceeds 100 percent of the license capacity.		
Raising condition: ('Exceeded' EQUAL 'true')		
Clearing condition: ('Exceeded' NOT EQUAL 'true')		
Remedial action: Informational - The number of SAM licenses purchased and available on the SAM server is insufficient as compared to the number of NES/MDA/Cells under management in the network. Please contact Alcatel-Lucent Sales to purchase additional licenses.		

Table 26-1652 LinkDown (equipment)

Alarm	Attributes	Applicable major releases
Name: LinkDown (12) Type: communicationsAlarm (4) Package: equipment Raised on class: equipment.Equipment	Severity: major Implicitly cleared: true Default probable cause: portLinkProblem (10)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when a port has no associated physical link or remote end point is operationally down.		
Raising condition: (('compositeEquipmentState' EQUAL 'Link Down') OR ('compositeEquipmentState' EQUAL 'Oper Down'))		
Clearing condition: (('compositeEquipmentState' NOT EQUAL 'Link Down') AND ('compositeEquipmentState' NOT EQUAL 'Oper Down'))		
Remedial action: Please make sure that port has physical link and remote end point is operationally up.		

Table 26-1653 MobileConnectorDown

Alarm	Attributes	Applicable major releases
Name: MobileConnectorDown (1064) Type: EpcAlarm (59) Package: Iteservice Raised on class: Iteservice.MobileServiceConnector	Severity: minor Implicitly cleared: true Default probable cause: EpcDown (519)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the 5620 SAM no longer manages the EPS path instance of this mobile service site. As a result, the service must be regenerated.		
Raising condition: ('EPS Path' EQUAL "\")		
Clearing condition: ('EPS Path' NOT EQUAL "\")		

(1 of 2)

Alarm	Attributes	Applicable major releases
Remedial action: The underlying transport network has gone down resulting in the deletion of a mobile service connector (EPS path). Correct the issue with the transport network and regenerate the mobile service connector by clicking on the re-calculate button on the mobile service properties form.		

(2 of 2)

Table 26-1654 NeManagementAndTrapManagementMismatch

Alarm	Attributes	Applicable major releases
Name: NeManagementAndTrapManagementMismatch (1079) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: neManagementChange (817)	<ul style="list-style-type: none"> LR14.3.MG
Description: This user-defined alarm is raised when the NE configuration is one of the following: - The Active Management IP is set to Out Of Band, and the Primary Route Preference is set to In Band. - The Active Management IP is set to In Band, and the Primary Route Preference is set to Out of Band.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only'))) AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only'))) AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'Out Of Band'))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND (('Management IP Selection' EQUAL 'In Band Preferred') OR ('Management IP Selection' EQUAL 'In Band Only'))) AND ('Primary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND (('Management IP Selection' EQUAL 'Out Of Band Preferred') OR ('Management IP Selection' EQUAL 'Out Of Band Only'))) AND ('Primary Route Preference' EQUAL 'Out Of Band'))		
Remedial action: A configuration error has been made which must be corrected. The parameters described in the description for this alarm must match.		

Table 26-1655 NewSsh2ServerKeyDetected

Alarm	Attributes	Applicable major releases
Name: NewSsh2ServerKeyDetected (285) Type: communicationsAlarm (4) Package: security Raised on class: security.KnownHostKey	Severity: warning Implicitly cleared: true Default probable cause: ssh2ServerKeyMismatch (217)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when a 5620 SAM main server detects a new public SSH key.		
Raising condition: ('SSH2 Server Key Status' EQUAL 'Mismatch SSH2 Host Key')		
Clearing condition: ('SSH2 Server Key Status' EQUAL 'Active SSH2 Host Key')		
Remedial action: Informational - possible security breach. The SSH key of the router is different from the one known to the SAM server.		

Table 26-1656 NodeDatabaseFallbackDetected

Alarm	Attributes	Applicable major releases
Name: NodeDatabaseFallbackDetected (2923) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseFallback (1121)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when a configuration fallback is detected on the node and comes back up with a previous configuration. To correct this situation it might be necessary to reconfigure the node, or perform full resync its database with the 'fallback' configuration returned by the node.		
Raising condition: ('State' EQUAL 'Node Configuration Fallback')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE has come back to a previous configuration. Perform a manual Full Resync or a Reconfigure of the NE		

Table 26-1657 NodeDatabaseMisalignmentDetected

Alarm	Attributes	Applicable major releases
Name: NodeDatabaseMisalignmentDetected (2924) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: nodeDatabaseMisalignment (1122)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when a configuration misalignment has been detected on the node and comes back up with an unexpected configuration (configuration change triggered by external tool) To correct this situation it might be necessary to reconfigure the node with the 5620 SAM's old configuration or accept the new configuration received from the node.		
Raising condition: ('State' EQUAL 'Node Configuration Misalignment')		
Clearing condition: ('State' EQUAL 'Managed')		
Remedial action: the NE configuration is misaligned. Perform a resync in order to update SAM configuration according to the NE.		

Table 26-1658 NodeSuspended

Alarm	Attributes	Applicable major releases
Name: NodeSuspended (5123) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: NodeSuspend (2057)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the 5620 SAM detects an NE moved to suspend state as per user request.		
Raising condition: ('SNMP Reachability' EQUAL 'Suspended')		
Clearing condition: ('SNMP Reachability' NOT EQUAL 'Suspended')		
Remedial action: This alarm is raised when user suspends the network element. The alarm will be cleared when the network element is managed back.		

Table 26-1659 OrphanNodeDetected

Alarm	Attributes	Applicable major releases
Name: OrphanNodeDetected (4866) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.AdvertisedNode	Severity: major Implicitly cleared: true Default probable cause: nodeNotMangedByAnyEms (1934)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when node is node managed by any EMS after n retries(threshold crossed) it is manually cleared by the operator or when the node is discovered.		
Raising condition: ('State' EQUAL 'Orphan')		
Remedial action: The NE is not managed by any SAM.Add an discovery rule in order to managed it.		

Table 26-1660 PartialResyncProblem

Alarm	Attributes	Applicable major releases
Name: PartialResyncProblem (4401) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: partialResyncProblem (1578)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when a partial resync on an NE fails. For example, when resyncing only some MIB entries as opposed to a full resync. The periodic reachability test (sysUpTime) is not considered a partial resync, neither is a full resync. However, a PartialResyncProblem alarm can only be reset by a FullResync.		
Raising condition: ('partialResyncStatus' EQUAL 'Partial Resync Failed')		
Clearing condition: ('partialResyncStatus' EQUAL 'Partial Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE.		

Table 26-1661 PersistentIndexParametersMisconfigured

Alarm	Attributes	Applicable major releases
Name: PersistentIndexParametersMisconfigured (173) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: persistentIndexConfigurationMismatch (136)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when persistence is set to Off in the NE BOF.		
Raising condition: (('Persistent SNMP Indices' EQUAL 'False') OR (('hasRedundantProcessorCards' EQUAL 'true') AND ('Redundant Synchronization Mode' EQUAL 'None')))		
Clearing condition: (('Persistent SNMP Indices' EQUAL 'True') AND (('hasRedundantProcessorCards' EQUAL 'false') OR ('Redundant Synchronization Mode' NOT EQUAL 'None')))		

(1 of 2)

26 – Alcatel-Lucent 9774 LMG alarms

Alarm	Attributes	Applicable major releases
Remedial action: A configuration error has occurred that must be corrected. Use the CLI on the NE to enable persistency in the BOF. The discovery process will complete on the next discovery scan. A re-scan can be triggered immediately for the NE from within the discovery manager		

(2 of 2)

Table 26-1662 PollerProblem

Alarm	Attributes	Applicable major releases
Name: PollerProblem (31) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: resyncFailed (24)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Resync Status' EQUAL 'Full Resync Failed')		
Clearing condition: ('Resync Status' EQUAL 'Full Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 26-1663 PrimaryImageBootFailure

Alarm	Attributes	Applicable major releases
Name: PrimaryImageBootFailure (191) Type: configurationAlarm (11) Package: sw Raised on class: sw.CardSoftware	Severity: warning Implicitly cleared: true Default probable cause: bootOptionFileMisconfigured (150)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the primary software image specified in an NE BOF is unusable.		
Raising condition: (('imageSource' NOT EQUAL 'Primary') AND ('imageSource' NOT EQUAL 'Unknown'))		
Clearing condition: (('imageSource' EQUAL 'Primary') OR ('imageSource' EQUAL 'Unknown'))		
Remedial action: The SW image on the NE may have been inadvertently corrupted. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 26-1664 RadiusOperStatusDown

Alarm	Attributes	Applicable major releases
Name: RadiusOperStatusDown (3692) Type: radiusOperStatusDownAlarm (105) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: radiusOperationStatusDown (1431)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when all RADIUS servers have gone down.		
Raising condition: ('Global RADIUS Operational State' EQUAL 'Down')		
Clearing condition: ('Global RADIUS Operational State' EQUAL 'Up')		
Remedial action: Verify the RADIUS server is properly configured and radius server state is up. Check the connectivity between SAM server and radius server configured on the Network element.		

Table 26-1665 ReachabilityProblem

Alarm	Attributes	Applicable major releases
Name: ReachabilityProblem (243) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ReachabilityTestFailed (176)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when a mediation poll of the SysUpTimeAlarm object on an NE fails, for example, because of network congestion or because the NE is too busy to respond. The probable cause is an unreachable NE Mediation agent on the NE. The polling interval depends on the NE type and is configurable in nms-server.xml. By default, the 5620 SAM polls a managed NE every four minutes. If a poll fails, the alarm is raised. The alarm clears when the 5620 SAM receives a response from the NE, and the 5620 SAM GUI icon that represents the NE turns from red to green.		
Raising condition: ('SNMP Reachability' EQUAL 'Down')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 26-1666 ReconfigFailure

Alarm	Attributes	Applicable major releases
Name: ReconfigFailure (1949) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: failedReconfig (937)	<ul style="list-style-type: none"> LR14.3.MG
Description: This alarm is raised when the reconfig action failed.		
Raising condition: ('State' EQUAL 'Failed')		
Clearing condition: ('State' NOT EQUAL 'Failed')		

(1 of 2)

26 – Alcatel-Lucent 9774 LMG alarms

Alarm	Attributes	Applicable major releases
Remedial action: Verify that the object is configured as expected.		

(2 of 2)

Table 26-1667 SaveConfigFailed

Alarm	Attributes	Applicable major releases
Name: SaveConfigFailed (105) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileAccessError (90)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the admin save command on an NE fails.		
Raising condition: ('Config Save State' EQUAL 'Failure')		
Clearing condition: ('Config Save State' EQUAL 'Success')		
Remedial action: Attempt the admin save command a second time. If the problem persists please contact Alcatel-Lucent support for assistance.		

Table 26-1668 ScheduledPollerProblem

Alarm	Attributes	Applicable major releases
Name: ScheduledPollerProblem (4386) Type: communicationsAlarm (4) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: scheduledResyncFailed (1569)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the 5620 SAM is unable to poll a network object, for example, because of intermittent or no IP connectivity to an NE, incorrect SNMP security parameters, or disabled SNMP on the NE.		
Raising condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Failed')		
Clearing condition: ('Scheduled Resync Status' EQUAL 'Scheduled Resync Done')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy to respond to 5620 SAM or c) has SNMP been disabled on the NE. Once the issue has been resolved SAM will automatically re-attempt.		

Table 26-1669 StatsRetrieveFailed

Alarm	Attributes	Applicable major releases
Name: StatsRetrieveFailed (244) Type: configurationAlarm (11) Package: sw Raised on class: sw.AccountingStatsRetrievalManager	Severity: major Implicitly cleared: false Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the 5620 SAM main or auxiliary server cannot transfer an accounting file from an NE.		
Raising condition: (('Stats Retrieval State' NOT EQUAL 'Success') AND ('Stats Retrieval State' NOT EQUAL 'Not Attempted'))		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand a) why the underlying transport network is unreliable or b) why the NE is too busy or otherwise cannot respond to the 5620 SAM main or auxiliary server.		

Table 26-1670 SubscriberSystemNextHopUsageHigh

Alarm	Attributes	Applicable major releases
Name: SubscriberSystemNextHopUsageHigh (5157) Type: thresholdCrossed (6) Package: netw Raised on class: netw.NetworkElement	Severity: minor Implicitly cleared: true Default probable cause: resourceFull (53)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit.		
Raising condition: ('IP Next Hop Usage High' EQUAL 'true')		
Clearing condition: ('IP Next Hop Usage High' EQUAL 'false')		
Remedial action: The alarm is raised when the IP next-hop usage by subscriber managed routes reaches its high watermark, cleared when it reaches its low watermark again; the watermarks are derived from the limit specified with the property subSysNextHopLimit. There is no immediate effect, but when the usage actually hits the limit, new hosts will not get their managed routes.		

Table 26-1671 TrapDestinationMisconfigured

Alarm	Attributes	Applicable major releases
Name: TrapDestinationMisconfigured (33) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: trapDestinationMisconfigured (26) Applicable probable causes: <ul style="list-style-type: none"> trapDestinationMisconfigured duplicateTrapLogId 	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the 5620 SAM cannot be added to the NE's SNMP trap destinations.		

(1 of 2)

26 – Alcatel-Lucent 9774 LMG alarms

Alarm	Attributes	Applicable major releases
Raising condition: ('isTrapDestinationMisconfigured' EQUAL 'true')		
Clearing condition: ('isTrapDestinationMisconfigured' EQUAL 'false')		
Remedial action: A configuration error has been made which must be corrected. The SNMP trap destination on the NE must be configured to the IP address of the SAM server.		

(2 of 2)

Table 26-1672 TrapReceivingFailure

Alarm	Attributes	Applicable major releases
Name: TrapReceivingFailure (1083) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: false Default probable cause: trapsWillNotBeSent (822)	<ul style="list-style-type: none"> LR14.3.MG
Description: This user-defined alarm is raised when the NE is unable to send traps because the NE configuration is one of the following: - The Management IP Selection is set to Out Of Band Only, the Primary Route Preference is set to In Band, and the Secondary Route Preference is set to None. - The Management IP Selection is set to In Band Only, the Primary Route Preference is set to Out Of Band, and the Secondary Route Preference is set to None.		
Raising condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Only') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Only') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'In Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'In Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'In Band') OR ('Secondary Route Preference' EQUAL 'In Band')) OR (('Active Management IP' EQUAL 'Out Of Band') AND ('Management IP Selection' EQUAL 'Out Of Band Preferred') AND (('Primary Route Preference' EQUAL 'Out Of Band') OR ('Secondary Route Preference' EQUAL 'Out Of Band'))))		
Remedial action: A configuration error has been made which must be corrected. The configuration error must be corrected per the discussion in the description for this alarm.		

Table 26-1673 TrapRoutePreferenceRedundancyMissing

Alarm	Attributes	Applicable major releases
Name: TrapRoutePreferenceRedundancyMissing (1084) Type: communications (87) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: trapsRedundancyMissing (823)	<ul style="list-style-type: none"> LR14.3.MG

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: The user-defined alarm is raised when NE management redundancy is configured without trap route preference redundancy.		
Raising condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Primary Route Preference' EQUAL 'In Band') AND ('Secondary Route Preference' EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Primary Route Preference' EQUAL 'Out Of Band') AND ('Secondary Route Preference' EQUAL 'None'))))		
Clearing condition: (((('Management IP Selection' EQUAL 'In Band Preferred') AND ('Active Management IP' EQUAL 'In Band') AND ('Secondary Route Preference' NOT EQUAL 'None')) OR (('Management IP Selection' EQUAL 'Out Of Band Preferred') AND ('Active Management IP' EQUAL 'Out Of Band') AND ('Secondary Route Preference' NOT EQUAL 'None'))))		
Remedial action: A configuration error has been made which must be corrected. The IP address of the standby SAM server must be configured on the NE in question.		

(2 of 2)

Table 26-1674 UnidentifiedNode

Alarm	Attributes	Applicable major releases
Name: UnidentifiedNode (1922) Type: communicationsAlarm (4) Package: netw Raised on class: netw.DiscoveredNode	Severity: major Implicitly cleared: true Default probable cause: unidentifiedNode (922)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the node being discovered can not be properly identified.		
Raising condition: ('State' EQUAL 'Pending Identification')		
Clearing condition: ('State' NOT EQUAL 'Pending Identification')		
Remedial action: A configuration error has occurred that must be corrected. The eNodeB does not have a system name. The name can be configured by selecting the alarm, opening the associated properties form for the alarmed object and configuring the system name.		

Table 26-1675 UnmanageFailed

Alarm	Attributes	Applicable major releases
Name: UnmanageFailed (300) Type: discoveryControlAlarm (33) Package: netw Raised on class: netw.NodeDiscoveryControl	Severity: warning Implicitly cleared: true Default probable cause: unableToDeleteNode (231)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when an attempt to unmanage an NE fails.		
Raising condition: ('Site State' EQUAL 'Unmanage Failed')		
Clearing condition: ('Site State' NOT EQUAL 'Unmanage Failed')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 26-1676 UpgradedBuildVersionMismatch

Alarm	Attributes	Applicable major releases
Name: UpgradedBuildVersionMismatch (174) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: warning Implicitly cleared: true Default probable cause: upgradedImageNotBooted (137)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the software version that an NE reports after a software upgrade does not match the version of the software used for the upgrade.		
Raising condition: ('upgradedBuildVersionMismatch' EQUAL 'true')		
Clearing condition: ('upgradedBuildVersionMismatch' EQUAL 'false')		
Remedial action: Informational - if the alarm persists please contact Alcatel-Lucent support for assistance		

Table 26-1677 VersionConfigRestoreFailed

Alarm	Attributes	Applicable major releases
Name: VersionConfigRestoreFailed (536) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: versionMismatch (405)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the restore procedure on an NE fails because of a mismatch between the backup file set version and the NE software version.		
Raising condition: ('lastNmsVersionRestoreState' EQUAL 'Failure')		
Clearing condition: ('lastNmsVersionRestoreState' EQUAL 'Success')		
Remedial action: The backup files being restored do not match with the version of node software release. Download a new copy of the SW image to the NE. If the problem persists contact Alcatel-Lucent support for assistance.		

Table 26-1678 WrongCpaaSoftwareVersion

Alarm	Attributes	Applicable major releases
Name: WrongCpaaSoftwareVersion (791) Type: equipmentAlarm (3) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: wrongCpaaSoftwareVersion (559)	<ul style="list-style-type: none"> LR14.3.MG
Description: The alarm is raised when the 7701 CPAA software is the wrong version and requires an upgrade.		
Raising condition: (('Software Version' EQUAL '\"TIMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Clearing condition: (('Software Version' NOT EQUAL '\"TIMOS-B-3.0.Generic \") AND ('Chassis Type' EQUAL '7701 CPAA'))		
Remedial action: The SW version of the CPAA must be upgraded to the version compatible with CPAM version.		

27 – Alcatel-Lucent 9966 MS GW alarms

Note – Some alarms that the 5620 SAM can raise against this device may not be listed in this chapter. Associating alarms with specific NE types is an ongoing Alcatel-Lucent effort. If the 5620 SAM raises an alarm against this device type, and the alarm is not described in this chapter, see chapter 41 for information about the alarm.

Table 27-1 AAA_addressPoolExhausted

Alarm	Attributes	Applicable major releases
Name: AAA_addressPoolExhausted (5673) Type: qualityOfServiceAlarm (82) Package: femto Raised on class: femto.AAA	Severity: major Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when the address pool for the available SeGW servers has become exhausted		
Remedial action: See the nodal documentation for more information.		

Table 27-2 AAA_centralAAAFailure

Alarm	Attributes	Applicable major releases
Name: AAA_centralAAAFailure (5674) Type: communicationsAlarm (4) Package: femto Raised on class: femto.AAA	Severity: critical Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

27 – Alcatel-Lucent 9966 MS GW alarms

Alarm	Attributes	Applicable major releases
Description: This fault is generated when communication to all central AAA has failed.		
Remedial action: See the nodal documentation for more information.		

(2 of 2)

Table 27-3 ActiveAbnormalCondition

Alarm	Attributes	Applicable major releases
Name: ActiveAbnormalCondition (3938) Type: activeAbnormalConditionAlarm (116) Package: netw Raised on class: netw.NetworkElement	Severity: major Implicitly cleared: true Default probable cause: ActiveAbnormalConditionState (1520)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is an indication for abnormal condition on NE.		
Raising condition: ('abnormalCondition' EQUAL 'true')		
Clearing condition: ('abnormalCondition' EQUAL 'false')		
Remedial action: This alarm is raised when there is a abnormal state indication on NE.		

Table 27-4 AggregatedVFLPortDown

Alarm	Attributes	Applicable major releases
Name: AggregatedVFLPortDown (5436) Type: equipmentAlarm (3) Package: equipment Raised on class: equipment.Shelf	Severity: critical Implicitly cleared: true Default probable cause: connectivityIssue (2137)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is generated when the aggregated virtual fabric link on the virtual chassis slot is down.		
Raising condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' NOT EQUAL 'Up'))		
Clearing condition: (('Shelf Type' EQUAL '7850') AND ('Total Slots' EQUAL '4') AND ('Virtual Fabric Link State' EQUAL 'Up'))		
Remedial action: The alarm is raised when the aggregated virtual fabric link on the virtual chassis is down. Please check the virtual fabric links for the virtual chassis setup.		

Table 27-5 AGPSProxy_agpsServiceFailure

Alarm	Attributes	Applicable major releases
Name: AGPSProxy_agpsServiceFailure (5675) Type: communicationsAlarm (4) Package: femto Raised on class: femto.AGPSProxy	Severity: major Implicitly cleared: true Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: This fault is raised if a failure is detected on the Assisted GPS Service		
Remedial action: See the nodal documentation for more information.		

(2 of 2)

Table 27-6 AGWDiameterPeerDown

Alarm	Attributes	Applicable major releases
Name: AGWDiameterPeerDown (844) Type: EpcAlarm (59) Package: lte Raised on class: lte.AGWDiameterPeer	Severity: variable Implicitly cleared: true Default probable cause: EPSPeerDown (602)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the path management state of a Diameter peer changes to a state other than Up.		
Raising condition: ('Path Diameter Management State' NOT EQUAL 'Active')		
Clearing condition: ('Path Diameter Management State' EQUAL 'Active')		
Remedial action: A Ga reference point (peer) is operationally down for one of the following reasons: the underlying IP or physical interface is down, the far end peer is down or the underlying transport between this NE and the peer NE is down. To resolve the issue ensure that the IP/physical interface is up, check that the far end peer is operational and check that the underlying transport network is up.		

Table 27-7 AMCSlot_deviceInstalledAssert

Alarm	Attributes	Applicable major releases
Name: AMCSlot_deviceInstalledAssert (5679) Type: equipmentAlarm (3) Package: femto Raised on class: femto.AMCSlot	Severity: minor Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: Device installed assert		
Remedial action: See the nodal documentation for more information.

Description: 5V device installed deassert		
Remedial action: See the nodal documentation for more information.		

Table 27-21 Application4G_droppingS1Traffic

Alarm	Attributes	Applicable major releases
Name: Application4G_droppingS1Traffic (5693) Type: qualityOfServiceAlarm (82) Package: femto Raised on class: femto.Application4G	Severity: critical Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW drops S1 traffic since SCGW CPU/Memory utilization has crossed maximum threshold		
Remedial action: The alarm is cleared when the BSR Gateway recovers from the overload condition. The %CPU column of top command can be used to check the CPU utilization. Enter the command free to check the memory utilization. Free memory specified should be high, compared to the used memory available, for recovering to normal overload. The used buffer cache memory should be low. To drop the cache memory use the command echo 3 >/proc/sys/vm/drop_caches. Terminate some calls to check whether memory utilization comes down, clearing the alarm. If the memory utilization does not reduce and the alarm persists, de-register the Small Cells and check for reduction in memory utilization. If there is no reduction in memory utilization, even after call termination and enforced Small Cell de-registration. Enforce a BSR Gateway switch-over by terminating the BSR Gateway application.		

Table 27-22 Application4G_failedToDecodeMMESentMsg

Alarm	Attributes	Applicable major releases
Name: Application4G_failedToDecodeMMESentMsg (5694) Type: communicationsAlarm (4) Package: femto Raised on class: femto.Application4G	Severity: critical Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is triggered when SCGW fails to decode messages sent by MME		
Remedial action: Check whether the messages from the MME are properly framed. This fault is cleared manually from the OAM system.		

Table 27-23 Application4G_failedToSendDataToHeNB

Alarm	Attributes	Applicable major releases
Name: Application4G_failedToSendDataToHeNB (5695) Type: communicationsAlarm (4) Package: femto Raised on class: femto.Application4G	Severity: critical Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW fails to send data to BSR		
Remedial action: Check the connectivity between the Small Cell and BSR Gateway. Check whether the BSR Gateway sctp port (6005) towards Small Cell is open. Check for any errors with respect to sending the data towards Small Cell. This can be done by looking for LOG ERROR statements in LOG_FMG.log file under /opt/log/. Use the above mentioned information to isolate the issue at Small Cell or BSR Gateway. This alarm is cleared when data from the BSR Gateway reaches the Small Cell successfully.		

Table 27-24 Application4G_failedToSendDataToMME

Alarm	Attributes	Applicable major releases
Name: Application4G_failedToSendDataToMME (5696) Type: communicationsAlarm (4) Package: femto Raised on class: femto.Application4G	Severity: critical Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW fails to send data to MME		
Remedial action: Reduce memory utilization in SCGW, using the command free. Check if there is a reduction. Check whether memory overload alarm has been triggered. Terminate some calls to check if the memory utilization reduces, clearing the alarm. If there is no reduction in memory utilization, and the overload alarm still persists, then de-register the Small Cells. Now check for any reduction in memory utilization. If there is no reduction in memory utilization, even after call termination and enforced Small Cell de-registration. Enforce a BSR Gateway switchover by terminating the BSR Gateway application		

Table 27-25 Application4G_henbldClash

Alarm	Attributes	Applicable major releases
Name: Application4G_henbldClash (5698) Type: operationalViolation (93) Package: femto Raised on class: femto.Application4G	Severity: major Implicitly cleared: false Default probable cause: callEstablishmentError (778)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW has detected that another HENB tries to register with a henbld already used by another HeNB.		
Remedial action: Re-configure the Small Cell with a different ID. Re-register the Small Cell.		

Table 27-26 Application4G_henbIntegrityViolation

Alarm	Attributes	Applicable major releases
Name: Application4G_henbIntegrityViolation (5699) Type: securityServiceOrMechanismViolation (92) Package: femto Raised on class: femto.Application4G	Severity: major Implicitly cleared: false Default probable cause: authenticationFailure (786)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW has detected a mismatch between the parameters received from the HeNB SETUP Request and the provisioned HeNB parameters. At least one of the following parameters might have been manipulated: - HeNB-Id, - TAC- Access mode		
Remedial action: Verify, that the HeNB-Id, TAC and access mode of the registered Small Cell is same as present in BSR DATA XML file. Re-register this Small Cell.		

Table 27-27 Application4G_heNbOutOfService

Alarm	Attributes	Applicable major releases
Name: Application4G_heNbOutOfService (5697) Type: equipmentAlarm (3) Package: femto Raised on class: femto.Application4G	Severity: major Implicitly cleared: true Default probable cause: operationalCondition (2441)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is triggered for HeNBs which have not registered with the SCGW during either the HenbRegisterAfterFailureTimer period or the HenbRegisterAfterInitTimer period and which have the Application4G::enableServiceMonitoringattribute set to True.		
Remedial action: The alarm is cleared by the Gateway whenApplication4G::enableServiceMonitoring attribute is disabled or the failed Small Cell tries to reregister.		

Table 27-28 Application4G_invalidHeNBS1SetupMessage

Alarm	Attributes	Applicable major releases
Name: Application4G_invalidHeNBS1SetupMessage (5700) Type: communicationsAlarm (4) Package: femto Raised on class: femto.Application4G	Severity: major Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW receives S1 SETUP message with an invalid HeNBId.		
Remedial action: Check whether any invalid IE is sent as part of Small Cell registration request.Check Fatal/Error logs in Log_FMG.log file with respect to decoding of Small Cell registration request.Use the above information to isolate the issue at Small Cell or BSR Gateway end.		

Table 27-29 Application4G_invalidS1flexConfiguration

Alarm	Attributes	Applicable major releases
Name: Application4G_invalidS1flexConfiguration (5701) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.Application4G	Severity: major Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is generated when inconsistent/missing configuration data is detected for S1flex NNSF function		
Remedial action: Check the provisioned S1 Flex configuration function.		

Table 27-30 Application4G_massHeNbOutOfService

Alarm	Attributes	Applicable major releases
Name: Application4G_massHeNbOutOfService (5702) Type: equipmentAlarm (3) Package: femto Raised on class: femto.Application4G	Severity: major Implicitly cleared: true Default probable cause: operationalCondition (2441)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is triggered when the number of active bsrOutOfService alarms reaches the threshold defined by the Application4G:: maxNumHnbServiceAlarms attribute		
Remedial action: The alarm is automatically detected and cleared by the Gateway, when the total number of failed Small Cells drops below the Application4G:: maxNumHnbServiceAlarms value.		

Table 27-31 Application4G_newHeNBS1SetupRejectedDueToOverload

Alarm	Attributes	Applicable major releases
Name: Application4G_newHeNBS1SetupRejectedDueToOverload (5703) Type: qualityOfServiceAlarm (82) Package: femto Raised on class: femto.Application4G	Severity: critical Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW rejects new HeNB SETUP request due to overload		
Remedial action: Check the loading on the SCGW		

Table 27-32 AtcaAlarmCard_e1InfraAlarm

Alarm	Attributes	Applicable major releases
Name: AtcaAlarmCard_e1InfraAlarm (5704) Type: communicationsAlarm (4) Package: femto Raised on class: femto.SCATCAAlarmCard	Severity: info Implicitly cleared: true Default probable cause: remoteAlarmInterface (615)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when there is a failure and the infrastructure alarms :E1_A, E1_B, E1_C, E1_D get raised.		
Remedial action: See the nodal documentation for more information.		

Table 27-33 AtcaAlarmCard_e2InfraAlarm

Alarm	Attributes	Applicable major releases
Name: AtcaAlarmCard_e2InfraAlarm (5705) Type: communicationsAlarm (4) Package: femto Raised on class: femto.SCATCAAlarmCard	Severity: info Implicitly cleared: true Default probable cause: remoteAlarmInterface (615)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when there is a failure and the infrastructure alarms : E2_A, E2_B, E2_C, E2_D get raised.

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_i2cMasterResourceHighLimit (5738) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: critical Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the I2C Master Resource reaches the critical limit.		
Remedial action: See the nodal documentation for more information.		

Table 27-72 AtcaShelfManager_i2cMasterResourceMidLimit

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_i2cMasterResourceMidLimit (5739) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: major Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the I2C of the Master Resource reaches the major limit		
Remedial action: See the nodal documentation for more information.		

Table 27-73 AtcaShelfManager_ipmbLinkDown

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_ipmbLinkDown (5740) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: minor Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when failure happens to the IPMB-0 link		
Remedial action: See the nodal documentation for more information.		

Table 27-74 AtcaShelfManager_lm75TempDownHighLimit

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_lm75TempDownHighLimit (5741) Type: environmentalAlarm (2) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: critical Implicitly cleared: true Default probable cause: lowTemperature (674)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the temperature of the bottom of the NBSHMC board reaches the lower critical limit.		
Remedial action: See the nodal documentation for more information.		

Table 27-75 AtcaShelfManager_lm75TempDownMidLimit

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_lm75TempDownMidLimit (5742) Type: environmentalAlarm (2) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: major Implicitly cleared: true Default probable cause: lowTemperatureMidLimit (2443)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the temperature of the bottom of the NBSHMC board reaches the lower major limit.		
Remedial action: See the nodal documentation for more information.		

Table 27-76 AtcaShelfManager_Im75TempUpHighLimit

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_Im75TempUpHighLimit (5743) Type: environmentalAlarm (2) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: critical Implicitly cleared: true Default probable cause: highTemperature (667)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the temperature of the top of the NBSHMC board reaches the upper critical limit.		
Remedial action: See the nodal documentation for more information.		

Table 27-77 AtcaShelfManager_Im75TempUpMidLimit

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_Im75TempUpMidLimit (5744) Type: environmentalAlarm (2) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: major Implicitly cleared: true Default probable cause: highTemperature (667)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the temperature of the top of the NBSHMC board reaches the upper major limit.		
Remedial action: See the nodal documentation for more information.		

Table 27-78 AtcaShelfManager_pwrRedDegraded

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_pwrRedDegraded (5745) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: major Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: Power supple redundancy degraded assert. Redundancy still exists, but at a less than full level. For example, a system has four fans, and can tolerate the failure of two of them, and presently one has failed		
Remedial action: See the nodal documentation for more information.		

Table 27-79 AtcaShelfManager_pwrRedLost

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_pwrRedLost (5746) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: major Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the Power supply redundancy lost or Entered any non-redundant state, including Non-redundant: Insufficient Resources		
Remedial action: See the nodal documentation for more information.		

Table 27-80 AtcaShelfManager_pwrRedRegained

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_pwrRedRegained (5747) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: major Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the full power supply redundancy has been regained		
Remedial action: See the nodal documentation for more information.		

Table 27-81 AtcaShelfManager_rebootReason

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_rebootReason (5748) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: major Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the Shelf Manager has been Rebooted		
Remedial action: See the nodal documentation for more information.		

Table 27-82 AtcaShelfManager_rtmFilterAbsence

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_rtmFilterAbsence (5749) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: minor Implicitly cleared: true Default probable cause: probCauseUnknown (2442)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the RTM filter or the Back side filter or grid is not present.		
Remedial action: See the nodal documentation for more information.		

Table 27-83 AtcaShelfManager_shelfFRUcriticalFailure

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_shelfFRUcriticalFailure (5750) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: critical Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when critical failure happens to the Shelf FRUs in EEPROMs.		
Remedial action: See the nodal documentation for more information.		

Table 27-84 AtcaShelfManager_shelfFRUminorFailure

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_shelfFRUminorFailure (5751) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: minor Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when minor failure happens to the Shelf FRUs in EEPROMs.		
Remedial action: See the nodal documentation for more information.		

Table 27-85 AtcaShelfManager_shelfManagerConnectionFailure

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_shelfManagerConnectionFailure (5752) Type: communicationsAlarm (4) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: critical Implicitly cleared: true Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the Shelf Oam is unable to communicate with shelf manager		
Remedial action: See the nodal documentation for more information.		

Table 27-86 AtcaShelfManager_shelfManagerInNonRedundantState

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_shelfManagerInNonRedundantState (5753) Type: communicationsAlarm (4) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: major Implicitly cleared: true Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the Peer Shelf Manager is not available		
Remedial action: See the nodal documentation for more information.		

Table 27-87 AtcaShelfManager_shelfManagerUnAvailable

Alarm	Attributes	Applicable major releases
Name: AtcaShelfManager_shelfManagerUnAvailable (5754) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASHelfManager	Severity: major Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the Shelf Manager Card is not available		
Remedial action: See the nodal documentation for more information.		

Table 27-88 AtcaSwitchBaseEthernetIntf_malbanBaseEthernetPortFailure

Alarm	Attributes	Applicable major releases
Name: AtcaSwitchBaseEthernetIntf_malbanBaseEthernetPortFailure (5756) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASwitchBaseEthernetIntf	Severity: major Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the Malban Card Base Ethernet port has failed		
Remedial action: See the nodal documentation for more information.		

Table 27-89 AtcaSwitchCPU_malban10CPUFailure

Alarm	Attributes	Applicable major releases
Name: AtcaSwitchCPU_malban10CPUFailure (5757) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASwitchCPU	Severity: critical Implicitly cleared: false Default probable cause: processorProblem (633)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when software critical error occurs on the payload. Usually followed by a board reboot or reset. It is asserted upon fault detection by the payload software and de-asserted on startup.		
Remedial action: See the nodal documentation for more information.		

Table 27-90 AtcaSwitchFabricEthernetIntf_malbanFabricEthernetPortFailure

Alarm	Attributes	Applicable major releases
Name: AtcaSwitchFabricEthernetIntf_malbanFabricEthernetPortFailure (5758) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASwitchFabricEthernetIntf	Severity: major Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the Malban Card Fabric Ethernet port has failed		
Remedial action: See the nodal documentation for more information.		

Table 27-91 AtcaSwitchSlot_malbanConnectionFailure

Alarm	Attributes	Applicable major releases
Name: AtcaSwitchSlot_malbanConnectionFailure (5759) Type: communicationsAlarm (4) Package: femto Raised on class: femto.SCATCASwitchSlot	Severity: critical Implicitly cleared: true Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the Shelf Oam is unable to communicate with Malban		
Remedial action: See the nodal documentation for more information.		

Table 27-92 AtcaSwitchSlot_malbanInNonRedundantState

Alarm	Attributes	Applicable major releases
Name: AtcaSwitchSlot_malbanInNonRedundantState (5760) Type: communicationsAlarm (4) Package: femto Raised on class: femto.SCATCASwitchSlot	Severity: major Implicitly cleared: true Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the Peer Malban is not available		
Remedial action: See the nodal documentation for more information.		

Table 27-93 AtcaSwitchSlot_malbanIpmbLinkDown

Alarm	Attributes	Applicable major releases
Name: AtcaSwitchSlot_malbanIpmbLinkDown (5761) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASwitchSlot	Severity: minor Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when failure happens to the IPMB-0 link		
Remedial action: See the nodal documentation for more information.		

Table 27-94 AtcaSwitchSlot_malbanUnAvailable

Alarm	Attributes	Applicable major releases
Name: AtcaSwitchSlot_malbanUnAvailable (5762) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASwitchSlot	Severity: major Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the Malban Card is not available		
Remedial action: See the nodal documentation for more information.		

Table 27-95 AtcaSwitchSlot_malbanVlanCreationFailure

Alarm	Attributes	Applicable major releases
Name: AtcaSwitchSlot_malbanVlanCreationFailure (5763) Type: communicationsAlarm (4) Package: femto Raised on class: femto.SCATCASwitchSlot	Severity: critical Implicitly cleared: true Default probable cause: unspecifiedReason (802)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when the vlan creation failed in Malban		
Remedial action: See the nodal documentation for more information.		

Table 27-96 AtcaSwitchSlot_ncpuFatalError

Alarm	Attributes	Applicable major releases
Name: AtcaSwitchSlot_ncpuFatalError (5764) Type: equipmentAlarm (3) Package: femto Raised on class: femto.SCATCASwitchSlot	Severity: major Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: This Alarm is raised when a software critical error occurs on the payload.		
Remedial action: See the nodal documentation for more information.		

Table 27-97 AuxiliaryServerStatus

Alarm	Attributes	Applicable major releases
Name: AuxiliaryServerStatus (311) Type: communicationsAlarm (4) Package: server Raised on class: server.AuxiliaryServer	Severity: critical Implicitly cleared: true Default probable cause: systemFailed (144)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when a 5620 SAM main server cannot communicate with an auxiliary server. The alarm clears when communication is restored.		
Raising condition: ('Server Status' EQUAL 'Down')		
Clearing condition: ('Server Status' EQUAL 'Up')		
Remedial action: Informational - if the alarm persists or is occurring frequently then investigation is required to understand why the connectivity between the AUX and SAM servers is unreliable.		

Table 27-98 BladeHardware_alarm48VaAssert

Alarm	Attributes	Applicable major releases
Name: BladeHardware_alarm48VaAssert (5861) Type: equipmentAlarm (3) Package: femto Raised on class: femto.BladeHardware	Severity: minor Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: Alarm 48Va assert

Alarm	Attributes	Applicable major releases
Name: BladeHardware_lm75localTempMinorDeassert (5876) Type: equipmentAlarm (3) Package: femto Raised on class: femto.BladeHardware	Severity: minor Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: LM 75 local temperature minor deassert		
Remedial action: See the nodal documentation for more information.		

Table 27-114 BladeHardware_ncpuFatalErrAssert

Alarm	Attributes	Applicable major releases
Name: BladeHardware_ncpuFatalErrAssert (5877) Type: equipmentAlarm (3) Package: femto Raised on class: femto.BladeHardware	Severity: major Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: NCPU fatal assert		
Remedial action: See the nodal documentation for more information.		

Table 27-115 BladeHardware_ncpuFatalErrDeassert

Alarm	Attributes	Applicable major releases
Name: BladeHardware_ncpuFatalErrDeassert (5878) Type: equipmentAlarm (3) Package: femto Raised on class: femto.BladeHardware	Severity: minor Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: NCPU fatal deassert		
Remedial action: See the nodal documentation for more information.		

Table 27-116 BladeHardware_powerConsumptionMinor

Alarm	Attributes	Applicable major releases
Name: BladeHardware_powerConsumptionMinor (5879) Type: equipmentAlarm (3) Package: femto Raised on class: femto.BladeHardware	Severity: minor Implicitly cleared: true Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: Power consumption minor		
Remedial action: See the nodal documentation for more information.		

Table 27-117 BladeHardware_switchConnectionLost

Alarm	Attributes	Applicable major releases
Name: BladeHardware_switchConnectionLost (5880) Type: equipmentAlarm (3) Package: femto Raised on class: femto.BladeHardware	Severity: critical Implicitly cleared: false Default probable cause: equipmentMalfunction (698)	<ul style="list-style-type: none"> LR14.2.SC
Description: Switch connection lost		
Remedial action: See the nodal documentation for more information.		

Table 27-118 BootableConfigBackupFailed

Alarm	Attributes	Applicable major releases
Name: BootableConfigBackupFailed (103) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the 5620 SAM fails to back up a set of NE configuration files.		
Raising condition: ('Backup State' EQUAL 'Failure')		
Clearing condition: ('Backup State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: insufficient disk space is available to accommodate the NE configuration files (additional SAM platform alarms will accompany this alarm); the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 27-119 BootableConfigRestoreFailed

Alarm	Attributes	Applicable major releases
Name: BootableConfigRestoreFailed (104) Type: configurationAlarm (11) Package: sw Raised on class: sw.BackupRestoreManager	Severity: major Implicitly cleared: true Default probable cause: fileTransferFailure (89)	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the 5620 SAM fails to restore a set of NE configuration files.		
Raising condition: ('Restore State' EQUAL 'Failure')		
Clearing condition: ('Restore State' EQUAL 'Success')		
Remedial action: Investigation is required to resolve the following possible scenarios: the NE is unreachable (including underlying transport network issue); loss of connectivity to the NE during transfer; the FTP daemon on the NE may have stopped; FTP security credential issues.		

Table 27-120 BootParametersMisconfigured

Alarm	Attributes	Applicable major releases
Name: BootParametersMisconfigured (35) Type: configurationAlarm (11) Package: netw Raised on class: netw.NetworkElement	Severity: critical Implicitly cleared: true Default probable cause: persistentIndexFailure (30) Applicable probable causes: <ul style="list-style-type: none"> persistentIndexFailure configFileBootFailure 	<ul style="list-style-type: none"> LR14.2.SC
Description: The alarm is raised when the SNMP Index Boot Status on an NE is not set to Persistent.		
Raising condition: (('isGenericNode' EQUAL 'false') AND ('State' NOT EQUAL 'Pre-provisioned') AND (('Config File Status' NOT EQUAL 'Executed Successfully') AND ('Config File Status' NOT EQUAL 'configFileStatus_unspecified')) OR (('Persistent Index Status' NOT EQUAL 'Rebuild Succeeded') AND ('Persistent Index Status' NOT EQUAL 'persistentIndexStatus_unspecified'))))		
Clearing condition: (('Config File Status' EQUAL 'Executed Successfully') AND ('Persistent Index Status' EQUAL 'Rebuild Succeeded'))		
Remedial action: Ensure that "SNMP Index Boot Status" is persistent (using cli command "show system information" on the NE). If not, unmanage the network element from SAM, ensure that "persist on" is set in the bof file, save the bof, save a config file, verify that an index file (.ndx) is saved as well, reboot the router, verify that SNMP Index Boot Status is persistent and finally remanage the router from SAM.		

Table 27-121 BPG_noBpgMapping

Alarm	Attributes	Applicable major releases
Name: BPG_noBpgMapping (5765) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BPG	Severity: major Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

27 – Alcatel-Lucent 9966 MS GW alarms

Alarm	Attributes	Applicable major releases
Description: This fault is generated when the BPG function receives a user plane packet which gets discarded due to there being no associated binding in the BPG mapping table.		
Remedial action: See the nodal documentation for more information.		

(2 of 2)

Table 27-122 BSG_aBSGUERegTableFull

Alarm	Attributes	Applicable major releases
Name: BSG_aBSGUERegTableFull (5766) Type: equipmentAlarm (3) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: true Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when the UE Registration Table has become full and existing entries have been discarded to make space for new entries		
Remedial action: See the nodal documentation for more information.		

Table 27-123 BSG_allocationOfStreamFail

Alarm	Attributes	Applicable major releases
Name: BSG_allocationOfStreamFail (5767) Type: qualityOfServiceAlarm (82) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: false Default probable cause: congestion (694)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW fails to allocate requested stream ID by BSR		
Remedial action: See the nodal documentation for more information.		

Table 27-124 BSG_bsgppPagingHighRateExceeded

Alarm	Attributes	Applicable major releases
Name: BSG_bsgppPagingHighRateExceeded (5768) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is raised when the number of bsgpp Batch Paging messages processed per second has exceeded its High limit. Batch Paging is either greater than the configurable high CPU utilization or greater than the configurable High Batch Paging message rate. The number of Batch Paging messages sent shall be degraded to a rate within bounds.		
Remedial action: See the nodal documentation for more information.		

Table 27-125 BSG_bsgppPagingLowRateExceeded

Alarm	Attributes	Applicable major releases
Name: BSG_bsgppPagingLowRateExceeded (5769) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: warning Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is raised when the number of bsgpp Batch Paging messages processed per second has exceeded its Low limit. Batch Paging is either greater than the configurable low CPU utilization or greater than the configurable Low Batch Paging message rate.		
Remedial action: See the nodal documentation for more information.		

Table 27-126 BSG_bsrOutOfService

Alarm	Attributes	Applicable major releases
Name: BSG_bsrOutOfService (5770) Type: equipmentAlarm (3) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: true Default probable cause: operationalCondition (2441)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is triggered for BSRs which have not registered with the SCGW during either the bsrRegisterAfterFailureTimer period or the bsrRegisterAfterInitTimer period and which have the BSR::enableServiceMonitoringattribute set to True.		
Remedial action: See the nodal documentation for more information.		

Table 27-127 BSG_cellBroadcastConflictingServiceArea

Alarm	Attributes	Applicable major releases
Name: BSG_cellBroadcastConflictingServiceArea (5771) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm shall be raised when a Small Cell registers a Broadcast Service Area Identifier already in use by another Small Cell.		
Remedial action: See the nodal documentation for more information.		

Table 27-128 BSG_cellBroadcastInvalidServiceArea

Alarm	Attributes	Applicable major releases
Name: BSG_cellBroadcastInvalidServiceArea (5772) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm shall be raised when a Small Cell attempts to register a Broadcast Service Area Identifier which does not correspond to the one provisioned for that Small Cell.		
Remedial action: See the nodal documentation for more information.		

Table 27-129 BSG_collapsingLAI

Alarm	Attributes	Applicable major releases
Name: BSG_collapsingLAI (5773) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: minor Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is raised when a SC requests the identity of a PSC/UARFCN that can only be matched to an entry from a different SC group, but with the same LAI		
Remedial action: Check LAI planning and consider changing LAI of one of the impacted SC groups. This alarm is manually cleared from the OAM system.		

Table 27-130 BSG_differentLacRacSameGroup

Alarm	Attributes	Applicable major releases
Name: BSG_differentLacRacSameGroup (5774) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: warning Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is raised when a Femto belonging to a Group has tried to register with a different Macro LAC RAC than other Femtos belonging to the same Group.		
Remedial action: See the nodal documentation for more information.		

Table 27-131 BSG_differentMacroLacRacDetected

Alarm	Attributes	Applicable major releases
Name: BSG_differentMacroLacRacDetected (5775) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is raised when Femto registration contains a Macro LAC RAC that is not provisioned on the BSG..		
Remedial action: See the nodal documentation for more information.		

Table 27-132 BSG_droppingRANAPTraffic

Alarm	Attributes	Applicable major releases
Name: BSG_droppingRANAPTraffic (5776) Type: qualityOfServiceAlarm (82) Package: femto Raised on class: femto.BSG	Severity: critical Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW drops RANAP traffic since SCGW CPU/Memory utilization has crossed maximum threshold		
Remedial action: See the nodal documentation for more information.		

Table 27-133 BSG_failedIMSI Retrieval

Alarm	Attributes	Applicable major releases
Name: BSG_failedIMSI Retrieval (5777) Type: equipmentAlarm (3) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: false Default probable cause: applicationSubsystemFailure (689)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when the SCGW is not able to retrieve the IMSI directory entries		
Remedial action: See the nodal documentation for more information.		

Table 27-134 BSG_failedToDecodeMSCSentMsg

Alarm	Attributes	Applicable major releases
Name: BSG_failedToDecodeMSCSentMsg (5778) Type: communicationsAlarm (4) Package: femto Raised on class: femto.BSG	Severity: critical Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is triggered when SCGW fails to decode messages sent by 3G-MSC		
Remedial action: See the nodal documentation for more information.		

Table 27-135 BSG_failedToSendDataToBSR

Alarm	Attributes	Applicable major releases
Name: BSG_failedToSendDataToBSR (5779) Type: communicationsAlarm (4) Package: femto Raised on class: femto.BSG	Severity: critical Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW fails to send data to BSR		
Remedial action: See the nodal documentation for more information.		

Table 27-136 BSG_failedToSendDataToMSC

Alarm	Attributes	Applicable major releases
Name: BSG_failedToSendDataToMSC (5780) Type: communicationsAlarm (4) Package: femto Raised on class: femto.BSG	Severity: critical Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW fails to send data to 3G-MSC		
Remedial action: See the nodal documentation for more information.		

Table 27-137 BSG_hnbIntegrityViolation

Alarm	Attributes	Applicable major releases
Name: BSG_hnbIntegrityViolation (5781) Type: securityServiceOrMechanismViolation (92) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: false Default probable cause: authenticationFailure (786)	<ul style="list-style-type: none"> LR14.2.SC

(1 of 2)

Alarm	Attributes	Applicable major releases
Description: This fault is generated when BSG has detected a mismatch between the registration parameters received from the BSR and the provisioned BSR parameters. At least one of the following parameters might have been manipulated:- Cell-Id,- HNB Identity		
Remedial action: See the nodal documentation for more information.		

(2 of 2)

Table 27-138 BSG_imsiDirectoryFull

Alarm	Attributes	Applicable major releases
Name: BSG_imsiDirectoryFull (5782) Type: qualityOfServiceAlarm (82) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when the IMSI directory has become full and existing entries have been discarded to make space for new entries		
Remedial action: See the nodal documentation for more information.		

Table 27-139 BSG_incomingHoProvisionError

Alarm	Attributes	Applicable major releases
Name: BSG_incomingHoProvisionError (5783) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is raised if the Target BSR Selection Algorithm has incorrect data provisioned for incoming HO on a particular RAT, when incoming HO is enabled for that RAT,		
Remedial action: See the nodal documentation for more information.		

Table 27-140 BSG_invalidBSRIdInBSRRegistrationMessage

Alarm	Attributes	Applicable major releases
Name: BSG_invalidBSRIdInBSRRegistrationMessage (5784) Type: communicationsAlarm (4) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW receives BSR registration message with already registered BSR ID and different IP Sec address		

(1 of 2)

27 – Alcatel-Lucent 9966 MS GW alarms

Alarm	Attributes	Applicable major releases
Remedial action: See the nodal documentation for more information.		

(2 of 2)

Table 27-141 BSG_invalidMocnConfiguration

Alarm	Attributes	Applicable major releases
Name: BSG_invalidMocnConfiguration (5785) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: minor Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm shall be raised when CS or PS region is not assigned or CN Node for selected operator is not configured in the region for split NRIs based MOCN operator selection		
Remedial action: See the nodal documentation for more information.		

Table 27-142 BSG_macroLacRacNotAllowed

Alarm	Attributes	Applicable major releases
Name: BSG_macroLacRacNotAllowed (5786) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: Femto registration contains a Macro LAC RAC that is not allowed by this Femto.		
Remedial action: See the nodal documentation for more information.		

Table 27-143 BSG_massBsrCsCnConnLost

Alarm	Attributes	Applicable major releases
Name: BSG_massBsrCsCnConnLost (5787) Type: communicationsAlarm (4) Package: femto Raised on class: femto.BSG	Severity: critical Implicitly cleared: true Default probable cause: remoteNodeTransmissionError (714)	<ul style="list-style-type: none"> LR14.2.SC
Description: A significant number of Femto BSRs have detected a loss of connectivity to the CS Core Network, even though their transport layer is still connected.		
Remedial action: See the nodal documentation for more information.		

Table 27-144 BSG_massBsrOutOfService

Alarm	Attributes	Applicable major releases
Name: BSG_massBsrOutOfService (5788) Type: equipmentAlarm (3) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: true Default probable cause: operationalCondition (2441)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is triggered when the number of active bsrOutOfService alarms reaches the threshold defined by the BSG::maxNumBSRServiceAlarms attribute		
Remedial action: See the nodal documentation for more information.		

Table 27-145 BSG_maximumImsiListThresholdExceeded

Alarm	Attributes	Applicable major releases
Name: BSG_maximumImsiListThresholdExceeded (5789) Type: qualityOfServiceAlarm (82) Package: femto Raised on class: femto.BSG	Severity: critical Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is raised whenever the number of IMSIs in the ACL lists defined on the SCGW has exceeded the maximum threshold defined by attribute maximumIMSIList. The alarm is automatically cleared whenever the number falls below this threshold.		
Remedial action: The operator must do a manual clearance. This alarm gets cleared when total number of IMSIs in the ACL lists defined on the SCGW falls below the maximumIMSIList value.		

Table 27-146 BSG_minimumImsiListThresholdExceeded

Alarm	Attributes	Applicable major releases
Name: BSG_minimumImsiListThresholdExceeded (5790) Type: qualityOfServiceAlarm (82) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is raised whenever the number of IMSIs in the ACL lists defined on the SCGW has exceeded the minimum threshold defined by attribute minimumIMSIList. The alarm is automatically cleared whenever the number falls below this threshold.		
Remedial action: The operator must do a manual clearance. This alarm gets cleared when total number of IMSIs in the ACL lists defined on the BSR Gateway falls below the minimumIMSIList value.		

Table 27-147 BSG_newBSRRegistrationRejectedDueToOverload

Alarm	Attributes	Applicable major releases
Name: BSG_newBSRRegistrationRejectedDueToOverload (5791) Type: qualityOfServiceAlarm (82) Package: femto Raised on class: femto.BSG	Severity: critical Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW rejects new BSR registration due to overload		
Remedial action: See the nodal documentation for more information.		

Table 27-148 BSG_newRANAPCallRejectedDueToOverload

Alarm	Attributes	Applicable major releases
Name: BSG_newRANAPCallRejectedDueToOverload (5792) Type: qualityOfServiceAlarm (82) Package: femto Raised on class: femto.BSG	Severity: critical Implicitly cleared: true Default probable cause: resourceAtOrNearingCapacity (715)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW rejects RANAP calls due to overload		
Remedial action: See the nodal documentation for more information.		

Table 27-149 BSG_pagingRecordLimitExceeded

Alarm	Attributes	Applicable major releases
Name: BSG_pagingRecordLimitExceeded (5793) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is raised when the number of Paging messages for the same Macro LAC RAC per Batch has exceeded its limit.		
Remedial action: See the nodal documentation for more information.		

Table 27-150 BSG_pscInconsistent

Alarm	Attributes	Applicable major releases
Name: BSG_pscInconsistent (5794) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: minor Implicitly cleared: false Default probable cause: configurationOrCustomizationError (902)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is raised if PSC consistency is not maintained at BSR registration for open access BSR with incoming HO enabled.		
Remedial action: See the nodal documentation for more information.		

Table 27-151 BSG_ranapPagingHighRateExceeded

Alarm	Attributes	Applicable major releases
Name: BSG_ranapPagingHighRateExceeded (5795) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is raised when the number of RANAP Paging messages per second received has exceeded its High limit. RANAP Paging messages above this limit shall be dropped.		
Remedial action: See the nodal documentation for more information.		

Table 27-152 BSG_ranapPagingLowRateExceeded

Alarm	Attributes	Applicable major releases
Name: BSG_ranapPagingLowRateExceeded (5796) Type: processingErrorAlarm (81) Package: femto Raised on class: femto.BSG	Severity: warning Implicitly cleared: true Default probable cause: thresholdCrossed (12)	<ul style="list-style-type: none"> LR14.2.SC
Description: This alarm is raised when the number of RANAP Paging messages per second received has exceeded its Low limit.		
Remedial action: See the nodal documentation for more information.		

Table 27-153 BSG_rangeOfStreamIdFromMSCNotSupported

Alarm	Attributes	Applicable major releases
Name: BSG_rangeOfStreamIdFromMSCNotSupported (5797) Type: communicationsAlarm (4) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW receives RANAP message with invalid stream ID on the SCTP association from the 3G-MSC		
Remedial action: See the nodal documentation for more information.		

Table 27-154 BSG_rangeOfStreamIdNotSupported

Alarm	Attributes	Applicable major releases
Name: BSG_rangeOfStreamIdNotSupported (5798) Type: communicationsAlarm (4) Package: femto Raised on class: femto.BSG	Severity: major Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW receives STRMGR PDU with invalid stream ID from the BSR		
Remedial action: See the nodal documentation for more information.		

Table 27-155 BSG_receivedInvalidBSRRegistrationMessage

Alarm	Attributes	Applicable major releases
Name: BSG_receivedInvalidBSRRegistrationMessage (5799) Type: communicationsAlarm (4) Package: femto Raised on class: femto.BSG	Severity: minor Implicitly cleared: false Default probable cause: communicationsProtocolError (901)	<ul style="list-style-type: none"> LR14.2.SC
Description: This fault is generated when SCGW receives invalid BSR registration message from BSR		
Remedial action: See the nodal documentation for more information.		

Table 27-156 BSG_registrationOfBSRFailed
